Introduction to Cloud-Delivered Firewall Management Center

The Cloud-Delivered Firewall Management Center is a software-as-a-service (SaaS) product that manages Secure Firewall Threat Defense devices and is delivered via Security Cloud Control. The Cloud-Delivered Firewall Management Center offers many of the same functions as an On-Premises Management Center.

The Cloud-Delivered Firewall Management Center has the same appearance and behavior as an On-Premises Management Center and uses the same FMC API.

As a SaaS product, the Security Cloud Control operations team is responsible for deploying and maintaining Cloud-Delivered Firewall Management Center software. As new features are introduced, the Security Cloud Control operations team updates your Security Cloud Control tenant's Cloud-Delivered Firewall Management Center for you.

A migration wizard is available to help you migrate your Secure Firewall Threat Defense devices from your On-Premises Management Center to the Cloud-Delivered Firewall Management Center. The devices must have Threat Defense software Version 7.0.3 or a later 7.0.x release, or Version 7.2 or later installed to be migrated. Threat Defense 7.1 releases are not supported.

Onboarding Secure Firewall Threat Defense devices is carried out in Security Cloud Control using familiar processes such as onboarding a device with its serial number or using a CLI command that includes a registration key. Once the device is onboarded, it is visible both in Security Cloud Control and in the Cloud-Delivered Firewall Management Center, however, you configure the device in the Cloud-Delivered Firewall Management Center. In Security Cloud Control, you can view device-specific information such as version, configuration status, connectivity, health status, and node status. When you click on the health status from Security Cloud Control, you are taken to the respective device's health monitoring page in the Cloud-Delivered Firewall Management Center user interface.

Security Cloud Control provides high availability support for the threat defense devices that it manages through the data interface. This feature is supported for devices running software version 7.2 or later.

You can analyze syslog events generated by your onboarded threat defense devices using Security Analytics and Logging (SaaS) or Security Analytics and Logging (On-Premises). The SaaS version stores events in the

cloud and you view the events in Security Cloud Control. The on-premises version stores events in an on-premises Secure Network Analytics appliance and analysis is done in the On-Premises Management Center. In both cases, just as with an On-Premises Management Center today, you can still send logs to a log collector of your choice directly from the sensors.

The license for Cloud-Delivered Firewall Management Center is a per-device-managed license and there is no license required for the Cloud-Delivered Firewall Management Center itself. Existing Secure Firewall Threat Defense devices re-use their existing smart licenses and new Secure Firewall Threat Defense devices provision new smart licenses for each feature implemented on the Secure Firewall Threat Defense.

To learn how to have a Cloud-Delivered Firewall Management Center provisioned on your tenant, see [Enable Cloud-delivered Firewall Management Center on Your Security Cloud Control Tenant](#).

Enable Cloud-Delivered Firewall Management Center on Your Security Cloud Control Tenant

If you want to manage your Secure Firewall Threat Defense devices, you can enable the Cloud-Delivered Firewall Management Center on your tenant. You need to have an admin or a super admin user role to perform this task.

Procedure

- Step 1** From the Security Cloud Control menu, click **Administration > Integrations > Firewall Management Center** and click **Enable Cloud-Delivered FMC**.
- Step 2** Security Cloud Control starts provisioning a Cloud-Delivered Firewall Management Center instance in the background; it typically takes 15 to 30 minutes for this to be complete. You can track the provisioning progress on the **Status** column of **Cloud-Delivered FMC**.

After the provisioning is complete, the status changes to **Active**. In addition, you get a **Cloud-Delivered Firewall Management Center is Ready** notification on the Security Cloud Control notifications panel and on the applications on which you have configured incoming webhooks. See [Notification Settings](#) for more information.

Note

After you receive the **Cloud-Delivered Firewall Management Center is Ready** notification, ensure that you log out of and log in back to your tenant once, to see the **Cloud-Delivered FMC** right pane options, such as **Actions**, **Management**, and **System**.

You can then onboard your Firewall Threat Defense devices to the Cloud-Delivered Firewall Management Center and manage them.

Hardware and Software Support

Cloud-Delivered Firewall Management Center supports these Secure Firewall Threat Defense software versions when they are installed on any supported hardware or virtual device:

- Verion 7.0.3 or later 7.0.x versions.
- Version 7.2 and later versions.

Note Software Version 7.1 is _not_ supported.

See [Firepower Threat Defense Support Specifics](#) for more information.

Security Cloud Control Platform Maintenance Schedule

Security Cloud Control updates its platform every week with new features and quality improvements. Updates are made during a 3-hour period according to this schedule:

Day of the Week	Time of Day (24-hour time, UTC)
Thursday	09:00 UTC - 12:00 UTC

During this maintenance period, you can still access your organization and if you have a cloud-delivered Firewall Management Center or Multicloud Defense Controller, you can access those portals as well. Additionally, the devices that you have onboarded to Security Cloud Control continue to enforce their security policies.

**Note**

- We advise against using Security Cloud Control to deploy configuration changes on the devices it manages during maintenance periods.
- If there is any issue that stops Security Cloud Control from communicating, we address that failure on all affected tenants as quickly as possible, even if it is outside the maintenance window.
