

Configure Cloud-Delivered Firewall Management Center-Managed Secure Firewall Threat Defense

This chapter provides information on how to manage the cloud-delivered Firewall Management Center-managed Secure Firewall Threat Defense onboarded to Security Cloud Control.

- [Enable Cloud-Delivered Firewall Management Center on Your Security Cloud Control Tenant, on page 1](#)
- [Hardware and Software Support, on page 2](#)
- [Security Cloud Control Platform Maintenance Schedule, on page 2](#)

Enable Cloud-Delivered Firewall Management Center on Your Security Cloud Control Tenant

If you want to manage your Secure Firewall Threat Defense devices, you can enable the Cloud-Delivered Firewall Management Center on your tenant. You need to have an admin or a super admin user role to perform this task.

Procedure

- Step 1** From the Security Cloud Control menu, click **Administration > Integrations > Firewall Management Center** and click **Enable Cloud-Delivered FMC**.
- Step 2** Security Cloud Control starts provisioning a Cloud-Delivered Firewall Management Center instance in the background; it typically takes 15 to 30 minutes for this to be complete. You can track the provisioning progress on the **Status** column of **Cloud-Delivered FMC**.

After the provisioning is complete, the status changes to **Active**. In addition, you get a **Cloud-Delivered Firewall Management Center is Ready** notification on the Security Cloud Control notifications panel and on the applications on which you have configured incoming webhooks. See [Notification Settings](#) for more information.

Note

After you receive the **Cloud-Delivered Firewall Management Center is Ready** notification, ensure that you log out of and log in back to your tenant once, to see the **Cloud-Delivered FMC** right pane options, such as **Actions**, **Management**, and **System**.

You can then onboard your Firewall Threat Defense devices to the Cloud-Delivered Firewall Management Center and manage them.

Hardware and Software Support

Cloud-Delivered Firewall Management Center supports these Secure Firewall Threat Defense software versions when they are installed on any supported hardware or virtual device:

- Version 7.0.3 or later 7.0.x versions.
- Version 7.2 and later versions.

Note Software Version 7.1 is not supported.

See [Firepower Threat Defense Support Specifics](#) for more information.

Security Cloud Control Platform Maintenance Schedule

Security Cloud Control updates its platform every week with new features and quality improvements. Updates are made during a 3-hour period according to this schedule:

| Day of the Week | Time of Day (24-hour time, UTC) |
|-----------------|------------------------------------|
| Thursday | 09:00 UTC - 12:00 UTC |

During this maintenance period, you can still access your organization and if you have a cloud-delivered Firewall Management Center or Multicloud Defense Controller, you can access those portals as well. Additionally, the devices that you have onboarded to Security Cloud Control continue to enforce their security policies.

- Note**
- We advise against using Security Cloud Control to deploy configuration changes on the devices it manages during maintenance periods.
 - If there is any issue that stops Security Cloud Control from communicating, we address that failure on all affected tenants as quickly as possible, even if it is outside the maintenance window.
