

## About Dynamic Attributes Connector

- [About the Dynamic Attributes Connector](#) , on page 1

### About the Dynamic Attributes Connector

The dynamic attributes connector enables your access control policy to adapt in real time to the changes in public and private cloud workloads and business-critical software-as-a-service (SaaS) applications. It simplifies policy management by keeping rules up to date without tedious manual updates and policy deployment. Customers require policy rules to be defined based on non-network constructs such as VM name or security group, so that firewall policy is persistent even when the IP address or VLAN changes.

#### Supported connectors

We currently support:

**Table 1: List of supported connectors by dynamic attributes connector version and platform**

| CSDAC version             | AWS | AWS security groups | AWS service tags | Azure | Azure Service Tags | Cisco Cyber Vision | Cisco Multicl. Defense | Generic text | GitHub | Google Cloud | Microsoft Office 365 | vCenter | Tenable | Webex | Zoom |
|---------------------------|-----|---------------------|------------------|-------|--------------------|--------------------|------------------------|--------------|--------|--------------|----------------------|---------|---------|-------|------|
| Version 1.1 (on-premises) | Yes | No                  | No               | Yes   | Yes                | No                 | No                     | No           | No     | No           | Yes                  | Yes     | No      | No    | No   |
| Version 2.0 (on-premises) | Yes | No                  | No               | Yes   | Yes                | No                 | No                     | No           | No     | Yes          | Yes                  | Yes     | No      | No    | No   |
| Version 2.2 (on-premises) | Yes | No                  | No               | Yes   | Yes                | No                 | No                     | No           | Yes    | Yes          | Yes                  | Yes     | No      | No    | No   |
| Version 2.3 (on-premises) | Yes | No                  | No               | Yes   | Yes                | No                 | No                     | No           | Yes    | Yes          | Yes                  | Yes     | No      | Yes   | Yes  |
| Version 3.0 (on-premises) | Yes | Yes                 | Yes              | Yes   | Yes                | Yes                | No                     | Yes          | Yes    | Yes          | Yes                  | Yes     | No      | Yes   | Yes  |

More information about connectors:

- Generic text list of IP addresses you specify

For more information, see [Create a generic text connector](#).

- GitHub

For more information, see [Create a GitHub connector](#).

- Google Cloud

For more information, see [Setting Up Your Environment](#) in the Google Cloud documentation.

See [Google cloud connector user permissions and imported data](#).

- Webex IP addresses

For more information, see [Create a Webex connector](#).

- Zoom IP addresses

For more information, see [Create a Zoom connector](#).

## How It Works

This topic discusses the architecture of the dynamic attributes connector.

The following figure shows how the system functions at a high level.

- The system supports certain public cloud providers.

This topic discusses supported *connectors* (which are the connections to those providers).

- The *adapter* defined by the dynamic attributes connector receives those dynamic attributes filters as *dynamic objects* and enables you to use them in access control rules.

You can create the following types of adapters:

- for an on-premises device.

This type of device might be managed by Security Cloud Control or it might be a standalone.

- *Cloud-Delivered Firewall Management Center* for devices managed by Security Cloud Control.
