

# **Installation procedures**

- Procedure with the Sensor management extension, on page 1
- Procedure with the Local Manager, on page 11

# Procedure with the Sensor management extension

This section explains how to install the Cisco IC3000 thanks to the sensor management extension. You will:

- 1. Retrieve the sensor management extension on cisco.com.
- 2. Install the sensor management extension on Cisco Cyber Vision.
- **3.** Connect to the Cisco IC3000 with the serial console and check its firmware version and management interface IP address.
- **4.** Create a new sensor on Cisco Cyber Vision through the Cisco device deployment and proceed to its configuration.

### **Requirements**

The hardware must have an access set to the Local Manager and to the CLI (ssh or console port).

### **Required material and information:**

- An Admin or Product access to Cisco Cyber Vision.
- The network information of the Collection network interface (IP address, subnet mask and gateway).
- A RJ45 or mini USB console cable.
- A serial console emulator, like PuTTY.

Note

• To be able to use the Cisco Cyber Vision sensor management extension, an IP address reachable by the Center Collection interface must be set on the Collection VLAN.

## Retrieve the sensor management extension file

- 1. On cisco.com, navigate to Cisco Cyber Vision's Software Download page.
- **2.** Download Cisco Cyber Vision Sensor Management Extension for IoX sensor setup. Version of the extension must be the same as the version of the center.

### Install the sensor management extension

- 1. In Cisco Cyber Vision, navigate to Admin > Extensions.
- 2. Click Import extension file and select CiscoCyberVision-sensor-management-<version>.ext.

L

The file upload takes a few minutes.

### Extensions

From this page, you can manage Cyber Vision Extensions. Extensions are optional add-ons to Cyber Vision Center which provide more features, such as the management of new device types, additional detection engines, or integrations with external services.

#### Installation

Uploading... Please do not quit or refresh the page.

### Extensions

From this page, you can manage Cyber Vision Extensions. Extensions are optional add-ons to Cyber Vision Center which provide more features, such as the management of new device types, additional detection engines, or integrations with external services.

Installation Cyber Vision sensor management installed successfully !		×
Installed extensions		
Name	Version	Actions
Cyber Vision sensor management	3.2.0	
Install a new extension t Import extension file		

## **Check the Cisco IC3000 firmware version**

To ensure a proper installation of the Cisco IC3000, you must check its firmware version.

It is recommended to use the newest firmware version available. The lowest version used should be 1.2.1 for a classic installation or 1.5.1 for an installation with Active Discovery.

#### Procedure

Step 1	To check the	version
--------	--------------	---------

Step 2

• Use the following command in the Cisco IC3000 shell prompt:

ic3k>show version

Example:

ic3k>show version
Version: 1.2.1
Platform ID: IC3000-2C2F-K9
Hardware ID: FCH2312Y04M
ic3k>

## **Check the MGMT interface IP address**

Check that the IP address set on the MGMT network is the one you've configured on the Cisco Cyber Vision GUI.

To check the MGMT network interface:

#### Procedure

**Step 1** Use the following command in the Cisco IC3000 shell prompt:

ic3k>show interfaces

**Step 2** Search for the reference "svcbr\_0" which corresponds to the MGMT interface.

The IP address you've set as Host Management on Cisco Cyber Vision GUI should follow the mention "inet addr: <IP ADDRESS>".

#### Example:

```
      Dink encap:Ethernet HWaddr d0:ec:35:ca:99:a0

      inet addr:192.168.71.22

      Bcast:192.168.71.255

      Mask:255.255.255.0

      inet6 addr: fe80::d2ec:35ff:feca:99a0/64

      Scope:Link

      UP BROADCAST RUNNING MULTICAST MTU:1500

      Metric:1

      RX packets:227

      errors:0
      dropped:0

      overruns:0
      frame:0

      TX packets:16
      errors:0

      dropped:0
      overruns:0

      collisions:0
      txqueuelen:1000

      RX bytes:12676
      (12.3
      KiB)

      TX bytes:1980
      (1.9
```

Step 3

### Test connectivity between Cisco IC3000 and IOx Local Manager

To proceed with the installation, you must first test if you have access to the Cisco IC3000's Cisco IOx Local Manager. To do so:

- 1. Open Chrome.
- Access Cisco Iox Local Manager using the Cisco IC3000's MGMT IP address and the MGMT port number, which is 8443:

https://Management Address:8443

ex: https://192.168.71.22:8443

**3.** If you're able to see the following screen it means that the connectivity between the Cisco IC3000 and IOx Local Manager is on.

← → C 🚺	Non sécurisé   192.168.69.22:	8443/admin

	• Add New	Refresh					

### **Create a sensor in Cisco Cyber Vision**

#### Procedure

Step 1 In Cisco Cyber Vision, navigate to Admin > Sensors > Sensor Explorer and click Install sensor, then Install via extension.

**Step 2** Fill in the requested fields so Cisco Cyber Vision can reach the equipment:

- IP Address: admin address of the equipment
- Port: management port (8443)

Ir	nstall via extension	
Reach Cisco device		
Please fill in the fields below to enable Cisco C	Cyber Vision to reach your device.

The Center will join the equipment and display the second parameter list. For this step to succeed, the equipment needs to be reachable by the Center on its eth0 connection for a Center with single interface or eth1 for a Center with dual interface.

### **Configure the sensor**

Once the Center can join the equipment, you will have to configure the Cisco Cyber Vision IOx sensor app by setting the Collection interface and, if needed, Active Discovery.

While some parameters are filled automatically, you can still change them if necessary.

- 1. Fill the following parameters for the Collection interface:
  - Collection IP address: IP address of the sensor in the sensor (must be different than the ip address of the device)
  - · Collection subnet mask: mask of the Collection IP address
  - Collection gateway: gateway of the Collection IP address (optional)

	Install via extension
Configure Cyber Vision	IOx sensor app rs. Some parameters have been pre-filled. Please complete the
Cisco device: IC3000-2C2F-K9	Collection prefix length*
192.168.49.23	24
Collection gateway	Like 24, 16 or 8

### Exit 🗧

#### Next

- 2. Select the Application type (passive only or passive and Active Discovery).
- 3. If selecting Passive and Active Discovery, the following fields will appear to set its interface:

Install via extension

### Configure Active Discovery

Please select an application type. If you want to enable Active Discovery on the application, select "Passive and Active Discovery". You will have to add some network interfaces parameters.

<ul><li>Passive only</li><li>Passive and Act</li></ul>	tive Discovery	
Select a physical int	erface	
Int2	$\checkmark$	ETH2 NETWORK
Select the port u	used to send packets	IP address*
		192.168.53.23
		IP address interface used to do Active Discovery
		Prefix length*
		24
		Like 24, 16 or 8
		Back Deplo

• Physical interface: port that will be used to send packets.

Ð

## Configure Active Discovery

Please select an application type. If you want to enable Active Di interfaces parameters.

Passive and Active Discovery

Select a physical interface

MGMT / Collection (enables DPI on collection interface)
Month / concetion (chaples b) for concetion interface,
Int1
Int2
Int3
Int4
Int4

- IP address of the interface dedicated to Active Discovery.
- Prefix lenght: subnet mask of the interface.

Select a physical interface

Int2	$\sim$	ETH2 NETWORK
Select the port u	used to send packets	IP address*
		192.168.53.23
		IP address interface used to do Active Discovery
		Prefix length*
		24
		Like 24, 16 or 8
		Back Deploy

4. Click the Deploy button.

The Center starts deploying the sensor application on the target equipment. This can take a few minutes. Once the deployment is finished, a new sensor appears in the sensors list. If Active Discovery has been enabled, the Active Discovery status will switch to Available and the Active Discovery button will be displayed in the right side panel as you click the sensor in the list.

The sensor status will turn to connected.

You can change the Active Discovery configuration by clicking the Active Discovery button. However, for changes to be applied, you will have to download a new provisioning package and deploy it on the hardware.

## Procedure with the Local Manager

Note

This section explains how to install the Cisco IC3000 with the Local Manager. You will:

- 1. Create and configure a new sensor on Cisco Cyber Vision to retrieve its provisioning package.
- Install and configure the virtual sensor application on the Local Manager to deploy the provisioning package on the Cisco IC3000.
- **3.** The last step, which is optional, consists in enabling Active Discovery on the Cisco IC3000.

### Requirements

The hardware must have an access set to the Local Manager and to the CLI (ssh or console port).

If it's the first time the Cisco IC3000 device is installed with the Local Manager you must first proceed to a Cisco IC3000 platform initial configuration.

### **Required material and information:**

- An Admin or Product access to Cisco Cyber Vision.
- A Local Manager user account and password.
- The serial number of the Cisco IC3000 to be configured (located on the hardware's front view).
- An IP addressing scheme for the Local Manager and the Collection Network Interfaces.
- The Cisco Cyber Vision Sensor application to collect from cisco.com, i.e. CiscoCyberVision-IOx-IC3000-<version>.tar.

## Access the Local Manager

- 1. Open a browser and navigate to the IP address you configured on the interface you are connected to.
- 2. Log in using the user account and password.

## Install the sensor virtual application

Once logged in, the following menu appears:

Applications	Docker Layers	System Info	System Setting	System Troubleshoot
		• Add New	${\cal C}$ Refresh	

- 1. Click Add New.
- 2. Add an Application id name (e.g. CCVSensor).
- 3. Select the application archive file

(i.e. "CiscoCyberVision-IOx-IC3000-<version>.tar").

Note If you aim to install a sensor with Active Discovery, select the required application archive file

(i.e. "CiscoCyberVision-IOx-Active-Discovery-IC3000-<version>.tar").

The installation takes a few minutes.

When the application is installed, the following message is displayed and the sensor application appears:

Applications	App Groups	Remote Doc	ker Workflow	Docker Layers	System Info	System Setting	System Troubleshoot
CCVSensor Cisco Cyber Vision	sensor for IC3000		DEPLOYED

Docker						

Note

Disk size shouldn't be lower than 1,000 MB.

To map the Sensor network interfaces:

**Step 4** Under Network Configuration, click **edit** in the eth0 line.

			✓ Activate App
<ul> <li>Network Configuration</li> </ul>			
Name	Network Config	Description	Action
eth0	iox-nat_docker0	none	edit
eth1	Not Configured	none	edit
eth2	Not Configured	none	edit
eth3	Not Configured	none	edit
eth4	Not Configured	none	edit

### Step 5

Set eth0 to "iox-bridge0" using the dropdown menu.

			✓ Activate App
<ul> <li>Network Configuration</li> </ul>			
Name	Network Config	Description	Action
eth0	iox-nat_docker0	none	edit
eth1	Not Configured	none	edit
eth2	Not Configured	none	edit
eth3	Not Configured	none	edit
eth4	Not Configured	none	edit
eth0 iox-n	at_docker0 - nat_docker ~	Port Mapping	
Description (optional):			
✓ OK X Cancel			

### Step 6 Click Interface Setting.

			✓ Activate App
Network Configuration	on		
Name	Network Config	Description	Action
eth0	iox-nat_docker0	none	edit
eth1	Not Configured	none	edit
eth2	Not Configured	none	edit
eth3	Not Configured	none	edit
eth4	Not Configured	none	edit
eth0	x-bridge0 - bridge	Interface Setting	
✓ OK X Cancel			

In	terface Settin	g	
			IPv4 Setting
	<ol> <li>Static</li> </ol>	O Dynamic	0
	IP/Mask	192.168.49.23	/ 24
	DNS		
	Default Gateway IP		
			IPv6 Setting
	○ Static	O Dynamic	۵ (

### **Step 7** Apply the following settings:

- Set IPV4 as Static.
- Set the Sensor Collection IP and mask.

- If needed set a default gateway IP.
- Disable IPV6.
- **Step 8** Click **OK** to close the Interface Setting window and **OK** again to confirm Network Configurations.
- **Step 9** A message saying that the network interface has been changed appears. Click **OK**.
- Step 10Set the network interfaces eth1, eth2, eth3 and eth4 by repeating the previous steps and using the table below.<br/>You must click **OK** each time you map a new interface for changes to be taken into consideration.

Each network interface must be mapped like below:

Name	Network Configuration
eth0	iox-bridge0
eth1	int1
eth2	int2
eth3	int3
eth4	int4

			✓ Activate App
<ul> <li>Network Configuration</li> </ul>			
Name	Network Config	Description	Action
eth0	iox-bridge0	none	edit
eth1	int1	none	edit
eth2	int2	none	edit
eth3	int3	none	edit
eth4	int4	none	edit
• Add App Network Interface			

To set eth1, eth2, eth3 and eth4 as mirrored ports:

- Step 11 Click Edit beside eth.
- Step 12 Click Interface Setting.
- **Step 13 Disable** IPv4 and IPv6.
- Step 14 Tick Enabled for Mirror Mode.
- Step 15 Click OK.

In	terface Settin	Ig		×
			IPv4 Setting	
	◯ Static	O Dynamic	<ul> <li>Disable</li> </ul>	
			IPv6 Setting	
	<ul> <li>Static</li> </ul>	O Dynamic	<ul> <li>Disable</li> </ul>	
			Mirror Mode	
1	Mirror Mode	Enabled		
				OK Cancel

**Step 16** Repeat the above steps for eth2, eth3 and eth4.

**Step 17** Click **Activate App** on the page top right corner.

			✓ Activate App
<ul> <li>Network Configuration</li> </ul>			
Name	Network Config	Description	Action
eth0	iox-bridge0	none	edit
eth1	int1	none	edit
eth2	int2	none	edit
eth3	int3	none	edit
eth4	int4	none	edit

• Add App Network Interface

The following message appears:

To start the Sensor Application:

- Step 18Access the Applications tab again.
- Step 19 Click Start.

Applications	App Groups Remo	te Docker Workflow	Do
