

# The Commands: Reference Examples

This chapter contains the following sections:

- How to Read the Listing, on page 2
- Advanced Malware Protection, on page 2
- Spam and Graymail Management, on page 11
- Anti-Virus, on page 19
- Command Line Management, on page 22
- Configuration File Management, on page 25
- Configuring Cisco Email Security Gateway to Consume External Threat Feeds, on page 29
- Cluster Management, on page 32
- Data Loss Prevention, on page 34
- Domain Exception List, on page 36
- S/MIME Security Services, on page 37
- Domain Keys, on page 39
- DMARC Verification, on page 49
- DNS, on page 53
- Enhanced User Experience using How-Tos Widget, on page 63
- General Management/Administration/Troubleshooting, on page 64
- Content Scanning, on page 121
- LDAP, on page 122
- Mail Delivery Configuration/Monitoring, on page 128
- Networking Configuration / Network Tools, on page 160
- Outbreak Filters, on page 180
- Policy Enforcement, on page 183
- Logging and Alerts, on page 219
- Reporting, on page 234
- Improving Phishing Detection using Service Logs, on page 237
- Sender Domain Reputation Filtering, on page 238
- Mailbox Auto Remediation, on page 242
- Smart Software Licensing, on page 243
- SMTP Services Configuration, on page 248
- System Setup, on page 280
- URL Filtering, on page 283
- User Management, on page 287

- Virtual Appliance Management, on page 295
- Geolocation, on page 296
- Integrating the Appliance with Cisco Threat Response, on page 297
- Configuring Safe Print Settings on Email Gateway, on page 300
- Connecting the Appliance to Talos Cloud Services, on page 301
- Integrating the Cisco Email Security Gateway with Cisco Advanced Phishing Protection, on page 302

# **How to Read the Listing**

For each command, there is a description and at least one example of the command being used. The Usage section specifies the following command attributes:

#### **Procedure**

- **Step 1** Does the command require a commit command to be implemented on the appliance?
- **Step 2** Is the command restricted to a particular mode (cluster, group, or machine).?
- **Step 3** Does the command permit a batch format?

For more information about Centralized Management, see *User Guide for AsyncOS for Cisco Email Security Appliances* .

For more information about batch formats, please see Command Line Interface: The Basics.

# **Advanced Malware Protection**

# ampconfig

Configure file reputation filtering and file analysis. Do not modify advanced options without guidance from Cisco TAC.

# Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format. For details, see the inline help by typing the command: help ampconfig.

# **Examples**

# **Enabling File Reputation and File Analysis**

mail.example.com> ampconfig

```
File Reputation: Disabled
Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
[]> setup
File Reputation: Disabled
Would you like to use File Reputation? [Y]>
Would you like to use File Analysis? [Y]>
File types supported for File Analysis:
1. Microsoft Executables
Do you want to modify the file types selected for File Analysis? [N]>
Specify AMP processing timeout (in seconds)
[120]>
Advanced-Malware protection is now enabled on the system.
Please note: you must issue the 'policyconfig' command (CLI) or Mail
Policies (GUI) to configure advanced malware scanning behavior for
default and custom Incoming Mail Policies.
This is recommended for your DEFAULT policy.
File Reputation: Enabled
File Analysis: Enabled
File types selected for File Analysis:
1. Microsoft Executables
Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- CLEARCACHE - Clears the local File Reputation cache.
[]>
```

# **Selecting File Types for File Analysis**

```
mail.example.com> ampconfig
File Reputation: Enabled
File Analysis: Enabled
Appliance Group ID/Name: Not part of any group yet

Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- SETGROUP - Add this appliance to the group of appliances that can share File Analysis
```

```
reporting details.
- CACHESETTINGS - Configure the cache settings for AMP.
[]> setup
File Reputation: Enabled
Would you like to use File Reputation? [Y]> yes
Would you like to use File Analysis? [Y]> yes
Do you want to modify the file types selected for File Analysis? [N]> yes
Enter comma separated serial numbers from the list of groups to select file types associated
with the group.
1. Archived and compressed
2. Configuration
3. Database
4. Document
5. Email
6. Encoded and Encrypted
7. Executables [partly selected]
8. Font & Graphics and Images
9. Microsoft Documents
10. Miscellaneous
11. Multimedia
[]> 9
File types belonging to the group "Microsoft Documents":
1. Access.Extension.14(mda)
2. Access.MDBFile(mdb)
3. Access.MDEFile.14(mde)
4. Access.Shortcut.DataAccessPage.1 (maw)
5. Access.Shortcut.Form.1 (maf)
6. .....
Choose the operation you want to perform:
- PRINT - Print the file types for File Analysis
- ADD - Add the file type(s) for File Analysis
Choose the file type(s) to be added for File Analysis from the list
File types that are not selected for File Analysis from group "Microsoft Documents":
1. Access.Extension.14 (mda)
2. Access.MDBFile(mdb)
3. Access.MDEFile.14(mde)
4. Access.Shortcut.DataAccessPage.1(maw)
5. Access.Shortcut.Form.1(maf)
6. ......
[] > 1-3, 5
Choose the operation you want to perform:
- PRINT - Print the file types for File Analysis
- DELETE - Delete the file type(s) for File Analysis
- ADD - Add the file type(s) for File Analysis
[]> print
File types belonging to the group:
1. Access.Extension.14(mda) [selected]
2. Access.MDBFile(mdb) [selected]
3. Access.MDEFile.14(mde) [selected]
4. Access.Shortcut.DataAccessPage.1(maw)
5. Access.Shortcut.Form.1(maf) [selected]
6. ......
Choose the operation you want to perform:
- PRINT - Print the file types for File Analysis
- DELETE - Delete the file type(s) for File Analysis
- ADD - Add the file type(s) for File Analysis
Specify AMP processing timeout (in seconds)
[120]>
```

```
Advanced-Malware protection is now enabled on the system.

Please note: you must issue the 'policyconfig' command (CLI) or Mail Policies (GUI) to configure advanced malware
scanning behavior for default and custom Incoming Mail Policies.

This is recommended for your DEFAULT policy. File Reputation: Enabled
File Analysis: Enabled
Appliance Group ID/Name: Not part of any group yet
Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- SETGROUP - Add this appliance to the group of appliances that can share File
Analysis reporting details.
- CACHESETTINGS - Configure the cache settings for AMP.

[1]
```

#### **Configure Email Security appliance to Use Public Cloud File Analysis Server**

```
mail.example.com> ampconfig
File Reputation: Enabled
File Analysis: Enabled
File types selected for File Analysis:
   Microsoft Windows / DOS Executable
Appliance Group ID/Name: Not part of any group yet
Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- SETGROUP - Add this appliance to the group of appliances that can share File Analysis
reporting details.
- CLEARCACHE - Clears the local File Reputation cache.
[]> advanced
Enter cloud query timeout?
[151>
Choose a file reputation server:
1. AMERICAS (cloud-sa.amp.sourcefire.com)
2. Private reputation cloud
[1]>
Enter cloud domain?

[501>
Enter heartbeat interval?
[151>
Do you want to enable SSL communication (port 443) for file reputation? [N]>
Do you want to suppress the verdict update alerts for all messages that are
not delivered to the recipient? [N]>
Choose a file analysis server:

    AMERICAS (https://americas-fa.com)

2. Private Cloud
[1]>
```

# (Public Cloud File Analysis Services Only) Configuring Appliance Groups

In order to allow all content security appliances in your organization to view file analysis result details in the cloud for files sent for analysis from any appliance in your organization, you need to join all appliances to the same appliance group.

For more information, see the "File Reputation Filtering and File Analysis" chapter in the user guide.

```
mail.example.com> ampconfig
File Reputation: Enabled
File Analysis: Enabled
File types selected for File Analysis:
   Microsoft Windows / DOS Executable
Appliance Group ID/Name: Not part of any group yet
Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- SETGROUP - Add this appliance to the group of appliances that can share File Analysis
reporting details.
- CLEARCACHE - Clears the local File Reputation cache.
[]> setgroup
Does your organization have multiple Cisco Email, Web, and/or Content Security Management
appliances? [N]> Y
Do you want this appliance to display detailed analysis reports for files uploaded to the
cloud from other appliances in your organization,
and vice-versa?
[Y]> Enter an Analysis Group name. This name is case-sensitive and must be configured
identically on each appliance in the Analysis Group.
[]> FA Reporting
Registration is successful with the group name. This does not require commit
File Reputation: Enabled
File Analysis: Enabled
File types selected for File Analysis:
   Microsoft Windows / DOS Executable
Appliance Group ID/Name: FA Reporting
Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- VIEWGROUP - view the group members details.
- CLEARCACHE - Clears the local File Reputation cache.
```

Note

After you configure an appliance group, you cannot use the setgroup subcommand. If you want to need to modify the group for any reason, you must open a case with Cisco TAC. You can view the details of the appliance group using the viewgroup subcommand.

# Configure Email Security Appliance to Use an On-Premises File Analysis Server

```
mail.example.com> ampconfig
File Reputation: Enabled
File Analysis: Enabled
File types selected for File Analysis:
   Microsoft Windows / DOS Executable
Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- SETGROUP - Add this appliance to the group of appliances that can share File Analysis
reporting details.
- CLEARCACHE - Clears the local File Reputation cache.
[]> advanced
Enter cloud query timeout?
[151>
Choose a file reputation server:
1. AMERICAS (cloud-sa.amp.sourcefire.com)
2. Private reputation cloud
[1]>

```
Enter cloud domain?
[a.immunet.com]>
Do you want use the recommended analysis threshold from cloud service? [Y]>
Enter analysis threshold?
[501>
Enter heartbeat interval?
[151>
Do you want to enable SSL communication (port 443) for file reputation? [N]>
Do you want to suppress the verdict update alerts for all messages that are
not delivered to the recipient? [N]>
Choose a file analysis server:

    AMERICAS (https://panacea.threatgrid.com)

2. Private Cloud
[1] > 2
Enter file analysis server url?
[]> https://mycloud.example.com
Certificate Authority:
1. Use Cisco Trusted Root Certificate List
2. Paste certificate to CLI
[1]>
File Reputation: Enabled
File Analysis: Enabled
File types selected for File Analysis:
   Microsoft Windows / DOS Executable
Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- SETGROUP - Add this appliance to the group of appliances that can share File Analysis
reporting details.
- CLEARCACHE - Clears the local File Reputation cache.
```

#### Configure Email Security Appliance to Use an On-Premises File Reputation Server

```
mail.example.com> ampconfig
File Reputation: Enabled
File Analysis: Enabled
File types selected for File Analysis:
   Microsoft Windows / DOS Executable
Appliance Group ID/Name: Not part of any group yet
Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- SETGROUP - Add this appliance to the group of appliances that can share File
Analysis reporting details.
- CLEARCACHE - Clears the local File Reputation cache.
[]> advanced
Enter cloud query timeout?
Choose a file reputation server:

    AMERICAS (cloud-sa.amp.domain.com)

2. Private reputation cloud
[1]> 2
Enter AMP reputation server hostname or IP address?
[] > myamp.domain.com
Paste the public key followed by a . on a new line

Enter cloud domain?
```

```
[immunet.com] >
Do you want use the recommended analysis threshold from cloud service? [Y]>
Enter heartbeat interval?
[15]>
Do you want to enable SSL communication (port 443) for file reputation? [N]>
Choose a file analysis server:
1. AMERICAS (https://threatgrid.com)
2. Private analysis cloud
[1]>
File Reputation: Enabled
File Analysis: Enabled
File types selected for File Analysis:
   Microsoft Windows / DOS Executable
Appliance Group ID/Name: Not part of any group yet
Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- {\tt SETGROUP} - {\tt Add} this appliance to the group of appliances that can share {\tt File}
Analysis reporting details.
- CLEARCACHE - Clears the local File Reputation cache.
[]>
```

#### **Clearing Local File Reputation Cache**

```
mail.example.com> ampconfig
File Reputation: Enabled
File Analysis: Enabled
Appliance Group ID/Name: Not part of any group yet
Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- SETGROUP - Add this appliance to the group of appliances that can share File Analysis reporting details.
- CACHESETTINGS - Configure the cache settings for AMP.
[]> cachesettings
Choose the operation you want to perform:
- MODIFYTIMEOUT - Configure the cache expiry period based on File Reputation disposition.
- CLEARCACHE - Clears the local File Reputation cache.
[]>clearcache
```

# **Configuring Cache Expiry Period for File Reputation disposition values**

In the following example, the modifytimeout sub command is used to configure the cache expiry period for malicious files.

Note

The cache expiry period must be a value from 15 minutes to 7 days.

```
mail.example.com> ampconfig
File Reputation: Enabled
File Analysis: Enabled
File types selected for File Analysis:
    Microsoft Windows / DOS Executable
Appliance Group ID/Name: Not part of any group yet
Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- SETGROUP - Add this appliance to the group of appliances that can share File Analysis reporting details.
```

```
- CACHESETTINGS - Configure the cache settings for AMP.

[]> cachesettings
Choose the operation you want to perfrom:
- MODIFYTIMEOUT - Configure the cache expiry period based on File Reputation disposition.
- CLEARCACHE - Clears the local File Reputation cache.

[]> modifytimeout
Choose the operation you want to perform:
- CLEAN - Configure the cache expiry period for clean files.
- MALICIOUS - Configure the cache expiry period for malicious files.
- UNKNOWN - Configure the cache expiry period for unknown files.

[]> malicious
Specify the cache expiry period for this file disposition (use 'd' for days, 'h' for hours, or 'm' for minutes). If you specify a value without a unit, it is always treated as days.

[1d]> 5d
```

#### **Suppressing File Retrospective Verdict Alerts**

```
mail.example.com> ampconfig
File Reputation: Enabled
File Analysis: Enabled
Appliance Group ID/Name: Not part of any group yet
Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- SETGROUP - Add this appliance to the group of appliances that can share File Analysis
reporting details.
- CACHESETTINGS - Configure the cache settings for AMP.
[]> advanced
Enter cloud query timeout?
[15]>
Choose a file reputation server:

    AMERICAS (cloud-sa.amp.domain.com)

2. Private reputation cloud
[11>
Do you want use the recommended reputation threshold from cloud service? [Y]>
Enter heartbeat interval?
[15]>
Do you want to enable SSL communication (port 443) for file reputation? [N]>
Do you want to suppress the file retrospective verdict alerts for the messages that are not
 delivered to the recipient
[N] > yes
```

# **Configuring Cisco AMP Threat Grid Clustering for File Analysis**

```
mail.example.com> ampconfig

File Reputation: Enabled
File Analysis: Enabled
Appliance Group ID/Name: Not part of any group yet

Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
```

```
- SETGROUP - Add this appliance to the group of appliances that can share File
Analysis reporting details.
- CACHESETTINGS - Configure the cache settings for AMP.
[]> advanced
Enter cloud query timeout?
[15]>
Choose a file reputation server:

    AMERICAS (cloud-sa.amp.cisco.com)

2. AMERICAS (Legacy) (cloud-sa.amp.sourcefire.com)
3. Private reputation cloud
[1]>
Do you want use the recommended analysis threshold from cloud service? [Y]>
Enter heartbeat interval?
[15]>
Do you want to enable SSL communication (port 443) for file reputation? [N]>
Do you want to suppress the verdict update alerts for all messages that are not
delivered to the recipient? [N]>
Choose a file analysis server:
1. AMERICAS (https://panacea.threatgrid.com)
2. Private analysis cloud
[1] > 2
There are no private analysis servers configured.
Choose the operation you want to perform:
- NEW - Configure a new private analysis server.
[]> new
Enter the file analysis server hostname or IP or URL.
[]> 192.1.10.20
Serial Number
                 Private Analysis Server
                   192.1.10.20
Choose the operation you want to perform:
- ADD - Add a new private analysis server to the cluster.
- EDIT - Edit a private analysis server in the cluster.
- DELETE - Delete a private analysis server from the cluster.
[]> add
Enter the new private analysis server hostname or IP address or URL to the
cluster.
[]> 192.1.10.30
Serial Number
                  Private Analysis Server
1
                  192.1.10.20
2
                  192.1.10.30
Choose the operation you want to perform:
- ADD - Add a new private analysis server to the cluster.
- EDIT - Edit a private analysis server in the cluster.
- DELETE - Delete a private analysis server from the cluster.
[]>
```

# ampstatus

#### **Description**

Display the version of various Advanced Malware Protection (file reputation and analysis) components.

#### **Usage**

Commit: This command does not require a 'commit'.

**Cluster Management**: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

#### **Example**

mail.example.com> ampstatus

Component Version Last Updated

AMP Client Settings 1.0 Never updated

AMP Client Engine 1.0 Never updated

# **Spam and Graymail Management**

This section contains the following commands:

# antispamconfig

# **Description**

Configure anti-spam policy.

# Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

# **Example**

The following examples demonstrates the configuration for Anti-Spam functionality.

```
mail3.example.com> antispamconfig

IronPort Anti-Spam scanning: Disabled
Choose the operation you want to perform:
- SETUP - Edit IronPort Anti-Spam settings.

[]> setup
IronPort Anti-Spam scanning: Disabled
Would you like to use IronPort Anti-Spam scanning? [Y]> y
The IronPort Anti-Spam License Agreement is displayed (if you have not already accepted it).
```

```
Do you accept the above IronPort Anti-Spam license agreement? []> Y
Increasing the following size settings may result in decreased performance. Please consult
documentation for size
recommendations based on your environment.
Never scan message larger than: (Add a trailing K for kilobytes, M for megabytes, or no
letters for bytes.)
Always scan message smaller than: (Add a trailing K for kilobytes, M for megabytes, or no
letters for bytes.)
[512K]>
Please specify the IronPort Anti-Spam scanning timeout (in seconds)
[60]>
Choose Scanning Profile
1. Normal - Scanning profile used to block spam with small potential for false positives.
2. Aggressive - Scanning profile used to block spam that has more impact on spam detection
than the Normal profile with a larger potential for false positives.
3. Regional (China) - Scanning profile similar to a Normal profile that provides benefit
to detect spam in regional languages.
If you have changed the global scanning profile settings, you must review the Anti-Spam
policy thresholds (Mail Policies > Incoming/Outgoing Mail Policies > Anti-Spam)
to produce satisfactory results.
If you have changed the scanning profile setting from Normal to Aggressive, you need to
reset the mail policy threshold values to the default values to avoid
undesirable false positives.
For Aggressive scanning profile, it is recommended to tune the policy threshold values to
smaller increments compared to the threshold values of the
Normal scanning profile.
IronPort Anti-Spam scanning is now enabled on the system.
Please note: You must issue the policyconfig command or Mail Policies (GUI) to configure
Cisco IronPort scanning behavior for default and custom policies.
This is recommended for your DEFAULT policy.
IronPort Anti-Spam scanning: Enabled
Choose the operation you want to perform:
- SETUP - Edit IronPort Anti-Spam settings.
[]>
```

# antispamstatus

# **Description**

Display anti-spam status.

# Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

# **Example**

```
CASE Core Files Never updated 3.4.0-013
CASE Utilities Never updated 3.4.0-013
Structural Rules Never updated 3.3.1-009-20141210_214201
Web Reputation DB Never updated 20141211_111021
Web Reputation Rules Never updated 20141211_11021-20141211_170330
Content Rules Never updated unavailable
Content Rules Update Never updated unavailable
Last download attempt made on: Never
```

# antispamupdate

#### **Description**

Manually request an immediate update of Anti-Spam rules and related CASE components. This also includes the Anti-Spam rules and CASE components used by Intelligent Multi-Scan (IMS), but not for the third-party anti-spam engines used by IMS.

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto).

Batch Command: This command does not support a batch format.

#### Example

```
mail3.example.com> antispamupdate
Choose the operation you want to perform:
- MULTISCAN - Request updates for Intelligent Multi-Scan
- IRONPORT - Request updates for IronPort Anti-Spam
[]> ironport
Requesting check for new CASE definitions
```

# imsandgraymailconfig

- Description, on page 13
- Usage, on page 14
- Example, on page 14

# Description

Configure the Cisco Intelligent Multi-Scan (IMS) and Graymail Detection and Safe Unsubscribe settings.

Note

- To configure the threshold for message scanning by Cisco Intelligent Multi-Scan and Graymail Detection and Safe Unsubscribing, use the imsandgraymailconfig > globalconfig sub command. These global configuration settings are common for both Cisco Intelligent Multi-Scan and Graymail Detection and Safe Unsubscribing.
- To configure policy settings for graymail detection and safe unsubscribing, use the policyconfig command. For more information, see Create an Incoming Policy to Drop the Messages Identified as Bulk Email or Social Network Email, on page 207.

#### **Usage**

**Commit**: This command requires a 'commit'.

**Cluster Management**: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command**: This command supports a batch format for graymail configuration. For more details, see the inline help by typing the command: help imsandgraymailconfig.

#### **Example**

The following examples demonstrates the configurations for Graymail Detection and Safe Unsubscribing and Intelligent Multi-Scan.

```
mail3.example.com> imsandgraymailconfig
Choose the operation you want to perform:
- GRAYMAIL - Configure Graymail Detection and Safe Unsubscribe settings
- MULTISCAN - Configure IronPort Intelligent Multi-Scan.
- GLOBALCONFIG - Common Global Configuration settings
[]> graymail
Graymail Detection: Disabled
Choose the operation you want to perform:
- SETUP - Configure Graymail.
[]> setup
Would you like to use Graymail Detection? [Y]> y
Would you like to enable automatic updates for Graymail engine? [Y]> y
Graymail Safe Unsubscribe: Disabled
Would you like to use Graymail Safe Unsubscribe? [Y]> y
Graymail Detection and Safe Unsubscribe is now enabled. Please note: The global settings
are recommended only for your DEFAULT mail policy. To configure policy settings, use the
or outgoing policy page on web interface or the 'policyconfig' command in CLI.
[]> multiscan
IronPort Intelligent Multi-Scan: Disabled
Choose the operation you want to perform:
- SETUP - Edit Intelligent Multi-Scan settings.
[]> setup
IronPort Intelligent Multi-Scan scanning: Disabled
Would you like to use IronPort Intelligent Multi-Scan scanning? [Y]> y
Would you like to enable regional scanning? [N]> n
```

```
Intelligent Multi-Scan scanning is now enabled on the system. Please note: you must issue
the 'policyconfig' command (CLI) or Mail Policies (GUI) to configure
Intelligent Multi-Scan scanning behavior for default and custom Incoming and Outgoing Mail
Policies. This is recommended for your DEFAULT policy.
IronPort Intelligent Multi-Scan: Enabled
[]> globalconfig
Choose the operation you want to perform:
- SETUP - Configure Common Global settings
[]> setup
Increasing the following size settings may result in decreased performance.
Please consult documentation for size recommendations based on your environment.
Never scan message larger than: (Add a trailing K for kilobytes,
M for megabytes, or no letters for bytes.)
[1M] >
Always scan message smaller than: (Add a trailing K for kilobytes,
M for megabytes, or no letters for bytes.)
[512K]>
Timeout for Scanning Single Message (in seconds):
[60]>
```

# graymailstatus

#### **Description**

Display the details of the existing graymail rules.

# Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command:** This command does not support a batch format

# **Example**

```
mail.example.com> graymailstatus
Component Version Last Updated
Graymail Engine 01.378.53 Never Updated
Graymail Rules 01.378.53#15 Never updated
Graymail Tools 1.0.03 Never updated
```

# graymailupdate

# **Description**

Manually request update of the graymail rules.

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command:** This command does not support a batch format

#### **Example**

```
mail.example.com> graymailupdate
```

Requesting check for new Graymail updates.

# incomingrelayconfig

# **Description**

Use the **incomingrelayconfig** command to enable and configure the Incoming Relays feature. In the following examples, the Incoming Relays feature is first enabled, and then two relays are added, one is modified, and one is deleted.

#### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

# **Example: Enabling Incoming RelaysConfiguring an Incoming Relay**

```
mail3.example.com> incomingrelayconfig
Incoming relays: Disabled
Choose the operation you want to perform:
- SETUP - Edit update configuration.
- RELAYLIST - Configure incoming relays.
[]> setup
This command helps your Cisco IronPort appliance determine the sender's
originating IP address.
You should ONLY enable this command if your Cisco IronPort appliance is NOT
directly connected to the Internet as the "first hop" in your email
infrastructure.
You should configure this feature if other MTAs or servers are configured at
your network's perimeter to relay mail to your Cisco IronPort appliance.
Do you want to enable and define incoming relays? [N] > y
Incoming relays: Enabled
Choose the operation you want to perform:
- SETUP - Edit update configuration.
- RELAYLIST - Configure incoming relays.
[]> relaylist
There are no relays defined.
Choose the operation you want to perform:
- NEW - Create a new entry
[] > new
Enter a name for this incoming relay (Ex: "first-hop")
Enter the IP address of the incoming relay. IPv4 and IPv6 addresses are supported.
```

```
For IPv4, CIDR format subnets such as 10.1.1.0/24, IP address ranges such as 10.1.1.10-20,
and subnets such as 10.2.3. are allowed.
For IPv6, CIDR format subnets such as 2001:db8::/32 and IP address ranges such as
2001:db8::1-2001:db8::11 are allowed.
Hostnames such as crm.example.com and partial hostnames such as .example.com are allowed.
[]> 192.168.1.1
Do you want to use the "Received:" header or a custom header to determine the originating
IP address?
1. Use "Received:" header
2. Use a custom header
[1] > 1
Within the "Received:" header, enter the special character or string after which to begin
parsing for the originating IP address:
[from] > [
Within the headers, enter the position of the "Received:" header that contains the originating
IP address:
[1] > 1
There is 1 relay defined.
Choose the operation you want to perform:
- NEW - Create a new entry
- EDIT - Modify an entry
- DELETE - Remove an entry
- PRINT - Display the table
[]> print
Incoming
                                             Header
                                                            Match
relay name:
            IP address:
                                             to parse:
                                                            after:
                                                                        Hops:

# slblconfig

#### **Description**

Configure End-User Safelist/Blocklist.

Note

Safelists/Blocklists must be enabled on the appliance via the GUI in order to run this command.

# Usage

Commit: This command does not require a 'commit'.

Batch Command: This command supports a batch format.

# **Batch Format - Import**

#### **Batch Format**

Replaces all entries in the End-User Safelist/Blocklist with entries present in the specified file.

```
slblconfig import <filename> <ignore invalid entries>
```

- filename Name of the file that has to be imported. The file must be in the /configuration directory on the appliance.
- ignore invalid entries Whether to ignore invalid entries or not. Either 'Yes' or 'No.'

# **Batch Format - Export**

Exports all entries in the End-User Safelist/Blocklist to a file the appliance.

```
slblconfig export
```

The appliance saves a .CSV file to the /configuration directory using the following naming convention:

slbl<timestamp><serial number>.csv.

# **Example - Importing Safelist/Blocklist Entries**

```
mail.example.com>
slblconfig
End-User Safelist/Blocklist: Enabled
Choose the operation you want to perform:
- IMPORT - Replace all entries in the End-User Safelist/Blocklist.
 EXPORT - Export all entries from the End-User Safelist/Blocklist.
import
Currently available End-User Safelist/Blocklist files:
1. slbl.csv
Choose the file to import from.
Do you want to ignore invalid entries? [Y]>
End-User Safelist/Blocklist import has been initiated...
Please wait while this operation executes.
End-User Safelist/Blocklist successfully imported.
Choose the operation you want to perform:
- IMPORT - Replace all entries in the End-User Safelist/Blocklist.
- EXPORT - Export all entries from the End-User Safelist/Blocklist.
[]>
```

# **Anti-Virus**

This section contains the following CLI commands:

# antivirusconfig

# **Description**

Configure anti-virus policy.

# **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

# **Example**

In the following example, the antivirusconfig command is used to enable Sophos virus scanning on the system and set the time-out value to 60 seconds. To configure the update server, update interval, and optional proxy server, see updateconfig, on page 115.

Note

The first time you invoke the antivirusconfig command, you may be presented with a license agreement, if you did not accept the license during the systemsetup command. If you do not accept the license agreement, the Sophos virus scanning engine will not be enabled on the appliance.

```
mail3.example.com> antivirusconfig
Choose the operation you want to perform:
- SOPHOS - Configure Sophos Anti-Virus.
- MCAFEE - Configure McAfee Anti-Virus.
[]> sophos
Sophos Anti-Virus: Disabled
Choose the operation you want to perform:
- SETUP - Configure Sophos Anti-Virus.
[]> setup
Sophos Anti-Virus scanning: Disabled
Would you like to use Sophos Anti-Virus scanning? [Y]> y
(First time users see the license agreement displayed here.)
Please specify the Anti-Virus scanning timeout (in seconds)
[60] > 60
Would you like to enable automatic updates for Sophos engine? [Y] > Y
Sophos Anti-Virus scanning is now enabled on the system.
Please note: you must issue the 'policyconfig' command (CLI) or Mail
Policies (GUI) to configure Sophos Anti-Virus scanning behavior for default and custom
Incoming and Outgoing Mail Policies.
This is recommended for your DEFAULT policy.
Sophos Anti-Virus: Enabled
Choose the operation you want to perform:
- SETUP - Configure Sophos Anti-Virus.
[]>
```

# **Viewing Anti-Virus IDE Details**

AsyncOS provides detailed status on the specific anti-virus signature files (IDE files) that have been downloaded by the appliance. You can access these details using the **antivirusconfig** -> **detail** subcommand. For example:

```
mail3.example.com> antivirusconfig
Choose the operation you want to perform:
- SOPHOS - Configure Sophos Anti-Virus.
- MCAFEE - Configure McAfee Anti-Virus.
[]> sophos
Sophos Anti-Virus: Enabled
Choose the operation you want to perform:
- SETUP - Configure Sophos Anti-Virus.
```

```
- STATUS - View Sophos Anti-Virus status.
- DETAIL - View Sophos Anti-Virus detail.
[]> detail
Sophos Anti-Virus:

# antivirusupdate

# **Description**

Manually update virus definitions.

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto).

Batch Command: This command does not support a batch format.

#### **Example**

```
mail3.example.com> antivirusupdate
Choose the operation you want to perform:
- MCAFEE - Request updates for McAfee Anti-Virus
- SOPHOS - Request updates for Sophos Anti-Virus
[]> sophos
Requesting update of virus definitions
mail3.example.com>
```

# **Command Line Management**

This section contains the following CLI commands:

#### commit

#### Description

Commit changes. Entering comments after the commit command is optional.

# Usage

Commit: N/A

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

# **Example**

```
mail3.example.com> commit
Please enter some comments describing your changes:
[]> Changed "psinet" IP Interface to a different IP ad dress
Do you want to save the current configuration for rollback? [Y]> n
Changes committed: Fri May 23 11:42:12 2014 GMT
```

# commitdetail

# Description

Display detailed information about the last commit.

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

#### **Example**

```
mail3.example.com> commitdetail
Commit at Mon Apr 18 13:46:28 2005 PDT with comments: "Enabled loopback".
mail3.example.com>
```

# clearchanges or clear

#### **Description**

The clear command clears any configuration changes made since the last commit or clear command was issued.

#### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command:** This command does not support a batch format

# **Example**

```
mail3.example.com> clear Are you sure you want to clear all changes since the last commit? [Y]> \bf y Changes cleared: Mon Jan 01 12:00:01 2003 mail3.example.com>
```

# help or h or?

# **Description**

The **help** command lists all available CLI commands and gives a brief description of each command. The **help** command can be invoked by typing either help or a single question mark (?) at the command prompt.

# **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format

#### **Example**

```
mail3.example.com> help
Displays the list of all available commands.
```

# rollbackconfig

The rollbackconfig command allows you to rollback to one of the previously committed 10 configurations.

#### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

#### **Example**

```
mail.example.com> rollbackconfig
Previous Commits:
   Committed On
                                     User
                                                           Description
1. Fri May 23 06:53:43 2014 admin
                                                         new user
2. Fri May 23 06:50:57 2014 admin
3. Fri May 23 05:47:26 2014 admin
4. Fri May 23 05:45:51 2014 admin
                                                         rollback
                                                          edit user
Enter the number of the config to revert to.
[]> 2
Are you sure you want to roll back the configuration? [N] > y
Reverted to Fri May 23 06:50:57 2014 admin
                                                                     rollback
Do you want to commit this configuration now? [N]> y
Committed the changes successfully
```

# quit or q or exit

# **Description**

The quit command logs you out of the CLI application. Configuration changes that have not been committed are cleared. The quit command has no effect on email operations. Logout is logged into the log files. (Typing exit is the same as typing quit.)

# Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command:** This command does not support a batch format

# **Example**

```
mail3.example.com> quit
Configuration changes entered but not committed. Exiting will lose changes.
```

```
Type 'commit' at the command prompt to commit changes. Are you sure you wish to exit? 
 [N]> \mathbf{Y}
```

# **Configuration File Management**

This section contains the following CLI commands:

# loadconfig

#### **Description**

Load a configuration file.

Note

Loading configuration on clustered machines is supported only using GUI. For instructions, see *User Guide for AsyncOS for Cisco Email Security Appliances* .

#### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command:** This command does not support a batch format

# **Example**

In this example, a new configuration file is imported from a local location.

```
mail3.example.com> loadconfig
1. Paste via CLI
2. Load from file
[1]> 2
Enter the name of the file to import:
[]> changed.config.xml
Values have been loaded.
Be sure to run "commit" to make these settings active.
mail3.example.com> commit
Please enter some comments describing your changes:
[]> loaded new configuration file
Do you want to save the current configuration for rollback? [Y]> n
Changes committed: Fri May 23 11:42:12 2014 GMT
```

In this example, a new configuration file is pasted directly at the command line. (Remember to type Control-D on a blank line to end the paste command.) Then, the system setup wizard is used to change the default hostname, IP address, and default gateway information. Finally, the changes are committed.

```
mail3.example.com> loadconfig
1. Paste via CLI
2. Load from file
[1]> 1
Paste the configuration file now.
Press CTRL-D on a blank line when done.
```

```
[The configuration file is pasted until the end tag </config>
. Control-D is entered on a separate line.]
Values have been loaded.
Be sure to run "commit" to make these settings active.
mail3.example.com> systemsetup
[The system setup wizard is run.]
mail3.example.com> commit
Please enter some comments describing your changes:
[]> pasted new configuration file and changed default settings via systemsetup
Do you want to save the current configuration for rollback? [Y]> n Changes committed: Fri May 23 11:42:12 2014 GMT
```

# mailconfig

#### **Description**

To test the configuration, you can use the **mailconfig** command immediately to send a test email containing the system configuration data you just created with the **systemsetup** command.

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command:** This command does not support a batch format

#### **Example**

```
mail.example.com> mailconfig
Please enter the email address to which you want to send the configuration file.
Separate multiple addresses with commas.
[]> user@example.com
Choose the passphrase option:
1. Mask passphrases (Files with masked passphrases cannot be loaded using loadconfig command)
2. Encrypt passphrases
3. Plain passphrases
[1]> 2
The configuration file has been sent to user@example.com.
```

Send the configuration to a mailbox to which you have access to confirm that the system is able to send email on your network.

Note

For enhanced security, if encryption of sensitive data in the appliance is enabled in fipsconfig command, you cannot use Plain passwords option.

# resetconfig

#### **Description**

When physically transferring the appliance, you may want to start with factory defaults. The r esetconfig command resets *all* configuration values to factory defaults. This command is extremely destructive, and it should only be used when you are transferring the unit or as a last resort to solving configuration issues. It is recommended you run the systemsetup command after reconnecting to the CLI after you have run the resetconfig command.

Note

The resetconfig command only works when the appliance is in the offline state. When the resetconfig command completes, the appliance is automatically returned to the online state, even before you run the systemsetup command again. If mail delivery was suspended before you issued the resetconfig command, the mail will attempt to be delivered again when the resetconfig command completes.

Danger

The resetconfig command will return all network settings to factory defaults, potentially disconnecting you from the CLI, disabling services that you used to connect to the appliance (FTP, Telnet, SSH, HTTP, HTTPS), and even removing additional user accounts you created with the userconfig command. Do not use this command if you are not able to reconnect to the CLI using the Serial interface or the default settings on the Management port through the default Admin user account.

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

**Batch Command:** This command does not support a batch format.

# **Example**

```
mail3.example.com> suspend
Delay (seconds, minimum 30):
[30]> 45
Waiting for listeners to exit...
Receiving suspended.
Waiting for outgoing deliveries to finish...
Mail delivery suspended.
mail3.example.com>
resetconfig
Are you sure you want to reset all configuration values? [N]> Y
All settings have been restored to the factory default.
```

# saveconfig

#### **Description**

The **saveconfig** command saves the configuration file with a unique filename to the configuration directory.

Note

If you are on a clustered environment, this command saves the complete cluster configuration. To run this command on a clustered machine, change your configuration mode to cluster.

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format

#### **Example**

In the following example, the passphrases in the configuration file is encrypted and saved in the configuration directory.

```
mail.example.com> saveconfig
Choose the passphrase option:
1. Mask passphrases (Files with masked passphrases cannot be loaded using loadconfig command)
2. Encrypt passphrases

[1]> 2
File written on machine "mail.example.com" to the location
   "/configuration/C100V-4232116C4E14C70C4C7F-7898DA3BD955-20140319T050635.xml".
Configuration saved.
```

Note

For enhanced security, if encryption of sensitive data in the appliance is enabled in fipsconfig command, you cannot use Plain passwords option.

# showconfig

# **Description**

The **showconfig** command prints the current configuration to the screen.

# Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format

#### **Example**

In the following example, the configuration is displayed on CLI and the passphrases in the configuration are encrypted.

```
mail.example.com> showconfig
Choose the passphrase display option:
1. Mask passphrases (Files with masked passphrases cannot be loaded using loadconfig command)
2. Encrypt passphrases
3. Plain passphrases

```

Note

For enhanced security, if encryption of sensitive data in the appliance is enabled in fipsconfig command, you cannot use Plain passwords option.

# Configuring Cisco Email Security Gateway to Consume External Threat Feeds

- threatfeedconfig, on page 29
- threatfeedstatus, on page 31
- threatfeedupdate, on page 32

# threatfeedconfig

- Description, on page 30
- Usage, on page 30
- Example Adding an External Threat Feed Source, on page 30

#### **Description**

The threatfeedconfig command is used to

- Enable the ETF engine on your Cisco Email Security Gateway.
- Configure an ETF source on your Cisco Email Security Gateway.

#### **Usage**

Commit: This command requires a 'commit'.

**Cluster Management**: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command**: This command does not support a batch format.

#### **Example - Enabling the External Threat Feeds Engine**

In the following example, you can use the setup subcommand to enable the ETF engine on your Cisco Email Security Gateway.

```
mail.example.com> threatfeedconfig
Choose the operation you want to perform:
- SETUP - Configure External Threat Feeds.
- {\tt SOURCECONFIG} - {\tt Configure} an external threat feed source.
[]> setup
External Threat Feeds: Enabled
Would you like to use External Threat Feeds? [Y]> yes
Do you want to add a custom header to the message in the case of an External Threat Feeds
Lookup Failure? [N]> ves
Enter the header name:
[X-IronPort-ETF-Lookup-Failure]>
Enter the header content:
[true]>
Choose the operation you want to perform:
- SETUP - Configure External Threat Feeds.
- SOURCECONFIG - Configure an external threat feed source.
[]>
```

# **Example - Adding an External Threat Feed Source**

In the following example, you can use the sourceconfig subcommand to add an ETF source on your Cisco Email Security Gateway.

```
mail.example.com > threatfeedconfig
Choose the operation you want to perform:
- SOURCECONFIG - Configure an external threat feed source.
[]> sourceconfig
Choose the operation you want to perform:
- ADD - Add a Source.
- LIST - List out all the sources.
- DETAIL - Get detailed information about a source.
- EDIT - Edit a source.
- SUSPEND - Suspend a source.
- RESUME - Resume a source.
- DELETE - Delete a source.
```

```
[]> add
Choose the operation you want to perform:
- POLL URL - Add an external threat feed source using the polling path and collection name.
[]> poll url
Enter a name for the external threat feed source:
[]> test source
Enter a description for the external threat feed source (optional):
[]> test source
Enter the host name for the external threat feed source:
[]> hailataxii.com
Enter the polling path for the external threat feed source:
[]> /taxii-data
Enter the collection name for the external threat feed source:
[]> guest.Abuse ch
Enter the polling interval:
The polling interval can be an alphanumeric value that consists of a combination of
minutes, hours, or days followed by 'm', 'h' or 'd' suffixes. The numeric
values that are not entered with a suffix are considered as minutes by default. The
minimum value is 15 minutes.
[60m] > 30
Enter the age of the threat feed:
The value for the age must be between 1 and 365 days. Enter the age of the threat feed
that you want to fetch from the TAXII server. For example, if the age
is 30 days, the appliance fetches all threat feeds whose age is up to 30 days only.
[30]> 20
Enter the time span for each poll segment:
The age of threat feeds for a poll can be split into different poll segments based
on the time span entered.
The minimum time span for a poll segment is 1 day. The maximum time span for a
poll segment is the value entered in the 'Age of Threat Feeds' field.
For example, if the age of the threat feeds is 30 days and the TAXII server has a fixed
limit on
the age of threat feeds (for example, '20 days'), enter the fixed limit, which must be less
the age of the threat feeds configured on your appliance.
[301> 5
Do you want to use HTTPS? [Y]> yes
Enter the polling port:
Do you want to use a proxy server for the threat feed source? [\mathtt{N}] > no
Do you want to configure user credentials for the external threat feed source? [Y]> no
test source successfully added.
```

# threatfeedstatus

- Description, on page 31
- Usage, on page 32
- Example Viewing Current Version of External Threat Feeds Engine, on page 32

# **Description**

The threatfeedstatus command is used to display the current version of the ETF engine.

#### **Usage**

**Commit**: This command does not require a 'commit'.

**Cluster Management**: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command**: This command does not support a batch format.

#### **Example - Viewing Current Version of External Threat Feeds Engine**

In the following example, you can use the threatfeedstatus command to view the current version of the ETF engine.

mail.example.com> threatfeedstatus

Component Version Last Updated

External ThreatFeeds 1.0.0-0000001 2 Jul 2018 04:22 (GMT +00:00)

# threatfeedupdate

- Description, on page 32
- Usage, on page 32
- Example Manually Updating External Threat Feeds Engine, on page 32

#### **Description**

The threatfeedupdate command is used to manually update the ETF engine.

#### **Usage**

**Commit**: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command**: This command does not support a batch format.

# **Example - Manually Updating External Threat Feeds Engine**

In the following example, you can use the threatfeedupdate command to manually update the ETF engine.

mail.example.com > threatfeedupdate

Requesting check for new External Threat Feeds updates.

# **Cluster Management**

This section contains the following CLI commands:

# clusterconfig

#### **Description**

The **clusterconfig** command is used to configure cluster-related settings. If this machine is not part of a cluster, running clusterconfig will give you the option of joining a cluster or creating a new cluster.

The **clusterconfig** command provides additional subcommands:

#### **Non-Cluster Commands**

The following commands are available when you are not in a cluster.

• clusterconfig new <name> — This will create a new cluster with the given name. This machine will be a member of this cluster and a member of a default cluster group called "Main Group".

<name> - The name of the new cluster.

• clusterconfig join [--port=xx] <ip\_of\_remote\_cluster> [<admin\_password>]<groupname> — This will add this machine to a cluster.

where:

<ip\_of\_remote\_cluster> - The IP address of another machine in the cluster.

<admin\_password > - The admin password of the cluster. This should not be

specified if joining over CCS.

<groupname> - The name of the group to join.

<port> - The port of the remote machine to connect to (defaults to 22).

#### clusterconfig prepjoin print

This will display the information needed to prepare the joining of this machine to a cluster over a CCS port.

#### **Cluster Commands**

The following commands are available when you are in a cluster.

- clusterconfig addgroup <groupname> Creates a new cluster group. The group starts off with no members.
- clusterconfig renamegroup <old\_groupname> <new\_groupname> Change the name of a cluster group.
- clusterconfig deletegroup <groupname> [new groupname] Remove a cluster group.

<groupname> - Name of the cluster group to remove.

<new\_groupname> - The cluster group to put machines of the old group into.

 clusterconfig setgroup <machinename> <groupname> — Sets (or changes) which group a machine is a member of.

<machinename > - The name of the machine to set.

<groupname> - The group to set the machine to.

• clusterconfig removemachine <machinename> — Remove a machine from the cluster.

- clusterconfig setname <name> Changes the name of the cluster to the given name.
- clusterconfig list Display all the machines currently in the cluster.
- clusterconfig connstatus Display all the machines currently in the cluster and add routing details for disconnected machines.
- clusterconfig disconnect <machinename> This will temporarily detach a machine from the cluster.
  - <machinename> The name of the machine to disconnect.
- clusterconfig reconnect <machinename> This will restore connections with machines that were detached with the "disconnect" command.
- clusterconfig prepjoin new <serial\_number> <hostname> <user\_key> This will add a new host that is to join the cluster over the CCSport.
  - <serial number> The serial number of the machine being added.
- <hostname> The host name of the machine being added.
- <user\_key> The SSH user key from the "prepjoin print" command from the joining machine.
- clusterconfig prepjoin delete <serial\_number|hostname> This will remove a host that was previously indicated to be added from the "prepjoin new" command. This is only necessary to be used if you later decide not to add the host. When a host is successfully added to the cluster, its prepjoin information is automatically removed.

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to cluster mode.

**Batch Command:** This command does not support a batch format.

#### Example

For an explanation of the clusterconfig command and its uses, see *User Guide for AsyncOS for Cisco Email Security Appliances* .

# **Data Loss Prevention**

This section contains the following CLI commands:

# dlpstatus

Request version information for DLP Engine.

Note

DLP must already be configured via the DLP Global Settings page in the GUI before you can use the **dlpstatus** command.

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is can be used at cluster, group or machine mode.

Batch Command: This command does not support a batch format.

#### **Example**

mail.example.com> dlpstatus

Component Version Last Updated DLP Engine 3.0.2.31 Never updated

# dlpupdate

#### **Description**

Update DLP Engine.

Note

DLP must already be configured via the DLP Global Settings page in the GUI before you can use the **dlpupdate** command.

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is can be used at cluster, group or machine mode.

**Batch Command:** This command supports a batch format.

#### **Batch Format**

The batch format of the dlpupdate command forces an update of the DLP engine even if no changes are detected.

dlpupdate [force]

# Example

mail.example.com> dlpupdate

Checking for available updates. This may take a few seconds..

Could not check for available updates. Please check your Network and Service Updates settings and retry.

Choose the operation you want to perform:

- SETUP - Enable or disable automatic updates for DLP Engine.

```
[]> setup
Automatic updates for DLP are disabled
Do you wish to enable automatic updates for DLP Engine? [N]> y
Choose the operation you want to perform:
- SETUP - Enable or disable automatic updates for DLP Engine.
[]>
```

# **Domain Exception List**

This section contains the following CLI command:

# domainrepconfig

#### **Description**

The domainrepconfig command is used to create a Domain Exception List.

#### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command**: This command supports a batch format. For more details, see the inline help by typing the command: help domainrepconfig.

#### **Example**

In the following example, you can use the domainrepconfig command to create a Domain Exception List.

```
mail.example.com> domainrepconfig

Would you like to configure an exception list for Sender Domain Reputation and External Threat Feeds functionality? [N]> yes

Select the domain only address list to to be used for Sender Domain Reputation and External Threat Feeds functionality

1. addr_list
[1]> 1
```

# **S/MIME Security Services**

## smimeconfig

## **Description**

Configure S/MIME settings such as sending profiles, managing public keys, and so on.

#### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

#### **Examples**

#### **Creating a Sending Profile for Signing and Encryption**

The following example shows how to create a sending profile for signing and encrypting messages using S/MIME.

```
mail.example.com> smimeconfig
Choose the operation you want to perform:
- GATEWAY - Manage S/MIME gateway configuration.
Choose the operation you want to perform:
- VERIFICATION - Manage S/MIME Public Keys.
- SENDING - Manage S/MIME gateway sending profiles.
[]> sending
Choose the operation you want to perform:
- NEW - Create a new S/MIME sending profile.
- EDIT - Edit a S/MIME sending profile.
 RENAME - Rename a S/MIME sending profile.
- DELETE - Delete a S/MIME sending profile.
- IMPORT - Import a S/MIME sending profile from a file
- EXPORT - Export a S/MIME sending profile to a file
- PRINT - Display S/MIME sending profiles.
[]> new
Enter a name for this profile:
> hr sign and encrypt
1. Encrypt
2. Sign
3. Sign/Encrypt
4. Triple
Enter S/MIME mode:
[2] > 3
1. smime signing
Select S/MIME certificate to sign:
[1]>
1. Detached
2. Opaque
Enter S/MIME sign mode:
[1]>
1. Bounce
```

```
2. Drop
3. Split
Enter S/MIME action:
[1] > 3
Choose the operation you want to perform:
- NEW - Create a new S/MIME sending profile.
- EDIT - Edit a S/MIME sending profile.
- RENAME - Rename a S/MIME sending profile.
- DELETE - Delete a S/MIME sending profile.
- \ensuremath{\mathsf{IMPORT}} - \ensuremath{\mathsf{Import}} a \ensuremath{\mathsf{S}}/\ensuremath{\mathsf{MIME}} sending profile from a file
- EXPORT - Export a S/MIME sending profile to a file
- PRINT - Display S/MIME sending profiles.
[]> print
S/MIME Sending Profiles
Name
           Certificate
                             S/MIME Mode Sign Mode Action
           ______
hr sign a smime signing Sign/Encrypt
                                               Detached
                                                              Split
Choose the operation you want to perform:
- NEW - Create a new S/MIME sending profile.
- EDIT - Edit a S/MIME sending profile.
- RENAME - Rename a S/MIME sending profile.
- DELETE - Delete a S/MIME sending profile.
- IMPORT - Import a S/MIME sending profile from a file
- EXPORT - Export a {\ensuremath{\mathsf{S}}}/{\ensuremath{\mathsf{MIME}}} sending profile to a file
- PRINT - Display S/MIME sending profiles.
```

#### **Adding a Public Key for Encryption**

The following example shows how to add the public key of the recipient's S/MIME certificate to the appliance for encrypting messages.

```
mail.example.com> smimeconfig
Choose the operation you want to perform:
- GATEWAY - Manage S/MIME gateway configuration.
[]> gateway
Choose the operation you want to perform:
- VERIFICATION - Manage S/MIME Public Keys.
- SENDING - Manage S/MIME gateway sending profiles.
[]> verification
Choose the operation you want to perform:
- NEW - Create a new S/MIME Public Key.
- IMPORT - Import the list of S/MIME Public Keys from a file.
[]> new
Enter a name for this profile:
> hr signing
1. Import
2. Paste
Choose one of the options for the certificate introducing:
[21>
Paste public certificate in PEM format (end with '.'):
----BEGIN CERTIFICATE----
\verb|MIIDdDCCAlygAwIBAgIBDTANBgkqhkiG9w0BAQUFADCBljELMAkGA1UEBhMCSU4x| \\
CzAJBgNVBAg...
----END CERTIFICATE----
C=IN,ST=KA,L=BN,O=Cisco,OU=stg,CN=cert for enc,emailAddress=admin@example.com
Choose the operation you want to perform:
- NEW - Create a new S/MIME Public Key.
- EDIT - Edit a S/MIME Public Key.
- RENAME - Rename a S/MIME Public Key.
- DELETE - Delete a S/MIME Public Key.
- IMPORT - Import the list of S/MIME Public Keys from a file.
```

# **Domain Keys**

This section contains the following CLI commands:

## domainkeysconfig

### **Description**

Configure DomainKeys/DKIM support.

### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

Note

For enhanced security, if encryption of sensitive data in the appliance is enabled in FIPS mode, you will not be able view the private key. If you intend to edit the private key, you can enter an existing private key or generate a new private key.

## **Batch Format - Signing Profiles**

The batch format of the domainkeysconfig command can be used to create, edit, or delete signing profiles

• Adding a DomainKeys/DKIM signing profile:

domainkeysconfig profiles signing new <name> <type> <domain> <selector> <user-list> [options]

#### **Table 1: domainkeysconfig New Signing Profile Arguments**

Argument	Description
<name></name>	Name of domain profile.
<type></type>	Type of domain. Can be dk or dkim.
<domain></domain>	Domain field of domain profile. This forms the d tag of the Domain-Keys signature.
<selector></selector>	Selector field of domain profile. This forms the s tag of the Domain-Keys signature.

Argument	Description		
<user-list></user-list>	Comma separated list of domain profile users. Users are used to match against email addresses to determine if a specific domain profile should be used to sign an email. Use the special keyword all to match all domain users.		
[options]			
key_name	The name of the private key that will be used for signing.		
canon	The canonicalization algorithm to use when signing by DK. Currently supported algorithms are simple and nofws. Default is nofws.		
body_canon	The body canonicalization algorithm of to use when signing by DKIM. Currently supported algorithms are simple and relaxed . Default is simple .		
header_canon	The headers canonicalization algorithm of to use when signing by DKIM. Currently supported algorithms are simple and relaxed . Default is simple .		
body_length	Number of bytes of canonicalized body that are used to calculate the signature. Is used only in DKIM profiles. If used this value becomes I tag of the signature. By default it is not used.		
headers_select	Detrmines how to select headers for signing. Is used only in DKIM profiles. Can be one of all , standard , standard_and_custom . all means to sign all non-repetitive headers. "standard" means to sign pedefined set of well known headers such as Subject, From, To, Sender, MIME heades etc. standard_and_custom means to sign well known headers and user-defined set of headers. Default is standard .		
custom_headers	User-defined set of headers to sign. Is used only in DKIM profiles if headers_select is standard_and_custom . Default is empty set.		
i_tag	Determines whether to include the i tag into the signature. Possible values are yes or no . Default is yes .		
agent_identity	The identity of the user or agent on behalf of which this message is signed. The syntax is a standard email address where the local-part may be omitted. Domain part of this address should be a sub-domain of or equal to the <domain> . This option is only applicable ifi_tag value is set to yes . Default is an empty local-part followed by an @ and by the <domain> .</domain></domain>		
q_tag	Determines whether to include the q tag into the signature. Possible values are yes or no . Default is yes .		
t_tag	Determines whether to include the t tag into the signature. Possible values are yes or no . Default is yes .		
x_tag	Determines whether to include the x tag into the signature. Possible values are yes or no . Default is yes .		
expiration_time	Number of seconds before signature is expired. Is used only in DKIM profiles. This value becomes a difference of x and t tags of the signature. This option is only applicable ifx_tag value is set to yes. Default is 31536000 seconds (one year).		

Argument	Description
z_tag	Determines whether to include the z tag into the signature. Possible values are yes or no . Default is no .

• Editing a signing profile:

domainkeysconfig profiles signing edit <name> [signing-profile-options]

#### Signing profile options:

- rename <name>
- domain <domain>
- selector <selector>
- canonicalization <canon>
- canonicalization <header canon> <body canon>
- key <key\_name>
- bodylength <body length>
- headerselect <header\_select>
- customheaders < custom\_headers>
- itag <i\_tag> [<agent\_identity>]
- qtag <q tag>
- ttag <t tag>
- xtag <x\_tag> [<expiration\_time>]
- ztag <z\_tag>
- new <user-list>
- delete <user-list>
- print
- clear
- Delete a signing profile:

domainkeysconfig profiles signing delete <name>

• Show a list of signing profiles:

domainkeysconfig profiles signing list

• Print the details of a signing profile:

domainkeysconfig profiles signing print <name>

• Test a signing profile:

domainkeysconfig profiles signing test <name>

• Import a local copy of your signing profiles:

domainkeysconfig profiles signing import <filename>

• Export a copy of your signing profile from the appliance:

domainkeysconfig profiles signing export <filename

• Delete all the signing profiles from the appliance:

domainkeysconfig profiles signing clear

#### **Batch Format - Verification Profiles**

• Create a new DKIM verification profile:

domainkeysconfig profiles verification new <name> <verification-profile-options>

#### **Table 2: domainkeysconfig Verification Profile Options**

Argument	Description		
name	The name of DKIM verification profile.		
min_key_size	The smallest key to be accepted. Possible key-length values (in bits) are 512, 768, 1024, 1536 and 2048 . Default is 512 .		
max_key_size	The largest key to be accepted. Possible key-length values (in bits) are 512, 768, 1024, 1536 and 2048. Default is 2048.		
max_signatures_num	A maximum number of signatures in the message to verify. Possible value is any positive number. Default is 5.		
key_query_timeout	A number of seconds before the key query is timed out. Possible value is any positive number. Default is 10.		
max_systemtime_divergence	A number of seconds to tolerate wall clock asynchronization between sender and verifier. Possible value is any positive number. Default is 60.		
use_body_length	Whether to use a body length parameter. Possible values are yes or no . Default is yes .		
tempfail_action	The SMTP action should be taken in case of temporary failure. Possible values are accept or reject. Default is accept.		
tempfail_response_code	The SMTP response code for rejected message in case of temporary failure. Possible value is number in 4XX format. Default is 451.		
tempfail_response_text	The SMTP response text for rejected message in case of temporary failure. Default is #4.7.5 Unable to verify signature - key server unavailable.		

Argument	Description		
permfail_action	The SMTP action should be taken in case of permanent failure. Possible values are accept or reject . Default is accept .		
permfail_response_code	The SMTP response code for rejected message in case of permanent failure. Possible value is number in 5XX format. Default is 550.		
permfail_response_text	The SMTP response text for rejected message in case of permanent failure. Default is #5.7.5 DKIM unauthenticated mail is prohibited.		

• Edit a verification profile:

domainkeysconfig profiles verification edit <name> <verification-profile-options>

• Delete a verification profile:

domainkeysconfig profiles verification delete <name>

• Print details of an existing verification profile:

domainkeysconfig profiles verification print <name>

• Display a list of existing verification profiles:

domainkeysconfig profiles verification list

• Import a file of verification profiles from a local machine:

domainkeysconfig profiles verification import <filename>

• Export the verification profiles from the appliance:

domainkeysconfig profiles verification export <filename>

• Delete all existing verification profiles from the appliance:

domainkeysconfig profiles verification clear

## **Batch Format - Signing Keys**

• Create a new signing key:

domainkeysconfig keys new <key\_name> <key-options>

#### Table 3: domainkeysconfig Signing Keys Options

Argument	Description
generate_key	Generate a private key. Possible key-length values (in bits) are 512, 768, 1024, 1536, and 2048.
use_key	Use supplied private key.
public_key	Flag to derive and print to the screen a matching public key for the specified private key. Ifgenerate_key is specified first, a new private key is generated first, followed by the display of a matching public key.

• Edit a signing key:

domainkeysconfig keys edit <key\_name> key <key-options>

• Rename an existing signing key:

domainkeysconfig keys edit <key\_name> rename <key\_name>

• To specify a public key:

domainkeysconfig keys publickey <key\_name>

• Delete a key:

domainkeysconfig keys delete <key\_name>

• Display a list of all signing keys:

domainkeysconfig keys list

• Display all information about a specify signing key:

domainkeysconfig keys print <key\_name>

• Import signing keys from a local machine:

domainkeysconfig keys import <filename>

• Export signing keys from the appliance:

domainkeysconfig keys export <filename>

• Delete all signing keys on the appliance:

domainkeysconfig keys clear

#### **Batch Format - Search for a Key or Profile**

• Search for a profile signing key:

```
domainkeysconfig search <search_text>
```

#### **Batch Format - Global Settings**

• Modify global settings for Domain Keys/DKIM on your appliance:

```
domainkeysconfig setup <setup_options>
```

The option available is:

• --sign\_generated\_msgs - Specify whether to sign system-generated messages. Possible values are yes or no .

#### **Example: Configuring Domain Keys via the CLI**

Use the domainkeysconfig command in the CLI to configure Domain Keys on your appliance.

The domainkeysconfig command has all of the features of the Mail Policies -> Domain Keys page. It also provides the ability to generate a sample Domain Keys DNS TXT record. For more information about generating sample Domain Keys DNS TXT records, see Creating a Sample Domain Keys DNS TXT Record, on page 48.

In this example, a key is generated, and a domain profile is created:

```
mail3.example.com> domainkeysconfig
Number of DK/DKIM Signing Profiles: 0
Number of Signing Keys: 0
Number of DKIM Verification Profiles: 1
Sign System-Generated Messages: Yes
Choose the operation you want to perform:
- PROFILES - Manage domain profiles.
- KEYS - Manage signing keys.
- SETUP - Change global settings.
- SEARCH - Search for domain profile or key.
[]> keys
No signing keys are defined.
Choose the operation you want to perform:
- NEW - Create a new signing key.
- IMPORT - Import signing keys from a file.
[]> new
Enter a name for this signing key:
[]> testkey
1. Generate a private key
2. Enter an existing key
[1]>
Enter the size (in bits) of this signing key:
1. 512
```

```
2.768
3. 1024
4. 1536
5. 2048
[31>
New key "testkey" created.
There are currently 1 signing keys defined.
Choose the operation you want to perform:
- NEW - Create a new signing key.
- EDIT - Modify a signing key.
- PUBLICKEY - Create a publickey from a signing key.
- DELETE - Delete a signing key.
- PRINT - Display signing keys.
- LIST - List signing keys.
- IMPORT - Import signing keys from a file.
- EXPORT - Export signing keys to a file.
- CLEAR - Clear all signing keys.
[]>
Number of DK/DKIM Signing Profiles: 0
Number of Signing Keys: 1
Number of DKIM Verification Profiles: 1
Sign System-Generated Messages: Yes
Choose the operation you want to perform:
- PROFILES - Manage domain profiles.
- KEYS - Manage signing keys.
- SETUP - Change global settings.
- SEARCH - Search for domain profile or key.
[]> profiles
Choose the operation you want to perform:
- SIGNING - Manage signing profiles.
- VERIFICATION - Manage verification profiles.
[]> signing
No domain profiles are defined.
Choose the operation you want to perform:
- NEW - Create a new domain profile.
- IMPORT - Import domain profiles from a file.
[]> new
Enter a name for this domain profile:
[]> Example
Enter type of domain profile:
1. dk
2. dkim
[2]>
The domain field forms the basis of the public-key query. The value in
this field MUST match the domain of the sending email address or MUST
be one of the parent domains of the sending email address. This value
becomes the "d" tag of the Domain-Keys signature.
Enter the domain name of the signing domain:
[]> example.com
Selectors are arbitrary names below the " domainkey." namespace. A
selector value and length MUST be legal in the DNS namespace and in
email headers with the additional provision that they cannot contain a
semicolon. This value becomes the "s" tag of the DomainKeys
Signature.
Enter selector:
[]> test
The private key which is to be used to sign messages must be entered.
A corresponding public key must be published in the DNS following the
form described in the DomainKeys documentation. If a key is not
immediately available, a key can be entered at a later time.
Select the key-association method:
1. Create new key
2. Paste in key
3. Enter key at later time
```

```
4. Select existing key
[1]> 4
Enter the name or number of a signing key.
1. testkev
[1]>
The canonicalization algorithm is the method by which the headers and
content are prepared for presentation to the signing algorithm.
Possible choices are "simple" and "relaxed".
Select canonicalization algorithm for body:
1. simple
2. relaxed
[1] > 1
How would you like to sign headers:
1. Sign all existing, non-repeatable headers (except Return-Path header).
2. Sign "well-known" headers (Date, Subject, From, To, Cc, Reply-To, Message-ID, Sender,
MIME headers).
3. Sign "well-known" headers plus a custom list of headers.
[2.1>
Body length is a number of bytes of the message body to sign.
This value becomes the "l" tag of the signature.
Which body length option would you like to use?
1. Whole body implied. No further message modification is possible.
2. Whole body auto-determined. Appending content is possible.
3. Specify a body length.
[1]>
Would you like to fine-tune which tags should be used in the
DKIM Signature? (yes/no) [N]>
Finish by entering profile users. The following types of entries are
allowed:
- Email address entries such as "joe@example.com".
- Domain entries such as "example.com".
- Partial domain entries such as ".example.com". For example, a partial
  domain of ".example.com" will match "sales.example.com".
                                                             This
  sort of entry will not match the root domain ("example.com").
- Leave blank to match all domain users.
Enter user for this signing profile:
[]> sales.example.com

# **DMARC Verification**

This section contains the following CLI commands:

## dmarcconfig

#### **Description**

Configure DMARC settings.

### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

#### **Batch Format - DMARC Verification Profiles**

The batch format of the dmarcconfig can be used to create, edit, or delete verification profiles and modify global settings.

#### **Add a DMARC Verification Profile**

dmarcconfig profiles new <name> [options]

Argument	Description
<name></name>	Name of the DMARC profile.
[options]	
rejectpolicy_action	The message action that AsyncOS must take when the policy in DMARC record is reject. Possible values are "reject", "quarantine", or "none."

Argument	Description		
rejectpolicy_response_code	The SMTP response code for rejected messages. The default value is 550.		
rejectpolicy_response_text	The SMTP response text for rejected messages. The default value is "#5.7.1 DMARC unauthenticated mail is prohibited."		
rejectpolicy_quarantine	The quarantine for messages that fail DMARC verification.		
quarantinepolicy_action	The message action that AsyncOS must take when the policy in DMARC record is quarantine. Possible values are "quarantine" or "none."		
quarantinepolicy_quarantine	The quarantine for messages that fail DMARC verification.		
tempfail_action	The message action that AsyncOS must take on the messages that result in temporary failure during DMARC verification. Possible values are "accept" or "reject."		
tempfail_response_code	The SMTP response code for rejected messages in case of temporary failure. The default value is 451.		
tempfail_response_text	The SMTP response text for rejected messages in case of temporary failure. The default value is "#4.7.1 Unable to perform DMARC verification."		
permfail_action	The message action that AsyncOS must take on the messages that result in permanent failure during DMARC verification. Possible values are "accept" or "reject."		
permfail_response_code	The SMTP response code for rejected messages in case of permanent failure. The default value is 550.		
permfail_response_text	The SMTP response text for rejected messages in case of permanent failure. The default value is "#5.7.1 DMARC verification failed."		

#### **Edit a DMARC Verification Profile**

dmarcconfig profiles edit <name> [options]

#### **Delete a DMARC Verification Profile**

dmarcconfig profiles delete <name>

#### **Delete all the DMARC Verification Profiles**

dmarcconfig profiles clear

#### View the Details of a DMARC Verification Profile

dmarcconfig profiles print <name>

#### **Export DMARC Verification Profiles**

dmarcconfig profiles export <filename>

#### **Import DMARC Verification Profiles**

dmarcconfig profiles import <filename>

#### **Change Global Settings**

dmarcconfig setup [options]

Options	Description		
report_schedule	The time when you want AsyncOS to generate DMARC aggregate reports.		
error_reports	Send delivery error reports to the domain owners if the DMARC aggregate report size exceeds 10 MB or the size specified in the RUA tag of DMARC record.		
org_name	The entity generating DMARC aggregate reports. This must be a domain name.		
contact_info	Additional contact information, for example, details of your organization's customer support, if the domain owners who receive DMARC aggregate reports want to contact the entity that generated the report.		
copy_reports	Send copy of all the DMARC aggregate reports to specific users, for example, internal users who perform analysis on the aggregate reports. Enter an email address or multiple addresses separated by commas.		
bypass_addresslist	Skip DMARC verification of messages from specific senders (address list).		
	Note You can choose only address lists created with full email addresses.		
bypass_headers	Skip DMARC verification of messages that contain specific header field names. For example, use this option to skip DMARC verification of messages from mailing lists and trusted forwarders. Enter a header or multiple headers separated by commas.		

## **Example**

The following example shows how to setup a DMARC verification profile and edit the global settings of DMARC verification profiles.

```
mail.example.com> dmarcconfig
Number of DMARC Verification Profiles: 1
Daily report generation time is: 00:00
Error reports enabled: No
Reports sent on behalf of:
Contact details for reports:
Send a copy of aggregate reports to: None Specified
Bypass DMARC verification for senders from addresslist: None Specified
Bypass DMARC verification for messages with header fields: None Specified
```

```
Choose the operation you want to perform:
- PROFILES - Manage DMARC verification profiles.
- SETUP - Change global settings.
[]> profiles
There are currently 1 DMARC verification profiles defined.
Choose the operation you want to perform:
- NEW - Create a new DMARC verification profile.
- EDIT - Modify a DMARC verification profile.
- DELETE - Delete a DMARC verification profile.
- PRINT - Display DMARC verification profiles.
- IMPORT - Import DMARC verification profiles from a file.
- EXPORT - Export DMARC verification profiles to a file.
- CLEAR - Clear all DMARC verification profiles.
[]> new
Enter the name of the new DMARC verification profile:
[]> dmarc_ver_profile 1
Select the message action when the policy in DMARC record is reject:
1. No Action
2. Quarantine the message
3. Reject the message
[31 > 1]
Select the message action when the policy in DMARC record is quarantine:
1. No Action
2. Quarantine the message
[21> 2
Select the quarantine for messages that fail DMARC verification (when the DMARC policy is
quarantine).
1. Policy

```

## **DNS**

This section contains the following CLI commands:

## dig

## **Description**

Look up a record on a DNS server

### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

#### **Batch Format**

The batch format of the dig command can be used to perform all the functions of the traditional CLI command.

• Look up a record on a DNS server

• Do a reverse lookup for given IP address on a DNS server

These are the options available for the dig command's batch format

```
-s <source_ip> Specify the source IP address.

-t Make query over TCP.

-u Make query over UDP (default).

dns_ip - Query the DNS server at this IP address.

qtype - Query type: A, PTR, CNAME, MX, SOA, NS, TXT.

hostname - Record that user want to look up.

reverse_ip - Reverse lookup IP address.

dns_ip - Query the DNS server at this IP address.
```

#### **Example**

The following example explicitly specifies a DNS server for the lookup.

```
mail.com> dig @111.111.111.111 example.com MX
; <<>> DiG 9.4.3-P2 <<>> @111.111.111.111 example.com MX
; (1 server found)
;; global options: printcmd
;; Got answer:

## dnsconfig

#### **Description**

Configure DNS setup

### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

#### **Batch Format**

The batch format of the dnsconfig command can be used to perform all the functions of the traditional CLI command.

• Configuring DNS to use a local nameserver cache:

```
dnsconfig parent new <ns_ip> <priority>
```

#### Command arguments:

- <ns ip> The IP address of the nameserver. Separate multiple IP addresses with commas.
- <pri>riority> The priority for this entry.
- Deleting the local nameserver cache:

```
dnsconfig parent delete <ns_ip>
```

• Configuring alternate DNS caches to use for specific domains:

```
dnsconfig alt new <domains> <ns_ip>
```

Note

Cannot be used when using Internet root nameservers.

#### Command arguments:

- <ns\_ip> The IP address of the nameserver. Separate multiple IP addresses with commas.
- <domains> A comma separated list of domains.
- Deleting the alternate DNS cache for a specific domain:

• Configuring DNS to use the Internet root nameservers:

```
dnsconfig roots new <ns_domain> <ns_name> <ns_ip>
```

#### Nameserver arguments:

- <ns domain> The domain to override.
- <ns name> The name of the nameserver.
- <ns ip> The IP address of the nameserver.

Note

You can override certain domains by specifying an alternate name server for that domain.

• Deleting nameservers:

```
dnsconfig roots delete <ns_domain> [ns_name]
```

Note

When deleting, if you do not specify an ns name, then all nameservers for that domain will be removed.

• Clearing all DNS settings and automatically configuring the system to use the Internet root servers:

```
dnsconfig roots
```

Displaying the current DNS settings.

```
dnsconfig print
```

#### **Example**

Each user-specified DNS server requires the following information:

- Hostname
- IP address
- Domain authoritative for (alternate servers only)

Four subcommands are available within the **dnsconfig** command:

Table 4: Subcommands for dnsconfig Command

Syntax	Description
new	Add a new alternate DNS server to use for specific domains or local DNS server.
delete	Remove an alternate server or local DNS server.
edit	Modify an alternate server or local DNS server.
setup	Switch between Internet root DNS servers or local DNS servers.

```
mail3.example.com> dnsconfig
Currently using the Internet root DNS servers.
Alternate authoritative DNS servers:
1. com: dns.example.com (10.1.10.9)
Choose the operation you want to perform:
- NEW - Add a new server.
- EDIT - Edit a server.
- DELETE - Remove a server.
- SETUP - Configure general settings.
[]> setup
Do you want the Gateway to use the Internet's root DNS servers or would you like
it to use your own DNS servers?
1. Use Internet root DNS servers
2. Use own DNS cache servers
[1]> 1
Choose the IP interface for DNS traffic.
2. Management (10.92.149.70/24: mail3.example.com)
[1]>
Enter the number of seconds to wait before timing out reverse DNS lookups.
[20]>
Enter the minimum TTL in seconds for DNS cache.
[1800]>
Currently using the Internet root DNS servers.
Alternate authoritative DNS servers:
1. com: dns.example.com (10.1.10.9)
Choose the operation you want to perform:
- NEW - Add a new server.
- EDIT - Edit a server.
- DELETE - Remove a server.
- SETUP - Configure general settings.
[]>
```

#### **Adding an Alternate DNS Server for Specific Domains**

You can configure the appliance to use the Internet root servers for all DNS queries except specific local domains.

```
mail3.example.com> dnsconfig
Currently using the Internet root DNS servers.
No alternate authoritative servers configured.
Choose the operation you want to perform:
- NEW - Add a new server.
- SETUP - Configure general settings.
[] > new
Please enter the domain this server is authoritative for. (Ex: "com").
[]> example.com
Please enter the fully qualified hostname of the DNS server for the domain "example.com".
(Ex: "dns.example.com").
[]> dns.example.com
Please enter the IP address of dns.example.com.
[]> 10.1.10.9
Currently using the Internet root DNS servers.
Alternate authoritative DNS servers:
1. com: dns.example.com (10.1.10.9)
Choose the operation you want to perform:
- NEW - Add a new server.
- EDIT - Edit a server.
- DELETE - Remove a server.
- SETUP - Configure general settings.
```

#### **Using Your Own DNS Cache Servers**

You can configure the appliance to use your own DNS cache server.

```
mail3.example.com> dnsconfig
Currently using the Internet root DNS servers.
Alternate authoritative DNS servers:
1. com: dns.example.com (10.1.10.9)
Choose the operation you want to perform:
- NEW - Add a new server.
- EDIT - Edit a server.
- DELETE - Remove a server.
- SETUP - Configure general settings.
[]> setup
Do you want the Gateway to use the Internet's root DNS servers or would you like
it to use your own DNS servers?
1. Use Internet root DNS servers
2. Use own DNS cache servers
[1] > 2
Please enter the IP address of your DNS server.
Separate multiple IPs with commas.
[]> 10.10.200.03
Please enter the priority for 10.10.200.3.
A value of 0 has the highest priority.
The IP will be chosen at random if they have the same priority.
[0]> 1
Choose the IP interface for DNS traffic.
1. Auto
2. Management (192.168.42.42/24)
3. PrivateNet (192.168.1.1/24: mail3.example.com)
4. PublicNet (192.168.2.1/24: mail3.example.com)
Enter the number of seconds to wait before timing out reverse DNS lookups.
```

Currently using the local DNS cache servers:
1. Priority: 1 10.10.200.3
Choose the operation you want to perform:
- NEW - Add a new server.
- EDIT - Edit a server.
- DELETE - Remove a server.
- SETUP - Configure general settings.
[1>
```

### dnsflush

### **Description**

Clear all entries from the DNS cache.

#### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

### **Example**

```
mail3.example.com> dnsflush
Are you sure you want to clear out the DNS cache? [N]> Y
```

# dnshostprefs

### **Description**

Configure IPv4/IPv6 DNS preferences

### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

```
mail3.example.com> dnshostprefs
Choose the operation you want to perform:
- NEW - Add new domain override.
- SETDEFAULT - Set the default behavior.
[]> new
Enter the domain you wish to configure.
[]> example.com
How should the appliance sort IP addresses for this domain?
```

```
1. Prefer IPv4
2. Prefer IPv6
3. Require IPv4
4. Require IPv6
[21> 3
Choose the operation you want to perform:
- NEW - Add new domain override.
- SETDEFAULT - Set the default behavior.
[]> setdefault
How should the appliance sort IP addresses?
1. Prefer IPv4
2. Prefer IPv6
3. Require IPv4
4. Require IPv6
[2] > 1
Choose the operation you want to perform:
- NEW - Add new domain override.
- SETDEFAULT - Set the default behavior.
```

## dnslistconfig

#### **Description**

Configure DNS List services support

### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format

```
mail3.example.com> dnslistconfig
Current DNS List Settings:
Negative Response TTL: 1800 seconds
DNS List Query Timeout: 3 seconds
Choose the operation you want to perform:
- SETUP - Configure general settings.
[]> setup
Enter the cache TTL for negative responses in seconds:
[1800]> 1200
Enter the query timeout in seconds:
[3]>
Settings updated.
Current DNS List Settings:
Negative Response TTL: 1200 seconds
DNS List Query Timeout: 3 seconds
Choose the operation you want to perform:
- SETUP - Configure general settings.
[]>
```

### dnslisttest

## **Description**

Test a DNS lookup for a DNS-based list service.

### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format

### **Example**

```
mail3.example.com> dnslisttest
Enter the query server name:
[]> mail4.example.com
Enter the test IP address to query for:
[127.0.0.2]> 10.10.1.11
Querying: 10.10.1.11.mail4.example.com
Result: MATCHED
```

### dnsstatus

### **Description**

Display DNS statistics.

### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

mail3.example.com> dnsstatus				
Status as of: Mon Apr 18	3 10:58:07 2005 PDT			
Counters:	Reset	Uptime	Lifetime	
DNS Requests	1,115	1,115	1,115	
Network Requests	186	186	186	
Cache Hits	1,300	1,300	1,300	
Cache Misses	1	1	1	
Cache Exceptions	0	0	0	
Cache Expired	185	185	185	

# **Enhanced User Experience using How-Tos Widget**

This section contains the following CLI commands:

## howtoupdate

#### **Description**

The howtoupdate command is used to manually update the How-Tos component.

### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command**: This command supports a batch format. For more details, see the inline help by typing the command: help howtoupdate.

#### **Example**

In the following example, you can use the howtoupdate command to manually update the How-Tos component.

mail.example.com > howtoupdate

Requesting update of How-Tos component

#### **howtostatus**

### **Description**

The howtostatus command is used to display the current version of the How-Tos component.

### Usage

**Commit**: This command does not require a 'commit'.

**Cluster Management**: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command**: This command supports a batch format. For more details, see the inline help by typing the command: help howtostatus.

## **Example**

In the following example, you can use the howtostatus command to view the current version of the How-Tos component.

mail.example.com > howtostatus

Component Version Last Updated

How-Tos 1.0 4 Jul 2018 04:22 (GMT +00:00)

# **General Management/Administration/Troubleshooting**

This section contains the following CLI commands:

## addressconfig

#### **Description**

The addressconfig command is used to configure the From: Address header. You can specify the display, user, and domain names of the From: address. You can also choose to use the Virtual Gateway domain for the domain name. Use the addressconfig command for mail generated by AsyncOS for the following circumstances:

- · Anti-virus notifications
- Bounces
- DMARC feedback reports
- Notifications (notify() and notify-copy() filter actions)
- Quarantine Messages (and "Send Copy" in quarantine management)
- Reports
- · All other messages

In the following example, the From: Address for notifications is changed from: Mail Delivery System [MAILER-DAEMON@domain] (the default) to Notifications [Notification@example.com]

### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

```
mail3.example.com> addressconfig
Current anti-virus from: "Mail Delivery System" <MAILER-DAEMON@domain>
Current bounce from: "Mail Delivery System" <MAILER-DAEMON@domain>
Current notify from: "Mail Delivery System" <MAILER-DAEMON@domain>
Current quarantine from: "Mail Delivery System" <MAILER-DAEMON@domain>
Current DMARC reports from: "DMARC Feedback" <MAILER-DAEMON@domain>
Current all other messages from: "Mail Delivery System" <MAILER-DAEMON@domain>
Choose the operation you want to perform:
- AVFROM - Edit the anti-virus from address.
- BOUNCEFROM - Edit the bounce from address.
- NOTIFYFROM - Edit the notify from address.
- QUARANTINEFROM - Edit the quarantine bcc from address.
- DMARCFROM - Edit the DMARC reports from address.
- \mbox{OTHERFROM} - \mbox{Edit} the all other messages from address.
[] > notifyfrom
Please enter the display name portion of the "notify from" address
["Mail Delivery System"]> Notifications
Please enter the user name portion of the "notify from" address
[MAILER-DAEMON] > Notification
```

```
Do you want the virtual gateway domain used for the domain? [Y]> n
Please enter the domain name portion of the "notify from" address
[]> example.com
Current anti-virus from: "Mail Delivery System" <MAILER-DAEMON@domain>
{\tt Current\ bounce\ from:\ "Mail\ Delivery\ System"\ {\tt <MAILER-DAEMON@domain>}}
Current notify from: Notifications <Notification@example.com>
Current quarantine from: "Mail Delivery System" <MAILER-DAEMON@domain>
Current DMARC reports from: "DMARC Feedback" <MAILER-DAEMON@domain>
Current all other messages from: "Mail Delivery System" <MAILER-DAEMON@domain>
Choose the operation you want to perform:
- AVFROM - Edit the anti-virus from address.
- BOUNCEFROM - Edit the bounce from address.
- NOTIFYFROM - Edit the notify from address.
- QUARANTINEFROM - Edit the quarantine bcc from address.
- DMARCFROM - Edit the DMARC reports from address.
- \mbox{OTHERFROM} - \mbox{Edit} the all other messages from address.
```

## adminaccessconfig

#### **Description**

Use the adminaccessconfig command to configure:

- Login message (banner) for the administrator.
- IP-based access for appliance administrative interface.
- Web interface Cross-Site Request Forgeries protection.
- Option to use host header in HTTP requests.
- Web interface and CLI session inactivity timeout.
- Maximum HTTP header size.

### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

#### **Batch Format**

The batch format of the adminaccessconfig command can be used to perform all the functions of the traditional CLI command.

Select whether to allow access for all IP addresses or limit access to specific IP address/subnet/range

```
adminaccessconfig ipaccess <all/restrict/proxyonly/proxy>
```

Adding a new IP address/subnet/range

```
adminaccessconfig ipaccess new <address>
```

• Editing an existing IP address/subnet/range

adminaccessconfig ipaccess edit <oldaddress> <newaddress>

• Deleting an existing IP address/subnet/range

adminaccessconfig ipaccess delete <address>

• Printing a list of the IP addresses/subnets/ranges

adminaccessconfig ipaccess print

• Deleting all existing IP addresses/subnets/ranges

adminaccessconfig ipaccess clear

• Printing the login banner

adminaccessconfig banner print

• Importing a login banner from a file on the appliance

adminaccessconfig banner import <filename>

• Deleting an existing login banner

adminaccessconfig banner clear

• Printing the welcome banner

adminaccessconfig welcome print

• Importing a welcome banner from a file on the appliance

adminaccessconfig welcome import <filename>

• Deleting an existing welcome banner

adminaccessconfig welcome clear

• Exporting a welcome banner

adminaccessconfig welcome export <filename>

Add an allowed proxy IP address

adminaccessconfig ipaccess proxylist new <address>

Edit an allowed proxy IP address

```
adminaccessconfig ipaccess proxylist edit <oldaddress> <newaddress>
```

Delete an allowed proxy IP address

```
adminaccessconfig ipaccess proxylist delete <address>
```

Delete all existing allowed proxy IP addresses

```
adminaccessconfig ipaccess proxylist clear
```

• Configure the header name that contains origin IP address

```
adminaccessconfig ipaccess proxy-header <header name>
```

• Enable or disable web interface Cross-Site Request Forgeries protection

```
adminaccessconfig csrf <enable|disable>
```

• Check whether web interface Cross-Site Request Forgeries protection is enabled

```
adminaccessconfig csrf print
```

• Configure web interface session timeout

```
adminaccessconfig timeout gui <value>
```

• Configure CLI session timeout

```
adminaccessconfig timeout gui <value>
```

### **Example - Configuring Network Access List**

You can control from which IP addresses users access the Email Security appliance. Users can access the appliance from any machine with an IP address from the access list you define. When creating the network access list, you can specify IP addresses, subnets, or CIDR addresses.

AsyncOS displays a warning if you do not include the IP address of your current machine in the network access list. If your current machine's IP address is not in the list, it will not be able to access the appliance after you commit your changes.

In the following example, network access to the appliance is restricted to two sets of IP addresses:

```
mail.example.com> adminaccessconfig
Choose the operation you want to perform:
    BANNER - Configure login message (banner) for appliance administrator login.
    WELCOME - Configure welcome message (post login message) for appliance administrator
```

```
login.
- IPACCESS - Configure IP-based access for appliance administrative interface.
- CSRF - Configure web UI Cross-Site Request Forgeries protection.
- HOSTHEADER - Configure option to use host header in HTTP requests.
- XSS - Configure Cross-Site Scripting Attack protection.
- TIMEOUT - Configure GUI and CLI session inactivity timeout.
- MAXHTTPHEADERFIELDSIZE - Configure maximum HTTP header field size.
- HOW-TOS - Configure How-Tos feature.
[]> ipaccess
Current mode: Allow All.
Please select the mode:
- ALL - All IP addresses will be allowed to access the administrative interface.
- RESTRICT - Specify IP addresses/Subnets/Ranges to be allowed access.
- PROXYONLY - Specify IP addresses/Subnets/Ranges to be allowed access through proxy.
- PROXY - Specify IP addresses/Subnets/Ranges to be allowed access through proxy or directly.
[]> restrict
List of allowed IP addresses/Subnets/Ranges:
Choose the operation you want to perform:
- NEW - Add a new IP address/subnet/range.
Please enter IP address, subnet or range.
[]> 192.168.1.2-100
List of allowed IP addresses/Subnets/Ranges:
1. 192.168.1.2-100
Choose the operation you want to perform:
- NEW - Add a new IP address/subnet/range.
- EDIT - Modify an existing entry.
- DELETE - Remove an existing entry.
- CLEAR - Remove all the entries.
[]> new
Please enter IP address, subnet or range.
[]> 192.168.255.12
List of allowed IP addresses/Subnets/Ranges:
1. 192.168.1.2-100
2. 192.168.255.12
Choose the operation you want to perform:
- NEW - Add a new IP address/subnet/range.
- EDIT - Modify an existing entry.
- DELETE - Remove an existing entry.
- CLEAR - Remove all the entries.
[]>
Warning: The host you are currently using [72.163.202.175] is not included in the User
Access list. Excluding it will prevent your
host from connecting to the administrative interface. Are you sure you want to continue?
[N] > Y
Current mode: Restrict.
Please select the mode:
- ALL - All IP addresses will be allowed to access the administrative interface.
- RESTRICT - Specify IP addresses/Subnets/Ranges to be allowed access.
- PROXYONLY - Specify IP addresses/Subnets/Ranges to be allowed access through proxy.
- PROXY - Specify IP addresses/Subnets/Ranges to be allowed access through proxy or directly.
[]>
```

### **Example - Configuring Login Banner**

You can configure the Email Security appliance to display a message called a "login banner" when a user attempts to log into the appliance through SSH, Telnet, FTP, or Web UI. The login banner is customizable text that appears above the login prompt in the CLI and to the right of the login prompt in the GUI. You can use the login banner to display internal security information or best practice instructions for the appliance. For example, you can create a simple note that saying that unauthorized use of the appliance is prohibited or a detailed warning concerning the organization's right to review changes made by the user to the appliance.

The maximum length of the login banner is 2000 characters to fit 80x25 consoles. A login banner can be imported from a file in the /data/pub/configuration directory on the appliance. After creating the banner, commit your changes.

In the following example, the login banner "Use of this system in an unauthorized manner is prohibited" is added to the appliance:

```
mail.example.com> adminaccessconfig
Choose the operation you want to perform:
- BANNER - Configure login message (banner) for appliance administrator login.
- WELCOME - Configure welcome message (post login message) for appliance administrator
- IPACCESS - Configure IP-based access for appliance administrative interface.
- CSRF - Configure web UI Cross-Site Request Forgeries protection.
- XSS - Configure Cross-Site Scripting Attack protection.
- HOSTHEADER - Configure option to use host header in HTTP requests.
- TIMEOUT - Configure GUI and CLI session inactivity timeout.
- MAXHTTPHEADERFIELDSIZE - Configure maximum HTTP header field size.
- HOW-TOS - Configure How-Tos feature.
[]> banner
A banner has not been defined.
Choose the operation you want to perform:
- NEW - Create a banner to display at login.
- IMPORT - Import banner text from a file.
[]> new
Enter or paste the banner text here. Enter CTRL-D on a blank line to end.
Use of this system in an unauthorized manner is prohibited.
^ D
Choose the operation you want to perform:
- BANNER - Configure login message (banner) for appliance administrator login.
- WELCOME - Configure welcome message (post login message) for appliance administrator
login.
- IPACCESS - Configure IP-based access for appliance administrative interface.
- CSRF - Configure web UI Cross-Site Request Forgeries protection.
- HOSTHEADER - Configure option to use host header in HTTP requests.
- TIMEOUT - Configure GUI and CLI session inactivity timeout.
[]> banner
Banner: Use of this system in an unauthorized manner is prohibited.
Choose the operation you want to perform:
- NEW - Create a banner to display at login.
- IMPORT - Import banner text from a file.
- DELETE - Remove the banner.
```

### **Example - Configuring Web Interface and CLI Session Timeout**

The following example sets the web interface and CLI session timeout to 32 minutes.

Note

The CLI session timeout applies only to the connections using Secure Shell (SSH), SCP, and direct serial connection. Any uncommitted configuration changes at the time of CLI session timeout will be lost. Make sure that you commit the configuration changes as soon as they are made.

```
mail.example.com> adminaccessconfig
Choose the operation you want to perform:
    BANNER - Configure login message (banner) for appliance administrator login.
    WELCOME - Configure welcome message (post login message) for appliance administrator login.
```

```
- IPACCESS - Configure IP-based access for appliance administrative interface.
- CSRF - Configure web UI Cross-Site Request Forgeries protection.
- XSS - Configure Cross-Site Scripting Attack protection.
- HOSTHEADER - Configure option to use host header in HTTP requests.
- TIMEOUT - Configure GUI and CLI session inactivity timeout.
- MAXHTTPHEADERFIELDSIZE - Configure maximum HTTP header field size.
- HOW-TOS - Configure How-Tos feature.
[]> timeout
Enter WebUI inactivity timeout(in minutes):
[30]> 32
Enter CLI inactivity timeout(in minutes):
[30]> 32
Choose the operation you want to perform:
- BANNER - Configure login message (banner) for appliance administrator login.
- WELCOME - Configure welcome message (post login message) for appliance administrator
login.
- IPACCESS - Configure IP-based access for appliance administrative interface.
- CSRF - Configure web UI Cross-Site Request Forgeries protection.
- HOSTHEADER - Configure option to use host header in HTTP requests.
- TIMEOUT - Configure GUI and CLI session inactivity timeout.
[]>
mail.example.com> commit
Please enter some comments describing your changes:
[]> Changed WebUI and CLI session timeout values
Do you want to save the current configuration for rollback? [Y]>
Changes committed: Wed Mar 12 08:03:21 2014 GMT
```

Note

After committing the changes, the new CLI session timeout takes affect only during the subsequent login.

## certconfig

## Description

Configure security certificates and keys.

### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### **Example - Pasting in a certificate**

In the following example, a certificate is installed by pasting in the certificate and private key.

```
Cisco Appliance Demo Cisco Appliance Demo Active
                                                                   3467 davs
Choose the operation you want to perform:
- IMPORT - Import a certificate from a local PKCS#12 file
- PASTE - Paste a certificate into the CLI
 NEW - Create a self-signed certificate and CSR
- PRINT - View certificates assigned to services
[]> paste
Enter a name for this certificate profile:
> partner.com
Paste public certificate in PEM format (end with '.'):

#### date

### **Description**

Displays the current date and time

### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

## **Example**

```
mail.example.com> date
Tue Mar 10 11:30:21 2015 GMT
```

# daneverify

- Description, on page 74
- Usage, on page 75
- Example, on page 75

## **Description**

Checks whether DANE is supported for a specified domain.

#### **Usage**

**Commit**: This command does not require a 'commit'.

**Cluster Management**: This command is restricted to machine mode.

**Batch Command**: This command supports a batch format. For more details, see the inline help by typing the command: help daneverify.

### **Example**

In the following example, you can use the daneverify command to verify DANE support for a specified domain.

```
mail3.example.com> daneverify
Enter the DANE domain to verify against: []> example-dane.net
Trying DANE MANDATORY for example-dane.net
SECURE MX RECORD found for example-dane.net
SECURE A record (10.10.1.198) found for MX(mail.example.com.cs2.test-dane.net) in
example-dane.net
SECURE TLSA Record found for MX(mail.example.com.cs2.test-dane.net) in example-dane.net TLS
connection established: protocol TLSv1.2, cipher DHE-RSA-AES128-SHA256.
Certificate verification successful for TLSA
record(030101329aad19cfb5a0bb8d3b99c67dd1282a4dcdf67bd9c4efc08578657065fe7504)
TLS connection succeeded example-dane.net.

DANE_SUCESS for example-dane.net

DANE_verification completed.
```

## diagnostic

### Description

Use the diagnostic command to:

- Troubleshoot hardware and network issues using various utilities
- Check the RAID status
- · Display ARP cache
- Clear LDAP, DNS, and ARP caches
- Send SMTP test messages
- Restart and viewing the status of Service Engines enabled on the appliance.

## **Using the diagnostic Command**

The following commands are available within the diagnostic submenu:

Table 5: diagnostic Subcommands

Option	Sub Commands	Availability
RAID	1. Run disk verify	Available on C30 and C60 only.
	2. Monitor tasks in progress	
	3. Display disk verify verdict	

Option	Sub Commands	Availability
DISK_USAGE (deprecated)	No Sub Commands	This command has been deprecated. Instead, use the diskquotaconfig command.
NETWORK	FLUSH	C-, X-, and M-Series
	ARPSHOW	
	SMTPPING	
	TCPDUMP	
REPORTING	DELETEDB	C-, X-, and M-Series
	DISABLE	
TRACKING	DELETEDB	C-, X-, and M-Series
	DEBUG	
RELOAD	No Sub Commands	C-, X-, and M-Series
SERVICES	RESTART	C-, X-, and M-Series
	STATUS	

### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

Batch Command: This command supports a batch format.

#### **Batch Format**

The batch format of the diagnostic command can be used to check RAID status, clear caches and show the contents of the ARP cache. To invoke as a batch command, use the following formats:

Use the batch format to perform the following operations:

• Check the RAID status

• Show the contents of the ARP cache

• Show the contents of the NDP cache

diagnostic network ndpshow

• Clear the LDAP, DNS, ARP and NDP caches

diagnostic network flush

Reset and delete the reporting database

diagnostic reporting deletedb

• Enable reporting daemons

diagnostic reporting enable

Disable reporting daemons

diagnostic reporting disable

· Reset and delete the tracking database

diagnostic tracking deletedb

Reset configuration to the initial manufacturer values

diagnostic reload

## **Example: Displaying and Clearing Caches**

The following example shows the **diagnostic** command used to display the contents of the ARP cache and to flush all network related caches.

```
mail.example.com> diagnostic
Choose the operation you want to perform:
- RAID - Disk Verify Utility.
- DISK_USAGE - Check Disk Usage.
- NETWORK - Network Utilities.
- REPORTING - Reporting Utilities.
- TRACKING - Tracking Utilities.
- RELOAD - Reset configuration to the initial manufacturer values.
[]> network
Choose the operation you want to perform:
- FLUSH - Flush all network related caches.
- ARPSHOW - Show system ARP cache.
- NDPSHOW - Show system NDP cache.
- SMTPPING - Test a remote SMTP server.
```

```
- TCPDUMP - Dump ethernet packets.
[]> arpshow
System ARP cache contents:
(10.76.69.3) at 00:1e:bd:28:97:00 on em0 expires in 1193 seconds [ethernet]
(10.76.69.2) at 00:1e:79:af:f4:00 on em0 expires in 1192 seconds [ethernet]
(10.76.69.1) at 00:00:0c:9f:f0:01 on em0 expires in 687 seconds [ethernet]
(10.76.69.149) at 00:50:56:b2:0e:2b on em0 permanent [ethernet]
Choose the operation you want to perform:
- FLUSH - Flush all network related caches.
- ARPSHOW - Show system ARP cache.
- NDPSHOW - Show system NDP cache.
- SMTPPING - Test a remote SMTP server.
- TCPDUMP - Dump ethernet packets.
[]> flush
Flushing LDAP cache.
Flushing DNS cache.
Flushing system ARP cache.
10.76.69.3 (10.76.69.3) deleted
10.76.69.2 (10.76.69.2) deleted
10.76.69.1 (10.76.69.1) deleted
10.76.69.149 (10.76.69.149) deleted
Flushing system NDP cache.
fe80::250:56ff:feb2:e2d%em2 (fe80::250:56ff:feb2:e2d%em2) deleted
fe80::250:56ff:feb2:e2c%em1 (fe80::250:56ff:feb2:e2c%em1) deleted
fe80::250:56ff:feb2:e2b%em0 (fe80::250:56ff:feb2:e2b%em0) deleted
Network reset complete.
```

### **Example: Verify Connectivity to Another Mail Server**

The following example shows diagnostics used to check connectivity to another mail server. You can test the mail server by sending a message or pinging the server.

```
mail.example.com> diagnostic
Choose the operation you want to perform:
- RAID - Disk Verify Utility.
- NETWORK - Network Utilities.
- REPORTING - Reporting Utilities.
- TRACKING - Tracking Utilities.
- RELOAD - Reset configuration to the initial manufacturer values.
[]> network
Choose the operation you want to perform:
- FLUSH - Flush all network related caches.
- ARPSHOW - Show system ARP cache.
- NDPSHOW - Show system NDP cache.
- SMTPPING - Test a remote SMTP server.
- TCPDUMP - Dump ethernet packets.
[]> smtpping
Enter the hostname or IP address of the SMTP server:
[mail.example.com] > mail.com
The domain you entered has MX records.
Would you like to select an MX host to test instead? [Y]> y
Select an MX host to test.
1. mx00.gmx.com
2. mx01.gmx.com
[1]>
Select a network interface to use for the test.
1. Management
2. auto
[2] > 1
Do you want to type in a test message to send? If not, the connection will be tested but
no email will be sent. [N]>
Starting SMTP test of host mx00.gmx.com.
```

```
Resolved 'mx00.gmx.com' to 74.208.5.4. Unable to connect to 74.208.5.4.
```

#### **Example: Reset Appliance Configuration to the Initial Manufacturer Values**

The following example shows how to reset your appliance configuration to the initial manufacturer values.

```
mail.example.com> diagnostic
Choose the operation you want to perform:
    RAID - Disk Verify Utility.
    NETWORK - Network Utilities.
    REPORTING - Reporting Utilities.
    TRACKING - Tracking Utilities.
    RELOAD - Reset configuration to the initial manufacturer values.
[]> reload
This command will remove all user settings and reset the entire device.
If this is a Virtual Appliance, all feature keys will be removed,
and the license must be reapplied.
Are you sure you want to continue? [N]> Y
Are you *really* sure you want to continue? [N]> Y
Do you want to wipe also? [N]> Y
```

#### **Restarting and Viewing Status of Service Engines**

You can use the diagnostic > services sub command in the CLI to:

- Restart the service engines enabled on your appliance without having to reboot your appliance.
- View the status of service engines enabled on your appliance.

For more information, refer to the CLI Reference Guide for Email Security Appliance.

## diskquotaconfig

View or configure disk space allocation for reporting and tracking, quarantines, log files, packet captures, and configuration files.

See User Guide for AsyncOS for Cisco Email Security Appliances for complete information about this feature.

## Usage

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command supports a batch format.

#### **Batch Format**

```
diskquotaconfig <feature> <quota> [<feature> <quota> [<feature> <quota>]]]
```

Valid values for <feature> are euq, pvo, tracking, reporting

Valid values for <quota> are integers.

## **Example**

mail.example.com> diskquotaconfig		
Service	Disk Usage(GB)	Quota(GB)
Spam Quarantine (EUQ)	1	1
Policy, Virus & Outbreak Quarantines	1	3
Reporting	5	10
Tracking	1	10
Miscellaneous Files	5	30
System Files Usage : 5 GB		
User Files Usage : 0 GB		
Total	13	54 of 143
Choose the operation you want to perform:		
- EDIT - Edit disk quotas		
[]> edit		
Enter the number of the service for which you wou	ld like to edit dis}	quota:
1. Spam Quarantine (EUQ)		
2. Policy, Virus & Outbreak Quarantines		
3. Reporting		
4. Tracking		
5. Miscellaneous Files		
[1]> 1		
Enter the new disk quota -		
[1]> 1		
Disk quota for Spam Quarantine (EUQ) changed to 1		
Service	Disk Usage(GB)	Quota(GB)
Spam Quarantine (EUQ)	 1	1
Policy, Virus & Outbreak Quarantines	_ 1	3
Reporting	- 5	10
Tracking	1	10
Miscellaneous Files	- 5	30
System Files Usage : 5 GB	<u> </u>	
User Files Usage : 0 GB		
Total	13	54 of 143
Choose the operation you want to perform:		-1 01 110
- EDIT - Edit disk quotas		
[]>		
5.5		

# ecconfig

Set or clear the enrollment client that is used to obtain certificates for use with the URL Filtering feature.

Do not use this command without guidance from Cisco support.

Entries must be in the format <nostname:port> or <IPv4 address:port> . Port is optional.

To specify the default server, enter ecconfig server default.

## Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used at all levels in a cluster.

**Batch Command:** This command supports a batch format.

#### **Batch Format**

• To specify a non-default enrollment client server:

```
> ecconfig server <server name:port>
```

To use the default enrollment client server:

```
> ecconfig server default
```

### **Example**

```
mail.example.com> ecconfig
Enrollment Server: Not Configured (Use Default)
Choose the operation you want to perform:
    SETUP - Configure the Enrollment Server
[]> setup
Do you want to use non-default Enrollment server?
WARNING: Do not configure this option without the assistance of Cisco Support.
Incorrect configuration can impact the services using certificates from the Enrollment server. [N]> y
[]> 192.0.2.1
Choose the operation you want to perform:
    SETUP - Configure the Enrollment Server
[]>
```

#### ecstatus

Display the current version of the enrollment client that is used to automatically obtain certificates for use with the URL Filtering feature.

### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

## **Example**

## ecupdate

Manually update the enrollment client that is used to automatically obtain certificates for use with the URL Filtering feature. Normally, these updates occur automatically. Do not use this command without guidance from Cisco support.

If you use the force parameter (ecupdate [force]) the client is updated even if no changes are detected.

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command supports a batch format.

#### **Batch Format**

```
> ecupdate [force]
```

#### **Example**

```
mail.example.com> ecupdate
Requesting update of Enrollment Client.
```

# encryptionconfig

Configure email encryption.

#### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format

## Example

The following example shows modifications to an encryption profile:

```
mail.example.com> encryptionconfig
IronPort Email Encryption: Enabled
Choose the operation you want to perform:
- SETUP - Enable/Disable IronPort Email Encryption
- PROFILES - Configure email encryption profiles
- PROVISION - Provision with the Cisco Registered Envelope Service
[]> setup
PXE Email Encryption: Enabled
Would you like to use PXE Email Encryption? [Y]>
WARNING: Increasing the default maximum message size(10MB) may result in
decreased performance. Please consult documentation for size recommendations
based on your environment.
Maximum message size for encryption: (Add a trailing K for kilobytes, M for
megabytes, or no letters for bytes.)
Enter the email address of the encryption account administrator
[administrator@example.com]>
IronPort Email Encryption: Enabled
Choose the operation you want to perform:

## encryptionstatus

### **Description**

The **encryptionstatus** command shows the version of the PXE Engine and Domain Mappings file on the Email Security appliance, as well as the date and time the components were last updated.

#### **Usage**

**Commit:** This command does not require a 'commit'.

**Cluster Management:** This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

## **Example**

```
mail3.example.com> encryptionstatus

Component Version Last Updated

PXE Engine 6.7.1 17 Nov 2009 00:09 (GMT)

Domain Mappings File 1.0.0 Never updated
```

## encryptionupdate

## **Description**

The **encryptionupdate** command requests an update to the PXE Engine on the Email Security appliance.

## Usage

**Commit:** This command does not require a 'commit'.

**Cluster Management:** This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto).

**Batch Command:** This command does not support a batch format.

#### **Example**

mail3.example.com> encryptionupdate
Requesting update of PXE Engine.

## enginestatus

### **Description**

The **enginestatus** command is used to display the status and CPU usage of various engines enabled on the appliance.

### **Usage**

Commit: This command does not requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command:** This command supports a batch format. For more details, see the inline help by typing the command: help enginestatus.

### **Example**

The following example shows how to view the status and CPU usage of all engines enabled on the appliance:

```
vm30esa0086.ibqa> enginestatus
Choose the operation you want to perform:
- GRAYMAIL - View Graymail engine status
- SOPHOS - View Sophos engine status
- CASE - View CASE engine status
- AMP - View AMP engine status
- MCAFEE - View McAfee engine status
- ALL - View status of All engines

# featurekey

#### **Description**

The **featurekey** command lists all functionality enabled by keys on the system and information related to the keys. It also allows you to activate features using a key or check for new feature keys.

For virtual appliances, see also loadlicense, on page 295 and showlicense, on page 295.

#### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

## **Example**

In this example, the **featurekey** command is used to check for new feature keys.

mail3.example.com> featurekey				
Module	Quantity	Status	Remaining	Expiration Date
Outbreak Filters	1	Active	28 days	Tue Feb 25 06:40:53
2014				
IronPort Anti-Spam	1	Dormant	30 days	Wed Feb 26 07:56:57
2014				
Sophos Anti-Virus	1	Active	26 days	Sun Feb 23 02:27:48
2014				
Bounce Verification	1	Dormant	30 days	Wed Feb 26 07:56:57
2014				
Incoming Mail Handling	1	Active	20 days	Sun Feb 16 08:55:58
2014				
IronPort Email Encryption	1	Dormant	30 days	Wed Feb 26 07:56:57
2014				
Data Loss Prevention	1	Active	25 days	Fri Feb 21 10:07:10
2014				
McAfee	1	Dormant	30 days	Wed Feb 26 07:56:57
2014				
Choose the operation you want to perform:				

Choose the operation you want to perform:

- ACTIVATE Activate a (pending) key.
- CHECKNOW Check now for new feature keys.
- []> checknow

No new feature keys are available.

# featurekeyconfig

## **Description**

The **featurekeyconfig** command allows you to configure the machine to automatically download available keys and update the keys on the machine.

#### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine.

**Batch Command:** This command does not support a batch format.

#### **Example**

In this example, the featurekeyconfig command is used to enable the autoactivate and autocheck features.

```
mail3.example.com> featurekeyconfig
Automatic activation of downloaded keys: Disabled
Automatic periodic checking for new feature keys: Disabled
Choose the operation you want to perform:
- SETUP - Edit feature key configuration.
[]> setup
Automatic activation of downloaded keys: Disabled
Automatic periodic checking for new feature keys: Disabled
Choose the operation you want to perform:
- AUTOACTIVATE - Toggle automatic activation of downloaded keys.
- AUTOCHECK - Toggle automatic checking for new feature keys.
[]> autoactivate
Do you want to automatically apply downloaded feature keys? [N]> y
Automatic activation of downloaded keys: Enabled
Automatic periodic checking for new feature keys: Disabled
Choose the operation you want to perform:
- AUTOACTIVATE - Toggle automatic activation of downloaded keys.
- AUTOCHECK - Toggle automatic checking for new feature keys.
[]> autocheck
Do you want to periodically query for new feature keys? [N]> {f y}
Automatic activation of downloaded keys: Enabled
Automatic periodic checking for new feature keys: Enabled
```

# generalconfig

## **Description**

The **generalconfig** command allows you to configure browser settings.

## Usage

Commit: This command requires 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format. For details, see the inline help by typing the command: help generalconfig.

## **Example - Configure Internet Explorer Compatibility Mode Override**

The following example shows how to override IE Compatibility Mode.

```
mail.example.com> generalconfig
Choose the operation you want to perform:
- IEOVERRIDE - Configure Internet Explorer Compatibility Mode Override
```

```
[]> ieoverride
For better web interface rendering, we recommend that you enable Internet
Explorer Compatibility Mode Override. However, if enabling this feature
is against your organizational policy, you may disable this feature.
Internet Explorer Compatibility Mode Override is currently disabled.
Would you like to enable Internet Explorer Compatibility Mode Override? [N]y
Choose the operation you want to perform:
- IEOVERRIDE - Configure Internet Explorer Compatibility Mode Override
```

#### healthcheck

#### **Description**

Checks the health of your Email Security appliance. Health check analyzes historical data (up to three months) in the current Status Logs to determine the health of the appliance.

#### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### **Example**

```
mail.example.com> healthcheck
Analyzing the system to determine current health of the system.
The analysis may take a while, depending on the size of the historical data.
System analysis is complete.
The analysis indicates that the system has experienced the following issue(s)recently:
Entered Resource conservation mode
Delay in mail processing
High CPU usage
High memory usage
Based on this analysis,
we recommend you to contact Cisco Customer Support before upgrading.
```

# healthconfig

## **Description**

Configure the threshold of various health parameters of your appliance such as CPU usage, maximum messages in work queue and so on

## **Usage**

Commit: This command requires 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

#### **Example**

```
mail.example.com> healthconfig
Choose the operation you want to perform:
- WORKQUEUE - View and edit workqueue-health configuration.
- CPU - View and edit CPU-health configuration.
- SWAP - View and edit swap-health configuration.
[]> workqueue
Number of messages in the workqueue : 0
Current threshold on the workqueue size : 500
Alert when exceeds threshold : Disabled
Do you want to edit the settings? [N]> y
Please enter the threshold value for number of messages in work queue.
[500]> 550
Do you want to receive alerts if the number of messages in work queue exceeds
threshold value? [N]> n
Choose the operation you want to perform:
- WORKQUEUE - View and edit workqueue-health configuration.
- CPU - View and edit CPU-health configuration.
- SWAP - View and edit swap-health configuration.
[]> cpu
Overall CPU usage : 0 %
Current threshold on the overall CPU usage: 85 \%
Alert when exceeds threshold: Disabled
Do you want to edit the settings? [N]> y
Please enter the threshold value for overall CPU usage (in percent)
[85]> 90
Do you want to receive alerts if the overall CPU usage exceeds threshold value?[N]> n
Choose the operation you want to perform:
- WORKQUEUE - View and edit workqueue-health configuration.
- CPU - View and edit CPU-health configuration.
- SWAP - View and edit swap-health configuration.
[]> swap
Number of pages swapped from memory in a minute : 0
Current threshold on the number of pages swapped from memory per minute : 5000
Alert when exceeds threshold : Disabled
Do you want to edit the settings? [N]> y
Please enter the threshold value for number of pages swapped from memory in a
minute.
[50001> 5500
Do you want to receive alerts if number of pages swapped from memory in a
minute exceeds the threshold? [N] > n
Choose the operation you want to perform:
- WORKQUEUE - View and edit workqueue-health configuration.
- CPU - View and edit CPU-health configuration.
- SWAP - View and edit swap-health configuration.
```

## ntpconfig

## **Description**

The **ntpconfig** command configures AsyncOS to use Network Time Protocol (NTP) to synchronize the system clock with other computers. NTP can be turned off using the **settime** command.

## Usage

Commit: This command requires 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

#### **Example**

```
mail3.example.com>
ntpconfig
Currently configured NTP servers:
1. time.ironport.com
Choose the operation you want to perform:
- NEW - Add a server.
- DELETE - Remove a server.
- SOURCEINT - Set the interface from whose IP address NTP queries should originate.
- AUTH - Configure NTP authentication.
[]> new
Please enter the fully qualified hostname or IP address of your NTP server.
[] > ntp.example.com
Currently configured NTP servers:
1. time.ironport.com
2. bitsy.mit.edi
Choose the operation you want to perform:
- NEW - Add a server.
- DELETE - Remove a server.
- SOURCEINT - Set the interface from whose IP address NTP queries should
originate.
- AUTH - Configure NTP authentication.
[]> sourceint
When initiating a connection to an NTP server, the outbound IP address
used is chosen automatically.
If you want to choose a specific outbound IP address, please select
its interface name now.
1. Auto
2. Management (172.19.0.11/24: elroy.run)
3. PrivateNet (172.19.1.11/24: elroy.run)
4. PublicNet (172.19.2.11/24: elroy.run)
[1]> 1
Currently configured NTP servers:
1. time.ironport.com
2. bitsy.mit.edi
Choose the operation you want to perform:
- NEW - Add a server.
- DELETE - Remove a server.
- SOURCEINT - Set the interface from whose IP address NTP queries should originate.
- AUTH - Configure NTP authentication.
[] > auth
Would you like to enable NTP authentication? [N]>yes
Currently configured NTP servers:
1. time.ironport.com
2. bitsy.mit.edi
Authentication is on
Choose the operation you want to perform:
- NEW - Add a server.
- DELETE - Remove a server.
- SOURCEINT - Set the interface from whose IP address NTP queries should
originate.
- AUTH - Configure NTP authentication.
mail3.example.com> commit
Please enter some comments describing your changes:
```

```
[]> Added new NTP server
Do you want to save the current configuration for rollback? [Y]> n
Changes committed: Fri May 23 11:42:12 2014 GMT
```

# portalregistrationconfig

Cisco Spam Submission Tracking Portal is a web-based tool that allows email administrators to track the spam submissions from their organization and to report new misclassified messages to Cisco. This portal requires all your appliances to have a common registration ID.

Use the **portalregistrationconfig** command in CLI to set the registration ID. If your appliances are not part of a cluster, you must set a common registration ID on all your appliances.

For more information about the portal, see Anti-Spam chapter in user guide or online help.

#### Usage

Commit: This command requires 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

#### **Example**

```
mail3.example.com> portalregistrationconfig
Choose the operation you want to perform:
- REGISTRATION_ID - Set up the Registration ID.
[]> registration_id
Enter the new value of the Registration ID.
[]> registrationidexample1234
```

### reboot

## **Description**

Restart the appliance.

## **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

## Example

```
mail3.example.com> reboot
Enter the number of seconds to wait before abruptly closing connections.
[30]>
Waiting for listeners to exit...
```

```
Receiving suspended.
Waiting for outgoing deliveries to finish...
Mail delivery suspended.
```

## repengstatus

### **Description**

Request version information of Reputation Engine.

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

### **Example**

#### resume

## **Description**

Resume receiving and deliveries

## **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

## **Example**

```
mail3.example.com> resume
Receiving resumed for Listener 1.
Mail delivery resumed.
Mail delivery for individually suspended domains must be resumed individually.
```

## resumedel

## **Description**

Resume deliveries.

#### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

### **Example**

```
mail.example.com> resumedel
Currently suspended domains:
1. domain1.com
2. domain2.com
3. domain3.com
Enter one or more domains [comma-separated] to which you want to resume delivery.
[ALL]> domain1.com, domain2.com
Mail delivery resumed.
```

### resumelistener

#### **Description**

Resume receiving on a listener.

#### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

## **Example**

```
mail3.example.com> resumelistener
Choose the listener(s) you wish to resume.
Separate multiple entries with commas.
1. All
2. InboundMail
3. OutboundMail
[1]> 1
Receiving resumed.
mail3.example.com>
```

#### revert

## **Description**

Revert to a previous release.

## Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command:** This command does not support a batch format.

#### **Example**

```
mail.example.com> revert
This command will revert the appliance to a previous version of AsyncOS.
WARNING: Reverting the appliance is extremely destructive.
The following data will be destroyed in the process:
- all configuration settings (including listeners)
- all log files
- all databases (including messages in Virus Outbreak and Policy quarantines)
- all reporting data (including saved scheduled reports)
- all message tracking data
- all IronPort Spam Quarantine message and end-user safelist/blocklist data
Only the network settings will be preserved.
Before running this command, be sure you have:
- saved the configuration file of this appliance (with passphrases unmasked)
- exported the IronPort Spam Quarantine safelist/blocklist database
 to another machine (if applicable)
- waited for the mail queue to empty
Reverting the device causes an immediate reboot to take place.
After rebooting, the appliance reinitializes itself and reboots
again to the desired version.
   Available versions
   _____
1. 9.1.0-019
Please select an AsyncOS version [1]:
Do you want to continue? [N]>
```

## samlconfig

- Description, on page 95
- Usage, on page 95
- Example Configure New SAML Profile, on page 95
- Example Modifying SAML Profile, on page 98

#### **Description**

Configure SAML profile with Service Provider and Identity Provider Settings.

## Usage

**Commit**: This command requires a 'commit'.

**Cluster Management**: This command can be used in all three machine modes (cluster, group, and machine).

**Batch Command**: This command does not support a batch format.

## **Example – Configure New SAML Profile**

In the following example, the samleonfig command is used to create a new SAML Profile with service provider and identity provider settings. You must enter a valid certificate and the private key for the service provider.

You can either configure the identity provider configuration manually or import an existing identity provider metadata.

```
mail.example.com > samlconfig
Choose the operation you want to perform:
- UILOGIN - Create a new SAML Profile for UI Login.
[]> uilogin
No SAML profiles are configured on the system.
Choose the operation you want to perform:
- NEW - Create a new SAML profile.
[] > new
Please enter the Service Provider Settings:
Enter the SP profile Name:
[]> SP1
Enter the SP Entity Id:
[]> ENTSP
Name ID Format: urn:oasis:names:tc:SAML:1.1:nameid-format:emailAddress
Assertion Consumer URL: http://mail.example.com
Please paste the SP Certificate
Paste the content now.
Press CTRL-D on a blank line when done.

### **Example – Modifying SAML Profile**

In the following example, you can use the samlconfig command to modify the service provider or identity provider settings of an existing SAML profile.

```
mail.example.com > samlconfig
Choose the operation you want to perform:
- UILOGIN - Create a new SAML Profile for UI Login.
[]> uilogin
Currently configured SAML User profiles:
_____
                                                         URT
              Name
                                   Entity ID
           SP1
SP Settings
                                 ENTSP
                                                       http://mail.example.com
IDP Settings IDP1
                                 https://WIN-BL0P4116 https://WIN-
BLOP4116VDB/dag/saml2/idp/Si
Choose the operation you want to perform:
- EDIT - Modify a SAML profile.
- DELETE - Delete a SAML profile.
[]> edit
Choose the operation you want to perform:
- SP - Edit Service Provider Settings.
- IDP - Edit Identity Provider Settings.
[]>
```

### settime

#### **Description**

The **settime** command allows you to manually set the time if you are not using an NTP server. The command asks you if you want to stop NTP and manually set the system clock. Enter the time is using this format: **MM/DD/YYYY HH:MM:SS**.

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

### **Example**

```
mail3.example.com> settime
WARNING: Changes to system time will take place immediately
and do not require the user to run the commit command.
Current time 09/23/2001 21:03:53.
This machine is currently running NTP.
In order to manually set the time, NTP must be disabled.
Do you want to stop NTP and manually set the time? [N]> Y
Please enter the time in MM/DD/YYYY HH:MM:SS format.
[]> 09/23/2001 21:03:53
Time set to 09/23/2001 21:03:53.
```

#### settz

## **Description**

Set the local time zone.

## **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

## **Example**

```
mail3.example.com> settz
Current time zone: Etc/GMT
Current time zone version: 2010.02.0
Choose the operation you want to perform:
- SETUP - Set the local time zone.
[]> setup
Please choose your continent:
1. Africa
2. America
[ ... ]
```

```
11. GMT Offset
[2]> 2
Please choose your country:
1. Anguilla
[ ... ]
45. United States
46. Uruguay
47. Venezuela
48. Virgin Islands (British)
49. Virgin Islands (U.S.)
[45]> 45
Please choose your timezone:
1. Alaska Time (Anchorage)
2. Alaska Time - Alaska panhandle (Juneau)
[ ...]
21. Pacific Time (Los Angeles)
[21]> 21
Current time zone: America/Los Angeles
Choose the operation you want to perform:
- SETUP - Set the local time zone.
[]>
```

### shutdown

#### **Description**

Shut down the system to power off

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

## **Example**

```
mail.example.com> shutdown
Enter the number of seconds to wait before forcibly closing connections.
[30]>
System shutting down. Please wait while the queue is being closed...
Closing CLI connection.
The system will power off automatically.
Connection to mail.example.com closed.
```

## smaconfig

- Description, on page 101
- Usage, on page 101
- Example, on page 101

#### **Description**

The smaconfig command is used to add, delete, or view the SMA connection parameters and keys.

#### **Usage**

**Commit**: This command requires a 'commit'.

**Cluster Management**: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command**: This command supports a batch format.

#### **Example**

In the following example, you can use the smaconfig command to add Email Security appliances to the Content Security Management Appliance (SMA) using pre-shared keys, and view the SMA connection details (host name and user keys).

```
mail.example.com> smaconfig
Choose the operation you want to perform:
- ADD - Add a new SMA Connection Parameter and Key.
Enter the hostname of the system that you want to add.
[]> m380q03.ibqa
Enter the user key of the host m380q03.ibqa.
Press enter on a blank line to finish.
SSH2:dsa
10.76.71.107 ssh-dss
SMA host key was added successfully.
Choose the operation you want to perform:
- ADD - Add a new SMA Connection Parameter and Key.
- DELETE - Remove an existing SMA Connection Parameter and Key.
- PRINT - Display all SMA Parameters and Keys.
[]> print
1. Hostname: m380q03.ibqa Keys: SSH2:dsa10.76.71.107 ssh-dss

Choose the operation you want to perform:
- ADD - Add a new SMA Connection Parameter and Key.
- DELETE - Remove an existing SMA Connection Parameter and Key.
- PRINT - Display all SMA Parameters and Keys.
[]>
```

## sshconfig

## **Description**

Configure SSH server and user key settings.

#### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to cluster mode.

Batch Command: This command does not support a batch format.

#### **Examples**

#### **Example: Editing SSH Server Configuration**

The following example shows how to edit the SSH server configuration:

```
mail.example.com> sshconfig
Choose the operation you want to perform:
- SSHD - Edit SSH server settings.
- USERKEY - Edit SSH User Key settings
[]> sshd
ssh server config settings:
Public Key Authentication Algorithms:
        rsa1
        ssh-dss
        ssh-rsa
Cipher Algorithms:
        aes128-ctr
        aes192-ctr
        aes256-ctr
        arcfour256
        arcfour128
        aes128-cbc
        3des-cbc
        blowfish-cbc
        cast128-cbc
        aes192-cbc
        aes256-cbc
        arcfour
        rijndael-cbc@lysator.liu.se
MAC Methods:
        hmac-sha1
        umac-64@openssh.com
        hmac-ripemd160
        hmac-ripemd160@openssh.com
        hmac-sha1-96
        hmac-md5-96

        diffie-hellman-group-exchange-sha1
        diffie-hellman-group14-sha1
        diffie-hellman-group1-shal
Choose the operation you want to perform:
- SETUP - Setup SSH server configuration settings
Choose the operation you want to perform:
- SSHD - Edit SSH server settings.
- USERKEY - Edit SSH User Key settings
[]>
```

#### **Example: Installing a New Public Key for the Administrator Account**

In the following example, a new public key is installed for the administrator account:

```
mail.example.com> sshconfig
Choose the operation you want to perform:
- SSHD - Edit SSH server settings.
- USERKEY - Edit SSH User Key settings
[]> userkey
Currently installed keys for admin:
Choose the operation you want to perform:
- NEW - Add a new key.
- USER - Switch to a different user to edit.
[]> new
Please enter the public SSH key for authorization.
Press enter on a blank line to finish.
```

```
[-paste public key for user authentication here-]
Choose the operation you want to perform:
- SSHD - Edit SSH server settings.
- USERKEY - Edit SSH User Key settings
[]>
```

#### **Example: Categorizing an IP Address as Persistent Blacklist or Whitelist**

If the appliance or the ipblockd service is restarted, the IP address that you categorize as a persistent blacklist or whitelist is retained.

Note

You can categorize IP addresses as persistent blacklists or whitelists only on AsyncOS 11.0.2 and above.

The following example shows how to categorize IP addresses as persistent whitelist:

```
mail.example.com> sshconfig
Choose the operation you want to perform:
- SSHD - Edit SSH server settings.
- USERKEY - Edit SSH User Key settings
- ACCESS CONTROL - Edit SSH whitelist/blacklist
[] > access control
Choose the operation you want to perform:
- WHITELIST - Manage the persistent whitelist
- BLACKLIST - Manage the persistent blacklist
[]> whitelist
Choose the operation you want to perform:
- ADD - Add address(es)
- REMOVE - Remove address(es)
- PRINT - Print addresses
[]> add
Enter an IP address or a comma-separated list of addresses.
Addresses already in the Whitelist will be ignored.
[1> 10.8.85.77
The addresses were successfully added to the Whitelist
```

The following example shows how to categorize IP addresses as persistent blacklist:

```
mail.example.com> sshconfig
Choose the operation you want to perform:
- SSHD - Edit SSH server settings.
- USERKEY - Edit SSH User Key settings
- ACCESS CONTROL - Edit SSH whitelist/blacklist
[]> access control
Choose the operation you want to perform:
- WHITELIST - Manage the persistent whitelist
- BLACKLIST - Manage the persistent blacklist
[]> blacklist
Choose the operation you want to perform:
- ADD - Add address(es)
- REMOVE - Remove address(es)
- PRINT - Print addresses
[] > add
Enter an IP address or a comma-separated list of addresses.
Addresses already in the Whitelist will be ignored.
```

[]> 10.8.85.77

The addresses were successfully added to the blacklist

## status

## **Description**

Show system status.

## Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

## supportrequest

### **Description**

Send a message to Cisco customer support. This command requires that the appliance is able to send mail to the Internet. A trouble ticket is automatically created, or you can associate the support request with an existing trouble ticket.

To access Cisco technical support directly from the appliance, your Cisco.com user ID must be associated with your service agreement contract for this appliance. To view a list of service contracts that are currently associated with your Cisco.com profile, visit the Cisco.com Profile Manager at <a href="https://sso.cisco.com/autho/forms/CDClogin.html">https://sso.cisco.com/autho/forms/CDClogin.html</a> . If you do not have a Cisco.com user ID, register to get one. See information about registering for an account in the online help or user guide for your release.

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

**Batch Command:** This command does not support a batch format.

#### **Example**

The following example shows a support request that is not related to an existing support ticket.

```
mail.example.com> supportrequest
Please Note:
If you have an urgent issue, please call one of our worldwide Support Centers
(www.cisco.com/support). Use this command to open a technical support request
for issues that are not urgent, such as:
- Request for information.
- Problem for which you have a work-around, but would like an alternative
solution.
Do you want to send the support request to supportrequest@mail.qa?
[Y]>
Do you want to send the support request to additional recipient(s)?
[N]>
Is this support request associated with an existing support ticket?
Please select a technology related to this support request:

```

## supportrequeststatus

## **Description**

Display Support Request Keywords version information for requesting support from Cisco TAC.

## Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command:** This command does not support a batch format.

#### **Example**

## supportrequestupdate

## **Description**

Request manual update of Support Request Keywords for requesting support from Cisco TAC.

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command:** This command does not support a batch format.

### **Example**

```
mail.example.com> supportrequestupdate
Requesting update of Support Request Keywords.
```

## suspend

## **Description**

Suspend receiving and deliveries

## Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

## **Example**

```
mail3.example.com> suspend
Enter the number of seconds to wait before abruptly closing connections.
[30]> 45
Waiting for listeners to exit...
Receiving suspended for Listener 1.
Waiting for outgoing deliveries to finish...
Mail delivery suspended.
mail3.example.com>
```

# suspenddel

#### **Description**

Suspend deliveries

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

#### **Example**

```
mail.example.com> suspenddel
Enter the number of seconds to wait before abruptly closing connections.
[30]>
Enter one or more domains [comma-separated] to which you want to suspend delivery.
[ALL]> domain1.com, domain2.com, domain3.com
Waiting for outgoing deliveries to finish...
Mail delivery suspended.
```

# suspendlistener

#### **Description**

Suspend receiving.

### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

### **Example**

```
mail3.example.com> suspendlistener
Choose the listener(s) you wish to suspend.
Separate multiple entries with commas.
1. All
2. InboundMail
3. OutboundMail
[1]> 1
Enter the number of seconds to wait before abruptly closing connections.
[30]>
Waiting for listeners to exit...
Receiving suspended.
mail3.example.com>
```

# tcpservices

#### **Description**

Display information about files opened by processes.

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

#### **Example**

```
mail.cisco.com> tcpservices

# techsupport

#### **Description**

Allow Cisco TAC to access your system.

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

#### **Example**

```
mail3.example.com> techsupport
Service Access currently disabled.
Choose the operation you want to perform:
- SSHACCESS - Allow a Cisco IronPort Customer Support representative to remotely access
your system, without establishing a tunnel.
- TUNNEL - Allow a Cisco IronPort Customer Support representative to remotely access your
system, and establish a secure tunnel
          for communication.
- STATUS - Display the current techsupport status.
[]> sshaccess
A random seed string is required for this operation
1. Generate a random string to initialize secure communication (recommended)
2. Enter a random string
Are you sure you want to enable service access? [N] > y
Service access has been ENABLED. Please provide the string:
QT22-JQZF-YAQL-TL8L-8@2L-95
to your Cisco IronPort Customer Support representative.
Service Access currently ENABLED (0 current service logins).
Tunnel option is not active.
Choose the operation you want to perform:
- DISABLE - Prevent customer service representatives from remotely accessing your system.
- STATUS - Display the current techsupport status.
```

# tlsverify

### **Description**

Establish an outbound TLS connection on demand and debug any TLS connection issues concerning a destination domain. To create the connection, specify the domain to verify against and the destination host. AsyncOS checks the TLS connection based on the Required (Verify) TLS setting

# Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command supports a batch format.

#### **Batch Format**

The batch format of the tlsverify command can be used to perform all the fuctions of the traditional CLI command to check the TLS connection to the given hostname.

```
tlsverify <domain> <hostname>[:<port>]
```

#### **Example**

```
mail3.example.com> tlsverify
Enter the TLS domain to verify against:
[]> example.com
Enter the destination host to connect to. Append the port (example.com:26) if you are not
connecting on port 25:
[example.com] > mxe.example.com:25
Connecting to 1.1.1.1 on port 25.
Connected to 1.1.1.1 from interface 10.10.10.10.
Checking TLS connection.
TLS connection established: protocol TLSv1, cipher RC4-SHA.
Verifying peer certificate.
Verifying certificate common name mxe.example.com.
TLS certificate match mxe.example.com
TLS certificate verified.
TLS connection to 1.1.1.1 succeeded.
TLS successfully connected to mxe.example.com.
TLS verification completed.
```

#### trace

### **Description**

Trace the flow of a message through the system

#### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

# Example

```
mail3.example.com> trace
Enter the source IP
[]> 192.168.1.1
Enter the fully qualified domain name of the source IP
[]> example.com
Select the listener to trace behavior on:
1. InboundMail
2. OutboundMail
[1]> 1
Fetching default SenderBase values...
```

```
Enter the SenderBase Org ID of the source IP. The actual ID is N/A.
[N/Al>
Enter the SenderBase Reputation Score of the source IP. The actual score is N/A.
[N/A] >
Enter the Envelope Sender address:
[]> pretend.sender@example.net
Enter the Envelope Recipient addresses. Separate multiple addresses by commas.
[]> admin@example.com
Load message from disk? [Y] > n
Enter or paste the message body here. Enter '.' on a blank line to end.
Subject: Hello
This is a test message.

Run through another debug session? [N]>
```

Note

When using trace, you must include both the header and the body of the message pasted into the CLI.

# trackingconfig

#### **Description**

Configure the tracking system.

#### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

#### **Example**

```
mail.example.com> trackingconfig
Message Tracking service status: Message Tracking is enabled.
Choose the operation you want to perform:
- SETUP - Enable Message Tracking for this appliance.
[]> setup
Would you like to use the Message Tracking Service? [Y]>
Do you want to use Centralized Message Tracking for this appliance? [N]>
Would you like to track rejected connections? [N]>
Message Tracking service status: Local Message Tracking is enabled.
Rejected connections are currently not being tracked.
Choose the operation you want to perform:
- SETUP - Enable Message Tracking for this appliance.
[]>
```

# tzupdate

### Description

Update timezone rules

### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto).

Batch Command: This command supports a batch format.

#### **Batch Format**

The batch format of the tzupdate command forces an update off all time zone rules even if no changes are detected.

```
tzupdate [force]
```

#### **Example**

```
mail.example.com> tzupdate
Requesting update of Timezone Rules
```

# updateconfig

#### **Description**

Configure system update parameters.

#### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### **Examples**

#### **Configure the Appliance to Download Updates from Updater Servers**

In the following example, the updateconfig command is used to configure the appliance to download update images from Cisco servers and download the list of available AsyncOS upgrades from a local server.

<pre>mail.example.com&gt; updateconfig Service (images):</pre>	Update URL:

```

#### Configure the Appliance to Verify the Validity of Updater Server Certificate

If you configure this option, every time the appliance communicates the Cisco updater server, the validity of the updater server certificate is verified. If the verification fails, updates are not downloaded and the details are logged in Updater Logs. The following example shows how to configure this option:

<pre>mail.example.com&gt; updateconfig Service (images):</pre>	Update URL:

Cisco IronPort AsyncOS upgrades
                                             Cisco IronPort Servers
Update interval: 5m
Proxy server: not enabled
HTTPS Proxy server: not enabled
Choose the operation you want to perform:
- SETUP - Edit update configuration.
- VALIDATE CERTIFICATES - Validate update server certificates
- TRUSTED CERTIFICATES - Manage trusted certificates for updates
```

#### **Configure the Appliance to Trust Proxy Server Communication**

If you are using a non-transparent proxy server, you can add the CA certificate used to sign the proxy certificate to the appliance. By doing so, the appliance trusts the proxy server communication. The following example shows how to configure this option:

```
Choose the operation you want to perform:
- SETUP - Edit update configuration.
- VALIDATE CERTIFICATES - Validate update server certificates
- TRUSTED CERTIFICATES - Manage trusted certificates for updates
[]> trusted certificates
Choose the operation you want to perform:
- ADD - Upload a new trusted certificate for updates.
Paste certificates to be trusted for secure updater connections, blank to quit
Trusted Certificate for Updater:
Paste cert in PEM format (end with '.'):
----BEGIN CERTIFICATE----
{\tt MMIICiDCCAfGqAwIBAqIBATANBqkqhkiG9w0BAQUFADCBqDELMAkGA1UEBhMCSU4x}
DDAKBgNVBAgTA0tBUjENM.....
----END CERTIFICATE----
Choose the operation you want to perform:
- ADD - Upload a new trusted certificate for updates.
- LIST - List trusted certificates for updates.
- DELETE - Delete a trusted certificate for updates.
[]>
```

# updatenow

#### **Description**

Requests an update to all system service components.

#### **Usage**

**Commit**: This command does not require a 'commit'.

**Cluster Management**: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto).

**Batch Command**: This command does support a batch format.

#### **Batch Format**

The batch format of the updatenow command can be used to update all components on the appliance even if no changes are detected.

updatenow [force]

#### **Example**

```
mail3.example.com> updatenow
Success - All component updates requested
```

#### version

# **Description**

View system version information

### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

# **Example**

```
BIOS: 6.00
CPUs: 2 expected, 2 allocated
Memory: 6144 MB expected, 6144 MB allocated
RAID: NA
RAID Status: Unknown
RAID Type: NA
BMC: NA
```

# wipedata

#### **Description**

Use the **wipedata** command to wipe the core files on the disk and check the status of the last coredump operation.

Note

Depending on the size of the data, wipe action may take a while and can affect the system performance until the action is complete.

## Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

#### **Example**

```
mail.example.com> wipedata
Wiping data may take a while and can affect system performance till it completes.
Choose the operation you want to perform:
- STATUS - Display status of last command run
- COREDUMP - Wipe core files on disk
[]> coredump
wipedata: In progress
mail.example.com> wipedata
Wiping data may take a while and can affect system performance till it completes.
Choose the operation you want to perform:
- STATUS - Display status of last command run
- COREDUMP - Wipe core files on disk
[]> status
Last wipedata status: Successful
```

# upgrade

### **Description**

The **upgrade** CLI command displays a list of available upgrades and upgrades the AsyncOS system to the version specified by the user.

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

#### **Example**

```
mail3.example.com> upgrade
Upgrades available:
1. AsyncOS (***DON'T TOUCH!***) 4.0.8 upgrade, 2005-05-09 Build 900
2. AsyncOS 4.0.8 upgrade, 2005-08-12 Build 030
.....
Performing an upgrade will require a reboot of the system after the upgrade is applied.
Do you wish to proceed with the upgrade? [Y]> Y
```

# **Content Scanning**

#### contentscannerstatus

Display the content scanning engine version information.

#### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

### **Example**

# contentscannerudpate

Request manual update of the content scanning engine. If 'force' parameter is used, update is performed even if no changes are detected.

# Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto).

Batch Command: This command does not support a batch format.

#### **Example**

```
mail.example.com> contentscannerupdate force
Requesting forced update for Content Scanner.
```

# **LDAP**

This section contains the following CLI commands:

# Idapconfig

#### **Description**

Configure LDAP servers

#### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

#### **Example - Creating a New LDAP Server Profile**

In the following example, the Idapconfig command is used to define an LDAP server for the appliance to bind to, and queries for recipient acceptance ( Idapaccept subcommand), routing ( Idaprouting subcommand), masquerading ( masquerade subcommand), end-user authentication for the Spam Quarantine ( isqauth subcommand), and alias consolidation for spam notifications ( isqalias subcommand) are configured.

First, the nickname of "PublicLDAP" is given for the mldapserver.example.com LDAP server. Queries are directed to port 3268 (the default). The search base of example.com is defined (dc=example,dc=com), and queries for recipient acceptance, mail re-routing, and masquerading are defined. The queries in this example are similar to an OpenLDAP directory configuration which uses the inetLocalMailRecipient auxiliary object class defined in the expired Internet Draft draft-lachman-laser-ldap-mail-routing-xx.txt, also sometimes known as "the Laser spec." (A version of this draft is included with the OpenLDAP source distribution.) Note that in this example, the alternate mailhost to use for queried recipients in the mail re-routing query is mailForwardingAddress. Remember that query names are case-sensitive and must match exactly in order to return the proper results.

```
mail3.example.com> ldapconfig
No LDAP server configurations.
Choose the operation you want to perform:
    NEW - Create a new server configuration.
    SETUP - Configure LDAP options.

# **Idapflush**

#### **Description**

Flush any cached LDAP results.

#### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

#### **Example**

```
mail3.example.com> ldapflush
Are you sure you want to flush any cached LDAP results? [N]> y
Flushing cache
mail3.example.com>
```

# **Idaptest**

### **Description**

Perform a single LDAP query test

# Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

### **Example**

In this example, the ldaptest command is used to test the only recipient acceptance query for the configured LDAP server configuration. The recipient address "admin@example.com" passes the test, while the recipient address "bogus@example.com" fails.

```
mail3.example.com> ldaptest
Select which LDAP query to test:
1. PublicLDAP.ldapaccep
[1]> 1
Address to use in query:
```

```
[] > admin@example.com
LDAP query test results:
                Query: PublicLDAP.ldapaccept
             Argument: admin@example.com
              Action: pass
LDAP query test finished.
mail3.example.com> ldaptest
Select which LDAP query to test:
1. PublicLDAP.ldapaccep
[1]> 1
Address to use in query:
[] > bogus@example.com
LDAP query test results:
 Query: PublicLDAP.ldapaccept
Argument: bogus@example.com
Action: drop or bounce (depending on listener settings)
Reason: no matching LDAP record was found
LDAP query test finished.
mail3.example.com>
```

#### sievechar

#### **Description**

Sets or disables the character used for Sieve Email Filtering, as described in RFC 3598. Note that the Sieve Character is ONLY recognized in LDAP Accept and LDAP Reroute queries. Other parts of the system will operate on the complete email address.

Allowable characters are: -\_=+/^#

#### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command:** This command does not support a batch format

# Example

In this example, the sievechar command is used to define + as the sieve character recognized in Accept and LDAP Reroute queries.

```
mail3.example.com> sievechar
Sieve Email Filtering is currently disabled.
Choose the operation you want to perform:
- SETUP - Set the separator character.
[]> setup
Enter the Sieve Filter Character, or a space to disable Sieve Filtering.
[]> +
Sieve Email Filter is enabled, using the '+' character as separator.
This applies only to LDAP Accept and LDAP Reroute Queries.
Choose the operation you want to perform:
- SETUP - Set the separator character.
[]>
```

# **Mail Delivery Configuration/Monitoring**

This section contains the following CLI commands:

# addresslistconfig

#### **Description**

Configure address lists.

#### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

#### **Batch Format**

The batch format for the addresslistconfig command can be used to create a new address list, edit an existing address list, print a list of address lists, delete an address list, or find conflicting addresses within an address list.

• Adding a new address list:

```
addresslistconfig new <name> --descr=<description> --addresses=<address1,address2,...>
```

• Editing an existing address list:

```
addresslistconfig edit <name> --name=<new-name> --descr=<description>
--addresses=<address1,address2,...>
```

· Deleting an address list:

```
addresslistconfig delete <name>
```

Printing a list of address lists:

```
addresslistconfig print <name>
```

• Finding conflicting addresses within an address list:

```
addresslistconfig conflicts <name>
```

### **Example**

```
mail1.example.com> addresslistconfig

No address lists configured.

Choose the operation you want to perform:
    NEW - Create a new address list.
```

```
[] > new
Enter a name for the address list:
> add-list1
Enter a description for the address list:
> This is a sample address list
Enter the type of list:
1. Full Email Addresses only
2. Domains only
3. IP Addresses only
4. All of the above
Enter the type of the address list:
[4] > 1
Enter a comma separated list of addresses:
(e.g.: user@example.com)
> user1@example.com, user2@example.com
Address list "add-list1" added.
Choose the operation you want to perform:
- NEW - Create a new address list.
- EDIT - Modify an address list.
- DELETE - Remove an address list.
- PRINT - Display the contents of an address list.
- CONFLICTS - Find conflicting entries within an address list.
```

# aliasconfig

#### **Description**

Configure email aliases.

### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

#### **Batch Format**

The batch format of the aliasconfig command can be used to add a new alias table, edit an existing table, print a list of email aliases, and import/export alias table. To invoke as a batch command, use the following format of the aliasconfig command with the variables listed below:

Adding a new email alias:

```
aliasconfig new <domain> <alias> [email_address1] [email_address2] ...
```

Note

Using the 'aliasconfig new' command with a non-existant domain causes the domain to be created.

• Editing an existing email alias

```
aliasconfig edit <domain> <alias> <email_address1] [email_address2] ...
```

Displaying an email alias:

```
aliasconfig print
```

Importing a local alias listing:

```
aliasconfig import <filename>
```

• Exporting an alias listing on the appliance:

```
aliasconfig export <filename>
```

#### **Example**

```
mail3.example.com> aliasconfig
Enter address(es) for "customercare".
Separate multiple addresses with commas.
[]> bob@example.com, frank@example.com, sally@example.com
Adding alias customercare: bob@example.com, frank@example.com, sally@example.com
Do you want to add another alias? [N] > n
There are currently 1 mappings defined.
Choose the operation you want to perform:
- NEW - Create a new entry.
- EDIT - Modify an entry.
- DELETE - Remove an entry.
- PRINT - Display the table.
- IMPORT - Import aliases from a file.
- EXPORT - Export table to a file.
- CLEAR - Clear the table.
[]> new
How do you want your aliases to apply?
1. Globally
2. Add a new domain context
3. example.com
[1]> 1
Enter the alias(es) to match on.
Separate multiple aliases with commas.
Allowed aliases:
    - "user@domain" - This email address.
    - "user" - This user for any domain
    - "@domain" - All users in this domain.
    - "@.partialdomain" - All users in this domain, or any of its sub domains.
```

```
[]> admin
Enter address(es) for "admin".
Separate multiple addresses with commas.
[] > administrator@example.com
Adding alias admin: administrator@example.com
Do you want to add another alias? [N] > n
There are currently 2 mappings defined.
Choose the operation you want to perform:
- NEW - Create a new entry.
- EDIT - Modify an entry.
- DELETE - Remove an entry.
- PRINT - Display the table.
- IMPORT - Import aliases from a file.
- EXPORT - Export table to a file.
- CLEAR - Clear the table.
[]> print
admin: administrator@example.com
[ example.com ]
customercare: bob@example.com, frank@example.com, sally@example.com
There are currently 2 mappings defined.
Choose the operation you want to perform:
- NEW - Create a new entry.
- EDIT - Modify an entry.
- DELETE - Remove an entry.
- PRINT - Display the table.
- IMPORT - Import aliases from a file.
- EXPORT - Export table to a file.
- CLEAR - Clear the table.
[]>
```

#### **Table 6: Arguments for Configuring Aliases**

Argument	Description			
<domain></domain>	The domain context in which an alias is applied. 'Global' specifies the Global Domain Context.			
<alias></alias>	The name of the alias to configure Aliases permitted at the Global Comain Context:			
	' user@domain' — This email address.			
	' user'— This user for any domain.			
	'@domain— All users in this domain.			
	'@.partialdomain'— All users in this domain or any of its sub-domains.			
	Aliases permitted for specific domain contexts:			
	'user'— This user in this domain context			
	'user@domain'— This email address			
<email_address></email_address>	The email address that an alias mapps to. A single alias can map to multiple email addresses.			
<filename></filename>	The filename to use with importing/exporting the alias table.			

# archivemessage

#### **Description**

Archive older messages in your queue.

#### **Usage**

Commit: This command does not require a commit.

Cluster Management: This command is restricted to machine mode...

Batch Command: This command does not support a batch format.

#### **Example**

In the following example, an older message is archived:

```
mail3.example.com>
archivemessage
Enter the MID to archive.
[0]> 47
MID 47 has been saved in file oldmessage 47.mbox in the configuration
```

#### altsrchost

### **Description**

Configure Virtual Gateway(tm) mappings.

# Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### **Example**

In the following example, the altsrchost table is printed to show that there are no existing mappings. Two entries are then created:

- Mail from the groupware server host named @exchange.example.com is mapped to the PublicNet interface.
- Mail from the sender IP address of 192.168.35.35 is mapped to the AnotherPublicNet interface.

Finally, the altsrchost mappings are printed to confirm and the changes are committed.

```
mail3.example.com> altsrchost
There are currently no mappings configured.
Choose the operation you want to perform:
    NEW - Create a new mapping.
    IMPORT - Load new mappings from a file.
```

```
[] > new
Enter the Envelope From address or client IP address for which you want to set up a Virtual
Gateway mapping.
Partial addresses such as "@example.com" or "user@" are allowed.
[] > @exchange.example.com
Which interface do you want to send messages for @exchange.example.com from?
1. AnotherPublicNet (192.168.2.2/24: mail4.example.com)
2. Management (192.168.42.42/24: mail3.example.com)
3. PrivateNet (192.168.1.1/24: mail3.example.com)
4. PublicNet (192.168.2.1/24: mail4.example.com)
[1]> 4
Mapping for @exchange.example.com on interface PublicNet created.
Choose the operation you want to perform:
- NEW - Create a new mapping.
- EDIT - Modify a mapping.
- DELETE - Remove a mapping.
- IMPORT - Load new mappings from a file.
- EXPORT - Export all mappings to a file.
- PRINT - Display all mappings.
- CLEAR - Remove all mappings.
[]> new
Enter the Envelope From address or client IP address for which you want to set up a Virtual
Gateway mapping.
Partial addresses such as "@example.com" or "user@" are allowed.
[]> 192.168.35.35
Which interface do you want to send messages for 192.168.35.35 from?

# bounceconfig

#### **Description**

Configure the behavior of bounces.

#### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format. See the inline CLI help for more details. Use the help command to access the inline help for this command.

#### **Example**

In the following example, a bounce profile named bounceprofile is created using the **bounceconfig** command. In this profile, all hard bounced messages are sent to the alternate address

**bounce-mailbox@example.com**. Delay warnings messages are enabled. One warning message will be sent per recipient, and the default value of 4 hours (14400 seconds) between warning messages is accepted

```
mail3.example.com> bounceconfig

#### **Applying a Bounce Profile to a Listener**

After a bounce profile has been configured, you can apply the profile for each listener using the listenerconfig -> bounceconfig command and then committing the changes.

Note

Bounce profiles can be applied based upon the listener that a message was received on. However, this listener has nothing to do with how the message is ultimately delivered.

In this example, the OutboundMail private listener is edited and the bounce profile named **bouncepr1** is applied to it.

```
mail3.example.com> listenerconfig
Currently configured listeners:
1. InboundMail (on PublicNet, 192.168.2.1) SMTP Port 25 Public
2. OutboundMail (on PrivateNet, 192.168.1.1) SMTP Port 25 Private
Choose the operation you want to perform:
- NEW - Create a new listener.
- EDIT - Modify a listener.
- DELETE - Remove a listener.
- SETUP - Change global settings.
[]> edit
Enter the name or number of the listener you wish to edit.
[] > 2
Name: OutboundMail
Type: Private
Interface: PrivateNet (192.168.1.1/24) TCP Port 25

# bouncerecipients

# **Description**

Bounce messages from the queue.

# Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format

#### **Example**

Recipients to be bounced are identified by either the destination recipient host or the message sender identified by the specific address given in the Envelope From line of the message envelope. Alternately, all messages in the delivery queue can be bounced at once.

#### **Bounce by Recipient Host**

```
mail3.example.com> bouncerecipients
Please select how you would like to bounce messages:
1. By recipient host.
2. By Envelope From address.
3. All.
[1]> 1
Please enter the hostname for the messages you wish to bounce.
[]> example.com
Are you sure you want to bounce all messages being delivered to "example.com"? [N]> Y
Bouncing messages, please wait.
100 messages bounced.
```

#### **Bounce by Envelope From Address**

```
mail3.example.com> bouncerecipients
Please select how you would like to bounce messages:
1. By recipient host.
2. By Envelope From address.
3. All.
[1]> 2
Please enter the Envelope From address for the messages you wish to bounce.
[]> mailadmin@example.com
Are you sure you want to bounce all messages with the Envelope From address of "mailadmin@example.com"? [N]> Y
Bouncing messages, please wait.
100 messages bounced.
```

#### **Bounce All**

```
mail3.example.com> bouncerecipients

Please select how you would like to bounce messages:

1. By recipient host.

2. By Envelope From address.

3. All.

[1]>

Are you sure you want to bounce all messages in the queue? [N]> Y

Bouncing messages, please wait.

1000 messages bounced.
```

# **bvconfig**

### **Description**

Configure settings for Bounce Verification. Use this command to configure keys and invalid bounced emails.

#### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command:** This command does not support a batch format.

#### **Example**

The following exampe shows key configuration and settings configured for invalid bounced emails.

```
mail3.example.com> bvconfig
Behavior on invalid bounces: reject
Key for tagging outgoing mail: key
Previously-used keys for verifying incoming mail:

    key (current outgoing key)

        2. goodneighbor (last in use Wed May 31 23:21:01 2006 GMT)
Choose the operation you want to perform:
- KEY - Assign a new key for tagging outgoing mail.
- PURGE - Purge keys no longer needed for verifying incoming mail.
- CLEAR - Clear all keys including current key.
- SETUP - Set how invalid bounces will be handled.
[] > key
Enter the key to tag outgoing mail with (when tagging is enabled in the Good
Neighbor Table)
[]> basic key
Behavior on invalid bounces: reject
Key for tagging outgoing mail: basic key

# deleterecipients

#### **Description**

Delete messages from the queue

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

#### **Example**

The appliance gives you various options to delete recipients depending upon the need. The following example show deleting recipients by recipient host, deleting by Envelope From Address, and deleting all recipients in the queue.

#### **Delete by Recipient Domain**

```
mail3.example.com> deleterecipients
Please select how you would like to delete messages:
1. By recipient host.
2. By Envelope From address.
3. All.
[1]> 1
Please enter the hostname for the messages you wish to delete.
[]> example.com
Are you sure you want to delete all messages being delivered to "example.com"? [N]> Y
Deleting messages, please wait.
100 messages deleted.
```

#### **Delete by Envelope From Address**

```
mail3.example.com> deleterecipients
Please select how you would like to delete messages:
1. By recipient host.
2. By Envelope From address.
3. All.
[1]> 2
Please enter the Envelope From address for the messages you wish to delete.
[]> mailadmin@example.com
Are you sure you want to delete all messages with the Envelope From address of "mailadmin@example.com"? [N]> Y
Deleting messages, please wait.
100 messages deleted.

3. All.
```

```
[1]> {\bf 1} Are you sure you want to delete all messages in the queue? [N]> {\bf Y} Deleting messages, please wait. 1000 messages deleted.
```

# deliveryconfig

#### **Description**

Configure mail delivery

#### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

#### **Example**

In the following example, the deliveryconfig command is used to set the default interface to "Auto" with "Possible Delivery" enabled. The system-wide maximum outbound message delivery is set to 9000 connections.

```
mail3.example.com> deliveryconfig
Choose the operation you want to perform:
- SETUP - Configure mail delivery.
[]> setup
Choose the default interface to deliver mail.
1. Auto
2. AnotherPublicNet (192.168.3.1/24: mail4.example.com)
3. Management (192.168.42.42/24: mail3.example.com)
4. PrivateNet (192.168.1.1/24: mail3.example.com)
5. PublicNet (192.168.2.1/24: mail3.example.com)
[1]> 1
Enable "Possible Delivery" (recommended)? [Y]> y
Please enter the default system wide maximum outbound message delivery concurrency
[10000]> 9000
mail3.example.com>
```

# delivernow

### **Description**

Reschedule messages for immediate delivery. Users have the option of selecting a single recipient host, or all messages currently scheduled for delivery.

# Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format

#### **Example**

```
mail3.example.com> delivernow
Please choose an option for scheduling immediate delivery.
1. By recipient domain
2. All messages
[1]> 1
Please enter the recipient domain to schedule for delivery.
[]>foo.com
Scheduling all messages to foo.com for delivery.
```

# destconfig

Formerly the **setgoodtable** command. The table is now called the Destination Control Table. Use this table to configure delivery limits for a specified domain.

#### **Using the destconfig Command**

The following commands are available within the destconfig submenu:

Table 7: destconfig Subcommands

Syntax	Description
SETUP	Change global settings.
NEW	Add new limits for a domain.
EDIT	Modify the limits for a domain.
DELETE	Remove the limits for a domain.
DEFAULT	Change the default limits for non-specified domains.
LIST	Display the list of domains and their limits.
DETAIL	Display the details for one destination or all entries.
CLEAR	Remove all entries from the table.
IMPORT	Imports a table of destination control entries from a .INI configuration file.
EXPORT	Exports a table of destination control entries to a .INI configuration file.

The **destconfig** command requires the following information for each row in the Destination Controls table.

- Domain (recipient host)
- Maximum simultaneous connections to the domain
- Messages-per-connection limit
- Recipient limit
- · System-wide or Virtual Gateway switch
- Enforce limits per domain

- Time period for recipient limit (in minutes)
- Bounce Verification
- Bounce profile to use for the domain

# **Sample Destination Control Table**

The following table shows entries in a destination control table.

**Table 8: Example Destination Control Table Entries** 

Domain	Conn. Limit	Rcpt. Limit	Min. Prd.	Enforce MX/DOM
(default)	500	None	1	Domain
Unlisted domains get their own set of 500 connections with unlimited rcpts/hr				
(default)	500	None	1	MXIP
Mail gateways at unlisted domains get up to 500 connections, with unlimited rcpts/hr				
partner.com	10	500	60	Domain
All gateways at partner.com will share 10 connections, with 500 rcpts/minute maximum				
101.202.101.2	500	None	0	MXIP
Specifying an IP address		<u>'</u>	1	

#### **Batch Format**

The batch format of the destconfig command can be used to perform all the fuctions of the traditional CLI command.

• Creating a new destination control table

• Editing an existing destination control table

• Deleting an existing destination control table

• Displaying a summary of all destination control entries

destconfig list

• Displaying details for one destination or all entries

```
destconfig detail <default|profile|all>
```

• Deleting all existing destination control table entries

```
destconfig clear
```

• Import table from a file

```
destconfig import <filename>
```

• Export table to a file

```
destconfig export <filename>
```

For the edit and new batch commands, any or all of the following options may be provided by identifying the value with the variable name and an equals sign. Options not specified will not be modified (if using edit ) or will be set to default values (if using new ).

```
concurrency_limit=<int> - The maximum concurrency for a specific host.

concurrency_limit_type=<host|MXIP> - Maximum concurrency is per host or per MX IP.

concurrency_limit_apply=<system|VG> - Apply maximum concurrency is system wide or by Virtual Gateway(tm).

max_messages_per_connection=<int> - The maximum number of messages that will be sent per connection.

recipient_limit_minutes=<int> - The time frame to check for recipient limits in minutes.

recipient_limit=<int> - The number of recipients to limit per unit of time.

use_tls=<off|on|require|on_verify|require_verify> - Whether TLS should be on, off, or required for a given host.

bounce_profile=<default|profile> - The bounce profile name to use.

bounce_verification=<off|on> - Bounce Verification option.
```

#### **Example: Creating a new destconfig Entry**

In the following example, the current destconfig entries are printed to the screen. Then, a new entry for the domain partner.com is created. The concurrency limit of 100 simultaneous connections and recipient limit of 50 recipients for a 60-minute time period is set for that domain. So, the system will never open more than 100 connections or deliver to more than more than 50 recipients in a given hour to the domain partner.com . No bounce profile is assigned for this specific domain, and no specific TLS setting is configured. Finally, the changes are printed to confirm and then committed

```
mail3.example.com> destconfig
There are currently 2 entries configured.

```

#### **Example: Inbound "Shock Absorber"**

In this example, another **destconfig** entry is created to throttle mail to the internal groupware server exchange.example.com. This "shock absorber" entry for your internal server throttles inbound delivery to your internal groupware servers during periods of especially high volume traffic. In this example, the appliance will never open more than ten simultaneous connections or deliver to more than 1000 recipients to the internal groupware server exchange.example.com in any given *minute*. No bounce profile or TLS setting is configured:

```
mail3.example.com> destconfig
There are currently 2 entries configured.
Choose the operation you want to perform:
- SETUP - Change global settings.
- NEW - Create a new entry.

```

### **Example: Global Settings**

In this example, the TLS alert and certificate for TLS connections are configured.

```
mail3.example.com> destconfig
Choose the operation you want to perform:
- SETUP - Change global settings.
- NEW - Create a new entry.
- EDIT - Modify an entry.
- DELETE - Remove an entry.
- DEFAULT - Change the default.
 LIST - Display a summary list of all entries.
- DETAIL - Display details for one destination or all entries.
- CLEAR - Remove all entries.
- IMPORT - Import tables from a file.
- EXPORT - Export tables to a file.
[]> setup
The "Demo" certificate is currently configured. You may use "Demo", but this will not be
secure.
1. partner.com
2. Demo
Please choose the certificate to apply:
[1]> 1
Do you want to send an alert when a required TLS connection fails? [N]> \boldsymbol{n}
```

## **Example: Enabling TLS Connection with DANE Support**

In this example, a new destconfig entry is configured for the domain newpartner.com, where TLS connections are enabled with "Opportunistic" DANE support.

Note

You must select a TLS support option to enable the DANE prompt.

```
mail3.example.com> destconfig
There are currently 1 entries configured. Choose the operation you want to perform:
- SETUP - Change global settings.
- NEW - Create a new entry.
- {\tt EDIT} - {\tt Modify} an entry.
- DELETE - Remove an entry.
- DEFAULT - Change the default.
- LIST - Display a summary list of all entries.
- DETAIL - Display details for one destination or all entries.
- CLEAR - Remove all entries.
- IMPORT - Import tables from a file.
- EXPORT - Export tables to a file.
[]> new
Enter the domain you wish to configure.[]> newparter.com
Do you want to configure a concurrency limit for newparter.com? [Y]>
Enter the max concurrency limit for "newpartner.com".
[500]>
Do you want to apply a messages-per-connection limit to this domain? [N]>
Do you want to apply a recipient limit to this domain? [N]
Select how the limits will be enforced:
1. System Wide
2. Per Virtual Gateway(tm)
[1]>
Do you wish to apply a specific TLS setting for this domain? [N]> y
Do you want to use TLS support?
1. No
2. Preferred
3. Required
4. Preferred - Verify
5. Required - Verify
6. Required - Verify Hosted Domains
[21> 3
You have chosen to enable TLS.
Please use the 'certconfig' command to ensure that there is a valid certificate configured.
Do you want to configure DANE Support? [N]> y
Info:
If you configure DANE as 'Opportunistic' and the remote host does not support DANE,
opportunistic TLS is preferred for encrypting SMTP conversations.
If you configure DANE as 'Mandatory' and the remote host does not support DANE,
no connection is established to the destination host.
If you configure DANE as 'Mandatory' or 'Opportunistic' and the remote host supports DANE,
it is preferred for encrypting SMTP conversations.
Please choose a DANE option:
```

- 1. No
- 2. Opportunistic
- 3. Mandatory

[2]> 2

Do you want to apply a specific bounce verification address tagging setting for this domain? [N] >

#### hostrate

#### **Description**

Monitor activity for a particular host

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

## **Example**

```
mail3.example.com> hostrate
Recipient host:
[]> aol.com
Enter the number of seconds between displays.
[10]> 1

## imageanalysisconfig

#### **Description**

Configure the IronPort Image Analysis settings

### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command:** This command does not support a batch format

```
mail.example.com>imageanalysisconfig
IronPort Image Analysis: Enabled
Image Analysis Sensitivity: 65
Verdict Ranges: Clean (0-49), Suspect(50-74), Inappropriate (75+)
Skip small images with size less than 100 pixels (width or height)
(First time users see the license agreement displayed here.)
Choose the operation you want to perform:
- SETUP - Configure IronPort Image Analysis.
[]> setup
IronPort Image Analysis: Enabled
Would you like to use IronPort Image Analysis? [Y]>
Define the image analysis sensitivity. Enter a value between 0 (least sensitive) and 100
(most sensitive). As sensitivity increases, so does the false
positive rate. The default setting of 65 is recommended.
Define the range for a CLEAN verdict. Enter the upper bound of the CLEAN range by entering
a value between 0 and 98. The default setting of 49 is
recommended.
Define the range for a SUSPECT verdict. Enter the upper bound of the SUSPECT range by
entering a value between 50 and 99. The default setting of 74 is
recommended.
[74]>
Would you like to skip scanning of images smaller than a specific size? [Y]>
Please enter minimum image size to scan in pixels, representing either height or width of
a given image.
[100]>
IronPort Image Analysis: Enabled
Image Analysis Sensitivity: 65
Verdict Ranges: Clean (0-49), Suspect(50-74), Inappropriate (75+)
Skip small images with size less than 100 pixels (width or height)
Choose the operation you want to perform:
- SETUP - Configure IronPort Image Analysis.
```

## oldmessage

## **Description**

Displays the mid and headers of the oldest non-quarantine message on the system.

### **Usage**

Commit: This command does not require a commit.

Cluster Management: This command is restricted to machine mode..

Batch Command: This command does not support a batch format.

### **Example**

In the following example, an older messages are displayed:

```
mail3.example.com>
oldmessage
MID 9: 1 hour 5 mins 35 secs old
Received: from test02.com ([172.19.0.109])
by test02.com with SMTP; 14 Feb 2007 22:11:37 -0800
From: user123@test02.com
To: 4031@example.com
Subject: Testing
Message-Id: <20070215061136.68297.16346@test02.com</pre>
```

#### rate

## **Description**

Monitor message throughput

## Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

## **Example**

```
mail3.example.com> rate
Enter the number of seconds between displays.
[10]> 1
```

Hit Ctrl-C to return to the main prompt.

## redirectrecipients

## **Description**

Redirect all messages to another relay host.

Danger

Redirecting messages to a receiving domain that has /dev/null as its destination results in the loss of messages. The CLI does not display a warning if you redirect mail to such a domain. Check the SMTP route for the receiving domain before redirecting messages.

Danger

Redirecting recipients to a host or IP address that is not prepared to accept large volumes of SMTP mail from this host will cause messages to bounce and possibly result in the loss of mail.

### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command supports a batch format.

#### **Batch Format**

The batch format of the redirectrecipients command can be used to perform all the fuctions of the traditional CLI command.

· Redirects all mail to another host name or IP address

redirectrecipients host <hostname>

### **Example**

The following example redirects all mail to the example2.com host.

```
mail3.example.com> redirectrecipients
Please enter the hostname or IP address of the machine you want to send all mail to.
[]> example2.com
WARNING: redirecting recipients to a host or IP address that is not prepared to accept large volumes of SMTP mail from this host
will cause messages to bounce and possibly result in the loss of mail.
Are you sure you want to redirect all mail in the queue to "example2.com"? [N]> y
Redirecting messages, please wait.
246 recipients redirected.
```

#### resetcounters

### **Description**

Reset all of the counters in the system

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

### **Example**

```
mail3.example.com> resetcounters
Counters reset: Mon Jan 01 12:00:01 2003
```

## removemessage

### **Description**

Attempts to safely remove a message for a given message ID.

The **removemessage** command can only remove messages that are in the work queue, retry queue, or a destination queue. Note that depending on the state of the system, valid and active messages may not be in any of those queues.

## Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

```
example.com>
removemessage
Enter the MID to remove.
[]> 1
MID 1: 19 secs old
Received: from example2.com ([172.16.0.102])
  by test02.com with SMTP; 01 Mar 2007 19:50:41 -0800
From: user123@test02.com
To: 9526@example.com
Subject: Testing
Message-Id: <20070302035041.67424.53212@test02.com>
Remove this message? [N]> y
```

## showmessage

### **Description**

Shows the message and message body for a specified message ID.

#### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

### **Example**

```
example.com> showmessage
MID 9: 1 hour 5 mins 35 secs old
Received: from example2.com([172.19.0.109])
  by test02.com with SMTP; 14 Feb 2007 22:11:37 -0800
From: user123@test02.com
To: 4031@example.com
Subject: Testing
Message-Id: <20070215061136.68297.16346@test02.com>
This is the message body.
```

## showrecipients

## **Description**

Show messages from the queue by recipient host, Envelope From address, or all messages.

## Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does support a batch format.

#### **Batch Format**

The batch format of the showrecipients command can be used to perform all the fuctions of the traditional CLI command.

• Find messages by a recipient host name

```
showrecipients host <hostname>
```

• Find messages by an envelope from address

```
showrecipients [sender_options] <sender_email>
```

The following sender\_option is available:

- --match-case Case-sensitive matching for the username portion of an address.
  - Find all messages

```
showrecipients all
```

### **Example**

The following example shows messages in the queue for all recipient hosts.

```
mail3.example.com> showrecipients
Please select how you would like to show messages:
1. By recipient host.
2. By Envelope From address.
3. All.
[1]> 3
Showing messages, please wait.

## tophosts

## **Description**

To get immediate information about the email queue and determine if a particular recipient host has delivery problems — such as a queue buildup — use the tophosts command. The tophosts command returns a list of the top 20 recipient hosts in the queue. The list can be sorted by a number of different statistics, including active recipients, connections out, delivered recipients, soft bounced events, and hard bounced recipients.

## Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

```
mail3.example.com> tophosts
Sort results by:
```

```
1. Active Recipients
2. Connections Out
3. Delivered Recipients
4. Hard Bounced Recipients
5. Soft Bounced Events
[1]> 1
Status as of:
Hosts marked with '*' were down as of the last delivery attempt.
```

		Active	Conn.	Deliv.	Soft	Hard

#### unsubscribe

#### **Description**

Update the global unsubscribe list

### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### **Example**

In this example, the address user@example.net is added to the Global Unsubscribe list, and the feature is configured to hard bounce messages. Messages sent to this address will be bounced; the appliance will bounce the message immediately prior to delivery.

```
mail3.example.com> unsubscribe
Global Unsubscribe is enabled. Action: drop.
Choose the operation you want to perform:
- NEW - Create a new entry.
- IMPORT - Import entries from a file.
- SETUP - Configure general settings.
[]> new
Enter the unsubscribe key to add. Partial addresses such as "@example.com"
or "user@" are allowed, as are IP addresses. Partial hostnames such as "@.example.com" are
allowed.
[]> user@example.net
Email Address 'user@example.net' added.
Global Unsubscribe is enabled. Action: drop.
Choose the operation you want to perform:
- NEW - Create a new entry.
- DELETE - Remove an entry.
- PRINT - Display all entries.
- IMPORT - Import entries from a file.
- EXPORT - Export all entries to a file.
- SETUP - Configure general settings.
- CLEAR - Remove all entries.
[]> setup
Do you want to enable the Global Unsubscribe feature? [Y]> y
Would you like matching messages to be dropped or bounced?
1. Drop
2. Bounce
[1]> 2
Global Unsubscribe is enabled. Action: bounce.
Choose the operation you want to perform:
- NEW - Create a new entry.
- DELETE - Remove an entry.
- PRINT - Display all entries.
- IMPORT - Import entries from a file.
- EXPORT - Export all entries to a file.
- SETUP - Configure general settings.
- CLEAR - Remove all entries.
mail3.example.com> commit
Please enter some comments describing your changes:
[]> Added username "user@example.net" to global unsubscribe
```

Do you want to save the current configuration for rollback? [Y]> n Changes committed: Fri May 23 11:42:12 2014 GMT

## workqueue

### **Description**

Display and/or alter work queue pause status

### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

## **Example**

```
mail3.example.com> workqueue
Status: Operational
Messages: 1243
Manually pause work queue? This will only affect unprocessed messages. [N]> y
Reason for pausing work queue:
[]> checking LDAP server
Status: Paused by admin: checking LDAP server
Messages: 1243
```

Note

Entering a reason is optional. If you do not enter a reason, the system logs the reason as "operator paused."

In this example, the work queue is resumed:

```
mail3.example.com> workqueue
Status: Paused by admin: checking LDAP server
Messages: 1243
Resume the work queue? [Y]> y
Status: Operational
Messages: 1243
```

# **Networking Configuration / Network Tools**

This section contains the following CLI commands:

## etherconfig

## **Description**

Configure Ethernet settings, including media settings, NIC pairing, VLAN configuration, and DSR configuration.

#### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

```
mail3.example.com> etherconfig
Choose the operation you want to perform:
- MEDIA - View and edit ethernet media settings.
- VLAN - View and configure VLANs.
- LOOPBACK - View and configure Loopback.
- MTU - View and configure MTU.
- MULTICAST - Accept or reject ARP replies with a multicast address.
[]> vlan
VLAN interfaces:
Choose the operation you want to perform:
- NEW - Create a new VLAN.
[]> new
VLAN tag ID for the interface (Ex: "34"):
[]> 12
Enter the name or number of the ethernet interface you wish bind to:
1. Data 1
2. Data 2
3. Management
[1] > 1
VLAN interfaces:
1. VLAN 12 (Data 1)
Choose the operation you want to perform:
- NEW - Create a new VLAN.
- EDIT - Edit a VLAN.
- DELETE - Delete a VLAN.
Choose the operation you want to perform:
- MEDIA - View and edit ethernet media settings.
- VLAN - View and configure VLANs.
- LOOPBACK - View and configure Loopback.
- MTU - View and configure MTU.
- MULTICAST - Accept or reject ARP replies with a multicast address.
[]> loopback
Currently configured loopback interface:
Choose the operation you want to perform:
- ENABLE - Enable Loopback Interface.
Choose the operation you want to perform:
- MEDIA - View and edit ethernet media settings.
- VLAN - View and configure VLANs.
- LOOPBACK - View and configure Loopback.
- MTU - View and configure MTU.
- MULTICAST - Accept or reject ARP replies with a multicast address.
[]> mtu
Ethernet interfaces:
1. Data 1 default mtu 1500
2. Data 2 default mtu 1500
3. Management default mtu 1500
4. VLAN 12 default mtu 1500
Choose the operation you want to perform:
- EDIT - Edit an ethernet interface.
[]> edit
```

```
Enter the name or number of the ethernet interface you wish to edit.
[] > pair1
That value is not valid.
Enter the name or number of the ethernet interface you wish to edit.
[]> 12
That value is not valid.
Enter the name or number of the ethernet interface you wish to edit.
Please enter a non-default (1500) MTU value for the Data 2 interface.
[]> 1200
Ethernet interfaces:
1. Data 1 default mtu 1500
2. Data 2 mtu 1200
3. Management default mtu 1500
4. VLAN 12 default mtu 1500
Choose the operation you want to perform:
- EDIT - Edit an ethernet interface.
[]>
```

## interfaceconfig

## **Description**

Configure the interface. You can create, edit, or delete interfaces. You can enable FTP, change an IP address, and configure Ethernet IP addresses.

### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command supports a batch format.

#### **Batch Format**

The batch format of the interfaceconfig command can be used to perform all the fuctions of the traditional CLI command.

• Creating a new interface

interfaceconfig new <name></name>
<ethernet interface=""></ethernet>
<hostname></hostname>
ip=IPv4 Address/Netmask
ip6=IPv6 Address/Prefix Lenght
[ftp[= <port>]]</port>

```
[--telnet[=<port>]]

[--ssh[=<port>]]

[--http][=<port>]

[--https[=<port>]]

[--euq_http[=<port>]]

[--euq_https][=<port>]

[--ccs[=<port>]].

FTP is available only on IPv4.
```

#### • Deleting an interface

interfaceconfig delete <name>

#### **Example: Configuring an Interface**

```
mail.example.com> interfaceconfig
Currently configured interfaces:
1. Management (10.76.69.149/24 on Management: mail.example.com)
Choose the operation you want to perform:
- NEW - Create a new interface.
- {\tt EDIT} - {\tt Modify} an interface.
- GROUPS - Define interface groups.
- DELETE - Remove an interface.
[]> edit
Enter the number of the interface you wish to edit.
[]> 1
IP interface name (Ex: "InternalNet"):

Choose the operation you want to perform:
- NEW - Create a new interface.
- EDIT - Modify an interface.
- GROUPS - Define interface groups.
- DELETE - Remove an interface.
[]>
```

## nslookup

## **Description**

Use the nslookup command to check the DNS functionality.

The **nslookup** command can confirm that the appliance is able to reach and resolve hostnames and IP addresses from a working DNS (domain name service) server.

#### Table 9: nslookup Command Query Types

Query Type	Description
	the host's Internet address
CNAME	the canonical name for an alias
MX	the mail exchanger
NS	the name server for the named zone
PTR	the hostname if the query is an Internet address, otherwise the pointer to other information
SOA	the domain's "start-of-authority" information
TXT	the text information

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command:** This command does not support a batch format

#### **Example**

```
mail.example.com> nslookup
Please enter the host or IP address to resolve.
[]> vm30esa0086.ibga
Choose the query type:
       the host's IP address
1. A
2. AAAA
          the host's IPv6 address
3. CNAME the canonical name for an alias
4. MX the mail exchanger
5. NS
          the name server for the named zone
6. PTR
         the hostname if the query is an Internet address,
otherwise the pointer to other information
7. SOA the domain's "start-of-authority" information
8. TXT
         the text information
[11>2]
AAAA=2001:420:54ff:ff06::95 TTL=30m
```

#### netstat

### **Description**

Use the netstat command to displays network connections (both incoming and outgoing), routing tables, and a number of network interface statistics. Note that this version will not support all arguments. Specifically, you cannot use -a, -A, -g, -m, -M, -N, -s. The command was designed to be run in interactive mode, so that you may enter netstat, then choose from five options to report on. You can also specify the interface to listen on and the interval for display.

## Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

```
example.com> netstat

Choose the information you want to display:

1. List of active sockets.

2. State of network interfaces.

3. Contents of routing tables.

4. Size of the listen queues.

5. Packet traffic information.

[1] > 2

Select the ethernet interface whose state you wish to display:

1. Data 1

2. Data 2
```

```
3. Management
4. ALL
[]> 1
Show the number of bytes in and out? [N]>
Show the number of dropped packets? [N]> y

## ping

## **Description**

The ping command allows you to test connectivity to a network host from the appliance.

## Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

**Batch Command:** This command does not support a batch format.

```
mail3.example.com> ping
Which interface do you want to send the pings from?
1. Auto
2. Management (192.168.42.42/24: mail3.example.com)
3. PrivateNet (192.168.1.1/24: mail3.example.com)
```

```
4. PublicNet (192.168.2.1/24: mail3.example.com)
[1] > 1
Please enter the host you wish to ping.
[]> anotherhost.example.com
Press Ctrl-C to stop.
PING anotherhost.example.com (
X.X.X.X
): 56 data bytes
64 bytes from 10.19.0.31: icmp seq=0 ttl=64 time=1.421 ms

round-trip min/avg/max/stddev = 0.115/0.242/1.421/0.373 ms
```

Note

You must use Control-C to end the ping command.

## ping6

### Description

Ping a network host using IPv6

## Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

Batch Command: This command does not support a batch format.

```
mail.example.com> ping6
Which interface do you want to send the pings from?
1. Auto
2. Management (192.168.42.42/24: mail3.example.com)
[1]> 1
Please enter the host you wish to ping.
[]> anotherhost.example.com
Press Ctrl-C to stop.
```

Note

You must use Control-C to end the ping6 command.

## routeconfig

### **Description**

The routeconfig command allows you to create, edit, and delete static routes for TCP/IP traffic. By default, traffic is routed through the default gateway set with the setgateway command. However, AsyncOS allows specific routing based on destination.

Routes consist of a nickname (for future reference), a destination, and a gateway. A gateway (the next hop) is an IP address such as 10.1.1.2. The destination can be one of two things:

- an IP address, such as 192.168.14.32
- a subnet using CIDR notation. For example, 192.168.5.0/24 means the entire class C network from 192.168.5.0 to 192.168.5.255.

For IPv6 addresses, you can use the following formats:

- 2620:101:2004:4202::0-2620:101:2004:4202::ff
- 2620:101:2004:4202::
- 2620:101:2004:4202::23
- 2620:101:2004:4202::/64

The command presents a list of all currently configured TCP/IP routes for you to select from using the edit and delete subcommands.

## Usage

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command supports a batch format.

#### **Batch Format**

The batch format of the smtproutes command can be used to perform all the fuctions of the traditional CLI command. You can choose whether to use IPv4 or IPv6 addresses for the route.

• Creating a static route:

```
routeconfig new 4|6 <name> <destination_address> <gateway_ip>
```

#### Table 10: routeconfig Arguments

Argument	Description
4   6	The IP version (IPv4 or IPv6) to apply this command to. For clear and print this option can be omitted and the command applies to both versions.

Argument	Description
name	The name of the route.
destination_address	The IP or CIDR address to match on for outgoing IP traffic.
gateway_ip	The IP address to send this traffic to.

• Editing a static route:

```
routeconfig edit 4|6 <name> <new_name> <destination_address> <gateway_ip>
```

• Deleting a static route:

```
routeconfig delete 4|6 <name>
```

• Deleting all static routes:

```
routeconfig clear [4|6]
```

• Printing a list of static routes:

```

```

## setgateway

#### **Description**

The setgateway command configures the default next-hop intermediary through which packets should be routed. Alternate (non-default) gateways are configured using the routeconfig command.

### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

```
mail3.example.com> setgateway
Warning: setting an incorrect default gateway may cause the current connection to be
interrupted when the changes are committed.
Enter new default gateway:
[10.1.1.1]> 192.168.20.1
mail3.example.com> commit
Please enter some comments describing your changes:
[]> changed default gateway to 192.168.20.1
Do you want to save the current configuration for rollback? [Y]> n
Changes committed: Fri May 23 11:42:12 2014 GMT
```

#### sethostname

### **Description**

The hostname is used to identify the system at the CLI prompt. You must enter a fully-qualified hostname. The sethostname command sets the name of the Email Security appliance. The new hostname does not take effect until you issue the commit command.

#### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### **Example**

```
oldname.example.com> sethostname
[oldname.example.com]> mail3.example.com
oldname.example.com>
```

For the hostname change to take effect, you must enter the commit command. After you have successfully committed the hostname change, the new name appears in the CLI prompt:

```
oldname.example.com> commit
Please enter some comments describing your changes:
[]> Changed System Hostname
Do you want to save the current configuration for rollback? [Y]> n
Changes committed: Fri May 23 11:42:12 2014 GMT
```

The new hostname appears in the prompt as follows:

mail3.example.com>

## **smtproutes**

## **Description**

Set up permanent domain redirections.

## Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

#### **Batch Format**

The batch format of the smtproutes command can be used to perform all the fuctions of the traditional CLI command.

• Creating a new SMTP route

```
smtproutes new <source> <destination> [destination] [destination] [...]
```

Deleting an existing SMTP route

```
smtproutes delete <source>
```

Clear a listing of SMTP routes

```
smtproutes clear
```

Print a listing of SMTP routes

```
smtproutes print
```

Import a listing of SMTP routes

```
smtproutes import <filenames>
```

• Export a listing of SMTP routes

```
smtproutes export <filenames>
```

### **Example**

In the following example, the smptroutes command is used to construct a route (mapping) for the domain example.com to relay 1. example.com, relay 2. example.com, and backup-relay. example.com. Use /pri=# to specify a destination priority. THE # should be from 0-65535, with larger numbers indicating decreasing priority. If unspecified, the priority defaults to 0.

(Note that you may have constructed the same mapping during the systemsetup command when you configured the InboundMail public listener.)

```
mail3.example.com> smtproutes
There are no routes configured.
Choose the operation you want to perform:
- NEW - Create a new route.
- IMPORT - Import new routes from a file.
Enter the domain for which you want to set up a permanent route.
Partial hostnames such as ".example.com" are allowed.
Use "ALL" for the default route.
[]> example.com
Enter the destination hosts, separated by commas, which you want mail
for example.com to be delivered.
Enter USEDNS by itself to use normal DNS resolution for this route.
Enter /dev/null by itself if you wish to discard the mail.
Enclose in square brackets to force resolution via address (A)
records, ignoring any MX records.
[] > relay1.example.com/pri=10, relay2.example.com, backup-relay.example.com
```

```
Mapping for example.com to relay1.example.com, relay2.example.com, backup-relay.example.com/pri=10 created.

There are currently 1 routes configured.

Choose the operation you want to perform:

- NEW - Create a new route.

- EDIT - Edit destinations of an existing route.

- DELETE - Remove a route.

- PRINT - Display all routes.

- IMPORT - Import new routes from a file.

- EXPORT - Export all routes to a file.

- CLEAR - Remove all routes.

[]>
```

## sslconfig

#### **Description**

Configure SSL settings for the appliance.

Note

You cannot change server and client methods in the FIPS 140-2 compliance mode.

#### Usage

**Commit:** This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command:** This command does not support a batch format.

```
mail.example.com> sslconfig
sslconfig settings:
  GUI HTTPS method: tlsv1_1tlsv1_2
  GUI HTTPS ciphers:
       AES128
       AES256
        !SRP
        !AESGCM+DH+aRSA
        !AESGCM+RSA
       !aNULL
  Inbound SMTP method: tlsv1_1tlsv1_2
  Inbound SMTP ciphers:
        AES128
        AES256
        !SRP
        !AESGCM+DH+aRSA
        !AESGCM+RSA
        !aNULL
  Outbound SMTP method: tlsv1_1tlsv1_2
  Outbound SMTP ciphers:

```

## sslv3config

## **Description**

Enable or disable SSLv3 settings for the appliance.

## Usage

**Commit:** This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command:** This command does not support a batch format.

## **Example**

The following example shows how to disable SSLv3 for End User Quarantine.

```
UPDATER : Enabled
WEBSECURITY : Enabled
EUQ : Enabled
LDAP : Enabled
LDAP : Enabled

Choose the operation you want to perform:
- SETUP - Toggle SSLv3 settings.

[]> setup
Choose the service to toggle SSLv3 settings:
1. EUQ Service
2. LDAP Service
3. Updater Service
4. Web Security Service
[1]>
Do you want to enable SSLv3 for EUQ Service ? [Y]>n
Choose the operation you want to perform:
- SETUP - Toggle SSLv3 settings.

[]>
```

### telnet

#### **Description**

Connect to a remote host

### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

Batch Command: This command does not support a batch format.

```
mail3.example.com> telnet
Please select which interface you want to telnet from.
1. Auto
2. Management (192.168.42.42/24: mail3.example.com)
3. PrivateNet (192.168.1.1/24: mail3.example.com)
4. PublicNet (192.168.2.1/24: mail3.example.com)
[1]> 3
Enter the remote hostname or IP.
[]> 193.168.1.1
Enter the remote port.
[25]> 25
Trying 193.168.1.1...
Connected to 193.168.1.1.
Escape character is '^]'.
```

#### traceroute

### **Description**

Use the traceroute command to test connectivity to a network host using IPV4 from the appliance and debug routing issues with network hops.

### **Usage**

Commit: This command does not require a 'commit'.

**Cluster Management:** This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

Batch Command: This command does not support a batch format.

### **Example**

```
mail3.example.com> traceroute
Which interface do you want to trace from?
1. Auto
2. Management (192.168.42.42/24: mail3.example.com)

4. PublicNet (192.168.2.1/24: mail3.example.com)
[1]> 1
Please enter the host to which you want to trace the route.
[]> 10.1.1.1
Press Ctrl-C to stop.
traceroute to 10.1.1.1 (10.1.1.1), 64 hops max, 44 byte packets
1 gateway
 (192.168.0.1) 0.202 ms 0.173 ms 0.161 ms
2 hostname
(10.1.1.1) 0.298 ms 0.302 ms 0.291 ms
mail3.example.com>
```

## traceroute6

## **Description**

Use the **traceroute6** command to test connectivity to a network host using IPV6 from the appliance and debug routing issues with network hops.

## Usage

Commit: This command does not require a 'commit'.

**Cluster Management:** This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

Batch Command: This command does not support a batch format.

```
mail.example.com> traceroute6
```

```
Which interface do you want to trace from?
1. Auto
2. D1 (2001:db8::/32: example.com)
[1] > 1
Please enter the host to which you want to trace the route.
[]> example.com
Press Ctrl-C to stop.
connect: No route to host
vm10esa0031.qa> traceroute6
Which interface do you want to trace from?
1. Auto
2. D1 (2001:db8::/32: example.com)
[11> 2
Please enter the host to which you want to trace the route.
[]> example.com
Press Ctrl-C to stop.
traceroute6 to example.com (2606:2800:220:1:248:1893:25c8:1946) from 2001:db8::, 64 hops

traceroute6: wrote example.com 12 chars, ret=-1
 *sendto: No route to host
traceroute6: wrote example.com 12 chars, ret=-1
```

## trailblazerconfig

- Description, on page 179
- Usage, on page 180
- Example, on page 180

## Description

The trailblazerconfig command is used to route your incoming and outgoing connections through HTTP and HTTPS ports on the new web interface.

You can see the inline help by using the following command on the CLI: help trailblazerconfig.

Note

By default, trailblazerconfig CLI command is enabled on your appliance. Make sure that the HTTPS ports are opened on the firewall. Also, ensure that your DNS server can resolve the hostname that you specified for accessing the appliance.

The trailblazerconfig command helps you to avoid the following issues:

- Requiring to add multiple certificates for API ports in certain browsers.
- Redirecting to the legacy web interface when you refresh the Spam Quarantine, Safelist or Blocklist page.
- Metrics bar on the Advanced Malware Protection report page does not contain any data.

#### **Important**

When you enable trailblazerconfig command on the appliance, the requested URL will contain the trailblazerconfig HTTPS port number appended to the hostname.

The syntax is as follows:

trailblazerconfig enable <a href="https\_port">http\_port</a>- runs the trailblazer configuration on the default ports (HTTPS: 4431).

trailblazerconfig disable- disables the trailblazer configuration

trailblazerconfig status- checks the status of the trailblazer configuration

#### **Usage**

**Commit**: This command does not require a 'commit'.

**Cluster Management**: This command is restricted to machine mode.

**Batch Command**: This command does not support a batch format.

### **Example**

The following example shows how to enable and view status of trailblazerconfig command.

```
maill.example.com> trailblazerconfig enable 4431

trailblazer is enabled.
To access the Next Generation web interface, use the port 4419 for HTTPS.
maill.example.com> trailblazerconfig status
trailblazer is running with https on 4419 port.
maill.example.com> trailblazerconfig disable
trailblazer is disabled.
[]>
```

## **Outbreak Filters**

This section contains the following CLI commands:

## outbreakconfig

## **Description**

Use the **outbreakconfig** command to configure the Outbreak Filter feature. You perform the following actions using this command:

- Enable Outbreak Filters globally
- Enable Adaptive Rules scanning
- Set a maximum size for files to scan (note that you are entering the size in bytes)
- Enable alerts for the Outbreak Filter
- Enable Logging of URLs

## Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### **Example**

```
mail.example.com> outbreakconfig
Outbreak Filters: Enabled
Choose the operation you want to perform:
- SETUP - Change Outbreak Filters settings.
[]> setup
Outbreak Filters: Enabled
Would you like to use Outbreak Filters? [Y]>
Outbreak Filters enabled.
Outbreak Filter alerts are sent when outbreak rules cross the threshold (go above or back
down below), meaning that new messages of
certain types could be quarantined or will no longer be quarantined, respectively.
Would you like to receive Outbreak Filter alerts? [N]>
What is the largest size message Outbreak Filters should scan?
[524288]>
Do you want to use adaptive rules to compute the threat level of messages? [Y]>
Logging of URLs is currently disabled.
Do you wish to enable logging of URL's? [N]> Y
Logging of URLs has been enabled.
The Outbreak Filters feature is now globally enabled on the system. You must use the
'policyconfig' command in the CLI or the Email
Security Manager in the GUI to enable Outbreak Filters for the desired Incoming and Outgoing
Mail Policies.
Choose the operation you want to perform:
- SETUP - Change Outbreak Filters settings.
[]>
```

## outbreakflush

## Description

Clear the cached Outbreak Rules.

## Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

## **Example**

```
mail3.example.com> outbreakflush
Warning - This command removes the current set of Outbreak Filter Rules, leaving your network
exposed until the next rule download.
Run "outbreakupdate force" command to immediately download Outbreak Filter Rules.
Are you sure that you want to clear the current rules? [N]> y
Cleared the current rules.
mail3.example.com>
```

## outbreakstatus

## **Description**

The **outbreakstatus** command shows the current Outbreak Filters feature settings, including whether the Outbreak Filters feature is enabled, any Outbreak Rules, and the current threshold.

## Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

## **Example**

```
mail3.example.com> outbreakstatus
Outbreak Filters: Enabled

mail3.example.com>
```

## outbreakupdate

## **Description**

Requests an immediate update of CASE rules and engine core.

## **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto).

**Batch Command:** This command does not support a batch format.

### **Example**

```
elroy.run> outbreakupdate
Requesting updates for Outbreak Filter Rules.
```

# **Policy Enforcement**

This section contains the following CLI commands:

# dictionaryconfig

## **Description**

Configure content dictionaries

### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### **Example**

Use dictionaryconfig -> new to create dictionaries, and dictionaryconfig -> delete to remove dictionaries.

#### **Creating a Dictionary**

```
example.com> dictionaryconfig
No content dictionaries have been defined.
Choose the operation you want to perform:
- NEW - Create a new content dictionary.
[]> new
Enter a name for this content dictionary.
[]> HRWords
Do you wish to specify a file for import? [N]>
Enter new words or regular expressions, enter a blank line to finish.
<list of words typed here>
Currently configured content dictionaries:
1. HRWords
Choose the operation you want to perform:
- NEW - Create a new content dictionary.
- EDIT - Modify a content dictionary.
- DELETE - Remove a content dictionary.
- RENAME - Change the name of a content dictionary.
[]> delete
Enter the number of the dictionary you want to delete:
1. HRWords
[]> 1
Content dictionary "HRWords" deleted.
No content dictionaries have been defined.
Choose the operation you want to perform:
```

```
- NEW - Create a new content dictionary.
```

#### **Creating a Dictionary 2**

In this example, a new dictionary named "secret\_words" is created to contain the term "codename." Once the dictionary has been entered, the edit -> settings subcommand is used to define the case-sensitivity and word boundary detection for words in the dictionary.

```
mail3.example.com> dictionaryconfig
No content dictionaries have been defined.
Choose the operation you want to perform:
- NEW - Create a new content dictionary.
[]> new
Enter a name for this content dictionary.
[]> secret words
Do you wish to specify a file for import? [N]>
Enter new words or regular expressions, enter a blank line to finish.
codename
Currently configured content dictionaries:
1. secret_words
Choose the operation you want to perform:
- NEW - Create a new content dictionary.
- EDIT - Modify a content dictionary.
- DELETE - Remove a content dictionary.
- RENAME - Change the name of a content dictionary.
[]> edit
Enter the number of the dictionary you want to edit:
1. secret words
[]> 1
Choose the operation you want to perform on dictionary 'secret words':
- NEW - Create new entries in this dictionary.
- IMPORT - Replace all of the words in this dictionary.
- EXPORT - Export the words in this dictionary.
- DELETE - Remove an entry in this dictionary.
- PRINT - List the entries in this dictionary.
- SETTINGS - Change settings for this dictionary.
[]> settings
Do you want to ignore case when matching using this dictionary? [Y]>
Do you want strings in this dictionary to only match complete words? [Y]>
Enter the default encoding to be used for exporting this dictionary:
1. US-ASCII
2. Unicode (UTF-8)
3. Unicode (UTF-16)
4. Western European/Latin-1 (ISO 8859-1)
5. Western European/Latin-1 (Windows CP1252)
6. Traditional Chinese (Big 5)
7. Simplified Chinese (GB 2312)
8. Simplified Chinese (HZ GB 2312)
9. Korean (ISO 2022-KR)
10. Korean (KS-C-5601/EUC-KR)
11. Japanese (Shift-JIS (X0123))
12. Japanese (ISO-2022-JP)
13. Japanese (EUC)
[2]>
Choose the operation you want to perform on dictionary 'secret words':
- NEW - Create new entries in this dictionary.
- IMPORT - Replace all of the words in this dictionary.
- EXPORT - Export the words in this dictionary.
- DELETE - Remove an entry in this dictionary.
- PRINT - List the entries in this dictionary.
- SETTINGS - Change settings for this dictionary.
[]>
```

```
Currently configured content dictionaries:

1. secret_words

Choose the operation you want to perform:

- NEW - Create a new content dictionary.

- EDIT - Modify a content dictionary.

- DELETE - Remove a content dictionary.

- RENAME - Change the name of a content dictionary.

[]>

[]> Added new dictionary: secret_words

Do you want to save the current configuration for rollback? [Y]> n Changes committed: Fri May 23 11:42:12 2014 GMT
```

#### **Importing Dictionaries**

In the example below, using the **dictionaryconfig** command, 84 terms in the profanity.txt text file are imported as Unicode (UTF-8) into a dictionary named profanity.

```
mail3.example.com> dictionaryconfig
No content dictionaries have been defined.
Choose the operation you want to perform:
- NEW - Create a new content dictionary.
[]> new
Enter a name for this content dictionary.
[]> profanity
Do you wish to specify a file for import? [N] > y
Enter the name of the file to import:
[]> profanity.txt
Enter the encoding to use for the imported file:
1. US-ASCII
2. Unicode (UTF-8)
3. Unicode (UTF-16)
4. Western European/Latin-1 (ISO 8859-1)
5. Western European/Latin-1 (Windows CP1252)
6. Traditional Chinese (Big 5)
7. Simplified Chinese (GB 2312)
8. Simplified Chinese (HZ GB 2312)
9. Korean (ISO 2022-KR)
10. Korean (KS-C-5601/EUC-KR)
11. Japanese (Shift-JIS (X0123))
12. Japanese (ISO-2022-JP)
13. Japanese (EUC)
[2]>
84 entries imported successfully.
Currently configured content dictionaries:
1. profanity
Choose the operation you want to perform:
- NEW - Create a new content dictionary.
- {\tt EDIT} - {\tt Modify} a content dictionary.
- DELETE - Remove a content dictionary.
- RENAME - Change the name of a content dictionary.
```

#### **Exporting Dictionaries**

In the example below, using the **dictionaryconfig** command, the secret\_words dictionary is exported to a text file named secret\_words export.txt

```
mail3.example.com> dictionaryconfig
Currently configured content dictionaries:
1. secret_words
```

```
Choose the operation you want to perform:
- NEW - Create a new content dictionary.
- EDIT - Modify a content dictionary.
- DELETE - Remove a content dictionary.
- RENAME - Change the name of a content dictionary.
[]> edit
Enter the number of the dictionary you want to edit:
1. secret words
[]> 1
Choose the operation you want to perform on dictionary 'secret_words':
- NEW - Create new entries in this dictionary.
- IMPORT - Replace all of the words in this dictionary.
- EXPORT - Export the words in this dictionary.
- DELETE - Remove an entry in this dictionary.
- PRINT - List the entries in this dictionary.
- SETTINGS - Change settings for this dictionary.
[]> export
Enter a name for the exported file:
[]> secret_words_export.txt
mail3.example.com> dictionaryconfig
Currently configured content dictionaries:
1. secret words
Choose the operation you want to perform:
- NEW - Create a new content dictionary.
- EDIT - Modify a content dictionary.
- DELETE - Remove a content dictionary.
- RENAME - Change the name of a content dictionary.
[]> edit
Enter the number of the dictionary you want to edit:
1. secret words
Choose the operation you want to perform on dictionary 'secret words':
- NEW - Create new entries in this dictionary.
- IMPORT - Replace all of the words in this dictionary.
- EXPORT - Export the words in this dictionary.
- DELETE - Remove an entry in this dictionary.
- PRINT - List the entries in this dictionary.
- SETTINGS - Change settings for this dictionary.
Enter a name for the exported file:
[]> secret_words_export.txt
```

# exceptionconfig

## **Description**

Use the **exceptionconfig** command in the CLI to create the domain exception table. In this example, the email address "admin@zzzaaazzz.com" is added to the domain exception table with a policy of "Allow."

## Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine)...

Batch Command: This command does not support a batch format.

### **Example**

```
mail3.example.com> exceptionconfig
Choose the operation you want to perform:
- NEW - Create a new domain exception table entry
[] > new
Enter a domain, sub-domain, user, or email address for which you wish to
provide an exception:
[] > mail.partner.com
Any of the following passes:
- @[IP address]
 Matches any email address with this IP address.
- @domain
 Matches any email address with this domain.
 - @.partial.domain
 Matches any email address domain ending in this domain.
 Matches any email address beginning with user@.
- user@domain
 Matches entire email address.
Enter a domain, sub-domain, user, or email address for which you wish to
provide an exception:
[]> admin@zzzaaazzz.com
Choose a policy for this domain exception:
1. Allow
2. Reject
[1]> 1
Choose the operation you want to perform:
- NEW - Create a new domain exception table entry
- EDIT - Edit a domain exception table entry
- DELETE - Delete a domain exception table entry
 PRINT - Print all domain exception table entries
- SEARCH - Search domain exception table
- CLEAR - Clear all domain exception entries
[]>
```

## filters

## **Description**

Configure message processing options.

## Usage

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

## Example

In this example, the filter command is used to create three new filters:

- The first filter is named **big\_messages**. It uses the body-size rule to drop messages larger than 10 megabytes.
- The second filter is named **no\_mp3s**. It uses the attachment-filename rule to drop messages that contain attachments with the filename extension of .mp3.

• The third filter is named **mailfrompm**. It uses mail-from rule examines all mail from postmaster@example.com and blind-carbon copies administrator@example.com.

Using the **filter** -> **list** subcommand, the filters are listed to confirm that they are active and valid, and then the first and last filters are switched in position using the move subcommand. Finally, the changes are committed so that the filters take effect.

```
mail3.example.com> filters
Choose the operation you want to perform:
- NEW - Create a new filter.
- IMPORT - Import a filter script from a file.
[]> new
Enter filter script. Enter '.' on its own line to end.
big messages:
    if (body-size >= 10M) {
       drop();
    }
1 filters added.
Choose the operation you want to perform:
- NEW - Create a new filter.
- DELETE - Remove a filter.
- IMPORT - Import a filter script from a file.
- EXPORT - Export filters to a file
- MOVE - Move a filter to a different position.
- SET - Set a filter attribute.
- LIST - List the filters.
- DETAIL - Get detailed information on the filters.
- LOGCONFIG - Configure log subscriptions used by filters.
- ROLLOVERNOW - Roll over a filter log file.
[]> new
Enter filter script. Enter '.' on its own line to end.
no mp3s:
    if (attachment-filename == '\\.mp3$') {
        drop();
     }
1 filters added.
Choose the operation you want to perform:
- NEW - Create a new filter.
- DELETE - Remove a filter.
- IMPORT - Import a filter script from a file.
- EXPORT - Export filters to a file
- \mbox{MOVE} - \mbox{Move} a filter to a different position.
- SET - Set a filter attribute.
- LIST - List the filters.
- DETAIL - Get detailed information on the filters.
- LOGCONFIG - Configure log subscriptions used by filters.
- ROLLOVERNOW - Roll over a filter log file.
[]> new
Enter filter script. Enter '.' on its own line to end.
mailfrompm:
    if (mail-from == "^postmaster$")
     { bcc ("administrator@example.com");}
1 filters added.
Choose the operation you want to perform:
- NEW - Create a new filter.
- DELETE - Remove a filter.
- IMPORT - Import a filter script from a file.
- EXPORT - Export filters to a file
- \mbox{MOVE} - \mbox{Move} a filter to a different position.
```

```
    SET - Set a filter attribute.
    LIST - List the filters.
    DETAIL - Get detailed information on the filters.
    LOGCONFIG - Configure log subscriptions used by filters.
    ROLLOVERNOW - Roll over a filter log file.
    []> list
```

# policyconfig

## **Description**

Configure per recipient or sender based policies.

## **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### **Examples**

### Creating an Incoming Mail Policy to Drop Spam Messages and Archive Suspected Spam Messages

In this example, the policyconfig -> edit -> antispam subcommand is used to edit the Anti-Spam settings for the default incoming mail policy. (Note that this same configuration is available in the GUI from the Email Security Manager feature.)

- First, messages positively identified as spam are chosen not to be archived; they will be dropped.
- Messages that are *suspected* to be spam are chosen to be archived. They will also be sent to the Spam Quarantine installed on the server named quarantine.example.com. The text [quarantined: possible spam] is prepended to the subject line and a special header of X-quarantined: true is configured to be added to these suspect messages. In this scenario, Administrators and end-users can check the quarantine for false positives, and an administrator can adjust, if necessary, the suspected spam threshold.

Finally, the changes are committed.

```
mail3.example.com> policyconfig

- DELETE - Delete a file extension
- PRINT - Display all file extensions
- CLEAR - Clear all file extensions
[]> print
The following file extensions will bypass Outbreak Filter processing:
dwg
Choose the operation you want to perform:
- NEW - Add a file extension
- DELETE - Delete a file extension
- PRINT - Display all file extensions
- CLEAR - Clear all file extensions
[]>
Incoming Mail Policy Configuration
```

Name:	Anti-Spam:	Anti-Virus:	Advanced Malware Protection:	Graymail:		Outbreak Filters:
sales_team	IronPort	Default	Default	Default	Default	Default
engineering	Default	Default	Default	Default	Default	Enabled
DEFAULT	Ironport	Mcafee	N/A	Off	Off	Enabled

```
Choose the operation you want to perform:

- NEW - Create a new policy

- EDIT - Edit an existing policy

- DELETE - Remove a policy

- PRINT - Print all policies

- SEARCH - Search for a policy by member

- MOVE - Move the position of a policy

- FILTERS - Edit content filters

- CLEAR - Clear all policies

[]>
```

Next, create three new content filters to be used in the Incoming Mail Overview policy table.

In the CLI, the filters subcommand of the policyconfig command is the equivalent of the Incoming Content Filters GUI page. When you create content filters in the CLI, you must use the save subcommand to save the filter and return to the policyconfig command.

First, create the scan\_for\_confidential content filter:

### Creating the scan\_for\_confidential Content Filter

Incoming Mail Policy Configuration

- ANTISPAM - Modify Anti-Spam policy
- ANTIVIRUS - Modify Anti-Virus policy
- GRAYMAIL - Modify Graymail policy
- OUTBREAK - Modify Outbreak Filters policy
- FILTERS - Modify filters
[]>
Incoming Mail Policy Configuration
```

Name:	Anti-Spam:	Anti-Virus:	Advanced Malware Protection:	Graymail:	Content Filter:	Outbreak Filters:
sales_team	IronPort	Default	Default	Default	Default	Default
engineering	Default	Default	Default	Default	Enabled	Enabled
DEFAULT	Ironport	Mcafee	N/A	Off	Enabled	Enabled

```
Choose the operation you want to perform:

- NEW - Create a new policy

- EDIT - Edit an existing policy

- DELETE - Remove a policy

- PRINT - Print all policies

- SEARCH - Search for a policy by member

- MOVE - Move the position of a policy

- FILTERS - Edit content filters

- CLEAR - Clear all policies
```

Note

The CLI does not contain the notion of adding a new content filter within an individual policy. Rather, the filters subcommand forces you to manage all content filters from within one subsection of the policyconfig command. For that reason, adding the drop large attachments has been omitted from this example.

### **DLP Policies for Default Outgoing Policy**

This illustrates how to enable DLP policies on the default outgoing policy.

```
mail3.example.com> policyconfig
Would you like to configure Incoming or Outgoing Mail Policies?

# quarantineconfig

## **Description**

Configure system quarantines.

## **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

### **Example**

```
mail3.example.com> quarantineconfig
Currently configured quarantines:
 # Quarantine Name Size (MB) % full Messages Retention Policy
                                                 12h
1 Outbreak
                     3,072
                                0.0 1
                                                            Release
2 Policy
                                                    10d
                                                          Delete
                                           497
                     1,024
                                0.1
3 Virus
                     2,048
                                                    30d
                                                          Delete
                              empty
2,048 MB available for quarantine allocation.

                                                     10d
                      2,048
                                            0
                                                     30d Delete
                                empty
(N/A: Quarantine contents is not available at this time.)
1,024 MB available for quarantine allocation.
Choose the operation you want to perform:
- NEW - Create a new quarantine.
- EDIT - Modify a quarantine.
- DELETE - Remove a quarantine.
- OUTBREAKMANAGE - Manage the Outbreak Filters quarantine.
```

### **Users and Quarantines**

Once you answer "y" or yes to the question about adding users, you begin user management, where you can manage the user list. This lets you add or remove multiple users to the quarantine without having to go through the other quarantine configuration questions. Press Return (Enter) at an empty prompt ([]>) to exit the user management section and continue with configuring the quarantine.

Note

You will only be prompted to give users access to the quarantine if guest or operator users have already been created on the system.

A quarantine's user list only contains users belonging to the Operators or Guests groups. Users in the Administrators group always have full access to the quarantine. When managing the user list, the NEW command is suppressed if all the Operator/Guest users are already on the quarantine's user list. Similarly, DELETE is suppressed if there are no users to delete.

# scanconfig

### **Description**

Configure attachment scanning policy

### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

## **Example**

In this example, the scanconfig command sets these parameters:

- MIME types of video/\*, audio/\*, image/\* are skipped (not scanned for content).
- Nested (recursive) archive attachments up to 10 levels are scanned. (The default is 5 levels.)
- The maximum size for attachments to be scanned is 25 megabytes; anything larger will be skipped. (The default is 5 megabytes.)
- The document metadata is scannned.
- Attachment scanning timeout is set at 180 seconds.
- Attachments that were not scanned are assumed to not match the search pattern. (This is the default behavior.)
- ASCII encoding is configured for use when none is specified for plain body text or anything with MIME type plain/text or plain/html.

Note

When setting the assume the attachment matches the search pattern to Y, messages that cannot be scanned will cause the message filter rule to evaluate to true. This could result in unexpected behavior, such as the quarantining of messages that do not match a dictionary, but were quarantined because their content could not be correctly scanned. This setting does not apply to DLP scanning.

```
mail3.example.com> scanconfig
There are currently 5 attachment type mappings configured to be SKIPPED.
Choose the operation you want to perform:
- NEW - Add a new entry.
- DELETE - Remove an entry.
- SETUP - Configure scanning behavior.
- IMPORT - Load mappings from a file.
- EXPORT - Save mappings to a file.
- PRINT - Display the list.
- CLEAR - Remove all entries.
- SMIME - Configure S/MIME unpacking.
1. Scan only attachments with MIME types or fingerprints in the list.
2. Skip attachments with MIME types or fingerprints in the list.
Choose one:

mail3.example.com>
```

# textconfig

#### **Description**

Configure text resources such as anti-virus alert templates, message disclaimers, and notification templates, including DLP, bounce, and encryption notifications.

### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### **Example**

Use textconfig -> NEW to create text resources, and textconfig > delete to remove them.

```
mail3.example.com> textconfig
Choose the operation you want to perform:
- NEW - Create a new text resource.
- IMPORT - Import a text resource from a file.
[]> new
What kind of text resource would you like to create?
1. Anti-Virus Container Template
2. Anti-Virus Notification Template
3. DLP Notification Template
4. Bounce and Encryption Failure Notification Template
5. Message Disclaimer
6. Encryption Notification Template (HTML)
7. Encryption Notification Template (text)
8. Notification Template
[1]> 5
Please create a name for the message disclaimer:
[]> disclaimer 1
Enter the encoding for the message disclaimer:
1. US-ASCII
2. Unicode (UTF-8)
3. Unicode (UTF-16)
4. Western European/Latin-1 (ISO 8859-1)
5. Western European/Latin-1 (Windows CP1252)
6. Traditional Chinese (Big 5)
7. Simplified Chinese (GB 2312)
8. Simplified Chinese (HZ GB 2312)
9. Korean (ISO 2022-KR)
10. Korean (KS-C-5601/EUC-KR)
11. Japanese (Shift-JIS (X0123))
12. Japanese (ISO-2022-JP)
13. Japanese (EUC)
[1]>
```

```
Enter or paste the message disclaimer here. Enter '.' on a blank line to end.
This message was sent from an IronPort(tm) Email Security appliance.
Message disclaimer "disclaimer 1" created.
Choose the operation you want to perform:
- NEW - Create a new text resource.
- IMPORT - Import a text resource from a file.
- {\tt EXPORT} - {\tt Export} text resource to a file.
- PRINT - Display the content of a resource.
- EDIT - Modify a resource.
- DELETE - Remove a resource from the system.
- LIST - List configured resources.
[]> delete
Please enter the name or number of the resource to delete:
[]> 1
Message disclaimer "disclaimer 1" has been deleted.
Choose the operation you want to perform:
- NEW - Create a new text resource.
- IMPORT - Import a text resource from a file.
```

Use **textconfig** -> **EDIT** to modify an existing text resource. You can change the encoding or replace the text of the selected text resource.

#### **Importing Text Resources**

Use **textconfig** -> **IMPORT** to import a text file as a text resource. The text file must be present in the configuration directory on the appliance.

```
mail3.example.com> textconfig
Current Text Resources:
1. footer.2.message (Message Footer)
Choose the operation you want to perform:
- NEW - Create a new text resource.
- IMPORT - Import a text resource from a file.
- EXPORT - Export text resource to a file.
- PRINT - Display the content of a resource.
- EDIT - Modify a resource.
- DELETE - Remove a resource from the system.
- LIST - List configured resources.
[]> import
What kind of text resource would you like to create?
1. Anti-Virus Container Template

# **Logging and Alerts**

This section contains the following CLI commands:

# alertconfig

#### **Description**

Configure email alerts.

## Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### **Example: Creating a New Alert**

In this example, a new alert recipient (alertadmin@example.com) is created and set to receive critical system, hardware, and directory harvest attack alerts.

```
vm30esa0086.ibqa> alertconfig
Not sending alerts (no configured addresses)
Alerts will be sent using the system-default From Address.
Cisco IronPort AutoSupport: Disabled
Choose the operation you want to perform:
- NEW - Add a new email address to send alerts.
- SETUP - Configure alert settings.
- FROM - Configure the From Address of alert emails.
[] > new
Please enter a new email address to send alerts.
(Ex: "administrator@example.com")
[]> alertadmin@example.com
Choose the Alert Classes. Separate multiple choices with commas.
1. All
2. System
3. Hardware
4. Updater
5. Outbreak Filters
6. Anti-Virus
7. Anti-Spam
8. Directory Harvest Attack Prevention
9. Release and Support Notifications
[1] > 2,3,8
Select a Severity Level. Separate multiple choices with commas.
1. All
2. Critical
Warning
4. Information
[11>2]
Sending alerts to:
  alertadmin@example.com
      Class: Hardware - Severities: Critical
      Class: Directory Harvest Attack Prevention - Severities: Critical
      Class: System - Severities: Critical
Initial number of seconds to wait before sending a duplicate alert: 300
Maximum number of seconds to wait before sending a duplicate alert: 3600
Maximum number of alerts stored in the system are: 50
Alerts will be sent using the system-default From Address.
Cisco IronPort AutoSupport: Disabled
Choose the operation you want to perform:
- NEW - Add a new email address to send alerts.
```

```
EDIT - Modify alert subscription for an email address.
DELETE - Remove an email address.
CLEAR - Remove all email addresses (disable alerts).
SETUP - Configure alert settings.
FROM - Configure the From Address of alert emails.
```

# displayalerts

#### **Description**

Display the last n alerts sent by the appliance

### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### **Example**

```
> displayalerts
Date and Time Stamp
                             Description

## grep

## Description

Searches for text in a log file.

# Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

Batch Command: This command does not support a batch format.

The grep command can be used to search for text strings within logs. Use the following syntax when you run the grep command:

```
grep [-C count] [-e regex] [-i] [-p] [-t] [regex] log_name
```

Note

You must enter either -e regex or regex to return results.

Use the following options when you run the grep command:

#### Table 11: grep Command Options

Option	Description
-C	Provides lines of context around the grep pattern found. Enter a value to specify the number of lines to include.
-е	Enter a regular expression.
-i	Ignores case sensitivities.
-р	Paginates the output.
-t	Runs the grep command over the tail of the log file.
regex	Enter a regular expression.

### **Example of grep**

The following example shows a search for the text string 'clean' or 'viral' within the antivirus logs. The **grep** command includes a regex expression:

```
mail3.example.com> grep "CLEAN\\IVIRAL" antivirus

Fri Jun 9 21:50:25 2006 Info: sophos antivirus - MID 1 - Result 'CLEAN' ()

Fri Jun 9 21:53:15 2006 Info: sophos antivirus - MID 2 - Result 'CLEAN' ()

Fri Jun 9 22:47:41 2006 Info: sophos antivirus - MID 3 - Result 'CLEAN' ()

Fri Jun 9 22:47:41 2006 Info: sophos antivirus - MID 4 - Result 'CLEAN' ()

Fri Jun 9 22:47:41 2006 Info: sophos antivirus - MID 5 - Result 'CLEAN' ()

Fri Jun 9 22:47:41 2006 Info: sophos antivirus - MID 6 - Result 'CLEAN' ()

Fri Jun 9 22:53:08 2006 Info: sophos antivirus - MID 20 - Result 'VIRAL' ()

Fri Jun 9 22:53:08 2006 Info: sophos antivirus - MID 20 - Result 'VIRAL' ()

Fri Jun 9 22:53:08 2006 Info: sophos antivirus - MID 20 - Result 'VIRAL' ()
```

# logconfig

## **Description**

Configure access to log files.

#### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

#### **Example of FTP Push Log Subscription**

In the following example, the **logconfig** command is used to configure a new delivery log called myDeliveryLogs. The log is then configured to be pushed via FTP to a remote host

```
mail3.example.com> logconfig
Currently configured logs:
1. "antispam" Type: "Anti-Spam Logs" Retrieval: FTP Poll
2. "antivirus" Type: "Anti-Virus Logs" Retrieval: FTP Poll
3. "asarchive" Type: "Anti-Spam Archive" Retrieval: FTP Poll
4. "authentication" Type: "Authentication Logs" Retrieval: FTP Poll
5. "avarchive" Type: "Anti-Virus Archive" Retrieval: FTP Poll
6. "bounces" Type: "Bounce Logs" Retrieval: FTP Poll
7. "cli logs" Type: "CLI Audit Logs" Retrieval: FTP Poll
8. "encryption" Type: "Encryption Logs" Retrieval: FTP Poll
9. "error logs" Type: "IronPort Text Mail Logs" Retrieval: FTP Poll
10. "euq logs" Type: "IronPort Spam Quarantine Logs" Retrieval: FTP Poll
11. "eugqui logs" Type: "IronPort Spam Quarantine GUI Logs" Retrieval: FTP Poll
12. "ftpd_logs" Type: "FTP Server Logs" Retrieval: FTP Poll
13. "gui_logs" Type: "HTTP Logs" Retrieval: FTP Poll
14. "mail logs" Type: "IronPort Text Mail Logs" Retrieval: FTP Poll
15. "reportd logs" Type: "Reporting Logs" Retrieval: FTP Poll

#### **Example of SCP Push Log Subscription**

In the following example, the <code>logconfig</code> command is used to configure a new delivery log called LogPush . The log is configured to be pushed via SCP to a remote host with the IP address of 10.1.1.1, as the user logger , and stored in the directory /tmp . Note that the <code>sshconfig</code> command is automatically called from within the <code>logconfig</code> command when the log retrieval method is SCP push. (See "Configuring Host Keys" for information about Host keys, and "Managing Secure Shell (SSH) Keys" for more information about User keys, in the <code>User Guide for AsyncOS for Cisco Email Security Appliances</code> .) Also note that an IP address can be used at the hostname prompt.

```

#### **Example of Syslog Push Log Subscription**

In the following example, the **logconfig** command is used to configure a new delivery log called MailLog SyslogPush. The log is configured to be pushed to a remote syslog server with the IP address of 10.1.1.2, using UPD, with a 'mail' facility and stored in the directory.

```
mail3.example.com> logconfig

# snmpconfig

### **Description**

Configure SNMP.

### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### **Example**

In the following example, the snmpconfig command is used to enable SNMP on the "PublicNet" interface on port 161. A passphrase for version 3 is entered and then re-entered for confirmation. The system is configured to service version 1 and 2 requests, and the community string public is entered for GET requests from those versions 1 and 2. The trap target of snmp-monitor.example.com is entered. Finally, system location and contact information is entered.

```
mail3.example.com> snmpconfig
Current SNMP settings:
SNMP Disabled.
Choose the operation you want to perform:
- SETUP - Configure SNMP.
[]> setup
Do you want to enable SNMP? [N]> {\bf y}
Please choose an IP interface for SNMP requests.
1. Data 1 (192.168.1.1/24: buttercup.run)
2. Data 2 (192.168.2.1/24: buttercup.run)
3. Management (192.168.44.44/24: buttercup.run)
[1]>
Enter the SNMPv3 passphrase.
Please enter the SNMPv3 passphrase again to confirm.
Which port shall the SNMP daemon listen on?
[161]>
Service SNMP V1/V2c requests? [N]> y
Enter the SNMP V1/V2c community string.
[]> public
From which network shall SNMP V1/V2c requests be allowed?
[192.168.2.0/24]>
Enter the Trap target (IP address). Enter "None" to disable traps.
[None] > snmp-monitor.example.com
Enterprise Trap Status
1. RAIDStatusChange
                               Enabled
2. fanFailure

```

#### tail

#### **Description**

Continuously display the end of a log file. The tail command also accepts the name or number of a log to view as a parameter: tail 9 or tail mail logs.

## Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

Batch Command: This command does not support a batch format.

## **Example**

```
mail3.example.com> tail
Currently configured logs:
1. "antispam" Type: "Anti-Spam Logs" Retrieval: FTP Poll
2. "antivirus" Type: "Anti-Virus Logs" Retrieval: FTP Poll
3. "asarchive" Type: "Anti-Spam Archive" Retrieval: FTP Poll
4. "authentication" Type: "Authentication Logs" Retrieval: FTP Poll
5. "avarchive" Type: "Anti-Virus Archive" Retrieval: FTP Poll
6. "bounces" Type: "Bounce Logs" Retrieval: FTP Poll
7. "cli_logs" Type: "CLI Audit Logs" Retrieval: FTP Poll
8. "encryption" Type: "Encryption Logs" Retrieval: FTP Poll
9. "error_logs" Type: "IronPort Text Mail Logs" Retrieval: FTP Poll
10. "euq_logs" Type: "IronPort Spam Quarantine Logs" Retrieval: FTP Poll
11. "euqgui_logs" Type: "IronPort Spam Quarantine GUI Logs" Retrieval: FTP Poll
12. "ftpd logs" Type: "FTP Server Logs" Retrieval: FTP Poll
```

```
13. "gui logs" Type: "HTTP Logs" Retrieval: FTP Poll
14. "mail logs" Type: "IronPort Text Mail Logs" Retrieval: FTP Poll
15. "reportd logs" Type: "Reporting Logs" Retrieval: FTP Poll
16. "reportqueryd_logs" Type: "Reporting Query Logs" Retrieval: FTP Poll
17. "scanning" Type: "Scanning Logs" Retrieval: FTP Poll
18. "slbld logs" Type: "Safe/Block Lists Logs" Retrieval: FTP Poll
19. "sntpd logs" Type: "NTP logs" Retrieval: FTP Poll
20. "status" Type: "Status Logs" Retrieval: FTP Poll
21. "system logs" Type: "System Logs" Retrieval: FTP Poll
22. "trackerd_logs" Type: "Tracking Logs" Retrieval: FTP Poll
23. "updater_logs" Type: "Updater Logs" Retrieval: FTP Poll
Enter the number of the log you wish to tail.
[]> 19
Press Ctrl-C to stop.

# Reporting

This section contains the following CLI commands:

# reportingconfig

## Using the reportingconfig command

The following subcommands are available within the reportingconfig submenu:

Table 12: reportingconfig Subcommands

Syntax	Description	Availability
filters	Configure filters for the Security Management appliance.	M-Series only
alert_timeout Configure when you will be alerted du failing to get reporting data.		M-Series only
domain	Configure domain report settings.	M-Series only
mode	Enable centralized reporting on the Security Management appliance. Enable centralized or local reporting for the Email Security appliance.	C-, M-Series

Syntax	Description	Availability
mailsetup	Configure reporting for the Email Security applaince.	C-Series only

#### Usage

Commit: This command requires a 'commit'.

#### **Example: Enabling Reporting Filters (M-Series only)**

```
mail3.example.com> reportingconfig
Choose the operation you want to perform:
- FILTERS - Configure filtering for the SMA.
- ALERT TIMEOUT - Configure when you will be alerted due to failing to get reporting data
- DOMAIN - Configure domain report settings.
- MODE - Enable/disable centralized reporting.
[]> filters
Filters remove specific sets of centralized reporting data from the "last year" reports.
Data from the reporting groups selected below will not be recorded.
All filtering has been disabled.
1. No Filtering enabled
2. IP Connection Level Detail.
3. User Detail.
4. Mail Traffic Detail.
Choose which groups to filter, you can specify multiple filters by entering a comma separated
list:
[]> 2, 3
Choose the operation you want to perform:
- FILTERS - Configure filtering for the SMA.
- ALERT TIMEOUT - Configure when you will be alerted due to failing to get
reporting data
- DOMAIN - Configure domain report settings.
- MODE - Enable/disable centralized reporting.
```

## **Enabling HAT REJECT Information for Domain Reports (M-Series only)**

```
mail3.example.com> reportingconfig
Choose the operation you want to perform:
- FILTERS - Configure filtering for the SMA.
- ALERT TIMEOUT - Configure when you will be alerted due to failing to get reporting data
- DOMAIN - Configure domain report settings.
- MODE - Enable/disable centralized reporting.
[]> domain
If you have configured HAT REJECT policy on all remote appliances providing reporting data
to this appliance to occur at the message
recipient level then of domain reports.
Use message recipient HAT REJECT information for domain reports? [N]> y
Choose the operation you want to perform:
- FILTERS - Configure filtering for the SMA.
- ALERT TIMEOUT - Configure when you will be alerted due to failing to get reporting data
- DOMAIN - Configure domain report settings.
- MODE - Enable/disable centralized reporting.
[]>
```

### **Enabling Timeout Alerts (M-Series only)**

```
mail3.example.com> reportingconfig
Choose the operation you want to perform:
- FILTERS - Configure filtering for the SMA.
- ALERT TIMEOUT - Configure when you will be alerted due to failing to get reporting data
- DOMAIN - Configure domain report settings.
- MODE - Enable/disable centralized reporting.
[]> alert_timeout
An alert will be sent if reporting data has not been fetched from an appliance after 360
minutes.
Would you like timeout alerts to be enabled? [Y]> {\bf y}
After how many minutes should an alert be sent?
[360]> 240
Choose the operation you want to perform:
- FILTERS - Configure filtering for the SMA.
- ALERT TIMEOUT - Configure when you will be alerted due to failing to get reporting data
- DOMAIN - Configure domain report settings.
- MODE - Enable/disable centralized reporting.
```

#### **Enabling Centralized Reporting for an Email Security Appliance**

```
mail3.example.com> reportingconfig
Choose the operation you want to perform:
- MAILSETUP - Configure reporting for the ESA.
- MODE - Enable centralized or local reporting for the ESA.
[]> mode
Centralized reporting: Local reporting only.
Do you want to enable centralized reporting? [N]> y
Choose the operation you want to perform:
- MAILSETUP - Configure reporting for the ESA.
- MODE - Enable centralized or local reporting for the ESA.
```

## **Configure Storage Limit for Reporting Data (C-Series only)**

```
mail.example.com> reportingconfig
Choose the operation you want to perform:
- MAILSETUP - Configure reporting for the ESA.
- MODE - Enable centralized or local reporting for the ESA.
[]> mailsetup
SenderBase timeout used by the web interface: 5 seconds
Sender Reputation Multiplier: 3
The current level of reporting data recording is: unlimited
No custom second level domains are defined.
Legacy mailflow report: Disabled
Choose the operation you want to perform:
- SENDERBASE - Configure SenderBase timeout for the web interface.
- MULTIPLIER - Configure Sender Reputation Multiplier.
- COUNTERS - Limit counters recorded by the reporting system.
- THROTTLING - Limit unique hosts tracked for rejected connection reporting.
- TLD - Add customer specific domains for reporting rollup.
- STORAGE - How long centralized reporting data will be stored on the C-series before being
overwritten.
- LEGACY - Configure legacy mailflow report.
[]> storage
While in centralized mode the C-series will store reporting data for the M-series to collect.
```

If the M-series does not collect that data then eventually the C-series will begin to

```
overwrite the oldest data with new data.
A maximum of 24 hours of reporting data will be stored.
How many hours of reporting data should be stored before data loss?
[24]> 48
SenderBase timeout used by the web interface: 5 seconds
Sender Reputation Multiplier: 3
The current level of reporting data recording is: unlimited
No custom second level domains are defined.
Legacy mailflow report: Disabled
Choose the operation you want to perform:
- SENDERBASE - Configure SenderBase timeout for the web interface.
- MULTIPLIER - Configure Sender Reputation Multiplier.
- COUNTERS - Limit counters recorded by the reporting system.
- THROTTLING - Limit unique hosts tracked for rejected connection reporting.
- TLD - Add customer specific domains for reporting rollup.
- STORAGE - How long centralized reporting data will be stored on the C-series
before being overwritten.
- LEGACY - Configure legacy mailflow report.
```

# Improving Phishing Detection using Service Logs

This section contains the following CLI command:

servicelogsconfig, on page 237

# servicelogsconfig

- Description, on page 237
- Usage, on page 237
- Example Enabling Service Logs on Appliance, on page 237
- Example Disabling Service Logs on Appliance, on page 238

## Description

The servicelogsconfig command is used to enable or disable Service Logs on your appliance.

# Usage

**Commit**: This command requires a 'commit'.

**Cluster Management**: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command**: This command supports a batch format.

## **Example - Enabling Service Logs on Appliance**

In the following example, you can use the servicelogsconfig command to enable Service Logs on your appliance.

```
mail1.example.com> servicelogsconfig
```

Share limited data with Service Logs Information Service: Disabled.

```
Choose the operation you want to perform:
- SETUP - Configure Service Logs settings
[]> setup

Do you want to share data with the Service Logs Information Service (recommended)? [N]> yes

Share limited data with Service Logs Information Service: Enabled

Choose the operation you want to perform:
- SETUP - Configure Service Logs settings
```

#### **Example - Disabling Service Logs on Appliance**

In the following example, you can use the servicelogsconfig command to disable Service Logs on your appliance.

```
maill.example.com> servicelogsconfig

Share limited data with Service Logs Information Service: Enabled.

Choose the operation you want to perform:
    SETUP - Configure Service Logs settings
[]> setup

Do you want to share data with the Service Logs Information Service (recommended)? [N]> no

The system will no longer share data with Service Logs.
Are you sure you want to disable (not recommended)? [N]> yes

Share limited data with Service Logs Information Service: Disabled

Choose the operation you want to perform:
    SETUP - Configure Service Logs settings
[]>
```

# **Sender Domain Reputation Filtering**

This section contains the following CLI commands:

- sdrconfig, on page 238
- sdradvancedconfig, on page 240
- sdrstatus, on page 240
- sdrdiagnostics, on page 241
- sdrupdate, on page 241

# sdrconfig

- Description, on page 239
- Usage, on page 239

• Example, on page 239

#### **Description**

The sdrconfig command is used to enable SDR filtering on your Cisco Email Security Gateway.

#### **Usage**

**Commit**: This command requires a 'commit'.

**Cluster Management**: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command**: This command supports a batch format. For more details, see the inline help by typing the command: help sdrconfig.

#### **Example**

In the following example, you can use the sdrconfig command to enable SDR filtering on your Cisco Email Security Gateway

```
mail.example.com > sdrconfig
Would you like to enable sender domain reputation check? [N] > yes
SDR uses headers such as 'Envelope-From:', 'From:' and 'Reply-to' to determine the reputation
of the message.
In addition, it also uses the results of the email authentication mechanisms such as SPF,
DKIM, and DMARC
to decide the reputation.
The following additional attributes of the message can also be included in the Sender Domain
Reputation
check to improve the efficacy:
- Username part of the email address present in the 'Envelope-From:', 'From:' and 'Reply-To:'
headers.
- Display name in the 'From:' and 'Reply-To:' headers.
Do you want to include these additional attributes of the message for the Sender Domain
Reputation check? [N]> yes
Sender Domain Reputation (SDR) is a new feature in AsyncOS 12.0 that sends certain telemetry
data to Cisco.
If you choose to enable the 'Additional Attributes' function in SDR, that telemetry data
will include
the processing of personal data as described in the Cisco ESA Privacy Data Sheet
(https://www.cisco.com/c/en/us/about/trust-center/solutions-privacy-data-sheets.html) and
Cisco Online Privacy Statement (https://www.cisco.com/c/en_in/about/legal/privacy-full.html).
To enable the "Additional Attributes" feature in SDR, you must agree to the Cisco Content
Security Supplemental
End User License Agreement
(https://www.cisco.com/c/en/us/about/legal/cloud-and-software/software-terms.html).
By selecting Yes, you agree to be bound to the Cisco Content Security Supplemental End User
License Agreement
(https://www.cisco.com/c/en/us/about/legal/cloud-and-software/software-terms.html).
```

I accept the Cisco Content Security Supplemental End User License Agreement. [N]> yes

# sdradvancedconfig

- Description, on page 240
- Usage, on page 240
- Example, on page 240

### **Description**

The sdradvancedconfig command is used to configure advanced parameters when connecting your Cisco Email Security Gateway to the SDR service.

### Usage

Commit: This command requires a 'commit'.

**Cluster Management**: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command**: This command supports a batch format. For more details, see the inline help by typing the command: help sdradvancedconfig.

#### **Example**

In the following example, you can use the sdradvancedconfig command to configure advanced parameters when connecting your Cisco Email Security Gateway to the SDR service.

```
mail.example.com > sdradvancedconfig

Enter SDR query timeout in seconds [5]> 3

Enter the Domain Reputation service hostname [v2.beta.sds.cisco.com]>

Do you want to verify server certificate? [Y]>

Enter the default debug log level for RPC server: [Info]>

Enter the default debug log level for HTTP Client: [Info]>

Do you want exception list matches based on envelope-from domain only? [Y]>
```

## sdrstatus

- Description, on page 240
- Usage, on page 241
- Example, on page 241

# **Description**

The sdrstatus command is used to display the current version of the SDR component.

#### Usage

**Commit**: This command does not require a 'commit'.

**Cluster Management**: This command is restricted to the machine mode.

**Batch Command**: This command does not support a batch format.

#### **Example**

In the following example, you can use the sdrstatus command to view the current version of the SDR component.

mail.example.com> sdrstatus

 Component
 Version
 Last Updated

 SDR Client
 1.0
 2 Jul 2018 04:22 (GMT +00:00)

# sdrupdate

- Description, on page 241
- Usage, on page 241
- Example, on page 241

## **Description**

The sdrupdate command is used to manually update the SDR component.

#### **Usage**

Commit: This command does not require a 'commit'.

**Cluster Management**: This command is restricted to the machine mode.

**Batch Command**: This command does not support a batch format.

# **Example**

In the following example, you can use the sdrupdate command to manually update the SDR component.

```
mail.example.com > sdrupdate
```

Requesting update of Sender Domain Reputation component.

# sdrdiagnostics

- Description, on page 242
- Usage, on page 242
- Example, on page 242

#### **Description**

The sdrdiagnostics command is used to check if your Cisco Email Security Gateway is connected to the SDR service.

#### **Usage**

**Commit**: This command does not require a 'commit'.

**Cluster Management**: This command is restricted to the machine mode.

**Batch Command**: This command does not support a batch format.

### Example

In the following example, you can use the sdrdiagnostics command to check if your Cisco Email Security Gateway is connected to the SDR service.

```
mail.example.com > sdrdiagnostics

1. Show status of the domain reputation service
[1]> 1
Connection Status: Connected
```

# **Mailbox Auto Remediation**

This section contains the following CLI commands:

- marstatus, on page 242
- marupdate, on page 243

#### marstatus

- Description, on page 242
- Usage, on page 242
- Example, on page 243

# **Description**

The marstatus command is used to display the current version of the MAR component.

# **Usage**

Commit: This command does not require a 'commit'.

**Cluster Management**: This command is restricted to the machine mode.

**Batch Command**: This command does not support a batch format.

#### **Example**

In the following example, you can use the marstatus command to view the current version of the Mailbox Auto Remediation component.

mail.example.com> marstatus

Component Version Last Updated
Mailbox Remediation 1.0 29 Jun 2019 04:22 (GMT +00:00)

# marupdate

- Description, on page 243
- Usage, on page 243
- Example, on page 243

### **Description**

The marupdate command is used to manually update the MAR component.

#### Usage

Commit: This command does not require a 'commit'.

**Cluster Management**: This command is restricted to the machine mode.

**Batch Command**: This command does not support a batch format.

## **Example**

In the following example, you can use the marupdate command to manually update the Mailbox Auto Remediation component.

mail.example.com > marupdate

Requesting update of Mailbox Remediation component.

# **Smart Software Licensing**

This section contains the following CLI command:

license smart, on page 243

# license\_smart

- Description, on page 244
- Usage, on page 244
- Example: Configuring Port for Smart Agent Service, on page 244
- Example: Enabling Smart Licensing, on page 244

- Example: Registering the Appliance with the Smart Software Manager, on page 245
- Example: Status of Smart Licensing, on page 245
- Example: Status Summary of Smart Licensing, on page 245
- Example: Setting the Smart Transport URL, on page 245
- Example: Requesting Licenses, on page 246
- Example: Releasing Licenses, on page 246

#### **Description**

Configure smart software licensing feature.

### Usage

Commit: This command requires a 'commit'.

**Cluster Management**: This command can be used only in machine mode. This command does not support cluster and group mode.

**Batch Command**: This command supports a batch format. For details, see the inline help by typing the command: help license smart

#### **Example: Configuring Port for Smart Agent Service**

```
mail.example.com> license_smart
Choose the operation you want to perform:
    ENABLE - Enables Smart Licensing on the product.
    SETAGENTPORT - Set port to run Smart Agent service.
[]> setagentport
Enter the port to run smart agent service.
[65501]>
```

## **Example: Enabling Smart Licensing**

```
mail.example.com> license_smart
Choose the operation you want to perform:
- ENABLE - Enables Smart Licensing on the product.
 []> enable
After enabling Smart Licensing on your appliance, follow below steps to activate the feature
keys (licenses):
a) Register the product with Smart Software Manager using license smart > register command
in the CLI.
b) Activate the feature keys using license smart > requestsmart license command in the CLI.
Note: If you are using a virtual appliance, and have not enabled any of the features in the
classic licensing mode; you will not be able to activate the licenses, after you switch
to the smart licensing mode. You need to first register your appliance, and then you can
activate the licenses (features) in the smart licensing mode.
Commit your changes to enable the Smart Licensing mode on your appliance. All the features
enabled in the Classic Licensing mode will be available in the Evaluation period.
Type "Y" if you want to continue, or type "N" if you want to use the classic licensing mode
[Y/N] []> y
> commit.
Please enter some comments describing your changes:
```

Do you want to save the current configuration for rollback? [Y]>

#### **Example: Registering the Appliance with the Smart Software Manager**

```
mail.example.com> license_smart
To start using the licenses, please register the product.
Choose the operation you want to perform:
    REGISTER - Register the product for Smart Licensing.
    URL - Set the Smart Transport URL.
    STATUS - Show overall Smart Licensing status.
    SUMMARY - Show Smart Licensing status summary.
[]> register
Reregister this product instance if it is already registered [N]> n
Enter token to register the product:
[]> ODRIOTM5MjItOTQzOS00YjY0LWEXZTUtZTdmMmY3OGNlNDZmLTE1MzM3Mzgw%0AMDEzNTR
8WlpCQ1lMbGVMQWRxOXhuenN4OWZDdktFckJLQzF5V3VIbzkyTFgx%0AQWcvaz0%3D%0A
Product Registration is in progress. Use license_smart > status command to check status of registration.
```

#### **Example: Status of Smart Licensing**

```
mail.example.com> license smart
To start using the licenses, please register the product.
Choose the operation you want to perform:
- REQUESTSMART LICENSE - Request licenses for the product.
- RELEASESMART LICENSE - Release licenses of the product.
- REGISTER - Register the product for Smart Licensing.
 URL - Set the Smart Transport URL.
- STATUS - Show overall Smart Licensing status.
- SUMMARY - Show Smart Licensing status summary.
[]> status
Smart Licensing is: Enabled
Evaluation Period: In Use
Evaluation Period Remaining: 89 days 23 hours 53 minutes
Registration Status: Unregistered
Virtual Account: Not Available
Smart Account: Not Available
License Authorization Status: Evaluation Mode
Last Authorization Renewal Attempt Status: No Communication Attempted
Product Instance Name: mail.example.com
Transport Settings: Direct (https://smartreceiver.cisco.com/licservice/license)
```

# **Example: Status Summary of Smart Licensing**

```
mail.example.com> license smart
To start using the licenses, please register the product.
Choose the operation you want to perform:
- REGISTER - Register the product for Smart Licensing.
- URL - Set the Smart Transport URL.
- STATUS - Show overall Smart Licensing status.
- SUMMARY - Show Smart Licensing status summary.
[]> summarv
FeatureName
                                                    LicenseAuthorizationStatus
Mail Handling
                                                    Eval
Email Security Appliance Bounce Verification
                                                    Eval
Email Security Appliance Outbreak Filters
                                                   Eval
```

## **Example: Setting the Smart Transport URL**

```
mail.example.com> license_smart
Choose the operation you want to perform:
```

```
- REQUESTSMART LICENSE - Request licenses for the product.
- RELEASESMART LICENSE - Release licenses of the product.
- REGISTER - Register the product for Smart Licensing.
- URL - Set the Smart Transport URL.
- STATUS - Show overall Smart Licensing status.
- SUMMARY - Show Smart Licensing status summary.
[]> url
1. DIRECT - Product communicates directly with the cisco license servers
2. TRANSPORT GATEWAY - Product communicates via transport gateway or smart software manager
satellite.
Choose from the following menu options:
[1]> direct
You must enter a value from 1 to 2.
1. DIRECT - Product communicates directly with the cisco license servers
2. TRANSPORT GATEWAY - Product communicates via transport gateway or smart software manager
satellite.
Choose from the following menu options:
[1] > 1
Note: The appliance uses the Direct URL
(https://smartreceiver.cisco.com/licservice/license) to communicate with Cisco
Smart Software Manager (CSSM) via the proxy server configured using the updateconfig command.
Transport settings will be updated after commit.
```

#### **Example: Requesting Licenses**

Note

Users of virtual appliance must register their appliance to request for or release the licenses.

```
mail.example.com> license smart
Choose the operation you want to perform:
- REQUESTSMART LICENSE - Request licenses for the product.
- RELEASESMART LICENSE - Release licenses of the product.
- REGISTER - Register the product for Smart Licensing.
- URL - Set the Smart Transport URL.
- STATUS - Show overall Smart Licensing status.
- SUMMARY - Show Smart Licensing status summary.
[]> requestsmart license
Feature Name
                                                    License Authorization Status
1. Email Security Appliance Sophos Anti-Malware
                                                     Not Requested
2. Email Security Appliance PXE Encryption
                                                       Not requested
Enter the appropriate license number(s) for activation.
Separate multiple license with comma or enter range:
[]> 1
Activation is in progress for following features:
Email Security Appliance Sophos Anti-Malware
Use license_smart > summary command to check status of licenses.
```

#### **Example: Releasing Licenses**

```
mail.example.com> license_smart
Choose the operation you want to perform:
- REQUESTSMART_LICENSE - Request licenses for the product.
- RELEASESMART_LICENSE - Release licenses of the product.
- REGISTER - Register the product for Smart Licensing.
- URL - Set the Smart Transport URL.
- STATUS - Show overall Smart Licensing status.
- SUMMARY - Show Smart Licensing status summary.
[]> releasesmart_license

# **SMTP Services Configuration**

This section contains the following CLI commands:

# callaheadconfig

#### **Description**

Add, edit, and remove SMTP Call-Ahead profiles

### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

#### **Example**

In the following example you can create a new SMTP call-ahead profile for delivery host.

```
> callaheadconfig
No SMTP Call-Ahead profiles are configured on the system.
Choose the operation you want to perform:
- NEW - Create a new profile.
[] > new
Select the type of profile you want to create:
1. Delivery Host
2. Static Call-Ahead Servers
[1] > 1
Please enter a name for the profile:
[]> delhost01
Advanced Settings:
 MAIL FROM Address: <>
 Interface: Auto
  Timeout Value: 30
  Validation Failure Action: ACCEPT
 Temporary Failure Action: REJECT with same code
 Maximum number of connections: 5
 Maximum number of validation queries: 1000
 Cache size: 10000
 Cache TTL: 900
Do you want to change advanced settings? [N]> n
Currently configured SMTP Call-Ahead profiles:
1. delhost01 (Delivery Host)
Choose the operation you want to perform:
- NEW - Create a new profile.
- EDIT - Modify a profile.
- DELETE - Delete a profile.
- PRINT - Display profile information.
- TEST - Test profile.
- FLUSHCACHE - Flush SMTP Call-Ahead cache.
```

In the following example you can create a new SMTP call-ahead profile for call ahead server.

```
> callaheadconfig
Currently configured SMTP Call-Ahead profiles:
1. delhost01 (Delivery Host)
Choose the operation you want to perform:
- NEW - Create a new profile.
- EDIT - Modify a profile.
- DELETE - Delete a profile.
- PRINT - Display profile information.
- TEST - Test profile.
- FLUSHCACHE - Flush SMTP Call-Ahead cache.
[] > new
Select the type of profile you want to create:
1. Delivery Host
2. Static Call-Ahead Servers
[11>2]
Please enter a name for the profile:
[]> Static
Enter one or more Call-Ahead servers hostname separated by commas.
[]> 192.168.1.2
Advanced Settings:
 MAIL FROM Address: <>
  Interface: Auto
 Timeout Value: 30
 Validation Failure Action: ACCEPT
 Temporary Failure Action: REJECT with same code
 Maximum number of connections: 5
 Maximum number of validation queries: 1000
 Cache size: 10000
 Cache TTL: 900
Do you want to change advanced settings? [N]> n
Currently configured SMTP Call-Ahead profiles:
1. Static (Static Call-Ahead Servers)
2. delhost01 (Delivery Host)
Choose the operation you want to perform:
- NEW - Create a new profile.
- EDIT - Modify a profile.
- DELETE - Delete a profile.
- PRINT - Display profile information.
- TEST - Test profile.
- FLUSHCACHE - Flush SMTP Call-Ahead cache.
[]> print
Select the profile you want to print:
1. Static (Static Call-Ahead Servers)
2. delhost01 (Delivery Host)
[11>
```

# listenerconfig

## **Description**

The listenerconfig command allows you to create, edit, and delete a listener. AsyncOS requires that you specify criteria that messages must meet in order to be accepted and then relayed to recipient hosts — either internal to your network or to external recipients on the Internet.

These qualifying criteria are defined in listeners; collectively, they define and enforce your mail flow policies. Listeners also define how the appliance communicates with the system that is injecting email.

#### Table 13: listenerconfig Commands

Name	Unique nickname you supply for the listener, for future reference. The names you define for listeners are case-sensitive. AsyncOS does not allow you to create two identical listener names.
IP Interface	Listeners are assigned to IP interfaces. All IP interfaces must be configured using the systemstartup command or the interfaceconfig command before you create and assign a listener to it.
Mail protocol	The mail protocol is used for email receiving: either ESMTP or QMQP
IP Port	The specific IP port used for connections to the listener. by default SMTP uses port 25 and QMQP uses port 628.
Listener Type:	Public and private listeners are used for most configurations. By convention,
Public	private listeners are intended to be used for private (internal) networks, while public listeners contain default characteristics for receiving email from the
Private	Internet.
Blackhole	"Blackhole" listeners can be used for testing or troubleshooting purposes. When you create a blackhole listener, you choose whether messages are written to disk or not before they are deleted. (See the "Testing and Troubleshooting" chapter of the <i>User Guide for AsyncOS for Cisco Email Security Appliances</i> for more information.

# Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

# **Batch Format - General listenerconfig**

The batch format of the **listenerconfig** command can be used to add and delete listeners on a particular interface. The batch format of the listenerconfig command also allows you to configure a listener's HAT and RAT.

• Adding a new listener:

listenerconfig new <name> <public|private|blackhole|blackholequeueing>
<interface\_name> <smtp|qmqp>

• Deleting a listener:

listenerconfig delete <name>

#### **Batch Format - HAT**

The following examples demonstrate the use of the batch format of listenerconfig to perform various HAT-related tasks. For more information about arguments, consult *Table - listenerconfig Argument Values -HAT* below:

Adding a new sendergroup to the HAT

listenerconfig edit <name> hostaccess new sendergroup <name> <host\_list> <behavior>
[options [--comments]

• Add a new policy to the HAT

listenerconfig edit <name> hostaccess new policy <name> <behavior> [options]

• Add a new host list to a sendergroup

listenerconfig edit <name> hostaccess edit sendergroup <name> new <host list>

• Delete a host from a sendergroup

listenerconfig edit <name> hostaccess edit sendergroup <name> delete <host>

• Move a host in a sendergroup's list order

listenerconfig edit <name> hostaccess edit sendergroup <name> move <host>
<host-to-insert-before>

• Modify a sendergroup's policy

 ${\tt listener config \ edit \ < name> \ host access \ edit \ sender group \ < name> \ policy \ < behavior> \ [options]}$ 

Print a sendergroup listing

listenerconfig edit <name> hostaccess edit sendergroup <name> print

Rename a sendergroup

listenerconfig edit <name> hostaccess edit sendergroup <name> rename <name>

• Editing a HAT's policy

listenerconfig edit <name> hostaccess edit policy <name> <behavior> [options]

• Deleting a sendergroup from a HAT

listener<br/>config edit <name> hostaccess delete sendergroup <name>

• Deleting a policy

listenerconfig edit <name> hostaccess delete policy <name>

• Moving a sendergroup's position in the HAT

listenerconfig edit <name> hostaccess move <group> <group-to-insert-before>

• Changing a HAT default option

listenerconfig edit <name> hostaccess default [options]

Printing the hostaccess table

listenerconfig edit <name> hostaccess print

• Import a local copy of a HAT

listenerconfig edit <name> hostaccess import <filename>

• Exporting a copy of the HAT from the appliance

listenerconfig edit <name> hostaccess export <filename>

• Deleting all user defined sendergroups and policies from the HAT

listenerconfig edit <name> hostaccess clear

• Adding the sender's country of origin for a particular sender group.

listener config edit incoming hostaccess edit sender group  $\ensuremath{\mathbf{WHITELIST}}$  country add India Nepal Cyprus

• Deleting the sender's country of origin for a particular sender group.

listener config edit incoming hostaccess edit sendergroup  $\mbox{\sc WHITELIST}$  country delete Cyprus

• Printing the sender's country of origin for a particular sender group.

listener<br/>config edit incoming hostaccess edit sendergroup  $\ensuremath{\mathbf{WHITELIST}}$  <br/>country print

Table 14: listenerconfig Argument Values -HAT

Argument	Description
 <behavior></behavior>	"Accept", "Relay", "Reject", "TCP Refuse", or "Continue". When selecting a behavior for use with a sendergroup, additional behaviors of the form "Policy: FOO" are available (where "FOO" is the name of policy).
<filename></filename>	The filename to use with importing and exporting the hostaccess tables.
<group></group>	A sendergroup <name>.</name>
<host></host>	A single entity of a <host_list></host_list>
<host_list></host_list>	Enter the hosts to add. Hosts can be formatted as follows:
	CIDR addresses (10.1.1.0/24)
	IP address ranges (10.1.1.10-20)
	IP Subnets (10.2.3)
	Hostname (crm.example.com)
	Partial Hostname (.example.com)
	Sender Base Reputation Score range (7.5:10.0)
	Senderbase Network Owner IDS (SBO:12345)
	Remote blacklist queries (dnslist[query.blacklist.example]
	Note Separate multiple hosts with commas
<name></name>	The name of the sendergroup or policy. HAT labels must start with a letter or underscore, followed by any number of letters, numbers, underscores or hyphens.
[options]	
max_size	Maximum message size. Add a trailing k for kilobytes, M for megabytes, or no letters for bytes.
max_conn	Maximum number of connections allowed from a single host.
max_msgs	Maximum number of messages per connection.
max_rcpt	Maximum number of recipients per message.
override	Override the hostname in the SMTP banner. "No" or SMTP banner string.
cust_acc	Specify a custom SMTP acceptance response. "No" or SMTP acceptance response string.
acc_code	Custom SMTP acceptance response code. Default is 220.
cust_rej	Specify a custom SMTP rejection response. "No" or SMTP rejection response string.
rej_code	Custom SMTP rejection response code. Default is 554.

Argument	Description
rate_lim	Enable rate limiting per host. "No", "default" or maximum number of recipients per hour per host.
cust_lim	Specify a custom SMTP limit exceeded response message. "No" or SMTP rejection response string. Default is "No".
lim_code	Custom SMTP limit exceeded response code. Default is 452.
use_sb	Use SenderBase for flow control by default. "Yes", "No", or "default".
as_scan	Enable anti-spam scanning. "Yes", "No", "Default".
av_scan	Enable anti-virus scanning. "Yes", "No", "Default".
dhap	Directory Harvest Attack Prevention. "No", "default", or maximum number of invalid recipients per hour from a remote host.
tls	Not supported; use menuing system to configure TLS.
sig_bits	Number of bits of IP address to treat as significant. From 0 to 32, "No" or "default".
dkim_signing	Enable DKIM signing. "Yes", "No", "Default."
dkim_verification	Enable DKIM verification. "Yes", "No", "Default."
dkim_verification_profile <name></name>	The name of DKIM verification profile. This option is only applicable ifdkim_verification value is set to "Yes."
spf	Enable SPF verification. "Yes", "No", "Default."
spf_conf_level	SPF conformance level. Used with "spf Yes" only. "spf_only", "sidf_compatible", "sidf_strict."
spf_downgrade_pra	Downgrade SPF PRA verification result. Used with "spf Yes" and "spf_conf_level sidf_compatible" only. "Yes", "No."
spf_helo_test	SPF HELO test. Used with "spf Yes" and "spf_conf_level sidf_compatible," or "spf_conf_level spf_only." "Yes", "No".
dmarc_verification	Enable DMARC verification. "Yes", "No", "Default."
dmarc_verification_profile <name></name>	The name of DMARC verification profile. This option is only applicable ifdmarc_verification value is set to "Yes."
dmarc_agg_reports	Enable DMARC aggregate reports. "Yes", "No", "Default." This option is only applicable ifdmarc_verification value is set to "Yes."

#### **Batch Format - RAT**

The following examples demonstrate the use of the batch format of listenerconfig to perform various RAT-related tasks. For more information about arguments, consult *Table - listenerconfig Argument Values - RAT* below:

• Adding a new recipient to the RAT

listenerconfig edit <name> rcptacess new <rat\_addr> [options]

• Editing a recipient in the RAT

listenerconfig edit <name> rcptacess edit <rat\_addr> [options]

• Deleting a recipient from the RAT

listenerconfig edit <name> rcptacess delete <rat\_addr>

• Printing a copy of the RAT

listenerconfig edit <name> rcptacess print

• Importing a local RAT to your appliance

listenerconfig edit <name> rcptacess import <filename>

Exporting a RAT

listenerconfig edit <name> rcptacess export <filename>

• Clearing the default access

listenerconfig edit <name> rcptacess clear <default\_access>

Table 15: listenerconfig Argument Values - RAT

Argument	Description		
<rat_addr></rat_addr>	Enter the hosts to add. Hosts can be formatted as follows:		
	CIDR addresses (10.1.1.0/24)		
	Hostname (crm.example.com)		
	Partial Hostname (.example.com)		
	Usernames (postmaster@)		
	Full email addresses (joe@example.com, joe@[1.2.3.4]		
	<b>Note</b> Separate multiple hosts with commas		
<options></options>			
action	Action to apply to address(es). Either "Accept" or "Reject". Default is "Accept".		

Argument	Description
cust_resp	Specify a custom SMTP response. "No" or SMTP acceptance response string.
resp_code	Custom SMTP response code. Default is 250 for "Accept" actions, 550 for "Reject".
bypass_rc	Bypass receiving control. Default is "No".
bypass_la	Bypass LDAP Accept query. Either "Yes" or "No."
bypass_ca	Bypass SMTP Call-Ahead. Default is "No".

#### **Example - Adding a listener**

In the following example, the listenerconfig command is used to create a new private listener called OutboundMail that can be used for the B listener needed in the Enterprise Gateway configuration. (Note: you also had the option to add this private listener during the GUI's System Setup Wizard CLI systemsetup command.)

A private listener type is chosen and named OutboundMail. It is specified to run on the PrivateNet IP interface, using the SMTP protocol over port 25. The default values for the Host Access Policy for this listener are then accepted.

```
mail3.example.com> listenerconfig
Currently configured listeners:
1. InboundMail (on PublicNet, 192.168.2.1) SMTP TCP Port 25 Public
Choose the operation you want to perform:
- NEW - Create a new listener.
- EDIT - Modify a listener.
- DELETE - Remove a listener.
- SETUP - Change global settings.
[] > new
Please select the type of listener you want to create.
1. Private
2. Public
3. Blackhole
[2] > 1
Please create a name for this listener (Ex: "OutboundMail"):
[]> OutboundMail
Please choose an IP interface for this Listener.
1. Management (192.168.42.42/24: mail3.example.com)
2. PrivateNet (192.168.1.1/24: mail3.example.com)
3. PublicNet (192.168.2.1/24: mail3.example.com)
[1]> 2
Choose a protocol.
1. SMTP
2. QMQP
[1]> 1
Please enter the TCP port for this listener.
[25]> 25
Please specify the systems allowed to relay email through the IronPort C60.
Hostnames such as "example.com" are allowed.
Partial hostnames such as ".example.com" are allowed.
IP addresses, IP address ranges, and partial IP addresses are allowed.
Separate multiple entries with commas.
[]> .example.com
Do you want to enable rate limiting for this listener? (Rate limiting defines the maximum
number of recipients per hour you are
```

```
willing to receive from a remote domain.)
                                             [N] > n
Default Policy Parameters
Maximum Message Size: 100M
Maximum Number Of Connections From A Single IP: 600
Maximum Number Of Messages Per Connection: 10,000
Maximum Number Of Recipients Per Message: 100,000
Maximum Number Of Recipients Per Hour: Disabled
Use SenderBase for Flow Control: No
Spam Detection Enabled: No
Virus Detection Enabled: Yes
Allow TLS Connections: No
Allow SMTP Authentication: No
Require TLS To Offer SMTP authentication: No
Would you like to change the default host access policy? [N]> \boldsymbol{n}
Listener OutboundMail created.
Defaults have been set for a Private listener.
Use the listenerconfig->EDIT command to customize the listener.
Currently configured listeners:
1. InboundMail (on PublicNet, 192.168.2.1) SMTP TCP Port 25 Public
2. OutboundMail (on PrivateNet, 192.168.1.1) SMTP TCP Port 25 Private
Choose the operation you want to perform:
- NEW - Create a new listener.
- EDIT - Modify a listener.
- DELETE - Remove a listener.
- SETUP - Change global settings.
[1>
```

#### **Example - Adding a Sender's Country of Origin to a Sender Group**

In the following example, the listenerconfig command is used to modify a listener to add the sender's country of origin for a particular sender group.

```
mail3.example.com> listenerconfig

Currently configured listeners:
1. InboundMail (on PublicNet, 192.168.2.1) SMTP TCP Port 25 Public
2. OutboundMail (on PrivateNet, 192.168.1.1) SMTP TCP Port 25 Private
Choose the operation you want to perform:
    NEW - Create a new listener.
    EDIT - Modify a listener.
    DELETE - Remove a listener.
    SETUP - Change global settings.

[]> edit
Enter the name or number of the listener you wish to edit.

[]> 1
Name: InboundMailhostacce
Type: Public
Interface: PublicNet (192.168.2.1/24) TCP Port 25
```

```
Protocol: SMTP
Default Domain:
Max Concurrency: 1000 (TCP Queue: 50)
Domain map: disabled

#### **Example - Customizing the Host Acess Table (HAT ) for a listener via Export and Import**

Many of the subcommands within the listenerconfig command allow you to import and export data in order to make large configuration changes without having to enter data piecemeal in the CLI.

These steps use the CLI to modify the Host Access Table (HAT) of a listener by exporting, modifying, and importing a file. You can also use the HAT CLI editor or the GUI to customize the HAT for a listener. For more information, see the "Configuring the Gateway to Receive Mail" and "Using Mail Flow Monitor" chapters in the *User Guide for AsyncOS for Cisco Email Security Appliances*.

To customize a HAT for a listener you have defined via export and import:

#### **Procedure**

**Step 1** Use the hostaccess -> export subcommands of listenerconfig to export the default HAT to a file.

In the following example, the HAT for the public listener InboundMail is printed, and then exported to a file named inbound.HAT.txt

#### Example:

```
mail3.example.com> listenerconfig
Currently configured listeners:
1. InboundMail (on PublicNet, 192.168.2.1) SMTP TCP Port 25 Public
2. OutboundMail (on PrivateNet, 192.168.1.1) SMTP TCP Port 25 Private
Choose the operation you want to perform:
    NEW - Create a new listener.
    EDIT - Modify a listener.
    DELETE - Remove a listener.
    SETUP - Change global settings.
[]> edit
Enter the name or number of the listener you wish to edit.
[]> 1
Name: InboundMail
Type: Public
```

```
Interface: PublicNet (192.168.2.1/24) TCP Port 25
Protocol: SMTP
Default Domain:
Max Concurrency: 1000 (TCP Queue: 50)
Domain map: disabled
TLS: No
SMTP Authentication: Disabled
Bounce Profile: Default
Use SenderBase For Reputation Filters and IP Profiling: Yes
Footer: None
LDAP: off
Choose the operation you want to perform:
- NAME - Change the name of the listener.
- INTERFACE - Change the interface.
- LIMITS - Change the injection limits.
- SETUP - Configure general options.
- HOSTACCESS - Modify the Host Access Table.
- RCPTACCESS - Modify the Recipient Access Table.
- BOUNCECONFIG - Choose the bounce profile to use for messages injected on this listener.
- MASQUERADE - Configure the Domain Masquerading Table.
- DOMAINMAP - Configure domain mappings.

BLACKLIST:
        $BLOCKED (Spammers are rejected)
SUSPECTLIST:
        $THROTTLED (Suspicious senders are throttled)
UNKNOWNLIST:
        $ACCEPTED (Reviewed but undecided, continue normal acceptance)
ALL
    $ACCEPTED (Everyone else)
Default Policy Parameters
_____
Allow TLS Connections: No
Allow SMTP Authentication: No
Require TLS To Offer SMTP authentication: No
Maximum Concurrency Per IP: 1,000
Maximum Message Size: 100M
Maximum Messages Per Connection: 1,000
Maximum Recipients Per Message: 1,000
Maximum Recipients Per Hour: Disabled
Use SenderBase For Flow Control: Yes
Spam Detection Enabled: Yes
Virus Detection Enabled: Yes
There are currently 4 policies defined.
There are currently 5 sender groups.
Choose the operation you want to perform:
- NEW - Create a new entry.
- EDIT - Modify an entry.
- DELETE - Remove an entry.
- MOVE - Move an entry.
- DEFAULT - Set the defaults.
- PRINT - Display the table.
- IMPORT - Import a table from a file.
- EXPORT - Export the table to a file.
- CLEAR - Remove all entries.
[]> export
Enter a name for the exported file:
[] > inbound.HAT.txt
File written on machine "mail3.example.com".
```

#### **Example:**

- **Step 2** Outside of the Command Line Interface (CLI), get the file inbound.HAT.txt.
- **Step 3** With a text editor, create new HAT entries in the file.

In this example, the following entries are added to the HAT above the ALL entry:

```
spamdomain.com REJECT
.spamdomain.com REJECT
251.192.1. TCPREFUSE
169.254.10.10 RELAY
```

- The first two entries reject all connections from the remote hosts in the domain spamdomain.com and any subdomain of spamdomain.com.
- The third line refuses connections from any host with an IP address of 251.192.1. x.
- The fourth line allows the remote host with the IP address of 169.254.10.10 to use the Email Security appliance as an SMTP relay for all of its outbound email to the Internet

Note

The order that rules appear in the HAT is important. The HAT is read from top to bottom for each host that attempts to connect to the listener. If a rule matches a connecting host, the action is taken for that connection immediately. You should place all custom entries in the HAT above an ALL host definition. You can also use the HAT CLI editor or the GUI to customize the HAT for a listener. For more information, see the "Configuring the Gateway to Receive Mail" and "Using Mail Flow Monitor" chapters in the *User Guide for AsyncOS for Cisco Email Security Appliances*.

- Step 4 Save the file and place it in the configuration directory for the interface so that it can be imported. (See Appendix B, "Accessing the Appliance," for more information.)
- **Step 5** Use the hostaccess -> import subcommand of listenerconfig to import the edited Host Access Table file.

In the following example, the edited file named inbound.HAT.txt is imported into the HAT for the InboundMail listener. The new entries are printed using the print subcommand.

#### **Example:**

```
mail3.example.com> listenerconfig
Currently configured listeners:
1. InboundMail (on PublicNet, 192.168.2.1) SMTP TCP Port 25 Public
2. OutboundMail (on PrivateNet, 192.168.1.1) SMTP TCP Port 25 Private
Choose the operation you want to perform:
- NEW - Create a new listener.
- EDIT - Modify a listener.
- DELETE - Remove a listener.
- SETUP - Change global settings.
[]> edit
Enter the name or number of the listener you wish to edit.
[]> 1
Name: InboundMail

#### **Example - Advanced HAT Parameters**

The following table defines the syntax of advanced HAT parameters. Note that for the values below which are numbers, you can add a trailing  ${\bf k}$  to denote kilobytes or a trailing  ${\bf M}$  to denote megabytes. Values with no letters are considered bytes. Parameters marked with an asterisk support the variable syntax shown in the following table.

Table 16: Advanced HAT Parameter Syntax

Parameter	Syntax	Values	Example Values
Maximum messages per connection	max_msgs_per_session	Number	1000
Maximum recipients per message	max_rcpts_per_msg	Number	10000 1k
Maximum message size	max_message_size	Number	1048576 20M
Maximum concurrent connections allowed to this listener	max_concurrency	Number	1000
SMTP Banner Code	smtp_banner_code	Number	220
SMTP Banner Text (*)	smtp_banner_text	String	Accepted
SMTP Reject Banner Code	smtp_banner_code	Number	550
SMTP Reject Banner Text (*)	smtp_banner_text	String	Rejected
Override SMTP Banner Hostname	use_override_hostname	on   off   default	default
	override_hostname	String	newhostname
Use TLS	tls	on   off   required	on
Use anti-spam scanning	spam_check	on   off	off
Use Sophos virus scanning	virus_check	on   off	off
Maximum Recipients per Hour	max_rcpts_per_hour	Number	5k

Parameter	Syntax	Values	Example Values
Maximum Recipients per Hour Error Code	max_rcpts_per_hour_code	Number	452
Maximum Recipients per Hour Text (*)	max_rcpts_per_hour_text	String	Too manyrecipients
Use SenderBase	use_sb	on   off	on
Define SenderBase Reputation Score	sbrs[value1:value2]	-10.0- 10.0	sbrs[-10:-7.5]
Directory Harvest Attack Prevention: Maximum Invalid Recipients Per Hour	dhap_limit	Number	150

#### Adding bypass\_ca Argument to listenerconfig

The following example shows how to add the bypass ca argument to listenerconfig:

```
esa.example.com (SERVICE) > help listenerconfig.
    rcptaccess options are the following:
       new <rat addr> [options]
       edit <rat addr> [options]
       delete <rat_addr>
       print
        import <filename>
       export <filename>
       clear <default access>
       default_access - Default access for empty RAT. Either "ACCEPT"
                        or "REJECT".
       rat addr - Hostnames such as "example.com" and "[1.2.3.4]" are
                  allowed. Partial hostnames such as ".example.com"
                  are allowed. Usernames such as "postmaster@" are
                  allowed. Full email addresses such as
                   "joe@example.com" or "joe@[1.2.3.4]" are allowed.
                  Separate multiple entries with commas.
       options - Various options to modify a host access policy:
            --action
                       Action to apply to address(es). Either
                        "Accept" or "Reject". Default is "Accept".
            --cust_resp Specify a custom SMTP response. "No" or SMTP
                        acceptance response string.
            --resp code Custom SMTP response code. Default is 250 for
                        "Accept" actions, 550 for "Reject".
            --bypass rc Bypass receiving control. Default is "No".
            --bypass_la Bypass LDAP Accept queries for this Recipient. Default is "No".
            --bypass ca Bypass SMTP Call-Ahead. Default is "No".
```

# **Example - Configuring SPF and SIDF**

When configuring the default settings for a listener's Host Access Table, you can choose the listener's SPF/SIDF conformance level and the SMTP actions (ACCEPT or REJECT) that the appliance performs,

based on the SPF/SIDF verification results. You can also define the SMTP response that the appliance sends when it rejects a message.

Depending on the conformance level, the appliance performs a check against the HELO identity, MAIL FROM identity, or PRA identity. You can specify whether the appliance proceeds with the session (ACCEPT) or terminates the session (REJECT) for each of the following SPF/SIDF verification results for each identity check:

- None. No verification can be performed due to the lack of information.
- Neutral. The domain owner does not assert whether the client is authorized to use the given identity.
- **SoftFail**. The domain owner believes the host is not authorized to use the given identity but is not willing to make a definitive statement.
- Fail. The client is not authorized to send mail with the given identity.
- **TempError**. A transient error occurred during verification.
- PermError. A permanent error occurred during verification.

The appliance accepts the message for a Pass result unless you configure the SIDF Compatible conformance level to downgrade a Pass result of the PRA identity to None if there are Resent-Sender: or Resent-From: headers present in the message. The appliance then takes the SMTP action specified for when the PRA check returns None.

If you choose not to define the SMTP actions for an identity check, the appliance automatically accepts all verification results, including Fail.

The appliance terminates the session if the identity verification result matches a REJECT action for any of the enabled identity checks. For example, an administrator configures a listener to accept messages based on all HELO identity check results, including Fail, but also configures it to reject messages for a Fail result from the MAIL FROM identity check. If a message fails the HELO identity check, the session proceeds because the appliance accepts that result. If the message then fails the MAIL FROM identity check, the listener terminates the session and then returns the STMP response for the REJECT action.

The SMTP response is a code number and message that the appliance returns when it rejects a message based on the SPF/SIDF verification result. The TempError result returns a different SMTP response from the other verification results. For TempError, the default response code is 451 and the default message text is #4.4.3 Temporary error occurred during SPF verification. For all other verification results, the default response code is 550 and the default message text is #5.7.1 SPF unauthorized mail is prohibited. You can specify your own response code and message text for TempError and the other verification results.

Optionally, you can configure the appliance to return a third-party response from the SPF publisher domain if the REJECT action is taken for Neutral, SoftFail, or Fail verification result. By default, the appliance returns the following response:

550-#5.7.1 SPF unauthorized mail is prohibited.

550-The domain example.com explains:

550 < Response text from SPF domain publisher >

To enable these SPF/SIDF settings, use the listenerconfig -> edit subcommand and select a listener. Then use the hostaccess -> default subcommand to edit the Host Access Table's default settings. Answer yes to the following prompts to configure the SPF controls:

```
Would you like to change SPF/SIDF settings? [N]> yes

Would you like to perform SPF/SIDF Verification? [Y]> yes
```

The following SPF control settings are available for the Host Access Table:

**Table 17: SPF Control Settings** 

Conformance Level	Available SPF Control Settings
SPF Only	<ul> <li>whether to perform HELO identity check</li> <li>SMTP actions taken based on the results of the following identity checks:</li> <li>HELO identity (if enabled)</li> <li>MAIL FROM Identity</li> <li>SMTP response code and text returned for the REJECT action</li> <li>verification time out (in seconds)</li> </ul>
SIDF Compatible	<ul> <li>whether to perform a HELO identity check</li> <li>whether the verification downgrades a Pass result of the PRA identity to None if the Resent-Sender: or Resent-From: headers are present in the message</li> <li>SMTP actions taken based on the results of the following identity checks:</li> <li>HELO identity (if enabled)</li> <li>MAIL FROM Identity</li> <li>PRA Identity</li> <li>SMTP response code and text returned for the REJECT action</li> <li>verification timeout (in seconds)</li> </ul>
SIDF Strict	<ul> <li>SMTP actions taken based on the results of the following identity checks:</li> <li>MAIL FROM Identity</li> <li>PRA Identity</li> <li>SMTP response code and text returned in case of SPF REJECT action</li> <li>verification timeout (in seconds)</li> </ul>

The following example shows a user configuring the SPF/SIDF verification using the SPF Only conformance level. The appliance performs the HELO identity check and accepts the None and Neutral verification results and rejects the others. The CLI prompts for the SMTP actions are the same for all identity types. The user does not define the SMTP actions for the MAIL FROM identity. The appliance automatically accepts all verification results for the identity. The appliance uses the default reject code and text for all REJECT results.

## **Example: SPF/SIDF Settings**

```
Would you like to change SPF/SIDF settings? [N]> yes
Would you like to perform SPF/SIDF Verification? [N]> yes
What Conformance Level would you like to use?
1. SPF only
2. SIDF compatible
3. SIDF strict
[2]> 1
Would you like to have the HELO check performed? [Y]> {f y}
Would you like to change SMTP actions taken as result of the SPF verification? [N]> {f y}
Would you like to change SMTP actions taken for the HELO identity? [N]> {f y}
What SMTP action should be taken if HELO check returns None?
1. Accept
2. Reject
[1]> 1
What SMTP action should be taken if HELO check returns Neutral?
1. Accept
```

```
2. Reject
[1]> 1
What SMTP action should be taken if HELO check returns SoftFail?
2. Reject
[1]> 2
What SMTP action should be taken if HELO check returns Fail?
1. Accept
2. Reject
[1]> 2
What SMTP action should be taken if HELO check returns TempError?
1. Accept
2. Reject
[1]> 2
What SMTP action should be taken if HELO check returns PermError?
1. Accept
2. Reject
[1]> 2
Would you like to change SMTP actions taken for the MAIL FROM identity? [N]> \boldsymbol{n}
Would you like to change SMTP response settings for the REJECT action? [N]> \boldsymbol{n}
Verification timeout (seconds)
```

The following shows how the SPF/SIDF settings are displayed for the listener's Default Policy Parameters.

#### **Example: SPF/SIDF in Default Policy Parameters**

```
SPF/SIDF Verification Enabled: Yes
Conformance Level: SPF only
Do HELO test: Yes
SMTP actions:
For HELO Identity:
None, Neutral: Accept
SoftFail, Fail, TempError, PermError: Reject
For MAIL FROM Identity: Accept
SMTP Response Settings:
Reject code: 550
Reject text: #5.7.1 SPF unauthorized mail is prohibited.
Get reject response text from publisher: Yes
Defer code: 451
Defer text: #4.4.3 Temporary error occurred during SPF verification.
Verification timeout: 40
```

## **Example - Enable DMARC Verification**

The following example shows how to enable DMARC verification.

```
mail.example.com> listenerconfig
Currently configured listeners:
1. Listener 1 (on Management, 172.29.181.70) SMTP TCP Port 25 Public
Choose the operation you want to perform:
    NEW - Create a new listener.
    EDIT - Modify a listener.
    DELETE - Remove a listener.
    SETUP - Change global settings.
[]> edit
Enter the name or number of the listener you wish to edit.
[]> 1
Name: Listener 1
Type: Public
Interface: Management (172.29.181.70/24) TCP Port 25
```

```
Protocol: SMTP
Default Domain: <none configured>
Max Concurrent Connections: 300 (TCP Queue: 50)

```

# localeconfig

#### **Description**

Configure multi-lingual settings

#### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

#### **Example**

```
mail3.example.com> localeconfig
Behavior when modifying headers: Use encoding of message body
Behavior for untagged non-ASCII headers: Impose encoding of message body
Behavior for mismatched footer or heading encoding: Try both body and footer or heading
encodinas
Behavior when decoding errors found: Disclaimer is displayed as inline content and the
message body is added as an attachment.
Choose the operation you want to perform:
- SETUP - Configure multi-lingual settings.
[]> setup
If a header is modified, encode the new header in the same encoding as the message body?
(Some MUAs incorrectly handle headers encoded in a different encoding than the body.
However, encoding a modified header in the same encoding as the message body may cause
characters in the modified header to be lost.) [Y]>
If a non-ASCII header is not properly tagged with a character set and is being used or
modified.
impose the encoding of the body on the header during processing and final representation
of the message?
(Many MUAs create non-RFC-compliant headers that are then handled in an undefined way.
Some MUAs handle headers encoded in character sets that differ from that of the main body
in an incorrect way.
Imposing the encoding of the body on the header may encode the header more precisely.
This will be used to interpret the content of headers for processing, it will not modify
or rewrite the
header unless that is done explicitly as part of the processing.) [Y]>
Disclaimers (as either footers or headings) are added in-line with the message body whenever
possible.
However, if the disclaimer is encoded differently than the message body, and if imposing a
single encoding
will cause loss of characters, it will be added as an attachment. The system will always
try to use the
```

```
message body's encoding for the disclaimer. If that fails, the system can try to edit the
message body to
use an encoding that is compatible with the message body as well as the disclaimer. Should
the system try to
re-encode the message body in such a case? [Y]>
If the disclaimer that is added to the footer or header of the message generates an error
when decoding the message body,
it is added at the top of the message body. This prevents you to rewrite a new message
content that must merge with
the original message content and the header/footer-stamp. The disclaimer is now added as
an additional MIME part
that displays only the header disclaimer as an inline content, and the rest of the message
content is split into
separate email attachments. Should the system try to ignore such errors when decoding the
message body? [N]>
Behavior when modifying headers: Use encoding of message body
Behavior for untagged non-ASCII headers: Impose encoding of message body
Behavior for mismatched footer or heading encoding: Try both body and footer or heading
encodings
Behavior when decoding errors found: Disclaimer is displayed as inline content and the
message body
is added as an attachment.
Choose the operation you want to perform:
- SETUP - Configure multi-lingual settings.
[] > mail3.example.com
```

## smtpauthconfig

#### **Description**

Configure SMTP Auth outgoing and forwarding profiles.

## Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

## **Example**

In the following example, the **smtpauthconfig** command is used to create a new, forwarding-based profile for the server "smtp2.example.com:"

```
mail3.example.com> smtpauthconfig
Choose the operation you want to perform:
    NEW - Create a new SMTP Auth profile
[]> new
Choose the type of profile you wish to create:
    FORWARD - Create an SMTP Auth forwarding server group profile
    OUTGOING - Create an outgoing SMTP Auth profile
[]> forward
Enter a name for this profile:
[]> forwarding-based
Please begin entering forwarding servers for this group profile.
```

```
Enter a hostname or an IP address for the forwarding server:
[]> smtp2.example.com
Enter a port:
[25]>
Choose the interface to use for forwarding requests:
1. Auto
2. Data 1 (192.168.1.1/24: mail3.example.com)
3. Data 2 (192.168.2.1/24: mail3.example.com)
4. Management (192.168.42.42/24: mail3.example.com)
[1]>
Require TLS? (issue STARTTLS) [Y]> y
Enter the maximum number of simultaneous connections allowed:
[10]>
Use SASL PLAIN mechanism when contacting forwarding server? [Y] >
Use SASL LOGIN mechanism when contacting forwarding server? [Y]>
Would you like to enter another forwarding server to this group? [N]>
Choose the operation you want to perform:
- NEW - Create a new SMTP Auth profile
- EDIT - Edit an existing SMTP Auth profile
- PRINT - List all profiles
- DELETE - Delete a profile
- CLEAR - Delete all profiles
[]>
mail3.example.com> commit
Please enter some comments describing your changes:
[]> created SMTP auth profile
Do you want to save the current configuration for rollback? [Y] > n
Changes committed: Fri May 23 11:42:12 2014 GMT
```

Note

An authenticated user is granted a RELAY HAT policy.

You may specify more than one forwarding server in a profile. SASL mechanisms CRAM-MD5 and DIGEST-MD5 are not supported between the Email Security appliance and a forwarding server.

# **System Setup**

# systemsetup

## **Description**

First time system setup as well as re-installation of the system.

## **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

## Example

```
mail3.example.com> systemsetup
```

```
WARNING: The system setup wizard will completely delete any existing
'listeners' and all associated settings including the 'Host Access Table' -
mail operations may be interrupted.
Are you sure you wish to continue? [Y]> y
Before you begin, please reset the administrator passphrase to a new value.
Old passphrase:
New passphrase:
Retype new passphrase:
You will now configure the network settings for the IronPort C100.
Please create a fully qualified hostname for the IronPort C100 appliance
(Ex: "ironport-C100.example.com"):
[] > ironport-C100.example.com
You will now assign an IP address for the "Data 1" interface.
Please create a nickname for the "Data 1" interface (Ex: "Data 1"):
[] > Data 1
Enter the static IP address for "Data 1" on the "Data 1" interface? (Ex:
"192.168.1.1"):
[]> 192.168.1.1
What is the netmask for this IP address? (Ex: "255.255.255.0" or "0xffffff00"):
[255.255.255.0]>
You have successfully configured IP Interface "Data 1".
Would you like to assign a second IP address for the "Data 1" interface? [Y]> {\bf n}
What is the IP address of the default router (gateway) on your network?:
[192.168.1.1] > 192.168.2.1
Do you want to enable the web interface on the Data 1 interface? [Y]> {f y}
Do you want to use secure HTTPS? [Y]> y
Note: The system will use a demo certificate for HTTPS.
Use the "certconfig" command to upload your own certificate.
Do you want the IronPort C100 to use the Internet's root DNS servers or would
you like it to use your own DNS servers?
1. Use Internet root DNS servers
2. Use my own DNS servers
[1]> 2
Please enter the IP address of your DNS server.
[]> 192.168.0.3
Do you want to enter another DNS server? [N] >
You have successfully configured the DNS settings.
You are now going to configure how the IronPort C100 accepts mail by creating a
"Listener".
Please create a name for this listener (Ex: "MailInterface"):
[]> InboundMail
Please choose an IP interface for this Listener.
1. Data 1 (192.168.1.1/24: ironport-C100.example.com)
[1]> 1
Enter the domain names or specific email addresses you want to accept mail for.
Hostnames such as "example.com" are allowed.
Partial hostnames such as ".example.com" are allowed.
Usernames such as "postmaster@" are allowed.
Full email addresses such as "joe@example.com" or "joe@[1.2.3.4]" are allowed.
Separate multiple addresses with commas.
[]> example.com, .example.com
Would you like to configure SMTP routes for example.com, .example.com? [Y] > n
Please specify the systems allowed to relay email through the IronPort C100.
Hostnames such as "example.com" are allowed.
Partial hostnames such as ".example.com" are allowed.
IP addresses, IP address ranges, and partial IP addresses are allowed.
Separate multiple entries with commas.
[]> example.com, .example.com
```

```
Do you want to enable filtering based on SenderBase Reputation Service (SBRS)
Scores for this listener? (Your selection will be used to filter all incoming
mail based on its SBRS Score.) [Y]> y
Do you want to enable rate limiting for this listener? (Rate limiting defines
the maximum number of recipients per hour you are willing to receive from a
remote domain.) [Y]> v
Enter the maximum number of recipients per hour to accept from a remote domain.
[]> 1000
Default Policy Parameters
______
Maximum Message Size: 10M
Maximum Number Of Concurrent Connections From A Single IP: 10
Maximum Number Of Messages Per Connection: 10
Maximum Number Of Recipients Per Message: 50
Directory Harvest Attack Prevention: Enabled
Maximum Number Of Invalid Recipients Per Hour: 25
Maximum Number Of Recipients Per Hour: 1,000
Maximum Recipients Per Hour SMTP Response:
   452 Too many recipients received this hour
Use SenderBase for Flow Control: Yes
Spam Detection Enabled: Yes
Virus Detection Enabled: Yes
Allow TLS Connections: No
Allow SMTP Authentication: No
Require TLS To Offer SMTP authentication: No
DKIM/DomainKeys Signing Enabled: No
DKIM Verification Enabled: No
SPF/SIDF Verification Enabled: No
DMARC Verification Enabled: No
Envelope Sender DNS Verification Enabled: No
Domain Exception Table Enabled: No
Accept untagged bounces: No
Would you like to change the default host access policy? [N]> n
Listener InboundMail created.
Defaults have been set for a Public listener.
Use the listenerconfig->EDIT command to customize the listener.
Do you want to use Anti-Spam scanning in the default Incoming Mail policy? [Y]> {f y}
Would you like to enable IronPort Spam Quarantine? [Y]> y
IronPort Anti-Spam configured globally for the IronPort C100 appliance. Use the
policyconfig command (CLI) or Mail Policies (GUI) to customize the IronPort
settings for each listener.
IronPort selected for DEFAULT policy
Do you want to use Anti-Virus scanning in the default Incoming and Outgoing
Mail policies? [Y]> y
1. McAfee Anti-Virus
2. Sophos Anti-Virus
Enter the number of the Anti-Virus engine you would like to use on the default
Incoming and Outgoing Mail policies.
[]> 2
Sophos selected for DEFAULT policy
Do you want to enable Outbreak Filters? [Y]> {\bf y}
Outbreak Filters enabled.
Outbreak Filter alerts are sent when outbreak rules cross the threshold (go above or back
down below),
meaning that new messages of certain types could be quarantined or will no longer be
quarantined, respectively.
Allow the sharing of limited data with SenderBase? [Y]> y
You have successfully configured Outbreak Filters and SenderBase.
You will now configure system alerts.
Please enter the email address(es) to send alerts.
```

```
(Ex: "administrator@example.com")
Separate multiple addresses with commas.
[]> administrator@example.com
Would you like to enable IronPort AutoSupport, which automatically emails
system alerts and weekly status reports directly to IronPort Customer Support?
You will receive a complete copy of each message sent to IronPort.
(Recommended) [Y]> y
You will now configure scheduled reporting.
Please enter the email address(es) to deliver scheduled reports to.
(Leave blank to only archive reports on-box.)
Separate multiple addresses with commas.
[] > administrator@example.com
You will now configure system time settings.
Please choose your continent:
1. Africa
2. America
11. GMT Offset
[11]> 2
Please choose your country:
1. Anguilla
47. United States
48. Uruquay
49. Venezuela
50. Virgin Islands (British)
51. Virgin Islands (U.S.)
[]> 47
Please choose your timezone:
1. Alaska Time (Anchorage)
26. Pacific Time (Los_Angeles)
[]> 26
Do you wish to use NTP to set system time? [Y] > y
Please enter the fully qualified hostname or IP address of your NTP server, or
press Enter to use time.ironport.com:
[time.ironport.com]>
Would you like to commit these changes at this time? [Y] > y
Congratulations! System setup is complete.
For advanced configuration, please refer to the User Guide.
```

# **URL Filtering**

This section contains the following CLI commands:

# aggregatorconfig

## **Description**

Configure address for Cisco Aggregator Server on the Email Security appliance. This server provides details of the end users who clicked on rewritten URLs and the action (allowed, blocked or unknown) associated with each user click.

#### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

#### **Example**

```
mail.example.com> aggregatorconfig
Choose the operation you want to perform:
- EDIT - Edit aggregator configuration
[]> edit
Edit aggregator address:
[aggregator.organization.com]> org-aggregator.com
Successfully changed aggregator address to : org-aggregator.com
```

# urllistconfig

#### **Description**

Configure or import whitelists of URLs that will not be evaluated by URL filtering features. These lists are not used by the Outbreak Filters feature.

#### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

## **Example**

```
> urllistconfig
No URL lists configured.
Choose the operation you want to perform:
NEW - Create a new URL list-
[]> new
Do you want to import a URL list?
[N]>
Enter a name for the URL list
[]> sample
Enter the URL domains that need to be skipped from scanning for URL Filtering.
Enter one URL domain per line and '.' to finish.
cisco.com
ironport.com/*
*.example.com
10.2.4.5/24
[2001:DB8::1]
URL list sample added.
There are currently 4 URL lists configured.
Choose the operation you want to perform:
- NEW - Create a new URL whitelist.
- EDIT - Modify an existing URL whitelist.
- DELETE - Delete an existing URL whitelist.
```

```
[]>EDIT
Choose the operation to edit the URL whitelist:
- IMPORT - Import a file into an existing URL whitelist
- EXPORT - Export an existing URL whitelist into a file
- RENAME - Rename an existing URL whitelist
[]>IMPORT
Assign new name to the imported list? (By default, name stored in the file will be applied to the list)
[N] > Y
Enter name of the list > new_list
Enter filename to import from > URLfile
NOTE: These files will be stored in /pub/configuration
URL list "new list" added.
```

# websecurityadvancedconfig

#### **Description**

Configure the following advanced settings for URL filtering:

- URL Lookup Timeout: The time taken for the URL to request the IP address for a certain domain name.
- Maximum number of URLs to scan in message body: The maximum number of URLs that are scanned in a message body.
- Maximum number of URLs to scan in message attachments: The maximum number of URLs that are scanned in the attachments of a message.
- Rewrite URL text and HREF in the message: You can choose whether you want the full rewritten URL to appear in the message body or the rewritten URL to only appear in the HREF for HTML messages.
- Additional Header: Includes a custom header to a message, if required.

Note

Except to change timeout values for troubleshooting purposes, use this command only under the direction of Cisco support.

The timeout value is the value, in seconds, for communication with the cloud services that provide reputation and category for URLs.

## **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command supports a batch format.

#### **Batch Format**

For the batch format, see the CLI inline help.

#### **Example**

```
mail.example.com> websecurityadvancedconfig
Enter URL lookup timeout in seconds:
[15]>

Enter the maximum number of URLs that can be scanned in a message body:
[100]>

Enter the maximum number of URLs that can be scanned in the attachments in a message:
[25]>

Do you want to rewrite both the URL text and the href in the message? Y indicates that the full rewritten URL will appear in the email body. N indicates that the rewritten URL will only be visible in the href for HTML messages. [N]>
Do you want to include additional headers? [N]>
```

# websecurityconfig

#### **Description**

Configure basic settings for URL filtering (URL reputation and URL category features.)

Normally, certificate management is automatic. Unless directed to do otherwise by Cisco TAC, you should select No at the prompt to set a certificate.

#### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format. See the inline CLI help for more details. Use the help command to access the inline help for this command.

## **Example**

```
mail.example.com> websecurityconfig
Enable URL Filtering? [N]> y
Do you wish to enable Web Interaction Tracking? [N] > y
Web Interaction Tracking is enabled.
Do you want to whitelist URLs using a URL list? [N]> y
1. urllist1
2. urllist2
3. No URL list
Enter the number of URL list
[1]> 1
URL list 'urllist1' added
mail.example.com> websecurityconfig
URL Filtering is enabled.
URL list 'urllist1' used.
System provided certificate used.
Web Interaction Tracking is enabled.
```

# websecuritydiagnostics

#### **Description**

View diagnostic statistics related to URL filtering.

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. Batch Command: This command does not support a batch format.

#### **Example**

```
mail.example.com> websecuritydiagnostics
Cache Size: 254
Cache Hits: 551
Response Time
    Minimum: None
    Average: 0.0
    Maximum: None
DNS Lookup Time
    Minimum: 9.4198775
    Average: 10.1786801765
    Maximum: 10.544356
```

# **User Management**

This section contains the following CLI commands:

# userconfig

## **Description**

Manage user accounts and connections to external authentication sources.

## Usage

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to cluster mode.

Batch Command: This command supports a batch format. See the inline CLI help for more details. Use the help command to access the inline help for this command, for example,

```
mail.example.com> userconfig help
```

## **Example - Creating a New User Account**

The following example shows how to create a new user account with a Help Desk User role.

```
mail.example.com> userconfig
1. admin - "Administrator" (admin)
External authentication: Disabled
Choose the operation you want to perform:
- NEW - Create a new account.
- EDIT - Modify an account.
- DELETE - Remove an account.
- POLICY - Change passphrase and account policy settings.
- PASSPHRASE - Change the passphrase for a user.
- ROLE - Create/modify user roles.
- STATUS - Change the account status.
- EXTERNAL - Configure external authentication.
- DLPTRACKING - Configure DLP tracking privileges.
- URLTRACKING - Configure URL tracking privileges.
[] > new
Enter your Passphrase to make changes:
Enter the new username.
[]> helpdesk
Enter the full name for helpdesk.
[]> HELP DESK
Assign a role to "helpdesk":
1. Administrators - Administrators have full access to all settings of the system.
2. Operators - Operators are restricted from creating new user accounts.
3. Read-Only Operators - Read-Only operators may only view settings and status information.
4. Guests - Guest users may only view status information.
5. Technicians - Technician can only manage upgrades and feature keys.
6. Help Desk Users - Help Desk users have access only to ISQ and Message Tracking.
[1]> 6
Would you like to get a system generated passphrase? [N]>
Enter the passphrase for helpdesk
[]>
Please enter the new passphrase again:
Users:
1. admin - "Administrator" (admin)
2. helpdesk - "HELP DESK" (helpdesk)
External authentication: Disabled
Choose the operation you want to perform:
- NEW - Create a new account.
- EDIT - Modify an account.
- DELETE - Remove an account.
- POLICY - Change passphrase and account policy settings.
- PASSPHRASE - Change the passphrase for a user.
- ROLE - Create/modify user roles.
- STATUS - Change the account status.
- EXTERNAL - Configure external authentication.
- DLPTRACKING - Configure DLP tracking privileges.
- URLTRACKING - Configure URL tracking privileges.
```

## **Example - Setting Up a RADIUS Server for External Authentication**

The following example shows how to set up a RADIUS server for external authentication. To set up a RADIUS server, enter the hostname, port, shared passphrase, and whether to use CHAP or PAP for the authentication protocol.

```
mail.example.com> userconfig
Users:
1. admin - "Administrator" (admin)
2. hdesk_user - "Helpdesk User" (helpdesk)
External authentication: Disabled
```

```
Choose the operation you want to perform:
- NEW - Create a new account.
- EDIT - Modify an account.
- DELETE - Remove an account.
- POLICY - Change passphrase and account policy settings.
 PASSPHRASE - Change the passphrase for a user.
- ROLE - Create/modify user roles.
- STATUS - Change the account status.
- EXTERNAL - Configure external authentication.
- DLPTRACKING - Configure DLP tracking privileges.
- URLTRACKING - Configure URL tracking privileges.
[]> external
Choose the operation you want to perform:
- SETUP - Set up global settings.
[]> setup
Do you want to enable external authentication? [N]> Y
Please enter the timeout in seconds for how long the external authentication credentials
will be cached. (Enter '0' to disable expiration of
authentication credentials altogether when using one time passphrases.)
Choose a mechanism to use:
LDAP is unavailable because no LDAP queries of type EXTERNALAUTH are configured
1. RADIUS
[1]> 1
Configured RADIUS servers:
- No RADIUS servers configured
Choose the operation you want to perform:
- NEW - Add a RADIUS server configuration.
[]> new
Please enter host name or IP address of the RADIUS server:
[] > radius.example.com
Please enter port number of the RADIUS server:
[1812]>
Please enter the shared passphrase:
Please enter the new passphrase again.
Please enter timeout in seconds for receiving a valid reply from the server:
[5]>

# **Example - Enabling Two-Factor Authentication for Specific User Role**

In the following example, the twofactorauth sub command is used to enable two-factor authentication for a specific user role.

```
mail.example.com> userconfig
Users:
```

```
1. admin - "Administrator" (admin)
2. hdesk user - "Helpdesk User" (helpdesk)
External authentication: Disabled
Two-Factor Authentication: Disabled
Choose the operation you want to perform:
- NEW - Create a new account.
- EDIT - Modify an account.
- DELETE - Remove an account.
- POLICY - Change passphrase and account policy settings.
- PASSPHRASE - Change the passphrase for a user.
- ROLE - Create/modify user roles.
- STATUS - Change the account status.
- EXTERNAL - Configure external authentication.
- TWOFACTORAUTH - Configure Two-Factor Authentication.
- DLPTRACKING - Configure DLP tracking privileges.
- URLTRACKING - Configure URL tracking privileges.
[]> twofactorauth
Choose the operation you want to perform:
- SETUP - Set up global settings.
- PRIVILEGES - Configure Two-Factor Authentication based on User Role Privileges.
[]> setup
Do you want to enable external authentication? [N] > y
Choose the operation you want to perform:
- NEW - Add a two-factor authentication server configuration.
- EDIT - Modify two-factor authentication server configuration.
- DELETE - Remove a two-factor authentication server configuration.
- CLEAR - Remove all two-factor authentication server configurations.
[] > new
Please enter host name or IP address of the RADIUS server:

- GROUPS - Configure external group mapping.
[]> groups
There are currently 1 mappings configured.
Choose the operation you want to perform:
- NEW - Create a new mapping.
- EDIT - Edit destination of an existing mapping.
- DELETE - Remove a mapping.
- CLEAR - Clear all mappings.
- PRINT - Display all mappings.
[]>
```

# passphrase or passwd

#### **Description**

Change your passphrase.

#### **Usage**

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to cluster mode.

Note

The passwd command is a special case because it needs to be usable by guest users who can only ever be in machine mode. If a guest user issues the passwd command on a machine in a cluster, it will not print the warning message but will instead just silently operate on the cluster level data without changing the user's mode. All other users will get the above written behavior (consistent with the other restricted configuration commands).

Batch Command: This command does not support a batch format.

#### **Example**

```
mail3.example.com> passphrase
Old passphrase: your_old_passphrase
New passphrase: your_new_passphrase
Retype new passphrase: your_new_passphrase
passphrase changed.
```

#### last

# **Description**

The last command displays who has recently logged into the system. By default, it shows all users who have logged into the system

# **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

# Example

elroy.run	> last			
Username	Remote Host	Login Time	Logout Time	Total Time

shutdown					Thu	Aug	25	22:20	

#### who

#### **Description**

The **who** command lists all users who are logged into the system via the CLI, the time of login, the idle time, and the remote host from which the user is logged in.

#### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

**Batch Command:** This command does not support a batch format.

#### **Example**

```
      mail3.example.com> who

      Username
      Login Time
      Idle Time
      Remote Host
      What

      =======
      ========
      =========

      admin
      03:27PM
      0s
      10.1.3.201
      cli
```

# whoami

# **Description**

The **whoami** command displays the username and full name of the user currently logged in, and which groups the user belongs to.

# Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

# **Example**

```
mail3.example.com> whoami
Username: admin
Full Name: Administrator
Groups: admin, operators, config, log, guest
```

# **Virtual Appliance Management**

#### **loadlicense**

#### **Description**

Loads an XML license for a virtual appliance. You can load from a file or copy and paste. For complete information, see the *Cisco Content Security Virtual Appliance Installation Guide* available from <a href="http://www.cisco.com/c/en/us/support/security/email-security-appliance/products-installation-guides-list.html">http://www.cisco.com/c/en/us/support/security/email-security-appliance/products-installation-guides-list.html</a>.

This command is available to users with Admin or Operator privileges.

#### **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto).

Batch Command: This command does not support a batch format.

#### **Example**

```
mail.example.com> loadlicense
1 Paste via CLI
2 Load from file
How would you like to load a license file?
[1]> 2
Enter the name of the file in /configurations to import:
[]> <filename>
TERMS AND CONDITIONS OF USE
<Terms and conditions>
Do you accept the above license agreement?
[]> y
The license agreement was accepted.
The following feature key have been added:
<feature keys>
```

Errors and hardware misconfigurations may also be shown.

# showlicense

# Description

Displays information about the current virtual appliance license. Additional details are available using the featurekey command.

This command is available to users with Admin or Operator privileges.

# **Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto).

Batch Command: This command supports a batch format.

#### **Batch Format**

The syntax of this command is: showlicense

#### **Example**

```
mail.example.com> showlicense company: Example Inc. org: Widget Division unit: Portland Data Center seats: 1000 city: Portland state: Oregon country: US email: mailadmin@example.com begin_date: Tue Dec 6 17:45:19 2011 end_date: Mon Sep 1 17:45:19 2014 vln: ABC-123423123 serial: 1003385
```

# Geolocation

This section contains the following CLI commands:

# geolocationupdate

# **Description**

Manually update the geolocation list.

# Usage

Commit: This command does not require a 'commit'.

**Cluster Management**: This command is restricted to machine mode.

**Batch Command**: This command supports a batch format. For details, see the inline help by typing the command: help geolocationupdate.

# **Example**

```
mail3.example.com> geolocationupdate
Requesting update of Geo Countries List.
```

# geolocationstatus

#### **Description**

Displays the current version of the geolocation list.

#### **Usage**

**Commit**: This command does not require a 'commit'.

**Cluster Management**: This command is restricted to machine mode. **Batch Command**: This command does not support a batch format.

#### **Example**

# Integrating the Appliance with Cisco Threat Response

This section contains the following CLI commands:

- cloudserviceconfig, on page 298

# threatresponseconfig

- Description, on page 297
- Usage, on page 297
- Example Enabling Cisco Threat Response on Appliance, on page 298
- Example Disabling Cisco Threat Response from Appliance, on page 298

# Description

The threatresponseconfig command is used to:

- Enable Cisco Threat Response on your appliance.
- Disable Cisco Threat Response from your appliance.

# Usage

**Commit**: This command requires a 'commit.'

**Cluster Management**: This command is restricted to the machine mode.

**Batch Command**: This command supports a batch format.

#### **Example - Enabling Cisco Threat Response on Appliance**

In the following example, you can use the threatresponseconfig command to enable Cisco Threat Response on your appliance.

```
maill.example.com> threatresponseconfig

Choose the operation you want to perform:
- ENABLE - To enable the Cisco Threat Response feature on your appliance.
[]> enable

The Cisco Threat Response feature is currently enabled on your appliance.
Use the cloudserviceconfig command to register your appliance with the Cisco Threat Response portal.

maill.example.com> commit
Please enter some comments describing your changes: []>
Changes committed: Mon Nov 19 10:04:35 2018 GMT
```

#### **Example - Disabling Cisco Threat Response from Appliance**

In the following example, you can use the threatresponseconfig command to disable Cisco Threat Response from your appliance.

```
maill.example.com> threatresponseconfig

Choose the operation you want to perform:
-DISABLE - To disable the Cisco Threat Response feature on your appliance.
[]> disable

The Cisco Threat Response feature is currently disabled on your appliance.
maill.example.com> commit
Please enter some comments describing your changes: []>
Changes committed: Mon Nov 19 10:04:35 2018 GMT
```

# cloudserviceconfig

- Description, on page 298
- Usage, on page 299
- Example Registering Appliance with Cisco Threat Response, on page 299
- Example: Choosing Cisco Threat Response Server to Connect Appliance to Cisco Threat Response, on page 299
- Example Deregistering Appliance from Cisco Threat Response, on page 300

# Description

The cloudserviceconfig command is used to:

• Register your appliance with Cisco Threat Response.

- Deregister your appliance from Cisco Threat Response.
- Choose the Cisco Threat Response server to connect your appliance to Cisco Threat Response.

#### **Usage**

Commit: This command does not require a 'commit.'

**Cluster Management**: This command is restricted to the machine mode.

Batch Command: This command supports a batch format.

#### **Example - Registering Appliance with Cisco Threat Response**

In the following example, you can use the cloudserviceconfig command to register your appliance with Cisco Threat Response.

```
mail1.example.com> cloudserviceconfig

Choose the operation you want to perform:

-REGISTER - To register the appliance with the Cisco Threat Response portal.

Enter a registration token key to register your appliance with the Cisco Threat Response portal.

[]> de7c55f3ff0absdfsf4a25aae94dfb064642

The appliance registration is in progress.
```

# Example: Choosing Cisco Threat Response Server to Connect Appliance to Cisco Threat Response

In the following example, you can use the cloudserviceconfig command to choose the required Cisco Threat Response server to connect your appliance to Cisco Threat Response.

```
mail1.example.com> cloudserviceconfig

Choose the operation you want to perform:
    -SETTRS - Set the Threat Response Server to connect to the Cisco Threat Response portal.
[]> settrs

Available list of Threat Response Servers:
1. AMERICAS (api-sse.cisco.com)
2. EUROPE (api.eu.sse.itd.cisco.com)

Enter threat response server to connect to the Cisco Threat Response portal.:
[]> 2

Selected threat response server is api.eu.sse.itd.cisco.com.

Make sure you run "commit" to make these changes active.

mail1.example.com> commit

Please enter some comments describing your changes:
[]>
Changes committed: Mon Jum 19 10:04:35 2019 GMT
```

#### **Example - Deregistering Appliance from Cisco Threat Response**

In the following example, you can use the cloudserviceconfig command to deregister your appliance from Cisco Threat Response.

```
maill.example.com> cloudserviceconfig

The appliance is successfully registered with the Cisco Threat Response portal.
Choose the operation you want to perform:
-DEREGISTER - To deregister the appliance from the Cisco Threat Response portal.

Do you want to deregister your appliance from the Cisco Threat Response portal?

If you deregister, you will not be able to access the Cloud Service features. [N]> yes
The appliance deregistration is in progress.
```

# **Configuring Safe Print Settings on Email Gateway**

Use the scanconfig > safeprint sub command to configure safe print settings on your email gateway.

# safeprint

- Description, on page 300
- Usage, on page 300
- Example, on page 300

# **Description**

The safeprint sub command is used to configure safe print settings on the email gateway.

# **Usage**

**Commit**: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command**: This command supports a batch format. For more details, see the inline help by typing the command: scanconfig safeprint.

# Example

In the following example, you can use the safeprint sub command to configure safe print settings on your email gateway.

```
mail.example.com> scanconfig

Choose the operation you want to perform:

- NEW - Add a new entry.
- DELETE - Remove an entry.
- SETUP - Configure scanning behavior.
- IMPORT - Load mappings from a file.
- EXPORT - Save mappings to a file.
- PRINT - Display the list.
```

```
- CLEAR - Remove all entries.
- SMIME - Configure S/MIME unpacking.
- SAFEPRINT - Configure safeprint settings.
[]> safeprint
Enter the maximum attachment size that can safe-print.
[52428801> 2
Enter the maximum number of pages that you can safe print in an attachment.
Do you want to use the recommended image quality value to safe print an attachment? [Y]>
ves
Do you want to modify the file types selected to safe print an attachment?
[N]> no
Choose the operation you want to perform:
- NEW - Add a new entry.
 DELETE - Remove an entry.
- SETUP - Configure scanning behavior.
- IMPORT - Load mappings from a file.
- EXPORT - Save mappings to a file.
- PRINT - Display the list.
- CLEAR - Remove all entries.
- SMIME - Configure S/MIME unpacking.
- SAFEPRINT - Configure safeprint settings.
Mail.examle.com> commit
Please enter some comments describing your changes:
Do you want to save the current configuration for rollback?

- eaasupdate, on page 303
- eaasstatus, on page 304

# eaasconfig

- Description, on page 303
- Usage, on page 303
- Example Registering the Email Security Gateway, on page 303

#### **Description**

Register the Cisco Email Security Gateway with the Cisco Advanced Phishing Protection cloud service.

#### **Usage**

Commit: This command require a 'commit'.

**Cluster Management**: This command can be used in all three machine modes (cluster, group, machine).

**Batch Command**: This command does not support a batch format.

#### **Example - Registering the Email Security Gateway**

The following example shows a sample configuration to register your email security gateway to the Cisco Advanced Phishing Protection cloud service.

```
mail.example.com> eaasconfig

Choose the operation you want to perform:

- REGISTER - To Register the appliance with APP portal

[]> register

Available list of APP region(s) for the registration

1. AMERICA

Select the EAAS region to connect

[]> 1

Enter passphrase obtained from APP portal:

Registration is in progress. Please wait.

Successfully registered the device with APP portal.

Would you like enable APP [Y]> y
```

# eaasupdate

- Description, on page 303
- Usage, on page 304
- Example, on page 304

# **Description**

Manually request update of the Cisco Advanced Phishing Protection engine.

#### Usage

**Commit**: This command does not require a 'commit'.

**Cluster Management**: This command is restricted to machine mode.

**Batch Command**: This command supports a batch format. For more details, see the inline help by typing the command: eaasupdate force.

#### **Example**

```
mail.example.com > eaasupdate
```

Requesting check for new Eaas updates

#### eaasstatus

- Description, on page 304
- Usage, on page 304
- Example, on page 304

#### **Description**

Manually request update of the Cisco Advanced Phishing Protection engine.

#### Usage

**Commit**: This command does not require a 'commit'.

**Cluster Management**: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

# **Example**

mail.example.com > eaasstatus

Component		Version	Last Updated
Advanced Phish	ing Protection Engine	1.0	Never updated
Advanced Phish:	ing Protection Config	1.0	Never updated
