

## Accessing the Email Gateway

---

This chapter contains the following sections:

- [Web-based Graphical User Interface \(GUI\)](#) , on page 1
- [Changing Configuration Settings](#), on page 4
- [Command Line Interface \(CLI\)](#), on page 4

## Web-based Graphical User Interface (GUI)

You can administer the email gateway using both the web-based Graphical User Interface (GUI) and Command Line Interface (CLI). The GUI contains most of the functionality you need to configure and monitor the system. However, not all CLI commands are available in the GUI; some features are *only* available through the CLI.

- [Browser Requirements](#), on page 1
- [Accessing the GUI](#), on page 2

## Browser Requirements

To access the web-based UI, your browser must support and be enabled to accept JavaScript and cookies, and it must be able to render HTML pages containing Cascading Style Sheets (CSS).

Browser	Operating System
Internet Explorer 11.0	Microsoft Windows 7 and 10
Safari 7.0 and later	Mac OS X
Firefox 39.0 and later	Microsoft Windows 7 and 10, Mac OS X
Chrome 44.0 and later	Microsoft Windows 7 and 10, Mac OS X

Do not use multiple browser windows or tabs simultaneously to make changes to the email gateway. Do not use concurrent GUI and CLI sessions. Doing so will cause unexpected behavior and is not supported.

You may need to configure your browser's pop-up blocking settings in order to use the web interface because some buttons or links in the interface will cause additional windows to open.

## Accessing the GUI

To access the GUI on a brand new system, access the following URL:

<http://192.168.42.42/>

When the login page is displayed, log in to the system using the default username and passphrase.

### Related Topics

- [Factory Default Username and Passphrase, on page 2](#)
- [Centralized Management, on page 2](#)

## Factory Default Username and Passphrase

- Username: `admin`
- Passphrase: `ironport`

On brand new (not upgraded from previous releases of AsyncOS) systems, you will automatically be redirected to the System Setup Wizard.

During the initial system setup, you choose IP addresses for interfaces and whether to run HTTP and/or HTTPS services for those interfaces. When HTTP and/or HTTPS services have been enabled for an interface, you can use any supporting browser to view the GUI by entering the IP address or hostname of the IP interface as a URL in the location field (“address bar”) of the browser.

For example:

`http://192.168.1.1` or

`https://192.168.1.1` or

`http://mail3.example.com` or

`https://mail3.example.com`

---

**Note** If HTTPS has been enabled for an interface (and HTTP requests are *not* being redirected to the secure service), remember to access the GUI using the “`https://`” prefix.

---

### Related Topics

- [Adding Users](#)

## Centralized Management

If you have created a cluster, you can browse machines in the cluster, create, delete, copy, and move settings among clusters, groups, and machines (that is, perform the equivalent of the `clustermode` and `clusterset` commands) from within the GUI.

For more information, see [Administering a Cluster from the GUI](#).

## Enhanced User Experience using How-Tos Widget

The How-Tos is a contextual widget that provides in-app assistance to users in the form of walkthroughs to accomplish complex tasks on your email gateway. To view a list of walkthroughs supported in this release, see [Lis of Walkthroughs](#).

You can access the walkthroughs by clicking the How-Tos widget on the web interface of your email gateway. By default, the How-Tos widget is enabled on your email gateway. The contents of the How-Tos widget are cloud-updateable.

For each walkthrough, there are recommended settings for specific configurable values categorized as follows:

- Conservative Settings - Cautious, configuration of not excessive limits
- Moderate Settings - Average, configuration within reasonable limits
- Aggressive Settings- Forceful, configuration of assertive limits

### Note

- The current set of walkthroughs is limited to the following users: admin, cloud-admin, and operator.
- If you are using Internet Explorer version 11 to access the web interface of your email gateway, you may not be able to view the How-Tos widget. Go to **System Administration > General Settings** page on your web interface and enable the Override IE Compatibility Mode option to view the How-Tos widget.

## Disabling How-Tos Widget on the Email Gateway

Use the `adminaccessconfig > how-tos` sub command in the CLI if you want to disable the How-Tos widget on your email gateway.

### Example: Disabling How-Tos widget on the Email Gateway

```
mail.example.com> adminaccessconfig
```

Choose the operation you want to perform:

- BANNER - Configure login message (banner) for appliance administrator login.
- WELCOME - Configure welcome message (post login message) for appliance administrator login.
- IPACCESS - Configure IP-based access for appliance administrative interface.
- CSRF - Configure web UI Cross-Site Request Forgeries protection.
- XSS - Configure Cross-Site Scripting Attack protection.
- HOSTHEADER - Configure option to use host header in HTTP requests.
- TIMEOUT - Configure GUI and CLI session inactivity timeout.
- MAXHTTPHEADERFIELDSize - Configure maximum HTTP header Field size.
- HOW-TOS - Configure How-Tos feature.

```
[ ]> how-tos
```

How-Tos consists of a list of generic walkthroughs to assist the users in completing a particular task (for example, "enabling and configuring a service engine on the appliance").

```
Would you like to enable How-Tos? [Y]> no
```

# Changing Configuration Settings

- [Configuration Changes](#), on page 4
- [Commit or Abandoning Changes](#), on page 4

## Configuration Changes

You can make configuration changes while email operations proceed normally.

## Commit or Abandoning Changes

You must explicitly save most configuration changes.

When changes are pending a commit, the Commit Changes button turns orange.

To clear or commit these changes, click **Commit Changes**.

## Command Line Interface (CLI)

The Command Line Interface is accessible via SSH on IP interfaces that have been configured with these services enabled, or via terminal emulation software on the serial port. By factory default, SSH is configured on the Management port. Use the `interfaceconfig` command to disable these services.

For more information about CLI commands and conventions, see the CLI Reference Guide for AsyncOS for Cisco Secure Email Gateway.

---

**Note** The factory default username and passphrase for accessing CLI is same as that of the web interface. See [Factory Default Username and Passphrase](#), on page 2.
