## Request Structure

Request Structure:

Requests are sent to the Firepower Management Center as HTTPS requests with the Uniform Resource Identifier (URI) of the form described below:

`https://<management_center_IP_or_name>:<https_port>/<object_URL>/object_UUIDoptions`

Where:

- <management\_center\_IP\_or\_name>

is the IP address or Fully Qualified Domain Name of the Firepower Management Center

- <https\_port>

is the port number used by the Firepower Management Center for HTTPS connections. This port is always 443.

- <object\_URL>

is the specific URL for the desired resource. These URLs are unique for each resource and are given below.

- *options*

are the options given with the request. Options can be used to modify the output and filter results.

- {UUID}

Many URLs contain one or more UUIDs which must be specified. Most URIs include the domain UUID, which can be found in the Authentication Token. When deleting or modifying an object, or requesting information about a specific object, the URI will end with the object UUID.

Available request methods are:

- GET

– Retrieves data from the specified object. GET is a read-only operation.

- PUT

– Adds the supplied information to the specified object; returns a 404 Resource Not Found error if the object does not exist.

**Note**

Currently PUT may be used to create a new object, but this ability may be removed in later releases. Use POST to create new objects and PUT to modify existing objects.

- 
- POST

– Creates the object with the supplied information. POST operations should be followed with a payload consisting of the JSON object to be created, enclosed in braces:

{object}

**Note**

The maximum number of rules you can use depends on memory of the device. There is no set limit, because complex rules use more memory. For rule performance and optimization guidelines, see the Firepower Management Center Configuration Guide.

- 
- DELETE

– Deletes the specified object.

- PATCH

– **Not supported.**

The API supports query parameters for almost all requests. For GET requests, the following query parameters can be used to control the number of returned objects and the pagination:

- `expanded`
  - This is a True/False value which indicates whether you get a full listing of an item in a list or only a reference. Some fields will only show if this flag is set to true.
- `offset`
  - Indicates the position in the list where you want to start.
- `limit`
  - Indicates the number of items you want to retrieve in a page.

The API supports filtering on the basis of query parameters passed with a request. Filtering can be done based on specific attributes in a model. The parameters available for filtering vary by object, and are listed with the request below.

## Bulk Rule Posting

Multiple access control rules can be added with a POST command using the bulk insert feature. This feature allows as many as 1,000 rules to be added at once.

This feature is only available for access rules.

The URL for this feature is:

`https://{finc_IP_or_name}:{https_port}/api/finc_config/v1/domain/{domain_UUID}/policy/accesspolicies/{policy_UUID}/accessrules?bulk=true`

The option:

`?bulk=true`

indicates that multiple rules will be used in the payload of this request.

All objects in the payload of the bulk POST request must be of the same type. You cannot mix different objects in the same bulk request.

Unlike a normal POST operation, the bulk POST requires a list of JSON objects. This list may have as many as 1,000 objects or as few as one. The individual JSON objects must be enclosed in braces. Each object must be separated by commas, and the entire list is enclosed in brackets:

```
[{object}]
[ {object1}, {object2}, {object3}, {object4}, {object5} ...]
```

The following query parameters are supported in bulk POST requests:

- `bulk=true`

This parameter specifies that the bulk POST feature is being used in the query. This parameter is **required** for bulk rule posting.

- `section=mandatory/default`

This parameter specifies the section into which the rules will be added. If this parameter is not used the section will be the default section. Only `mandatory` and `default` are allowed values. If a section is specified it must exist or the request will fail. If a section is specified, a category cannot be specified.

- `category=<Name of the category>`

This parameter specifies the category into which the rules will be added. If a category is specified it must exist or the request will fail. If a category is specified, a section cannot be specified.

**Response Structure**

- `insertAfter=<Index of rule>`

This parameter specifies that the rules will be inserted after the specified rule index. If no section or category is specified, the rules will be added to the section or category after the insertion point.

- `insertBefore=<Index of rule>`

This parameter specifies that the rules will be inserted before the specified rule index. If no section or category is specified, the rules will be added to the section or category before the insertion point.

`insertBefore` takes precedence over `insertAfter` - if both are specified, the `insertBefore` parameter will apply.

When a rule or group of rules are inserted at an index which is part of either a section or a category, the category or section parameter can be used along with index to specify the insertion location of the rule(s). If an index is given along with a section or category, but the index is not in that section or category, you will receive an error.

If no index is specified, rules will be inserted after the end of the access policy. If a category or section is specified but no index is specified, rules will be inserted at the end of the category or section.

In any given POST all of the rules will be inserted at a single point. You cannot specify multiple insertion locations in a POST request.

**Note**

Rule order affects how orders are parsed by the Firepower Management Center.

## Response Structure

**Note**

The REST API will serve only 25 results per page. This can be increased up to 1000 using the limit query parameter.

The response structure can be:

- LOCATION – Newly created resource ID; for POST only—holds the new resource ID (as a URI representation).
- CONTENT-TYPE – Media type describing the response message body; describes the representation and syntax of the response message body.
- Each response includes an HTTP status or error code. Available codes fall into these categories:
  - 20x - A two-hundred series code indicates successful operation, including:
    - 200 200
      - "OK". Standard response for successful requests.
    - 201 201
      - "Created". Request completed; new resource created.
    - 202 202

- "Accepted". Request accepted, but processing not complete.
- 204 204
  - "No Content". Server successfully processed request; no content is being returned.
- 4xx - A four-hundred series code indicates a client-side error, including:
  - 400 400
    - "Bad Request". Invalid query parameters, including unrecognized parameters, missing parameters, or invalid values.
  - This can indicate that the object was edited or deleted via REST API such that the corresponding policy is invalidated.
  - 404 404
    - "Not Found". The provided URL does not match an existing resource. For example, an HTTP DELETE may fail because the resource is unavailable.
  - 405 405
    - "Method Not Allowed". An HTTP request was presented that is not allowed on the resource; for example, a POST on a read-only resource.
  - 422 422
    - "Unprocessable Entity". The payload is too large. This will occur when you send a payload greater than 2048000 bytes.
    - The payload contains an unprocessable or unreadable entity such as a invalid attribut name or incorrect JSON syntax.
  - 429 429
    - "Too Many Requests". Too many requests were sent to the API. This error will occur if you send more than 120 requests per minute.
    - Too many concurrent requests. The system cannot accept more than 10 parallel requests from all clients.
    - Too many write operations per server. The API will only allow one PUT, POST, or DELETE request per user on a server at a time.
  - 5xx - A five-hundred series code indicates a server-side error.

In the case of an error, in addition to the error code, the return response may include an error object containing more details about the error. The JSON error/warning response schema is as follows:

```
{
  "error": {
    "category": "FRAMEWORK",
    "messages": [
      {
        "description": "Action is mandatory to be specified."
      }
    ],
    "severity": "ERROR"
  }
}
```

```

}
}

```

where the object properties are:

**Table 1: Object Properties**

Property	Type	Description
messages	List of Dictionaries	List of error or warning messages
code	String	Error/Warning/Info code
details	String	Detailed message corresponding to Error/Warning/Info

## Rate Limiting

The Firepower Management Center REST API implements rate limiting to reduce network load.

The API will accept no more than 120 messages per minute from an individual IP address. It will only allow 10 simultaneous connections per IP address. These are not configurable parameters.

If a client exceeds these limits, the API will give an HTTP 429 error.

## Payload Limiting

The API cannot accept a message with a payload greater than 2048000 bytes. This applies to both the REST API and to API Explorer. This is not a configurable parameter.

If a message exceeds this limit, the API will give an HTTP 422 error.

## Object Overrides

An override defines an alternate value for an object, which the system uses for the device or domain specified. In a single request user can create multiple overrides for multiple objects using bulk operation.

When an object is overriden, the alternate values will be provided for that object when it is requested. This does not overwrite the original values, which will return if the override is removed. The override gives alternate values for all fields in the object except for the `Name` and `Description` fields.

The URL for this feature is:

```
https://:{fmc_ip_or_name}:{https_port}/api/fmc_config/v1/domain/{Domain_uuid} /object/hosts
```

Request payload to create an override for object “testhost” on domain “Global \\ RETAIL” with the override value being “1.2.3.5”:

```
{
  "type": "Host",
  "value": "1.2.3.5",
  "overrides": {
    "parent": {

```

```

        "id": <Parent UUID>
        "type": "Host"
    },
    "target": {
        "name": "Global \\ RETAIL",
        "id": <target domain UUID>,
        "type": "Domain"
    }
},
"overridable": true,
"description": " ",
"name": "testhost",
}

```

Optional:

?bulk=true

indicates the override creation for more than one object.

GET:

URL to list all overrides on a particular object:

`/api/fmc_config/v1/domain/{domain_UUID}/object/hosts/{host_UUID}/overrides`

URL for override for an object on a particular domain or device:

`/api/fmc_config/v1/domain/{domain_UUID}/object/hosts/{host_UUID}?overrideTargetId={target_UUID}`

URL for all the overrides on a particular domain or device:

`/api/fmc_config/v1/domain/{domain_UUID}/object/hosts?overrideTargetId={target_UUID}`

**Note**

When overridden, the parent object value will never change.

## Audit Services

### GET auditrecords

Request Type: **GET**

Description: Retrieves audit records.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/audit/auditrecords`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/audit/auditrecords/{objectID}`

Permissions: System > Monitoring > Audit

Parameters available for filtering: username, subsystem, source, starttime, endtime

# Deployment Services

## GET deployabledevices

Request Type: **GET**

Description: Retrieves list of all devices with configuration changes, ready to be deployed.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/deployment/deployabledevices

Permissions: Deploy Configuration to Devices

Parameters available for filtering: name

## GET pendingchanges

Request Type: **POST**

Description: Retrieves all the policy and object changes for the selected device.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/deployment/deployabledevices/{containerUUID}/pendingchanges

Permissions: Deploy Configuration to Devices

## POST deploymentrequests

Request Type: **POST**

Description: Creates a request for deploying configuration changes to the specified device.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/deployment/deploymentrequests/{object\_UUID}

Permissions: Deploy Configuration to Devices

# Device Group Services

## DELETE devicegrouprecords

Request Type: **DELETE**

Description: Deletes a device group with the specified object ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devicegroups/devicegrouprecords/{object\_UUID}

Permissions: Devices > Device Management > Modify Devices

## PUT devicegrouprecords

Request Type: **PUT**

Description: Modifies a device group with the specified object ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devicegroups/devicegrouprecords/{object\_UUID}

Permissions: Devices > Device Management > Modify Devices

## POST devicegrouprecords

Request Type: **POST**

Description: Creates a device group with the specified object ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devicegroups/devicegrouprecords

Permissions: Devices > Device Management > Modify Devices

## GET devicegrouprecords

Request Type: **GET**

Description: Retrieves the device group associated with the specified ID. If no ID is specified, retrieves list of all device groups.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devicegroups/devicegrouprecords

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/devicegroups/devicegrouprecords/{object\_UUID}

Permissions: Devices > Device Management > View Devices

## Device Clusters

### GET ftddevicecluster

Request Type: **GET**

Description: Retrieves or modifies the FTD Cluster record associated with the specified ID. If no ID is specified for a GET, retrieves list of all FTD Clusters.

URL: /api/fmc\_config/v1/domain/{domainUUID}/deviceclusters/ftddevicecluster/

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/deviceclusters/ftddevicecluster/{objectId}

Permissions: Devices > Device Management > View Devices

## Device HA Pair Services

### DELETE ftddevicehapair

Request Type: **DELETE**

**PUT ftdddevicehapair**

Description: Deletes a device high availability pair with the specified object ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devicehapairs/ftdddevicehapairs/{object\_UUID}

Permissions: Devices > Device Management > Modify Devices

**Note** Run the *configure high-availability disable* command to remove the failover configurations from FTD devices.

## PUT ftdddevicehapair

Request Type: **PUT**

Description: Sets any one of the following actions for the Firepower Threat Defense high availability device:

- Sets the failover trigger criteria for the device
- Switches states within the device
- Breaks or force-breaks the device

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devicehapairs/ftdddevicehapairs/{ha\_container\_UUID}

Permissions: Devices > Device Management > Modify Devices

## POST ftdddevicehapairs

Request Type: **POST**

Description: Creates a high availability device pair with the specified primary and secondary object IDs. Do not perform the POST operation for more than one high availability pair at a time. Ensure that the current POST operation is completed successfully before proceeding to the next POST operation.

**Note** Typically, the first POST operation responds within 60 seconds. Cisco recommends that you perform subsequent POST operations at least 120 seconds after the first POST operation was initiated. The response of the POST operation includes a task object, with a task ID and task status. You can monitor the completion of the task by performing a GET operation on the task object with its task ID. For more information, see [GET taskstatuses, on page 86](#).

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devicehapairs/ftdddevicehapairs

Permissions: Devices > Device Management > Modify Devices

## GET ftdddevicehapairs

Request Type: **GET**

Description: Retrieves the details associated with the specified high availability container ID. If no ID is specified, retrieves a list of all high availability container objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devicehapairs/ftddevicehapairs

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/devicehapairs/ftddevicehapairs/{ha\_container\_UUID}

Permissions: Devices > Device Management > Modify Devices

## **DELETE failoverinterfacemacaddressconfigs**

Request Type: **DELETE**

Description: Deletes the Firepower Threat Defense high availability failover policy interface MAC addresses record associated with the specified Firepower Threat Defense high availability pair.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devicehapairs/ftddevicehapairs/{hacontainer\_UUID}/failoverinterfacemacaddressconfigs

Permissions: Devices > Device Management > Modify Devices

## **GET failoverinterfacemacaddressconfigs**

Request Type: **GET**

Description: Retrieves the Firepower Threat Defense high availability failover policy interface MAC addresses record associated with the specified FTD HA pair. If no ID is specified for a GET, it retrieves the list of all Firepower Threat Defense high availability failover policy interface MAC addresses records.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devicehapairs/ftddevicehapairs/{hacontainer\_UUID}/failoverinterfacemacaddressconfigs

URL for GET by ID :

/api/fmc\_config/v1/domain/{domain\_UUID}/devicehapairs/ftddevicehapairs/{hacontainer\_UUID}/failoverinterfacemacaddressconfigs/{object\_UUID}

Permissions: Devices > Device Management

## **POST failoverinterfacemacaddressconfigs**

Request Type: **POST**

Description: Creates the Firepower Threat Defense high availability failover policy interface MAC addresses record associated with the specified Firepower Threat Defense high availability pair.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devicehapairs/ftddevicehapairs/{hacontainer\_UUID}/failoverinterfacemacaddressconfigs

Permissions: Devices > Device Management > Modify Devices

## **PUT failoverinterfacemacaddressconfigs**

Request Type: **PUT**

**GET monitoredinterfaces**

Description: Modifies the Firepower Threat Defense high availability failover policy interface MAC addresses record associated with the specified Firepower Threat Defense high availability pair.

URL:

```
/api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs/
{hacontainer_UUID}/failoverinterfacemacaddressconfigs/{object_UUID}
```

Permissions: Devices > Device Management > Modify Devices

**GET monitoredinterfaces**

Request Type: **GET**

Description: Retrieves the Firepower Threat Defense high availability Monitored interface policy record associated with the specified FTD HA pair. If no ID is specified for a GET, it retrieves the list of all Firepower Threat Defense high availability monitored interface policy records.

URL:

```
/api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs/
{hacontainer_UUID}/monitoredinterfaces
```

URL for GET by ID :

```
/api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs/
{hacontainer_UUID}/monitoredinterfaces/{object_UUID}
```

Permissions: Devices > Device Management

**PUT monitoredinterfaces**

Request Type: **PUT**

Description: Modifies the Firepower Threat Defense high availability Monitored interface policy record associated with the specified Firepower Threat Defense high availability pair.

URL:

```
/api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs/
{hacontainer_UUID}/monitoredinterfaces
```

Permissions: Devices > Device Management > Modify Devices

**Device Services****POST copyconfigrequests**

Request Type: **POST**

Description: Copies device configuration to the specified Firepower Threat Defense device.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devices/copyconfigrequests

Permissions: Devices > Device Management > Modify Devices

## **DELETE devicerecords**

Request Type: **DELETE**

Description: Unregisters the specified device.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{object\_UUID}

Permissions: Devices > Device Management > Modify Devices

## **PUT devicerecords**

Request Type: **PUT**

Description: Modifies the device record associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{object\_UUID}

Permissions: Devices > Device Management > Modify Devices

## **POST devicerecords**

Request Type: **POST**

Description: Registers the specified device to the Firepower Management Center.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords

Permissions: Devices > Device Management > Modify Devices

## **GET devicerecords**

Request Type: **GET**

Description: Retrieves device information. If a device ID is specified, the information for the specified device is retrieved. If no ID is specified, retrieves information for all devices.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{object\_UUID}

Permissions: Devices > Device Management

Parameters available for filtering: hostName

## **PUT fpPhysicalInterfaces**

Request Type: **PUT**

Description: Modifies a physical interface on the specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{containerUUID}/fpPhysicalInterfaces/{object\_UUID}

Permissions: Devices > Device Management > Modify Device

**GET fpphysicalinterfaces**

Request Type: **GET**

Description: Retrieves information on the physical interface associated with the specified NGIPS device ID and interface ID. If no ID is specified, retrieves list of all physical interfaces associated with the specified NGIPS device ID.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/fpphysicalinterfaces`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/fpphysicalinterfaces/{object_UUID}`

Permissions: Devices > Device Management

Parameters available for filtering: name

**DELETE fplogicalinterfaces**

Request Type: **DELETE**

Description: Deletes logical interfaces on the specified device.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{containerUUID}/fplogicalinterfaces/{object_UUID}`

Permissions: Devices > Device Management > Modify Device

**PUT fplogicalinterfaces**

Request Type: **PUT**

Description: Modifies a logical interface on the specified device.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/fplogicalinterfaces/{object_UUID}`

Permissions: Devices > Device Management > Modify Device

**POST fplogicalinterfaces**

Request Type: **POST**

Description: Creates logical interfaces on the specified device.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/fplogicalinterfaces`

Permissions: Devices > Device Management > Modify Device

**GET fplogicalinterfaces**

Request Type: **GET**

Description: Retrieves the logical interface associated with the specified NGIPS device ID and interface ID. If no ID is specified, retrieves list of all logical interfaces associated with the specified NGIPS device ID.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/fplogicalinterfaces`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/fplogicalinterfaces/{object_UUID}`

Permissions: Devices > Device Management

Parameters available for filtering: name

## DELETE inlinesets

Request Type: **DELETE**

Description: Deletes inline sets on the specified device.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{containerUUID}/inlinesets/{object_UUID}`

Permissions: Devices > Device Management > Modify Device

## PUT inlinesets

Request Type: **PUT**

Description: Modifies an inline set on the specified device.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/inlinesets/{object_UUID}`

Permissions: Devices > Device Management > Modify Device

## POST inlinesets

Request Type: **POST**

Description: Creates inline sets on the specified device.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/inlinesets`

Permissions: Devices > Device Management > Modify Device

## GET inlinesets

Request Type: **GET**

Description: Retrieves information on the inline set associated with the specified NGIPS device ID and inline set ID. If no inline set ID is specified, retrieves list of all inline sets associated with the specified NGIPS device ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/inlinesets`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/inlinesets/{object_UUID}`

**GET commands**

Permissions: Devices > Device Management

Parameters available for filtering: name

## GET commands

Request Type: **GET**

Description: Retrieves the list of all command line interface commands available on the device. If a command is specified in the payload, retries the output of that command.

The below table lists the commands which can be used with the `commands` service. Some commands are only allowed with certain parameters, or specific parameters may not be allowed, as specified in the **Blocked** column.

Command	Blocked
show version	
show failover	
show dhcpd	show dhcpd binding, show dhcpd statistics
show ip	
show aaa-server	
show logging	show logging asdm, show logging queue
show snmp-server	
show running-config {any}	show running-config {no parameters}
show ssl	
show firewall	
show logging	
show network	
show ntp	
show banner	

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/operational/commands`

Permissions: Devices > Device Management

## GET staticroutes

Request Type: **GET**

Description: Retrieves the static route associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves list of all static routes associated with the specified NGFW device ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/staticroute`

URL for GET by ID:

```
/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/staticroutes/{objectId}
```

Permissions: Devices > Device Management

## GET virtualrouters

Request Type: **GET**

Description: Retrieves the the virtual router with the specified ID. If no ID is specified, retrieves list of all virtual routers.

URL:

```
/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters
```

URL for GET by ID:

```
/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{objectId}
```

Permissions: Devices > Device Management

## PUT virtual routers

Request Type: **PUT**

Description: Modifies a virtual router on the specified device.

URL:

```
/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{objectId}
```

Permissions: Devices > Device Management > Modify Device

## POST virtual routers

Request Type: **POST**

Description: Creates virtual routers associated with the specified container.

URL:

```
/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters
```

Permissions: Devices > Device Management > Modify Device

## DELETE virtual routers

Request Type: **DELETE**

Description: Deletes the specified virtual router.

URL:

```
/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{objectId}
```

Permissions: Devices > Device Management > Modify Device

**GET virtual BGP**

Request Type: **GET**

Description: Retrieves specified BGP (ipv4 and ipv6) on the specified virtual router. If no ID is specified, retrieves list of all BGP on the virtual router.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv6staticroutes`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv6staticroutes/{objectId}`

Permissions: Devices > Device Management

**GET virtual ipv4staticroutes**

Request Type: **GET**

Description: Retrieves specified IPv4 static route on the specified virtual router. If no ID is specified, retrieves list of all IPv4 static routes on the virtual router.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv4staticroutes`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv4staticroutes/{objectId}`

**Note**

The methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management

**PUT virtual ipv4 static routes**

Request Type: **PUT**

Description: Modifies an IPv4 static route on the specified device.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv4staticroutes/{objectId}`

**Note**

The methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management > Modify Device

## POST virtual ipv4 static routes

Request Type: **POST**

Description: Creates IPv4 static routes associated with the specified virtual router.

URL:

`/api/frc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv4staticroutes`

**Note** For static routes (IPv4), the methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management > Modify Device

## DELETE virtual ipv4 static routes

Request Type: **DELETE**

Description: Deletes the specified IPv4 static route.

URL:

`/api/frc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv4staticroutes/{objectId}`

**Note** The methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management > Modify Device

## GET virtual ipv6staticroutes

Request Type: **GET**

Description: Retrieves specified IPv6 static route on the specified virtual router. If no ID is specified, retrieves list of all IPv6 static routes on the virtual router.

URL:

`/api/frc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv6staticroutes`

URL for GET by ID:

`/api/frc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv6staticroutes/{objectId}`

**Note** The methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management

**PUT virtual ipv6 static routes**

Request Type: **PUT**

Description: Modifies a bridge group interface on the specified device.

URL:

`/api/frc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv6staticroutes/{objectId}`

**Note** The methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management > Modify Device

**POST virtual ipv6 static routes**

Request Type: **POST**

Description: Creates IPv6 static routes associated with the specified virtual router.

URL:

`/api/frc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv6staticroutes`

**Note** The methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management > Modify Device

**DELETE virtual ipv6 static routes**

Request Type: **DELETE**

Description: Deletes the specified IPv6 static route.

URL:

`/api/frc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv6staticroutes/{objectId}`

**Note** The methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management > Modify Device

## GET virtual ospf interface

### GET virtual ospfv2 routes

### GET virtual static routes

Request Type: **DELETE**

Description: Deletes the IPv4 Static Route associated with the specified ID.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv4staticroutes/{object\_UUID}

Permissions: Devices > Devices Management > Modify Devices

### PUT ipv4staticroutes

Request Type: **PUT**

Description: Modifies the IPv4 Static Route associated with the specified ID.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv4staticroutes/{object\_UUID}

Permissions: Devices > Devices Management > Modify Devices

### POST ipv4staticroutes

Request Type: **POST**

Description: Creates an IPv4 Static Route.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv4staticroutes

Permissions: Devices > Device Management > Modify Devices

### GET ipv4staticroutes

Request Type: **GET**

Description: Retrieves the IPv4 Static Route associated with the specified ID. If no ID is specified, retrieves list of all IPv4 Static Routes.

**DELETE ipv6staticroutes**

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv4staticroutes`

URL for GET ID::

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv4staticroutes/{object_UUID}`

Permissions: Devices &gt; Devices Management

**DELETE ipv6staticroutes**Request Type: **DELETE**

Description: Deletes the IPv6 Static Route associated with the specified ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv6staticroutes/{object_UUID}`

Permissions: Devices &gt; Device Management &gt; Modify Devices

**PUT ipv6staticroutes**Request Type: **PUT**

Description: Modifies the IPv6 Static Route associated with the specified ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv6staticroutes/{object_UUID}`

Permissions: Devices &gt; Device Management &gt; Modify Devices

**POST ipv6staticroutes**Request Type: **POST**

Description: Creates an IPv6 Static Route.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv6staticroutes`

Permissions: Devices &gt; Device Management &gt; Modify Devices

**GET ipv6staticroutes**Request Type: **GET**

Description: Retrieves the IPv6 Static Route associated with the specified ID. If no ID is specified, retrieves list of all IPv6 Static Routes.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv6staticroutes`

URL for GET ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv6staticroutes/{object_UUID}`

Permissions: Devices &gt; Device Management

## GET ospf interface

Request Type: **GET**

Description: Retrieves the OSPF interface associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves list of all OSPF interfaces associated with the specified NGFW device ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ospfinterface`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ospfinterface/{objectId}`

Permissions: Devices > Device Management

## GET ospfv2routes

Request Type: **GET**

Description: Retrieves OSPF V2 routes associated with the specified ID. If no ID is specified, retrieves list of all OSPF v2 routes.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ospfv2routes`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ospfv2routes/{objectId}`

Permissions: Devices > Device Management

## GET ospfv3interfaces

Request Type: **GET**

Description: Retrieves OSPF v3 interface associated with the specified ID. If no ID is specified, retrieves a list of all OSPF v3 interfaces.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ospfv3interfaces`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ospfv3interfaces/{objectId}`

Permissions: Devices > Device Management

## GET ospfv3routes

Request Type: **GET**

Description: Retrieves the OSPFv3 process associated with the specified ID. If no ID is specified, retrieves list of all OSPFv3 processes.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ospfv3routes`

**DELETE virtualswitches**

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ospfv3routes/{objectID}

Permissions: Devices > Device Management

## **DELETE virtualswitches**

Request Type: **DELETE**

Description: Deletes a virtual switch on the specified device.

**This method is only available on a Firepower 1010 device.**

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{containerUUID}/virtualswitches/{object\_UUID}

Permissions: Devices > Device Management > Modify Device

## **PUT virtualswitches**

Request Type: **PUT**

Description: Modifies a virtual switch on the specified device.

**This method is only available on a Firepower 1010 device.**

URL:

/api/fmc\_config/v1/domain/{UUID}/devices/devicerecords/{containerUUID}/virtualswitches/{object\_UUID}

Permissions: Devices > Device Management > Modify Device

## **POST virtualswitches**

Request Type: **POST**

Description: Creates a virtual switch on the specified device.

**This method is only available on a Firepower 1010 device.**

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/virtualswitches

Permissions: Devices > Device Management > Modify Device

## **GET virtualswitches**

Request Type: **GET**

Description: Retrieves virtual switch associated with the specified NGIPS device ID and virtual switch ID. If no virtual switch ID is specified, retrieves list of all virtual switches associated with the specified NGIPS device ID.

**This method is only available on a Firepower 1010 device.**

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{containerUUID}/virtualswitches

URL for GET by ID:

```
/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{containerUUID}/virtualswitches/{object_UUID}
```

Permissions: Devices > Device Management

Parameters available for filtering: name

## DELETE vlaninterfaces

Request Type: **DELETE**

Description: Deletes the vlan interface associated with the specified NGFW device ID and interface ID.

**This method is only available on a Firepower 1010 device.**

URL:

```
/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/vlaninterfaces/{object_UUID}
```

Permissions: Devices > VPN > Modify VPN

## PUT vlaninterfaces

Request Type: **PUT**

Description: Modifies the vlan interface associated with the specified NGFW device ID and interface ID.

**This method is only available on a Firepower 1010 device.**

URL:

```
/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/vlaninterfaces/{object_UUID}
```

Permissions: Devices > VPN > Modify VPN

## POST vlaninterfaces

Request Type: **POST**

Description: Creates a vlan interface on the NGFW device.

**This method is only available on a Firepower 1010 device.**

URL:

```
/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/vlaninterfaces
```

Permissions: Devices > VPN > Modify VPN

## GET vlaninterfaces

Request Type: **GET**

Description: Retrieves the vlan interface associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves list of all vlan interfaces associated with the specified NGFW device ID.

**This method is only available on a Firepower 1010 device.**

**PUT fpphysicalinterfaces**

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/vlaninterfaces`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/vlaninterfaces/{object_UUID}`

Permissions: Devices &gt; VPN

Parameters available for filtering: name

**PUT fpphysicalinterfaces**Request Type: **PUT**

Description: Modifies a physical interface on the specified device.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{containerUUID}/fpphysicalinterfaces/{object_UUID}`

Permissions: Devices &gt; Device Management &gt; Modify Device

**GET fpphysicalinterfaces**Request Type: **GET**

Description: Retrieves information on the physical interface associated with the specified NGIPS device ID and interface ID. If no ID is specified, retrieves list of all physical interfaces associated with the specified NGIPS device ID.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/fpphysicalinterfaces`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/fpphysicalinterfaces/{object_UUID}`

Permissions: Devices &gt; Device Management

Parameters available for filtering: name

**PUT physicalinterfaces**Request Type: **PUT**

Description: Modifies physical interfaces on a specified device.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/physicalinterfaces`

Permissions: Devices &gt; Device Management &gt; Modify Device

**GET physicalinterfaces**Request Type: **GET**

Description: Retrieves the physical interface associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves list of all physical interfaces associated with the specified NGFW device ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/physicalinterfaces

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/physicalinterfaces/{object\_UUID}

Permissions: Devices > Device Management

## GET bridgegroupinterfaces

Request Type: **GET**

Description: Retrieves the bridge group interface associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves list of all bridge group interfaces associated with the specified NGFW device ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/bridgegroupinterfaces

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/bridgegroupinterfaces/{object\_UUID}

Permissions: Devices > Device Management

## POST bridgegroupinterfaces

Request Type: **POST**

Description: Creates bridge group interfaces associated with the specified NGFW device ID and interface ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/bridgegroupinterfaces

Permissions: Devices > Device Management > Modify Device

## PUT bridgegroupinterfaces

Request Type: **PUT**

Description: Modifies a bridge group interface on the specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/bridgegroupinterfaces

Permissions: Devices > Device Management > Modify Device

## DELETE bridgegroupinterfaces

Request Type: **DELETE**

Description: Deletes a bridge group interface associated with the specified NGFW device ID and interface ID.

**GET redundantinterfaces**

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/bridgegroupinterfaces`

Permissions: Devices &gt; Device Management &gt; Modify Device

## **GET redundantinterfaces**

Request Type: **GET**

Description: Retrieves the redundant interface associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves list of all redundant interfaces associated with the specified NGFW device ID.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/redundantinterfaces`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/redundantinterfaces/{object_UUID}`

Permissions: Devices &gt; Device Management

## **POST redundantinterfaces**

Request Type: **POST**

Description: Creates redundant interfaces on a specified device.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/redundantinterfaces`

Permissions: Devices &gt; Device Management

## **PUT redundantinterfaces**

Request Type: **PUT**

Description: Modifies redundant interfaces on a specified device.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/redundantinterfaces`

Permissions: Devices &gt; Device Management &gt; Modify Device

## **DELETE redundantinterfaces**

Request Type: **DELETE**

Description: Removes redundant interfaces on a specified device.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/redundantinterfaces`

Permissions: Devices &gt; Device Management

## GET bgp routing

Request Type: **GET**

Description: Retrieves list of all BGP (ipv4 and ipv6) associated with the specified device for specified vrf. If no device is specified, retrieves list of all BGP.

URL: /api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/bgp

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/bgp/{objectId}

Permissions: Devices > Device Management

## GET bgp general settings

Request Type: **GET**

Description: Retrieves BGP general settings associated with the specified device. If no device is specified, retrieves list of all BGP general settings.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/bgpgeneralsettings

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/bgpgeneralsettings/{objectId}

Permissions: Devices > Device Management

## GET etherchannelinterfaces

Request Type: **GET**

Description: Retrieves the ethernet channel interface associated with the specified NGFW device ID and interface ID. If no ID is specified, retrieves list of all ethernet channel interfaces associated with the specified NGFW device ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/etherchannelinterfaces

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/etherchannelinterfaces/{object\_UUID}

Permissions: Devices > Device Management

Parameters available for filtering:

## POST etherchannelinterfaces

Request Type: **POST**

Description: Creates ethernet channel interfaces on the specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/ethernetchannelinterfaces

Permissions: Devices > Device Management > Modify Device

**PUT etherchannelinterfaces**

Request Type: **PUT**

Description: Modifies an ethernet channel interfaces on the specified device.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{containerUUID}/etherchannelinterfaces/`

Permissions: Devices > Device Management > Modify Device

**DELETE etherchannelinterfaces**

Request Type: **DELETE**

Description: Removes ethernet channel interfaces from a specified device.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{containerUUID}/etherchannelinterfaces/`

Permissions: Devices > Device Management

**GET subinterfaces**

Request Type: **GET**

Description: Retrieves the sub-interface associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves list of all sub-interfaces associated with the specified NGFW device ID.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{containerUUID}/subinterfaces`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{containerUUID}/subinterfaces/{objectUUID}`

Permissions: Devices > Device Management

**POST subinterfaces**

Request Type: **POST**

Description: Creates sub interfaces on a specified device.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{containerUUID}/subinterfaces`

Permissions: Devices > Device Management

**PUT subinterfaces**

Request Type: **PUT**

Description: Modifies a sub interface on the specified device.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{containerUUID}/subinterfaces/`

Permissions: Devices > Device Management > Modify Device

## **DELETE** subinterfaces

Request Type: **DELETE**

Description: Deletes sub interfaces on a specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/subinterfaces

Permissions: Devices > Device Management

## **GET** fpinterfacestatistics

Request Type: **GET**

Description: Retrieves list of statistics for all interfaces associated with the specified NGIPS device ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/fpinterfacestatistics

Permissions: Devices > Device Management

Parameters available for filtering: name

## **POST** interfaceevents

Request Type: **POST**

Description: Creates netmod events on the specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/interfaceevents

Permissions: Devices > Device Management > Modify Device

## **GET** interfaceevents

Request Type: **GET**

Description: Retrieves list of all netmod events on the device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/interfaceevents

Permissions: Devices > Device Management

## **GET** commands

Request Type: **GET**

Description: Retrieves the list of all command line interface commands available on the device. If a command is specified in the payload, retries the output of that command.

The below table lists the commands which can be used with the `commands` service. Some commands are only allowed with certain parameters, or specific parameters may not be allowed, as specified in the **Blocked** column.

Command	Blocked
show version	
show failover	
show dhcpd	show dhcpd binding, show dhcpd statistics
show ip	
show aaa-server	
show logging	show logging asdm, show logging queue
show snmp-server	
show running-config {any}	show running-config {no parameters}
show ssl	
show firewall	
show logging	
show network	
show ntp	
show banner	

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/operational/commands`

Permissions: Devices > Device Management

## Intelligence Services

### POST collections

Request Type: **POST**

Description: Adds a collections from a TAXII source.

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/taxiiconfig/collections`

Permissions: Intelligence

### POST discoveryinfo

Request Type: **POST**

Description: Adds information about TAXII collections available from a source.

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/taxiiconfig/discoveryinfo

Permissions: Intelligence

## GET element

Request Type: **GET**

Description: Retrieves the intelligence-enabled sensor associated with the specified ID. If no ID is specified, retrieves list of all intelligence-enabled sensors.

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/element

URL for GET by ID: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/element/{object\_UUID}

Permissions: Intelligence

## DELETE incident

Request Type: **DELETE**

Description: Deletes an incident.

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/taxiiconfig/incident/{object\_UUID}

Permissions: Intelligence

## PUT incident

Request Type: **PUT**

Description: Modifies an intelligence incident with the specified object ID.

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/incident/{object\_UUID}

Permissions: Intelligence

## GET incident

Request Type: **GET**

Description: Retrieves the intelligence incident associated with the specified ID. If no ID is specified, retrieves list of all intelligence incidents. By default 25 results will be displayed on each page, this can be increased up to 40 using the `limit` parameter.

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/incident

URL for GET by ID: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/incident/{object\_UUID}

Permissions: Intelligence

## PUT indicator

Request Type: **PUT**

Description: Modifies an indicator with the specified object ID.

**GET indicator**

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/indicator/{object\_UUID}

Permissions: Intelligence

## GET indicator

Request Type: **GET**

Description: Retrieves the indicator associated with the specified ID. If no ID is specified, retrieves list of all indicators. By default 25 results will be displayed on each page, this can be increased up to 40 using the `limit` parameter.

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/indicator

URL for GET by ID: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/indicator/{object\_UUID}

Permissions: Intelligence

## PUT observable

Request Type: **PUT**

Description: Modifies an observable with the specified object ID.

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/observable/{object\_UUID}

Permissions: Intelligence

## GET observable

Request Type: **GET**

Description: Retrieves the observable associated with the specified ID. If no ID is specified, retrieves list of all observables. By default 25 results will be displayed on each page, this can be increased up to 40 using the `limit` parameter.

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/observable

URL for GET by ID: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/observable/{object\_UUID}

Permissions: Intelligence

## PUT settings

Request Type: **PUT**

Description: Activates or deactivates an intelligence setting.

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/settings/{value}

Permissions: Intelligence

## GET settings

Request Type: **GET**

Description: Retrieves the on/off settings for the specified value. If no ID is specified, retrieves list of all TID settings.

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/settings

URL for GET by value: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/settings/{value}

Permissions: Intelligence

## DELETE source

Request Type: **DELETE**

Description: Deletes an intelligence source from the device.

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/taxiiconfig/source/{object\_UUID}

Permissions: Intelligence

## PUT source

Request Type: **PUT**

Description: Modifies an intelligence source with the specified object ID.

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/source/{object\_UUID}

Permissions: Intelligence

## POST source

Request Type: **POST**

Description: Adds a source for intelligence information.

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/source

Permissions: Intelligence

## GET source

Request Type: **GET**

Description: Retrieves the intelligence source associated with the specified ID. If no ID is specified, retrieves list of all intelligence sources. By default 25 results will be displayed on each page, this can be increased up to 40 using the `limit` parameter.

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/source

URL for GET by ID: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/source/{object\_UUID}

Permissions: Intelligence

# Integration Services

## PUT cloudeventsconfigs

Request Type: **PUT**

Description: Modifies the cloud event configuration associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/integration/cloudeventsconfigs/{objectId}`

Permissions: Object Manager > Modify Object Manager

## GET cloudeventsconfigs

Request Type: **GET**

Description: Retrieves the cloud event configuration associated with the specified ID. If no ID is specified for a GET, retrieves a list of all cloud event configuration objects.

URL for listing: `/api/fmc_config/v1/domain/{domainUUID}/integration/cloudeventsconfigs`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/integration/cloudeventsconfigs/{objectId}`

Permissions: Object Manager

## PUT cloudregions

Request Type: **PUT**

Description: Modifies the cloud region configuration associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/integration/cloudregions/{object_UUID}`

Permissions: System > Integration > Cloud Services

## GET cloudregions

Request Type: **GET**

Description: Retrieves the cloud region configuration associated with the specified ID. If no ID is specified for a GET, retrieves list of all cloud regions.

URL for listing: `/api/fmc_config/v1/domain/{domain_UUID}/integration/cloudregions/`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/integration/cloudregions/{object_UUID}`

Permissions: System > Integration > Cloud Services

## DELETE externallookups

### DELETE externallookups

Description: Deletes the external lookup objects with the specified UUID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/integration/externallookups/{object\_UUID}

Permissions: Object Manager>Modify Object Manager

## PUT externallookups

Request Type: **PUT**

Description: Modifies externallookups objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/integration/externallookups/{object\_UUID}

Permissions: Object Manager>Modify Object Manager

## POST externallookups

### POST externallookups

Description: Creates externallookups objects with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/integration/externallookups

Permissions: Object Manager>Modify Object Manager

## GET externallookups

### GET externallookups

Retrieves the externallookups object associated with the specified ID. If no ID, retrieves list of all externallookups objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/integration/externallookups

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/integration/externallookups/{object\_UUID}

Permissions: Object Manager>Modify Object Manager

Parameters available for filtering:

## DELETE packetanalyzerdevices

Request Type: **DELETE**

Description: Deletes the packet analyzer object with the specified UUID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/integration/packetanalyzerdevices/{object\_UUID}

Permissions: Object Manager>Modify Object Manager

**PUT packetanalyzerdevices**

Request Type: **PUT**

Description: Modifies the packet analyzer object with the specified UUID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/integration/packetanalyzerdevices/{object\_UUID}

Permissions: Object Manager>Modify Object Manager

**POST packetanalyzerdevices**

Request Type: **POST**

Description: Creates PKI enrollments objects with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/packetanalyzerdevices

Permissions: Object Manager

**GET packetanalyzerdevices**

Request Type: **GET**

Description: Retrieves the packetanalyzerdevices object associated with the specified ID. If no ID, retrieves list of all packetanalyzerdevices objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/integration/packetanalyzerdevices

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/integration/packetanalyzerdevices/{object\_UUID}

Permissions: Object Manager>Modify Object Manager

Parameters available for filtering:

**Object Services****GET anyprotocolportobjects**

Request Type: **GET**

Description: Retrieves the any protocol port object associated with the specified ID. If no ID is specified, retrieves list of all protocol port objects with the protocol set to All.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/anyprotocolportobjects

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/anyprotocolportobjects/{object\_UUID}

Permissions: Object Manager

## GET applicationcategories

Request Type: **GET**

Description: Retrieves the application category object associated with the specified ID. If no ID is specified, retrieves list of all application category objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/applicationcategories

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/applicationcategories/{object\_UUID}

Permissions: Object Manager

## GET applicationfilters

Request Type: **GET**

Description: Retrieves the application filter object associated with the specified ID. If no ID is specified, retrieves list of all application filter objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/applicationfilters

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/applicationfilters/{object\_UUID}

Permissions: Object Manager

## GET applicationproductivities

Request Type: **GET**

Description: Retrieves the application productivity object associated with the specified ID. If no ID is specified, retrieves list of all application productivity objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/applicationproductivities

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/applicationproductivities/{object\_UUID}

Permissions: Object Manager

## GET applicationrisks

Request Type: **GET**

Description: Retrieves the application risk object associated with the specified ID. If no ID is specified, retrieves list of all application risk objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/applicationrisks

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/applicationrisks/{object\_UUID}

Permissions: Object Manager

## GET applications

Request Type: **GET**

Description: Retrieves the application object associated with the specified ID. If no ID is specified, retrieves list of all application objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/applications

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/applications/{object\_UUID}

Permissions: Object Manager

## GET applicationtags

Request Type: **GET**

Description: Retrieves the application tag object associated with the specified ID. If no ID is specified, retrieves list of all application tag objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/applicationtags

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/applicationtags/{object\_UUID}

Permissions: Object Manager

## GET applicationtypes

Request Type: **GET**

Description: Retrieves the application type object associated with the specified ID. If no ID is specified, retrieves list of all application type objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/applicationtypes

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/applicationtypes/{object\_UUID}

Permissions: Object Manager

## GET aspathlists

Request Type: **GET**

Description: Retrieves the autonomous system path list associated with the specified ID. If no ID is specified, retrieves list of all autonomous system paths.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/aspathlists

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/aspathlists/{objectId}

Permissions: Object Manager

## GET certenrollments

Request Type: **GET**

Description: Retrieves the PKI enrollments object associated with the specified ID. If no ID is specified for a GET, retrieves list of all PKI enrollment objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devicegroups/certenrollments

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/devicegroups/certenrollments/{parent\_object\_UUID}

Permissions: Devices > Device Management > View Devices

## GET communitylists

Request Type: **GET**

Description: Retrieves the community list associated with the specified ID. If no ID is specified, retrieves all community lists.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/communitylists

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/communitylists/{objectId}

Permissions: Object Manager

## GET continents

Request Type: **GET**

Description: Retrieves the continent object associated with the specified ID. If no ID is specified, retrieves list of all continent objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/continents

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/continents/{object\_UUID}

Permissions: Object Manager

## GET countries

Request Type: **GET**

Description: Retrieves the country object associated with the specified ID. If no ID is specified, retrieves list of all country objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/countries

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/countries/{object\_UUID}

Permissions: Object Manager

## DELETE dnsservergroups

Request Type: **DELETE**

Description: Deletes a DNS server group with the specified object ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/dnsservergroups/{object\_UUID}

Permissions: Devices > Device Management > Modify Devices

**PUT dnsservergroups**

Request Type: **PUT**

Description: Modifies a DNS server group with the specified object ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/dnsservergroups

Permissions: Devices > Device Management > Modify Devices

**POST dnsservergroups**

Request Type: **POST**

Description: Creates a DNS server group group with the specified object ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/dnsservergroups

Permissions: Devices > Device Management > Modify Devices

**GET dnsservergroups**

Request Type: **GET**

Description: Retrieves the DNS server group associated with the specified ID. If no ID is specified, retrieves list of all dns server groups.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/dnsservergroups

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/dnsservergroups/{object\_UUID}

Permissions: Devices > Device Management > View Devices

**GET endpointdevicetypes**

Request Type: **GET**

Description: Retrieves the endpoint device type object associated with the specified ID. If no ID is specified, retrieves list of all endpoint device type objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/endpointdevicetypes

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/endpointdevicetypes/{object\_UUID}

Permissions: Object Manager

**GET expanded community lists**

Request Type: **GET**

Description: Retrieves the expanded community list associated with the specified ID. If no ID is specified, retrieves all community lists.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/expandedcommunitylists

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/object/expandedcommunitylists/{objectId}

Permissions: Object Manager

## GET extended access lists

Request Type: **GET**

Description: Retrieves extended access list associated with the specified ID. If no ID is specified, retrieves list of all extended access lists.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/extendedaccesslists

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/extendedaccesslists/{object\_UUID}

Permissions: Devices > Device Management > View Devices

## DELETE fqdns

Request Type: **DELETE**

Description: Deletes the FQDN object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/fqdns/{object\_UUID}

URL to DELETE overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/fqdns/{object\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager > Modify Object Manager

## PUT fqdns

Request Type: **PUT**

Description: Modifies the FQDN object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/fqdns/{object\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/fqdns/{parent\_object\_UUID}

Permissions: Object Manager > Modify Object Manager

## POST fqdns

Request Type: **POST**

Description: Creates or overrides the FQDN objects with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/fqdns

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/object/fqdns?bulk=true

Permissions: Object Manager > Modify Object Manager

## GET fqdns

Request Type: **GET**

Description: Retrieves the FQDN object associated with the specified ID. If no ID is specified for a GET, retrieves list of all FQDN objects.

URL for listing: `/api/fmc_config/v1/domain/{domain_UUID}/object/fqdns`

URL for all the overrides on a particular domain or device:

`/api/fmc_config/v1/domain/{domain_UUID}/object/fqdns?overrideTargetId={target_UUID}`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/fqdns/{object_UUID}`

URL to list all overrides on a particular object:

`/api/fmc_config/v1/domain/{domain_UUID}/object/fqdns/{fqdn_UUID}/overrides`

URL for override for an object on a particular domain or device:

`/api/fmc_config/v1/domain/{domain_UUID}/object/fqdns/{object_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager

## GET geolocation

Request Type: **GET**

Description: Retrieves the geolocation object associated with the specified ID. If no ID is specified, retrieves list of all geolocation objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/geolocations`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/geolocations/{object_UUID}`

Permissions: Object Manager

## GET global time zones

Request Type: **GET**

Description: Retrieves the global time zone object associated with the specified ID. If no ID is specified, retrieves list of all global time zone objects.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/globaltimezones`

URL for GET by ID: `/api/fmc_config/v1/domain/{domainUUID}/object/globaltimezones/{objectId}`

Permissions: Object Manager

## DELETE hosts

Request Type: **DELETE**

Description: Deletes the specified host object.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/hosts/{object_UUID}`

URL to DELETE overrides on a particular object:

`/api/fmc_config/v1/domain/{domain_UUID}/object/hosts/{object_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager > Modify Object Manager

## PUT hosts

Request Type: **PUT**

Description: Modifies a host object.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/hosts/{object\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/hosts/{parent\_object\_UUID}

Permissions: Object Manager > Modify Object Manager

## POST hosts

Request Type: **POST**

Description: Creates or overrides the host objects with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/hosts

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/object/hosts?bulk=true

Permissions: Object Manager > Modify Object Manager

## GET hosts

Request Type: **GET**

Description: Retrieves the host object associated with the specified ID. If no ID is specified, retrieves list of all host objects.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/hosts

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/hosts?overrideTargetId={target\_UUID}

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/hosts/{object\_UUID}

URL to list all overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/hosts/{host\_UUID}/overrides

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/hosts/{host\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager

## DELETE icmpv4objects

Request Type: **DELETE**

Description: Deletes the specified ICMPv4 port.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv4objects/{object\_UUID}

**PUT icmpv4objects**

URL to DELETE overrides on a particular object:

`/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv4objects/{object_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager > Modify Object Manager

## PUT icmpv4objects

Request Type: **PUT**

Description: Modifies ICMPv4 port objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv4objects/{object_UUID}`

URL to edit or update an override on a particular object:

`/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv4objects/{parent_object_UUID}`

Permissions: Object Manager > Modify Object Manager

## POST icmpv4objects

Request Type: **POST**

Description: Creates or overrides the ICMPv4 port objects with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv4objects`

URL for Bulk Post : `/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv4objects?bulk=true`

Permissions: Object Manager > Modify Object Manager

## GET icmpv4objects

Request Type: **GET**

Description: Retrieves the ICMPv4 object associated with the specified ID. If no ID, retrieves list of all ICMPv4 objects.

URL for listing: `/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv4objects`

URL for all the overrides on a particular domain or device:

`/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv4objects?overrideTargetId={target_UUID}`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv4objects/{object_UUID}`

URL to list all overrides on a particular object:

`/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv4objects/{icmpv4object_UUID}/overrides`

URL for override for an object on a particular domain or device:

`/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv4objects/{icmp4object_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager

## DELETE icmpv6objects

Request Type: **DELETE**

Description: Deletes the specified ICMPv6 port objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv6objects/{object\_UUID}

URL to DELETE overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv6objects/{object\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager > Modify Object Manager

## PUT icmpv6objects

Request Type: **PUT**

Description: Modifies ICMPv6 port objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv6objects/{object\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv6objects/{parent\_object\_UUID}

Permissions: Object Manager > Modify Object Manager

## POST icmpv6objects

Request Type: **POST**

Description: Creates or overrides the ICMPv6 port objects with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv6objects

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv6objects?bulk=true

Permissions: Object Manager > Modify Object Manager

## GET icmpv6objects

Request Type: **GET**

Description: Retrieves the ICMPv6 object associated with the specified ID. If no ID is specified, retrieves list of all ICMPv6 objects.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv6objects

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv6objects?overrideTargetId={target\_UUID}

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv6objects/{object\_UUID}

URL to list all overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv6objects/{icmp6object\_UUID}/overrides

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv6objects/{icmp6object\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager

## DELETE ikev1ipsecproposals

Request Type: **DELETE**

**PUT ikev1ipsecproposals**

Description: Deletes the IKEv1 IPsec Proposal associated with the specified ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev1ipsecproposals/{ikev1ipsecproposal\_UUID}

Permissions: Object Manager > Modify Object Manager

**PUT ikev1ipsecproposals**

Request Type: **PUT**

Description: Modifies the IKEv1 IPsec Proposal associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev1ipsecproposals/{ikev1ipsecproposal\_UUID}

Permissions: Object Manager > Modify Object Manager

**POST ikev1ipsecproposals**

Request Type: **POST**

Description: Creates the IKEv1 IPsec Proposal associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev1ipsecproposals

Permissions: Object Manager > Modify Object Manager

**GET ikev1ipsecproposals**

Request Type: **GET**

Description: Retrieves the IKEv1 IPsec Proposal associated with the specified ID. If no ID is specified for a GET, retrieves list of all IKEv1 IPsec Proposal objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ikev1ipsecproposals

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev1ipsecproposals/{ikev1ipsecproposal\_UUID}

Permissions: Object Manager

**DELETE ikev1policies**

Request Type: **DELETE**

Description: Deletes the IKEv1 policy object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev1policies/{ikev1policy\_UUID}

Permissions: Object Manager > Modify Object Manager

**PUT ikev1policies**

Request Type: **PUT**

Description: Modifies the IKEv1 policy object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev1policies/{ikev1policy\_UUID}

Permissions: Object Manager > Modify Object Manager

## POST ikev1policies

Request Type: **POST**

Description: Creates the IKEv1 policy object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev1policies

Permissions: Object Manager > Modify Object Manager

## GET ikev1policies

Request Type: **GET**

Description: Retrieves the IKEv1 policy object associated with the specified ID. If no ID is specified for a GET, retrieves list of all IKEv1 policy objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ikev1policies

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev1policies/{ikev1policy\_UUID}

Permissions: Object Manager

## DELETE ikev2ipsecproposals

Request Type: **DELETE**

Description: Deletes the IKEv2 IPsec Proposal associated with the specified ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev2ipsecproposals/{ikev2ipsecproposal\_UUID}

Permissions: Object Manager > Modify Object Manager

## PUT ikev2ipsecproposals

Request Type: **PUT**

Description: Modifies the IKEv2 IPsec Proposal associated with the specified ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev2ipsecproposals/{ikev2ipsecproposal\_UUID}

Permissions: Object Manager > Modify Object Manager

## POST ikev2ipsecproposals

Request Type: **POST**

**GET ikev2ipsecproposals**

Description: Creates the IKEv2 IPsec Proposal associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev2ipsecproposals

Permissions: Object Manager > Modify Object Manager

## **GET ikev2ipsecproposals**

Request Type: **GET**

Description: Retrieves the IKEv2 IPsec Proposal associated with the specified ID. If no ID is specified for a GET, retrieves list of all IKEv2 IPsec Proposal objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ikev2ipsecproposals

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev2ipsecproposals/{ikev2ipsecproposal\_UUID}

Permissions: Object Manager

## **DELETE ikev2policies**

Request Type: **DELETE**

Description: Deletes the IKEv2 object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev2policies/{ikev2policy\_UUID}

Permissions: Object Manager > Modify Object Manager

## **PUT ikev2policies**

Request Type: **PUT**

Description: Modifies the IKEv2 object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev2policies/{ikev2policy\_UUID}

Permissions: Object Manager > Modify Object Manager

## **POST ikev2policies**

Request Type: **POST**

Description: Creates the IKEv2 object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev2policies

Permissions: Object Manager > Modify Object Manager

## **GET ikev2policies**

Request Type: **GET**

Description: Retrieves the IKEv2 object associated with the specified ID. If no ID is specified for a GET, retrieves list of all IKEv2 IPsec Proposal objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ikev2policies

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev2policies/{ikev2policy\_UUID}

Permissions: Object Manager

## DELETE interfacegroups

Request Type: **DELETE**

Description: Deletes the Interface group objects associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/interfacegroups/{object\_UUID}

URL on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/interfacegroups/{object\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager > Modify Object Manager

## PUT interfacegroups

Request Type: **PUT**

Description: Modifies the Interface group objects associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/interfacegroups/{object\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/interfacegroups/{parent\_object\_UUID}

Permissions: Object Manager > Modify Object Manager

## POST interfacegroups

Request Type: **POST**

Description: Creates or overrides the Interface group objects associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/interfacegroups

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/object/interfacegroups?bulk=true

Permissions: Object Manager > Modify Object Manager

## GET interfacegroups

Request Type: **GET**

Description: Retrieves the Interface group objects associated with the specified ID. If no ID is specified for a GET, retrieves list of all interface group objects.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/interfacegroups

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/interfacegroups?overrideTargetId={target\_UUID}

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/interfacegroups/{object\_UUID}

**GET interfaceobjects**

URL to list all overrides on a particular object:

```
/api/fmc_config/v1/domain/{domain_UUID}/object/interfacegroups/{interfacegroups_UUID}/overrides
```

URL for override for an object on a particular domain or device:

```
/api/fmc_config/v1/domain/{domainUUID}/object/interfacegroups/{interfacegroups_UUID}?overrideTargetId={target_UUID}
```

Permissions: Object Manager

## GET interfaceobjects

Request Type: **GET**

Description: Retrieves list of all the interface objects both security zones and interface groups.

URL for listing: `/api/fmc_config/v1/domain/{domain_UUID}/object/interfaceobjects`

URL for all the overrides on a particular domain or device:

```
/api/fmc_config/v1/domain/{domain_UUID}/object/interfaceobjects?overrideTargetId={target_UUID}
```

URL for GET by ID:

```
/api/fmc_config/v1/domain/{domain_UUID}/object/interfaceobjects/{object_UUID}
```

URL to list all overrides on a particular object::

```
/api/fmc_config/v1/domain/{domain_UUID}/object/interfaceobjects/{interfaceobjects_UUID}/overrides
```

URL for override for an object on a particular domain or device:

```
/api/fmc_config/v1/domain/{domain_UUID}/object/interfaceobjects/{interfaceobjects_UUID}?overrideTargetId={target_UUID}
```

Permissions: Object Manager

## GET ipv4prefixlists

Request Type: **GET**

Description: Retrieves the IPv4 prefix list associated with the specified ID. If no ID is specified, retrieves all IPv4 prefix lists.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/ipv4prefixlists`

URL for GET by ID: `/api/fmc_config/v1/domain/{domainUUID}/object/ipv4prefixlists/{objectId}`

Permissions: Object Manager

## GET ipv6prefixlists

Request Type: **GET**

Description: Retrieves the IPv6 prefix list associated with the specified ID. If no ID is specified, retrieves all IPv6 prefix lists.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/ipv6prefixlists`

URL for GET by ID: `/api/fmc_config/v1/domain/{domainUUID}/object/ipv6prefixlists/{objectId}`

Permissions: Object Manager

## GET isesecuritygrouptags

Request Type: **GET**

Description: Retrieves the ISE security group tag object with the specified ID. If no ID is specified, retrieves list of all ISE security group tag objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/iseseecuritygrouptags

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/iseseecuritygrouptags/{object\_UUID}

Permissions: Object Manager

## GET keychain

Request Type: **GET**

Description: Retrieves the keychain object associated with the specified ID. If no ID is specified for a GET, retrieves list of all keychain objects.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains/{keychain\_UUID}

URL to list all overrides on a particular object. If the object ID is not specified, displays all keychain objects: /api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains/{keychains\_UUID}/overrides/{objectId}

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains?overrideTargetId={target\_UUID}

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains/{keychain\_UUID}?overrideTargetId={target\_UUID}

**Note**

The target UUID could be that of a domain or a device.

Permissions: Object Manager

## DELETE keychain

Request Type: **DELETE**

Description: Deletes the keychain object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains/{keychain\_UUID}

URL to DELETE overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains/{keychain\_UUID}?overrideTargetId={target\_UUID}

**Note**

The target UUID could be that of a domain or a device.

Permissions: Object Manager > Modify Object Manager

**PUT keychain**

Request Type: **PUT**

Description: Modifies the keychain object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains/{keychain\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains/{keychain\_UUID}

Permissions: Object Manager > Modify Object Manager

**POST keychain**

Request Type: **POST**

Description: Creates or overrides the keychain objects with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains

URL for Bulk Post:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains?bulk=true

URL to create an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains

**Attention**

If override was not set when creating the key chain object:

1. Using PUT, update the override property of the key chain object to "true".
2. Create the POST override for the key chain object.

Permissions: Object Manager > Modify Object Manager

**GET networkaddresses**

Request Type: **GET**

Description: Retrieves list of all network and host objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networkaddresses

URL for listing only unused objects:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/networkaddresses?filter=unusedOnly:true

URL for searching by name or value:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/networkaddresses?filter=nameOrValue:{name\_or\_value}

Permissions: Object Manager

**DELETE networkgroups**

Request Type: **DELETE**

Description: Deletes the specified Network Group.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups/{object\_UUID}

URL to DELETE overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups/{object\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager > Modify Object Manager

## PUT networkgroups

Request Type: **PUT**

Description: Modifies a Network Group.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups/{object\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups/{parent\_object\_UUID}

Permissions: Object Manager > Modify Object Manager

## POST networkgroups

Request Type: **POST**

Description: Creates or overrides the network group with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups?bulk=true

Permissions: Object Manager > Modify Object Manager

## GET networkgroups

Request Type: **GET**

Description: Retrieves the network group object associated with the specified ID. If no ID is specified, retrieves list of all network group objects.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups?overrideTargetId={target\_UUID}

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups/{object\_UUID}

URL to list all overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups/{networkgroups\_UUID}/overrides

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups/{networkgroups\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager

**DELETE networks**

Request Type: **DELETE**

Description: Deletes the specified network objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/networks/{object_UUID}`

URL to DELETE overrides on a particular object:

`/api/fmc_config/v1/domain/{domain_UUID}/object/networks/{object_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager > Modify Object Manager

**PUT networks**

Request Type: **PUT**

Description: Modifies network objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/networks/{object_UUID}`

URL to edit or update an override on a particular object:

`/api/fmc_config/v1/domain/{domain_UUID}/object/networks/{parent_object_UUID}`

Permissions: Object Manager > Modify Object Manager

**POST networks**

Request Type: **POST**

Description: Creates or overrides the network objects with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/networks`

URL for Bulk Post: `/api/fmc_config/v1/domain/{domain_UUID}/object/networks?bulk=true`

Permissions: Object Manager > Modify Object Manager

**GET networks**

Request Type: **GET**

Description: Retrieves the network objects associated with the specified ID. If no ID is specified, retrieves list of all network objects.

URL for listing: `/api/fmc_config/v1/domain/{domain_UUID}/object/networks`

URL for all the overrides on a particular domain or device:

`/api/fmc_config/v1/domain/{domain_UUID}/object/networks?overrideTargetId={target_UUID}`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/networks/{object_UUID}`

URL to list all overrides on a particular object:

`/api/fmc_config/v1/domain/{domain_UUID}/object/networks/{network_UUID}/overrides`

URL for override for an object on a particular domain or device:

`/api/fmc_config/v1/domain/{domain_UUID}/object/networks/{network_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager

## GET policy lists

Request Type: **GET**

Description: Retrieves the policy list associated with the specified ID. If no ID is specified, retrieves all policy lists.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/policylists

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/policylists/{objectId}

Permissions: Object Manager

## DELETE portobjectgroups

Request Type: **DELETE**

Description: Deletes the specified port object groups.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups/{object\_UUID}

URL to DELETE overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups/{object\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager > Modify Object Manager

## PUT portobjectgroups

Request Type: **PUT**

Description: Modifies port object groups.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups/{object\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups/{parent\_object\_UUID}

Permissions: Object Manager > Modify Object Manager

## POST portobjectgroups

Request Type: **POST**

Description: Creates or overrides the port object groups with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups?bulk=true

Permissions: Object Manager > Modify Object Manager

## GET portobjectgroups

Request Type: **GET**

Description: Retrieves the port object group object associated with the specified ID. If no ID is specified, retrieves list of all port object group objects.

**GET ports**

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups?overrideTargetId={target\_UUID}

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups/{object\_UUID}

URL to list all overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups/{portobjectgroup\_UUID}/overrides

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups/{portobjectgroup\_UUID}?overrideTargetId={target\_UUID}

URL for listing only unused objects:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups?filter=unusedOnly:true

URL for searching by name or value:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups?filter=nameOrValue:{name\_or\_value}

Permissions: Object Manager

## GET ports

Request Type: **GET**

Description: Retrieves list of all port objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ports

URL for listing only unused objects:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ports?filter=unusedOnly:true

URL for searching by name or value:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ports?filter=nameOrValue:{name\_or\_value}

Permissions: Object Manager

## DELETE protocolportobjects

Request Type: **DELETE**

Description: Deletes the specified protocol port objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/protocolportobjects/{object\_UUID}

URL to DELETE overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/protocolportobjects/{object\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager > Modify Object Manager

## PUT protocolportobjects

Request Type: **PUT**

Description: Modifies protocol port objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/protocolportobjects/{object\_UUID}

URL to edit or update an override on a particular object:

`/api/fmc_config/v1/domain/{domain_UUID}/object/protocolportobjects/{parent_object_UUID}`

Permissions: Object Manager > Modify Object Manager

## POST protocolportobjects

Request Type: **POST**

Description: Creates or overrides the protocol port objects with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/protocolportobjects`

URL for Bulk Post: `/api/fmc_config/v1/domain/{domain_UUID}/object/protocolportobjects?bulk=true`

Permissions: Object Manager > Modify Object Manager

## GET protocolportobjects

Request Type: **GET**

Description: Retrieves the protocol port object associated with the specified ID. If no ID is specified, retrieves list of all protocol port objects.

URL for listing: `/api/fmc_config/v1/domain/{domain_UUID}/object/protocolportobjects`

URL for all the overrides on a particular domain or device:

`/api/fmc_config/v1/domain/{domain_UUID}/object/protocolportobjects?overrideTargetId={target_UUID}`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/object/protocolportobjects/{object_UUID}`

URL to list all overrides on a particular object::

`/api/fmc_config/v1/domain/{domain_UUID}/object/protocolportobjects/{protocolportobject_UUID}/overrides`

URL for override for an object on a particular domain or device:

`/api/fmc_config/v1/domain/{domain_UUID}/object/protocolportobjects/{protocolportobject_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager

## DELETE ranges

Request Type: **DELETE**

Description: Deletes the specified address range.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/ranges/{object_UUID}`

URL to DELETE overrides on a particular object:

`/api/fmc_config/v1/domain/{domain_UUID}/object/ranges/{object_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager > Modify Object Manager

## PUT ranges

Request Type: **PUT**

## POST ranges

Description: Modifies an address range.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ranges/{object\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ranges/{parent\_object\_UUID}

Permissions: Object Manager > Modify Object Manager

## POST ranges

Request Type: **POST**

Description: Creates or overrides an address range with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ranges

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ranges?bulk=true

Permissions: Object Manager > Modify Object Manager

## GET ranges

Request Type: **GET**

Description: Retrieves the address range object associated with the specified ID. If no ID is specified, retrieves list of all address range objects.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ranges

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ranges?overrideTargetId={target\_UUID}

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ranges/{object\_UUID}

URL to list all overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ranges/{range\_UUID}/overrides

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ranges/{range\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager

## GET realms

Request Type: **GET**

Description: Retrieves the realm object associated with the specified ID. If no ID is specified, retrieves list of all realm objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/realms

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/realms/{object\_UUID}

Permissions: Object Manager

## GET realmusergroups

Request Type: **GET**

Description: Retrieves the realm user group object associated with the specified ID. If no ID is specified, retrieves list of all realm user group objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/realmusergroups

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/realmusergroups/{object\_UUID}

Permissions: Object Manager

Parameters available for filtering: realmUuid

---

**Note** This is a required parameter.

---

## GET realmusers

Request Type: **GET**

Description: Retrieves the realm user object associated with the specified ID. If no ID is specified, retrieves list of all realm user objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/realmusers

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/realmusers/{object\_UUID}

Permissions: Object Manager

Parameters available for filtering: realmUuid

---

**Note** This is a required parameter.

---

## GET route maps

Request Type: **GET**

Description: Retrieves the route map associated with the specified ID. If no ID is specified, retrieves list of all route maps.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/routemaps

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/routemaps/{objectId}

Permissions: Object Manager

## GET securitygrouptags

Request Type: **GET**

**DELETE securityzones**

Description: Retrieves the custom security group tag object associated with the specified ID. If no ID is specified, retrieves list of all custom security group tag objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/securitygrouptags

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/securitygrouptags/{object\_UUID}

Permissions: Object Manager

Parameters available for filtering: name

## **DELETE securityzones**

Request Type: **DELETE**

Description: Deletes the specified securityzone objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/securityzones/{object\_UUID}

Permissions: Object Manager>Modify Object Manager

## **PUT securityzones**

Request Type: **PUT**

Description: Modifies a securityzone object.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/securityzones/{object\_UUID}

Permissions: Object Manager>Modify Object Manager

## **POST securityzones**

Request Type: **POST**

Description: Creates or overrides the securityzone objects with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/securityzones

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/object/securityzones?bulk=true

Permissions: Object Manager > Modify Object Manager

## **GET securityzones**

Request Type: **GET**

Description: Retrieves the security zone objects associated with the specified ID. If no ID is specified, retrieves list of all security zone objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/securityzones

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/securityzones/{object\_UUID}

Permissions: Object Manager

Parameters available for filtering: name

## GET siurfeeds

Request Type: **GET**

Description: Retrieves the Security Intelligence url feed object associated with the specified ID. If no ID is specified, retrieves list of all Security Intelligence url feed objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/siurfeeds

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/siurfeeds/{object\_UUID}

Permissions: Object Manager

## GET siurllists

Request Type: **GET**

Description: Retrieves the Security Intelligence url list object associated with the specified ID. If no ID is specified, retrieves list of all Security Intelligence url list objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/siurllists

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/siurllists/{object\_UUID}

Permissions: Object Manager

## DELETE slamonitors

Request Type: **DELETE**

Description: Deletes the sla monitor object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/slamonitor/{object\_UUID}

Permissions: Object Manager > Modify Object Manager

## PUT slamonitors

Request Type: **PUT**

Description: Modifies the sla monitor object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/slamonitor/{object\_UUID}

Permissions: Object Manager > Modify Object Manager

## POST slamonitors

Request Type: **POST**

Description: Creates or overrides a SLA monitor with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/slamonitor

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/object/slamonitor?bulk=true

Permissions: Object Manager > Modify Object Manager

**GET slamonitor**

## GET slamonitor

Request Type: **GET**

Description: Retrieves the SLA Monitors associated with the specified ID. If no ID is specified, retrieves list of all SLA Monitors.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/slamonitors

URL by GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/slamonitors/{object\_UUID}

Permissions: Object Manager

## GET standard access lists

Request Type: **GET**

Description: Retrieves the standard community list associated with the specified ID. If no ID is specified, retrieves all standard community lists.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/standardaccesslists

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/standardaccesslists/{objectId}

Permissions: Object Manager

## GET standard community lists

Request Type: **GET**

Description: Retrieves the standard community list associated with the specified ID. If no ID is specified, retrieves all standard community lists.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/standardcommunitylists

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/object/standardcommunitylists/{objectId}

Permissions: Object Manager

## GET time ranges

Request Type: **GET**

Description: Retrieves the time range object associated with the specified ID. If no ID is specified, retrieves list of all time range objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/timeranges

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/timeranges/{objectId}

Permissions: Object Manager

## PUT time ranges

Request Type: **PUT**

Description: Modifies a time range object.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/timeranges/{objectId}

Permissions: Object Manager

## POST time ranges

Request Type: **POST**

Description: Creates or overrides a time range object with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/timeranges

Permissions: Object Manager > Modify Object Manager

## DELETE time ranges

Request Type: **DELETE**

Description: Deletes the time range object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/timeranges/{objectId}

Permissions: Object Manager > Modify Object Manager

## GET time zone objects

Request Type: **GET**

Description: Retrieves the time zone object associated with the specified ID. If no ID is specified, retrieves list of all time zone objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/timezoneobjects

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/timezoneobjects/{objectId}

URL to list all overrides:

/api/fmc\_config/v1/domain/{domainUUID}/object/timezoneobjects/{containerUUID}/overrides

Permissions: Object Manager

## PUT time zone objects

Request Type: **PUT**

Description: Modifies a time zone object.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/timezoneobjects/{objectId}

Permissions: Object Manager

## POST time zone objects

Request Type: **POST**

Description: Creates or overrides a time zone object with the specified parameters.

**DELETE time zone objects**

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/timezoneobjects

Permissions: Object Manager > Modify Object Manager

## **DELETE time zone objects**

Request Type: **DELETE**

Description: Deletes the time zone object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/timezoneobjects/{objectId}

Permissions: Object Manager > Modify Object Manager

## **DELETE tunneltags**

Request Type: **DELETE**

Description: Deletes the tunnel tag object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/tunneltags/{object\_UUID}

Permissions: Object Manager > Modify Object Manager

## **PUT tunneltags**

Request Type: **PUT**

Description: Modifies the tunnel tag object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/tunneltags/{object\_UUID}

Permissions: Object Manager > Modify Object Manager

## **POST tunneltags**

Request Type: **POST**

Description: Creates or overrides a tunnel tag with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/tunneltags

Permissions: Object Manager > Modify Object Manager

## **GET tunneltags**

Request Type: **GET**

Description: Retrieves the tunnel tag object associated with the specified ID. If no ID is specified, retrieves list of all tunnel tag objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/tunneltags

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/tunneltags/{object\_UUID}

Permissions: Object Manager

## GET urlcategories

Request Type: **GET**

Description: Retrieves the url category object associated with the specified ID. If no ID is specified, retrieves list of all url category objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urlcategories

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urlcategories/{object\_UUID}

Permissions: Object Manager

## DELETE urlgroups

Request Type: **DELETE**

Description: Deletes the specified urlgroup objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups/{object\_UUID}

URL to DELETE overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups/{object\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager > Modify Object Manager

## PUT urlgroups

Request Type: **PUT**

Description: Modifies urlgroup objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups/{object\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups/{parent\_object\_UUID}

Permissions: Object Manager > Modify Object Manager

## POST urlgroups

Request Type: **POST**

Description: Creates or overrides the urlgroup objects with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups?bulk=true

Permissions: Object Manager > Modify Object Manager

## GET urlgroups

Request Type: **GET**

Description: Retrieves the url group objects associated with the specified ID. If no ID is specified, retrieves list of all url group objects.

**DELETE urls**

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups?overrideTargetId={target\_UUID}

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups/{object\_UUID}

URL to list all overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups/{urlgroup\_UUID}/overrides

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups/{urlgroup\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager > Modify Object Manager

## **DELETE urls**

Request Type: **GET**

Description: Deletes the specified URL.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urls/{object\_UUID}

URL to DELETE overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urls/{object\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager > Modify Object Manager

## **PUT urls**

Request Type: **PUT**

Description: Modifies a URL.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urls/{object\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urls/{parent\_object\_UUID}

Permissions: Object Manager

## **POST urls**

Request Type: **POST**

Description: Creates or overrides the URLs with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urls

URL for Bulk Post : /api/fmc\_config/v1/domain/{domain\_UUID}/object/urls?bulk=true

Permissions: Object Manager > Modify Object Manager

## **GET urls**

Request Type: **GET**

Description: Retrieves the url objects associated with the specified ID. If no ID is specified, retrieves list of all url objects.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urls

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urls?overrideTargetId={target\_UUID}

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urls/{object\_UUID}

URL to list all overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urls/{url\_UUID}/overrides

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urls/{url\_UUID}?overrideTargetId={target\_UUID}

URL for listing only unused objects:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urls?filter=unusedOnly:true

URL for searching by name or value:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urls?filter=nameOrValue:{name\_or\_value}

Permissions: Object Manager

## GET variablesets

Request Type: **GET**

Description: Retrieves the variable set object associated with the specified ID. If no ID is specified, retrieves list of all variable set objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/variablessets

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/variablessets/{object\_UUID}

Permissions: Object Manager

## DELETE vlangrouptags

Request Type: **DELETE**

Description: Deletes the specified vlangrouptag objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/vlangrouptags/{object\_UUID}

URL to DELETE overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/vlangrouptags/{object\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager > Modify Object Manager

## PUT vlangrouptags

Request Type: **PUT**

Description: Modifies vlangrouptag objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/vlangrouptags/{object\_UUID}

**POST vlangrouptags**

URL to edit or update an override on a particular object:

`/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags/{parent_object_UUID}`

Permissions: Object Manager > Modify Object Manager

## POST vlangrouptags

Request Type: **POST**

Description: Creates or overrides the VLAN group tags with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags`

URL for Bulk Post : `/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags?bulk=true`

Permissions: Object Manager > Modify Object Managers

## GET vlangrouptags

Request Type: **GET**

Description: Retrieves the vlan group tag objects associated with the specified ID. If no ID is specified, retrieves list of all vlan group tag objects.

URL for listing: `/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags`

URL for all the overrides on a particular domain or device:

`/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags?overrideTargetId={target_UUID}`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags/{object_UUID}`

URL to list all overrides on a particular object:

`/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags/{vlangrouptag_UUID}/overrides`

URL for override for an object on a particular domain or device:

`/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags/{vlangrouptag_UUID}?overrideTargetId={target_UUID}`

URL for listing only unused objects:

`/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags?filter=unusedOnly:true`

URL for searching by name or value:

`/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags?filter=nameOrValue:{name_or_value}`

Permissions: Object Manager > Modify Object Manager

## DELETE vlantags

Request Type: **DELETE**

Description: Deletes the specified VLAN tag objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags/{object_UUID}`

URL to DELETE overrides on a particular object:

`/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags/{object_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager > Modify Object Manager

## PUT vlantags

Request Type: **PUT**

Description: Modifies VLAN tag objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/vlantags/{object\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/vlantags/{parent\_object\_UUID}

Permissions: Object Manager > Modify Object Manager

## POST vlantags

Request Type: **POST**

Description: Creates or overrides the VLAN tags with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/vlantags

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/object/vlantags?bulk=true

Permissions: Object Manager > Modify Object Manager

## GET vlantags

Request Type: **GET**

Description: Retrieves the vlantag objects associated with the specified ID. If no ID is specified, retrieves list of all vlantag objects.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/vlantags

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/vlantags?overrideTargetId={target\_UUID}

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/vlantags/{object\_UUID}

URL to list all overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/vlantags/{vlantag\_UUID}/overrides

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/vlantags/{vlantag\_UUID}?overrideTargetId={target\_UUID}

URL for listing only unused objects:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/vlantags?filter=unusedOnly:true

URL for searching by name or value:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/vlantags?filter=nameOrValue:{name\_or\_value}

Permissions: Object Manager

# Policy Services

## DELETE accesspolicies

Request Type: **DELETE**

Description: Deletes the access control policy with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{object\_UUID}

Permissions: Policies>Access Control Policy>Modify Access Control Policy

## PUT accesspolicies

Request Type: **PUT**

Description: Modifies an access control policy.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{object\_UUID}

Permissions: Policies>Access Control Policy>Modify Access Control Policy

## POST accesspolicies

Request Type: **POST**

Description: Creates an access control policy with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies

Permissions: Policies>Access Control Policy>Modify Access Control Policy

## GET accesspolicies

Request Type: **GET**

Description: Retrieves the access control policy associated with the specified ID. If no ID is specified, retrieves a list of all access control policies.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{object\_UUID}

Permissions: Policies

## DELETE accessrules

Request Type: **DELETE**

Description: Deletes an access control rule in the specified access control policy.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/accessrules/{object\_UUID}

Permissions: Policies>Access Control>Access Control Policy>Modify Access Control Policy

## PUT accessrules

Request Type: **PUT**

Description: Modifies an access control rule in the specified access control policy.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/accessrules/{object\_UUID}

Permissions: Policies>Access Control>Access Control Policy>Modify Access Control Policy

## POST accessrules

Request Type: **POST**

Description: Creates an access control rule in the specified access control policy.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/accessrules

Permissions: Policies>Access Control>Access Control Policy>Modify Access Control Policy

## GET accessrules

Request Type: **GET**

Description: Retrieves the access control rule associated with the specified policy ID and rule ID. If no rule ID is specified, retrieves list of all access rules associated with the specified policy ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/accessrules

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/accessrules/{object\_UUID}

Permissions: Policies>Access Control>Access Control Policy

## DELETE categories

Request Type: **DELETE**

Description: Deletes a category associated with the specified policy ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/categories/{object\_UUID}

Permissions: Policies > Access Control > Access Control Policy > Modify Access Control Policy

## PUT categories

Request Type: **PUT**

Description: Modifies the category associated with the specified policy ID.

## POST categories

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/categories/{object\_UUID}

Permissions: Policies > Access Control > Access Control Policy > Modify Access Control Policy

## POST categories

Request Type: **POST**

Description: Creates a category for access control policies.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/categories

Permissions: Policies > Access Control > Access Control Policy > Modify Access Control Policy

## GET categories

Request Type: **GET**

Description: Retrieves the category associated with the specified policy ID. If no ID is specified, retrieves list of all categories associated with the specified policy ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/categories

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/categories/{object\_UUID}

Permissions: Policies > Access Control > Access Control Policy

## PUT defaultactions

Request Type: **PUT**

Description: Modifies the default action associated with the specified access control policy ID and default action ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/defaultactions/{object\_UUID}

Permissions: Policies>Access Control>Access Control Policy>Modify Access Control Policy

## GET defaultactions

Request Type: **GET**

Description: Retrieves the default action associated with the specified access control policy ID and default action ID. If no default action ID is specified, retrieves list of all default actions associated with the specified access control policy ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/defaultactions

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/defaultactions/{object\_UUID}

Permissions: Policies>Access Control>Access Control Policy

## GET loggingsettings

Request Type: **GET**

Description: Retrieves the logging setting associated with the specified access control policy ID and default action ID. If no default action ID is specified, retrieves list of all default actions associated with the specified access control policy ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/accesspolicies/{containerUUID}/loggingsettings`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/policy/accesspolicies/{containerUUID}/loggingsettings/{object_UUID}`

Permissions: Policies

## PUT loggingsettings

Request Type: **PUT**

Description: Modifies the logging setting associated with the specified access control policy ID and default action ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/accesspolicies/{containerUUID}/loggingsettings/{objectId}`

Permissions: Policies>Access Control Policy>Modify Access Control Policy

## GET filepolicies

Request Type: **GET**

Description: Retrieves the file policy object associated with the specified ID. If no ID is specified, retrieves list of all file policy objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/filepolicies`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/policy/filepolicies/{object_UUID}`

Permissions: Policies>Access Control>Malware & File Policy

## DELETE ftdnatpolicies

Request Type: **DELETE**

Description: Deletes the Firepower Threat Defense NAT policy with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies/{object_UUID}`

Permissions: Devices>NAT>NAT List >Modify NAT policy

## PUT ftdnatpolicies

Request Type: **PUT**

Description: Modifies an Firepower Threat Defense NAT policy with the specified ID.

**POST ftdnatpolicies**

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{object\_UUID}

Permissions: Devices>NAT>NAT List >Modify NAT policy

## **POST ftdnatpolicies**

Request Type: **POST**

Description: Creates a Firepower Threat Defense device NAT policy with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies?bulk=true

Permissions: Devices>NAT>NAT List >Modify NAT policy

## **GET ftdnatpolicies**

Request Type: **GET**

Description: Retrieves the Firepower Threat Defense NAT policy associated with the specified ID. If no ID is specified, retrieves a list of all Firepower Threat Defense NAT policies.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{object\_UUID}

Permissions: Devices>NAT>NAT List

## **DELETE ftnds2svpns**

Request Type: **DELETE**

Description: Deletes the Firepower Threat Defense Site to Site VPN topology associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftds2svpns/{topology\_UUID}

Permissions: Devices > VPN > Modify VPN

## **PUT ftnds2svpns**

Request Type: **PUT**

Description: Modifies a Firepower Threat Defense Site to Site VPN topology associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftds2svpns/{topology\_UUID}

Permissions: Devices > VPN > Modify VPN

## **POST ftnds2svpns**

Request Type: **POST**

Description: Creates a Firepower Threat Defense Site to Site VPN topology with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftds2svpns

Permissions: Devices > VPN > Modify VPN

## GET ftds2svpns

Request Type: **GET**

Description: Retrieves the Firepower Threat Defense Site to Site VPN topology associated with the specified ID. If no ID is specified, retrieves a list of all Firepower Threat Defense Site to Site VPN topologies.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftds2svpns

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftds2svpns/{topology\_UUID}

Permissions: Devices > VPN

## PUT advancedsettings

Request Type: **PUT**

Description: Modifies advanced settings inside a VPN Site to Site Topology.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftds2svpns/{topology\_UUID}/advancedsettings/{advancedsetting\_UUID}

Permissions: Devices > VPN > Modify VPN

## GET advancedsettings

Request Type: **GET**

Description: Retrieves an advanced settings inside a VPN Site to Site Topology. If no ID is specified for a GET, retrieves list containing a single AdvancedSettings entry of the topology.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftds2svpns/{topology\_UUID}/advancedsettings

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftds2svpns/{topology\_UUID}/advancedsettings/{advancedSetting\_UUID}

Permissions: Devices > VPN

## DELETE endpoints

Request Type: **DELETE**

Description: Deletes all endpoints in a topology or a specific endpoint associated with the specified ID inside a VPN Site to Site Topology.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftds2svpns/{topology\_UUID}/endpoints/{endpoint\_UUID}

Permissions: Devices > VPN > Modify VPN

## PUT endpoints

Request Type: **PUT**

Description: Modifies all endpoints in a topology or a specific endpoint associated with the specified ID inside a VPN Site to Site Topology.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/endpoints/{endpoint_UUID}`

Permissions: Devices > VPN > Modify VPN

## POST endpoints

Request Type: **POST**

Description: Creates all endpoints in a topology or a specific endpoint associated with the specified ID inside a VPN Site to Site Topology.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/endpoints`

Permissions: Devices > VPN > Modify VPN

## GET endpoints

Request Type: **GET**

Description: Retrieves all endpoints in a topology or a specific endpoint associated with the specified ID inside a VPN Site to Site Topology. If no ID is specified for a GET, retrieves list of all Endpoints of a topology.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/endpoints`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/endpoints/{endpoint_UUID}`

Permissions: Devices > VPN

## PUT ikesettings

Request Type: **PUT**

Description: Modifies the IKE Settings associated with the specified ID inside a VPN Site to Site Topology.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/ikesettings/{ikesetting_UUID}`

Permissions: Devices > VPN > Modify VPN

## GET ikesettings

Request Type: **GET**

Description: Retrieves the IKE Settings associated with the specified ID inside a VPN Site to Site Topology. If no ID is specified for a GET, retrieves IKE Settings of a topology.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/ikesettings`

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftds2svpns/{topology\_UUID}/ikesettings/{ikesetting\_UUID}

Permissions: Devices > VPN

## PUT ipsecsettings

Request Type: **PUT**

Description: Modifies an IPsec Proposal settings inside a VPN Site to Site Topology.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftds2svpns/{topology\_UUID}/ipsecsettings/{ipsecsetting\_UUID}

Permissions: Devices > VPN > Modify VPN

## GET ipsecsettings

Request Type: **GET**

Description: Retrieves an IPsec Proposal Settings inside a VPN Site To Site Topology. If no ID is specified for a GET, retrieves list containing a single IPsec Settings entry of the topology.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftds2svpns/{topology\_UUID}/ipsecsettings

URL for GET by ID: /api/fmc\_config/v1/domain/DomainUUID/policy/ftds2svpns/{topology\_UUID}/ipsecsettings/{ipsecsetting\_UUID}

Permissions: Devices > VPN

## DELETE autonatrules

Request Type: **DELETE**

Description: Deletes a NAT rule with the specified parameters.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{container\_UUID}/autonatrules/{object\_UUID}

Permissions: Devices>NAT>NAT List >Modify NAT policy

## PUT autonatrules

Request Type: **PUT**

Description: Modifies a NAT rule with the specified parameters.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{container\_UUID}/autonatrules/{autonatrule\_UUID}

Permissions: Devices>NAT>NAT List >Modify NAT policy

## POST autonatrules

Request Type: **POST**

**GET autonatrules**

Description: Creates a NAT policy with the specified parameters.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{container\_UUID}/autonatrules

Permissions: Devices>NAT>NAT List >Modify NAT policy

**GET autonatrules**

Request Type: **GET**

Description: Retrieves the NAT rule associated with the specific ID. If no ID is specified, retrieves a list of all NAT rules.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{container\_UUID}/autonatrules

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{container\_UUID}/autonatrules/{object\_UUID}

Permissions: Devices>NAT>NAT List

**DELETE manualnatrules**

Request Type: **POST**

Description: Deletes a manual NAT rule in the specified NAT policy.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{container\_UUID}/manualnatrules/{object\_UUID}

Permissions: Devices>NAT>NAT List >Modify NAT policy

**PUT manualnatrules**

Request Type: **PUT**

Description: Modify a manual NAT rule in the specified NAT policy.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{container\_UUID}/manualnatrules/{object\_UUID}

Permissions: Devices>NAT>NAT List >Modify NAT policy

**POST manualnatrules**

Request Type: **POST**

Description: Creates manual NAT rules with the specified parameters.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{container\_UUID}/manualnatrules

Permissions: Devices>NAT>NAT List >Modify NAT policy

## GET manualnatrules

Request Type: **GET**

Description: Retrieves the manual NAT rule associated with the specified ID. If no ID is specified, retrieves a list of all manual NAT rules.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{container\_UUID}/manualnatrules

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{container\_UUID}/manualnatrules/{object\_UUID}

Permissions: Devices>NAT>NAT List

## GET natrules

Request Type: **GET**

Description: Retrieves the list of all NAT rules (manual and auto) associated with the specified NAT policy.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{container\_UUID}/natrules

Permissions: Devices>NAT>NAT List

## PUT inheritancesettings

Request Type: **PUT**

Description: Modifies the inheritance settings associated with specified Access Policy.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/inheritancesettings/{object\_UUID}

Permissions: Policies > Access Control Policy > Modify Access Control Policy

## GET inheritancesettings

Request Type: **GET**

Description: Retrieves the inheritance settings associated with specified Access Policy. If no ID is specified, retrieves a list of all inheritance settings.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/inheritancesettings/

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/inheritancesettings/{object\_UUID}

Permissions: Policies > Access Control Policy

## GET intrusionpolicies

Request Type: **GET**

**DELETE preffilterpolicies**

Description: Retrieves the intrusion policy associated with the specified ID. If no ID is specified, retrieves list of all intrusion policies.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/intrusionpolicies

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/intrusionpolicies/{object\_UUID}

Permissions: Policies>Access Control>Intrusion Policy

## **DELETE preffilterpolicies**

Request Type: **DELETE**

Description: Deletes a prefilter policy associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/prefilterpolicies/{object\_UUID}

Permissions: Policies > Access Control > Prefilter Policy > Modify Prefilter Policy

## **PUT preffilterpolicies**

Request Type: **PUT**

Description: Modifies a prefilter policy associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/prefilterpolicies/{object\_UUID}

Permissions: Policies > Access Control > Prefilter Policy > Modify Prefilter Policy

## **POST preffilterpolicies**

Request Type: **POST**

Description: Creates a prefilter policy associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/prefilterpolicies/{object\_UUID}

Permissions: Policies > Access Control > Prefilter Policy > Modify Prefilter Policy

## **GET preffilterpolicies**

Request Type: **GET**

Description: Retrieves the prefilter policy associated with the specified ID. If no ID is specified, retrieves a list of all prefILTER policies.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/prefilterpolicies

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/policy/prefilterpolicies/{object\_UUID}

Permissions: Policies > Access Control > Prefilter Policy

## DELETE hitcounts

Request Type: **DELETE**

Description: Deletes the hit count information and resets the hit count to zero for an assigned policy or rule in a device, from the Firepower Management Center.

Note that the DELETE operation returns a 200 (OK) message upon successful completion of the operation.

URLs:

- /api/fmc\_config/v1/domain/{domainUUID}/policy/accesspolicies/{containerUUID}/operational/hitcounts?filter="{filterString}"
- /api/fmc\_config/v1/domain/{domainUUID}/policy/prefilterpolicies/{containerUUID}/operational/hitcounts?filter="{filterString}"

Permissions:

- Policies>Access Control Policy>Modify Access Control Policy
- Policies>Prefilter Policy>Modify Prefilter Policy

## PUT hitcounts

Request Type: **PUT**

Description: Retrieves the latest hit count information for a device against an assigned policy, and stores it in the Firepower Management Center.

URLs:

- /api/fmc\_config/v1/domain/{domainUUID}/policy/accesspolicies/{containerUUID}/operational/hitcounts?filter="{filterString}"
- /api/fmc\_config/v1/domain/{domainUUID}/policy/prefilterpolicies/{containerUUID}/operational/hitcounts?filter="{filterString}"

Permissions:

- Policies>Access Control Policy>Modify Access Control Policy
- Policies>Prefilter Policy>Modify Prefilter Policy

## GET hitcounts

Request Type: **GET**

Description: Retrieves the last collected hit count information for a device against an assigned policy or its rules, from the Firepower Management Center.

Note that during the GET operation, hit counts will be automatically pre-fetched from the device if it is the first retrieval being done against a specific device.

URLs:

- /api/fmc\_config/v1/domain/{domainUUID}/policy/accesspolicies/{containerUUID}/operational/hitcounts?filter="{filterString}"
- /api/fmc\_config/v1/domain/{domainUUID}/policy/prefilterpolicies/{containerUUID}/operational/hitcounts?filter="{filterString}"

Permissions:

**DELETE prefiterrules**

- Policies>Access Control Policy>Modify Access Control Policy
- Policies>Prefilter Policy>Modify Prefilter Policy

**DELETE prefiterrules**

Request Type: **DELETE**

Description: Deletes the prefilter rule associated with the specified rule ID.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/policy/prefilterpolicies/{container_UUID}/prefiterrules/{object_UUID}`

Permissions: Policies > Access Control > Prefilter Policy > Modify Prefilter Policy

**PUT prefiterrules**

Request Type: **PUT**

Description: Modifies the prefilter rule associated with the specified rule ID.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/policy/prefilterpolicies/{container_UUID}/prefiterrules/{object_UUID}`

Permissions: Policies > Access Control > Prefilter Policy > Modify Prefilter Policy

**POST prefiterrules**

Request Type: **POST**

Description: Creates a prefilter rule.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/policy/prefilterpolicies/{container_UUID}/prefiterrules`

Permissions: Policies > Access Control > Prefilter Policy > Modify Prefilter Policy

**GET prefiterrules**

Request Type: **GET**

Description: Retrieves the prefilter rule associated with the specified rule ID. If no ID is specified, retrieves list of all prefilter rules.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/policy/prefilterpolicies/{container_UUID}/prefiterrules/`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/policy/prefilterpolicies/{container_UUID}/prefiterrules/{object_UUID}`

Permissions: Policies > Access Control > Prefilter Policy

**GET snmpalerts**

Request Type: **GET**

Description: Retrieves the SNMP alert object associated with the specified ID. If no ID is specified, retrieves a list of all SNMP alert objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/snmpalerts

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/snmpalerts/{object\_UUID}

Permissions: Policies > Actions > Alerts > View Alerts

## GET syslogalerts

Request Type: **GET**

Description: Retrieves the syslog alert object associated with the specified ID. If no ID is specified, retrieves a list of all syslog alert objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/syslogalerts

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/syslogalerts/{object\_UUID}

Permissions: Policies > Actions > Alerts

# Policy Assignment Services

## PUT policyassignments

Request Type: **PUT**

Description: Modifies an assigned access policy to add a new device or a new device group.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/assignment/policyassignments/{object\_UUID}

Permissions:

## POST policyassignments

Request Type: **POST**

Description: Assigns an unassigned access policy to devices or device groups.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/assignment/policyassignments

Permissions:

## GET policyassignments

Request Type: **GET**

Description: Retrieves the policy assignment associated with the specified ID. If no ID is specified, retrieves a list of all policy assignments to target devices.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/assignment/policyassignments

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/assignment/policyassignments/{object\_UUID}

Permissions:

Parameters available for filtering: name

## Status Services

### GET taskstatuses

Description: Retrieves information about a previously submitted pending job/task with the specified ID. This is currently supported for device registration and deployment jobs.

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/job/taskstatuses/{object\_UUID}

Permissions: Modify Devices/Deployment

## System Information

### GET domain

Request Type: **GET**

Description: Requests version information for the domain. If no ID is specified, retrieves a list of all domains.

URL: /api/fmc\_platform/v1/info/domain/{domain\_UUID}/

URL for GET by ID: /api/fmc\_platform/v1/info/domain/{domain\_UUID}/{object\_UUID}

Permissions: System > Domains

### GET serverversion

Request Type: **GET**

Description: Requests version information for the server. If no ID is specified, retrieves a list of all servers.

URL: /api/fmc\_platform/v1/info/serverversion

URL for GET by ID: /api/fmc\_platform/v1/info/serverversion/{objectID}

Permissions:

## Update Packages

### DELETE upgradepackages

Request Type: **DELETE**

Description: Deletes a specific Firepower Threat Defense upgrade package from the managing Firepower Management Center.

URL: /api/fmc\_platform/v1/updates/upgradepackages/{package\_UUID}

## GET upgradepackages

Request Type: **GET**

Description: Retrieves a list of locally available Firepower Threat Defense upgrade packages, including major upgrades, maintenances release upgrades, and hotfixes.

URL: /api/fmc\_platform/v1/updates/upgradepackages

URL for GET by ID: /api/fmc\_platform/v1/updates/upgradepackages/{package\_UUID}

## GET listapplicabledevices

Request Type: **GET**

Description: Lists registered device containers that support the specific upgrade package.

URL: /api/fmc\_platform/v1/updates/upgradepackages/{container\_UUID}/applicabledevices

## POST upgradepackage

Request Type: **POST**

Description: Dependent on the parameters, this POST operation either pushes available software upgrade packages to applicable devices running Firepower Threat Defense or initiates the upgrade process for applicable devices running Firepower Threat Defense. This process is applicable for standalone, clustered, or high availability pairs with the following limitations:

- For all configurations, ensure that the current POST operation is completed successfully before proceeding to the next POST operation.
- Perform the POST operation on the primary node of a high availability pair. Do not perform the POST operation for more than one high availability pair at a time.
- Perform the POST operation on the

### Note

Typically, the first POST operation responds within 60 seconds. Cisco recommends that you perform subsequent POST operations at least 120 seconds after the first POST operation was initiated. The response of the POST operation includes a task object, with a task ID and task status. You can monitor the completion of the task by performing a GET operation on the task object with its task ID. For more information, see [GET taskstatuses, on page 86](#).

URL: /api/fmc\_platform/v1/updates/upgrades/

## GET upgradepackages: Monitor

Request Type: **GET**

Description: Monitors the upgrade process once you have executed the POST upgrade task.

**GET upgradepackages: Monitor**

URL: /api/fmc\_platform/v1/domain/{domain\_UUID}/job/taskstatuses/{task\_ID}
