Preface

Revised: May 26, 2017, OL-25998-01

This guide describes how you can configure and maintain the Cisco Identity Services Engine (ISE) Release 1.0, by using the command-line interface (CLI). Each topic provides a high-level summary of the tasks required for using the CLI for the Cisco ISE in the Cisco Application Deployment Engine (ADE) OS Release 2.0, that runs on supported appliances for small, medium, and large Cisco ISE deployments.

This preface includes:

- Who Should Read This Guide, page vii
- How to Use This Guide, page viii
- How This Guide Is Organized, page viii
- Document Conventions, page viii
- Documentation Updates, page ix
- Related Documentation, page ix
- Notices, page x
- Obtaining Documentation and Submitting a Service Request, page xiii

Note

Use this guide in conjunction with the documentation listed in Related Documentation, page ix.

Who Should Read This Guide

The majority of the instructions in this guide are straightforward; however, a few are complex. Therefore, only experienced users should use these instructions.

Note

Use this guide in conjunction with the documentation listed in Related Documentation, page ix.
How to Use This Guide

Cisco makes the following recommendations for using this document:

- Read the document in its entirety. Subsequent sections build on information and recommendations discussed in previous sections.
- Use this document for all-inclusive information about the Cisco ISE appliance.
- Do not vary the command-line conventions (see Document Conventions, page viii).

How This Guide Is Organized

This table lists the major sections of this guide.

<table>
<thead>
<tr>
<th>Chapter</th>
<th>Title</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chapter 1</td>
<td>Overview of the Cisco ISE Command-Line Interface</td>
<td>Provides an overview of the Cisco ISE CLI environment and command modes.</td>
</tr>
<tr>
<td>Chapter 2</td>
<td>Using the Cisco ISE Command-Line Interface</td>
<td>Describes how you can access and administer Cisco ISE from the CLI.</td>
</tr>
<tr>
<td>Appendix A</td>
<td>Cisco ISE Command Reference</td>
<td>Provides a complete description of all the CLI commands.</td>
</tr>
</tbody>
</table>

Document Conventions

This guide uses the following conventions to convey instructions and information.

<table>
<thead>
<tr>
<th>Convention</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>bold font</td>
<td>Commands and keywords.</td>
</tr>
<tr>
<td>italic font</td>
<td>Variables for which you supply values.</td>
</tr>
<tr>
<td>[ ]</td>
<td>Keywords or arguments that appear within square brackets are optional.</td>
</tr>
<tr>
<td>{x</td>
<td>y</td>
</tr>
<tr>
<td>courier font</td>
<td>Examples of information displayed on the screen.</td>
</tr>
<tr>
<td>bold courier font</td>
<td>Examples of information you must enter.</td>
</tr>
<tr>
<td>&lt; &gt;</td>
<td>Nonprinting characters (for example, passwords) appear in angle brackets.</td>
</tr>
<tr>
<td>[ ]</td>
<td>Default responses to system prompts appear in square brackets.</td>
</tr>
</tbody>
</table>

Note

Means reader take note. Notes identify important information that you should think about before continuing, contain helpful suggestions, or provide references to material not covered in the manual.
Tip
Means the following information will help you solve a problem. A tip might not consist of an action or troubleshooting help, but could still contain useful information.

Caution
Means reader be careful. In this situation, you might do something that could result in equipment damage or loss of data.

Documentation Updates

Table 1    Updates to the Cisco Identity Services Engine CLI Reference Guide, Release 1.0.4

<table>
<thead>
<tr>
<th>Date</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>12/02/2011</td>
<td>Minor text updates</td>
</tr>
<tr>
<td>9/30/2011</td>
<td>Content updates for Cisco Identity Services Engine Maintenance Release 1.0.4.573:</td>
</tr>
<tr>
<td></td>
<td>• application reset-config</td>
</tr>
<tr>
<td></td>
<td>• application reset-passwd</td>
</tr>
<tr>
<td>8/26/2011</td>
<td>Republished with the following enhancements to coincide with Cisco Identity Services Engine Maintenance Release 1.0.4:</td>
</tr>
<tr>
<td></td>
<td>• Added application reset-passwd</td>
</tr>
<tr>
<td>7/17/2011</td>
<td>Minor text updates</td>

The license and distribution terms for any publicly available version or derivative of this code cannot be changed, i.e. this code cannot simply be copied and put under another distribution license [including the GNU Public License].
Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, submitting a service request, and gathering additional information, see the monthly What’s New in Cisco Product Documentation, which also lists all new and revised Cisco technical documentation, at:

Subscribe to the What's New in Cisco Product Documentation as a Really Simple Syndication (RSS) feed and set content to be delivered directly to your desktop using a reader application. The RSS feeds are a free service and Cisco currently supports RSS Version 2.0.
Overview of the Cisco ISE Command-Line Interface

This chapter provides an overview of how to access the Cisco ISE command-line interface (CLI), the different command modes, and the commands that are available in each mode.

You can configure and monitor the Cisco ISE by using the web interface. You can also use the CLI to perform configuration and monitoring tasks that this guide describes.

The following sections describe the Cisco ISE CLI:

- Accessing the Cisco ISE Command Environment, page 1-1
- User Accounts and Modes in the Cisco ISE CLI, page 1-1
- Command Modes in the Cisco ISE CLI, page 1-4
- CLI Audit, page 1-9

Accessing the Cisco ISE Command Environment

You can access the Cisco ISE CLI through a Secure Shell (SSH) client or the console port using one of the following machines:

- Windows PC running Windows XP/Vista
- Apple Computer running Mac OS X 10.4 or later
- PC running Linux

For detailed information on accessing the CLI, see Chapter 2, “Using the Cisco ISE Command-Line Interface”

User Accounts and Modes in the Cisco ISE CLI

Two different types of accounts are available on the Cisco ISE CLI:

- Admin (administrator)
- Operator (user)
When you power up the Cisco ISE appliances for the first time, you are prompted to run the `setup` utility to configure the appliances. During this setup process, an administrator user account, also known as an Admin account, is created. After you enter the initial configuration information, the appliances automatically reboot and prompt you to enter the username and the password that you specified for the Admin account. You must use this Admin account to log into the Cisco ISE CLI for the first time.

An Admin can create and manage Operator (user) accounts, which have limited privileges and access to the Cisco ISE server. An Admin account also provides the functionality that is needed to use the Cisco ISE CLI.

To create more users (with admin and operator privileges) with SSH access to the Cisco ISE CLI, you must run the `username` command in the Configuration mode (see Command Modes in the Cisco ISE CLI, page 1-4).

Table 1-1 lists the command privileges for each type of user account: Admin and Operator (user).

Logging into the Cisco ISE node places you in the Operator (user) mode or the Admin (EXEC) mode, which always requires a username and password for authentication.

You can tell which mode you are in by looking at the prompt. A right angle bracket (>) appears at the end of the Operator (user) mode prompt; a pound sign (#) appears at the end of the Admin mode prompt, regardless of the submode.

### Command Modes in the Cisco ISE CLI

Cisco ISE supports these command modes:

- **EXEC**—Use the commands in this mode to perform system-level configuration. See EXEC Commands, page 1-5. In addition, refer to the commands in the EXEC that generate operational logs as listed in Table 1-6.

- **Configuration**—Use the commands in this mode to perform configuration tasks in the Cisco ISE. See Configuration Commands, page 1-8. In addition, refer to the commands in the configuration mode that generate operational logs as listed in Table 1-5.

EXEC Commands

EXEC commands primarily include system-level commands such as show and reload (for example, application installation, application start and stop, copy files and installations, restore backups, and display information).

- Table 1-2 describes the EXEC commands
- Table 1-3 describes the show commands in the EXEC mode

For detailed information on EXEC commands, see Understanding Command Modes, page 2-5.

EXEC or System-Level Commands

Table 1-2 describes the EXEC mode commands.

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>application install</td>
<td>Installs a specific application bundle.</td>
</tr>
<tr>
<td>application remove</td>
<td>Removes a specific application.</td>
</tr>
<tr>
<td>application reset-config</td>
<td>Resets the Cisco ISE configuration and clears the Cisco ISE database.</td>
</tr>
<tr>
<td>application reset-passwd</td>
<td>Resets the application password for a specific user (admin) in the application.</td>
</tr>
<tr>
<td>application start</td>
<td>Starts or enables a specific application.</td>
</tr>
<tr>
<td>application stop</td>
<td>Stops or disables a specific application.</td>
</tr>
<tr>
<td>application upgrade</td>
<td>Upgrades a specific application bundle.</td>
</tr>
<tr>
<td>backup</td>
<td>Performs a backup and places the backup in a repository.</td>
</tr>
<tr>
<td>backup-logs</td>
<td>Performs a backup of all the logs on the Cisco ISE to a remote location.</td>
</tr>
<tr>
<td>clock</td>
<td>Sets the system clock on the Cisco ISE server.</td>
</tr>
<tr>
<td>configure</td>
<td>Enters the Configuration mode.</td>
</tr>
<tr>
<td>copy</td>
<td>Copies any file from a source to a destination.</td>
</tr>
<tr>
<td>debug</td>
<td>Displays any errors or events for various command situations; for example, backup and restore, configuration, copy, resource locking, file transfer, and user management.</td>
</tr>
<tr>
<td>delete</td>
<td>Deletes a file in the Cisco ISE server.</td>
</tr>
<tr>
<td>dir</td>
<td>Lists the files in the Cisco ISE server.</td>
</tr>
<tr>
<td>exit</td>
<td>Disconnects the encrypted session with a remote system. Exits from the current command mode to the previous command mode.</td>
</tr>
<tr>
<td>forceout</td>
<td>Forces the logout of all the sessions of a specific Cisco ISE server system user.</td>
</tr>
<tr>
<td>halt</td>
<td>Disables or shuts down the Cisco ISE server.</td>
</tr>
<tr>
<td>help</td>
<td>Describes the help utility and how to use it in the Cisco ISE server.</td>
</tr>
<tr>
<td>mkdir</td>
<td>Creates a new directory.</td>
</tr>
<tr>
<td>nslookup</td>
<td>Queries the IPv4 address or hostname of a remote system.</td>
</tr>
<tr>
<td>patch</td>
<td>Installs System or Application patch.</td>
</tr>
</tbody>
</table>
Table 1-2  Summary of EXEC Commands (continued)

<table>
<thead>

<td>Disables the output (display of errors or events) of the <code>debug</code> command for various command situations; for example, backup and restore, configuration, copy, resource locking, file transfer, and user management.</td>
</tr>
<tr>
<td>write</td>
<td>Erases the startup configuration that forces to run the setup utility and prompt the network configuration, copies the running configuration to the startup configuration, and displays the running configuration on the console.</td>
</tr>
</tbody>
</table>

Show Commands

The `show` commands are used to display the Cisco ISE settings and are among the most useful commands. See Table 1-3 for a summary of the `show` commands.

The commands in Table 1-3 require the `show` command to be followed by a keyword; for example, `show application status`. Some `show` commands require an argument or variable after the keyword to function; for example, `show application version`.

Table 1-3  Summary of show Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>Displays information about the installed application; for example, status information or version information.</td>

<td>with hardware and device information.</td>
</tr>
</tbody>
</table>
Configuration Commands

Configuration commands include `interface` and `repository`. To access the Configuration mode, run the `configure` command in the EXEC mode.

Some of the configuration commands require that you enter the configuration submode to complete the configuration.

Table 1-4 describes the configuration commands.

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>backup-staging-url</td>
<td>Specifies a Network File System (NFS) temporary space or staging area for the remote directory for backup and restore operations.</td>
</tr>
<tr>
<td>cdp holdtime</td>
<td>Specifies the amount of time the receiving device should hold a Cisco Discovery Protocol packet from the Cisco ISE server before discarding it.</td>
</tr>
<tr>
<td>cdp run</td>
<td>Enables Cisco Discovery Protocol.</td>
</tr>
<tr>
<td>cdp timer</td>
<td>Specifies how often the Cisco ISE server sends Cisco Discovery Protocol updates.</td>
</tr>
<tr>
<td>clock timezone</td>
<td>Sets the time zone for display purposes.</td>
</tr>
<tr>
<td>do</td>
<td>Executes an EXEC-level command from the configuration mode or any configuration submode.</td>
</tr>
<tr>
<td></td>
<td><strong>Note</strong> To initiate, the <code>do</code> command precedes the EXEC command.</td>
</tr>
<tr>
<td>end</td>
<td>Returns to the EXEC mode.</td>
</tr>
<tr>
<td>exit</td>
<td>Exits the Configuration mode.</td>
</tr>
<tr>
<td>hostname</td>
<td>Sets the hostname of the system.</td>
</tr>
<tr>
<td>icmp echo</td>
<td>Configures the ICMP echo requests.</td>
</tr>
<tr>
<td>interface</td>
<td>Configures an interface type and enters the interface configuration mode.</td>
</tr>
<tr>
<td>ipv6 address</td>
<td>Enables IPv6 stateless autoconfiguration in the interface configuration mode.</td>
</tr>

<td>Adds a user to the system with a password and a privilege level.</td>
</tr>
</tbody>
</table>

For detailed information on Configuration mode and submode commands, see Understanding Command Modes, page 2-5.

**CLI Audit**

You must have administrator access to execute the Cisco ISE configuration commands. Whenever an administrator logs in to the configuration mode and executes a command that causes configurational changes in the Cisco ISE server, the information related to those changes is logged in the Cisco ISE operational logs.

Table 1-5 describes the Configuration mode commands that generate operational logs.

Table 1-5 Configuration Mode Commands for the Operation Log

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>clock</td>
<td>Sets the system clock on the Cisco ISE server.</td>

Using the Cisco ISE Command-Line Interface

This chapter provides helpful tips for understanding and configuring the Cisco Identity Services Engine (Cisco ISE) using the command-line interface (CLI). Cisco ISE can be deployed in small, medium, and large deployments and is available on different platforms and also as a software that can run on VMware. This chapter contains the following sections:

- Before Accessing the Cisco ISE CLI, page 2-1
- Accessing the Cisco ISE CLI, page 2-3
- Understanding Command Modes, page 2-5
- Navigating the CLI Commands, page 2-9
- Where to Go Next, page 2-12

Before Accessing the Cisco ISE CLI

Before logging in to the Cisco ISE CLI, ensure that you have completed the installation tasks as specified in the Cisco Identity Services Engine Hardware Installation Guide, Release 1.0.4.

Running Setup to Configure the Cisco ISE

When you power up the Cisco ISE appliances for the first time, you are prompted to run the setup utility to configure the Cisco ISE appliances. Before you run the utility using the setup command, ensure that you have values for the following network configuration prompts:

- Hostname
- IP address—Ethernet interface address
- Netmask
- Default Gateway
- DNS domain name
- Primary nameserver
- Primary NTP server (optional)
- System time zone
- Username (user name for CLI-admin user)
- Password (password for CLI-admin user)
Before Accessing the Cisco ISE CLI

This example shows sample output of the setup command.

```
**********************************************
Please type 'setup' to configure the appliance
**********************************************
localhost login:  setup
Press 'Ctrl-C' to abort setup
Enter hostname[]: ise-server-1
Enter IP address[]: 10.0.0.0
Enter Netmask[]: 10.255.10.255
Enter default gateway[]: 172.10.10.10
Enter default DNS domain[]: cisco.com
Enter Primary nameserver[]: 200.150.200.150
Add/Edit another nameserver? Y/N: n
Enter primary NTP domain[]: clock.cisco.com
Add/Edit another NTP domain? Y/N: n
Enter system time zone[]: UTC
Enter username [admin]: admin
Enter password:
Enter password again:
Bringing up the network interface...
Pinging the gateway...
Pinging the primary nameserver...
Do not use 'Ctrl-C' from this point on...
Appliance is configured
```

After the Cisco ISE software has been configured, the Cisco ISE system reboots automatically. To log back into the Cisco ISE CLI, you must enter the CLI-admin user credentials that you configured during Setup.

Once Cisco ISE reboots, you are prompted to enter and confirm the new database administrator and database user passwords.

```
Welcome to the ISE initial setup. The purpose of this setup is to provision the internal database. This setup requires you to create a database administrator password and also create a database user password.

Please follow the prompts below to create the database administrator password.

Enter new database admin password:
Confirm new database admin password:
Successfully created database administrator password.

Please follow the prompts below to create the database user password.

Enter new database user password:
Confirm new database user password:
Successfully created database user password.
```

```
Running database cloning script...
Running database network config assistant tool...
Extracting ISE database contents...
Starting ISE database processes...
...
```

```
machine_name login:
```

where machine_name identifies the hostname that you specified when you ran the setup command.

In this example, this prompt appears:

```
ise login:
```
To log in, use the administrator user account (and the corresponding password) that you created during the setup process. You must also use this Admin account to log into the Cisco ISE CLI for the first time. After accessing the CLI as an administrator, you can create more users (with admin and operator privileges) with SSH access to the CLI by running the `username` command in the Configuration mode.

---

**Note**

The administrator user account and the corresponding password (a CLI user account) that you created during the initial setup wizard can be used to manage the Cisco ISE application using the CLI. The CLI user has privileges to start and stop the Cisco ISE application software, backup and restore the Cisco ISE application data, apply software patches and upgrades to the Cisco ISE application software, view all the system and the application logs, and reload or shutdown the Cisco ISE appliance. To protect the CLI user credentials, explicitly create users with access to the CLI.

See the “Accessing the Cisco ISE CLI” section on page 2-3.

---

**Note**

Any users that you create from the Cisco ISE web interface cannot automatically log into the Cisco ISE CLI. You must explicitly create users with access to the CLI. To create these users, you must log in to the CLI using the Admin account that you created during setup; then, enter the Configuration mode, and run the `username` command.

### Accessing the Cisco ISE CLI

Before logging in to the Cisco ISE CLI, ensure that you have completed the hardware installation and configuration process outlined in “Before Accessing the Cisco ISE CLI” section on page 2-1.

To log into the Cisco ISE server and access the CLI, use an SSH Secure Shell client or the console port.

---

**Note**

To access the Cisco ISE CLI environment, use any SSH client that supports SSH v2.

You can log in from:
- A PC running Windows XP/Vista.
- A PC running Linux.
- An Apple computer running Mac OS X 10.4 or later.
- Any terminal device compatible with VT100 or ANSI characteristics. On the VT100-type and ANSI devices, you can use cursor-control and cursor-movement key. Keys include left arrow, up arrow, down arrow, right arrow, Delete, and Backspace. The CLI senses the use of the cursor-control keys and automatically uses the optimal device characteristics (see the “Supported Hardware and Software Platforms” section on page 2-3).

To exit the CLI, use the `exit` command from the EXEC mode. You are currently in one of the configuration modes and you want to exit the CLI, enter the `end`, `exit`, or `Ctrl-z` command to return to the EXEC mode, and then enter the `exit` command (see EXEC Mode, page 2-6).

### Supported Hardware and Software Platforms

The following valid terminal types can access the Cisco ISE:
- 1178
Opening the CLI with Secure Shell

You can also access the Cisco ISE through an SSH client or the console port.

Note

To access the Cisco ISE CLI environment, use any SSH client that supports SSH v2.

The following example shows you how to log in with a Secure Shell (SSH) client (connecting to a wired WAN) via a PC by using Windows XP. Assuming that Cisco ISE is preconfigured through the setup utility to accept an Admin (administrator) user, log in as Admin.

Step 1
Use any SSH client and start an SSH session.
The SSH window appears.

Step 2
Press Enter or Spacebar to connect.
The Connect to Remote Host window appears.

Step 3
Enter a hostname, username, port number, and authentication method.
In this example, you enter ise for the hostname, admin for the username, and 22 for the port number; and, for the authentication method, choose Password from the drop-down list.

Step 4
Click Connect, or press Enter.
The Enter Password window appears.

Step 5
Enter your assigned password for the administrator.
The SSH with the Add Profile window appears.

Step 6
(Optional) Enter a profile name in the text box and click Add to Profile.

Step 7
Click Close on the Add Profile window.

See the terminfo database for a complete listing.
The Cisco ISE prompt ise/admin# appears. You can now enter Cisco ISE CLI commands.

## Opening the CLI Using a Local PC

If you need to configure Cisco ISE locally (without connecting to a wired LAN), you can connect a PC to the console port on the Cisco ISE appliance by using a null-modem cable.

The serial console connector (port) provides access to the CLI locally by connecting a terminal to the console port. The terminal is a PC running terminal-emulation software or an ASCII terminal. The console port (EIA/TIA-232 asynchronous) requires only a null-modem cable.

To connect a PC running terminal-emulation software to the console port, use a DB-9 female to DB-9 female null-modem cable.

To connect an ASCII terminal to the console port, use a DB-9 female to DB-25 male straight-through cable with a DB-25 female to DB-25 female gender changer.

The default parameters for the console port are 9600 baud, 8 data bits, no parity, 1 stop bit, and no hardware flow control.

**Note**

If you are using a Cisco switch on the other side of the connection, set the switchport to duplex auto, speed auto (the default).

To connect to the console port and open the CLI, complete the following steps:

**Step 1** Connect a null-modem cable to the console port on the Cisco ISE appliance and to the COM port on your PC.

**Step 2** Set up a terminal emulator to communicate with the Cisco ISE. Use the following settings for the terminal emulator connection: 9600 baud, 8 data bits, no parity, 1 stop bit, and no hardware flow control.

**Step 3** When the terminal emulator activates, press Enter.

**Step 4** At the window, enter your username, then press Enter.

**Step 5** Enter the password, then press Enter.

When the CLI activates, you can enter CLI commands to configure the Cisco ISE.

## Understanding Command Modes

This section describes the Cisco ISE command modes in detail. The primary modes of operation are:

- EXEC Mode, page 2-6
- Configuration Mode, page 2-7
- Configuration Submodes, page 2-8
EXEC Mode

When you start a session on the Cisco ISE, you begin in the Admin or EXEC mode. From the EXEC mode, you can enter the Configuration mode. Most of the EXEC commands (one-time commands), such as `show` commands, display the current configuration status. The Admin or EXEC mode prompt consists of the device name or hostname before a pound sign (#), as shown:

```
ise/admin# (Admin or EXEC mode)
```

Note

Throughout this guide, the Cisco ISE server uses the name `ise` in place of the hostname and `admin` of the Cisco ISE server for the user account.
You can always tell when you are in the EXEC mode or the Configuration mode by looking at the prompt. In the:

- EXEC mode, a pound sign (#) appears after the Cisco ISE server hostname and your username. For example:
  
  ise/admin#

- Configuration mode, the ‘config’ keyword and a pound sign (#) appear after the hostname of the Cisco ISE server and your username. For example:
  
  ise/admin# configure
  
  Enter configuration commands, one per line. End with CNTL/Z.
  ise/admin(config)# (configuration mode)

If you are familiar with UNIX, you can equate the EXEC mode to root access. You could also equate it to the administrator level in Windows NT or the supervisor in NetWare. In this mode, you have permission to access everything in the Cisco ISE server, including the configuration commands. However, you cannot enter configuration commands directly. Before you can change the actual configuration of the Cisco ISE server, you must enter the Configuration mode by running the configure or configure terminal (conf t) command. Enter this command only when in the EXEC mode.

For example:

ise/admin# conf t
Enter configuration commands, one per line. End with CNTL-Z.
ise(config)# (configuration mode)

The Configuration mode has several submodes; each has its own prompt. To enter these submodes, you must first enter the Configuration mode by entering the configure terminal command.

To exit the Configuration mode, enter the end, exit, or Ctrl-z command. To exit the EXEC mode, enter the exit command. To exit both Configuration and EXEC modes, enter this sequence of commands:

ise/admin(config)# exit
ise/admin# exit

To obtain a listing of commands in the EXEC mode, enter a question mark (?):

ise/admin# ?

Configuration Mode

Use the Configuration mode to make changes to the existing configuration. When you save the configuration, these commands remain across Cisco ISE server reboots, but only if you run either of these commands:

- copy running-config startup-config
- write memory

To enter the Configuration mode, run the configure or configure terminal (conf t) command in the EXEC mode. When in the Configuration mode, the Cisco ISE expects configuration commands.

For example:

ise/admin# configure
  
  Enter configuration commands, one per line. End with CNTL-Z.
  ise/admin(config)# (configuration mode)
From this level, you can enter commands directly into the Cisco ISE configuration. To obtain a listing
of commands in this mode, enter a question mark (?):

ise/admin(config)# ?

The Configuration mode has several configuration submodes. Each of these submodes places you deeper
in the prompt hierarchy. When you enter exit, the Cisco ISE backs you out one level and returns you to
the previous level. When you enter exit again, the Cisco ISE backs you out to the EXEC level.

---

Note
In the Configuration mode, you can alternatively enter Ctrl-z instead of the end or exit command.

---

**Configuration Submodes**

In the configuration submodes, you can enter commands for specific configurations. For example:

ise/admin# config t
ise/admin(config)# interface GigabitEthernet 0
ise/admin(config-GigabitEthernet)#

To obtain a list of commands in this mode, enter a question mark (?):

ise/admin(config-GigabitEthernet)# ?

Use the exit or end command to exit this prompt and return to the configuration prompt.

Table 2-1 lists the commands in the interface GigabitEthernet 0 configuration submode. Other
configuration submodes exist including those specific to the kron, repository, and password policy
commands.

**Table 2-1  Command Options in the Interface GigabitEthernet 0 Configuration Submode**

<table>
<thead>
<tr>
<th>Command</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>ise/admin(config)# interface GigabitEthernet 0</td>
<td>Configure ethernet interface:</td>
</tr>
<tr>
<td></td>
<td>do EXEC command</td>
</tr>
<tr>
<td></td>
<td>end Exit from configure mode</td>
</tr>
<tr>
<td></td>
<td>exit Exit from this submode</td>
</tr>

</tr>
<tr>
<td></td>
<td>address Configure IP address</td>
</tr>
<tr>
<td>ise/admin(config-GigabitEthernet)#</td>
<td>ip</td>
</tr>
</tbody>
</table>

Enter the command that you want to configure for the interface. This example uses the interface
GigabitEthernet command.

Enter ? to display what you must enter next on the command line. This example shows the available
interface GigabitEthernet configuration submode commands.

Enter the command that you want to configure for the interface. This example uses the ip command.
Enter ? to display what you must enter next on the command line. This example shows the available
ip configuration submode commands.
### Table 2-1 Command Options in the Interface GigabitEthernet 0 Configuration Submode

<table>
<thead>
<tr>
<th>Command</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>ip address ?</code> <code>&lt;A.B.C.D&gt;</code> IPv4 address</td>
<td>Enter the command that you want to configure for the interface. This example uses the <code>ip address</code> command. Enter <code>?</code> to display what you must enter next on the command line. In this example, you must enter an IPv4 address. A carriage return <code>&lt;cr&gt;</code> does not appear; therefore, you must enter additional arguments to complete the command.</td>
</tr>
<tr>
<td><code>ip address 172.16.0.1 ?</code> <code>&lt;A.B.C.D&gt;</code> Network mask</td>
<td>Enter the keyword or argument that you want to use. This example uses the 172.16.0.1 IP address. Enter <code>?</code> to display what you must enter next on the command line. In this example, you must enter a network mask. A carriage return <code>&lt;cr&gt;</code> does not display; therefore, you must enter additional arguments to complete the command.</td>
</tr>
<tr>
<td><code>ip address 172.16.0.1 255.255.255.224 ?</code> <code>&lt;cr&gt;</code> Carriage Return</td>
<td>Enter the network mask. This example uses the 255.255.255.224 IP address. Enter <code>?</code> to display what you must enter next on the command line. In this example, you can press Enter. A carriage return <code>&lt;cr&gt;</code> displays; you can press Enter to complete the command.</td>
</tr>
</tbody>
</table>

### Navigating the CLI Commands

This section describes how to navigate the commands and modes on the Cisco ISE.

- **Getting Help**, page 2-9
- **Using the No and Default Forms of Commands**, page 2-10
- **Command Line Conventions**, page 2-10

### Getting Help

Use the question mark (`?`) and the arrow keys to help you enter commands:

- For a list of available commands, enter a question mark (`?`):
  ```
  ise/admin# ?
  ```
- To complete a command, enter a few known characters before `?` (with no space):
  ```
  ise/admin# s?
  ```
Navigating the CLI Commands

Chapter 2      Using the Cisco ISE Command-Line Interface

To display keywords and arguments for a command, enter ? at the prompt or after entering part of a command followed by a space:

ise/admin# show ?

The Cisco ISE displays a list and brief description of available keywords and arguments.

Note

The <cr> symbol in command help stands for “carriage return”, which means to press the Return or the Enter key. The <cr> at the end of command help output indicates that you have the option to press Enter to complete the command and that the arguments and keywords in the list preceding the <cr> symbol are optional. The <cr> symbol by itself indicates that no more arguments or keywords are available, and that you must press Enter to complete the command.

To redisplay a command that you previously entered, press the Up Arrow key. Continue to press the Up Arrow key to see more commands.

Using the No and Default Forms of Commands

Some EXEC or configuration commands have a no form. In general, use the no form to disable a function. Use the command without the no keyword to re-enable a disabled function or to enable a function disabled by default; for example, an IP address enabled by default. To disable the IP address, use the no ip address command; to re-enable the IP address, use the ip address command.

Configuration commands can also have a default form, which returns the command settings to the default values. Most commands disable by default, so in such cases using the default form has the same result as using the no form of the command. However, some commands are enabled by default and have variables set to certain default values. In these cases, the default form of the command enables the command and sets the variables to their default values.

See Appendix A, “Cisco ISE Command Reference,” for a description of the complete syntax of the configuration commands, and the no and default forms of a command.

Command Line Conventions

While reading this document, you might not understand some of the information if you do not know certain basic conventions of CLI usage.

- Command Line Editing Key Conventions, page 2-10
- Command Line Completion, page 2-11
- Continuing Output at the --More-- Prompt, page 2-12

Command Line Editing Key Conventions

Cisco ISE provides a number of keyboard shortcuts that you can use to edit an entered line.

Tab

Press Tab to try to finish the current command.

If you press the Tab key:

- At the beginning of a line, the system lists all the short-form options.
When you enter a partial command, the system lists all the short form options beginning with those characters.

When only one possible option is available, the system fills in the option automatically.

**Ctrl-c**

Press Ctrl-c to abort the sequence. Breaks out of any executing command and returns to the previous mode.

**Ctrl-z**

Press Ctrl-z to exit the Configuration mode and return to the previous configuration mode.

?  
Enter a question mark (?) at the prompt to list the available commands (see *Getting Help, page 2-9*).

### Command Line Completion

Command-line completion makes the Cisco ISE CLI more user-friendly. It saves you extra key strokes and helps out when you cannot remember the syntax of a command.

For example, in the `show running-config` command:

```
ise/admin# show running-config
```

You could have used:

```
ise/admin# sh run
```

The Cisco ISE expands the command `sh run` to `show running-config`.

Another shortcut is to press the Tab key after you type `sh`; the Cisco ISE CLI fills in the rest of the command completion, in this case `show`.

If the Cisco ISE CLI does not understand a command, it repeats the entire command line and places a caret symbol (^) under the point at which it could not parse the command.

For example:

```
ise/admin# show unning-configuration
```

```
^ Invalid input detected at ‘^’ marker.
```

The caret symbol (^) points to the first letter in the command line that the Cisco ISE does not understand. Usually, this means that you need to provide additional arguments to complete the command or you mispelled the command. In this case, you omitted the “r” in the “unnering” command. To fix the error, retype the command.

In another form of command-line completion, you can start a command by entering the first few characters, then pressing the Tab key. As long as you can match one command, the Cisco ISE CLI will complete the command. For example, if you type `sh` and press Tab, the Cisco ISE completes the `sh` with `show`. If the Cisco ISE does not complete the command, you can enter a few more letters and press Tab again. For more information, see *Tab, page 2-10*. 
Chapter 2  Using the Cisco ISE Command-Line Interface

Where to Go Next

Continuing Output at the --More-- Prompt

When working with the Cisco ISE CLI, output often extends beyond the visible screen length. For cases where output continues beyond the bottom of the screen, such as with the output of many `?` or `show` commands, the output pauses and a `--More--` prompt appears at the bottom of the screen. To resume output, press Return to scroll down one line, or press the spacebar to display the next full screen of output.

Tip

If output pauses on your screen but you do not see the `--More--` prompt, try entering a smaller value for the screen length by using the `terminal length` EXEC command. Command output will not pause if you set the length value to zero (0).

Where to Go Next

Now that you are familiar with some of the Cisco ISE CLI basics, you can begin to configure the Cisco ISE by using the CLI.

Remember that:

- You can use the question mark (`?`) and arrow keys to help you enter commands.
- Each command mode restricts you to a set of commands. If you have difficulty entering a command, check the prompt and then enter the question mark (`?`) to see a list of available commands.
- To disable a feature, enter the keyword `no` before the command; for example, `no ip address`.
- You must save your configuration changes so that you preserve them during a system reload or power outage.

Cisco ISE Command Reference

This appendix contains an alphabetical listing of the commands specific to the Cisco Identity Services Engine (Cisco ISE).

The commands comprise these modes:

- **EXEC**
  - System-level
  - Show
- **Configuration**
  - Configuration submode

Note

Use the EXEC mode system-level `config` or `configure` command to access the Configuration mode.

Each of the commands in this appendix is followed by a brief description of its use, command syntax, usage guidelines, and one or more examples. Throughout this appendix, the Cisco ISE server uses the name `ise` in place of the Cisco ISE server’s hostname.

Note

If an error occurs in any command usage, use the `debug` command to determine the cause of the error.

This appendix describes:

- EXEC Commands, page A-2
- Show Commands, page A-52
- Configuration Commands, page A-88
EXEC Commands

This section lists each EXEC command and includes a brief description of its use, command syntax, usage guidelines, and sample output.

Table A-1 lists the EXEC commands that this section describes.

<table>
<thead>
<tr>
<th>Command</th>
<th>Syntax Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>application install</td>
<td>The application command for application install and administration.</td>
</tr>
<tr>
<td>install</td>
<td>Installs a specific application.</td>
</tr>
<tr>
<td>application-bundle</td>
<td>Application bundle filename. Supports up to 255 alphanumeric characters.</td>
</tr>
<tr>
<td>remote-repository-name</td>
<td>Remote repository name. Supports up to 255 alphanumeric characters.</td>
</tr>
</tbody>
</table>

application install

Note: You are not allowed to run the application install command from the CLI under normal operations because the Cisco ISE application is preinstalled with a Cisco IOS image on all supported appliances and VMware.

To install a specific application other than the Cisco ISE, use the application install command in the EXEC mode. To remove this function, use the application remove command.

application install application-bundle remote-repository-name

Syntax Description

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>The application command for application install and administration.</td>
</tr>
<tr>
<td>install</td>
<td>Installs a specific application.</td>

<tr>
<td>application-bundle</td>
<td>Application bundle filename. Supports up to 255 alphanumeric characters.</td>
</tr>
<tr>
<td>remote-repository-name</td>
<td>Remote repository name. Supports up to 255 alphanumeric characters.</td>
</tr>
</tbody>
</table>

Defaults

No default behavior or values.
**EXEC Commands**

**Command Modes**
EXEC

**Usage Guidelines**
Installs the specified application bundle on the appliance. The application bundle file is pulled from the specified repository.

If you issue the `application install` or `application remove` command when another installation or removal operation of an application is in progress, you will see the following warning message:

An existing application install, remove, or upgrade is in progress. Try again shortly.

**Examples**

**Example 1**
```
ise/admin# application install ise-appbundle-1.0.4.573.i386.tar.gz myrepository
Do you want to save the current configuration? (yes/no) [yes]? y
Please enter yes or no
Do you want to save the current configuration? (yes/no) [yes]? yes
Generating configuration...
Saved the running configuration to startup successfully
Initiating Application installation...
Extracting ISE database content...
Starting ISE database processes...
Restarting ISE database processes...
Creating ISE M&T session directory...
Performing ISE database priming...
Application successfully installed
ise/admin#
```

**Example 2**
```
ise/admin# application install ise-appbundle-1.0.4.573.i386.tar.gz myrepository
Do you want to save the current configuration? (yes/no) [yes]? no
Initiating Application installation...
Extracting ISE database content...
Starting ISE database processes...
Restarting ISE database processes...
Creating ISE M&T session directory...
Performing ISE database priming...
Application successfully installed
ise/admin#
```

<td>Shows application information for the installed application packages on the system.</td>
</tr>
</tbody>
</table>
application remove

Note
You are not allowed to run the application remove command from the CLI to remove the Cisco ISE application unless you are explicitly instructed for an upgrade.

To remove a specific application other than the Cisco ISE, use the application remove command in the EXEC mode. To remove this function, use the no form of this command.

    application remove application-name

Syntax Description

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>application</code></td>
<td>The application command for application install and administration.</td>
</tr>
<tr>
<td><code>remove</code></td>
<td>Removes or uninstalls an application.</td>
</tr>
<tr>
<td><code>application-name</code></td>
<td>Application name. Supports up to 255 alphanumeric characters.</td>
</tr>
</tbody>
</table>

Defaults
No default behavior or values.

Command Modes
EXEC

Usage Guidelines
Removes or uninstalls an application.

Examples
ise/admin# application remove ise
Continue with application removal? [y/n] y
Application successfully uninstalled
ise/admin#

Related Commands

</tbody>
</table>
application reset-config

To reset the Cisco ISE application configuration and clear the Cisco ISE database, use the `application reset-config` command in the EXEC mode. (This command does not reset your initial chassis configuration settings like the IP address, netmask, administrator user interface password, and so on.) Part of this reset function requires you to enter new Cisco ISE database administrator and user passwords.

```
application reset-config application-name
```

### Syntax Description

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>The application command for application install and administration.</td>
</tr>
<tr>
<td>reset-config</td>
<td>Resets the Cisco ISE application configuration and clears the Cisco ISE database.</td>
</tr>
<tr>
<td>application-name</td>
<td>Name of the application configuration you want to reset. Supports up to 255 alphanumeric characters.</td>
</tr>
</tbody>
</table>

### Defaults

No default behavior or values.

### Command Modes

EXEC

### Usage Guidelines

You can use the `application reset-config` command to reset the Cisco ISE configuration and clear the Cisco ISE database without reimaging the Cisco ISE appliance or VMware, and reset the Cisco ISE database administrator and user passwords.

### Examples

#### Example 1

```
ise/admin# application reset-config ise
Initialize your identity policy database to factory defaults? (y/n): y
Reinitializing local policy database to factory default state...
Stopping ISE Monitoring & Troubleshooting Log Processor...
Stopping ISE Monitoring & Troubleshooting Log Collector...
Stopping ISE Monitoring & Troubleshooting Alert Process...
Stopping ISE Application Server...
Stopping ISE Monitoring & Troubleshooting Session Database...
Stopping ISE Database processes...
Please follow the prompts below to create the database administrator password.

Enter new database admin password:
Confirm new database admin password:
Successfully created database administrator password.

Please follow the prompts below to create the database user password.

Enter new database user password:
Confirm new database user password:
Successfully created database user password.

Extracting ISE database content...
Starting ISE database processes...
Restarting ISE database processes...
```
Creating ISE M&T session directory...
Performing ISE database priming...

Application successfully reset configuration
ise/admin#

Example 2
ise/admin# application reset-config ise
Initialize your identity policy database to factory defaults? (y/n): n
Existing policy database will be retained.

Application successfully reset configuration
ise/admin#

application reset-passwd

This command was introduced in Cisco ISE Maintenance Release 1.0.4 and does not apply to regular Cisco ISE, Release 1.0. Use this command to reset the administrator user interface password. It does not affect the command-line interface password for the specified administrator ID.

To reset the administrator user interface login password for a specified user account (usually an existing administrator account) in Cisco ISE after the administrator account has been disabled due to incorrect password entries, use the application reset-passwd command in the EXEC mode. You can also use this command to reset the Cisco ISE database administrator and user passwords.

```
application reset-passwd application-name administrator-ID | internal-database-admin | internal-database-user
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Syntax Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
</tr>
<tr>
<td>reset-passwd</td>
</tr>
<tr>
<td>application-name</td>
</tr>
<tr>
<td>administrator-ID</td>
</tr>
<tr>
<td>internal-database-admin</td>
</tr>
<tr>
<td>internal-database-user</td>
</tr>
</tbody>
</table>

**Note** If you reset the internal database user password, Cisco ISE prompts you to restart the application. The internal database user password is reset after you restart the Cisco ISE application.

**Defaults**

No default behavior or values.
EXEC Commands

Command Modes

EXEC

Usage Guidelines

If you enter an incorrect password for your administrator user ID more than the specified number of times necessary to disable the administrator account in Cisco ISE, then the user interface “locks you out” of the system. Cisco ISE suspends the credentials for that administrator ID until you have an opportunity to reset the password associated with that administrator ID. It is the Administration ISE node on which the password is being reset only from the CLI.

Typically, you need to specify the Cisco ISE database administrator and user passwords only once, and only during initial configuration or upgrade. If it is necessary to change either of these passwords later, you can use the application reset-passwd command line function for this purpose.

Examples

Example 1
ise/admin# application reset-passwd ise admin
Enter new password: *******
Confirm new password: *******
Password reset successfully.
ise/admin#

Example 2
ise/admin# application reset-passwd ise internal-database-admin
Enter new database admin password: ***********
Confirm new database admin password: ***********
Password reset successfully.
ise/admin#

application start

To enable a specific application, use the application start command in the EXEC mode. To remove this function, use the no form of this command.

application start application-name

Syntax Description

<table>
<thead>
<tr>
<th>Syntax Description</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>The application command for application install and administration.</td>
</tr>
<tr>
<td>application start</td>
<td>Enables an application bundle.</td>
</tr>
<tr>
<td>application-name</td>
<td>Name of the predefined application that you want to enable. Supports up to 255 alphanumeric characters.</td>
</tr>
</tbody>
</table>

Defaults

No default behavior or values.

Command Modes

EXEC
**EXEC Commands**

**Usage Guidelines**

Enables an application.

You cannot use this command to start the Cisco ISE application. If you use this command to start the application, you can see that the Cisco ISE is already running.

**Examples**

```
ise/admin# application start ise
ISE Database processes is already running, PID: 7585
ISE M&T Session Database is already running, PID: 7851
ISE Application Server process is already running, PID: 7935
ISE M&T Log Collector is already running, PID: 7955
ISE M&T Log Processor is already running, PID: 8005
ISE M&T Alert Processor is already running, PID: 8046
```

```
ise/admin#
```

**Related Commands**

</tr>
<tr>
<td>application upgrade</td>
<td>Upgrades an application bundle.</td>
</tr>
<tr>
<td>show application</td>
<td>Shows application information for the installed application packages on the system.</td>
</tr>
</tbody>
</table>

**application stop**

To disable a specific application, use the `application stop` command in the EXEC mode. To remove this function, use the `no` form of this command.

```
application stop application-name
```

**Syntax Description**

- `application` The application command for application install and administration.
- `stop` Disables an application.
- `application-name` Name of the predefined application that you want to disable. Supports up to 255 alphanumeric characters.

**Defaults**

No default behavior or values.

**Command Modes**

EXEC

**Usage Guidelines**

Disables an application.
Examples

ise/admin# application stop ise
Stopping ISE Monitoring & Troubleshooting Log Processor...
Stopping ISE Monitoring & Troubleshooting Log Collector...
Stopping ISE Monitoring & Troubleshooting Alert Process...
Stopping ISE Application Server...
Stopping ISE Monitoring & Troubleshooting Session Database...
Stopping ISE Database processes...
ise/admin#

</tr>
</tbody>
</table>

application upgrade

To upgrade a specific application bundle, use the **application upgrade** command in the EXEC mode.

```
application upgrade application-bundle remote-repository-name
```

Syntax Description

<table>
<thead>
<tr>
<th>Syntax Description</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>The application command for application install and administration.</td>
</tr>
<tr>
<td>upgrade</td>
<td>Upgrades a specific application bundle in the remote repository.</td>
</tr>
<tr>
<td>application-bundle</td>
<td>Application name. Supports up to 255 alphanumeric characters.</td>
</tr>
<tr>
<td>remote-repository-name</td>
<td>Remote repository name. Supports up to 255 alphanumeric characters.</td>
</tr>
</tbody>
</table>

Defaults

No default behavior or values.

Command Modes

EXEC

Usage Guidelines

Upgrades an application bundle, and preserves any application configuration data.

If you issue the **application upgrade** command when another application upgrade operation is in progress, you will see the following warning message:

An existing application install, remove, or upgrade is in progress. Try again shortly.

⚠️ Caution

Do not issue the **backup** or **restore** commands when the upgrade is in progress. This action might cause the database to be corrupted.
Note

Before attempting to use this application upgrade command to upgrade to a newer release, you must read the upgrade instructions in the release notes supplied with that newer release. The release notes contains important instructions updated for upgrading to the newer release, which must be followed.

Examples

Example 1
ise/admin# application upgrade ise-appbundle-1.0.4.573.i386.tar.gz http

Save the current ADE-OS running configuration? (yes/no) [yes]? yes
Generating configuration...
Saved the ADE-OS running configuration to startup successfully
Initiating Application Upgrade...
Stopping ISE application before upgrade...
Running ISE Database upgrade...
Upgrading ISE Database schema...
ISE Database schema upgrade completed.
Running ISE Global data upgrade as this node is a STANDALONE...
Running ISE data upgrade for node specific data...
Application upgrade successful
ise/admin#

Example 2
ise/admin# application upgrade ise-appbundle-1.0.4.573.i386.tar.gz http

Save the current ADE-OS running configuration? (yes/no) [yes]? no
Initiating Application Upgrade...
Stopping ISE application before upgrade...
Running ISE Database upgrade...
Upgrading ISE Database schema...
ISE Database schema upgrade completed.
Running ISE Global data upgrade as this node is a STANDALONE...
Running ISE data upgrade for node specific data...
Application upgrade successful
ise/admin#

backup

To perform a backup (including the Cisco ISE and Cisco ADE OS data) and place the backup in a repository, use the backup command in the EXEC mode. To perform a backup of only the Cisco ISE application data without the Cisco ADE OS data, use the application command.
Before attempting to use this `backup` command in the EXEC mode, you must copy the running configuration to a safe location, such as a network server, or save it as the Cisco ISE server startup configuration. You can use this startup configuration when you restore or troubleshoot your Cisco ISE application from the backup and system logs. For more information of copying the running configuration to the startup configuration, see the "copy" section on page A-15.

```
backup backup-name repository repository-name
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>backup</td>
<td>The command to perform a backup the Cisco ISE and Cisco ADE OS and place the backup in a repository.</td>
</tr>
<tr>
<td>backup-name</td>
<td>Name of backup file. Supports up to 100 alphanumeric characters.</td>
</tr>
<tr>
<td>repository</td>
<td>Repository command.</td>
</tr>
<tr>
<td>repository-name</td>
<td>Location where the files should be backed up to. Supports up to 80 alphanumeric characters.</td>
</tr>
<tr>
<td>application</td>
<td>Application command (application-only backup, excludes the Cisco ODE OS system data).</td>
</tr>
<tr>
<td>application-name</td>
<td>Application name. Supports up to 255 alphanumeric characters.</td>
</tr>
</tbody>
</table>

**Defaults**

No default behavior or values.

**Command Modes**

EXEC

**Usage Guidelines**

Performs a backup of the Cisco ISE and Cisco ADE OS data and places the backup in a repository. To perform a backup of only the Cisco ISE application data without the Cisco ADE OS data, use the `application` command.

**Examples**

**Example 1**

```
ise/admin# backup mybackup repository myrepository
% Creating backup with timestamped filename: mybackup-100805-1222.tar.gpg
ise/admin#
```

**Example 2**

```
ise/admin# backup mybackup repository myrepository application ise
% Creating backup with timestamped filename: mybackup-100805-1240.tar.gpg
ise/admin#
```

</tbody>
</table>

**clock**

To set the system clock, use the `clock` command in the EXEC mode. To remove this function, use the `no` form of this command.

```
clock set [month day hh:mm:ss yyyy]
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>clock set</code></td>
<td>The command that sets the system clock.</td>
</tr>
<tr>
<td><code>month</code></td>
<td>Current month of the year by name. Supports up to three alphabetic characters. For example, Jan for January.</td>
</tr>
<tr>
<td><code>day</code></td>
<td>Current day (by date) of the month. Value = 0 to 31. Supports up to two numbers.</td>
</tr>
<tr>
<td><code>hh:mm:ss</code></td>
<td>Current time in hours (24-hour format), minutes, and seconds.</td>
</tr>
<tr>
<td><code>yyyy</code></td>
<td>Current year (no abbreviation).</td>
</tr>
</tbody>
</table>

**Defaults**

No default behavior or values.

**Command Modes**

EXEC

**Usage Guidelines**

Sets the system clock. You must restart the Cisco ISE server after you reset the clock for the change to take effect.

**Warning**

Changing the system time on a Cisco ISE appliance causes the Cisco ISE application to be unusable.

For more information on how changing system time impacts different Cisco ISE nodes types of your deployment and the steps to recover from the impact, see the “Standalone or Primary ISE Node” section on page A-13 and “Secondary ISE Node” section on page A-14.

**Standalone or Primary ISE Node**

Changing the system time after installation is not supported on a Standalone or Primary ISE node.

If you inadvertently change the system time, do the following:

- Revert to the original system time (the time before it changed).
EXEC Commands

- Run the `application reset-config ise` command from the CLI of that node.
- Restore from the last known good backup before time change on that node.

**Secondary ISE Node**

Changing the system time on a secondary node renders it unusable on your deployment. To synchronize the system time of the secondary node with the primary node, do the following:

- Deregister the secondary node.
- Correct the system time to be in sync with the primary node.
- Run the `application reset-config ise` command from the CLI of that node.
- Reregister the node as a secondary node to the primary node.

**Note**

To ensure that you have the correct system time set at the time of installation, the setup wizard prompts for an NTP server and tries to sync with it. You must ensure that the configured NTP server during setup is always reachable so that the system time is always kept accurate, especially in rare situations where the BIOS time can get corrupted because of power failure or CMOS battery failure and this in turn can corrupt the ADE-OS system time during reboot. If you do not configure a NTP server during setup, then you have to ensure that the system BIOS time is set relative to UTC as described in the *Cisco Identity Services Engine Hardware Installation Guide, Release 1.0.4*.

**Examples**

```
ise/admin# clock set May 5 18:07:20 2010
ise/admin# show clock
Thu May 5 18:07:26 UTC 2010
ise/admin#
```

**Related Commands**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>show clock</code></td>
<td>Displays the time and date set on the system software clock.</td>
</tr>
</tbody>
</table>

**configure**

To enter the Configuration mode, use the `configure` command in the EXEC mode. If the `replace` option is used with this command, copies a remote configuration to the system which overwrites the existing configuration.

```
configure terminal
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>configure</td>
<td>The command that allows you to enter the Configuration mode.</td>
</tr>
<tr>
<td>terminal</td>
<td>Executes configuration commands from the terminal.</td>
</tr>
</tbody>
</table>

**Defaults**

No default behavior or values.
EXEC Commands

**Command Modes**

EXEC

**Usage Guidelines**

Use this command to enter the Configuration mode. Note that commands in this mode write to the running configuration file as soon as you enter them (press Enter).

To exit the Configuration mode and return to the EXEC mode, enter `end`, `exit`, or Ctrl-z.

To view the changes that you have made to the configuration, use the `show running-config` command in the EXEC mode.

**Examples**

**Example 1**

ise/admin# configure
Enter configuration commands, one per line. End with CNTL/Z.
ise/admin(config)#

**Example 2**

ise/admin# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
ise/admin(config)#

**Related Commands**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>show running-config</td>
<td>Displays the contents of the currently running configuration file or the configuration.</td>
</tr>
<tr>
<td>show startup-config</td>
<td>Displays the contents of the startup configuration file or the configuration.</td>
</tr>
</tbody>
</table>

**copy**

To copy any file from a source to a destination, use the `copy` command in the EXEC mode. The `copy` command in the Cisco ISE copies a configuration (running or startup).

**Running Configuration**

The Cisco ISE active configuration stores itself in the Cisco ISE RAM. Every configuration command you enter resides in the running configuration. If you reboot your Cisco ISE server, you lose the running configuration. If you make changes that you want to save, you must copy the running configuration to a safe location, such as a network server, or save it as the Cisco ISE server startup configuration.

**Startup Configuration**

You cannot edit a startup configuration directly. All commands that you enter store themselves in the running configuration, which you can copy into the startup configuration.

In other words, when you boot a Cisco ISE server, the startup configuration becomes the initial running configuration. As you modify the configuration, the two diverge: the startup configuration remains the same; the running configuration reflects the changes that you have made. If you want to make your changes permanent, you must copy the running configuration to the startup configuration.

The following command lines show some of the `copy` command scenarios available:
copy running-config startup-config—Copies the running configuration to the startup configuration.

copy run start—Replaces the startup configuration with the running configuration.

**Note** If you do not save the running configuration, you will lose all your configuration changes during the next reboot of the Cisco ISE server. When you are satisfied that the current configuration is correct, copy your configuration to the startup configuration with the `copy run start` command.

copy startup-config running-config—Copies the startup configuration to the running configuration.

copy start run—Merges the startup configuration on top of the running configuration.

copy [protocol://hostname/location] startup-config—Copies but does not merge a remote file to the startup configuration.

copy [protocol://hostname/location] running-config—Copies and merges a remote file to the running configuration.

copy startup-config [protocol://hostname/location]—Copies the startup configuration to a remote system.

copy running-config [protocol://hostname/location]—Copies the running configuration to a remote system.

copy logs [protocol://hostname/location]—Copies log files from the system to another location.

**Note** The `copy` command is supported only for the local disk and not for a repository.

### Syntax Description

<table>

<tr>
<td><code>log_filename</code></td>
<td>Name of the Cisco ISE log file, as displayed by the <code>show logs</code> command (up to 255 characters).</td>
</tr>
</tbody>
</table>
EXEC Commands

### Appendix A       Cisco ISE Command Reference

#### EXEC Commands

---

### Defaults

No default behavior or values.

### Command Modes

EXEC

### Usage Guidelines

The fundamental function of the `copy` command allows you to copy a file (such as a system image or configuration file) from one location to another location. The source and destination for the file specified uses the Cisco ISE file system, through which you can specify any supported local or remote file location. The file system being used (a local memory source or a remote system) dictates the syntax used in the command.

You can enter on the command line all the necessary source and destination information and the username and password to use; or, you can enter the `copy` command and have the server prompt you for any missing information.

---

### Timesaver

Aliases reduce the amount of typing that you need to do. For example, type `copy run start` (the abbreviated form of the `copy running-config startup-config` command).

The entire copying process might take several minutes and differs from protocol to protocol and from network to network.

Use the filename relative to the directory for file transfers.

Possible errors are standard FTP or SCP error messages.

---

EXEC Commands

### Defaults

No default behavior or values.

### Command Modes

EXEC

### Usage Guidelines

Use the `debug` command to identify various failures within the Cisco ISE server; for example, setup failures or configuration failures.

### Examples

```
ise/admin# debug all
ise/admin# mkdir disk:/1
ise/admin# 6 [15347]: utils: vsh_root_stubs.c[2742] [admin]: mkdir operation success

ise/admin# rmdir disk:/1
6 [15351]: utils: vsh_root_stubs.c[2601] [admin]: Invoked Remove Directory disk:/1 command
6 [15351]: utils: vsh_root_stubs.c[2663] [admin]: Remove Directory operation success
ise/admin#

ise/admin# undebug all
ise/admin#
```

### Related Commands

<table>

</tbody>
</table>
delete

To delete a file from the Cisco ISE server, use the `delete` command in the EXEC mode. To remove this function, use the `no` form of this command.

`delete filename [disk:/path]`

**Syntax Description**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>delete</code></td>
<td>The command to delete a file from the Cisco ISE server.</td>
</tr>
<tr>
<td><code>filename</code></td>
<td>Filename. Supports up to 80 alphanumeric characters.</td>
</tr>
<tr>
<td><code>disk:/path</code></td>
<td>Location.</td>
</tr>
</tbody>
</table>

**Defaults**

No default behavior or values.

**Command Modes**

EXEC

**Usage Guidelines**

If you attempt to delete the configuration file or image, the system prompts you to confirm the deletion. Also, if you attempt to delete the last valid system image, the system prompts you to confirm the deletion.

**Examples**

```plaintext```
ise/admin# delete disk:/hs_err_pid19962.log
ise/admin#
```

</tbody>
</table>

**exit**

To close an active terminal session by logging out of the Cisco ISE server or to move up one mode level from the Configuration mode, use the `exit` command in the EXEC mode.

```
ise/admin# exit
```

**Syntax Description**

No arguments or keywords.

**Defaults**

No default behavior or values.

**Command Modes**

EXEC

**Usage Guidelines**

Use the `exit` command in EXEC mode to exit an active session (log out of the Cisco ISE server) or to move up from the Configuration mode.

**Examples**

```
ise/admin# exit
ise/admin#
```

**Related Commands**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>end</td>
<td>Exits the Configuration mode.</td>
</tr>
</tbody>
</table>
## EXEC Commands

### forceout

To force users out of an active terminal session by logging them out of the Cisco ISE server, use the `forceout` command in the EXEC mode.

`forceout username`

**Syntax Description**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>forceout</td>
<td>The command that enforces logout of all the sessions of a specific system user.</td>
</tr>
<tr>
<td>username</td>
<td>The name of the user. Supports up to 31 alphanumeric characters.</td>
</tr>
</tbody>
</table>

**Defaults**

No default behavior or values.

**Command Modes**

EXEC

**Usage Guidelines**

Use the `forceout` command in EXEC mode to force a user from an active session.

**Examples**

ise/admin# forceout user1
ise/admin#

### halt

To shut down and power off the system, use the `halt` command in EXEC mode.

`halt`

**Syntax Description**

No arguments or keywords.

**Defaults**

No default behavior or values.

**Command Modes**

EXEC
Usage Guidelines

Before you issue the `halt` command, ensure that the Cisco ISE is not performing any backup, restore, installation, upgrade, or remove operation. If you issue the `halt` command while the Cisco ISE is performing any of these operations, you will get one of the following warning messages:

```plaintext
WARNING: A backup or restore is currently in progress! Continue with halt?
WARNING: An install/upgrade/remove is currently in progress! Continue with halt?
```

If you get any of these warnings, enter Yes to halt the operation, or enter No to cancel the halt.

If no processes are running when you use the `halt` command or if you enter Yes in response to the warning message displayed, the Cisco ISE asks you to respond to the following option:

```plaintext
Do you want to save the current configuration?
```

Enter Yes to save the existing Cisco ISE configuration. The Cisco ISE displays the following message:

```plaintext
Saved the running configuration to startup successfully
```

Examples

ise/admin# halt
ise/admin#

Related Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>reload</td>
<td>Reboots the system.</td>
</tr>
</tbody>
</table>

help

To describe the interactive help system for the Cisco ISE server, use the `help` command in the EXEC mode.

```plaintext
help
```

Syntax Description

No arguments or keywords.

Defaults

No default behavior or values.

Command Modes

EXEC

All configuration modes.

Usage Guidelines

The `help` command provides a brief description of the context-sensitive help system.

- To list all commands available for a particular command mode, enter a question mark (?) at the system prompt.
EXEC Commands

- To obtain a list of commands that begin with a particular character string, enter the abbreviated command entry immediately followed by a question mark (?). This form of help is called word help, because it lists only the keywords or arguments that begin with the abbreviation that you entered.

- To list the keywords and arguments associated with a command, enter a question mark (?) in place of a keyword or argument on the command line. This form of help is called command syntax help, because it lists the keywords or arguments that apply based on the command, keywords, and arguments that you have already entered.

Examples

ise/admin# help
Help may be requested at any point in a command by entering a question mark ‘?’ . If nothing matches, the help list will be empty and you must backup until entering a ‘?’ shows the available options.
Two styles of help are provided:
1. Full help is available when you are ready to enter a command argument (e.g. 'show?') and describes each possible argument.
2. Partial help is provided when an abbreviated argument is entered and you want to know what arguments match the input (e.g. 'show pr?'.)

ise/admin#

mkdir

To create a new directory on the Cisco ISE server, use the mkdir command in the EXEC mode.

```
mkdir directory-name [disk:/path]
```

<table>
<thead>
<tr>
<th>Syntax Description</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>mk dir</td>
<td>The command to create directory.</td>
</tr>
<tr>
<td>directory-name</td>
<td>The name of the directory to create. Supports up to 80 alphanumeric characters.</td>
</tr>
<tr>
<td>disk:/path</td>
<td>Use disk:/path with the directory name.</td>
</tr>
</tbody>
</table>

Defaults

No default behavior or values.

Command Modes

EXEC

Usage Guidelines

Use disk:/path with the directory name; otherwise, an error appears that indicates that the disk:/path must be included.

Examples

ise/admin# mkdir disk:/test
ise/admin# dir
Appendix A  Cisco ISE Command Reference

EXEC Commands

Directory of disk:

    4096 May 06 2010 13:34:49 activemq-data/
    4096 May 06 2010 13:40:59 logs/
    16384 Mar 01 2010 16:07:27 lost+found/
    4096 May 06 2010 13:42:53 target/
    4096 May 07 2010 12:26:04 test/

Usage for disk: filesystem
    181067776 bytes total used
    19084521472 bytes free
    20314165248 bytes available

ise/admin#

ise/admin#
```

`patch install` command

The `patch install` command installs a patch bundle of the application only on a specific node where you run the `patch install` command from the CLI.

**Note:**
In a Cisco ISE distributed deployment environment, install the patch bundle of the application from the primary Administration ISE node in the Cisco ISE Administration user interface so that the patch bundle automatically gets installed on all the secondary nodes.

To install a patch bundle of the application, use the `patch` command in the EXEC mode.

```
patch install patch-bundle repository
```

**Syntax Description**

- `patch`: The command to install System or Application patch.
- `install`: The command that installs a specific patch bundle of the application.
- `repository`: Repository name. Supports up to 255 alphanumeric characters.

**Defaults**

No default behavior or values.

**Command Modes**

EXEC

**Usage Guidelines**

Installs a specific patch bundle of the application.

If you attempt to install a patch that is an older version of the existing patch, then you receive the following error message:

```
% Patch to be installed is an older version than currently installed version.
```
Before attempting to use this patch install command to install a patch, you must read the patch installation instructions in the release notes supplied with that patch. The release notes contain important instructions updated for installing that patch, which must be followed. For more information, refer to the Managing ISE Backup and Restore Operations section in the *Cisco Identity Services Engine User Guide, Release 1.0.4* on patch installation and rollback.

### Examples

#### Example 1

```
ise/admin# patch install ise-patchbundle-1.0.4.573-3-47570.i386.tar.gz myrepository
Do you want to save the current configuration? (yes/no) [yes]? yes
Generating configuration...
Saved the running configuration to startup successfully
Initiating Application Patch installation...

Patch successfully installed
ise/admin#
```

#### Example 2

```
ise/admin# patch install ise-patchbundle-1.0.4.573-3-47570.i386.tar.gz myrepository
Do you want to save the current configuration? (yes/no) [yes]? no
Initiating Application Patch installation...

Patch successfully installed
ise/admin#
```

#### Example 3

```
ise/admin# patch install ise-patchbundle-1.0.4.573-2-47570.i386.tar.gz disk
Do you want to save the current configuration? (yes/no) [yes]? yes
Generating configuration...
Saved the running configuration to startup successfully
Initiating Application Patch installation...
% Patch to be installed is an older version than currently installed version.
ise/admin#
```

### Related Commands

<tr>
<td><code>remove</code></td>
<td>The command that removes a specific patch bundle version of the application.</td>
</tr>
<tr>
<td><code>word</code></td>
<td>The name of the application for which the patch is to be removed. Supports up to 255 alphanumeric characters.</td>
</tr>
<tr>
<td><code>word</code></td>
<td>The patch version number to be removed. Supports up to 255 alphanumeric characters.</td>
</tr>
</tbody>
</table>

### Defaults

No default behavior or values.

### Command Modes

EXEC

### Usage Guidelines

Removes a specific patch bundle of the application.

If you attempt to remove a patch that is not installed, then you receive the following error message:

```
% Patch is not installed
```

Note Before attempting to use this patch remove command to rollback a patch, you must read the rollback instructions of the patch in the release notes supplied with that patch. The release notes contains important instructions updated for rolling back the previously installed patch, which must be followed.

### Examples

**Example 1**

```
ise/admin# patch remove ise 3
Continue with application patch uninstall? [y/n] y

Application patch successfully uninstalled
ise/admin#
```

**Example 2**

```
ise/admin# patch remove ise 3
Continue with application patch uninstall? [y/n] y
```
You can use the **pep** command in the EXEC mode to perform the following:

- To log the Cisco ISE Inline Posture node information
- To configure a secondary node into a Cisco ISE Inline Posture role in a cisco ISE distributed deployment
- To configure the Cisco ISE Inline Posture role to a Cisco ISE standalone node.

The following command lines show the **pep** command scenarios available:

- **pep set loglevel** \{0|1|2|3\}—sets the Inline Posture node log information.

- **pep switch** \{into-pep|outof-pep\}—configures the Cisco ISE node into Inline Posture node or Inline Posture role to a Cisco ISE standalone node.

### Syntax Description

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>pep</td>
<td>The command to configure a secondary node in the distributed deployment to the Inline Posture role.</td>
</tr>
<tr>
<td>set</td>
<td>The command that sets the Inline Posture log level.</td>
</tr>
<tr>
<td>loglevel</td>
<td>The command that sets the Inline Posture log level.</td>
</tr>
<tr>
<td>0-3</td>
<td>0-info—Logs only information.</td>
</tr>
<tr>
<td></td>
<td>1-warn—Warning conditions.</td>
</tr>
<tr>
<td></td>
<td>2-debug—Debugging messages.</td>
</tr>
<tr>
<td></td>
<td>3-trace—Logs information for troubleshooting.</td>
</tr>
<tr>
<td>switch</td>
<td>The command that configures the Inline Posture node personna changes.</td>
</tr>
<tr>
<td>into-pep</td>
<td>Configures the secondary node into the Inline Posture role.</td>
</tr>
<tr>
<td>outof-pep</td>
<td>Configures the Inline Posture role to a standalone role enabled with the administration, monitoring and policy service roles.</td>
</tr>
</tbody>
</table>

### Defaults

No default behavior or values.

### Command Modes

EXEC
**Usage Guidelines**

The `pep` command logs the Inline Posture node information and also configures the secondary node into an Inline Posture node or the Inline Posture node to a standalone node that is enabled with the administration, monitoring and policy service roles.

You cannot use this `pep` command in a VMware setup.

**Examples**

**Example 1**

ise/admin# `pep set loglevel 0`

ise/admin#

The `show pep loglevel` command displays the loglevel.

ise/admin# `show pep loglevel`

INFO

ise/admin#

**Example 2**

ise/admin# `pep switch into-pep`

Broadcast message from root (pts/0) (Wed Oct 13 08:31:46 2010):

The system is going down for reboot NOW!

ise/admin#

To check the configuration of the secondary node after reboot, run the `show application status ise` command and the secondary node now runs the Inline Posture services after reboot.

ise/admin# `show application status ise`

Inline PEP click kernel module is loaded.
Inline PEP runtime java application is running,PID=3202.

ise/admin#

**Example 3**

ise/admin# `pep switch outof-pep`

Broadcast message from root (pts/0) (Wed Oct 13 09:03:10 2010):

The system is going down for reboot NOW!

ise/admin#

To check the configuration of the Inline Posture node after reboot, run the `show application status ise` command and the node now runs the administration, monitoring and policy service roles as a Standalone node after reboot.

ise/admin# `show application status ise`

ISE Database listener is running, PID: 3057
ISE Database is running, number of processes: 27
ISE Application Server is running, PID: 3357
ISE M&T Session Database is running, PID: 2858
ISE M&T Log Collector is running, PID: 3378
ISE M&T Log Processor is running, PID: 3422
ISE M&T Alert Process is running, PID: 3467

ise/admin#
To diagnose the basic IPv4 network connectivity to a remote system, use the **ping** command in the EXEC mode.

```
ping {ip-address | hostname} [df df] [packetsize packetsize] [pingcount pingcount]
```

**Syntax Description**

- **ping**: The command to ping a remote IP address.
- **ip-address**: IP address of the system to ping. Supports up to 32 alphanumeric characters.
- **hostname**: Hostname of the system to ping. Supports up to 32 alphanumeric characters.
- **df**: Specification for packet fragmentation.
  - df: Specify the value as 1 to prohibit packet fragmentation, or 2 to fragment the packets locally, or 3 to not set df.
- **packetsize**: Size of the ping packet.
- **packetsize**: Specify the size of the ping packet; the value can be between 0 and 65507.
- **pingcount**: Number of ping echo requests.
- **pingcount**: Specify the number of ping echo requests; the value can be between 1 and 10.

**Defaults**

No default behavior or values.

**Command Modes**

EXEC

**Usage Guidelines**

The **ping** command sends an echo request packet to an address, then awaits a reply. The ping output can help you evaluate path-to-host reliability, delays over the path, and whether you can reach a host.

**Examples**

```
ise/admin# ping 172.16.0.1 df 2 packetsize 10 pingcount 2
PING 172.16.0.1 (172.16.0.1) 10(38) bytes of data.
18 bytes from 172.16.0.1: icmp_seq=0 ttl=40 time=306 ms
18 bytes from 172.16.0.1: icmp_seq=1 ttl=40 time=300 ms
--- 172.16.0.1 ping statistics ---
2 packets transmitted, 2 received, 0% packet loss, time 1001ms
rtt min/avg/max/mdev = 300.302/303.557/306.812/3.255 ms, pipe 2
ise/admin#
```

<tbody>
<tr>
<td>ping6</td>
<td>Ping a remote IPv6 address.</td>
</tr>
</tbody>
</table>
ping6

Similar to the IPv4 ping, use the IPv6 ping6 command in the EXEC mode.

```
ping6 {ip-address | hostname} [GigabitEthernet 0-3][packetsize packetsize] [pingcount pingcount]
```

### Syntax Description

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ping</td>
<td>The command to ping a remote IPv6 address.</td>
</tr>
<tr>
<td>ip-address</td>
<td>IP address of the system to ping. Supports up to 64 alphanumeric characters.</td>

<tr>
<td>GigabitEthernet</td>
<td>Select ethernet interface.</td>
</tr>
<tr>
<td>packetsize</td>
<td>Size of the ping packet.</td>
</tr>
<tr>
<td>packetsize</td>
<td>Specify the size of the ping packet; the value can be between 0 and 65507.</td>
</tr>
<tr>
<td>pingcount</td>
<td>Number of ping echo requests.</td>
</tr>
<tr>
<td>pingcount</td>
<td>Specify the number of ping echo requests; the value can be between 1 and 10.</td>
</tr>
</tbody>
</table>

### Command Default

No default behavior or values.

### Command Modes

EXEC

### Usage Guidelines

The IPv6 ping6 command sends an echo request packet to an address, then awaits a reply. The ping output can help you evaluate path-to-host reliability, delays over the path, and whether you can reach a host.

The IPv6 ping6 command is similar to the existing IPv4 ping command. The ping 6 command does not support the IPv4 ping fragmentation (df in IPv4) options, but it allows an optional specification of an interface. The interface option is primarily useful for pinning with link-local addresses that are interface-specific. The packetsize and pingcount options work the same as they do with the IPv4 command.

### Examples

#### Example 1

```
ise/admin# ping6 3ffe:302:11:2:20c:29ff:feaf:da05
64 bytes from 3ffe:302:11:2:20c:29ff:feaf:da05: icmp_seq=0 ttl=64 time=0.599 ms
64 bytes from 3ffe:302:11:2:20c:29ff:feaf:da05: icmp_seq=1 ttl=64 time=0.150 ms
64 bytes from 3ffe:302:11:2:20c:29ff:feaf:da05: icmp_seq=2 ttl=64 time=0.070 ms
64 bytes from 3ffe:302:11:2:20c:29ff:feaf:da05: icmp_seq=3 ttl=64 time=0.065 ms
4 packets transmitted, 4 received, 0% packet loss, time 3118ms
rtt min/avg/max/mdev = 0.065/0.221/0.599/0.220 ms, pipe 2
```

ise/admin#
Example 2

ise/admin# ping6 3ffe:302:11:2:20c:29ff:feaf:da05 GigabitEthernet 0 packetsize 10 pingcount 2
18 bytes from 3ffe:302:11:2:20c:29ff:feaf:da05: icmp_seq=0 ttl=64 time=0.073 ms
18 bytes from 3ffe:302:11:2:20c:29ff:feaf:da05: icmp_seq=1 ttl=64 time=0.073 ms

2 packets transmitted, 2 received, 0% packet loss, time 1040ms
rtt min/avg/max/mdev = 0.073/0.073/0.073/0.000 ms, pipe 2

reload

To reload the Cisco ISE operating system, use the reload command in the EXEC mode.

reload

Syntax Description

No arguments or keywords.

Defaults

No default behavior or values.

Command Modes

EXEC

Usage Guidelines

The reload command reboots the system. Use the reload command after you enter configuration information into a file and save the running-configuration to the persistent startup-configuration on the CLI and save any settings in the web Administration user interface session.

Before you issue the reload command, ensure that the Cisco ISE is not performing any backup, restore, installation, upgrade, or remove operation. If the Cisco ISE performs any of these operations and you issue the reload command, you will notice any of the following warning messages:

WARNING: A backup or restore is currently in progress! Continue with reload?

WARNING: An install/upgrade/remove is currently in progress! Continue with reload?

If you get any of these warnings, enter Yes to halt the operation, or enter No to cancel the halt.
If no processes are running when you use the reload command or you enter Yes in response to the warning message displayed, the Cisco ISE asks you to respond to the following option:

Do you want to save the current configuration?

Enter Yes to save the existing Cisco ISE configuration. The Cisco ISE displays the following message:
Saved the running configuration to startup successfully

Examples
ise/admin# reload
Do you want to save the current configuration? (yes/no) [yes]? yes
Generating configuration...
Saved the running configuration to startup successfully
Continue with reboot? [y/n] y

Broadcast message from root (pts/0) (Fri Aug 7 13:26:46 2010):
The system is going down for reboot NOW!
ise/admin#

Related Commands

restore

To perform a restore of a previous backup, use the `restore` command in the EXEC mode. A restore operation restores data related to the Cisco ISE as well as the Cisco ADE OS. To perform a restore of a previous backup of the application data of the Cisco ISE only, add the `application` command to the `restore` command in the EXEC mode. To remove this function, use the `no` form of this command.

Use the following command to restore data related to the Cisco ISE application and Cisco ADE OS:

```
restore filename repository repository-name
```

Use the following command to restore data related only to the Cisco ISE application:

```
restore filename repository repository-name application application
```

Syntax Description

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>restore</td>
<td>The command to restore the system.</td>
</tr>
<tr>
<td>filename</td>
<td>Name of the backed-up file that resides in the repository. Supports up to 120 alphanumeric characters.</td>
</tr>
<tr>
<td>repository</td>
<td>The repository command.</td>
</tr>
<tr>
<td>repository-name</td>
<td>Name of the repository you want to restore from backup.</td>
</tr>
<tr>
<td>application</td>
<td>The application command.</td>
</tr>
<tr>
<td>application name</td>
<td>The name of the application data to be restored. Supports up to 255 alphanumeric characters.</td>
</tr>
</tbody>
</table>

Defaults
No default behavior or values.
Command Modes

EXEC

Usage Guidelines

When you use these two commands in the Cisco ISE, the Cisco ISE server restarts automatically.

Examples

ise/admin# restore mybackup-100818-1502.tar.gpg repository myrepository
Restore may require a reboot to successfully complete. Continue? (yes/no) [yes]? yes
Stopping ISE Monitoring & Troubleshooting Log Processor...
Stopping ISE Monitoring & Troubleshooting Log Collector...
Stopping ISE Monitoring & Troubleshooting Alert Process...

  20314165248 bytes available
```

ise/admin#
To show the running system information, use the `show` command in the EXEC mode. The `show` commands are used to display the Cisco ISE settings and are among the most useful commands.

The commands in Table A-3 require the `show` command to be followed by a keyword; for example, `show application status`. Some `show` commands require an argument or variable after the keyword to function; for example, `show application version`.

For detailed information on all the Cisco ISE `show` commands, see Show Commands, page A-52.

```
show keyword
```

### Table A-3: Summary of show Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>dir</code></td>
<td>Displays a list of files on the Cisco ISE server.</td>

<td>Displays information about the installed application version.</td>
</tr>
</tbody>
</table>

1. The commands in this table require that the `show` command precedes a keyword; for example, `show application`.
2. Some `show` commands require an argument or variable after the keyword to function; for example, `show application version`. This `show` command displays the version of the application installed on the system (see `show application`, page A-52).

**Defaults**

No default behavior or values.

**Command Modes**

EXEC

**Usage Guidelines**

All `show` commands require at least one keyword to function.

**Examples**

```
ise/admin# show application
<name>          <Description>
ise             Cisco Identity Services Engine
ise/admin#
```
**ssh**

To start an encrypted session with a remote system, use the `ssh` command in the EXEC mode.

**Note**
An Admin or Operator (user) can use this command (see Table 1-1).

```
ssh [ip-address | hostname] username port [number] version [1 | 2] delete hostkey word
```

<table>
<thead>
<tr>
<th>Syntax Description</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>ssh</code></td>
<td>The command to start an encrypted session with a remote system.</td>
</tr>
<tr>
<td><code>ip-address</code></td>
<td>IP address of the remote system. Supports up to 64 alphanumeric characters.</td>
</tr>
<tr>
<td><code>hostname</code></td>
<td>Hostname of the remote system. Supports up to 64 alphanumeric characters.</td>
</tr>
<tr>
<td><code>username</code></td>
<td>Username of the user logging in through SSH.</td>
</tr>
<tr>
<td><code>port [number]</code></td>
<td>(Optional) Indicates the port number of the remote host. From 0 to 65,535. Default 22.</td>
</tr>
<tr>
<td>`version [1</td>
<td>2]`</td>
</tr>
<tr>
<td><code>delete hostkey</code></td>
<td>Deletes the SSH fingerprint of a specific host.</td>
</tr>
<tr>
<td><code>word</code></td>
<td>IPv4 address or hostname of a remote system. Supports up to 64 alphanumeric characters.</td>
</tr>
</tbody>
</table>

**Defaults**
Disabled.

**Command Modes**
EXEC (Admin or Operator)

**Usage Guidelines**
The `ssh` command enables a system to make a secure, encrypted connection to another remote system or server. This connection provides functionality similar to that of an outbound Telnet connection except that the connection is encrypted. With authentication and encryption, the SSH client allows for secure communication over an insecure network.

**Examples**

**Example 1**
```
ise/admin# ssh ise1 admin
admin@ise1's password:

ise1/admin#
```

**Example 2**
```
ise/admin# ssh delete host ise
ise/admin#
```
**tech**

To dump a Transmission Control Protocol (TCP) package to the console, use the `tech` command in the EXEC mode.

```
tech dumptcp <0-3>
```

### Syntax Description

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>tech dumptcp</code></td>
<td>The command to dump a TCP package to the console.</td>
</tr>
<tr>
<td>0-3</td>
<td>Gigabit Ethernet interface number (0 to 3).</td>
</tr>
</tbody>
</table>

### Defaults

Disabled.

### Command Modes

EXEC

### Usage Guidelines

None.

### Examples

```
ise/admin# tech dumptcp 0
140816:141088(272) ack 1921 win 14144
141088:141248(160) ack 1921 win 14144
64656
141248:141520(272) ack 1921 win 14144
141520:141680(160) ack 1921 win 14144
141680:141952(272) ack 1921 win 14144
65520
141952:142112(160) ack 1921 win 14144
1000 packets captured
1000 packets received by filter
0 packets dropped by kernel
ise/admin#
```

### telnet

To log in to a host that supports Telnet, use the `telnet` command in Operator (user) or EXEC mode.

```
telnet [ip-address | hostname] port number
```
EXEC Commands

## telnet

The command to log in to a host that supports Telnet.

**Syntax Description**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>telnet</td>
<td>The command to log in to a host that supports Telnet.</td>
</tr>
<tr>
<td>ip-address</td>
<td>IP address of the remote system. Supports up to 64 alphanumeric characters.</td>
</tr>
<tr>
<td>hostname</td>
<td>Hostname of the remote system. Supports up to 64 alphanumeric characters.</td>
</tr>
<tr>
<td>port number</td>
<td>(Optional) Indicates the port number of the remote host. From 0 to 65,535.</td>
</tr>
</tbody>
</table>

**Defaults**

No default behavior or values.

**Command Modes**

Operator

EXEC

**Usage Guidelines**

None.

**Examples**

ise/admin# telnet 172.16.0.11 port 23
ise.cisco.com login: admin
password: Last login: Mon Jul 2 08:45:24 on ttyS0
ise/admin#

## terminal length

To set the number of lines on the current terminal screen for the current session, use the `terminal length` command in the EXEC mode.

**Syntax Description**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>terminal</td>
<td>The command to set the terminal line parameters.</td>
</tr>
<tr>
<td>length</td>
<td>The command that sets the number of lines on the current terminal screen for the current session.</td>
</tr>
<tr>
<td>integer</td>
<td>Number of lines on the screen. Contains between 0 to 511 lines, inclusive. A value of zero (0) disables pausing between screens of output.</td>
</tr>
</tbody>
</table>

**Defaults**

24 lines

**Command Modes**

EXEC

**Usage Guidelines**

The system uses the length value to determine when to pause during multiple-screen output.
Examples
ise/admin# terminal length 0
ise/admin#

terminal session-timeout

To set the inactivity timeout for all sessions, use the terminal session-timeout command in the EXEC mode.

    terminal session-timeout minutes

Syntax Description

+-----------------+--------------------------------------------------+
| Syntax          | Description                                      |
+-----------------+--------------------------------------------------+
| terminal        | The command to set the terminal line parameters. |
| session-timeout | The command that sets the inactivity time out of all the sessions. |
| minutes         | Sets the number of minutes for the inactivity timeout. From 0 to 525,600. Zero (0) disables the timeout. |
+-----------------+--------------------------------------------------+

Defaults
30 minutes

Command Modes
EXEC

Usage Guidelines
Setting the terminal session-timeout command to zero (0) results in no timeout being set.

Examples
ise/admin# terminal session-timeout 40
ise/admin#

Related Commands

+-----------------+---------------------------------+
| Command         | Description                     |
+-----------------+---------------------------------+
| terminal session-welcome | Sets a welcome message on the system for all users who log in to the system. |
+-----------------+---------------------------------+

terminal session-welcome

To set a welcome message on the system for all users who log in to the system, use the terminal session-welcome command in EXEC mode.

    terminal session-welcome string

Syntax Description

+-----------------+--------------------------------------------------+
| Syntax          | Description                                      |
+-----------------+--------------------------------------------------+
| terminal        | The command to set the terminal line parameters. |
+-----------------+--------------------------------------------------+
session-welcome | The command that sets a welcome message on the system for all users who log in to the system.
---|---
string | Welcome message. Supports up to 2,048 alphanumeric characters.

### Defaults
No default behavior or values.

### Command Modes
EXEC

### Usage Guidelines
Specify a message using up to 2,048 characters.

### Examples
ise/admin# terminal session-welcome Welcome
ise/admin#

### Related Commands
<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
</table>
| terminal session-timeout | Sets the inactivity timeout for all sessions.

### terminal terminal-type
To specify the type of terminal connected to the current line for the current session, use the `terminal terminal-type` command in EXEC mode.

```
terminal terminal-type type
```

### Syntax Description
| terminal | The command to set the terminal line parameters. |
| terminal-type | The command that specifies the type of terminal connected. The default terminal type is VT100. |
| type | Defines the terminal name and type, and permits terminal negotiation by hosts that provide that type of service. Supports up to 80 alphanumeric characters. |

### Defaults
VT100

### Command Modes
EXEC

### Usage Guidelines
Indicate the terminal type if it is different from the default of VT100.

Appendix A      Cisco ISE Command Reference

EXEC Commands

Examples
ise/admin# terminal terminal-type vt220
ise/admin#

cisco ise command reference manual

traceroute
To discover the routes that packets take when traveling to their destination address, use the `traceroute` command in EXEC mode.

```
traceroute [ip-address | hostname]
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>traceroute</code></td>
<td>The command to discover the routes of the packets to their destination address.</td>
</tr>
<tr>
<td><code>ip-address</code></td>
<td>IP address of the remote system. Supports up to 32 alphanumeric characters.</td>
</tr>
<tr>
<td><code>hostname</code></td>
<td>Hostname of the remote system. Supports up to 32 alphanumeric characters.</td>
</tr>
</tbody>
</table>

**Defaults**
No default behavior or values.

**Command Modes**
EXEC

**Usage Guidelines**
None.

Examples
ise/admin# traceroute 172.16.0.11
traceroute to 172.16.0.11 (172.16.0.11), 30 hops max, 38 byte packets
  1 172.16.0.11 0.067 ms 0.036 ms 0.032 ms
ise/admin#

undebug
To disable debugging functions, use the undebug command in EXEC mode.

```
undebug {all | application | backup-restore | cdp | config | copy | icmp | locks | logging | snmp | system | transfer | user | utils}
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>undebug</code></td>
<td>The command to disable identifying various failures with the Cisco ISE server.</td>
</tr>
<tr>
<td><code>all</code></td>
<td>Disables all debugging.</td>

</table>
EXEC Commands

**system**

System files.

- *all*—Disables all system files debug output.
- *id*—Disables system ID debug output.
- *info*—Disables system info debug output.
- *init*—Disables system init debug output.

**transfer**

File transfer.

**user**

User management.

- *all*—Disables all user management debug output.
- *password-policy*—Disables user management debug output for password-policy.

**utils**

Utilities configuration files.

- *all*—Disables all utilities configuration debug output.

---

**Defaults**

No default behavior or values.

**Command Modes**

EXEC

**Usage Guidelines**

None.

**Examples**

ise/admin# `undebug all`
ise/admin#

**Related Commands**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>debug</code></td>
<td>Displays errors or events for command situations.</td>
</tr>
</tbody>
</table>

**write**

To copy, display, or erase Cisco ISE server configurations, use the `write` command with the appropriate argument in the EXEC mode.

```
write {erase | memory | terminal}
```
Defaults
No default behavior or values.

Command Modes
EXEC

Usage Guidelines
Using this write command with the erase option is disabled in Cisco ISE.

If you use the write command with the erase option, Cisco ISE displays the following error message:

% Warning: 'write erase' functionality has been disabled by application: ise

<tr>
<td>repository</td>
<td>Enters the repository submode for configuration of backups.</td>
</tr>
<tr>
<td>show repository</td>
<td>Displays the available backup files located on a specific repository.</td>
</tr>
</tbody>
</table>

**show cdp**

To display information about the enabled Cisco Discovery Protocol interfaces, use the `show cdp` command in the EXEC mode.

```
show cdp {all | neighbors}
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>show cdp</td>
<td>The command to display Cisco Discovery Protocol show commands.</td>
</tr>
<tr>
<td>all</td>
<td>Shows all the enabled Cisco Discovery Protocol interfaces.</td>
</tr>
<tr>
<td>neighbors</td>
<td>Shows the Cisco Discovery Protocol neighbors.</td>
</tr>
</tbody>
</table>

**Defaults**
No default behavior or values.

**Command Modes**
EXEC
## Show Commands

### Usage Guidelines

None.

### Examples

#### Example 1
ise/admin# **show cdp all**
CDP protocol is enabled...
  broadcasting interval is every 60 seconds.
  time-to-live of cdp packets is 180 seconds.

  CDP is enabled on port GigabitEthernet0.

ise/admin#

#### Example 2
ise/admin# **show cdp neighbors**
CDP Neighbor: 000c297840e5
  Local Interface : GigabitEthernet0
  Device Type     : ISE-1141VM-K9
  Port            : eth0
  Address         : 172.23.90.114

CDP Neighbor: isexp-esw5
  Local Interface : GigabitEthernet0
  Device Type     : cisco WS-C3560E-24TD
  Port            : GigabitEthernet0/5
  Address         : 172.23.90.45

CDP Neighbor: 000c29e29926
  Local Interface : GigabitEthernet0
  Device Type     : ISE-1141VM-K9
  Port            : eth0
  Address         : 172.23.90.115

CDP Neighbor: 000c290fba98
  Local Interface : GigabitEthernet0
  Device Type     : ISE-1141VM-K9
  Port            : eth0
  Address         : 172.23.90.111

ise/admin#

### Related Commands

</tbody>
</table>
show clock

To display the day, month, date, time, time zone, and year of the system software clock, use the `show clock` command in the EXEC mode.

```
show clock
```

**Syntax Description**

No arguments or keywords.

**Defaults**

No default behavior or values.

**Command Modes**

EXEC

**Usage Guidelines**

None.

**Examples**

```
ise/admin# show clock
Fri Aug 6 10:46:39 UTC 2010
ise/admin#
```

**Note**

The `show clock` output in the previous example includes Coordinated Universal Time (UTC) or Greenwich Mean Time (GMT), Great Britain, or Zulu time (see Tables A-14, A-15, and A-16 on pages A-84 and A-85 for sample time zones).

**Related Commands**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>clock</code></td>
<td>Sets the system clock for display purposes.</td>
</tr>
</tbody>
</table>

**show cpu**

To display CPU information, use the `show cpu` command in the EXEC mode.

```
show cpu [statistics] [I] [I]
```

**Syntax Description**

<table>
<thead>
<tr>
<th>show cpu</th>
<th>The command to display CPU information.</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>statistics</code></td>
<td>Displays CPU statistics.</td>
</tr>
</tbody>
</table>

### Show Commands

#### Output modifier variables:

- **begin**—Matched pattern. Supports up to 80 alphanumeric characters.
- **count**—Count the number of lines in the output. Add number after the word `count`.
  - |—Output modifier variables (see Table A-6).
- **end**—End with line that matches. Supports up to 80 alphanumeric characters.
- **exclude**—Exclude lines that match. Supports up to 80 alphanumeric characters.
- **include**—Include lines that match. Supports up to 80 alphanumeric characters.
- **last**—Display last few lines of output. Add number after the word `last`. Supports up to 80 lines to display. Default 10.
  - |—Output modifier variables (see Table A-6).

#### Table A-6 Output Modifier Variables for Count or Last

<table>
<thead>
<tr>
<th>Output modifier variables:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• <strong>begin</strong>—Matched pattern. Supports up to 80 alphanumeric characters.</td>

</table>

**show interface**

To display the usability status of interfaces configured for IP, use the `show interface` command in the EXEC mode.

```
show interface [GigabitEthernet] [output modifier variables: begin | count | end | exclude | include | last]
```

Syntax Description

<table>
<thead>
<tr>
<th>show interface</th>
<th>The command to display interface information.</th>
</tr>
</thead>
<tbody>
<tr>
<td>GigabitEthernet</td>
<td>Shows the Gigabit Ethernet interface. Enter &lt;0-3&gt;.</td>
</tr>
</tbody>
</table>

Output modifier variables:

- `begin`—Matched pattern. Supports up to 80 alphanumeric characters.
- `count`—Count the number of lines in the output. Add number after the word `count`.
- `end`—End with line that matches. Supports up to 80 alphanumeric characters.
- `exclude`—Exclude lines that match. Supports up to 80 alphanumeric characters.
- `include`—Include lines that match. Supports up to 80 alphanumeric characters.
- `last`—Display last few lines of output. Add number after the word `last`. Supports up to 80 lines to display. Default 10.
 Defaults

No default behavior or values.

 Command Modes

EXEC

 Usage Guidelines

In the show interface GigabitEthernet 0 output, you can find that the interface has three IPv6 addresses. The first internet address (starting with 3ffe) is the result of using stateless autoconfiguration. For this to work, you need to have IPv6 route advertisement enabled on that subnet. The next address (starting with fe80) is a link local address that does not have any scope outside the host. You always see a link local address regardless of the IPv6 autoconfiguration or DHCPv6 configuration. The last address (starting with 2001) is the result obtained from a IPv6 DHCP server.

 Examples

Example 1

ise/admin# show interface
eth0       Link encap:Ethernet  HWaddr 00:0C:29:6A:88:C4

</tr>
<tr>
<td>| include</td>
<td>Include lines that match. Supports up to 80 alphanumeric characters.</td>
</tr>
<tr>
<td>| last</td>
<td>Display last few lines of output. Add number after the word last. Supports up to 80 lines to display. Default 10.</td>
</tr>
</tbody>
</table>

Defaults

No default behavior or values.

Command Modes

EXEC
This command displays the state of syslog error and event logging, including host addresses, and for which, logging destinations (console, monitor, buffer, or host) logging is enabled.

### Examples

**Example 1**

```
ise/admin# show logging system
ADEOS Platform log:

```
show logins

To display the state of system logins, use the `show logins` command in the EXEC mode.

```
show logins cli
```

### Syntax Description

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>show logins</td>
<td>The command to display system login history.</td>
</tr>
<tr>
<td>cli</td>
<td>Lists the cli login history.</td>
</tr>
</tbody>
</table>

### Defaults

No default behavior or values.

### Command Modes

EXEC

### Usage Guidelines

Requires the `cli` keyword; otherwise, an error occurs.

### Examples

```
ise/admin# show logins cli
admin    pts/0        10.77.137.60     Fri Aug 6 09:45   still logged in
admin    pts/0        10.77.137.60     Fri Aug 6 08:56 - 09:30  (00:33)
admin    pts/0        10.77.137.60     Fri Aug 6 07:17 - 08:43  (01:26)
```
show memory

To display the memory usage of all the running processes, use the **show memory** command in the EXEC mode.

```
ise/admin# show memory
```

<table>
<thead>
<tr>
<th>Syntax Description</th>
<th>No arguments or keywords.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Defaults</td>
<td>No default behavior or values.</td>
</tr>
<tr>
<td>Command Modes</td>
<td>EXEC</td>
</tr>
<tr>
<td>Usage Guidelines</td>
<td>None.</td>
</tr>
</tbody>
</table>

**Examples**
```
ise/admin# show memory
total memory: 1035164 kB
free memory: 27128 kB
cached: 358888 kB
swap-cached: 142164 kB
```

show ntp

To show the status of the NTP associations, use the **show ntp** command in the EXEC mode.

```
ise/admin# show ntp
```

<table>
<thead>
<tr>
<th>Syntax Description</th>
<th>No arguments or keywords.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Defaults</td>
<td>No default behavior or values.</td>
</tr>
</tbody>
</table>
Command Modes

EXEC

Usage Guidelines

None.

Examples

Example:1
ise/admin# show ntp
Primary NTP : cd-ise-ntp.cisco.com

ise/admin#
```
**show process**

To display information about active processes, use the `show process` command in the EXEC mode.

```
show process
```

**Syntax Description**

<table>
<thead>
<tr>
<th>show process</th>
<th>The command to display system processes.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>(Optional) Output modifier variables:</td>
</tr>
<tr>
<td></td>
<td>• <code>begin</code>—Matched pattern. Supports up to 80 alphanumeric characters.</td>
</tr>
<tr>
<td></td>
<td>• <code>count</code>—Count the number of lines in the output. Add number after the word <code>count</code>.</td>
</tr>
<tr>
<td></td>
<td>• <code>end</code>—End with line that matches. Supports up to 80 alphanumeric characters.</td>
</tr>
<tr>
<td></td>
<td>• <code>exclude</code>—Exclude lines that match. Supports up to 80 alphanumeric characters.</td>
</tr>
<tr>
<td></td>
<td>• <code>include</code>—Include lines that match. Supports up to 80 alphanumeric characters.</td>
</tr>
<tr>
<td></td>
<td>• <code>last</code>—Display last few lines of output. Add number after the word <code>last</code>. Supports up to 80 lines to display. Default 10.</td>
</tr>
</tbody>
</table>

**Defaults**

No default behavior or values.

**Command Modes**

EXEC

**Usage Guidelines**

None.

**Examples**

See Table A-11 for process field descriptions.

```
ise/admin# show process

<table>
<thead>
<tr>
<th>USER</th>
<th>PID</th>
<th>TIME</th>
<th>TT</th>
<th>COMMAND</th>
</tr>
</thead>
<tbody>
<tr>
<td>root</td>
<td>1 00:00:02</td>
<td>?</td>
<td>init</td>
<td></td>
</tr>
<tr>
<td>root</td>
<td>2 00:00:00</td>

show running-config

To display the contents of the currently running configuration file or the configuration, use the show running-config command in the EXEC mode.

    show running-config

Syntax Description
No arguments or keywords.

Defaults
The show running-config command displays all of the configuration information.

Command Modes
EXEC

Usage Guidelines
None.

Examples
ise/admin# show running-config

### show startup-config

To display the contents of the startup configuration file or the configuration, use the show startup-config command in the EXEC mode.

```
show startup-config
```

### Syntax Description

No arguments or keywords.

### Defaults

The show startup-config command displays all of the startup configuration information.

### Command Modes

EXEC

### Usage Guidelines

None.
**Examples**

```
ise/admin# show startup-config
!

</tbody>
</table>

**show tech-support**

To display technical support information, including email, use the `show tech-support` command in the EXEC mode.

```
show tech-support file [word]
```
Show Commands

Syntax Description

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>show tech-support</code></td>
<td>The command to display the technical support information.</td>
</tr>
<tr>
<td><code>file</code></td>
<td>Save any technical support data as a file in the local disk.</td>
</tr>
<tr>
<td><code>word</code></td>
<td>Filename to save. Supports up to 80 alphanumeric characters.</td>
</tr>
</tbody>
</table>

Defaults

Passwords and other security information do not appear in the output.

Command Modes

EXEC

Usage Guidelines

The `show tech-support` command is useful for collecting a large amount of information about your Cisco ISE server for troubleshooting purposes. You can then provide output to technical support representatives when reporting a problem.

Examples

```
ise/admin# show tech-support

</tbody>
</table>
show timezone

To display the time zone as set on the system, use the `show timezone` command in the EXEC mode.

```
show timezone
```

**Syntax Description**

No arguments or keywords.

**Defaults**

No default behavior or values.

**Command Modes**

EXEC

**Usage Guidelines**

None.

**Examples**

```
ise/admin# show timezone
UTC
ise/admin#
```

**Related Commands**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>

<tbody>
<tr>
<td>clock timezone</td>
<td>Sets the time zone on the system.</td>
</tr>
<tr>
<td>show timezones</td>
<td>Displays the time zones available on the system.</td>
</tr>
</tbody>
</table>

show timezones

To obtain a list of time zones from which you can select, use the `show timezones` command in the EXEC mode.

```
show timezones
```

**Syntax Description**

No arguments or keywords.

**Defaults**

No default behavior or values.

**Command Modes**

EXEC
Show Commands

Usage Guidelines

See the “clock timezone” section on page A-92, for examples of the time zones available for the ISE server.

Examples

ise/admin# show timezones
Africa/Blantyre
Africa/Dar_es_Salaam
Africa/Dakar
Africa/Asmara
Africa/Timbuktu
Africa/Maputo

</table>
show udi

To display information about the UDI of the Cisco ISE appliance, use the *show udi* command in the EXEC mode.

```
show udi
```

**Syntax Description**
No arguments or keywords.

**Defaults**
No default behavior or values.

**Command Modes**
EXEC

**Usage Guidelines**
None.

**Examples**

**Example 1**
```
ise/admin# show udi
SPID: ISE-3315-K9
VPID: V01
Serial: LAB12345678

ise/admin#
```

The following output appears when you run the *show udi* command on VMware servers.

**Example 2**
```
ise/admin# show udi
SPID: ISE-VM-K9
VPID: V01
Serial: 5C79C84NL9H

ise/admin#
```
show uptime

To display the length of time that you have been logged in to the Cisco ISE server, use the `show uptime` command in the EXEC mode.

```
ise/admin# show uptime
3 day(s), 18:55:02
ise/admin#
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Syntax Description</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>show uptime</td>
<td>The command to display the period that you have been logged into the Cisco ISE server.</td>
</tr>
</tbody>
</table>

- Output modifier variables:
  - `begin`—Matched pattern. Supports up to 80 alphanumeric characters.
  - `count`—Count the number of lines in the output. Add number after the word `count`.
  - `end`—End with line that matches. Supports up to 80 alphanumeric characters.
  - `exclude`—Exclude lines that match. Supports up to 80 alphanumeric characters.
  - `include`—Include lines that match. Supports up to 80 alphanumeric characters.
  - `last`—Display last few lines of output. Add number after the word `last`. Supports up to 80 lines to display. Default 10.

**Defaults**

No default behavior or values.

**Command Modes**

EXEC

**Usage Guidelines**

None.

**Examples**

```
ise/admin# show uptime
3 day(s), 18:55:02
ise/admin#
```

show users

To display the list of users logged in to the Cisco ISE server, use the `show users` command in the EXEC mode.

```
show users
```

**Syntax Description**

No arguments or keywords.
Show Commands

Defaults
No default behavior or values.

Command Modes
EXEC

Usage Guidelines
None.

Examples
ise/admin# show users

### Configuration Commands

This section lists each Configuration command and includes a brief description of its use, command syntax, usage guidelines, and sample output.

Configuration commands include `interface` and `repository`.

**Note**

Some of the Configuration commands require you to enter the configuration submode to complete the command configuration.

To access the Configuration mode, you must use the `configure` command in the EXEC mode. Table A-13 lists the Configuration commands that this section describes.

**Table A-13  List of Configuration Commands**

<table>
<thead>
<tr>
<th>Configuration Command</th>
<th>Configuration Command</th>
</tr>
</thead>
<tbody>
<tr>
<td>backup-staging-url</td>
<td>ip name-server</td>

<tr>
<td>ip address</td>
<td>snmp-server location</td>
</tr>
<tr>
<td>ip default-gateway</td>
<td>username</td>
</tr>
<tr>
<td>ip domain-name</td>
<td></td>
</tr>
</tbody>
</table>
backup-staging-url

To allow you to configure a Network File System (NFS) location that the backup and restore operations will use as a staging area to package and unpackage backup files, use the `backup-staging-url` command in Configuration mode.

```
backup-staging-url word
```

<table>
<thead>
<tr>
<th>Syntax Description</th>
<th>backup-staging-url</th>
<th>The command to configure a Network File System (NFS) location as a staging area that the backup and restore operations use.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>word</td>
<td>NFS URL for staging area. Supports up to 2048 alphanumeric characters. Use <code>nfs://server:path</code>.</td>
</tr>
</tbody>
</table>

1. Server is the server name and path refers to `/subdir/subsubdir`. Remember that a colon (:) is required after the server.

**Defaults**

No default behavior or values.

**Command Modes**

Configuration

**Usage Guidelines**

The URL is NFS only. The format of the command is `backup-staging-url nfs://server:path`.

**Warning**

Ensure that you secure your NFS server in such a way that the directory can be accessed only by the IP address of the Cisco ISE server.

**Examples**

```
ise/admin(config)# backup-staging-url nfs://loc-filer02a:/vol/local1/private1/jdoe
ise/admin(config)#
```

cdp holdtime

To specify the amount of time for which the receiving device should hold a Cisco Discovery Protocol packet from the Cisco ISE server before discarding it, use the `cdp holdtime` command in the Configuration mode. To revert to the default setting, use the `no` form of this command.

```
cdp holdtime seconds
```

<table>
<thead>
<tr>
<th>Syntax Description</th>
<th>cdp</th>
<th>The command to configure the Cisco Discovery Protocol parameters.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>holdtime</td>
<td>The Cisco Discovery Protocol hold time specified.</td>
</tr>
<tr>
<td></td>
<td>seconds</td>
<td>Specifies the hold time, in seconds. Value from 10 to 255 seconds.</td>
</tr>
</tbody>
</table>

**Defaults**

180 seconds
Cisco Discovery Protocol packets transmit with a time to live, or hold time, value. The receiving device will discard the Cisco Discovery Protocol information in the Cisco Discovery Protocol packet after the hold time has elapsed.

The `cdp holdtime` command takes only one argument; otherwise, an error occurs.

### Examples

```
ise/admin(config)# cdp holdtime 60
ise/admin(config)#
```

### Related Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>cdp timer</code></td>
<td>Specifies how often the Cisco ISE server sends Cisco Discovery Protocol updates.</td>
</tr>
<tr>
<td><code>cdp run</code></td>
<td>Enables the Cisco Discovery Protocol.</td>
</tr>
</tbody>
</table>

### cdp run

To enable the Cisco Discovery Protocol, use the `cdp run` command in Configuration mode. To disable the Cisco Discovery Protocol, use the `no` form of this command.

```
cdp run [GigabitEthernet]
```

### Syntax Description

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>cdp</td>
<td>The command to configure the Cisco Discovery Protocol parameters.</td>
</tr>
<tr>
<td>run</td>
<td>The command to enable or disable the Cisco Discovery Protocol.</td>
</tr>
<tr>
<td>GigabitEthernet</td>
<td>Specifies the GigabitEthernet interface on which to enable the Cisco Discovery Protocol.</td>
</tr>
</tbody>
</table>

### Defaults

No default behavior or values.

### Command Modes

Configuration

### Usage Guidelines

The command has one optional argument, which is an interface name. Without an optional interface name, the command enables the Cisco Discovery Protocol on all interfaces.

**Note**

The default for this command is on interfaces that are already up and running. When you are bringing up an interface, stop the Cisco Discovery Protocol first; then, start the Cisco Discovery Protocol again.
Examples

ise/admin(config)# cdp run GigabitEthernet 0
ise/admin(config)#

Related Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>cdp holdtime</td>
<td>Specifies the length of time that the receiving device should hold a Cisco Discovery Protocol packet from the Cisco ISE server before discarding it.</td>
</tr>
<tr>
<td>cdp timer</td>
<td>Specifies how often the Cisco ISE server sends Cisco Discovery Protocol updates.</td>
</tr>
</tbody>
</table>

cdp timer

To specify how often the Cisco ISE server sends Cisco Discovery Protocol updates, use the `cdp timer` command in Configuration mode. To revert to the default setting, use the `no` form of this command.

    cdp timer seconds

Syntax Description

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>cdp</td>
<td>The command to configure the Cisco Discovery Protocol parameters.</td>
</tr>
<tr>
<td>timer</td>
<td>The command that refreshes the time interval of the Cisco Discovery Protocol.</td>
</tr>
<tr>
<td>seconds</td>
<td>Specifies how often, in seconds, the Cisco ISE server sends Cisco Discovery Protocol updates. Value from 5 to 254 seconds.</td>
</tr>
</tbody>
</table>

Defaults

60 seconds

Command Modes

Configuration

Usage Guidelines

Cisco Discovery Protocol packets transmit with a time to live, or hold time, value. The receiving device will discard the Cisco Discovery Protocol information in the Cisco Discovery Protocol packet after the hold time has elapsed.

The `cdp timer` command takes only one argument; otherwise, an error occurs.

Examples

ise/admin(config)# cdp timer 60
ise/admin(config)#
clock timezone

To set the time zone, use the `clock timezone` command in Configuration mode. To disable this function, use the `no` form of this command.

```
clock timezone timezone
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>clock</td>
<td>The command to configure time zone.</td>
</tr>
<tr>
<td>timezone</td>
<td>The command to configure system timezone.</td>
</tr>
<tr>
<td>timezone</td>
<td>Name of the time zone visible when in standard time. Supports up to 64 alphanumeric characters.</td>
</tr>
</tbody>
</table>

**Defaults**

UTC

**Command Modes**

Configuration

**Usage Guidelines**

The system internally keeps time in UTC. If you do not know your specific time zone, you can enter the region, country, and city (see Tables A-14, A-15, and A-16 for sample time zones to enter on your system).

**Table A-14  Common Time Zones**

<tr>
<td>Kuwait</td>
<td>Krasnoyarsk</td>
</tr>
</tbody>
</table>

1. The Asia time zone includes cities from East Asia, Southern Southeast Asia, West Asia, and Central Asia.
2. Enter the region and city or country together separated by a forward slash (/); for example, Asia/Aden.
Several more time zones are available to you. On your Cisco ISE server, enter `show timezones`. A list of all the time zones available in the Cisco ISE server appears. Choose the most appropriate one for your time zone.

**Warning**

Changing the time zone on a Cisco ISE appliance after installation causes the Cisco ISE application on that node to be unusable. However, the preferred time zone (default UTC) can be configured during the installation when the initial setup wizard prompts you for the time zone.

For more information on how changing time zone impacts different Cisco ISE nodes types of your deployment and the steps to recover from the impact, see the “Standalone or Primary ISE Node” section on page A-94 and “Secondary ISE Node” section on page A-94.

**Standalone or Primary ISE Node**

Changing the time zone after installation is not supported on a Standalone or Primary ISE node. If you inadvertently change the time zone, do the following:

- Revert to the time zone back. (the time zone before it changed).
- Run the `application reset-config ise` command from the CLI of that node.
- Restore from the last known good backup before the time zone change on that node.

**Secondary ISE Node**

Changing the time zone on a secondary node renders it unusable on your deployment. If you want to change the time zone on the secondary node to keep it to be the same as the primary node, do the following:

- Deregister the secondary node.
- Correct the time zone to be the same as the primary node.
- Run the `application reset-config ise` command from the CLI of that node.
- Reregister the node as a secondary node to the primary node.

**Examples**

```plaintext
ise/admin(config)# clock timezone EST
ise/admin(config)# exit
ise/admin# show timezone
EST
ise/admin#
```

**Related Commands**

Appendix A      Cisco ISE Command Reference

Configuration Commands

Command Default
No default behavior or values.

Command Modes
Configuration or any configuration submode

Usage Guidelines
Use this command to execute EXEC commands (such as show, clear, and debug commands) while configuring your server. After the EXEC command executes, the system will return to the configuration mode you were using.

Examples
ise/admin(config)# do show run
Generating configuration...

hostname ise
ip domain-name cisco.com
interface GigabitEthernet 0
  ip address 172.23.90.113 255.255.255.0
  ipv6 address autoconfig
  ip name-server 171.70.168.183
  ip default-gateway 172.23.90.1
To end the current configuration session and return to the EXEC mode, use the **end** command in Configuration mode.

```
ise/admin(config)# end
ise/admin#
```

### Syntax Description
No arguments or keywords.

### Defaults
No default behavior or values.

### Command Modes
Configuration

### Usage Guidelines
This command brings you back to EXEC mode regardless of what configuration mode or submode you are in.

Use this command when you finish configuring the system and you want to return to EXEC mode to perform verification steps.
exit

To exit any configuration mode to the next-highest mode in the CLI mode hierarchy, use the exit command in Configuration mode.

```
exit
```

**Syntax Description**
No arguments or keywords.

**Defaults**
No default behavior or values.

**Command Modes**
Configuration

**Usage Guidelines**
The `exit` command is used in the Cisco ISE server to exit the current command mode to the next highest command mode in the CLI mode hierarchy.

For example, use the `exit` command in Configuration mode to return to the EXEC mode. Use the `exit` command in the configuration submodes to return to Configuration mode. At the highest level, EXEC mode, the `exit` command exits the EXEC mode and disconnects from the Cisco ISE server (see the "exit" section on page A-25, for a description of the `exit` (EXEC) command).

**Examples**
ise/admin(config)# exit
ise/admin#

**Related Commands**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>exit</code></td>
<td>Exits Configuration mode.</td>
</tr>
<tr>
<td><code>exit (EXEC)</code></td>
<td>Closes the active terminal session by logging out of the Cisco ISE server.</td>
</tr>
</tbody>
</table>

hostname

To set the hostname of the system, use the `hostname` command in Configuration mode. To delete the hostname from the system, use the `no` form of this command, which resets the system to localhost.

```
hostname word
```
### Syntax Description

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>hostname</td>
<td>The command to configure the hostname.</td>
</tr>
<tr>
<td>word</td>
<td>Name of the host. Contains at least 2 to 64 alphanumeric characters and an</td>
</tr>
<tr>
<td></td>
<td>underscore (_). The hostname must begin with a character that is not a space.</td>
</tr>
</tbody>
</table>

### Defaults

No default behavior or values.

### Command Modes

Configuration

### Usage Guidelines

A single instance type of command, **hostname** only occurs once in the configuration of the system. The hostname must contain one argument; otherwise, an error occurs.

### Examples

```
ise/admin(config)# hostname ise-1
Changing the hostname or IP may result in undesired side effects, such as installed application(s) being restarted.
Are you sure you want to proceed? [y/n] y

ISE M&T Alert Process is running, PID: 11623
```

### icmp echo

To configure the Internet Control Message Protocol (ICMP) echo responses, use the **icmp echo** command in Configuration mode.
icmp echo {off | on}

Syntax Description

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>icmp</td>
<td>The command to configure Internet Control Message Protocol echo requests.</td>
</tr>
<tr>
<td>echo</td>
<td>Configures ICMP echo response.</td>
</tr>
<tr>
<td>off</td>
<td>Disables ICMP echo response.</td>
</tr>
<tr>
<td>on</td>
<td>Enables ICMP echo response.</td>
</tr>
</tbody>
</table>

Defaults

The system behaves as if the ICMP echo response is on (enabled).

Command Modes

Configuration

Usage Guidelines

None.

Examples

ise/admin(config)# icmp echo off
ise/admin(config)#

Related Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>show icmp-status</td>
<td>Display ICMP echo response configuration information.</td>
</tr>
</tbody>
</table>

interface

To configure an interface type and enter the interface configuration mode, use the `interface` command in Configuration mode. This command does not have a `no` form.

Note

VMware virtual machine may have a number of interfaces available that depends on how many network interfaces (NIC) are added to the virtual machine.

interface GigabitEthernet [0 | 1 | 2 | 3]

Syntax Description

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>interface</td>
<td>The command to configure an interface.</td>
</tr>
<tr>
<td>GigabitEthernet</td>
<td>Configures the Gigabit Ethernet interface.</td>
</tr>
<tr>
<td>0 - 3</td>
<td>Number of the Gigabit Ethernet port to configure.</td>
</tr>
</tbody>
</table>

Note

After you enter the Gigabit Ethernet port number in the `interface` command, you enter the config-GigabitEthernet configuration submode (see the following Syntax Description).
do EXEC command. Allows you to perform any EXEC commands in this mode (see the “do” section on page A-95).

end Exits the config-GigabitEthernet submode and returns you to the EXEC mode.

exit Exits the config-GigabitEthernet configuration submode.

ip Sets the IP address and netmask for the Ethernet interface (see the “ip address” section on page A-105).

ipv6 Configures IPv6 autoconfiguration address and IPv6 address from DHCPv6 server. (see the “ipv6 address autoconfig” section on page A-101 and “ipv6 address dhcp” section on page A-103)

no Negates the command in this mode. Two keywords are available:
  • ip—Sets the IP address and netmask for the interface.
  • shutdown—Shuts down the interface.

shutdown Shuts down the interface (see the “shutdown” section on page A-118).

Defaults No default behavior or values.

Command Modes Configuration

Usage Guidelines You can use the interface command to configure subinterfaces to support various requirements.

Examples
ise/admin(config)# interface GigabitEthernet 0
ise/admin(config-GigabitEthernet)#

Related Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>show interface</td>
<td>Displays information about the system interfaces.</td>
</tr>
<tr>
<td>ip address (interface configuration mode)</td>
<td>Sets the IP address and netmask for the interface.</td>
</tr>
<tr>
<td>shutdown (interface configuration mode)</td>
<td>Shuts down the interface (see “shutdown” section on page A-118).</td>
</tr>
</tbody>
</table>

ipv6 address autoconfig

To enable IPv6 stateless autoconfiguration, use the interface GigabitEthernet 0 command in Configuration mode. This command does not have a no form.

IPv6 address autoconfiguration is enabled by default in Linux. Cisco ADE 2.0 shows the IPv6 address autoconfiguration in the running configuration for any interface that is enabled.

    interface GigabitEthernet 0
Configuration Commands

Syntax Description

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>interface</td>
<td>The command to configure an interface.</td>
</tr>
<tr>
<td>GigabitEthernet</td>
<td>Configures the Gigabit Ethernet interface.</td>
</tr>
<tr>
<td>&lt;0 - 3&gt;</td>
<td>Number of the Gigabit Ethernet port to configure.</td>
</tr>
</tbody>
</table>

Defaults

No default behavior or values.

Command Modes

Configuration

Usage Guidelines

IPv6 stateless autoconfiguration has the security downfall of having predictable IP addresses. This downfall is resolved with privacy extensions. You can verify that the privacy extensions feature is enabled using the `show` command.

Example 1

ise/admin# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
ise/admin(config)# interface GigabitEthernet 0
ise/admin(config)# (config-GigabitEthernet)# ipv6 address autoconfig
ise/admin(config)# (config-GigabitEthernet)# end
ise/admin#

When IPv6 autoconfiguration is enabled, the running configuration shows the interface settings similar to the following:

```
! interface GigabitEthernet 0
   ip address 172.23.90.116 255.255.255.0
   ipv6 address autoconfig
```

You can use the `show interface GigabitEthernet 0` command to display the interface settings. In example 2, you can see that the interface has three IPv6 addresses. The first address (starting with 3ffe) is obtained using the stateless autoconfiguration. For the stateless autoconfiguration to work, you must have IPv6 route advertisement enabled on that subnet. The next address (starting with fe80) is a link-local address that does not have any scope outside the host. You will always see a link local address regardless of the IPv6 autoconfiguration or DHCPv6 configuration. The last address (starting with 2001) is obtained from a IPv6 DHCP server.

Example 2

ise/admin# show interface GigabitEthernet 0
eth0    Link encap:Ethernet  HWaddr 00:0C:29:AF:DA:05
inet addr:172.23.90.116  Bcast:172.23.90.255  Mask:255.255.255.0
inet6 addr: 3ffe:302:11:2:20c:29ff:feaf:da05/64 Scope:Global
inet6 addr: fe80::20c:29ff:feaf:da05/64 Scope:Link
UP BROADCAST RUNNING MULTICAST  MTU:1500  Metric:1
RX packets:77848 errors:0 dropped:0 overruns:0 frame:0
TX packets:23131 errors:0 dropped:0 overruns:0 carrier:0
collisions:0 txqueuelen:1000
RX bytes:10699801 (10.2 MiB) TX bytes:3448374 (3.2 MiB)
Interrupt:59 Base address:0x2000

ise/admin#
The following RFC provides the IPv6 stateless autoconfiguration privacy extensions:
http://www.ietf.org/rfc/rfc3041.txt

To verify that the privacy extensions feature is enabled, you can use the `show interface GigabitEthernet 0` command. You can see two autoconfiguration addresses: one address is without the privacy extensions, and the other is with the privacy extensions.

In the example 3 below, the MAC is 3ffe:302:11:2:20c:29ff:feaf:da05/64 and the non-RFC3041 address contains the MAC, and the privacy-extension address is 302:11:2:9d65:e608:59a9:d4b9/64.

The output appears similar to the following:

```
Example 3
ise/admin# show interface GigabitEthernet 0
eth0      Link encap:Ethernet  HWaddr 00:0C:29:AF:DA:05
inet addr:172.23.90.116  Bcast:172.23.90.255  Mask:255.255.255.0
inet6 addr: 3ffe:302:11:2:20c:29ff:feaf:da05/64 Scope:Global
inet6 addr: fe80::20c:29ff:feaf:da05/64 Scope:Link
UP BROADCAST RUNNING MULTICAST  MTU:1500  Metric:1
RX packets:60606 errors:0 dropped:0 overruns:0 frame:0
TX packets:2771 errors:0 dropped:0 overruns:0 carrier:0
collisions:0 txqueuelen:1000
RX bytes:9430102 (8.9 MiB)  TX bytes:466204 (455.2 KiB)
Interrupt:59 Base address:0x2000
ise/admin#
```

### Related Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>show interface</code></td>
<td>Displays information about the system interfaces.</td>
</tr>
<tr>
<td><code>ip address</code> (interface configuration mode)</td>
<td>Sets the IP address and netmask for the interface.</td>
</tr>
<tr>
<td><code>shutdown</code> (interface configuration mode)</td>
<td>Shuts down the interface (see “shutdown” section on page A-118).</td>
</tr>
<tr>
<td><code>ipv6 address dhcp</code></td>
<td>Enables IPv6 address DHCP on an interface.</td>
</tr>
<tr>
<td><code>show running-config</code></td>
<td>Displays the contents of the currently running configuration file or the configuration.</td>
</tr>
</tbody>
</table>

### `ipv6 address dhcp`

To enable IPv6 address DHCP, use the `interface GigabitEthernet 0` command in Configuration mode. This command does not have a `no` form.

```
interface GigabitEthernet 0
```

### Syntax Description

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>interface</code></td>
<td>The command to configure an interface.</td>
</tr>
<tr>
<td><code>GigabitEthernet</code></td>
<td>Configures the Gigabit Ethernet interface.</td>
</tr>
<tr>
<td><code>0</code></td>
<td>Gigabit Ethernet port number to be configured.</td>
</tr>
</tbody>
</table>
Configuration Commands

Defaults
No default behavior or values.

Command Modes
Configuration

Usage Guidelines
None.

Examples
ise/admin# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
ise/admin(config)# interface GigabitEthernet 0
ise/admin(config-GigabitEthernet)# ipv6 address dhcp
ise/admin(config-GigabitEthernet)# end
ise/admin#

When IPv6 DHCPv6 is enabled, the running configuration shows the interface settings similar to the following:

```
interface GigabitEthernet 0
  ip address 172.23.90.116 255.255.255.0
  ipv6 address dhcp
```

Note
The IPv6 stateless autoconfiguration and IPv6 address DHCP are not mutually exclusive. It is possible to have both IPv6 stateless autoconfiguration and IPv6 address DHCP on the same interface. You can use the `show interface` to display what IPv6 addresses are in use for a particular interface.

When both the IPv6 stateless autoconfiguration and IPv6 address DHCP are enabled, the running configuration shows the interface settings similar to the following:

```
interface GigabitEthernet 0
  ip address 172.23.90.116 255.255.255.0
  ipv6 address dhcp
```

Related Commands

<tr>
<td><code>show running-config</code></td>
<td>Displays the contents of the currently running configuration file or the configuration.</td>
</tr>
</tbody>
</table>
ip address

To set the IP address and netmask for the Ethernet interface, use the `ip address` command in interface Configuration mode. To remove an IP address or disable IP processing, use the `no` form of this command.

```
ip address ip-address netmask
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ip address</td>
<td>The command to configure IP address and netmask for the GigabitEthernet interface.</td>
</tr>
<tr>
<td>ip-address</td>
<td>IPv4 version IP address.</td>
</tr>
<tr>
<td>netmask</td>
<td>Mask of the associated IP subnet.</td>
</tr>
</tbody>
</table>

**Defaults**

Enabled.

**Command Modes**

Interface configuration

**Usage Guidelines**

Requires exactly one address and one netmask; otherwise, an error occurs.

```
ise/admin(config)# interface GigabitEthernet 1
ise/admin(config-GigabitEthernet)# ip address 209.165.200.227 255.255.255.224
```

Changing the hostname or IP may result in undesired side effects, such as installed application(s) being restarted.

........

To verify that ISE processes are running, use the `show application status ise` command.

```
ise/admin(config-GigabitEthernet)#
```

**Related Commands**

<table>

</tbody>
</table>
ip default-gateway

To define or set a default gateway with an IP address, use the ip default-gateway command in Configuration mode. To disable this function, use the no form of this command.

```
ip default-gateway ip-address
```

**Syntax Description**
- `ip default-gateway` - The command to define a default gateway with an IP address.
- `ip-address` - IP address of the default gateway.

**Defaults**
Disabled.

**Command Modes**
Configuration

**Usage Guidelines**
If you enter more than one argument or no arguments at all, an error occurs.

**Examples**
ise/admin(config)# ip default-gateway 209.165.202.129
ise/admin(config)#

**Related Commands**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ip address (interface configuration mode)</td>
<td>Sets the IP address and netmask for the Ethernet interface.</td>
</tr>
</tbody>
</table>

ip domain-name

To define a default domain name that the Cisco ISE server uses to complete hostnames, use the ip domain-name command in Configuration mode. To disable this function, use the no form of this command.

```
ip domain-name word
```

**Syntax Description**
- `ip domain-name` - The command to define a default domain name.
- `word` - Default domain name used to complete the hostnames. Contains at least 2 to 64 alphanumeric characters.

**Defaults**
Enabled.
Command Modes

Configuration

Usage Guidelines

If you enter more or fewer arguments, an error occurs.

Examples

ise/admin(config)# ip domain-name cisco.com
ise/admin(config)#

Related Commands

Command | Description
--- | ---
ip name-server | Sets the DNS servers for use during a DNS query.

ip name-server

To set the Domain Name Server (DNS) servers for use during a DNS query, use the `ip name-server` command in Configuration mode. You can configure one to three DNS servers. To disable this function, use the `no` form of this command.

Note

Using the `no` form of this command removes all the name servers from the configuration. Using the `no` form of this command and one of the IP names removes only that name server.

```
   ip name-server ip-address [ip-address*]
```

Syntax Description

<table>
<thead>
<tr>
<th>Syntax Description</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>ip name-server</code></td>
<td>The command to configure IP addresses of name server(s) to use.</td>
</tr>
<tr>
<td><code>ip-address</code></td>
<td>Address of a name server.</td>
</tr>
<tr>
<td><code>ip-address*</code></td>
<td>(Optional) IP addresses of additional name servers.</td>
</tr>
</tbody>
</table>

Note

You can configure a maximum of three name servers.

Defaults

No default behavior or values.

Command Modes

Configuration

Usage Guidelines

The first name server that is added with the `ip name-server` command occupies the first position and the system uses that server first to resolve the IP addresses.

You can add name servers to the system one at a time or all at once, until you reach the maximum (3). If you already configured the system with three name servers, you must remove at least one server to add additional name servers.

To place a name server in the first position so that the subsystem uses it first, you must remove all name servers with the `no` form of this command before you proceed.
Examples

ise/admin(config)# ip name-server 209.165.201.1

To verify that ISE processes are running, use the 'show application status ise' command.

ise/admin(config)#

You can choose not to restart the Cisco ISE server; nevertheless, the changes will take effect.

<tr>
<td>ip domain-name</td>
<td>Defines a default domain name that the server uses to complete hostnames.</td>
</tr>
</tbody>
</table>

ip route

To configure the static routes, use the **ip route** command in Configuration mode. To remove static routes, use the **no** form of this command.

Static routes are manually configured, which makes them inflexible (they cannot dynamically adapt to network topology changes), but extremely stable. Static routes optimize bandwidth utilization, because no routing updates need to be sent to maintain them. They also make it easy to enforce routing policy.

**ip route** **prefix** **mask** **gateway** **ip-address**

**no ip route** **prefix** **mask**

Syntax Description

- **ip route** The command to configure IP routes.
- **prefix** IP route prefix for the destination.
- **mask** Prefix mask for the destination.
- **ip-address** IP address of the next hop that can be used to reach that network.

Defaults

No default behavior or values.

Command Modes

Configuration

Examples

ise/admin(config)# ip route 192.168.0.0 255.255.0.0 gateway 172.23.90.2
ise/admin(config)#
kron occurrence

To schedule one or more Command Scheduler commands to run at a specific date and time or a recurring level, use the **kron occurrence** command in Configuration mode. To delete this schedule, use the no form of this command.

```
kron occurrence occurrence-name
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>kron</td>
<td>The command to schedule the Command Scheduler commands.</td>
</tr>
<tr>
<td>occurrence</td>
<td>Schedules Command Scheduler commands.</td>
</tr>
<tr>
<td>occurrence-name</td>
<td>Name of the occurrence. Supports up to 80 alphanumeric characters. (See the</td>
</tr>
<tr>
<td></td>
<td>following note and Syntax Description.)</td>
</tr>
</tbody>
</table>

**Note**

After you enter the `occurrence-name` in the **kron occurrence** command, you enter the config-occurrence configuration submode (see the following Syntax Description).

- **at**
  - Identifies that the occurrence is to run at a specified calendar date and time.
  - Usage: `at [hh:mm] [day-of-week | day-of-month | month day-of-month].`

- **do**
  - EXEC command. Allows you to perform any EXEC commands in this mode (see the “do” section on page A-95).

- **end**
  - Exits the kron-occurrence configuration submode and returns you to the EXEC mode.

- **exit**
  - Exits the kron-occurrence configuration mode.

- **no**
  - Negates the command in this mode.
  - Three keywords are available:
    - **at**—Usage: `at [hh:mm] [day-of-week | day-of-month | month day-of-month].`
    - **policy-list**—Specifies a policy list to be run by the occurrence. Supports up to 80 alphanumeric characters.
    - **recurring**—Execution of the policy lists should be repeated.

- **policy-list**
  - Specifies a Command Scheduler policy list to be run by the occurrence.

- **recurring**
  - Identifies that the occurrences run on a recurring basis.

**Defaults**

No default behavior or values.

**Command Modes**

Configuration
Configuration Commands

Usage Guidelines

Use the `kron occurrence` and `policy-list` commands to schedule one or more policy lists to run at the same time or interval.

Use the `kron policy-list` command in conjunction with the `cli` command to create a Command Scheduler policy that contains the EXEC CLI commands to be scheduled to run on the Cisco ISE server at a specified time. See the “`kron policy-list`” section on page A-110.

Examples

Note When you run the `kron` command, backup bundles are created with a unique name (by adding a time stamp) to ensure that the files do not overwrite each other.

Example 1: Weekly Backup

```plaintext
ise/admin(config)# kron occurrence WeeklyBackup
ise/admin(config-Occurrence)# at 14:35 Monday
ise/admin(config-Occurrence)# policy-list SchedBackupPolicy
ise/admin(config-Occurrence)# recurring
ise/admin(config-Occurrence)# exit
ise/admin(config)#
```

Example 2: Daily Backup

```plaintext
ise/admin(config)# kron occurrence DailyBackup
ise/admin(config-Occurrence)# at 02:00
ise/admin(config-Occurrence)# exit
ise/admin(config)#
```

Example 3: Weekly Backup

```plaintext
ise/admin(config)# kron occurrence WeeklyBackup
ise/admin(config-Occurrence)# at 14:35 Monday
ise/admin(config-Occurrence)# policy-list SchedBackupPolicy
ise/admin(config-Occurrence)# no recurring
ise/admin(config-Occurrence)# exit
ise/admin(config)#
```

nntp server

To allow for software clock synchronization by the NTP server for the system, use the nntp server command in Configuration mode. Allows up to three servers. To disable this capability, use the no form of this command.

```
ntp server {ip-address | hostname} [ip-address | hostname] [ip-address | hostname]
```

Syntax Description

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ntp server</td>
<td>The command to specify NTP configuration.</td>
</tr>
<tr>
<td>ip-address</td>
<td>IP address or hostname of the server providing the clock synchronization.</td>
</tr>
<tr>
<td>hostname</td>
<td>Arguments are limited to 255 alphanumeric characters.</td>
</tr>
</tbody>
</table>

Defaults

No servers are configured by default.

Command Modes

Configuration

Usage Guidelines

Use this command if you want to allow the system to synchronize with a specified server.

To terminate NTP service on a device, you must enter the no ntp command without keywords or arguments. For example, if you previously issued the ntp server command and you now want to remove not only the server synchronization capability, but all NTP functions from the device, use the no ntp command without any keywords. This command ensures that all NTP functions are disabled and that the NTP service also terminates.

Note

This command gives conflicting information during the sync process. The sync process can take up to 20 minutes to complete.

Examples

ise/admin(config)# ntp server ise ise1 ise2
ise/admin(config)#

ise/admin# show ntp
Primary NTP : ise
Secondary NTP: ise1
Tertiary NTP : ise2

synchronised to local net at stratum 11

### password-policy

To enable or configure the passwords on the system, use the `password-policy` command in Configuration mode. To disable this function, use the `no` form of this command.

```
password-policy option
```

**Note**

The `password-policy` command requires a policy option (see Syntax Description). You must enter the `password-expiration-enabled` command before the other password-expiration commands.

### Syntax Description

- `password-policy` The command to configure the password policy.

**Note**

After you enter the `password-policy` command, you can enter the `config-password-policy` configuration submode.

<table>
<thead>
<tr>
<th>Command</th>

</tr>
<tr>
<td>no-username</td>
<td>Prohibits users from reusing their username as a part of a password.</td>
</tr>
<tr>
<td>password-expiration-days</td>
<td>Number of days until a password expires. Integer length from 0 to 80.</td>
</tr>
<tr>
<td>password-expiration-enabled</td>
<td>Enables password expiration.</td>
</tr>
</tbody>
</table>

**Note** You must enter the `password-expiration-enabled` command before the other password-expiration commands.
repository

To enter the repository submode for configuration of backups, use the repository command in Configuration mode.

```plaintext
repository repository-name
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>repository</td>
<td>The command to configure the repository.</td>
</tr>
<tr>
<td>repository-name</td>
<td>Name of repository. Supports up to 80 alphanumeric characters.</td>
</tr>
</tbody>
</table>

**Note**

After you enter the name of the repository in the repository command, you enter the config-Repository configuration submode (see the Syntax Description).

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>do</td>
<td>EXEC command. Allows you to perform any of the EXEC commands in this mode (see the “do” section on page A-95).</td>
</tr>
<tr>
<td>end</td>
<td>Exits the config-Repository submode and returns you to the EXEC mode.</td>
</tr>
<tr>
<td>exit</td>
<td>Exits this mode.</td>
</tr>
</tbody>
</table>

**Directory**

[ Cisco ISE Command Reference Guide, Release 1.0.4 ]

[ Cisco Identity Services Engine CLI Reference Guide, Release 1.0.4 ]
no

Negates the command in this mode.

Two keywords are available:

- url—Repository URL.
- user—Repository username and password for access.

url

URL of the repository. Supports up to 80 alphanumeric characters (see Table A-18).

user

Configure the username and password for access. Supports up to 30 alphanumeric characters.

Table A-18 URL Keywords

<table>
<thead>
<tr>
<th>Keyword</th>
<th>Source of Destination</th>
</tr>
</thead>
<tbody>
<tr>
<td>word</td>
<td>Enter the repository URL, including server and path info. Supports up to 80 alphanumeric characters.</td>
</tr>
<tr>
<td>cdrom:</td>
<td>Local CD-ROM drive (read only).</td>
</tr>
<tr>
<td>disk:</td>
<td>Local storage. You can run the show repository repository_name to view all the files in the local repository.</td>
</tr>
<tr>
<td>Note</td>
<td>All local repositories are created on the /localdisk partition. When you specify disk:// in the repository URL, the system creates directories in a path that is relative to /localdisk. For example, if you entered disk://backup, the directory is created at /localdisk/backup.</td>
</tr>
<tr>
<td>nfs:</td>
<td>Source or destination URL for an NFS network server. Use url nfs://server:path1.</td>
</tr>
<tr>
<td>sftp:</td>
<td>Source or destination URL for an SFTP network server. Use url sftp://server/path1.</td>
</tr>
<tr>
<td>tftp:</td>
<td>Source or destination URL for a TFTP network server. Use url tftp://server/path1.</td>
</tr>
<tr>
<td>Note</td>
<td>You cannot use a TFTP repository for performing a Cisco ISE upgrade.</td>
</tr>
</tbody>
</table>

1. Server is the server name and path refers to /subdir/subsubdir. Remember that a colon (:) is required after the server for an NFS network server.

Defaults
No default behavior or values.

Command Modes
Configuration

Usage Guidelines
None.

Examples

Example 1
ise/admin# configure terminal
ise/admin(config)# repository myrepository
ise/admin(config-Repository)# url sftp://starwars.test.com/repository/system1

**service**

To specify a service to manage, use the **service** command in Configuration mode. To disable this function, use the **no** form of this command.

```
    service ssdh
```

**Syntax Description**

```
    service          The command to specify a service to be managed.
    ssdh             Secure Shell Daemon. The daemon program for SSH.
```

**Defaults**

No default behavior or values.

**Command Modes**

Configuration

**Usage Guidelines**

None.

**Examples**

```
    ise/admin(config)# service ssdh
    ise/admin(config)#
```
shutdown

To shut down an interface, use the `shutdown` command in the interface configuration mode. To disable this function, use the `no` form of this command.

**Syntax Description**
No arguments or keywords.

**Defaults**
No default behavior or values.

**Command Modes**
Interface Configuration

**Usage Guidelines**
When you shut down an interface using this command, you lose connectivity to the Cisco ISE appliance through that interface (even though the appliance is still powered on). However, if you have configured the second interface on the appliance with a different IP and have not shut down that interface, you can access the appliance through that second interface.

To shut down an interface, you can also modify the ifcfg-eth[0,1] file, which is located at `/etc/sysconfig/network-scripts`, using the ONBOOT parameter:

- Disable an interface: set ONBOOT="no"
- Enable an interface: set ONBOOT="yes"

You can also use the `no shutdown` command to enable an interface.

**Examples**

```
ise/admin(config)# interface GigabitEthernet 0
ise/admin(config-GigabitEthernet)# shutdown
```

**snmp-server community**

To set up the community access string to permit access to the Simple Network Management Protocol (SNMP), use the `snmp-server community` command in Configuration mode. To disable this function, use the `no` form of this command.

```
  snmp-server community word ro
```
### snmp-server community

<table>
<thead>
<tr>
<th>Syntax Description</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>snmp-server community word ro</code></td>
<td>The command to configure the SNMP server. Accessing string that functions much like a password and allows access to SNMP. No blank spaces allowed. Supports up to 255 alphanumeric characters. Specifies read-only access.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**
The `snmp-server community` command requires a community string and the `ro` argument; otherwise, an error occurs.

**Examples**
ise/admin(config)# snmp-server community new ro
ise/admin(config)#

**Related Commands**

snmp-server host

To send SNMP traps to a remote user, use the snmp-server host command in Configuration mode. To remove trap forwarding, use the no form of this command.

```
snmp-server host {ip-address \ hostname} version {1 \ 2c} community
```

Syntax Description

- **snmp-server host**
  - The command to configure hosts to receive SNMP notifications.
- **ip-address**
  - IP address of the SNMP notification host. Supports up to 32 alphanumeric characters.
- **hostname**
  - Name of the SNMP notification host. Supports up to 32 alphanumeric characters.
- **version {1 \ 2c}**
  - (Optional) Version of the SNMP used to send the traps. Default = 1.
  - If you use the version keyword, specify one of the following keywords:
    - 1—SNMPv1.
    - 2c—SNMPv2C.
- **community**
  - Password-like community string that is sent with the notification operation.

Defaults

Disabled.

Command Modes

Configuration

Usage Guidelines

The command takes arguments as listed; otherwise, an error occurs.

Examples

ise/admin(config)# snmp-server community new ro
ise/admin(config)# snmp-server host 209.165.202.129 version 1 password
ise/admin(config)#
To configure the SNMP location MIB value on the system, use the `snmp-server location` command in Configuration mode. To remove the system location information, use the `no` form of this command.

```
  snmp-server location word
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>snmp-server location</td>
<td>The command to configure the physical location of this managed node. Supports up to 255 alphanumeric characters.</td>
</tr>
<tr>
<td>word</td>
<td>String that describes the physical location information of the system. Supports up to 255 alphanumeric characters.</td>
</tr>
</tbody>
</table>

**Defaults**

No default behavior or values.

**Command Modes**

Configuration

**Usage Guidelines**

Cisco recommends that you use underscores (_) or hyphens (-) between the terms within the `word` string. If you use spaces between terms within the `word` string, you must enclose the string in quotation marks (""").

**Examples**

**Example 1**

```
ise/admin(config)# snmp-server location Building_3/Room_214
ise/admin(config)#
```

**Example 2**

```
ise/admin(config)# snmp-server location "Building 3/Room 214"
ise/admin(config)#
```

**Related Commands**

<table>

<tr>
<td>snmp-server community</td>
<td>Sets up the community access string to permit access to SNMP.</td>
</tr>
<tr>
<td>snmp-server contact</td>
<td>Configures the SNMP location MIB value on the system.</td>
</tr>
</tbody>
</table>
username

To add a user who can access the Cisco ISE appliance using SSH, use the `username` command in Configuration mode. If the user already exists, the password, the privilege level, or both change with this command. To delete the user from the system, use the `no` form of this command.

```
username username password {hash | plain} password role {admin | user} [disabled [email email-address]] [email email-address]
```

For an existing user, use the following command option:

```
username username password role {admin | user} password
```

### Syntax Description

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>username</code></td>
<td>The command to create a user to access the Cisco ISE appliance using SSH.</td>
</tr>
<tr>
<td><code>username</code></td>
<td>Only one word for the username argument. Blank spaces and quotation marks (&quot;&quot;’) are not allowed. Supports up to 31 alphanumeric characters.</td>
</tr>
<tr>
<td><code>password</code></td>
<td>The command to use specify password and user role.</td>
</tr>
<tr>
<td><code>password</code></td>
<td>Password character length up to 40 alphanumeric characters. You must specify the password for all new users.</td>
</tr>
<tr>
<td>`hash</td>
<td>plain`</td>
</tr>
<tr>
<td>`role admin</td>
<td>user`</td>
</tr>
<tr>
<td><code>disabled</code></td>
<td>Disables the user according to the user’s email address.</td>
</tr>
<tr>
<td><code>email email-address</code></td>
<td>The user’s email address. For example, <a href="mailto:user1@mydomain.com">user1@mydomain.com</a>.</td>
</tr>
</tbody>
</table>

### Defaults

The initial user during setup.

### Command Modes

Configuration

### Usage Guidelines

The `username` command requires that the username and password keywords precede the `hash | plain` and the `admin | user` options.

### Examples

**Example 1**

```
ise/admin(config)# username admin password hash ##### role admin
ise/admin(config)#
```

**Example 2**

```
ise/admin(config)# username admin password plain Secr3tp@swd role admin
ise/admin(config)#
```

**Example 3**

```
ise/admin(config)# username admin password plain Secr3tp@swd role admin email admin123@mydomain.com
ise/admin(config)#
```

A

ADE
Application Deployment Engine.

C

CDP
Cisco Discovery Protocol. A proprietary tool that network administrators use to access a summary of protocol and address information about other devices that are directly connected to the device initiating the command.

Cisco Discovery Protocol runs over the data-link layer that connects the physical media to the upper-layer protocols. Because Cisco Discovery Protocol operates at this level, two or more Cisco Discovery Protocol devices that support different network layer protocols (for example, IP and Novell IPX) can learn about each other.

Physical media that supports the Subnetwork Access Protocol (SNAP) encapsulation connect Cisco Discovery Protocol devices. These can include all LANs, Frame Relay, and other WANs, and ATM networks.

See CDP.

CLI
command-line interface. An interface through which the user can interact with the software operating system by entering commands and optional arguments.

client
Node or software program that requests services from a server. For example, the Secure Shell (SSH) client. See also server.

See CLI.

command-line interface

community string
A text string that acts as a password, which is used to authenticate messages sent between a management station and an IP Transfer Point (ITP) that contains an SNMP agent. The community string sends in every packet between the manager and the agent.
D

DNS
Domain Name System. DNS associates various sorts of information with so-called domain names; most importantly, it serves as the “phone book” for the Internet: it translates human-readable computer hostnames (for example, en.wikipedia.org) into the IP addresses that networking equipment needs for delivering information. It also stores other information, such as the list of mail exchange servers that accept email for a given domain. By providing a worldwide keyword-based redirection service, the DNS is an essential component of contemporary Internet use.

DNS name
Initial name of a node.

domain name
The style of identifier—a sequence of case-insensitive ASCII labels separated by dots (.) (for example, bbn.com.)—defined for subtrees in the Internet DNS [R1034] and used in other Internet identifiers, such as hostnames, mailbox names, and URLs.

Domain Name System
See DNS.

F

FTP
File Transfer Protocol. Application protocol, part of the TCP/IP protocol stack, used for transferring files between network nodes. FTP is defined in RFC 959.

H

host
Computer system on a network. Similar to the term node; except that host usually implies a computer system, whereas node generally applies to any network system, including access servers and ITPs.

hostname
The name of the operating system’s server or computer that contains the major program files.

I

IP
Internet Protocol. Network layer protocol in the TCP/IP stack that offers a connectionless internetwork service. IP provides features for addressing, type-of-service specification, fragmentation and reassembly, and security. Documented in RFC 791.

IP address
A 32-bit address assigned to hosts by using TCP/IP. An IP address belongs to one of five classes (A, B, C, D, or E) and written as 4 octets separated by periods (.) (dotted-decimal format). Each address consists of a network number, an optional subnetwork number, and a host number. For routing, the network and subnetwork numbers stay together, while the host number addresses an individual host within the network or subnetwork. A subnet mask extracts network and subnetwork information from the IP address.
M

MIB
Management Information Base. A directory listing information that is used and maintained by the network’s management protocol of a network, such as SNMP.

N

name server
A name server is a computer server that implements a name-service protocol. It normally maps a computer-usable identifier of a host to a human-usable identifier for that host. For example, a DNS server might translate the domain name en.wikipedia.org to the IP address 145.97.39.155.

Network Time Protocol
See NTP.

NTP
Network Time Protocol. A protocol for synchronizing the clocks of computer systems over packet-switched, variable-latency data networks. NTP uses User Datagram Protocol (UDP) port 123 as its transport layer. NTP is designed particularly to resist the effects of variable latency (jitter).

NTP is one of the oldest Internet protocols still in use (since before 1985). NTP was originally designed by Dave Mills of the University of Delaware, who still maintains it, along with a team of volunteers.

NTP is not related to the much simpler DAYTIME (RFC 867) and TIME (RFC 868) protocols.

P

port
In IP terminology, an upper-layer process that receives information from lower layers. Each numbered port associates with a specific process. For example, SMTP associates with port 25.

S

Secure Shell
See SSH.

server
An application or device that performs services for connected clients as part of a client-server architecture. A server application, as defined by RFC 2616 (HTTP/1.1), is “an application program that accepts connections in order to service requests by sending back responses.” Server computers are devices designed to run such an application or applications, often for extended periods of time, with minimal human direction. Examples of servers include web servers, email servers, and file servers.

See also client.

Simple Network Management Protocol
See SNMP.
SSH
Secure Shell. A network protocol in which data is exchanged over a secure channel between two computers. Encryption provides confidentiality and integrity of data. SSH uses public-key cryptography to authenticate the remote computer and allow the remote computer to authenticate the user.

SSH is typically used to log in to a remote machine and execute commands; but, it also supports tunneling, forwarding arbitrary TCP ports, and X Window System (X11) connections. It can transfer files by using the associated SSH File Transfer Protocol (SFTP) or Secure Copy (SCP) protocols.

An SSH server, by default, listens on the standard TCP port 22. An SSH client program is typically used for establishing connections to an sshd daemon accepting remote connections. Both are commonly present on most modern operating systems. Proprietary, freeware, and open-source versions of various levels of complexity and completeness exist.

SNMP

SNMPv1
SNMPv1 is a simple request/response protocol. In the SNMPv1 framework, the network-management system issues a request, and managed devices return responses.

SNMPv2C
The second release of SNMP, described in RFC 1902. It provides additions to data types, counter size, and protocol operations. SNMPv2C support includes a bulk-retrieval mechanism and more detailed error message reporting to management stations. The bulk-retrieval mechanism supports the retrieval of tables and large quantities of information, minimizing the number of round-trip transmissions required. SNMPv2C improved error-handling support includes expanded error codes that distinguish different kinds of error conditions; these conditions are reported through a single error code in SNMPv1. Error return codes now report the error type. Three kinds of exceptions are also reported: No such object, No such instance, and End of MIB view.

SNMPv3
SNMPv3 is an interoperable standards-based protocol for network management, which provides secure access to devices by a combination of authenticating and encrypting packets over the network. It has primarily added security and remote configuration enhancements to SNMP. SNMPv3 provides important security features such as message integrity that ensures packets are not tampered with in-transit, authentication that verifies messages are from a valid source, and encryption of packets that prevents snooping by an unauthorized source.

TCP
Telnet (TELtype NETwork). A network protocol used on the Internet or LAN connections. It was developed in 1969 beginning with RFC 0015 and standardized as IETF STD 8, one of the first Internet standards.

The term Telnet also refers to software that implements the client part of the protocol. Telnet clients have been available on most UNIX systems for many years and are available for virtually all platforms. Most network equipment and operating systems with a TCP/IP stack support some kind of Telnet service server for their remote configuration (including those based on Windows NT). Recently, Secure Shell has begun to dominate remote access for UNIX-based machines.

Most often, a user establishes a telnet connection to a UNIX-like server system or a simple network device such as a switch. For example, you might “telnet in from home to check your email at work.” In doing so, you would be using a Telnet client to connect from your computer to one of your servers. When the connection is established, you would then log in with your account information and execute the operating system commands remotely on that computer, such as `ls` or `cd`.

TFTP

Trivial File Transfer Protocol. Simplified version of FTP that allows files to be transferred from one computer to another over a network.

Transmission Control Protocol

*See TCP.*

Trivial File Transfer Protocol

*See TFTP.*

UDI

Unique Device Identifier. Each identifiable product is an entity, as defined by the Entity MIB (RFC 2737) and its supporting documents. Some entities, such as a chassis, will have subentities like slots. An Ethernet switch might be a member of a super entity like a stack. Most Cisco entities that are orderable products leave the factory with an assigned UDI. The UDI information is printed on a label that is affixed to the physical hardware device, and it is also stored electronically on the device in order to facilitate remote retrieval.

A UDI consists of the following elements: product identifier (PID), version identifier (VID), and serial number (SN).

The PID is the name by which the product can be ordered; it has been historically called the “Product Name” or “Part Number.” You use this identifier to order an exact replacement part.

The VID is the version of the product. Whenever a product is revised, the VID is incremented, according to a rigorous process derived from Telcordia GR-209-CORE, an industry guideline that governs product change notices.

The SN is the vendor-unique serialization of the product. Each manufactured product carries a unique serial number assigned at the factory, which cannot be changed in the field. This number identifies an individual, specific instance of a product.

*See UDI.*
