

# Cisco Identity Services Engine Network Component Compatibility, Release 1.3

---

**Revised: February 14, 2018**

This document describes Cisco Identity Services Engine (ISE) compatibility with switches, wireless LAN controllers, and other policy enforcement devices as well as operating systems with which Cisco ISE interoperates.

- [Supported Network Access Devices, page 1](#)
- [Supported AAA Attributes for Third-Party VPN Concentrators, page 6](#)

- [Documentation Updates, page 15](#)
- [Related Documentation, page 16](#)
- [Obtaining Documentation and Submitting a Service Request, page 17](#)

## Supported Network Access Devices

Cisco ISE supports interoperability with any Cisco or non-Cisco RADIUS client network access device (NAD) that implements common RADIUS behavior (similar to Cisco IOS 12.x) for standards-based authentication. For a list of supported authentication methods, see the “Configure Authentication Policies” chapter of the *Cisco Identity Services Engine Admin Guide, Release 1.3*.

Certain advanced use cases, such as those that involve posture assessment, profiling, and web authentication, are not consistently available with non-Cisco devices or may provide limited functionality, and are therefore not supported with non-Cisco devices. In addition, certain other advanced functions like central web authentication (CWA), Change of Authorization (CoA), Security

Group Access (SGA), and downloadable access control lists (ACLs), are only supported on Cisco devices. For a full list of supported Cisco devices, see [Table 1](#).

The NADs that are not explicitly listed in [Table 1](#) and do not support RADIUS CoA must use inline posture.

For information on enabling specific functions of Cisco ISE on network switches, see the “Switch and Wireless LAN Controller Configuration Required to Support Cisco ISE Functions” chapter in [Cisco Identity Services Engine Admin Guide, Release 1.3](#).

**Note**

Some switch models and IOS versions may have reached the end-of-life date and interoperability may not be fully supported.

**Caution**

To support the Cisco ISE profiling service, use the latest version of NetFlow, which has additional functionality that is needed to operate the profiler. If you use NetFlow version 5, then you can use version 5 only on the primary NAD at the access layer, as it will not work anywhere else.

For Wireless LAN Controllers, note the following:

- MAB supports MAC filtering with RADIUS lookup.
- Support for session ID and COA with MAC filtering provides MAB-like functionality.
- DNS based ACL feature will be supported in WLC 8.0. Not all Access Points support DNS based ACL. Refer to Cisco Access Points Release Notes for more details.

[Table 1](#) lists the support for the devices as follows:

- **✓** — Fully supported
- **X** — Not supported
- **!** — Limited support, some functionalities are not supported

The following are the functionalities supported by each feature:

Feature	Functionality
AAA	802.1X, MAB, VLAN Assignment, dACL
Profiling	RADIUS CoA and Profiling Probes
BYOD	RADIUS CoA, URL Redirection + SessionID
Guest	RADIUS CoA, URL Redirection + SessionID, Local Web Auth
Guest Originating URL	RADIUS CoA, URL Redirection + SessionID, Local Web Auth
Posture	RADIUS CoA, URL Redirection + SessionID or IPN
MDM	RADIUS CoA, URL Redirection + SessionID
TrustSec	SGT Classification

	Latest Version	✓	!	X	!	X	X	X	X

1. Recommended OS is the version tested for compatibility and stability.
2. Cisco routers such as ISR 88x, 89x Series do not support CWA, therefore, an IPN has to be deployed for posture.
3. For a complete list of Cisco TrustSec feature support, see [http://www.cisco.com/en/US/solutions/collateral/ns170/ns896/ns1051/product\\_bulletin\\_c25-712066.html](http://www.cisco.com/en/US/solutions/collateral/ns170/ns896/ns1051/product_bulletin_c25-712066.html).
4. Minimum OS is the version in which the features got introduced.
5. Cisco Wireless LAN Controllers (WLCs) and Wireless Service Modules (WiSMs) do not support downloadable ACLs (dACLs), but support named ACLs. Autonomous AP deployments do not support the requirements for Inline Posture Node as they do not send Framed-IP-Address. Profiling services are supported for 802.1X-authenticated WLANs starting from WLC release 7.0.116.0 and for MAB-authenticated WLANs starting from WLC 7.2.110.0. FlexConnect, previously known as Hybrid Remote Edge Access Point (HREAP) mode, is supported with central authentication configuration deployment starting from WLC 7.2.110.0. For additional details regarding FlexConnect support, refer to the release notes for the applicable wireless controller platform.

## Supported AAA Attributes for Third-Party VPN Concentrators

For third-party VPN concentrators to integrate with Cisco ISE and Inline Posture nodes, the following authentication, authorization, and accounting (AAA) attributes must be included in RADIUS communication:

- Calling-Station-Id (for MAC\_ADDRESS)
- USER\_NAME
- NAS\_PORT\_TYPE

Also, for VPN devices, the RADIUS accounting message must have the framed-ip-address attribute set to the VPN client's IP address pool.

## Supported External Identity Sources

Refer to [Release Notes for the Cisco Identity Services Engine, Release 1.3](#) for more information.

Table 2 Supported External Identity Sources

External Identity Source	OS/Version
Active Directory <sup>1, 2, 3</sup>	
Microsoft Windows Active Directory 2003	—
Microsoft Windows Active Directory 2003 R2	—
Microsoft Windows Active Directory 2008	—

Table 2 Supported External Identity Sources (continued)

External Identity Source	OS/Version
Microsoft Windows Active Directory 2008 R2	—
Microsoft Windows Active Directory 2012	—
Microsoft Windows Active Directory 2012 R2 <sup>4</sup>	—
<b>LDAP Servers</b>	
SunONE LDAP Directory Server	Version 5.2
OpenLDAP Directory Server	Version 2.4.23
<b>Token Servers</b>	
RSA ACE/Server	6.x series
RSA Authentication Manager	7.x and 8.x series
Any RADIUS RFC 2865-compliant token server	—

1. Cisco ISE OSCP functionality is available only on Microsoft Windows Active Directory 2008, 2008 R2, 2012, and 2012 R2.
2. Cisco ISE SCEP functionality is available only on Microsoft Windows Active Directory 2008 R2, 2012, and 2012 R2.
3. Microsoft Windows Active Directory version 2000 or its functional level are not supported by Cisco ISE.
4. Cisco ISE supports all the legacy features in Microsoft Windows Active Directory 2012 R2; however, the new features in 2012 R2, such as Protective User Groups, are not supported.

## RADIUS

Cisco ISE interoperates fully with third-party RADIUS devices that adhere to the standard protocols. Support for RADIUS functions depends on the device-specific implementation.

## RFC Standards

Cisco ISE conforms to the following RFCs:

- *RFC 2138—Remote Authentication Dial In User Service (RADIUS)*
- *RFC 2139—RADIUS Accounting*
- *RFC 2865—Remote Authentication Dial In User Service (RADIUS)*
- *RFC 2866—RADIUS Accounting*
- *RFC 2867—RADIUS Accounting Modifications for Tunnel Protocol Support*

## Supported Browsers for the Admin Portal

- Mozilla Firefox version 31.x ESR, 32.x, 33.x, 34.x, and 35.x
- Microsoft Internet Explorer 10.x and 11.x

If you are using Internet Explorer 10.x, enable TLS 1.0 and disable SSL 3.0, TLS 1.1 and TLS 1.2 (Internet Options > Advanced).

Adobe Flash Player 11.2.0.0 or above must be installed on the system running your client browser.

The minimum required screen resolution to view the Cisco ISE Admin portal and for a better user experience is 1280 x 800 pixels.

## Supported Virtual Environments

Cisco ISE supports the following VMware servers and clients:

- VMware version 7 (default) for ESX/ESXi 4.x
- VMware version 8 (default) for ESXi 5.x
- VMware version 11 (default) for ESXi 6.0 (requires Cisco ISE 1.3 Patch 4)

## Supported Client Machine and Personal Device Operating Systems, Supplicants, and Agents

[Client Machine Operating Systems and Agent Support in Cisco ISE, page 8](#) lists the supported client machine operating systems, browsers, and agent versions supporting each client machine type. For all devices, you must also have cookies enabled in the web browser.

### Note

---

All standard 802.1X supplicants can be used with Cisco ISE, Release 1.3 standard and advanced features as long as they support the standard authentication protocols supported by Cisco ISE. (For information on allowed authentication protocols, see the “Manage Authentication Policies” chapter of the [Cisco Identity Services Engine Admin Guide, Release 1.3](#)). For the VLAN change authorization feature to work in a wireless deployment, the supplicant must support IP address refresh on VLAN change.

---

## Cisco NAC Agent Interoperability Between Cisco NAC Appliance and Cisco ISE

The Cisco NAC Agent versions 4.9.4.3 and later can be used on both Cisco NAC Appliance Releases 4.9(1), 4.9(3), 4.9(4) and Cisco ISE Releases 1 1.1.3-patch 11, 1.1.4-patch 11, 1.2.x, 1.3. This is the recommended model of deploying the NAC agent in an environment where users will be roaming between ISE and NAC deployments.

## Client Machine Operating Systems and Agent Support in Cisco ISE

Google Android 2.2	<ul style="list-style-type: none"> <li>• Native browser</li> <li>• Mozilla Firefox</li> </ul>	Google Android Supplicant 2.2

1. Because of the open access-nature of Android implementation on available devices, Cisco ISE may not support certain Android OS version and device combinations.
2. Tested with Cisco ISE, Release 1.3 patch 7.
3. Tested with Cisco ISE, Release 1.3 patch 7 with latest SPW 2.1.0.50.

Table 4 Apple iOS<sup>1</sup>

Client Machine Operating System	Web Browser	Supplicants (802.1X)
Apple iOS 10 <sup>2</sup>	• Safari	Apple iOS Supplicant 10
Apple iOS 9.x	• Safari	Apple iOS Supplicant 9.x
Apple iOS 8.x	• Safari	Apple iOS Supplicant 8.x
Apple iOS 7.x <sup>3</sup>	• Safari	Apple iOS Supplicant 7.x
Apple iOS 6.x	• Safari	Apple iOS Supplicant 6.x
Apple iOS 5.1	• Safari	Apple iOS Supplicant 5.1
Apple iOS 5.0.1	• Safari	Apple iOS Supplicant 5.0.1

1. When Apple iOS devices use Protected Extensible Authentication Protocol (PEAP) with Cisco ISE or 802.1x, certificate warnings might be displayed even for publicly trusted certificates. This usually occurs when the public certificate includes a Certificate Revocation List (CRL) distribution point that the iOS device needs to verify. The iOS device cannot verify the CRL without network access. Click Confirm or Accept in the iOS device to authenticate to the network.
2. Tested with Cisco ISE, Release 1.3 patch 7.
3. To work with Apple iOS 7, you need to install Cisco ISE Release 1.2.0.899 cumulative patch 2. To apply the patch, refer to [Release Notes for Cisco Identity Services Engine, Release 1.3](#).

Table 5 Apple Mac OS X

Client Machine Operating System	Web Browser <sup>1,2</sup>	Supplicants (802.1X)	Cisco ISE	Mac OS X Agent	AnyConnect
Apple Mac OS X 10.11	• Apple Safari • Mozilla Firefox • Google Chrome	Apple Mac OS X Supplicant 10.11	1.3 patch 5	4.9.5.3	4.0
Apple Mac OS X 10.10	• Apple Safari • Mozilla Firefox • Google Chrome	Apple Mac OS X Supplicant 10.10	1.3	4.9.5.3	4.0
Apple Mac OS X 10.9	• Apple Safari • Mozilla Firefox • Google Chrome	Apple Mac OS X Supplicant 10.9	1.3	4.9.5.3	4.0
Apple Mac OS X 10.8	• Apple Safari • Mozilla Firefox • Google Chrome	Apple Mac OS X Supplicant 10.8	1.3	4.9.5.3	4.0
Apple Mac OS X 10.7	• Apple Safari • Mozilla Firefox • Google Chrome	Apple Mac OS X Supplicant 10.7	1.3	4.9.5.3	4.0
Apple Mac OS X 10.6	• Apple Safari • Mozilla Firefox • Google Chrome	Apple Mac OS X Supplicant 10.6	1.3	4.9.5.3	4.0

1. Apple Safari version 6.0 is supported only on Mac OS X 10.7.4 and later versions of the operating system.

2. If you are using Mac OS X clients with Java 7, you cannot download the Agents using Google Chrome browser. Java 7 runs only on 64-bit browsers and Chrome is a 32-bit browser. It is recommended to use either previous versions of Java or other browsers while downloading the Agents.

**Table 6** Microsoft Windows <sup>1</sup>

Windows XP Tablet PC, SP2, SP3	<ul style="list-style-type: none"> <li>Microsoft IE 8.0 and 9.0</li> <li>Mozilla Firefox 3.6 and 20.x</li> </ul>					
Windows XP Home, SP2	<ul style="list-style-type: none"> <li>Microsoft IE 6.0, 7.0, 8.0, and 9.0</li> <li>Mozilla Firefox 3.0.17, 3.5.7, and 20.x</li> </ul>					
Windows XP Professional SP2, SP3	<ul style="list-style-type: none"> <li>Microsoft IE 6.0, 7.0, 8.0, and 9.0</li> <li>Mozilla Firefox 3.0.17, 3.5.7, 3.6, and 20.x</li> </ul>					
Windows XP Professional x64, SP2	<ul style="list-style-type: none"> <li>Microsoft IE 7.0, 8.0, and 9.0</li> <li>Mozilla Firefox 3.0.17, 3.5.7, 3.6, and 20.x</li> </ul>					

1. It is recommended to use the Cisco NAC/Web Agent versions along with the corresponding Cisco ISE version.
2. Cisco NAC Agent and Cisco NAC Web Agent do not support Google Chrome version 45 and later. See [CSCu19276](#) for more information. We recommend that you use another supported browser such as Internet Explorer 7.0, 8.0 or 9.0 or Mozilla Firefox 3.5.7, 3.6 or 20.x.
3. Microsoft Edge browser does not support NAC Agent provisioning.
4. Cisco NAC Web Agent 4.9.5.8 is supported for Cisco ISE 1.3 Patch 7.

5. In Windows 8, Internet Explorer 10 has two modes: Desktop and Metro. In Metro mode, the ActiveX plugins are restricted. You cannot download the Cisco NAC Agent in Metro mode. You must switch to Desktop mode, ensure ActiveX controls are enabled, and then launch Internet Explorer to download the Cisco NAC Agent. (If users are still not able to download Cisco NAC agent, check and enable “compatibility mode.”)
6. When you create a Cisco ISE client provisioning policy to accommodate Windows 8, you must specify the “Windows All” operating system option.
7. Windows 8 RT is not supported.
8. Cisco NAC Web Agent 4.9.5.8 is supported for Cisco ISE 1.3 Patch 7 on Windows 8.1 and Windows 8 operating systems only.
9. Cisco ISE does not support the Windows Embedded operating systems available from Microsoft.
10. When Internet Explorer 10 is installed on Windows 7, to get full network access, you need to update to March 2013 Hotfix ruleset.
11. Cisco NAC Web Agent 4.9.5.8 is supported for Cisco ISE 1.3 Patch 7 and Microsoft IE browser is not supported on Windows 7 operating system with Cisco NAC Web Agent 4.9.5.8.

**Table 7** Others

Client Machine Operating System	Web Browser	Supplicants (802.1X)
Red Hat Enterprise Linux (RHEL) 5	<ul style="list-style-type: none"> <li>• Google Chrome</li> <li>• Mozilla Firefox</li> </ul>	Not tested extensively <sup>1</sup>
Ubuntu	Mozilla Firefox	Not tested extensively

1. The support for 802.1X has not been tested extensively by Cisco, but any 802.1X supplicant is supported as long as it is compliant with the IEEE 802.1X standards.

## Supported Operating Systems and Browsers for Sponsor, Guest, and My Devices Portals

These Cisco ISE portals support the following operating system and browser combinations. These portals require that you have cookies enabled in your web browser.

**Table 8** Supported Operating Systems and Browsers

Supported Operating System <sup>1</sup>	Browser Versions
Google Android <sup>2</sup> 7.x <sup>3</sup> , 6.x <sup>4</sup> , 5.0, 4.4.x, 4.2.x, 4.1.2, 4.0.4, 4.0.3, 4.0, 3.2.1, 3.2, 2.3.6, 2.3.3, 2.2.1, 2.2	<ul style="list-style-type: none"> <li>• Native browser</li> <li>• Mozilla Firefox</li> </ul>
Apple iOS 10 <sup>5</sup> , 9.x, 8.x, 7.x, 6.1, 6, 5.1, 5.0.1	<ul style="list-style-type: none"> <li>• Safari</li> </ul>
Apple Mac OS X 10.11, 10.10.2, 10.10, 10.9, 10.8, 10.7, 10.6	<ul style="list-style-type: none"> <li>• Mozilla Firefox</li> <li>• Safari</li> <li>• Google Chrome</li> </ul>
Microsoft Windows 10, 8, 8.1 <sup>6</sup> , <sup>7</sup> , Vista	<ul style="list-style-type: none"> <li>• Microsoft Edge<sup>8</sup></li> <li>• Microsoft IE 11.x, 10.x<sup>9</sup></li> <li>• Mozilla Firefox</li> <li>• Google Chrome</li> </ul>
Red Hat Enterprise Linux (RHEL) 5	<ul style="list-style-type: none"> <li>• Mozilla Firefox</li> <li>• Google Chrome</li> </ul>
Ubuntu	Mozilla Firefox

1. The latest two officially-released browser versions are supported for all operating systems except Microsoft Windows; refer to [Table 8](#) for the supported Internet Explorer versions.
2. Because of the open access-nature of Android implementation on available devices, Cisco ISE may not support certain Android OS version and device combinations.
3. Tested with Cisco ISE, Release 1.3 patch 7.
4. Tested with Cisco ISE, Release 1.3 patch 7 with latest SPW 2.1.0.50.
5. Tested with Cisco ISE, Release 1.3 patch 7.
6. In Windows 8, Internet Explorer 10 has two modes: Desktop and Metro. In Metro mode, the ActiveX plugins are restricted. You cannot download the Cisco NAC Agent in Metro mode. You must switch to Desktop mode, ensure ActiveX controls are enabled, and then launch Internet Explorer to download the Cisco NAC Agent. (If users are still not able to download Cisco NAC agent, check and enable “compatibility mode.”)
7. Cisco ISE does not support the Windows Embedded 7 versions available from Microsoft.
8. Cisco ISE, Release 1.3 patch 4 supports Windows 10 operating system and Microsoft Edge browser
9. When Internet Explorer 10 is installed on Windows 7, to get full network access, you need to update to March 2013 Hotfix ruleset.

**Note**

When a guest user tries to log in using Google Chrome on Windows 7 OS, the login fails. It is recommended to upgrade the browser to Chrome 11 or later.

## Supported Devices for On-Boarding and Certificate Provisioning

Cisco Wireless LAN Controller (WLC) 7.2 or above support is required for the BYOD feature. Refer to the [Release Notes for the Cisco Identity Services Engine, Release 1.3](#) for any known issues or caveats.

**Table 9** BYOD On-Boarding and Certificate Provisioning - Supported Devices and Operating Systems

Device	Operating System	Single SSID	Dual SSID (open > PEAP (no cert) or open > TLS)	Onboard Method
Apple iDevice	iOS Apple iOS 10 <sup>1</sup> , 9.x, 8.x, 7.x, 6.1, 6, 5.1, 5.0.1	Yes	Yes <sup>2</sup>	Apple profile configurations (native)
Android	2.2 and above <sup>3</sup>	Yes	Yes	Cisco Network Setup Assistant
Barnes & Noble Nook (Android) HD/HD+ <sup>4</sup>	—	—	—	—
Windows	Windows 10, 8.1, 8, 7, Vista	Yes <sup>5</sup>	Yes	SPW from Cisco.com or Cisco ISE Client Provisioning feed
Windows	Mobile 8, Mobile RT, Surface 8, and Surface RT	No	No	—
MAC OS X <sup>6</sup>	Mac OS X 10.11, 10.10, 10.9, 10.8, 10.7, 10.6	Yes	Yes	SPW from Cisco.com or Cisco ISE client provisioning feed

1. Tested with Cisco ISE, Release 1.3 patch 7.
2. Connect to secure SSID after provisioning
3. There are known EAP-TLS issues with Android 4.1.1 devices. Contact your device manufacturer for support.
4. Barnes & Noble Nook (Android) works when it has Google Play Store 2.1.0 installed.
5. While configuring the wireless properties for the connection (Security > Auth Method > Settings > Validate Server Certificate), uncheck the valid server certificate option or if you check this option, ensure that you select the correct root certificate.
6. If you are using Mac OS X clients with Java 7, you cannot download the SPWs using Google Chrome browser. Java 7 runs only on 64-bit browsers and Chrome is a 32-bit browser. It is recommended to use either previous versions of Java or other browsers while downloading the SPWs.

## Requirements for CA to Interoperate with Cisco ISE

While using a CA server with Cisco ISE, make sure that the following requirements are met:

- Key size should be 1024, 2048, or higher. In CA server, the key size is defined using certificate template. You can define the key size on Cisco ISE using the supplicant profile.
- Key usage should allow signing and encryption in extension.
- While using GetCACapabilities through the SCEP protocol, cryptography algorithm and request hash should be supported. It is recommended to use RSA + SHA1.
- Online Certificate Status Protocol (OCSP) is supported. This is not directly used in BYOD, but a CA which can act as an OCSP server can be used for certificate revocation.

**Note**

EJBCA 4.x is not supported by Cisco ISE for proxy SCEP. EJBCA is supported by Cisco ISE for standard EAP authentication like PEAP, EAP-TLS, and so on.

## Client Certificate Requirements for Certificate-Based Authentication

For certificate-based authentication with Cisco ISE, the client certificate should meet the following requirements:

- Supported Cryptographic Algorithms: RSA
- Supported Key Sizes: 1024, 2048, or 4096 bits
- Supported Secure Hash Algorithms (SHA): SHA-1 and SHA-2 (includes SHA-256)
