Introduction

Cisco Identity Services Engine (ISE) is a security policy management platform that provides secure access to network resources. Cisco ISE allows enterprises to gather real-time contextual information from networks, users, and devices. An administrator can then use this information to make proactive governance decisions by creating access control policies for the various network elements, including access switches, Cisco Wireless Controllers, Virtual Private Network (VPN) gateways, and data center switches. Cisco ISE acts as the policy manager in the Cisco TrustSec solution and supports TrustSec software-defined segmentation.

Cisco ISE is available on Secure Network Server appliances with different performance characterizations, and also as software that can be run on a virtual machine (VM). Note that you can add more appliances to a deployment for better performance.

Cisco ISE has a scalable architecture that supports standalone and distributed deployments, but with centralized configuration and management. It also enables the configuration and management of distinct personas and services, thereby giving you the ability to create and apply services where needed, in a network, but operate the Cisco ISE deployment as a complete and coordinated system.

For more information about the features that are supported in this Cisco ISE release, see the [Cisco Identity Services Engine Administrator Guide](#).

System Requirements

For an uninterrupted Cisco ISE configuration, ensure that the following system requirements are fulfilled.

For more details on hardware platforms and installation in this Cisco ISE release, see the [Cisco Identity Services Engine Hardware Installation Guide](#).

Supported Hardware

Cisco ISE, Release 2.4, requires the following platforms.

Table 1: Supported Hardware platforms and Personas

Hardware Platform	Persona	Configuration
Cisco SNS-3515-K9 (small)	Any	For the appliance hardware specifications, see the "Cisco SNS-3500 Series Appliances" chapter in the Cisco Identity Services Engine Hardware Installation Guide 2.4 .
Cisco SNS-3595-K9 (large)		
Cisco SNS-3615-K9 (small)		
Cisco SNS-3655-K9 (medium)		
Cisco SNS-3695-K9 (large)		
Cisco ISE-VM-K9 (VMware, Linux KVM, Microsoft Hyper-V)		

Note For Cisco Secure Network Server (SNS) 3600 series appliance support (SNS-3615-K9, SNS-3655-K9, and SNS-3695-K9), you must use only the new ISO file (ise-2.4.0.357.SPA.x86_64_SNS-36x5_APPLIANCE_ONLY.iso). Cisco ISE 2.4 Patch 9 or above must be applied after installation. We recommend that you do not use this ISO file for SNS 3500 series appliance, VMware, KVM, or Hyper-V installation.

After installation, you can configure Cisco ISE with specific component personas such as Administration, Monitoring, and pxGrid on the platforms that are listed in the above table.

**Note**

- Cisco Secured Network Server (SNS) 3400 Series appliances are not supported in Cisco ISE, Release 2.4, and later.
- Memory allocation of less than 16 GB is not supported for VM appliance configurations. In the event of a Cisco ISE behavior issue, all the users will be required to change the allocated memory to at least 16 GB before opening a case with the [Cisco Technical Assistance Center](#).
- Legacy Access Control Server (ACS) and Network Access Control (NAC) appliances (including the Cisco ISE 3300 Series) are not supported in Cisco ISE, Release 2.0, and later.

Federal Information Processing Standard Mode Support

Cisco ISE uses embedded Federal Information Processing Standard (FIPS) 140-2-validated cryptographic module, Cisco FIPS Object Module Version 6.0 (Certificate #2984). For details about the FIPS compliance claims, see [Global Government Certifications](#).

Supported Virtual Environments

Cisco ISE supports the following virtual environment platforms:

- ESXi 5.x (5.1 U2 and later support RHEL 7), 6.x
- Microsoft Hyper-V on Microsoft Windows Server 2012 R2 and later
- KVM on RHEL 7.3

**Note**

If you are installing or upgrading Cisco ISE on an ESXi 5.x server to support RHEL 7 as the Guest OS, update the VMware hardware version to 9 or later.

Supported Browsers

The supported browsers for the Admin portal include:

- Mozilla Firefox 69 and earlier versions
- Mozilla Firefox ESR 60.9 and earlier versions
- Google Chrome 77 and earlier versions

**Note**

If you use Chrome 65.0.3325.189, you may not be able to view guest account details in the print preview section.

- Microsoft Internet Explorer 10.x and 11.x
- Microsoft Edge beta 77 and earlier versions

**Note**

- If you are using Internet Explorer 10.x, enable TLS 1.1 and TLS 1.2, and disable SSL 3.0 and TLS 1.0 (**Internet Options > Advanced**).
- If you use Chrome 65.0.3325.189, you may be unable to view guest account details in the print preview section.
- When self-signed certificates are used, Cisco ISE portal may fail to launch in Microsoft Edge beta 77 browser even if URL redirection is successful. To resolve this issue:
 1. Add both DNS name and IP address in the **Subject Alternative Name (SAN)** field.
 2. After the ISE services are restarted, redirect the portal in a different browser.
 3. Choose **View Certificate > Details** and copy the certificate by selecting the base-64 encoded option.
 4. Install the certificate in Trusted path and relaunch the browser.
- You might see a warning message while downloading an executable (EXE) file in Google Chrome 76 or later. To resolve this issue:
 1. In your browser, click the **Settings** menu at the top-right corner.
 2. At the bottom of the **Settings** window, click **Advanced**.
 3. Under **Downloads**, check the **Ask Where to Save Each File before Downloading** check box.

Support for Microsoft Active Directory

Cisco ISE works with Microsoft Active Directory servers 2003, 2003 R2, 2008, 2008 R2, 2012, 2012 R2, and 2016 at all functional levels.

**Note**

- It is recommended that you upgrade Windows server to a supported version as Microsoft no longer supports Window server 2003 and 2003 R2. .
- Microsoft Active Directory Version 2000 or its functional level is not supported by Cisco ISE.

Cisco ISE supports multidomain forest integration with Active Directory infrastructure to support authentication and attribute collection across large enterprise networks. Cisco ISE supports up to 50 domain join points.

Improved User Identification

Cisco ISE can identify Active Directory users when a username is not unique. Duplicate usernames are common when using short usernames in a multidomain Active Directory environment. You can identify users by Software Asset Management (SAM), Customer Name (CN), or both. Cisco ISE uses the attributes that you provide to uniquely identify a user.

Update the value of the following:

- SAM: Update this value to use only the SAM in the query (the default).
- CN: Update this value to use only CN in the query.

- CNSAM: Update this value to use CN and SAM in the query.

To configure the attributes mentioned above for identifying Active Directory users, update the **IdentityLookupField** parameter in the registry on the server that is running Active Directory:

```
REGISTRY.Services\lsass\Parameters\Providers\ActiveDirectory\IdentityLookupField
```

Supported Antivirus and Antimalware Products

For more information on the antivirus and antimalware products supported by the ISE posture agent, see the Cisco AnyConnect ISE Posture Support Charts at:

<https://www.cisco.com/c/en/us/support/security/identity-services-engine/products-device-support-tables-list.html>

What is New in Cisco ISE, Release 2.4

Support for Cisco Secure Network Server 3600 Series Appliance

For Cisco Secure Network Server (SNS) 3600 series appliance support (SNS-3615-K9, SNS-3655-K9, and SNS-3695-K9), you must use only the new ISO file (ise-2.4.0.357.SPA.x86_64_SNS-36x5_APPLIANCE_ONLY.iso). Cisco ISE 2.4 Patch 9 or above must be applied after installation. We recommend that you do not use this ISO file for SNS 3500 series appliance, VMware, KVM, or Hyper-V installation.

Business Outcome

Improved performance, scalability, and platform manageability over SNS 35xx series appliances.

The Default TLS Version when initiating External Connections through Proxy is TLS 1.2

When the Cisco ISE acts as a client, the default protocol used for the connections initiated from it to the external entities is TLS 1.2. In this case the supported protocol will be TLS 1.2 only. In case you want to provide support for lower versions as well (which might be insecure), these versions need to be explicitly enabled from the Cisco ISE by going to the following page: Administration > System > Settings > Security Settings.

Business Outcome

Improved security in SSL connections.

Cisco ISE Can Pull IoT Device Context and Session Data from Cisco IND

Cisco ISE can profile and display the status of devices attached to a Cisco Industrial Network Director (IND). Cisco Platform Exchange Grid (pxGrid) is used to communicate the endpoint (Internet of Things [IoT]) data between Cisco ISE and Cisco IND. pxGrid is used to receive the context from Cisco IND and query Cisco IND to update endpoint type.

Business Outcome

Automates classification of IoT devices on your network.

Control Permissions for pxGrid Clients

You can create pxGrid authorization rules to control the permissions of the pxGrid clients (under Administration > pxGrid Services > Permissions).

These rules to control which services and operation on that service are available to the pxGrid clients. Cisco ISE applies the rules to groups, not individual clients. You can manage groups by clicking the Manage Groups heading in the Permissions window. The Permissions window displays predefined authorization rules that use predefined groups (such as EPS, ANC). You can only update the Groups field in the predefined rules.

Business Outcome

Better pxGrid backward compatibility:

- Ability to control authorizations for different pxGrid services.
- Easier to group pxGrid clients with similar permissions.

Customizable SSH Ciphers and Encryption Algorithms

You can use the `service sshd encryption-algorithm` and `service sshd encryption-mode global` configuration commands in Cisco ISE 2.4 to harden the ISE SSH server and specify the cipher suite to be used. You can use AES-CTR and/or AES-CBC ciphers.

Cisco ISE 2.3 and earlier releases allowed only AES-CBC ciphers (due to Common Criteria Protection Profiles for Access Control Devices and Systems). Cisco ISE 2.4 allows you to use both AES-CTR and AES-CBC ciphers.

Business Outcome

- Improved security for SSH access.
- Allows you to choose the encryption algorithms.
- Allows you to choose the ciphers to be used to harden secure access.

Endpoint API Enhancements for MDM Attributes

Mobile Device Management (MDM) attributes are made available through the endpoints API to enable additional synchronization capability between Cisco ISE and a third-party MDM server.

Business Outcome

Helps customers to better integrate third party systems with ISE and provide better user experience for end users using mobile devices that are managed by an MDM server.

IPv6 Support for RADIUS

IPv6 addresses are now supported for RADIUS configurations. The IP Address field in the Administration > Network Resources > Network Devices page and the Host IP field in the Administration > Network Resources > External RADIUS Server page now support both IPv4 and IPv6 addresses for RADIUS configurations.

Business Outcome

Additional support for IPv6 addressing:

- Allows you to migrate your network to IPv6-based networks. You can migrate to IPv6 addressing if you have fragmented networks or have exhausted IPv4 addresses.
- Facilitates more efficient routing, packet processing, security, and simplified network configuration.

Large Virtual Machine for Monitoring Persona

Cisco ISE introduces a large VM for Monitoring nodes.

This form factor is available only as a VM in Release 2.4 and above, and requires a large VM license.

Business Outcome

Deploying Monitoring persona on a large VM offers the following advantages:

- Up to three times the volume of data previously supported.
- Improved performance in terms of faster response to live log queries and report completion.

Posture Enhancements

- **Grace Period for Noncompliant Devices**—Cisco ISE provides an option to configure grace time for devices that become noncompliant. Cisco ISE caches the results of posture assessment for a configurable amount of time. If a device is found to be noncompliant, Cisco ISE looks for the previously known good state in its cache and provides grace time for the device, during which the device is granted access to the network. You can configure the grace time period in minutes, hours, or days (up to a maximum of 30 days). The Posture Assessment by Endpoint report is updated and displays a Grace Compliant status for an endpoint that is currently not compliant, but is under the grace period.
- **Posture Rescan**—AnyConnect users can now manually restart posture at any time.
- **AnyConnect Stealth Mode Notifications**—Several new failure notifications are added for AnyConnect stealth mode deployment to help users identify issues with their VPN connection.
- **Disabling UAC Prompt on Windows**—You can choose to disable the User Access Control (UAC) prompts on Windows endpoints from the AnyConnect posture profile.

Note By default, this value is set to No while configuring the AnyConnect Profile. When you change it to Yes, the UAC prompts are disabled and the Windows users no longer receive these prompts. If you want to enable the UAC prompt again, you should change this setting to No in the AnyConnect Profile. This setting takes effect only when the Windows endpoint is restarted.

- **New URL for Downloading Client Provisioning and Posture Updates**—The client provisioning and posture feed URL has changed. The new URL for Posture Updates is <https://www.cisco.com/web/secure/spa/posture-update.xml> and for Client Provisioning is <https://www.cisco.com/web/secure/spa/provisioning-update.xml>
- **File Condition Enhancements**—A new operator, within, is introduced under File Condition to check for the changes in a file within a certain period of time.
- **Certificate Attributes in Client Provisioning and Posture Policies**—Certificate attributes are now available in the client provisioning and posture policy pages.
- The following option has been newly added under the Location field in the Policy > Policy Elements > Conditions > Posture > Disk Encryption Condition window:
 - **All Internal Drives**—To check the internal drives. Includes all hard disks that are mounted and encrypted, and all internal partitions. Excludes read only drives, system recovery disk/partition, boot partition, network partitions, and the different physical disk drives that are external to the endpoint (including but not limited to disk drives connected via USB and Thunderbolt). Encryption software products that are validated include:
 - Bit-locker-6.x/10.x
 - Checkpoint 80.x on Windows 7

Note "All Internal Drives" option is supported from AnyConnect Version 4.6.01098 onwards.

Business Outcome

Improved security alerts and enforcement:

- Provides admin users with more flexible options for educating end users about posture condition failures including grace-period-specific messaging scenarios.
- Helps effective management of some posture checks and remediations that require additional privileges and prompts the user for such privileges.

Profiler Enhancements

- Added 190 new profile policies from vendors, including AudioCode, BlackBerry, Brother, Hewlett Packard, Lexmark, NetApp, Samsung, and Xerox.

- Added additional conditions to 185 profile policies to support additional probes. For example, DHCP conditions are added to Xerox devices such that customers who do not want to profile Xerox devices based on SNMP, can profile Xerox devices using DHCP.
- Reorganized profiles into families for better identification of new devices. For example, HP-LaserJet-4350 was previously profiled directly under HP-Device. It is now profiled under HP-LaserJet, which in turn is profiled under HP-Device. When Hewlett Packard introduces a new Hewlett Packard LaserJet printer model, Cisco ISE will classify the new model as HP-LaserJet, and not as HP-Device until a new profile policy for that exact LaserJet printer model is added.

Business Outcome

Effective classification of devices:

- Helps you gain visibility of previously unknown devices, such as Xerox printers or Vista link printers with improved profiler efficacy.

Support for Sending Separate SNMP CoA Packets

You can check the **Send SNMP CoA Separate Request** check box in the **Administration > Network Resources > Network Device Profiles > Change of Authorization (CoA)** window to send the SNMP CoA packets to the NAD as two packets.

Business Outcome

Increased compatibility with devices:

- Provides support for older Cisco and third-party NADs that mandate the sending of SNMP CoA packets as two packets (for the shutdown and no shutdown interface configuration commands).

Support for Two Shared Secrets Per IP for RADIUS NAD Clients

You can specify two shared secrets (keys) to be used by the network device and Cisco ISE. You can configure the shared secrets in the RADIUS authentication settings section for a NAD in the Administration > Network Resources > Network Devices page in Cisco ISE.

Business Outcome

Replace Shared Secrets on network devices:

- Enables you to replace shared secrets on network devices independently and allows ISE to support both old and new shared secrets until the shared secret is replaced on the network device. Changing a RADIUS secret is now simplified and allows you to enter a new shared secret even before updating the network device.

TrustSec Enhancements

You can select the ISE node from which the configuration changes must be sent to the network device while adding the network device (under **Advanced TrustSec Settings** section). You can select the PAN or PSN

node. If the PSN node that you selected is down, the configuration changes are sent to this device using the PAN.

While deploying the IP SGT static mappings, you can select the devices or the device groups to which the selected mappings must be deployed. You can select all the devices if necessary. You can use the filter option to search for the devices that you want. If you do not select any device, the selected mappings are deployed on all TrustSec devices.

You can use the **Check Status** option to check if different SGTs are assigned to the same IP address for a specific device. You can use this option to find the devices that have conflicting mappings, IP address that is mapped to multiple SGTs, and the SGTs that are assigned to the same IP address. This option can be used even if device groups, FQDN, hostname, or IPv6 addresses are used in the deployment. You must remove the conflicting mappings or modify the scope of deployment before deploying these mappings.

Verify TrustSec Deployment option on the **General TrustSec Settings** page helps you to verify whether the latest TrustSec policies are deployed on all the network devices. Alarms are displayed in the **Alarms** dashlet (under **Work Centers > TrustSec > Dashboard**), if there are any discrepancies between the policies that are configured on Cisco ISE and the network device. The following alarms are displayed in the TrustSec dashboard:

- An alarm with an Info icon is displayed whenever the verification process is started or completed.
- An alarm with an Info icon is displayed if the verification process is cancelled due to a new deployment request.
- If the verification process resulted in an error (for instance, failed to open SSH connection with the network device, or the network device is unavailable), or if there is any discrepancy between the policies that are configured on Cisco ISE and the network device, an alarm with a Warning icon is displayed for each of these network devices.

The **Verify Deployment** option is also available on the following pages:

- **Work Centers > TrustSec > Components > Security Groups**
- **Work Centers > TrustSec > Components > Security Group ACLs**
- **Work Centers > TrustSec > TrustSec Policy > Egress Policy > Matrix**
- **Work Centers > TrustSec > TrustSec Policy > Egress Policy > Source Tree**
- **Work Centers > TrustSec > TrustSec Policy > Egress Policy > Destination Tree**

Check the **Automatic Verification After Every Deploy** check box if you want Cisco ISE to verify the updates on all the network devices after every deployment. When the deployment process is complete, the verification process is started after the time that you specify in the **Time after Deploy Process** field. The current verification process is cancelled if a new deployment request is received during the waiting period or when the verification is in progress. Click **Verify Now** to start the verification process immediately.

IPv6 addresses can be used in IP SGT static mappings. These mappings can be propagated using SSH or SXP to specific network devices or network device groups.

If FQDN and hostnames are used, Cisco ISE looks for the corresponding IP addresses in the PAN and PSN nodes while deploying the mappings and checking the deployment status. You can select one of the following options (under **IP SGT Static Mapping of Hostnames**) in the **General TrustSec Settings** window to specify the number of mappings created for the IP addresses returned by the DNS query:

- **Create mappings for all IP addresses returned by DNS query**

- Create mappings only for the first IPv4 address and the first IPv6 address that is returned by a DNS query

Business Outcome

- Verifies TrustSec policy on Network Devices.
- Enhanced IP-SGT mapping workflow:
 - Improves network device misconfiguration error handling and operational efficiency through Check Status option.
 - Selectively deploy the IP SGT static mappings.
 - Create IP static mappings with IPv6 addresses.
 - Create mappings for first or all known IP addresses which are based on DNS FQDN query.

Decommissioned Dashlets

Some Dashlets Removed to Resolve Performance Issues

The following dashlets have been decommissioned to prevent performance issues when displaying large data sets:

- **Context Visibility > Endpoint > Compliance: Status Trend**
- **Home > Endpoints > Endpoint Capacity**

A large number of endpoints caused performance problems with some dashlets.

Kerberos Authentication for the Sponsor Portal

You can configure ISE to use Kerberos to authenticate a sponsor user who is logged onto Windows for access to the sponsor portal. This process uses the Active Directory credentials of the logged in sponsor user in the Kerberos ticket. Kerberos SSO is performed inside the secure tunnel after the browser establishes the SSL connection with ISE.

Additional security for Sponsor authentication.

NFS Repository Credentials

When you add a repository and select NFS as the protocol, you can no longer enter credentials to connect to the repository.

Business Outcome

Using credentials to connect to an NFS repository caused problems.

Known Limitations and Workarounds

IP-SGT Bindings Are Not Propagated Under Certain Conditions

Under the following conditions, IP-SGT mappings are not propagated to ACI.

On the ISE administrators console, navigate to **Work Centers -> TrustSec -> Components**:

1. Create a security group, but don't check **Propagate to ACI**.
2. Create an IP-SGT binding with previously created Security Group. It may be a static, session or SXP binding.
3. On the Security Group, click **Propagate to ACI**.
4. Click **Save**.
5. The Security Group synchs to ACI, but not IP-SGT that is mapped to the Security Group.

Workaround

Either:

1. Restart the ACI propagation in ISE and recreate the IP-SGT mappings.
 1. On the Work Centers->TrustSec->Settings->ACI Settings, uncheck "TrustSec-ACI Policy Element Exchange", and save.
 2. Check **TrustSec-ACI Policy Element Exchange**, and save.
 3. The connection between Cisco ISE and ACI is reestablished.
2. Delete the old IP-SGT bindings, and recreate them while **Propagate to ACI** is checked.

Note The connection between ACI and ISE reauthenticates every 24 hours, which also fixes this problem.

SXP Protocol Security Standards

Limitation: Security Group Exchange Protocol (SXP) transfers unencrypted data and uses weak Hash Algorithm for message integrity checking per draft-smith-kandula-sxp-06.

Workaround: There is no workaround.

For more information, see <https://tools.ietf.org/html/draft-smith-kandula-sxp-06>.

Patch Build Download Using Chrome Browser

Limitation: Integrity checksum issues occur when you use the Google Chrome browser to download the patch build.

Condition: The Message Digest 5 (MD5) sum values do not match.

Workaround: Download the patch build using the FireFox browser. Verify that the downloaded patch bundle has the correct MD5 checksum.

Radius Logs for Authentication

Details of an authentication event can be viewed in the **Details** field of the **Radius Authentications** window. The details of an authentication event are available only for 7 days, after which no data on the authentication event will be visible. All the authentication log data will be removed when a purge is triggered.

Profiler RADIUS Probe

Limitation: Endpoints are not profiled; they are only authenticated and added to the database.

Condition: The RADIUS probe is disabled.

Workaround: Disable the profiling services completely.

High Memory Utilization

Limitation: High memory utilization after installing or upgrading to Cisco ISE Version 1.3 or later.

Condition: Because of the way kernels manage cache memory, Cisco ISE might use more memory, which may trigger high memory usage (80 to 90%) and alarms.

Workaround: There is no workaround.

For more information, see [CSCvn07836](#).

Diffie-Hellman Minimum Key Length

Limitation: Connection to LDAP server fails.

Condition: If the Diffie-Hellman minimum key length that is configured on the LDAP server is less than 1024, connection to the LDAP server fails.

Workaround: Change the Diffie Hellman key size on the LDAP server.

For more information, see [CSCvi76985](#).

ECDSA Certificates

Limitation: Cisco ISE supports Elliptic Curve Digital Signature Algorithm (ECDSA) certificates with key lengths of 256 and 384 only.

Condition: ECDSA certificates that are used for EAP authentication are supported only for endpoints with Android Version 6.x and later.

Note Apple iOS is not supported if you use ECDSA as a system certificate. ECDSA certificates are supported only for Android 6.x and Android 7.x.

Workaround: You can select the key length in the **Administration > System > Certificates > Certificate Management > System Certificates** window.

Cisco Temporal Agent

We recommend that you run the Cisco Temporal Agent within two minutes of downloading the agent from the Client Provisioning Portal. Otherwise, the `Posture Failed Due to Server Issues` error message is displayed.

Mobile Service Engine (MSE) Devices

When adding an MSE device to Cisco ISE, you must copy the certificates from the MSE device over to ISE to facilitate authorization. ISE does not receive these certificates directly from the MSE device.

Re-create Supplicant Provisioning Wizard References

Limitation: BYOD certificate provisioning flow is broken with both Internal and External Certificates.

Condition: When you upgrade to a new release, or apply a patch, the Supplicant Provisioning Wizard (SPW) is updated.

Workaround: Create new native supplicant profiles and new client-provisioning policies that reference the new SPWs.

Upgrade Information

- [Applying Patches to Release 2.4](#)
- [Upgrading to Release 2.4](#)
- [License Changes](#)
- [Upgrade Procedure Prerequisites](#)

Note If you have installed a hot patch, roll back the hot patch before applying an upgrade patch.

Applying Patches to Release 2.4

To obtain the patch file for Cisco ISE, Release 2.4, log in to the Cisco Download Software site at <http://www.cisco.com/cisco/software/navigator.html?a=a&i=rpm> (you might be required to provide your Cisco.com login credentials), navigate to **Security > Access Control and Policy > Cisco Identity Services Engine > Cisco Identity Services Engine Software**, and save a copy of the patch file to your local machine.

For instructions on how to apply the patch to your system, see the “[Installing a Software Patch](#)” section in the *Cisco Identity Services Engine Administrator Guide, Release 2.4*.

For instructions to install a patch using CLI, see the “[Install Patch](#)” section in the *Cisco Identity Services Engine CLI Reference Guide, Release 2.4*.

Note When installing 2.4 Patch 4 and later, CLI services will be temporary unavailable during kernel upgrade. If CLI is accessed during this time, CLI will show the following error: "Stub Library could not be opened". However, once patch installation is complete, CLI services will be available again.

Patches are cumulative such that any patch version also includes all fixes delivered in the preceding patch versions. Cisco ISE version 2.4.0.357 was the initial version of the Cisco ISE 2.4 release. After installation of the patch, you can see the version information from **Settings > About Identity Services Engine** page in the Cisco ISE GUI and from the CLI in the following format “2.4.0.357 patch N”; where N is the patch number.

Note Within the bug database, issues resolved in a patch have a version number with different nomenclature in the format, “2.4(0.9NN)” where NN is also the patch number, displayed as two digits. For example, version “2.4.0.298 patch 1” corresponds to the following version in the bug database “2.4(0.901)”.

Note We recommend you to clear your browser cache after you install a patch on Cisco ISE, Release 2.4.

Upgrading to Release 2.4

You can directly upgrade to Release 2.4 from the following Cisco ISE releases:

- 2.0
- 2.0.1
- 2.1
- 2.2
- 2.3

Information about the upgrade packages and the platforms they support, is available at [Cisco ISE Software Download](#).

If you are on a version earlier than Cisco ISE, Release 2.0, you must first upgrade to one of the releases listed above and then upgrade to Release 2.4.

Note It is recommended to upgrade to the latest patch in the existing version before upgrading to the next version of Cisco ISE.

You can upgrade to Release 2.4 from the GUI or the CLI. See, [Cisco Identity Services Engine Upgrade Guide, Release 2.4](#)

Verify Operating System of Virtual Machines

ISE Release 2.4 runs on Red Hat Enterprise Linux (RHEL) 7.0. If you are upgrading Cisco ISE nodes on a VMware VM, after you upgrade, ensure that you change the guest operating system to Red Hat Enterprise Linux (RHEL) 7. To do this, you must power down the VM, change the guest operating system to RHEL 7, and power on the VM after the change.

External RADIUS Token Server Timeout

External Radius Token Server Timeout maximum changed from 120 seconds to 60 seconds. Upgrades to this release change the existing setting, if the maximum is more than 60 seconds.

License Changes

Device Administration Licenses

There are two types of device administration licenses: cluster and node. A cluster license allows you to use device administration on all policy service nodes in a Cisco ISE cluster. A node license allows you to use

device administration on a single policy service node. In a high-availability standalone deployment, a node license permits you to use device administration on a single node in the high availability pair.

The device administration license key is registered against the primary and secondary policy administration nodes. All policy service nodes in the cluster consume device administration licenses, as required, until the license count is reached.

Cluster licenses were introduced with the release of device administration in Cisco ISE 2.0, and is enforced in Cisco ISE 2.0 and later releases. Node licenses were released later, and are only partially enforced in releases 2.0 to 2.3. Starting with Cisco ISE 2.4, node licenses are completely enforced on a per-node basis.

Cluster licenses have been discontinued, and now only node Licenses are available for sale.

However, if you are upgrading to this release with a valid cluster license, you can continue to use your existing license upon upgrade.

The evaluation license allows device administration on one policy service node.

Licenses for Virtual Machine nodes

Cisco ISE is also sold as a virtual machine (VM). For this Release, we recommend that you install appropriate VM licenses for the VM nodes in your deployment. Install the VM licenses based on the number of VM nodes and each VM node's resources, such as CPU and memory. Otherwise, you will receive warnings and notifications to procure and install the VM license keys. However, the installation process will not be interrupted. From Cisco ISE, Release 2.4, you can manage your VM licenses from the GUI.

VM licenses are offered under three categories—Small, Medium, and Large. For instance, if you are using a 3595-equivalent VM node with eight cores and 64-GB RAM, you might need a Medium category VM license if you want to replicate the same capabilities on the VM. You can install multiple VM licenses based on the number of VMs and their resources as per your deployment requirements.

VM licenses are infrastructure licenses. Therefore, you can install VM licenses irrespective of the endpoint licenses available in your deployment. You can install a VM license even if you have not installed any Evaluation, Base, Plus, or Apex license in your deployment. However, in order to use the features that are enabled by the Base, Plus, or Apex licenses, you must install the appropriate licenses.

After installing or upgrading, if there is any mismatch between the number of deployed VM nodes and installed VM licenses, alarms are displayed in the Alarms dashlet for every 14 days. Alarms are also displayed if there are any changes in the VM node's resources, or whenever a VM node is registered or de-registered.

VM licenses are perpetual licenses. VM licensing changes are displayed every time you log in to the Cisco ISE GUI, until you check the **Do not show this message again** check box in the notification pop-up window.

If you have not purchased an ISE VM license earlier, see the [Cisco Identity Services Engine Ordering Guide](#) to choose the appropriate VM license to be purchased.

Note

If you have purchased ISE VM licenses without a PAK, you can request VM PAKs by emailing licensing@cisco.com. Include the Sales Order numbers that reflect the ISE VM purchase, and your Cisco ID in your email. You will be provided a medium VM license key for each ISE VM purchase you have made.

For details about VM compatibility with your Cisco ISE version, see "Hardware and Virtual Appliance Requirements" chapter in the [Cisco Identity Services Engine Installation Guide](#) for the applicable release.

For more information about the licenses, see the "Cisco ISE Licenses" chapter in the [Cisco Identity Services Engine Administrator Guide, Release 2.4](#).

Upgrade Procedure Prerequisites

- Run the Upgrade Readiness Tool (URT) before an ISE software upgrade in order to check if the configured data can be upgraded to the required ISE version. Most upgrade failures occur because of data upgrade issues; the URT is designed to validate the data before the actual upgrade and reports and tries to fix the issues, wherever possible. The URT can be downloaded from the [Cisco ISE Download Software Center](#).
- We recommend that you install all the relevant patches before beginning the upgrade.

For more information, see the [Cisco Identity Services Engine Upgrade Guide](#).

Telemetry

After installation, when you log in to the Admin portal for the first time, the Cisco ISE Telemetry banner appears on screen. Using this feature, Cisco ISE securely collects non-sensitive information about your deployment, network access devices, profiler, and other services that you are using. The data that is collected will be used to provide better services and additional features in forthcoming releases. By default, the telemetry feature is enabled. You can choose to disable or modify the account information. To do this, choose **Administration > Settings > Smart Call Home**. Account information provided is unique to the deployment. Each admin user need not provide it separately.

Cisco ISE Live Update Portals

Cisco ISE Live Update portals help you to automatically download the **Supplicant Provisioning** wizard, AV/AS support (Compliance Module), and agent installer packages that support client provisioning and posture policy services. These live update portals are configured in Cisco ISE during the initial deployment to retrieve the latest client provisioning and posture software directly from Cisco.com to the corresponding device using Cisco ISE.

If the default Update portal URL is not reachable and your network requires a proxy server, configure the proxy settings by choosing **Administration > System > Settings > Proxy** before you access the Live Update portals. If proxy settings allow access to the profiler, posture, and client-provisioning feeds, access to a Mobile Device Management (MDM) server is blocked because Cisco ISE cannot bypass the proxy services for MDM communication. To resolve this, you can configure the proxy services to allow communication to the MDM servers. For more information on proxy settings, see the "Specify Proxy Settings in Cisco ISE" section in the [Cisco Identity Services Engine Administrator Guide, Release 2.4](#).

Client Provisioning and Posture Live Update Portals

You can download Client Provisioning resources from:

Work Centers > Posture > Settings > Software Updates > Client Provisioning.

The following software elements are available at this URL:

- Supplicant Provisioning wizards for Windows and Mac OS X native supplicants
- Windows versions of the latest Cisco ISE persistent and temporal agents
- Mac OS X versions of the latest Cisco ISE persistent agents
- ActiveX and Java Applet installer helpers
- AV/AS compliance module files

For more information on automatically downloading the software packages that are available at the Client Provisioning Update portal to Cisco ISE, see the "Download Client Provisioning Resources Automatically" section in the "Configure Client Provisioning" chapter in the [Cisco Identity Services Engine Administrator Guide, Release 2.4](#).

You can download Posture updates from:

Work Centers > Posture > Settings > Software Updates > Posture Updates

The following software elements are available at this URL:

- Cisco-predefined checks and rules
- Windows and Mac OS X AV/AS support charts
- Cisco ISE operating system support

For more information on automatically downloading the software packages that become available at this portal to Cisco ISE, see the "Download Posture Updates Automatically" section in the [Cisco Identity Services Engine Administrator Guide, Release 2.4](#).

If you do not want to enable the automatic download capabilities, you can choose to download updates offline.

Cisco ISE Offline Updates

This offline update option allows you to download client provisioning and posture updates, when direct internet access to Cisco.com from a device using Cisco ISE is not available or is not permitted by a security policy.

Offline updates are also available for Profiler Feed Service. For more information, see the .

To download offline client provisioning resources, perform the following procedure:

Procedure

Step 1 Go to: <https://software.cisco.com/download/home/283801620/type/283802505/release/2.4.0>.

Step 2 Provide your login credentials.

Step 3 Navigate to the Cisco Identity Services Engine download window, and select the release.

The following Offline Installation Packages are available for download:

- **win_spw-*<version>*-isebundle.zip**—Offline SPW Installation Package for Windows
- **mac_spw-*<version>*.zip**—Offline SPW Installation Package for Mac OS X
- **compliancemodule-*<version>*-isebundle.zip**—Offline Compliance Module Installation Package
- **macagent-*<version>*-isebundle.zip**—Offline Mac Agent Installation Package
- **webagent-*<version>*-isebundle.zip**—Offline Web Agent Installation Package

Step 4 Click either **Download** or **Add to Cart**.

For more information on adding the downloaded installation packages to Cisco ISE, see the "Add Client Provisioning Resources from a Local Machine" section in the [Cisco Identity Services Engine Administrator Guide](#).

You can update the checks, operating system information, and antivirus and antispyware support charts for Windows and Mac operating systems offline from an archive in your local system, using posture updates.

For offline updates, ensure that the versions of the archive files match the versions in the configuration file. Use offline posture updates after you configure Cisco ISE and want to enable dynamic updates for the posture policy service.

To download offline posture updates, perform the following procedure:

Procedure

- Step 1** Go to <https://s3.amazonaws.com/ise-public/posture-offline.zip>.
- Step 2** Save the **posture-offline.zip** file to your local system. This file is used to update the operating system information, checks, rules, and antivirus and antispyware support charts for Windows and Mac operating systems.
- Step 3** Launch the Cisco ISE administrator user interface and choose **Administration > System > Settings > Posture**.
- Step 4** Click the arrow to view the settings for posture.
- Step 5** Click **Updates**.
The **Posture Updates** window is displayed.
- Step 6** Click the **Offline** option.
- Step 7** Click **Browse** to locate the archive file (posture-offline.zip) from the local folder in your system.
- Note** The **File to Update** field is a mandatory field. You can select only one archive file (.zip) containing the appropriate files. Archive files other than .zip, such as .tar, and .gz are not supported.
- Step 8** Click **Update Now**.
-

Configuration Prerequisites

- The relevant Cisco ISE license fees should be provided.
- The latest patches should be installed.
- Cisco ISE software capabilities should be active.
- Read the Release Notes document for the corresponding release of Cisco Identity Services Engine.

See the following resources to get started with configuring ISE:

- [Getting started with Cisco ISE](#)
- Videos on the [Cisco ISE Channel on YouTube](#)
- [Cisco ISE Design and Integration Guides](#)
- [Cisco Identity Services Engine Administrator Guide](#)

Monitoring and Troubleshooting

For information on monitoring and troubleshooting the system, see the "Monitoring and Troubleshooting Cisco ISE" section in the [Cisco Identity Services Engine Administrator Guide](#).

Ordering Information

For detailed Cisco ISE ordering information, see the [Cisco Identity Services Engine Ordering Guide](#).

Cisco ISE Integration with Cisco Digital Network Architecture Center

Cisco ISE can integrate with Cisco DNA Center. For information about configuring Cisco ISE to work with Cisco DNA, see the Cisco DNA Center documentation <https://www.cisco.com/c/en/us/support/cloud-systems-management/dna-center/tsd-products-support-series-home.html>.

For information about which versions of Cisco ISE are compatible with which versions of Cisco DNA Center, see <https://www.cisco.com/c/en/us/solutions/enterprise-networks/software-defined-access/compatibility-matrix.html?wcmode=disabled>.

Migration Information

For information on migrating from ACS to ISE, see the [Cisco Identity Services Engine Migration Tool Guide](#).

Caveats

This section describes open severity 1 and 2 caveats and select severity 3 caveats. The "Open Caveats" sections list open caveats that apply to the current release and may apply to previous releases. A caveat that is open for a prior release and is still unresolved applies to all future releases until it is resolved. The bug IDs are sorted alphanumerically. The Caveats section includes the bug ID and a short description of the bug. For details on the symptoms, conditions, and workaround for a specific caveat, you must use the Bug Search Tool.

Cisco Bug Search Tool (BST), the online successor to Bug Toolkit, is designed to improve effectiveness in network risk management and device troubleshooting. You can search for bugs based on product, release, and keyword. For more details on the tool, see the help page located at <http://www.cisco.com/web/applicat/cbsshelphelp.html>.

New Features in Cisco ISE Release 2.4.0.357- Cumulative Patch 10

Enable Probe Data Publisher

This option is newly added in the Profiler Settings window (**Work Centers > Profiler > Settings**). This option is disabled by default. Enable this option if you want Cisco ISE to publish endpoint probe data to pxGrid subscribers that need this data to classify endpoints onboarding on ISE. The pxGrid subscriber can pull the endpoint records from Cisco ISE using bulk download during initial deployment phase. Cisco ISE sends the endpoint records to the pxGrid subscriber whenever they are updated in PAN.

Note When you enable this option, ensure that the pxGrid persona is enabled in your deployment.

Resolved Caveats in Cisco ISE Release 2.4.0.357- Cumulative Patch 10

Patch 10 might not work with older versions of SPW. MAC users must upgrade their SPW to MACOSXSPWizard 2.2.1.43 or later, and Windows users must upgrade their SPW to WinSPWizard 2.2.1.53 or later.

The following table lists the resolved caveats in Release 2.4 cumulative patch 10.

Caveat ID Number	Description
CSCvd48081	The software shouldn't allow to delete the pxGrid certificate on a ISE node
CSCvf36221	posture update not working when there's a proxy with credentials in ISE
CSCvf45991	Pseudo double Auth request on AD
CSCvf91219	ISE T+ and Policy : Allowed protocols for RADIUS uncheck if changes are made via TACACS PE section
CSCvg60477	ISE 2.3+ does not have authentication condition Network Access:AuthenticationMethod
CSCvh86082	Parsing NMAP smb-os-discovery data should remove
 or \x00
CSCvi16994	ERS Guest User operations fail with 401 Unauthorized if Sponsor_Portal_Sequence missing
CSCvi17935	ISE 2.x: Mobile/Desktop previews don't display self-registration form fields correctly
CSCvi18412	ISE 2.3 p2 is sending redundant CoA message during VPN Posture Flow
CSCvi29474	ISE2.3 portals not displaying Spanish Accents
CSCvi50874	Endpoint Oracle Persist Received value wrongly counted in ISE Counters report
CSCvi72862	ISE : Accounting updates tolerance for suppression needs to be more efficient.
CSCvi86385	Is ISE affected by Spring Framework CVE-2018-1270
CSCvi99138	ad_agent.log flooded with entries from non-whitelisted domains
CSCvj07166	ISE RBAC unable to modify nested permissions after migration from ACS
CSCvj34578	REST API GET DACL page filter does not show correct information
CSCvj61028	ISE HTTP error 401 unauthorized on External CA UI
CSCvj88164	Remote-Access VPN Posture Sessions showing Base license consumed but no Apex
CSCvk01929	Making name changes to the "All_User_ID_Stores" Identity Source Sequence will break new policy sets.

Caveat ID Number	Description
CSCvk52803	Different FQDN in SAN can cause CV issue
CSCvk53782	ISE ENH : Allow RADIUS Dictionary VSA "Vendor Attribute Size Field Length" of 2 bytes
CSCvk56913	Cannot edit Guest group if accessing through Manage accounts
CSCvm10275	Cisco Identity Services Engine Cross Site Scripting Vulnerability
CSCvm70858	Triggered SNMP query not working properly for HP OUI
CSCvn31337	ISE: Exception thrown while adding email address in NTP Service Failure alarm
CSCvn66106	ISE custom attributes not being applied to endpoint when pushed from cloudpost IND
CSCvn73740	EAP-TLS authentications with Endpoint profile set to not unknown fails in second authorization.
CSCvo04342	Multiple Vulnerabilities in jackson-databind
CSCvo64085	The calculation of required space for MNT backup need to be revalidated.
CSCvo75129	Runtime prepends "\" to ";" in dhcp-class-identifier in syslog message sent to profiler
CSCvo77219	Sponsor guest portal rate limit time not honored
CSCvo80291	pxGrid startup order causing profiler code to fail init
CSCvo82930	ProfilerCoA:- Exception in getting Policy details Exception : in Infinite Loop in Profiler.log
CSCvo90380	Sponsored Guest account start date not adjusting when account extend
CSCvo94666	ISE 2.4 P5 : Profiling : Netflow probe not working on ISE Bonded Interface
CSCvp00421	ISE Profiler SNMP Request Failure Alarms should show the reason of failure
CSCvp01553	No serialization or batching when large scale(>300) NADs are moved between MatrixA to MatrixB
CSCvp03249	ISE: SMTP server sending Email notification gets Exhausted
CSCvp22075	ERS API that requires CSRF token always failing on PUT/POST/DELETE
CSCvp30958	ISE dropping requests due to descriptor allocation exhaustion under external server latency scenario
CSCvp40509	Internal User not found in prrt-server intermittently even though PrRTCpmBridge returns user found
CSCvp46165	Posture redirect fails with error 'unable to determine peer' in AnyConnect_ISEPosture.txt
CSCvp47029	ISE 2.4 With CTA threat, threat endpoints are not detecting

Caveat ID Number	Description
CSCvp54424	AD Diagnostic tool shows low level API query failed w/ Response contains no answer. Check DNS config
CSCvp54773	ISE 2.4 p6 400 error on sponsor portal after timeout.
CSCvp58616	SQLite FTS3 Query Processing Integer Overflow Vulnerability
CSCvp61880	Authorization profile fails to import with no warnings or errors to user
CSCvp68285	AUP guest portal error 400 when retrun from contact support link (iphone captive portal)
CSCvp72966	Email not received to guest if view/print guest password disabled
CSCvp73385	Authentications start failing once AD throws KRB5KDC_ERR_S_PRINCIPAL_UNKNOWN
CSCvp74154	Unable to remove an endpoint from the endpoint database due to permission error
CSCvp75207	2.4 P8/P9 Certificate chain does not get imported to Patch 8 and Patch 9
CSCvp76617	ISE customer endpoint attribute type string doesn't allow certain numbers
CSCvp77014	ISE trustsec custom view doesn't sort properly with manual order
CSCvp77941	License usage for Plus either shows 0 or incorrect value
CSCvp83006	Export from Context Visibility-Endpoints does not contain Custom Attr for most of Endpoints
CSCvp88242	[400] Bad Request error when refreshing the Mydevice portal
CSCvp88443	ISE CoA is not sent even though new Logical Profile is used under Authz Policy Exceptions
CSCvp88940	Can't use endpoint group description during runtime for authz profile
CSCvp91987	Wrongly job (HOURLY_STATS_JOB) running
CSCvp98851	Cisco Identity Services Engine Cross-Site Scripting Vulnerability
CSCvq00186	ISE 2.4 fails to match authorization rules after deleting authorization condition
CSCvq13341	ISE 2.6 patch 1 - AD User Test is returning 0 groups
CSCvq14925	Renewed self-signed certificate doesn't get updated in trusted store
CSCvq17464	Cannot Update Internal User with External Password ID Store via ERS--ISE
CSCvq19039	ISE fails to save configuration changes for large policy-sets
CSCvq24877	Create Failing with ORA-02291 on CEPM.REF_ROLE_MASTER if groupId w/ prepending/trailing spaces

Caveat ID Number	Description
CSCVq27110	Core files on PSN servers causing High Disk Utilization alarms
CSCVq29336	ISE shows "Oops. Something went wrong" if session ID contains "-"
CSCVq35826	Incorrect audit report while updating Counter Time Limit in Max Sessions page
CSCVq39759	ISE PAN failover inactive days = elapsed days causing incorrect purging of EP's.
CSCVq45008	ISE doesn't store self-registered EndPoints in configured custom group
CSCVq46232	ISE 2.6 ACI integration Trustsec ACI report doesn't have sent ip-sgt mappings to ACI
CSCVq50088	Export function in Network device groups fails when using RBAC
CSCVq51955	Network Conditions do not work with shorten IPv6
CSCVq52340	'Deleting All' Network Access Users doesn't appear on audit report
CSCVq54533	Using ECDSA signed certificates with the admin or pxgrid usage breaks pxgrid
CSCVq56241	ISE user import does not fail when username contains invalid characters
CSCVq58785	Static group information is lost from EP in some scenarios
CSCVq62367	PSN generates scheduled reports if no connectivity to MNT
CSCVq71264	Static group assignment losing from guest flow
CSCVq71844	"Cache not properly initialized" message in every Profiler Policy and cannot update Profiler Feed
CSCVq72760	When updating password for administrative user it is possible to bypass entering current password
CSCVq73457	Under heavy load, ISE live logs either unavailable or delayed
CSCVq74995	ISE 2.4 Possible XSS input in Certificate Attributes message when "/" sign is in the name
CSCvo07993	Qualys show connected state once disable/enable tc-nac if added before applying patch.
CSCVq38610	Certificate trust chain is incomplete for pxGrid on pxGrid alone persona
CSCvn45977	Allowing Different FQDN in SAN DNS field for EAP Certificate.
CSCvp63038	System Test: Temporal agent instalation is failing with internal system error.
CSCVq16846	Rename the label from "ResetAll Hitcounts" to "Reset Policyset Hitcounts" under policy sets
CSCVq54153	Cisco Identity Services Engine Policy Set Name Cross Site Scripting Vulnerability

Caveat ID Number	Description
CSCvo15652	pxGrid WebSocket multiple connections issue
CSCvp53222	ISE subscribes to IND topic /topic/com.cisco.endpoint.asset 3 times
CSCvp54975	pxGrid service lookup still returns old hostname after hostname change
CSCvq33194	Not able to change the language in guest portal with option "Always use"
CSCvq33527	VM Licenses are not consuming based on M5 Profiles
CSCvp02082	Env data is missing when TrustSec-ACI integration is enabled.
CSCvp92030	unable to create ATZ policy using supported special character
CSCvq13294	SXP Mappings bulk download is slow over pxgrid
CSCvq69138	Change logging level of 90140 INFO PassiveID: Message parsed syslog to DEBUG
CSCvq42847	ISE: "Posture failed due to server issues" error during System scan on MAC OSX

Known Issues in Cisco ISE Release 2.4.0.357- Cumulative Patch 10

CA Service Disabled after Upgrade to Cisco ISE 2.4 Patch 10

After upgrading to Cisco ISE 2.4 Patch 10, Certificate Authority (CA) service might be disabled on the nodes on which Policy Service persona is not enabled. To enable the CA service, choose **Administration > System > Certificates > Certificate Authority > Internal CA Settings**.

Resolved Caveats in Cisco ISE Release 2.4.0.357 - Cumulative Patch 9

For Cisco Secure Network Server (SNS) 3600 series appliance support (SNS-3615-K9, SNS-3655-K9, and SNS-3695-K9), you must use only the new ISO file (ise-2.4.0.357.SPA.x86_64_SNS-36x5_APPLIANCE_ONLY.iso). Cisco ISE 2.4 Patch 9 or above must be applied after installation. We recommend that you do not use this ISO file for SNS 3500 series appliance, VMware, KVM, or Hyper-V installation.

The following table lists the resolved caveats in Cisco ISE 2.4 Patch 9.

Patch 9 might not work with older versions of SPW. MAC users must upgrade their SPW to MACOSXSPWizard 2.2.1.43 or later, and Windows users must upgrade their SPW to WinSPWizard 2.2.1.53 or later.

Note After the patch is successfully installed, sometimes you may see an alarm indicating that patch installation failed with an error while trying to reboot. This is a false alarm. You can ignore this alarm.

Caveat ID Number	Description
CSCvd88480	Location filter for ERS Network Device get-all API fails

Caveat ID Number	Description
CSCvfl7323	Normalized Radius:SSID not matched after CoA in the same session-ID
CSCvf33851	ISE 2.1+ RBAC: not able to manage endpoints and assign static identity groups
CSCvh64185	Some information is missing when session details are sent from ISE to FMC via pxGrid
CSCvi27613	Endpoints keeps profiling even though profiling is disabled
CSCvi65932	Blank pop-up in Sponsor Portal if customField contains "null" value
CSCvj02829	SCCM MDM attribute LastPolicyRequest is not converted correctly in ISE
CSCvj31598	Import two CA certs with same subject name
CSCvj83747	ISE Secure Access Wizard Easy Wireless null AD groups for BYOD, Secure Access, Sponsored guest flow
CSCvk52874	ISE does not provide the expected values in the context of EAP chaining
CSCvk76680	ISE-PIC self signed certificate delete operation fails due to Secure Syslog Server reference error
CSCvm00481	CA Service still running on command line after disabling internal certificate authority in Web UI
CSCvm01627	ISE 2.4 ERS API - PUT and GET Internal User "User Custom Attributes"
CSCvn66198	Sponsor portal doesn't refresh the accounts after deleting users and requires a manual refresh
CSCvn85484	Removing SCEP RA Profile causes the associated CA chain to be removed from Trusted Store
CSCvo48975	ISE downloads unnecessary RA certificate for BYOD
CSCvo56989	Json SearchResult gives the href value as NULL
CSCvo74766	ISE DACL syntax checking validation failing on wildcard notation
CSCvo75376	pxGrid node name limit too short for FMC
CSCvo78171	ISE 2.4 Patch 6 installation breaks FQDN of Sponsor and MyDevices Portal
CSCvo82021	Memory usage discrepancy in GUI and show tech
CSCvo90393	COA failure in Radius+PassiveID flow
CSCvo92284	While saving IP SGT static mappings changes, "Discard changes you have made" message is displayed
CSCvo98554	After Importing ISE PB to ISE, Login page are not loaded
CSCvp05303	Provisioned Certificates are not deleted after revocation

Caveat ID Number	Description
CSCvp05936	Adding DEFCON matrix pop-up title needs to be changed
CSCvp07591	Active Directory Machine authentication fails with error "22040 Wrong password or invalid shared secret"
CSCvp12131	ISE 2.4 Patch 6 reload breaks backups
CSCvp12685	Cross-Site Request Forgery (CSRF) [OWASP_CSRFTOKEN bypass]
CSCvp13378	PassiveID flow should send User's SamAccountName and ExplicitUPN
CSCvp14725	ADNormalizedUserName field missing in some of the sessions
CSCvp16734	Plus Licenses consumed without Plus features
CSCvp17444	RSA or RADIUS Token user with Valid account and credentials gets a blank page when trying to login to ISE Admin portal if the account doesn't exists under Access > Administrators
CSCvp18692	AD User information not shown in Context Visibility page
CSCvp19632	Policy sets order mismatch when exporting as XML
CSCvp23869	ISE TLS 1.0 and 1.1 security settings are not applied for PxGrid, causing WSA to fail integration
CSCvp29197	ISE 2.4p3 Radius livelogs not displayed due to invalid NAD ip address
CSCvp29278	Cisco Identity Services Engine Blind SQL Injection Vulnerability
CSCvp29413	Modifying Radius attributes to send in the request to External RADIUS Server is not working on ISE
CSCvp29572	Enable Pxgrid Profiling Probe setting is not working properly
CSCvp33593	ISE fails to match authorization policy with endpoint ID group "unknown"
CSCvp33598	ISE deletes all endpoints if MAC address is deleted twice at the same time
CSCvp33862	Custom Attribute (advanced filter in CV) not able to filter on risk score (integer value)
CSCvp37101	Application server crash is observed when an AD Join operation is attempted via GUI under Administration > Identity Management > External Identity Sources > Active Directory
CSCvp37238	TACACS/AAA live log report not showing configuration change made from ACI
CSCvp40082	ISE 2.3/2.4 upgrade to the latest patch may break dynamic redirection for third party NADs
CSCvp40398	Cannot configure scheduled config and operational backup with start date same as current day
CSCvp48710	Unable to add AD group if it contains "/" or "/" in the AD group name

Caveat ID Number	Description
CSCvp50450	ise-elasticsearch.log files not purged in ISE 2.4 and 2.6
CSCvp50557	Changing max user global settings is not logged in change configuration audit
CSCvp51033	GUI Context Visibility report export slowness
CSCvp52201	Replication: Cluster information table has old FQDN
CSCvp54949	BYOD flow is broken in IOS 12.2
CSCvp54992	BYOD provisioned profile doesn't automatically configure EAP TLS in IOS 12.2
CSCvp58945	Import of network device template throws error "Failed illegal value for Encryption key"
CSCvp59286	Multiple Vulnerabilities in struts2-core
CSCvp60359	Upgraded ISE Node shows LDAP Identity Store password in plain text
CSCvp62113	Enforce NMAP skip host discovery and NMAP scan timeout
CSCvp65711	ISE 2.4 P8 posture scan running when an endpoint switches to a wired network not configured with dot1x
CSCvp65816	"Cisco Modified" Profiles are overwritten by the Profiler Feed Service
CSCvp73076	Log Collection Error - Session directory write failed when AD Probe Session is inserted
CSCvp76911	Deploy button is missing in the Matrix page when Multiple Matrices workflow is enabled
CSCvp77008	ISE LogicalProfile appears under Custom attributes in Context Visibility page when custom attributes are configured
CSCvp86406	Unable to add network device with combination of any digit followed by () in Software Version field
CSCvp93901	Enhancement to publish the following attributes via pxGrid: ADUserSamAccountName, ADUserQualifiedName, ADHostSamAccountName, and ADHostQualifiedName
CSCvq15329	Restore failing for scheduled backup

Resolved Caveats in Cisco ISE Release 2.4.0.357- Cumulative Patch 8

The following table lists the resolved caveats in Release 2.4 cumulative patch 8.

Patch 8 might not work with older versions of SPW. MAC users must upgrade their SPW to MACOSXSPWizard 2.2.1.43 or later, and Windows users must upgrade their SPW to WinSPWizard 2.2.1.53 or later.

Note After the patch is successfully installed, sometimes you may see an alarm indicating that patch installation failed with an error while trying to reboot. This is a false alarm. You can ignore this alarm.

Caveat ID Number	Description
CSCvh54905	Identity Admin cannot see users under Identities tab
CSCvj83362	Include hostname in posture assessment reports
CSCvk34232	Posture remediation files are limited to 50MB
CSCvn35142	ISE 2.3 : Posture report for endpoint by condition not working as expected
CSCvn44171	Network access user with external password cannot be used as ISE admin
CSCvn52886	User name from WMI information is deleted on receiving a DHCP custom syslog for same endpoint
CSCvn55560	ISE 2.3 after applying patch 5 creation of EOB Guest user does not work
CSCvn58964	ISE 2.4 slow database response with 500 authorization policies
CSCvn60787	Emails are not sent for alarm specific email configuration
CSCvn61139	Smart Licensing agent thread lock causes GUI login delay in ISE 2.2
CSCvn64652	Cisco Identity Services Engine Cross-Site Scripting Vulnerability
CSCvn65317	ISE not able to assign guest account to the same guest type used for previous user
CSCvn67160	ISE 2.4 Unable to modify proxy settings when proxy bypass list contains carriage return symbol
CSCvn67199	Cannot filter Context Visibility by 'NAD Port ID' when using "/" character
CSCvn69854	ISE includes only one prrt-server file in support bundle
CSCvn70558	MDMServerReachable does not work for SCCM MDM again
CSCvn70680	ISE expired license can't be deleted if number of Base and Wired Licenses are not matching
CSCvn72150	Nodes have high IO spikes frequently in VM performance reports
CSCvn72918	ISE TrustSec policy difference alarm description is not accessible
CSCvn75396	Authentications are displayed in correctly in "Top N Authentication by Failure Reason" report
CSCvn76567	ISE 2.4 - IP-SGT bindings disappear from SXP for user session
CSCvn79043	ISE 2.4 Live Logs Not Filtering

Caveat ID Number	Description
CSCvn79557	ISE : Custom user attribute change does not reflect changes in configuration change audit report
CSCvn79569	App status for ISE is in initialisation state
CSCvn85498	ISE 2.4 : InactiveDays attribute update with disabled profiling
CSCvn87918	IPV6 based client provisioning portal is not working on default port 8443
CSCvn92246	ISE: admin users unable to delete or modify groups if a tacacs user is saved without any group
CSCvn92778	Removal of unused logical profile may cause a wrong authorization result
CSCvn98932	Non-existed DACL is not verified by the ISE
CSCvo05269	[ISE 2.4]Unable to use created profiling policy in authorization condition
CSCvo09945	Backups from SFTP repository may show incorrect year in Modified time
CSCvo13269	ISE does not allow to add an SGT
CSCvo13626	ISE : Improve Posture Assessment by Condition Report export rate for higher records (millions)
CSCvo17704	ISE 2.4 - CLI password will not accept 3 \$
CSCvo18247	ISE: failed to skip duplicate framed-pool attribute during migration
CSCvo19076	ISE endpoint purge ACTIVEDIRECTORY dictionary is not loading
CSCvo23340	TACACS+ Admin Group access denied when navigating to Work Center > Device Admin > Identities
CSCvo28092	ISE Custom Endpoint Attributes - Will not save or delete
CSCvo28578	ISE 2.3 - Location info and IPSEC info are reversed in order in Network Device Groups for some NADs
CSCvo30170	Guest portal client provisioning customization text doesn't save
CSCvo33696	ISE2.4 doesn't reset failedLoginAttempts after successful login of internal users to network device
CSCvo35516	Device Sensor not able to correctly parse DHCP attributes via RADIUS probe
CSCvo36837	Admin group cannot get access to "Users" at "Device Administration" tab after install patch 5
CSCvo42165	Default python change password script returns CRUD operation exception
CSCvo45582	Internal Administrator Summary report not allowing to select specific columns

Caveat ID Number	Description
CSCvo45606	ISE:WMI-Passed values may compromise the security of ISE. Please remove malicious scripting terms
CSCvo48352	CSV file of RADIUS authentications report may have duplicate records
CSCvo49521	ISE Adds an additional character at the end of OperatingSystemVersion

CSCvn51282	ISE replaces "ip:" to it's hostname in "ip:inacl" Cisco AV-Pair
CSCvn52114	Process failure using external radius token server authentication
CSCvn55640	Manage ACC calling infinite time when sponsoruser configured with permissions ALL&GROUP sponsor grps
CSCvn56648	When individual policy set is reset, other policy set hit counters are reset to 0.
CSCvn59383	ISE 2.3 patch 5 issue when creating guest user on sponsor portal using special character
CSCvn59502	ISE DACL syntax checking is not properly catching errors
CSCvn62164	ISE should support internal users with Special char colon : character to be partiy with ACS
CSCvn62788	TC-NAC configured with Qualys shows Not Reachable.
CSCvn67968	ISE stops responding to IPv6 hosts in its own subnet after adding IPv6 route.
CSCvn79861	ResetAll Hitcount Button not resetting hitcount value in Firefox browser
CSCvn81631	Cores being consistently generated on every node after upgrading from ISE 2.4 to 2.5
CSCvn92528	ISE 2.4 : Misconfigured supplicant query is one of the reasons for high CPU on both MNT nodes

New Features in Cisco ISE Release 2.4.0.357 - Cumulative Patch 6

Identity Caching in RADIUS Token and RSA SecurID Server

Identity caching is used to allow processing of requests that do not perform authentication against the server. You can enable the identity caching option and set the aging time in minutes. The default value is 120 minutes. The valid range is from 1 to 1440 minutes. The results obtained from the last successful authentication are available in the cache for the specified time period.

This option is disabled by default.

Open Caveats in Cisco ISE Release 2.4.0.357 - Cumulative Patch 6

Caveat ID Number	Description
CSCvo75376	pxGrid node name limit is too short for Cisco Firepower Management Center (FMC)

Resolved Caveats in Cisco ISE Release 2.4.0.357- Cumulative Patch 5

The following table lists the resolved caveats in Release 2.4 cumulative patch 5.

Patch 5 might not work with older versions of SPW. MAC users must upgrade their SPW to MACOSXSPWizard 2.2.1.43 or later, and Windows users must upgrade their SPW to WinSPWizard 2.2.0.53 or later.

Caveat ID Number	Description
CSCvj86877	SFTP Connect Error
CSCvm03681	EAP-FAST doesn't support correct key generation in TLS 1.2
CSCvm91034	pxGrid : EndpointProfileMetaData not propagated with Pxgrid V2
CSCvm93698	AD authentications are failing after applying 2.2 P11/ 2.4 P4
CSCvn09504	TC-NAC configured with Qualys shows Not Reachable.
CSCvk13724	EPG mappings not created on ISE
CSCvn17524	ISE Apache Struts CVE-2016-1000031 Vulnerability

Resolved Caveats in Cisco ISE Release 2.4.0.357- Cumulative Patch 4

The following table lists the resolved caveats in Release 2.4 cumulative patch 4.

Patch 4 might not work with older versions of SPW. MAC users must upgrade their SPW to MACOSXSPWizard 2.2.1.43 or later, and Windows users must upgrade their SPW to WinSPWizard 2.2.0.53 or later.

Caveat ID Number	Description
CSCuq95531	Diag Tool: For DNS A Record tests change status failed to warning
CSCuz52877	ISE21- Auth inactivity alarms every 15 mins
CSCvh25718	ISE doesn't convert guest username to lower case if credentials used in 802.1x, not on portal
CSCvh74979	Reset-config is reverting the fixes of patches and causing the issues.
CSCvi10363	ISE: Remove state attribute from access accept packets.
CSCvi50536	Evaluate ISE for Apache Tomcat February 2018 Vulnerabilities
CSCvi58316	ISE : URT fails due to upgrading the ACS to ISE migrated setup.

CSCvj44088	ISE: While registering getting the error: Unable to register the node <fqdn> Version: 0.0.0.0.
CSCvj57771	General Patch Management - Red Hat Linux(Critical/High)
CSCvj57967	Application check works in opposite logic
CSCvj70896	Failed to get sgt name from sgt tag: 5 or sgt is read only, or isPropagateToAPIC is false
CSCvj97277	Fix for CSCvf68738 does not allow legitimate CA certificate refresh
CSCvk07631	ISE 2.2: Hot Spot portal users asked to accept the AUP more than once
CSCvk09597	VM License Thresholds Mismatch Platform definitions
CSCvk10303	ISE 2.4 Trustsec Dashboard Query performance
CSCvk10454	Adding Node to deployment does not add the Profiling OUI data
CSCvk10674	ISE 2.4 Windows PC behind IP phone being profiled as Cisco-IP-Phone-8851
CSCvk12450	Regression: Windows 8/10 clients incorrectly profiled as windows7 due to feed policies
CSCvk13569	"ERROR_NO_SUCH_USER" due to ISE ADRT mis-identifying a child domain name as root forest domain
CSCvk16959	ISE 2.4 no patches : unable to load network devices page
CSCvk19766	ISE 2.4 MnT session & Auth API response is not populating 'other_attributes' section
CSCvk40421	Not able to delete certificate from trusted page
CSCvk43032	Wrong number or types of arguments in call to 'COLLATIONDAILY_PURGE',HOURLY_STATS_JOB
CSCvk51667	ISE: "Manage accounts" gives 400 HTTP error if sponsor portal is configured for SAML authentication.
CSCvk55065	ISE 2.4 PxGrid queries against Secondary MNT resulting in collector crashing
CSCvk61086	ISE 2.4 2.3 2.2 2.1 2.0 : NFS repository credentials are not used
CSCvk65898	ISE 2.4 : Social Login e2e flow fails due to recent changes done on Facebook side
CSCvk71161	ISE 2.4 excessive profiler syslogs sent to MNT
CSCvk74356	ISE 2.4 Cisco Prime querying ISE session API could cause high CPU utilization on Monitoring Nodes

Caveat ID Number	Description
CSCvk74989	Certificate parameters not persistent after DNAC trust re-establishment
CSCvk75544	Authentication Summary Reports show "no data available" for Radius and TACACS
CSCvk76510	ISE 2.4 Core dump on primary node: SIGSERV in GenericConfigObject::getAsNested(unsigned int) const
CSCvm02478	CISCO Network Setup Assistant APP Not Available on GooglePlay
CSCvm05439	ISE cores on LDAP test server after DNAC establishment when same chain used
CSCvm05499	ISE CoA sends NULL value for NAS-Port-Id
CSCvm11175	ISE custom endpoint attribute type String doesn't allow numbers only
CSCvm11595	LiveSessions are not showing on GUI because user name having unicode characters
CSCvm12575	ISE context visibility endpoints import fails with custom endpoint attribute date
CSCvm17749	400 Error Seen In Guest and Sponsor Portal due to portal session deletion
CSCvm17795	Config Backups triggered from GUI hangs at 45% during ES backup

Open Caveats in Cisco ISE Release 2.4.0.357- Cumulative Patch 4

Caveat ID Number	Description
CSCvm93698	AD authentications fail after installing ISE 2.4 patch 4. Could see the following error in ad_agent.log: Identity resolution failed - ERROR_NO_SUCH_USER_SOME_DOMAINS_NOT_AVAILABLE
CSCvm75266	ISE 2.4: Possible kernel memory leak
CSCvm72528	ISE 2.4 patch 3: COA is not working for CTS role based policy
CSCvm90852	Unable to use SFTP server as a repository in ISE 2.4 patch 4

Resolved Caveats in Cisco ISE Release 2.4.0.357- Cumulative Patch 3

The following table lists the resolved caveats in Release 2.4 cumulative patch 3.

Patch 3 might not work with older versions of SPW. MAC users must upgrade their SPW to MACOSXSPWizard 2.2.1.43 or later, and Windows users must upgrade their SPW to WinSPWizard 2.2.0.53 or later.

Caveat ID Number	Description
CSCvd78169	CDP Attributes not added to EP via SNMP Query
CSCvf75968	Multiple Vulnerabilities in httpsyncclient
CSCvf82350	US27030 - Fix VPN Session to MAC Mapping

Caveat ID Number	Description
CSCvg46899	ISE 2.2 user may be redirected again after AUP acceptance on Hotspot portal
CSCvh54726	ISE: Failure to retrieve AD groups for Intel AMT supplicant username format
CSCvh91996	Matched AuthC and AuthZ rules in Monitor Only mode showing in GUID but not names
CSCvi03093	Purging doesn't work if Identity group name was changed/ change is not reflected to purge policy
CSCvi06525	Single click approval sponsor not seeing self-registered guest with implicit/explicit UPN
CSCvi23542	ISE doesn't fail-over to other available DCs when receiving STATUS_ACCESS_DENIED (0xc0000022) from DC on authentication attempts
CSCvi31965	ISE High Authentication Latency due to lookup in Internal Endpoints
CSCvi66786	Corefiles are being generated due to timesten crash in MNT node
CSCvi74182	Log Collection Error : null alarm
CSCvj02644	Customer see's blank "Details" page in RADIUS Live Logs
CSCvj37364	The content changes for imported guest notification template is not working.
CSCvj38428	Changing status of Network Access Users doesn't appear on audit report
CSCvj41029	User domain name may remain empty in session when ISE passive-id AD agent or MS WEF is used
CSCvk48105	Sponsor created guest have a previous guest account email CC'd
CSCvk57963	ISE 2.4 patch 2 install brings application services down due to integrity checksums failure

Resolved Caveats in Cisco ISE Release 2.4.0.357- Cumulative Patch 2

The following table lists the resolved caveats in Release 2.4 cumulative patch 2.

Patch 2 might not work with older versions of SPW. MAC users must upgrade their SPW to MACOSXSPWizard 2.2.1.43 or later, and Windows users must upgrade their SPW to WinSPWizard 2.1.0.53 or later.

Caveat ID Number	Description
CSCvc71503	Jedis connections back to pool - broken connections (due to timeout)
CSCvf20208	ISE Posture PRA timer expires to non-compliant
CSCvf52213	ENH: ISE CLI support for MTU configuration on interfaces

Caveat ID Number	Description
CSCvg75818	Upgrade from ISE 2.2 to 2.3 fails on "CREATE UNIQUE INDEX CEPM.PKUPSABSTRACTTYPE_ATTRIBUTES"
CSCvh86466	PassiveID: WMI queries DC cause memory increased issues on DCs (Microsoft WMI memory leak)
CSCvi29600	Sponsor Groups are not merging results with AD Sponsor groups when Internal user uses AD password
CSCvi50542	ISE Telemetry Scheduler to be Configurable
CSCvi51021	No data available in context visibility if there is no plus/advanced license - Standalone node
CSCvi73782	Static Group Assignment dropping due to DHCP Probe
CSCvi79632	In case of no accounting activity, live session retains all session post 5 days period
CSCvi82192	Generate pxGrid Certificates page doesn't respect cert template RSA key size
CSCvi91353	NMAP scans for custom port 9100 but doesnt report it in nmap.log
CSCvj08379	ISE 2.4 EPSSStatus is not updated in Context Visibility properly
CSCvj11319	ISE 2.4 - EST Service not running after upgrade from 2.3
CSCvj11981	SNMPv3 profiler breaks for NAD with security level of no auth after modifying the SNMP polling time
CSCvj13401	ISE "Failed Value for attribute Protocol is mandatory" when importing network device
CSCvj20617	Upgrade to 2.4 fails due to KEK change
CSCvj42529	ISE - API POST 401 Unauthorized 60-90 seconds after successful Guest Create POST
CSCvj47154	ISE2.4 is consuming extra plus license for default authorization policy
CSCvj52267	ISE 2.4 Input validation error for IPv6 subnets under TACACS Device Network Condition
CSCvj66943	ISE not using SSL for LDAP for "Retrieve Attributes" however connects to port 636
CSCvj72180	ENH: ISE: Store new m/c password on ISE side if new password is valid despite RPC error - 121
CSCvj79271	Secondary MNT: incorrect timesten permission issue for the folder Timesten_Data
CSCvj88674	Smart License enable is failing on ISE 2.4 release.
CSCvj90439	SGT used in trustsec matrix should not be allowed to delete
CSCvj92358	After upgrade UDI values of secondary node are missing from sec_hostconfig table
CSCvk28377	MnT persists frequent Accounting Interim-updates without any changes into Database

Caveat ID Number	Description
CSCvk31092	Core: SyslogSecureTCPConnection::updateConnectionData
CSCvi44041	Cisco Identity Services Engine Privilege Escalation Vulnerability

Resolved Caveats in Cisco ISE Release 2.4.0.357- Cumulative Patch 1

Caveat	Description
CSCvi36111	Live sessions - NAS IP address Tooltip is duplicated for ipv6
CSCvi47074	Replication failure seen on SXP nodes during SXP connection down
CSCvi48886	Post upgrade - the GuestVLAN doesn't copy the key of omapi.key to DHCP
CSCvi50979	Machine change password interval should be configurable from advance tuning parameter (Kerberos SSO)
CSCvi56003	AUP Link in the Self-Registration form throws Bad Request in ISE 2.4
CSCvi69286	Dashboard > Search : Endpoint details screen doesn't work correctly in Internet Explorer
CSCvj11476	ISE : Wrong error message when deleting a certificate referenced by some resource
CSCvi53593	Wrong msg if trying to issue CoA and no MAC address is selected
CSCvj61368	2.4 P1: ISE Indexing server is not running on secondary PAN
CSCvi38373	ISE Delete All Endpoints in Context Visibility too risky
CSCvh93370	ISE Guest: Incorrect accounting in syslog causes issues
CSCvi06647	Anyconnect configuration - drop menu for compliance module is empty
CSCvi61330	Occasional application restart post Radius/DTLs authentication
CSCvg90863	"Application Configure ISE" left idle for long time causes SSHD to disable

Caveat	Description
CSCvj17258	ISE 2.4 keeps old DNAC client cert causing new DNAC pxGrid with ISE to fail
CSCvj33336	DNAC1.2: Network devices not getting added in ISE 2.4 after provision
CSCvi49103	Wrong data type for "Enable Multi Shared Secret:String(128)" in NAD CSV export
CSCvg19708	Guest Accounting report broken

Resolved Caveats in Cisco ISE Release 2.4.0.357

Note Cisco ISE 2.4 patch 0 has parity with Cisco ISE 2.0 Patch 6, 2.0.1 Patch 5, 2.1 Patch 6, 2.2 Patch 6, and 2.3 Patch 2

The following table lists the resolved caveats in Release 2.4.

Table 2: Cisco ISE, Release 2.4, Resolved Caveats, Patch 0

Caveat	Description
CSCvf69805	Cisco Identity Services Engine cross-site request forgery vulnerability
CSCvf49844	Cisco Identity Services Engine local command injection vulnerability
CSCvf63414	Cisco Identity Services Engine authenticated CLI denial of service vulnerability
CSCvh51992	Cisco Identity Services Engine authenticated CLI denial of service vulnerability
CSCvf69753	Cisco Identity Services Engine authenticated privilege escalation vulnerability
CSCvf69963	Cisco Identity Services Engine cross-site scripting vulnerability
CSCvg95479	Cisco Identity Services Engine command injection to underlying OS vulnerability
CSCvd38467	BYOD does not work on Apple iOS 10.3.x.
CSCvf29467	Editing multiple client provisioning policies simulataneously hides the results column.
CSCvf33475	Simultaneuos configuration and operational backup on same browser is very slow.

CSCvi45925	Newly created dashboard not visible in 2.4 342 build.
CSCvf28877	ISE 2.3 TACACS+ : Unable to add commands to Command Set while editing.
CSCvf32298	ISE 2.3 Sponsor Portal: There is a delay of one minute between the update of the username table and the counter.
CSCvf32394	ISE 2.3 Self-registered guest portal of SMS provider- Global default is always re-selected when other attributes are changed.
CSCvf34216	ISE 2.3: Unable to select Work Center Menu - Guest Access Identity Group upon opening detailed report.
CSCvh05703	'Remember Me' RADIUS live sessions view does not show usernames for guest devices

Open Caveats in Cisco ISE Release 2.4.0.357

The following table lists the open caveats in Release 2.4.

Caveat ID Number	Description
CSCvf30591	ISE 2.2: Disabled password Lifetime, however getting reminder for account expiration.
CSCvg80657	disk maintenance. need automatic and on demand cleanup of ESR 5921 IOS crashinfo files
CSCvg80766	"application configure ise" command ungracefully terminates all CLI sessions
CSCvh20790	"Go to Update Report Page" giving "no data found."
CSCvh22907	Sponsor Portal Page takes more than 10 seconds to load
CSCvh22984	Unable to delete multiple sponsor accounts at once
CSCvh65530	Filter by No of Devices not working in NDG Flat table page
CSCvh69481	Get-All with filtertype=OR not working for some of the objects
CSCvh77969	User Visibility not working after VSW
CSCvh86082	Parsing NMAP smb-os-discovery data should remove
 or \x00
CSCvh93771	Broken admin web ui access with PAT/NAT of HTTPS://<IP>:<port-non-443>
CSCvh95370	Creating Network Device Defaults Device Profile to AlcatelWired
CSCvi48276	AMP in ISE remains connected even after deregter from cloud
CSCvi48298	Policy Hit count value gets nullified while creating new policies in a specific case

Caveat ID Number	Description
CSCvi60160	Stop All Running Tests not functioning properly in Active Directory Diagnostic Tool
CSCvi85015	Anyconnect Profile for Vlan Refresh - notes is confusing
CSCvi88520	Message Catalog Displaying Only the Message Code 89006 but Not the Rest
CSCvi90269	SXP Device Connection page on ISE UI shows OFF on ISE even when peer is showing connection ON
CSCvj06916	ISE 2.3+ : Authc/Authz policies in a policy set cannot be configured if ext radius sequence is used
CSCvj13757	ISE 2.4 - Unable to acknowledge AD Diagnostic Failure Alarm
CSCvj22303	Endpoint OS is wrongly updated in External Mobile Device Management reports
CSCvj28192	ISE 2.4 GUI tcpdump is not having embeded -s 0 option
CSCvj29551	No warning/error on importing policy based on non-existing custom attributes
CSCvj31598	Enhancement Request: Import two CA certs with same subject name
CSCvj50085	After deleting the end-points from context visibility, homepage shows active end-points as 0
CSCvj50257	Active endpoints are mismatched from expected value
CSCvj54057	Alarm "Trustsec PAC validation failed" need to be enhanced to point the NAD hostname and IP address
CSCvj73152	Enable VLAN DHCP release breaks guest flow for ISE 2.4
CSCvj73550	CTS PAC refresh failed due to EAP-FAST communication failed btw switch and ISE
CSCvj77125	cdpCachePlatform rules not matching for Cisco Wave 2 (aka COS) APs 1800/2800/3800
CSCvj83961	CWA using non-mgmt interface is not replacing secondary interface fqdn for guest flow
CSCvj88164	Remote-Access VPN Posture Sessions showing Base license consumed but no Apex
CSCvj93331	Link to next page is not present in REST response
CSCvk06884	ISE should return 400 HTTP error, not 500 if incorrect data provided for REST call
CSCvk09565	ISE 2.x onwards RFC 3164 is not being followed completely
CSCvk12450	Regression: Windows 8/10 clients incorrectly profiled as windows7 due to feed policies
CSCvk25549	Offline profiler feed update web page is missing the offline feed option
CSCvk34422	Profiler: Feed download - Unable to update FeedEndpointPolicy
CSCvk40421	Not able to delete certificate from trusted page

Caveat ID Number	Description
CSCvk48315	Live sessions are not seen in ISE Live logs page in ISE 2.4
CSCvk55076	ISE 2.4 losing static group mapping due to profiler AD Probe
CSCvk55285	ISE doesn't validate the data type date in the custom endpoint attribute
CSCvk59357	Admin warned of license non-compliance even after adding new licenses
CSCvk65179	error while assigning a certificate to a certificate usage, Unable to access login Portal
CSCvk65898	ISE 2.4 : Social Login e2e flow fails due to recent changes done on Facebook side
CSCvk67692	ISE 2.x: REST API Get-All Internal Users' result has 'next-page' link missing in XML and JSON output
CSCvk68196	SNMPv3 profiling works only with DES or AES128 privacy protocol
CSCvk71555	Unable to configure opposite logic for Application condition
CSCvk72920	ISE does not send SNMP bulk request for CDP after it did once
CSCvk74989	Certificate parameters not persistent after DNAC trust re-establishment
CSCvm01627	ISE 2.4 ERS API - PUT and GET Internal User "User Custom Attributes"
CSCvm03411	Kernel Side-Channel Attack using L1 Terminal Fault: CVE-2018-3620 and CVE-2018-3646 (Foreshadow-NG)
CSCvm03842	PxGrid SSL / TLS Renegotiation Handshakes MiTM Plaintext Data Injection - CVE-2009-3555
CSCvm05439	ISE cores on LDAP test server after DNAC establishment when same chain used
CSCvm05840	NAD CSV imports should allow all supported characters
CSCvm06464	ISE: SNMPv3 not sending traps
CSCvm06688	Patch roll back from CLI is failing in case of Patch install has issues after installing from GUI
CSCvm07566	ACS migration to ISE 2.4 breaks Identity Source Sequencing
CSCvm09377	HTTP Request Header for ISE fails if it contains @ in email
CSCvm10559	ISE 2.4 Unable to delete unused SGTs associated with Virtual Network
CSCvm11175	ISE custom endpoint attribute type String doesn't allow numbers only
CSCvm11230	Customer sees no data available for this record for "Details" page in Live Logs
CSCvm12215	Patch install needs to re-apply SQL fixes in case of database reset
CSCvm12484	ISE sending wrong message to DNAC when clock not sync'd during trust establishment

Caveat ID Number	Description
CSCvm17795	Config Backups triggered from GUI hangs at 45% during ES backup
CSCvm19797	Hotfix Install Generates False Error Messages
CSCvm19803	ISE 2.4 EndPoints are being associated with the incorrect logical profile
CSCvm20561	ISE 2.x Cisco-Device profiler policy missing the tandberg OUI as a condition
CSCvm22838	CoAs not being sent after the initial profiler CoA when the profile for an endpoint changes
CSCvm23096	PSN is down and in initializing state for ever
CSCvm26207	ISE METRICS, Compliance percentage is of total endpoints instead actual endpoints go through posture
CSCvm26372	ISE Indexing Engine not running after installation of 2.4 patch 3 on secondary pan
CSCvm29083	ISE 2.4 configured Authz policy does not match the correct policy when using Logical Profiles
CSCvm29136	Windows7-Workstation policy is incorrect for the rule "WinPlatform certainty factor or 40
CSCvm29577	ISE 2.4 : Context Visibility Users : Active Directory attributes not getting stored
CSCvm31919	IE11 : Trash icon linked to MAC address search box in Context Visibility
CSCvm32107	Unable to delete Root Network Device Group
CSCvm32303	Rest API- Unable to retrieve Guest User Details using ToDate filters
CSCvm33217	Receiving an error when saving authorization policy using external domain users group as condition
CSCvo61888	Device Administration Current Active Sessions report not available from 2.4 P6
