Profiler Feed Services: Version 1 3

Purpose

This document provides a consolidated record of Cisco ISE Profiler Feed releases published during 2026. Each release section summarizes the profiler profiles introduced or updated in that feed and provides the information required to validate the changes included in that release

Overview

The Profiler Feed Service classifies profiler components and endpoint profiling policies by system type, controls the operations permitted for Cisco-provided and administrator-created or modified content, and retrieves new or updated profiling policies and OUI database updates from the Cisco feed server. With a Cisco ISE subscription, updates are downloaded and applied daily at 1:00 a.m. local server time, with options for email notifications, rollback, anonymous usage reporting, and manual offline updates. Feed updates replace administrator-modified policies with the latest Cisco-provided versions on which they are based.

For more information on how to configure Profiler Feed Service, refer to the [Cisco ISE Administrator Guide](#) for your Cisco ISE release.
