

## Cable and Onboard the Firewall

---

Cable and onboard the firewall to Security Cloud Control.

- [Cable the firewall, on page 1](#)
- [Onboard the firewall to Security Cloud Control, on page 2](#)
- [Perform initial configuration \(manual provisioning only\), on page 9](#)

### Cable the firewall

- Install an SFP into Ethernet 1/5—It is a 1-Gbps SFP port that requires an SFP module.
- See the [hardware installation guide](#) for more information.
- If you use zero-touch provisioning, do not cable both the outside and the Management interface. This guide covers management on the outside interface, but you may want to use zero-touch provisioning on Management with high availability. If you use zero-touch provisioning on outside and want to use high availability, you will have to change the outside IP address to a static address after registration.

## Onboard the firewall to Security Cloud Control

Onboard the firewall using zero-touch provisioning or manual provisioning. Log into Security Cloud Control at <https://security.cisco.com>.

### Onboard the firewall with zero-touch provisioning

Onboard using zero-touch provisioning with the serial number.

Onboard the Firewall Threat Defense using zero-touch provisioning and the device serial number.

#### Before you begin

- Obtain your device's serial number.
  - If you have the shipping box, you can see the chassis serial number on the label.

- The chassis serial number is on the compliance label on .
- The PCB serial number is on a label on the chassis called "S/N."
- You can view the serial numbers using the following CLI commands:
  - FXOS—**show chassis detail** shows both serial numbers.
  - Firewall Threat Defense—**show inventory** shows the chassis serial number. **show serial-number** shows the PCB serial number.
- Check your LEDs to make sure the firewall is ready for registration.

**Table 1: Zero-Touch Provisioning: Managed (M) LED behavior**

M LED	Description	Time after firewall powered on (minutes:seconds)
Slow flashing green	Connected to the Cisco cloud and ready for onboarding	15:00 - 30:00
Alternating green and amber (error condition)	Failed to connect to the Cisco cloud	15:00 - 30:00
Solid green	Onboarded	20:00 - 45:00

## Procedure

**Step 1** In the Security Cloud Control navigation menu, click **Security Devices**, then click the blue plus button (  ) to **Onboard** a device.

**Step 2** Select the **FTD** tile.

**Step 3** Under **Management Mode**, be sure **FTD** is selected.

At any point after selecting **FTD** as the management mode, you can click **Manage Smart License** to enroll in or modify the existing smart licenses available for your device. See [Obtain licenses](#) to see which licenses are available.

**Step 4** Select **Use Serial Number** as the onboarding method.

**Figure 1: Use Serial Number**

**Firewall Threat Defense**

**Important:** After you onboard the threat defense device to cdFMC or the Firewall Management Center using the zero-touch provisioning method, the device will be managed by the corresponding manager it is onboarded to. Note that the firewall device manager will no longer manage the device, and all existing policy configurations on the device will be lost except for the basic interface configurations. Therefore, you must configure the policies from the corresponding manager.

- Use CLI Registration Key**  
Onboard a device using a registration key generated from SCC and applied on the device using the Command Line Interface. (FTD 7.0.3+ & 7.2+)
- Use Serial Number**  
Onboard a factory-shipped FTD 7.2+ device to cdFMC or a 7.4+ On-Prem FMC using zero-touch provisioning.
- Deploy an FTD to a cloud environment**  
Deploy a device to supported cloud platforms: AWS, GCP, and Azure.
- Bulk Onboard using CSV File**  
Use this method for adding multiple devices to cdFMC by uploading a .csv file, with template assignment. (FTD 7.4+)

**Step 5** In **Select FMC**, choose the **Cloud-Delivered FMC > Cloud-Delivered FMC** from the list, and click **Next**.

**Figure 2: Select FMC**

**Step 6** In the **Connection** area, enter the **Device Serial Number** and the **Device Name** and then click **Next**.

**Figure 3: Connection**

**Step 7** In **Password Reset**, click **Yes...** Enter a new password and confirm the new password for the device, then click **Next**.

For zero-touch provisioning, the device must be brand new or has been reimaged.

**Note**

If you logged into the device and reset the password, and you did not change the configuration in a way that would disable zero-touch provisioning, then you should choose the **No...** option. There are a number of configurations that disable zero-touch provisioning, so we don't recommend logging into the device unless you need to, for example, to perform a reimage.

Figure 4: Password Reset

3 Password Reset

1 Please review all the prerequisites for onboarding with a serial number. [Learn more](#)

2 Is this a new device that has never been logged into or configured for a manager?

Yes, this new device has never been logged into or configured for a manager

Enter a new password for devices that have never been configured for a manager.

**Important:** If you select this option and the device's default password has already been changed, onboarding fails.

New Password

Confirm Password

No, this device has been logged into and configured for a manager

Use this option if you already changed the password in the device CLI.

**Important:** If you select this option and the device's default password has not been changed, onboarding fails.

[Next](#)

1 Password must:

- Be 8-128 characters
- Have at least one lower and one upper case letter
- Have at least one digit
- Have at least one special character.
- Not contain consecutive repeated letters

**Step 8**

For the **Policy Assignment**, use the drop-down menu to choose an access control policy for the device. If you have no policies configured, choose the **Default Access Control Policy**.

Figure 5: Policy Assignment

4 Policy Assignment

Access Control Policy

Default Access Control Policy ▾

[Next](#)

**Step 9**

For the **Subscription License**, check each of the feature licenses you want to enable. Click **Next**.

Figure 6: Subscription License

5 Subscription License

License Type	Includes
<input checked="" type="checkbox"/> Essentials	Base Firewall Capabilities
<input checked="" type="checkbox"/> Carrier (7.3+ FTDs only)	GTP/GPRS, Diameter, SCTP, M3UA
<input checked="" type="checkbox"/> IPS	Intrusion Policy
<input checked="" type="checkbox"/> Malware Defense	File Policy
<input checked="" type="checkbox"/> URL	URL Reputation
<input type="checkbox"/> RA VPN <input type="text" value="VPNOnly"/>	RA VPN

[Next](#)

1 Enable subscription licenses. CDO will attempt to enable the selected licenses when the device is connected to CDO and registered with the supplied Smart License. [Learn more about Cisco Smart Accounts.](#)

**Step 10** (Optional) Add labels to your device to help sort and filter the **Security Devices** page. Enter a label and select the blue plus button (+). Labels are applied to the device after it's onboarded to Security Cloud Control.

**Figure 7: Done**

### What to do next

From the **Security Devices** page, select the device you just onboarded and select any of the option listed under the **Management** pane located to the right.

## Onboard the firewall with manual provisioning

Onboard the firewall using a CLI registration key.

### Procedure

**Step 1** In the Security Cloud Control navigation menu, click **Security Devices**, then click the blue plus button (+) to **Onboard** a device.

**Step 2** Click the **FTD** tile.

**Step 3** Under **Management Mode**, be sure **FTD** is selected.

**Step 4** Select **Use CLI Registration Key** as the onboarding method.

**Figure 8: Use CLI Registration Key**

**Step 5** Enter the **Device Name** and click **Next**.

Figure 9: Device Name

<input checked="" type="checkbox"/> Carrier (7.3+ FTDs only)	GTP/GPRS, Diameter, SCTP, M3UA
<input checked="" type="checkbox"/> IPS	Intrusion Policy
<input checked="" type="checkbox"/> Malware Defense	File Policy
<input checked="" type="checkbox"/> URL	URL Reputation
<input checked="" type="checkbox"/> RA VPN Premier	RA VPN

Next

**Step 8**

For the **CLI Registration Key**, Security Cloud Control generates a command with the registration key and other parameters. You must copy this command and use it in the initial configuration of the Firewall Threat Defense.

Figure 12: CLI Registration Key

**configure manager add** Security Cloud Control\_ *hostname registration\_key nat\_id display\_name*

Complete initial configuration at the CLI or using the Firewall Device Manager:

- **Initial configuration: CLI, on page 15**—Copy this command at the Firewall Threat Defense CLI after you complete the startup script.
- **Initial configuration: Firewall Device Manager, on page 9**—Copy the *scc\_hostname*, *registration\_key*, and *nat\_id* parts of the command into the **Management Center/Security Cloud Control Hostname/IP Address, Management Center/Security Cloud Control Registration Key**, and NAT ID fields.

#### Example:

Sample command for CLI setup:

```
configure manager add account1.app.us.scc.cisco.com KP00P0rgWzaHrnj1V5ha2q5Rf8pKFX9E
Lzm1H0ynhVUWhXYWz2swmkj2ZWsn3Lb account1.app.us.scc.cisco.com
```

Sample command components for GUI setup:

Figure 13: configure manager add command components

```

          scc_hostname                                registration_key
          |-----|-----|-----|-----|-----|
configure manager add account1.app.us.scc.cisco.com KP00P0rgWzaHrnj1V5ha2q5Rf8pKFX9E
Lzm1H0ynhVUWhXYWz2swmkj2ZWsn3Lb account1.app.us.scc.cisco.com
          |-----|-----|-----|-----|-----|
          nat_id
  
```

**Step 9** Click **Next** in the onboarding wizard to start registering the device.

**Step 10** (Optional) Add labels to your device to help sort and filter the **Security Devices** page. Enter a label and select the blue plus button (+). Labels are applied to the device after it's onboarded to Security Cloud Control.

Figure 14: Done

## Perform initial configuration (manual provisioning only)

For manual provisioning, perform initial configuration of the firewall using the Secure Firewall Device Manager or using the CLI.

### Initial configuration: Firewall Device Manager

Using this method, after you register the firewall, the following interfaces will be preconfigured in addition to the Management interface:

- Ethernet 1/1—**outside**, IP address from DHCP, IPv6 autoconfiguration
- — **inside**, 192.168.95.1/24
- Default route—Obtained through DHCP on the outside interface
- Additional interfaces—Any interface configuration from the Firewall Device Manager is preserved.

Other settings, such as the DHCP server on inside, access control policy, or security zones, are not preserved.

#### Procedure

**Step 1** Connect your computer to the inside interface.

**Step 2** Log into the Firewall Device Manager.

- a) Go to <https://192.168.95.1>.
- b) Log in with the username **admin** and the default password **Admin123**.
- c) You are prompted to read and accept the General Terms and change the admin password.

**Step 3** Use the setup wizard.

#### Note

The exact port configuration depends on your model.

- a) Configure the outside and management interfaces.

Figure 15: Connect firewall to internet

## Connect firewall to Internet

The initial access control policy will enforce the following actions.  
You can edit the policy after setup.

<p><b>Rule 1</b> <b>Trust Outbound Traffic</b></p> <p>This rule allows traffic to go from inside to outside, which is needed for the Smart License configuration.</p>	<p><b>Default Action</b> <b>Block all other traffic</b></p> <p>The default action blocks all other traffic.</p>
---	---

---

### Outside Interface Address

Connect Ethernet1/1 (Outside) to your ISP/WAN device, for example, your cable modem or router. Then, configure the addresses for the outside interface.

**Configure IPv4**

Using DHCP ▼

**Configure IPv6**

Using DHCP ▼

---

[NEXT](#) Don't have internet connection?

[Skip device setup](#) i

1. **Outside Interface Address**—Use a static IP address if you plan for high availability. You cannot configure PPPoE using the setup wizard; you can configure PPPoE after you complete the wizard.
2. **Management Interface**—The Management interface settings are used even though you are using manager access on the outside interface. For example, management traffic that is routed over the backplane through the outside interface will resolve FQDNs using these Management interface DNS servers, and not the outside interface DNS servers.

**DNS Servers**—The DNS server for the system's management address. The default is the OpenDNS public DNS servers. These will probably match the outside interface DNS servers you set later since they are both accessed from the outside interface.

### Firewall Hostname

- b) Configure the **Time Setting (NTP)** and click **Next**.

**Figure 16: Time Setting (NTP)**

### Time Setting (NTP)

System Time: 11:56:20AM October 03 2024 -06:00

Time Zone for Scheduling Tasks

Default NTP Servers

Server Name

0.sourcefire.pool.ntp.org

1.sourcefire.pool.ntp.org

2.sourcefire.pool.ntp.org

[NEXT](#)

- c) Select **Start 90 day evaluation period without registration**.

### Register with Cisco Smart Software Manager

Register with Cisco Smart Software Manager to use the full functionality of this device and to apply subscription licenses.

[What is smart license? ↗](#)

**Continue with evaluation period: Start 90-day evaluation period without registration**  
**Recommended if device will be cloud managed. [Learn More](#)**

Please make sure you register with Cisco before the evaluation period ends.  
Otherwise you will not be able to make any changes to the device configuration.

*Do not* register the Firewall Threat Defense with the Smart Software Manager; all licensing is performed on the Security Cloud Control.

- d) Click **Finish**.

Figure 17: What's Next

e) Choose **Standalone Device**, and then **Got It**.

**Step 4** If you want to configure additional interfaces, choose **Device**, and then click the link in the **Interfaces** summary.

**Step 5** Register with the Security Cloud Control by choosing **Device > System Settings > Central Management** and clicking **Proceed**

Configure the **Management Center/SCC/Details**.

**Note**

Older versions may show "CDO" instead of "SCC."

Figure 18: Management Center/SCC Details

### Management Center/SCC Details

### Connectivity Configuration

Threat Defense Hostname

1120-4

DNS Server Group

CustomDNSServerGroup ▼

Management Center/SCC Access Interface

outside (Ethernet1/1) ▼

**Type:** Static | **IP Address:** 10.89.5.6 / 255.255.255.192 [Edit](#)

**i** Before you connect to the management center or SCC, perform additional configuration:

- [Add a static route](#) through the data management interface so the threat defense can reach the management center. Or [review your current static routes](#) .
- Optional. [Add a Dynamic DNS \(DDNS\) method](#). Or [review your current DDNS methods](#) . DDNS ensures the management center can reach the threat defense at its Fully-Qualified Domain Name (FQDN) if the threat defense's IP address changes.

CANCEL
CONNECT

- a) For **Do you know the Management Center/SCC Hostname or IP address**, click **Yes**.

Security Cloud Control generates the **configure manager add** command. See [Onboard the firewall with manual provisioning, on page 6](#) to generate the command.

**configure manager add** *\_hostname registration\_key nat\_id display\_name*

**Example:**

*Figure 19: configure manager add command components*

- b) Copy the *cdo\_hostname*, *registration\_key*, and *nat\_id* parts of the command into the following fields:
- **Management Center/SCC Hostname/IP Address**
  - **Management Center/SCC Registration Key**
  - **NAT ID**

**Step 6** Configure the **Connectivity Configuration**.

- a) Specify the **Threat Defense Hostname**.

This FQDN will be used for the outside interface.

- b) Specify the **DNS Server Group**.

Choose an existing group, or create a new one. The default DNS group is called **CiscoUmbrellaDNSServerGroup**, which includes the OpenDNS servers.

To retain the outside DNS server setting after registration, you need to re-configure the DNS Platform Settings in the Firewall Management Center.

- c) For the **Management Center/SCC Access Interface**, click **Data Interface**, and then choose **outside**.

**Step 7** (Optional) Click **Add a Dynamic DNS (DDNS) method**.

DDNS ensures the Firewall Management Center can reach the Firewall Threat Defense at its FQDN if the Firewall Threat Defense's IP address changes.

**Step 8** Click **Connect**.

The **Registration Status** dialog box shows the current status of the Security Cloud Control registration.

Figure 20: Successful Connection

- Step 9** After the **Saving Management Center/SCC Registration Settings** step on the status screen, go to the Security Cloud Control and add the firewall. See [Onboard the firewall with manual provisioning, on page 6](#).

## Initial configuration: CLI

Set the dedicated Management IP address, gateway, and other basic networking settings using the CLI setup script.

### Procedure

- Step 1** Connect to the console port and access the Firewall Threat Defense CLI. See [Access the Firewall Threat Defense CLI](#).
- Step 2** Complete the CLI setup script for the Management interface settings.

#### Note

You cannot repeat the CLI setup script unless you clear the configuration, for example, by reimaging. However, all of these settings can be changed later at the CLI using **configure network** commands. See [Cisco Secure Firewall Threat Defense Command Reference](#).

```
You must accept the EULA to continue.
Press <ENTER> to display the EULA:
Cisco General Terms
[...]
```

```
Please enter 'YES' or press <ENTER> to AGREE to the EULA:
```

```
System initialization in progress. Please stand by.
You must configure the network to continue.
Configure at least one of IPv4 or IPv6 unless managing via data interfaces.
```

```
Do you want to configure IPv4? (y/n) [y]:
Do you want to configure IPv6? (y/n) [y]: n
```

**Guidance:** Enter **y** for at least one of these types of addresses. Although you do not plan to use the Management interface, you must set an IP address, for example, a private address.

```
Configure IPv4 via DHCP or manually? (dhcp/manual) [manual]:
```

**Guidance:** Choose **manual**. DHCP is not supported when using the outside interface for manager access. Make sure this interface is on a different subnet from the manager access interface to prevent routing issues.

```
Enter an IPv4 address for the management interface [192.168.45.61]: 10.89.5.17
Enter an IPv4 netmask for the management interface [255.255.255.0]: 255.255.255.192
Enter the IPv4 default gateway for the management interface [data-interfaces]:
```

**Guidance:** Set the gateway to be **data-interfaces**. This setting forwards management traffic over the backplane so it can be routed through the outside interface.

```
Enter a fully qualified hostname for this system [firepower]: 1010-3
Enter a comma-separated list of DNS servers or 'none' [208.67.222.222,208.67.220.220,2620:119:35::35]:
Enter a comma-separated list of search domains or 'none' []: cisco.com
If your networking information has changed, you will need to reconnect.
Disabling IPv6 configuration: management0
Setting DNS servers: 208.67.222.222,208.67.220.220,2620:119:35::35
Setting DNS domains:cisco.com
```

**Guidance:** Set the Management interface DNS servers. These will probably match the outside interface DNS servers you set later, since they are both accessed from the outside interface.

```
Setting hostname as 1010-3
Setting static IPv4: 10.89.5.17 netmask: 255.255.255.192 gateway: data on management0
Updating routing tables, please wait...
All configurations applied to the system. Took 3 Seconds.
Saving a copy of running network configuration to local disk.
For HTTP Proxy configuration, run 'configure network http-proxy'
```

```
Manage the device locally? (yes/no) [yes]: no
```

**Guidance:** Enter **no** to use the Firewall Management Center.

```
Setting hostname as 1010-3
Setting static IPv4: 10.89.5.17 netmask: 255.255.255.192 gateway: data on management0
Updating routing tables, please wait...
All configurations applied to the system. Took 3 Seconds.
Saving a copy of running network configuration to local disk.
For HTTP Proxy configuration, run 'configure network http-proxy'
```

**Guidance:** Enter **routed**. Outside manager access is only supported in routed firewall mode.

```
Configuring firewall mode ...
```

```
Device is in OffBox mode - disabling/removing port 443 from iptables.
Update policy deployment information
- add device configuration
- add network discovery
- add system policy
```

You can register the sensor to a Firepower Management Center and use the Firepower Management Center to manage it. Note that registering the sensor to a Firepower Management Center disables on-sensor Firepower Services management capabilities.

When registering the sensor to a Firepower Management Center, a unique alphanumeric registration key is always required. In most cases, to register a sensor to a Firepower Management Center, you must provide the hostname or

the IP address along with the registration key.  
 'configure manager add [hostname | ip address ] [registration key ]'

However, if the sensor and the Firepower Management Center are separated by a NAT device, you must enter a unique NAT ID, along with the unique registration key.

'configure manager add DONTRESOLVE [registration key ] [ NAT ID ]'

Later, using the web interface on the Firepower Management Center, you must use the same registration key and, if necessary, the same NAT ID when you add this sensor to the Firepower Management Center.

>

### Step 3 Configure the outside interface for manager access.

#### configure network management-data-interface

After you press **Enter**, you are prompted to configure basic network settings for the outside interface.

#### Manual IP Address

```
> configure network management-data-interface
Data interface to use for management: ethernet1/1
Specify a name for the interface [outside]: internet
IP address (manual / dhcp) [dhcp]: manual
IPv4/IPv6 address: 10.10.6.7
Netmask/IPv6 Prefix: 255.255.255.0
Default Gateway: 10.10.6.1
Comma-separated list of DNS servers [none]: 208.67.222.222,208.67.220.220
```

**Guidance:** To retain the outside DNS servers after registration, you need to re-configure the DNS Platform Settings in the Firewall Management Center.

```
DDNS server update URL [none]:
Do you wish to clear all the device configuration before applying ? (y/n) [n]:
```

Configuration done with option to allow manager access from any network, if you wish to change the manager access network use the 'client' option in the command 'configure network management-data-interface'.

```
Setting IPv4 network configuration.
Network settings changed.
```

>

#### IP Address from DHCP

```
> configure network management-data-interface
Data interface to use for management: ethernet1/1
Specify a name for the interface [outside]:
IP address (manual / dhcp) [dhcp]:
DDNS server update URL [none]:
https://dwinchester:pa$$w0rd17@domains.example.com/nic/update?hostname=<h>&myip=<a>
Do you wish to clear all the device configuration before applying ? (y/n) [n]:
```

Configuration done with option to allow manager access from any network, if you wish to change the manager access network use the 'client' option in the command 'configure network management-data-interface'.

```
Setting IPv4 network configuration.
Network settings changed.
```

&gt;

**Step 4** Identify the Security Cloud Control that will manage this Firewall Threat Defense using the **configure manager add** command that Security Cloud Control generated. See [Onboard the firewall with manual provisioning, on page 6](#) to generate the command.

**Example:**

```
> configure manager add account1.app.us.cdo.cisco.com KPOOP0rgWzaHrnj1V5ha2q5Rf8pKFX9E
Lzm1HOynhVUWhXYWz2swmkj2ZWsn3Lb account1.app.us.cdo.cisco.com
Manager successfully configured.
```

**Step 5** Shut down the Firewall Threat Defense so you can send the device to the remote branch office.

It's important that you shut down your system properly. Simply unplugging the power or pressing the power switch can cause serious file system damage. Remember that there are many processes running in the background all the time, and unplugging or shutting off the power does not allow the graceful shutdown of your system.

- a) Enter the **shutdown** command.
  - b) Observe the Power LED and Status LED to verify that the chassis is powered off (appear unlit).
  - c) After the chassis has successfully powered off, you can then unplug the power to physically remove power from the chassis if necessary.
-
