

## Cable and Register the Firewall

Cable the firewall and then register the firewall to the management center.

- [Cable the Firewall, on page 1](#)
- [Perform Initial Configuration, on page 2](#)
- [Register the Firewall with the Management Center, on page 9](#)

### Cable the Firewall

Connect the management center to the dedicated Management 1/1 interface. The management network needs access to the internet for updates. For example, you can connect the management network to the internet through the firewall itself (for example, by connecting to the inside network).

- Obtain a console adapter—The Secure Firewall 3100 ships with a DB-9 to RJ-45 serial cable, so you may need to buy a third party DB-9-to-USB serial cable to make the connection.
- Install SFPs into ports Ethernet 1/9 and higher.
- See the [hardware installation guide](#) for more information.

# Perform Initial Configuration

Perform initial configuration of the firewall using the Secure Firewall device manager or using the CLI.

## Initial Configuration: Device Manager

Using this method, after you register the firewall, the following interfaces will be preconfigured in addition to the Management interface:

- Ethernet 1/1—**outside**, IP address from DHCP, IPv6 autoconfiguration
- Ethernet 1/2—**inside**, 192.168.95.1/24
- Default route—Obtained through DHCP on the outside interface
- Additional interfaces—Any interface configuration from the device manager is preserved.

Other settings, such as the DHCP server on inside, access control policy, or security zones, are not preserved.

### Procedure

**Step 1** Connect your computer to the inside interface (Ethernet 1/2).

**Step 2** Log into the device manager.

- Go to <https://192.168.95.1>.
- Log in with the username **admin** and the default password **Admin123**.
- You are prompted to read and accept the General Terms and change the admin password.

**Step 3** Use the setup wizard.

**Figure 1: Device Setup**

### Note

The exact port configuration depends on your model.

- Configure the outside and management interfaces.

**Figure 2: Connect firewall to internet**

### Connect firewall to Internet

The initial access control policy will enforce the following actions.  
You can edit the policy after setup.

<p><b>Rule 1</b> <b>Trust Outbound Traffic</b></p> <p>This rule allows traffic to go from inside to outside, which is needed for the Smart License configuration.</p>	<p><b>Default Action</b> <b>Block all other traffic</b></p> <p>The default action blocks all other traffic.</p>
---	---

---

### Outside Interface Address

Connect Ethernet1/1 (Outside) to your ISP/WAN device, for example, your cable modem or router. Then, configure the addresses for the outside interface.

**Configure IPv4**

Using DHCP ▼

**Configure IPv6**

Using DHCP ▼

- c) Select **Start 90 day evaluation period without registration**.

### Register with Cisco Smart Software Manager

Register with Cisco Smart Software Manager to use the full functionality of this device and to apply subscription licenses.

[What is smart license? ↗](#)

☐ **Continue with evaluation period: Start 90-day evaluation period without registration**  
Recommended if device will be cloud managed. [Learn More ↗](#)  
Please make sure you register with Cisco before the evaluation period ends.  
Otherwise you will not be able to make any changes to the device configuration.

*Do not* register the threat defense with the Smart Software Manager; all licensing is performed on the management centerCDO.

- d) Click **Finish**.

**Figure 4: What's Next**

e) Choose **Standalone Device**, and then **Got It**.

**Step 4** (Optional) Configure the Management interface with a static IP address. See the Management interface on **Device > Interfaces**.

**Step 5** If you want to configure additional interfaces, choose **Device**, and then click the link in the **Interfaces** summary.

**Step 6** Register with the management centerCDO by choosing **Device > System Settings > Central Management** and clicking **Proceed**

Configure the **Management Center/SCC/Details**.

**Note**

Older versions may show "CDO" instead of "SCC."

**Figure 5: Management Center/SCC Details****Management Center/SCC Details**

CANCEL

CONNECT

- For **Do you know the Management Center/SCC Hostname or IP address**, click **Yes** if you can reach the management center using an IP address or hostname or **No** if the management center is behind NAT or does not have a public IP address or hostname.
- If you chose **Yes**, enter the **Management Center/SCC Hostname/IP Address**.
- Specify the **Management Center/SCC Registration Key**.

This key is a one-time registration key of your choice that you will also specify on the management center when you register the firewall. The registration key must not exceed 37 characters. Valid characters include alphanumerical

characters (A–Z, a–z, 0–9) and the hyphen (-). This ID can be used for multiple firewalls registering to the management center.

d) Specify a **NAT ID**.

This ID is a unique, one-time string of your choice that you will also specify on the management center. We recommend that you specify the NAT ID even if you know the IP addresses of both devices. The NAT ID must not exceed 37 characters. Valid characters include alphanumerical characters (A–Z, a–z, 0–9) and the hyphen (-). This ID *cannot* be used for any other firewalls registering to the management center. The NAT ID is used in combination with the IP address to verify that the connection is coming from the correct device; only after authentication of the IP address/NAT ID will the registration key be checked.

**Step 7** Configure the **Connectivity Configuration**.

- a) Specify the **Threat Defense Hostname**.
- b) Specify the **DNS Server Group**.

Although you already set this: Choose an existing group, or create a new one. The default DNS group is called **CiscoUmbrellaDNSServerGroup**, which includes the OpenDNS servers.

- c) For the **Management Center/SCC Access Interface**, click **Management Interface**.

**Step 8** Click **Connect**.

The **Registration Status** dialog box shows the current status of the management centerCDO registration.

*Figure 6: Successful Connection*

- Step 9** After the **Saving Management Center/SCC Registration Settings** step on the status screen, go to the management centerCDO and add the firewall. See [Register the Firewall with the Management Center, on page 9](#).

## Initial Configuration: CLI

Set the dedicated Management IP address, gateway, and other basic networking settings using the CLI setup script.

## Procedure

**Step 1** Connect to the console port and access the threat defense CLI. See [Access the Threat Defense CLI](#).

**Step 2** Complete the CLI setup script for the Management interface settings.

### Note

You cannot repeat the CLI setup script unless you clear the configuration, for example, by reimaging. However, all of these settings can be changed later at the CLI using **configure network** commands. See [Cisco Secure Firewall Threat Defense Command Reference](#).

```
You must accept the EULA to continue.

```

You can register the sensor to a Firepower Management Center and use the Firepower Management Center to manage it. Note that registering the sensor to a Firepower Management Center disables on-sensor Firepower Services management capabilities.

When registering the sensor to a Firepower Management Center, a unique alphanumeric registration key is always required. In most cases, to register a sensor to a Firepower Management Center, you must provide the hostname or the IP address along with the registration key.

```
'configure manager add [hostname | ip address ] [registration key ]'
```

However, if the sensor and the Firepower Management Center are separated by a NAT device, you must enter a unique NAT ID, along with the unique registration key.

```
'configure manager add DONTRESOLVE [registration key ] [ NAT ID ]'
```

Later, using the web interface on the Firepower Management Center, you must use the same registration key and, if necessary, the same NAT ID when you add this sensor to the Firepower Management Center.

### Step 3 Identify the management center.

```
configure manager add {hostname | IPv4_address | IPv6_address | DONTRESOLVE} reg_key nat_id
```

- {hostname | IPv4\_address | IPv6\_address | **DONTRESOLVE**}—Specifies either the FQDN or IP address of the management center. If the management center is not directly addressable, use **DONTRESOLVE**, in which case the firewall must have a reachable IP address or hostname.
- *reg\_key*—Specifies a one-time registration key of your choice that you will also specify on the management center when you register the threat defense. The registration key must not exceed 37 characters. Valid characters include alphanumeric characters (A–Z, a–z, 0–9) and the hyphen (-).
- *nat\_id*—Specifies a unique, one-time string of your choice that you will also specify on the management center. The NAT ID must not exceed 37 characters. Valid characters include alphanumeric characters (A–Z, a–z, 0–9) and the hyphen (-). This ID cannot be used for any other devices registering to the management center.

#### Example:

```
> configure manager add fmc-1.example.com regk3y78 natid56
Manager successfully configured.
```

## Register the Firewall with the Management Center

Register the firewall to the management center.

## Procedure

- Step 1** Log into the management center.
- a) Enter the following URL.  
**`https://fmc_ip_address`**
  - b) Enter your username and password.
  - c) Click **Log In**.
- Step 2** Choose **Devices > Device Management**.
- Step 3** From the **Add** drop-down menu, choose **Device (Wizard)**.
- Step 4** Click **Registration Key**, and then click **Next**.

*Figure 7: Device Registration Method*

Cancel Add Device

- For the **Host**, enter the IP address or the hostname of the device you want to add. Leave this field blank if you don't know the device IP address (for example, it's behind NAT).
- For the **Display name**, enter a name for the device as you want it to display in the management center. You cannot change this name later.
- For the **Registration Key**, enter the same registration key from your initial configuration.
- (Optional) Add the device to a **Device group**
- For the **Unique NAT ID**, enter the same ID from your initial configuration.
- Check **Transfer Packets** so that for each intrusion event, the device transfers the packet to the management center for inspection.

For each intrusion event, the device sends event information and the packet that triggered the event to the management center for inspection. If you disable it, only event information will be sent to the management center; the packet will not be sent.

### Step 9 Click **Add Device**.

It may take up to two minutes for the management center to verify the device's heartbeat and establish communication. If the registration succeeds, the device is added to the list. If it fails, you will see an error message. If the device fails to register, check the following items:

- Ping—Access the device CLI, and ping the management center IP address using the following command:

**ping system ip\_address**

If the ping is not successful, check your network settings using the **show network** command. If you need to change the device IP address, use the **configure network {ipv4 | ipv6} manual** command.

- Registration key, NAT ID, and management center IP address—Make sure you are using the same registration key, and if used, NAT ID, on both devices. You can set the registration key and NAT ID on the device using the **configure manager add** command.

For more troubleshooting information, see <https://cisco.com/go/fmc-reg-error>.
