

Security, Internet Access, and Communication Ports

The following topics provide information on system security, internet access, and communication ports:

- [Security Requirements, on page 1](#)
- [Cisco Clouds, on page 1](#)
- [Internet Access Requirements, on page 2](#)
- [Communication Port Requirements, on page 5](#)

Security Requirements

To safeguard the Secure Firewall Management Center, you should install it on a protected internal network. Although the management center is configured to have only the necessary services and ports available, you must make sure that attacks cannot reach it (or any managed devices) from outside the firewall.

If the management center and its managed devices reside on the same network, you can connect the management interfaces on the devices to the same protected internal network as the management center. This allows you to securely control the devices from the management center. You can also configure multiple management interfaces to allow the management center to manage and isolate traffic from devices on other networks.

Regardless of how you deploy your appliances, inter-appliance communication is encrypted. However, you must still take steps to ensure that communications between appliances cannot be interrupted, blocked, or tampered with; for example, with a distributed denial of service (DDoS) or man-in-the-middle attack.

Cisco Clouds

The management center communicates with resources in the Cisco cloud for the following features:

- **Advanced Malware Protection**

The public cloud is configured by default; to make changes, see *Change AMP Options* in the [Cisco Secure Firewall Management Center Device Configuration Guide](#).

- **URL filtering**

For more information, see the *URL filtering* chapter in the [Cisco Secure Firewall Management Center Device Configuration Guide](#).

- **Integration with Security Analytics and Logging (SaaS)**

See [Remote Data Storage in Cisco Secure Cloud Analytics](#).

- **Integration with SecureX and SecureX threat response**

For details, see the integration documents linked from:

- [Integrate with Cisco SecureX](#)
- [Event Analysis with SecureX Threat Response](#)

- **The proactive support feature**

For information, see [Configure Cisco Support Diagnostics Enrollment](#).

- **Cisco Success Network**

For information, see [Configure Cisco Success Network Enrollment](#).

- **Cisco Umbrella Connection**

For information, see *DNS Policies* in the [Cisco Secure Firewall Management Center Device Configuration Guide](#).

Internet Access Requirements

By default, the system is configured to connect to the internet on ports 443/tcp (HTTPS) and 80/tcp (HTTP). If you do not want your appliances to have direct access to the internet, you can configure a proxy server. For many features, your location can determine which resources the system access.

In most cases, it is the management center that accesses the internet. Both management centers in a high availability pair should have internet access. Depending on the feature, sometimes both peers access the internet, and sometimes only the active peer does.

Sometimes, managed devices also access the internet. For example, if your malware protection configuration uses dynamic analysis, managed devices submit files directly to the Secure Malware Analytics cloud. Or, you may synchronize a device to an external NTP server.

Additionally, unless you disable web analytics tracking, your browser may contact Google (google.com) or Amplitude (amplitude.com) web analytics servers to provide non-personally-identifiable usage data to Cisco.

Table 1: Internet Access Requirements

Feature	Reason	Management Center High Availability	Resource
Malware defense	Malware cloud lookups.	Both peers perform lookups.	See Required Server Addresses for Proper Cisco Secure Endpoint & Malware Analytics Operations .
	Download signature updates for file preclassification and local malware analysis.	Active peer downloads, syncs to standby.	updates.vrt.sourcefire.com amp.updates.vrt.sourcefire.com
	Submit files for dynamic analysis (managed devices). Query for dynamic analysis results (management center).	Both peers query for dynamic analysis reports.	fmc.api.threatgrid.com fmc.api.threatgrid.eu
AMP for Endpoints	Receive malware events detected by AMP for Endpoints from the AMP cloud. Display malware events detected by the system in AMP for Endpoints. Use centralized file Block and Allow lists created in AMP for Endpoints to override dispositions from the AMP cloud.	Both peers receive events. You must also configure the cloud connection on both peers (configuration is not synced).	See Required Server Addresses for Proper Cisco Secure Endpoint & Malware Analytics Operations .
Security intelligence	Download security intelligence feeds.	Active peer downloads, syncs to standby.	intelligence.sourcefire.com

Feature	Reason	Management Center High Availability	Resource
URL filtering	<p>Download URL category and reputation data.</p> <p>Manually query (look up) URL category and reputation data.</p> <p>Query for uncategorized URLs.</p>	Active peer downloads, syncs to standby.	<p>URLs:</p> <ul style="list-style-type: none"> • regsvc.sco.cisco.com • est.sco.cisco.com • updates-talos.sco.cisco.com • updates.ironport.com <p>IPv4 blocks:</p> <ul style="list-style-type: none"> • 146.112.62.0/24 • 146.112.63.0/24 • 146.112.255.0/24 • 146.112.59.0/24 <p>IPv6 blocks:</p> <ul style="list-style-type: none"> • 2a04:e4c7:ffff::/48 • 2a04:e4c7:fffe::/48
Cisco Smart Licensing	Communicate with the Cisco Smart Software Manager.	Active peer communicates.	tools.cisco.com:443 www.cisco.com
Cisco Success Network	Transmit usage information and statistics.	Active peer communicates.	api-sse.cisco.com:8989 dex.sse.itd.cisco.com dex.eu.sse.itd.cisco.com
Cisco Support Diagnostics	Accepts authorized requests and transmits usage information and statistics.	Active peer communicates.	api-sse.cisco.com:8989
System updates	<p>Download updates <i>directly</i> from Cisco to the management center:</p> <ul style="list-style-type: none"> • System software • Intrusion rules • Vulnerability database (VDB) • Geolocation database (GeoDB) 	<p>Update intrusion rules, the VDB, and the GeoDB on the active peer, which then syncs to the standby.</p> <p>Upgrade the system software independently on each peer.</p>	cisco.com sourcefire.com
SecureX threat response integration	See the appropriate integration guide .		

Feature	Reason	Management Center High Availability	Resource
Time synchronization	Synchronize time in your deployment. Not supported with a proxy server.	Any appliance using an external NTP server must have internet access.	0.sourcefire.pool.ntp.org 1.sourcefire.pool.ntp.org 2.sourcefire.pool.ntp.org 3.sourcefire.pool.ntp.org
RSS feeds	Display the Cisco Threat Research Blog on the dashboard.	Any appliance displaying RSS feeds must have internet access.	blog.talosintelligence.com blogs.cisco.com feeds.feedburner.com
Whois	Request whois information for an external host. Not supported with a proxy server.	Any appliance requesting whois information must have internet access.	The whois client tries to guess the right server to query. If it cannot guess, it uses: <ul style="list-style-type: none"> • NIC handles: whois.networksolutions.com • IPv4 addresses and network names: whois.arin.net

Communication Port Requirements

The management center communicates with managed devices using a two-way, SSL-encrypted communication channel on port 8305/tcp. This port *must* remain open for basic communication.

Other ports allow secure management, as well as access to external resources required by specific features. In general, feature-related ports remain closed until you enable or configure the associated feature. *Do not* change or close an open port until you understand how this action will affect your deployment.

Table 2: Communication Port Requirements

Port	Protocol/Feature	Platforms	Direction	Details
22/tcp	SSH	Management Center Threat Defense	Inbound	Secure remote connections to the appliance.
53/tcp 53/udp	DNS		Outbound	DNS
67/udp 68/udp	DHCP		Outbound	DHCP
123/udp	NTP		Outbound	Synchronize time.

Port	Protocol/Feature	Platforms	Direction	Details
161/udp	SNMP	Management Center Threat Defense	Inbound	Allow access to MIBs via SNMP polling.
162/udp	SNMP		Outbound	Send SNMP alerts to a remote trap server.
389/tcp 636/tcp	LDAP		Outbound	Communicate with an LDAP server for external authentication. Obtain metadata for detected LDAP users (Management Center only). Configurable.
443/tcp	HTTPS	Management Center	Inbound	Access the web interface.
443/tcp	Remote access VPN (SSL/IPSec)	Threat Defense	Inbound	Allow secure VPN connections to your network from remote users.
500/udp 4500/udp	Remote access VPN (IKEv2)	Threat Defense	Inbound	Allow secure VPN connections to your network from remote users.
443/tcp	HTTPS	Management Center Threat Defense	Inbound	Communicate with integrated and third-party products using the Firepower REST API, including Cisco Terminal Services (TS) Agent.
443/tcp	HTTPS		Outbound	Send and receive data from the internet. For details, see Internet Access Requirements, on page 2 .
443	HTTPS	Management Center	both	Integrate with AMP for Endpoints
514/udp	Syslog (alerts)		Outbound	Send alerts to a remote syslog server.
623/udp	SOL/LOM	Management Center	Inbound	Lights-Out Management (LOM) using a Serial Over LAN (SOL) connection.
885/tcp	Captive portal	Threat Defense	Inbound	Communicate with a captive portal identity source.
1500/tcp 2000/tcp	Database access	Management Center	Inbound	Allow read-only access to the event database by a third-party client.
1812/udp 1813/udp	RADIUS		Outbound	Communicate with a RADIUS server for external authentication and accounting. Configurable.
8302/tcp	eStreamer	Management Center	Inbound	Communicate with an eStreamer client.

Port	Protocol/Feature	Platforms	Direction	Details
8305/tcp	Appliance communications		Both	Securely communicate between appliances in a deployment. Configurable. If you change this port, you must change it for <i>all</i> appliances in the deployment. We recommend you keep the default.
8307/tcp	Host input client	Management Center	Inbound	Communicate with a host input client.
8989/tcp	Cisco Support Diagnostics		Both	Accepts authorized requests and transmits usage information and statistics.
