

Snapshots

A snapshot is a capture of the critical internal state of your Cisco appliance at a specific point in time. It acts like a virtual picture of the appliance, with information such as the appliance configuration, logs, network status, and other relevant data.

Why are Snapshots important?

- **Detailed Diagnostics:** They provide a wealth of information that customer support can analyze to pinpoint the root cause of an issue. This data might include:
 - System logs: Recording events, errors, and configuration changes.
 - Network status: Showing active connections, traffic flow, and any network-related issues.
 - Version history: Highlighting recent software or firmware updates that might be relevant.
 - System state: Capturing the configuration, processes, and resources active at the time of the snapshot.
- **Time Savings:** Analyzing a snapshot is often faster than remotely logging into the appliance and manually gathering information. This means quicker resolution to your problem.
- **Reproducibility:** If the issue reoccurs, the snapshot allows customer support to recreate the exact appliance state for further investigation.

When are Snapshots Requested?

Customer support might request a snapshot when you open a ticket with an appliance issue, especially if the description is vague or the problem is intermittent. It is particularly helpful for:

- **Unusual behavior:** Snapshots capture the state during the anomaly, giving support crucial clues.
- **Performance issues:** Analyzing resource usage and network statistics within the snapshot helps identify bottlenecks or configuration problems.
- **Software or firmware updates:** Snapshots allow support to assess the impact of recent updates on your appliance.

Creating Snapshots

The process to create a Snapshot is as follows:

Step 1 In Admin TUI, select **Snapshot**.

Figure 1: Snapshots

```

Cisco Secure Malware Analytics - Appliance Administration
Your Malware Analytics appliance can be managed at:
Admin URL / MAC:
Application URL / MAC:
Password: *** set by user ***

(n) Network
    Configure the system's network interfaces
(r) Support Mode
    Allow remote access by customer support
(u) Updates
    Download and optionally install updates
(s) Snapshots
    Generate and submit snapshots
(a) Apply
    Apply configuration
(c) Console
    CLI-based configuration access
(e) Exit
    Exit the management tool
  
```

Step 2 Select **Create** option and this generates the Snapshot. Now, you would be able to download the Snapshot from the Admin UI as per the process documented. For more information, see [Support Snapshots](#).

Figure 2: Create Snapshots

```

Cisco Secure Malware Analytics - Appliance Administration
Your Malware Analytics appliance can be managed at:
Admin URL / MAC:
Application URL / MAC:
Password: *** set by user ***

Snapshots
Latest snapshot: none

(c) Create
    Create Support Snapshot
(b) Back
    Back to main menu
  
```

The snapshot creation might take some time depending on the size and complexity of your appliance.
