

Preface

This document explains how to install Cisco Security Management Suite (Security Manager) in a high availability (HA) or disaster recovery (DR) environment. The Security Manager HA/DR solution is based on Veritas Storage Foundation and High Availability solutions.

For the steps to install Security Manager in a VMware based high availability (HA) or disaster recovery (DR) environment, see [High Availability and Disaster Recovery in Virtual Machines](#).

Audience

The primary audience for this guide is system administrators who are responsible for installing and managing the HA/DR solutions. This guide assumes that you are familiar with the topics in [Table 1](#).

Table 1 *Topics in this Guide*

Configuration	Topics
Local Redundancy	<ul style="list-style-type: none"> • Cisco Security Management Suite • Microsoft Windows Server 2012, Standard and Datacenter Edition, or Microsoft Windows Server 2012 R2, Standard and Datacenter Edition • Veritas Storage Foundation HA for Windows 6.0.1, 6.0.2 or 6.1
Geographic Redundancy	<ul style="list-style-type: none"> • Cisco Security Management Suite • Microsoft Windows Server 2012, Standard and Datacenter Edition, or Microsoft Windows Server 2012 R2, Standard and Datacenter Edition • Veritas Storage Foundation HA/DR for Windows 6.0.1, 6.0.2, or 6.1 • Veritas Volume Replicator Option
Geographic Redundancy without Clustering	<ul style="list-style-type: none"> • Cisco Security Management Suite • Microsoft Windows Server 2012, Standard and Datacenter Edition, or Microsoft Windows Server 2012 R2, Standard and Datacenter Edition • Veritas Storage Foundation Basic for Windows 6.0.1, 6.0.2, or 6.1 • Veritas Volume Replicator Option

Because the Security Manager HA/DR solution utilizes Veritas Storage Foundation and High Availability Solutions for Windows, we highly recommend the following Symantec courses for a local redundancy solution:

- Veritas Storage Foundation for Windows
- Veritas Cluster Server for Windows

For a geographically redundant solution, the following additional courses are highly recommended:

- Veritas Volume Replicator for Windows
- Disaster Recovery Using Veritas Volume Replicator and Global Cluster Option for Windows

For more information, please refer to the Symantec website.

Conventions

This document uses the following conventions:

Item	Convention
Commands, keywords, special terminology, and options that should be selected during procedures	boldface font
Variables for which you supply values and new or important terminology	<i>italic font</i>
Displayed session and system information, paths and file names	screen font
Information you enter	boldface screen font
Variables you enter	<i>italic screen font</i>
Menu items and button names	boldface font
Indicates menu items to select, in the order you select them.	Option > Network Preferences

Tip

Identifies information to help you get the most benefit from your product.

Note

Means *reader take note*. Notes identify important information that you should reflect upon before continuing, contain helpful suggestions, or provide references to materials not contained in the document.

Caution

Means *reader be careful*. In this situation, you might do something that could result in equipment damage, loss of data, or a potential breach in your network security.

Warning

Identifies information that you must heed to prevent damaging yourself, the state of software, or equipment. Warnings identify definite security breaches that will result if the information presented is not followed carefully.
