How to Get Started with Security Manager

To set up and get started with Security Manager, we recommend the following:

- **Plan your installation.**

To learn which applications are available for installation and to plan your installation, see the “Overview” chapter in the [Installation Guide for Cisco Security Manager](#).

- **Get an overview of Cisco Security Manager.**

For a general product overview, see the “Product Overview” chapter in the [User Guide for Cisco Security Manager](#).

Note: For an interactive overview of Security Manager features, see the interactive JumpStart tutorial that opens when you start Security Manager for the first time. You can also access the JumpStart tutorial by choosing **Help > JumpStart**.

- **Review Getting Started checklist.**

To get up and running most efficiently, see the “Getting Started with Security Manager” chapter in the [User Guide for Cisco Security Manager](#).

■ **Define essential settings.**

Use Security Manager to define many application-wide settings that customize your working environment, such as deployment method. See “Completing the Initial Security Manager Configuration” in the [User Guide for Cisco Security Manager](#).

■ **Manage user authentication and authorization.**

— To define user roles and permissions, see the “Managing User Accounts” chapter in the [Installation Guide for Cisco Security Manager](#).

— To integrate Security Manager with Cisco Secure ACS, see the “Managing User Accounts” chapter in the [Installation Guide for Cisco Security Manager](#).

■ **Bootstrap your devices.**

To enable communication between Security Manager and devices, you must configure transport settings on the devices before you add them to the inventory. See the “Preparing Devices for Management” chapter in the [User Guide for Cisco Security Manager](#).
