The Cisco Enterprise L3 Virtualization Design and Implementation Guide is part of a set of resources that comprise the Cisco EPN System documentation suite. The resources include:

- [EPN 3.0 System Concept Guide](#): Provides general information about Cisco's EPN 3.0 System architecture, its components, service models, and the functional considerations, with specific focus on the benefits it provides to operators.
- [EPN 3.0 System Brochure](#): At-a-glance brochure of the Cisco Evolved Programmable Network (EPN).
- [EPN 3.0 MEF Services Design and Implementation Guide](#): Design and implementation guide with configurations for deploying the Metro Ethernet Forum service transport models and use cases supported by the Cisco EPN System concept.
- [EPN 3.0 Transport Infrastructure Design and Implementation Guide](#): Design and implementation guide with configurations for the transport models and cross-service functional components supported by the Cisco EPN System concept.
- [EPN 3.0 Mobile Transport Services Design and Implementation Guide](#): Design and implementation guide with configurations for deploying the mobile backhaul service transport models and use cases supported by the Cisco EPN System concept.
- [EPN 3.0 Residential Services Design and Implementation Guide](#): Design and implementation guide with configurations for deploying the consumer service models and the unified experience use cases supported by the Cisco EPN System concept.
- [EPN 3.0 Enterprise Services Design and Implementation Guide](#): Design and implementation guide with configurations for deploying the enterprise L3VPN service models over any access and the personalized use cases supported by the Cisco EPN System concept.
