

Cisco Patient Connect Screen Casting QuickStart Guide

Software Release 1.4
December 18, 2015

Note

The audience for this guide is **Care Team Staff**.

Screen Casting

This document explains how you can screen cast your Android tablet or phone to the TV in the patient's room. You can then share the patient's Electronic Medical Record (EMR), images, documents, web pages, etc. with the patient and annotate the screen.

Note

Rather than screen casting videos from the tablet/phone, it is best to play a video from the Video Library of the Patient view app.

To screen cast to the Patient view app, you must have the following:

- Android version 5.0 or later device
- Cisco Patient Connect Screen Sharing app downloaded to the device
- Care team view user credentials

-
- Step 1** On the Android device, press the **Screen Sharing** app icon.
- Step 2** Enter your credentials, and then press the **Sign In** button.
- Step 3** Your location (i.e. room-bed number) and the patient name in that location are displayed. If the information is not correct, click the **Change Patient** button and enter the correct room-bed number.
- Step 4** (Optional) Check the **Wait for Patient Acceptance** check box if you want to give the patient the option to accept or reject screen sharing. Leave the box unchecked if you want to force screen sharing.
- Step 5** Press the **Start Screen Sharing** button. A pop-up will appear on the TV indicating a countdown to screen sharing. Then your tablet/phone screen will appear on the TV.
- Step 6** When finished sharing, click the **Stop Screen Sharing** button on the Screen Sharing app.
-
