

Using the Cisco NX-OS Setup Utility

This chapter describes how to use the Cisco NX-OS setup utility.

- [Information About the Cisco NX-OS Setup Utility, on page 1](#)
- [Prerequisites for the Setup Utility, on page 3](#)
- [Initial Setup Routine, on page 3](#)
- [Where to Go Next, on page 15](#)

Information About the Cisco NX-OS Setup Utility

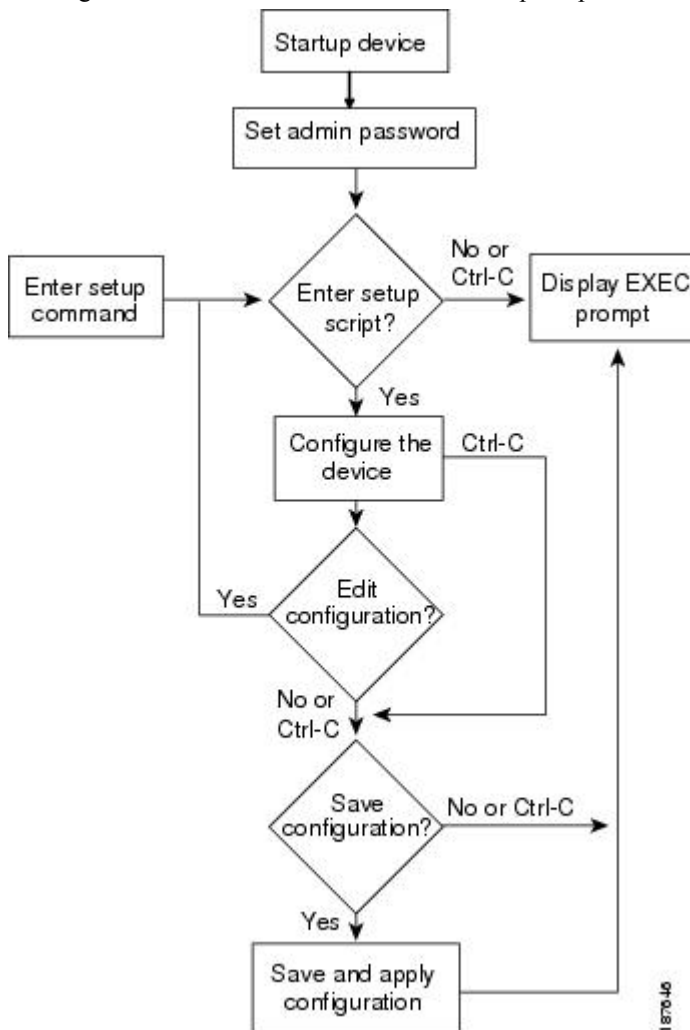

The Cisco NX-OS setup utility is an interactive command-line interface (CLI) mode that guides you through a basic (also called a startup) configuration of the system. The setup utility allows you to configure only enough connectivity for system management.

The setup utility allows you to build an initial configuration file using the System Configuration Dialog. The setup starts automatically when a device has no configuration file in NVRAM. The dialog guides you through initial configuration. After the file is created, you can use the CLI to perform additional configuration.

You can press **Ctrl-C** at any prompt to skip the remaining configuration options and proceed with what you have configured up to that point, except for the administrator password. If you want to skip answers to any questions, press **Enter**. If a default answer is not available (for example, the device hostname), the device uses what was previously configured and skips to the next question.

Figure 1: Setup Script Flow

This figure shows how to enter and exit the setup script.

You use the setup utility mainly for configuring the system initially, when no configuration is present. However, you can use the setup utility at any time for basic device configuration. The setup utility keeps the configured values when you skip steps in the script. For example, if you have already configured the mgmt0 interface, the setup utility does not change that configuration if you skip that step. However, if there is a default value for the step, the setup utility changes to the configuration using that default, not the configured value. Be sure to carefully check the configuration changes before you save the configuration.

Note Be sure to configure the IPv4 route, the default network IPv4 address, and the default gateway IPv4 address to enable SNMP access. If you enable IPv4 routing, the device uses the IPv4 route and the default network IPv4 address. If IPv4 routing is disabled, the device uses the default gateway IPv4 address.

Note The setup script only supports IPv4.

Prerequisites for the Setup Utility

The setup utility has the following prerequisites:

- Have a password strategy for your network environment.
- Connect the console port on the supervisor module to the network. If you have dual supervisor modules, connect the console ports on both supervisor modules to the network.
- Connect the Ethernet management port on the supervisor module to the network. If you have dual supervisor modules, connect the Ethernet management ports on both supervisor modules to the network.
- Enable the licensing grace period, if applicable. For detailed information about licensing, see the .

Initial Setup Routine

The first time that you access a switch in the Cisco MDS 9000 Family, it runs a setup program that prompts you for the IP address and other configuration information necessary for the switch to communicate over the supervisor module Ethernet interface. This information is required to configure and manage the switch.

The IP address can only be configured from the CLI. When you power up the switch for the first time assign the IP address. After you perform this step, the Cisco MDS 9000 Family Fabric Manager can reach the switch through the console port.

Configuring Out-of-Band Management

You can configure out-of-band management on the mgmt 0 interface.

Note You can configure both in-band and out-of-band configuration together by entering **Yes** in both Step 12c and Step 12d in the following procedure.

Step 1 Power on the switch. Switches in the Cisco MDS 9000 Family boot automatically.

Step 2 Enter **yes** (**yes** is the default) to enable secure password standard.

```
Do you want to enforce secure password standard (yes/no): yes
```

Note You can also enable secure password standard using the **password strength-check** command. A secure password should contain characters from at least three of the classes: lower case letters, upper case letters, digits, and special characters.

Step 3 Enter the new password for the administrator.

Enter the password for admin: *admin-password*

Confirm the password for admin: *admin-password*

Tip If a password is trivial (short, easy-to-decipher), your password configuration is rejected. Be sure to configure a strong password as shown in the sample configuration. Passwords are case-sensitive.

Step 4 Enter **yes** to enter the setup mode.

This setup utility will guide you through the basic configuration of the system. Setup configures only enough connectivity for management of the system.

*Note: setup is mainly used for configuring the system initially, when no configuration is present. So setup always assumes system defaults and not the current system configuration values.

Press Enter at anytime to skip a dialog. Use ctrl-c at anytime to skip the remaining dialogs.

Would you like to enter the basic configuration dialog (yes/no): **yes**

The setup utility guides you through the basic configuration process. Press **Ctrl-C** at any prompt to end the configuration process.

Step 5 Enter **yes** (**no** is the default) if you do not wish to create additional accounts.

Create another login account (yes/no) [no]: **yes**

While configuring your initial setup, you can create an additional user account (in the network-admin role) besides the administrator's account.

Note User login IDs must contain non-numeric characters.

a) Enter the user login ID.

Enter the user login ID: *user_name*

b) Enter and confirm the user password.

Enter the password for *user_name*: *user-password*

Confirm the password for *user_name*: *user-password*

c) Assign the user role **network-admin** (**network-operator** is the default).

Enter the user role [network-operator]: **network-admin**

Step 6 Configure the read-only or read-write SNMP community string.

- a) Enter **yes** (**no** is the default) to avoid configuring the read-only SNMP community string.

```
Configure read-only SNMP community string (yes/no) [n]: yes
```

- b) Enter the SNMP community string.

```
SNMP community string: snmp_community
```

Step 7 Enter a name for the switch.

Note The switch name is limited to 32 alphanumeric characters. The default is **switch**.

```
Enter the switch name: switch_name
```

Step 8 Enter **yes** (**yes** is the default) at the configuration prompt to configure out-of-band management.

```
Continue with Out-of-band (mgmt0) management configuration? [yes/no]: yes
```

- a) Enter the mgmt0 IPv4 address.

```
Mgmt0 IPv4 address: ip_address
```

- b) Enter the mgmt0 IPv4 subnet mask.

```
Mgmt0 IPv4 netmask: subnet_mask
```

Step 9 Enter **yes** (**yes** is the default) to configure the default gateway.

```
Configure the default-gateway: (yes/no) [y]: yes
```

- a) Enter the default gateway IP address.

```
IP address of the default gateway: default_gateway
```

Step 10 Enter **yes** (**no** is the default) to configure advanced IP options such as in-band management, static routes, default network, DNS, and domain name.

```
Configure Advanced IP options (yes/no)? [n]: yes
```

- a) Enter **no** (**no** is the default) at the in-band management configuration prompt.

```
Continue with in-band (VSAN1) management configuration? (yes/no) [no]: no
```

- b) Enter **yes** (**yes** is the default) to enable IPv4 routing capabilities.

Enable ip routing capabilities? (yes/no) [y]: **yes**

- c) Enter **yes** (**yes** is the default) to configure a static route.

Configure static route: (yes/no) [y]: **yes**

Enter the destination prefix.

Destination prefix: *dest_prefix*

Enter the destination prefix mask.

Destination prefix mask: *dest_mask*

Enter the next hop IP address.

Next hop ip address: *next_hop_address*

Note Be sure to configure the IP route, the default network IP address, and the default gateway IP address to enable SNMP access. If IP routing is enabled, the switch uses the IP route and the default network IP address. If IP routing is disabled, the switch uses the default gateway IP address.

- d) Enter **yes** (**yes** is the default) to configure the default network.

Configure the default-network: (yes/no) [y]: **yes**

Enter the default network IPv4 address.

Note The default network IPv4 address is the destination prefix provided in Step 10c.

Default network IP address [dest_prefix]: *dest_prefix*

- e) Enter **yes** (**yes** is the default) to configure the DNS IPv4 address.

Configure the DNS IP address? (yes/no) [y]: **yes**

Enter the DNS IP address.

DNS IP address: *name_server*

- f) Enter **yes** (**no** is the default) to skip the default domain name configuration.

Configure the default domain name? (yes/no) [n]: **yes**

Enter the default domain name.

Default domain name: *domain_name*

Step 11 Enter **yes** (**yes** is the default) to enable the SSH service.

Enabled SSH service? (yes/no) [n]: **yes**

Enter the SSH key type.

Type the SSH key you would like to generate (dsa/rsa)? **rsa**

Enter the number of key bits within the specified range.

Enter the number of key bits? (768-2048) [1024]: **2048**

Step 12 Enter **yes** (**no** is the default) to disable the Telnet service.

Enable the telnet service? (yes/no) [n]: **yes**

Step 13 Enter **yes** (**yes** is the default) to configure congestion or no_credit drop for FC interfaces.

Configure congestion or no_credit drop for fc interfaces? (yes/no) [q/quit] to quit [y]:**yes**

Step 14 Enter **con**(**con** is the default) to configure congestion or no_credit drop.

Enter the type of drop to configure congestion/no_credit drop? (con/no) [c]:**con**

Step 15 Enter a value from 100 to 1000 (**d** is the default) to calculate the number of milliseconds for congestion or no_credit drop.

Enter number of milliseconds for congestion/no_credit drop[100 - 1000] or [d/default] for default:**100**

Step 16 Enter a mode for congestion or no_credit drop.

Enter mode for congestion/no_credit drop[E/F]:

Step 17 Enter **yes** (**no** is the default) to configure the NTP server.

Configure NTP server? (yes/no) [n]: **yes**

Enter the NTP server IPv4 address.

NTP server IP address: *ntp_server_IP_address*

Step 18 Enter **shut** (**shut** is the default) to configure the default switch port interface to the shut (disabled) state.

Configure default switchport interface state (shut/noshut) [shut]: **shut**

Note The management Ethernet interface is not shut down at this point. Only the Fibre Channel, iSCSI, FCIP, and Gigabit Ethernet interfaces are shut down.

Step 19 Enter **on** (**off** is the default) to configure the switch port trunk mode.

```
Configure default switchport trunk mode (on/off/auto) [off]: on
```

Step 20 Enter **yes** (**yes** is the default) to configure the switchport mode F.

```
Configure default switchport mode F (yes/no) [n]: y
```

Step 21 Enter **on** (**off** is the default) to configure the PortChannel auto-create state.

```
Configure default port-channel auto-create state (on/off) [off]: on
```

Step 22 Enter **permit** (**deny** is the default) to deny a default zone policy configuration.

```
Configure default zone policy (permit/deny) [deny]: permit
```

Permits traffic flow to all members of the default zone.

Note If you are executing the setup script after issuing a **write erase** command, you must explicitly change the default zone policy to permit for VSAN 1 after finishing the script using the following commands:

```
switch# configure terminal  
switch(config)# zone default-zone permit vsan 1
```

Step 23 Enter **yes** (**no** is the default) to disable a full zone set distribution.

```
Enable full zoneset distribution (yes/no) [n]: yes
```

Overrides the switch-wide default for the full zone set distribution feature.

You see the new configuration. Review and edit the configuration that you have just entered.

Note If you are executing the setup script after issuing a **write erase** command, you must explicitly change the default zone policy to permit for VSAN 1 after finishing the script using the following commands:

```
switch# configure terminal  
switch(config)# zoneset distribute full vsan 1
```

Step 24 Enter **enhanced** (**basic** is the default) to configure default-zone mode as enhanced.

```
Configure default zone mode (basic/enhanced) [basic]: enhanced
```

Overrides the switch-wide default zone mode as enhanced.

Note If you are executing the setup script after issuing a **write erase** command, you must explicitly change the default zoning mode to enhanced for VSAN 1 after finishing the script using the following commands:

```
switch# configure terminal
switch(config)# zone mode enhanced vsan 1
```

Step 25 Enter **no** (**no** is the default) if you are satisfied with the configuration.

The following configuration will be applied:

```
username admin password admin_pass role network-admin
username user_name password user_pass role network-admin
snmp-server community snmp_community ro
switchname switch
interface mgmt0
  ip address ip_address subnet_mask
  no shutdown
ip routing
ip route dest_prefix dest_mask dest_address
ip default-network dest_prefix
ip default-gateway default_gateway
ip name-server name_server
ip domain-name domain_name
telnet server disable
ssh key rsa 2048 force
ssh server enable
ntp server ipaddr ntp_server
system default switchport shutdown
system default switchport trunk mode on
system default switchport mode F
system default port-channel auto-create
zone default-zone permit vsan 1-4093
zoneset distribute full vsan 1-4093
system default zone mode enhanced
Would you like to edit the configuration? (yes/no) [n]: n
```

Step 26 Enter **yes** (**yes** is default) to use and save this configuration.

```
Use this configuration and save it? (yes/no) [y]: yes
```

Caution If you do not save the configuration at this point, none of your changes are updated the next time the switch is rebooted. Type **yes** to save the new configuration. This ensures that the kickstart and system images are also automatically configured.

Configuring In-Band Management

The in-band management logical interface is VSAN 1. This management interface uses the Fibre Channel infrastructure to transport IP traffic. An interface for VSAN 1 is created on every switch in the fabric. Each switch should have its VSAN 1 interface configured with either an IPv4 address or an IPv6 address in the same subnetwork. A default route that points to the switch providing access to the IP network should be configured on every switch in the Fibre Channel fabric.

Note You can configure both in-band and out-of-band configuration together by entering **Yes** in both Step 10c and Step 10d in the following procedure.

SUMMARY STEPS

1. Power on the switch. Switches in the Cisco MDS 9000 Family boot automatically.
2. Enter the new password for the administrator.
3. Enter **yes** to enter the setup mode.
4. Enter **yes** (yes is the default) to enable secure password standard
5. Enter **no** (no is the default) if you do not wish to create additional accounts.
6. Configure the read-only or read-write SNMP community string.
7. Enter a name for the switch.
8. Enter **no** (yes is the default) at the configuration prompt to configure out-of-band management.
9. Enter **yes** (yes is the default) to configure the default gateway.
10. Enter **yes** (**no** is the default) to configure advanced IP options such as in-band management, static routes, default network, DNS, and domain name.
11. Enter **no** (**no** is the default) to disable the Telnet service.
12. Enter **yes** (**yes** is the default) to enable the SSH service.
13. Enter the SSH key type.
14. Enter the number of key bits within the specified range.
15. Enter **no** (**no** is the default) to configure the NTP server.
16. Enter **shut** (**shut** is the default) to configure the default switch port interface to the shut (disabled) state.
17. Enter **auto** (**off** is the default) to configure the switch port trunk mode.
18. Enter **yes** (**yes** is the default) to configure the switchport mode F.
19. Enter **off** (**off** is the default) to configure the PortChannel auto-create state.
20. Enter **deny** (**deny** is the default) to deny a default zone policy configuration.
21. Enter **no** (**no** is the default) to disable a full zone set distribution.
22. Enter **enhanced** (**basic** is the default) to configure default-zone mode as enhanced.
23. Enter **no** (**no** is the default) if you are satisfied with the configuration.
24. Enter **yes** (**yes** is default) to use and save this configuration.

DETAILED STEPS

Step 1 Power on the switch. Switches in the Cisco MDS 9000 Family boot automatically.

Step 2 Enter the new password for the administrator.

Enter the password for admin: **2004asdf*1kjh18**

Tip If a password is trivial (short, easy-to-decipher), your password configuration is rejected. Be sure to configure a strong password as shown in the sample configuration. Passwords are case-sensitive.

Step 3 Enter **yes** to enter the setup mode.

This setup utility will guide you through the basic configuration of the system. Setup configures only enough connectivity for management of the system.

*Note: setup is mainly used for configuring the system initially, when no configuration is present. So setup always assumes system defaults and not the current system configuration values.

Press Enter at anytime to skip a dialog. Use ctrl-c at anytime to skip the remaining dialogs.

Would you like to enter the basic configuration dialog (yes/no): **yes**

The setup utility guides you through the basic configuration process. Press **Ctrl-C** at any prompt to end the configuration process.

Step 4 Enter **yes** (yes is the default) to enable secure password standard

Do you want to enforce secure password standard (yes/no): **yes**

Note You can also enable secure password standard using the **password strength-check** command. A secure password should contain characters from at least three of the classes: lower case letters, upper case letters, digits, and special characters.

Step 5 Enter **no** (no is the default) if you do not wish to create additional accounts.

Create another login account (yes/no) [no]: **no**

Step 6 Configure the read-only or read-write SNMP community string.

a) Enter **no** (no is the default) to avoid configuring the read-only SNMP community string.

Configure read-only SNMP community string (yes/no) [n]: **no**

b) Enter **yes** (no is the default) to avoid configuring the read-write SNMP community string.

Configure read-write SNMP community string (yes/no) [n]: **yes**

c) Enter the SNMP community string.

SNMP community string: *snmp_community*

Step 7 Enter a name for the switch.

Note The switch name is limited to 32 alphanumeric characters. The default is **switch**.

Enter the switch name: *switch_name*

Step 8 Enter **no** (yes is the default) at the configuration prompt to configure out-of-band management.

```
Continue with Out-of-band (mgmt0) management configuration? [yes/no]: no
```

Step 9 Enter **yes** (yes is the default) to configure the default gateway.

```
Configure the default-gateway: (yes/no) [y]: yes
```

a) Enter the default gateway IP address.

```
IP address of the default gateway: default_gateway
```

Step 10 Enter **yes** (**no** is the default) to configure advanced IP options such as in-band management, static routes, default network, DNS, and domain name.

```
Configure Advanced IP options (yes/no)? [n]: yes
```

a) Enter **yes** (**no** is the default) at the in-band management configuration prompt.

```
Continue with in-band (VSAN1) management configuration? (yes/no) [no]: yes
```

Enter the VSAN 1 IPv4 address.

```
VSAN1 IPv4 address: ip_address
```

Enter the IPv4 subnet mask.

```
VSAN1 IPv4 net mask: subnet_mask
```

b) Enter **no** (**yes** is the default) to enable IPv4 routing capabilities.

```
Enable ip routing capabilities? (yes/no) [y]: no
```

c) Enter **no** (**yes** is the default) to configure a static route.

```
Configure static route: (yes/no) [y]: no
```

d) Enter **no** (**yes** is the default) to configure the default network

```
Configure the default-network: (yes/no) [y]: no
```

e) Enter **no** (**yes** is the default) to configure the DNS IPv4 address.

```
Configure the DNS IP address? (yes/no) [y]: no
```

f) Enter **no** (**no** is the default) to skip the default domain name configuration.

```
Configure the default domain name? (yes/no) [n]: no
```

Step 11 Enter **no** (**no** is the default) to disable the Telnet service.

```
Enable the telnet service? (yes/no) [y]: no
```

Step 12 Enter **yes** (**yes** is the default) to enable the SSH service.

```
Enabled SSH service? (yes/no) [n]: yes
```

Step 13 Enter the SSH key type.

```
Type the SSH key you would like to generate (dsa/rsa)? rsa
```

Step 14 Enter the number of key bits within the specified range.

```
Enter the number of key bits? (768 to 2048): 2048
```

Step 15 Enter **no** (**no** is the default) to configure the NTP server.

```
Configure NTP server? (yes/no) [n]: no
```

Step 16 Enter **shut** (**shut** is the default) to configure the default switch port interface to the shut (disabled) state.

```
Configure default switchport interface state (shut/noshut) [shut]: shut
```

Note The management Ethernet interface is not shut down at this point. Only the Fibre Channel, iSCSI, FCIP, and Gigabit Ethernet interfaces are shut down.

Step 17 Enter **auto** (**off** is the default) to configure the switch port trunk mode.

```
Configure default switchport trunk mode (on/off/auto) [off]: auto
```

Step 18 Enter **yes** (**yes** is the default) to configure the switchport mode F.

```
Configure default switchport mode F (yes/no) [n]: y
```

Step 19 Enter **off** (**off** is the default) to configure the PortChannel auto-create state.

```
Configure default port-channel auto-create state (on/off) [off]: off
```

Step 20 Enter **deny** (**deny** is the default) to deny a default zone policy configuration.

```
Configure default zone policy (permit/deny) [deny]: deny
```

Denies traffic flow to all members of the default zone.

Note If you are executing the setup script after issuing a **write erase** command, you must explicitly change the default zone policy to permit for VSAN 1 after finishing the script using the following commands:

```
switch# configure terminal
switch(config)# zone default-zone permit vsan 1
```

Step 21 Enter **no** (**no** is the default) to disable a full zone set distribution.

```
Enable full zoneset distribution (yes/no) [n]: no
```

Disables the switch-wide default for the full zone set distribution feature.

You see the new configuration. Review and edit the configuration that you have just entered.

Note If you are executing the setup script after issuing a **write erase** command, you must explicitly change the default zone policy to permit for VSAN 1 after finishing the script using the following commands:

```
switch# configure terminal
switch(config)# zoneset distribute full vsan 1
```

Step 22 Enter **enhanced** (**basic** is the default) to configure default-zone mode as enhanced.

```
Configure default zone mode (basic/enhanced) [basic]: enhanced
```

Overrides the switch-wide default zone mode as enhanced.

Note If you are executing the setup script after issuing a **write erase** command, you must explicitly change the default zoning mode to enhanced for VSAN 1 after finishing the script using the following commands:

```
switch# configure terminal
switch(config)# zone mode enhanced vsan 1
```

Note If you are executing the setup script after issuing a **write erase** command, you must explicitly change the default zone policy to permit for VSAN 1 after finishing the script using the following commands:

```
switch# configure terminal
switch(config)# zoneset distribute full vsan 1
```

Step 23 Enter **no** (**no** is the default) if you are satisfied with the configuration.

```
The following configuration will be applied:
username admin password admin_pass role network-admin
snmp-server community snmp_community rw
switchname switch
```

```
interface vsan1
  ip address ip_address subnet_mask
  no shutdown ip default-gateway default_gateway
no telnet server disable
ssh key rsa 2048 force ssh server enable system default switchport shutdown
system default switchport trunk mode
auto system default switchport mode F
no zone default-zone permit vsan 1-4093
no zoneset distribute full vsan 1-4093
system default zone mode enhanced
Would you like to edit the configuration? (yes/no) [n]: n
```

Step 24 Enter **yes** (**yes** is default) to use and save this configuration.

```
Use this configuration and save it? (yes/no) [y]: yes
```

Caution If you do not save the configuration at this point, none of your changes are updated the next time the switch is rebooted. Type **yes** to save the new configuration. This ensures that the kickstart and system images are also automatically configured.

Where to Go Next

To become more familiar with the CLI, continue to .
