

## M Commands

---

This chapter describes the Cisco Nexus 1010 commands that begin with the letter M.

### management vlan

To configure a management VLAN, use the **management vlan** command.

**management vlan**

<b>Syntax Description</b>	<i>vlan-id</i>	Number of a new or existing management VLAN. The range is from 1 to 3967 and 4048 to 4093.
---------------------------	----------------	--

<b>Defaults</b>	None
-----------------	------

<b>Command Modes</b>	SVS domain configuration (config-svs-domain)
----------------------	--

<b>SupportedUserRoles</b>	network-admin
---------------------------	---------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.0(4)SP1(1)	This command was introduced.

**Examples** This example shows how to apply the control interface and VLAN ID 1044 to this virtual service:

```
switch# config t
switch(config)# svs-domain
switch(config-svs-domain)# management vlan
switch(config-svs-domain)#
```

***Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).***

Related Commands	Command	Description
	<b>svs-domain</b>	Enters SVS domain configuration mode.
	<b>show vsm domain</b>	Displays the Virtual Supervisor Module (VSM) domain configuration.
	<b>control vlan</b>	Modifies the VLAN ID of the VSM domain control VLAN
	<b>domain id</b>	Assign a domain ID.

## media

To specify the media type of a VLAN as Ethernet, use the **media** command. To remove the type, use the **no** form of this command.

**media ethernet**

**no media**

Syntax	Description
<b>ethernet</b>	Specifies Ethernet media type.

Defaults	None
----------	------

Command Modes	VLAN configuration (config-vlan)
---------------	----------------------------------

Supported User Roles	network-admin
----------------------	---------------

Command History	Release	Modification
	4.0(4)SP1(1)	This command was introduced.

Examples	This example shows how to configure the media type:
----------	---

```
switch# configure terminal
switch(config)# media ethernet
switch(config)#
```

Related Commands	Command	Description
	<b>show vlan</b>	Displays VLAN information.

# mkdir

To create a new directory, use the **mkdir** command.

```
mkdir {bootflash: | debug: | volatile:}
```

Syntax Description	
<b>bootflash:</b>	Specifies bootflash as the directory name.
<b>debug:</b>	Specifies debug as the directory name.
<b>volatile:</b>	Specifies volatile as the directory name.

Defaults	None
----------	------

Command Modes	Any command mode
---------------	------------------

SupportedUserRoles	network-admin
--------------------	---------------

Command History	Release	Modification
	4.0(4)SP1(1)	This command was introduced.

Examples	This example shows how to create the bootflash: directory: switch# <b>mkdir bootflash:</b>
----------	---

Related Commands	Command	Description
	<b>cd</b>	Changes the current working directory.
	<b>dir</b>	Displays the directory contents.
	<b>pwd</b>	Displays the name of the current working directory.

## move

To move a file from one directory to another, use the **move** command.

```
move [filesystem://module/][directory/] | directory/source-filename
      { {filesystem://module/][directory/] | directory/ } [destination-filename] | target-filename }
```

Syntax Description	
<i>filesystem</i> :	(Optional) Name of a file system. The name is case sensitive.
<i>//module/</i>	(Optional) Identifier for a VSM. Valid values are <b>sup-active</b> , <b>sup-local</b> , <b>sup-remote</b> , or <b>sup-standby</b> . The identifiers are case sensitive.
<i>directory/</i>	(Optional) Name of a directory. The name is case sensitive.
<i>source-filename</i>	Name of the file to move. The name is case sensitive.
<i>destination-filename</i>	(Optional) Name of the destination file. The name is alphanumeric, case sensitive, and has a maximum of 64 characters.

### Defaults

The default name for the destination file is the same as the source filename.

### Command Modes

Any command mode

### Supported User Roles

network-admin

### Command History

Release	Modification
4.0(4)SP1(1)	This command was introduced.

### Usage Guidelines

You can make a copy of a file by using the **copy** command.

#### Tip

You can rename a file by moving it within the same directory.

### Examples

This example shows how to move a file to another directory:

```
switch# move file1 my_files:file2
```

This example shows how to move a file to another file system:

```
switch# move file1 slot0:
```

This example shows how to move a file to another VSM:

```
switch# move file1 bootflash://sup-remote/file1.bak
```

Related Commands	Command	Description
	<b>cd</b>	Changes the current working directory.
	<b>copy</b>	Makes a copy of a file.
	<b>dir</b>	Displays the directory contents.
	<b>pwd</b>	Displays the name of the current working directory.

## mtu

To configure the maximum transmission unit (MTU) size for an interface, use the **mtu** command. To remove the configured MTU size from the interface, use the **no** form of this command.

**mtu** *size*

**no mtu** *size*

<b>Syntax Description</b>	<i>size</i>	MTU size. The range is 1500 to 9000.
<b>Defaults</b>	1500 bytes	
<b>Command Modes</b>	Interface configuration (config-if)	
<b>Supported User Roles</b>	network-admin	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.0(4)SP1(1)	This command was introduced.
<b>Examples</b>	<p>This example shows how to set the MTU size to 2000:</p> <pre>switch# <b>configure terminal</b> switch(config)# <b>interface port-channel 2</b> switch(config-if)# <b>mtu 2000</b></pre>	
<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>show interface</b>	Displays information about the interface, which includes the MTU size.
