Upgrading Cisco Virtual Switch Upgrade Manager

This chapter contains the following sections:

- Problems when Upgrading the Cisco Virtual Switch Update Manager, page 1

Problems when Upgrading the Cisco Virtual Switch Update Manager

This section includes symptoms, possible causes, and solutions for the following problems while you upgrade VSUM.

Symptom	Possible Causes	Verification and Solution
When you upgrade VSUM using the command `./upgradeVsumToXXX.sh` *vCenterUsername* *vCenterPassword*, an error message appears, saying permission is denied.	The `upgradeVsumToXXX.sh` file might not have permission to execute.	Make sure that the permissions for the `upgradeVsumToXXX.sh` file are set for read, write and execute.
