Multicast Routing Commands

This chapter describes the Cisco NX-OS multicast routing commands available on Cisco Nexus 3000 Series switches.
clear ip igmp event-history

To clear information in the IGMP event history buffers, use the `clear ip igmp event-history` command.

```
        clear ip igmp event-history { cli | debugs | errors | events | ha | igmp-internal | mtrace | policy | vrf }
```

### Syntax Description

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>cli</td>
<td>Clears the CLI event history buffer.</td>
</tr>
<tr>
<td>debugs</td>
<td>Clears the debug event history buffer.</td>
</tr>
<tr>
<td>events</td>
<td>Clears the event history buffer.</td>
</tr>
<tr>
<td>ha</td>
<td>Clears the high availability (HA) event history buffer.</td>
</tr>
<tr>
<td>igmp-internal</td>
<td>Clears the IGMP internal event history buffer.</td>
</tr>
<tr>
<td>mtrace</td>
<td>Clears the mtrace event history buffer.</td>
</tr>
<tr>
<td>policy</td>
<td>Clears the policy event history buffer.</td>
</tr>
<tr>
<td>vrf</td>
<td>Clears the virtual routing and forwarding (VRF) event history buffer.</td>
</tr>
</tbody>
</table>

### Command Default

None

### Command Modes

Any command mode

### Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

### Usage Guidelines

This command does not require a license.

### Examples

This example shows how to clear information in the IGMP HA event history buffer:

```
switch(config)# clear ip igmp event-history ha
switch(config)#
```

### Related Commands

<tbody>
<tr>
<td>ip igmp event-history</td>
<td>Configures the size of the IGMP event history buffers.</td>
</tr>
</tbody>
</table>
clear ip igmp groups

To clear IGMP-related information in the IPv4 multicast routing table, use the **clear ip igmp groups** command.

```
clear ip igmp groups 
```

### Syntax Description

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>*</td>
<td>Specifies all routes.</td>
</tr>
<tr>
<td>group</td>
<td>Group address in the format A.B.C.D.</td>
</tr>
<tr>
<td>source</td>
<td>(Optional) Source (S, G) route.</td>
</tr>
<tr>
<td>group-prefix</td>
<td>Group prefix in the format A.B.C.D/length.</td>
</tr>
<tr>
<td>vrf</td>
<td>(Optional) Clears the virtual routing and forwarding (VRF) instance information.</td>
</tr>
<tr>
<td>vrf-name</td>
<td>VRF name. The name can be a maximum of 32 alphanumeric characters and is case sensitive.</td>
</tr>
<tr>
<td>all</td>
<td>Specifies that all VRF entries be cleared from the IPv4 multicast routing table.</td>
</tr>
<tr>
<td>default</td>
<td>Specifies that the default VRF entry be cleared from the IPv4 multicast routing table.</td>
</tr>
<tr>
<td>management</td>
<td>Specifies that the management VRF entry be cleared from the IPv4 multicast routing table.</td>
</tr>
</tbody>
</table>

### Command Default

None

### Command Modes

Any command mode

### Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

### Usage Guidelines

The **clear ip igmp route** command is an alternative form of this command.

This command does not require a license.

### Examples

This example shows how to clear all the IGMP-related routes in the IPv4 multicast routing table:

```
switch(config)# clear ip igmp groups *
switch(config)#
```

### Related Commands

<table>

<tr>
<td>show ip mroute</td>
<td>Displays information about the IPv4 multicast routing table.</td>
</tr>
</tbody>
</table>
clear ip igmp interface statistics

To clear the IGMP statistics for an interface, use the clear ip igmp interface statistics command.

```
clear ip igmp interface statistics [ethernet slot/port | loopback if_number | port-channel number | sub_if_number]
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ethernet</td>
<td>(Optional) Specifies the Ethernet interface and the slot number and port number. The slot number is from 1 to 255, and the port number is from 1 to 128.</td>
</tr>
<tr>
<td>slot/port</td>
<td></td>
</tr>
<tr>
<td>loopback</td>
<td>(Optional) Specifies the loopback interface. The loopback interface number is from 0 to 1023.</td>
</tr>
<tr>
<td>if_number</td>
<td></td>
</tr>
<tr>
<td>port-channel</td>
<td>(Optional) Specifies the EtherChannel interface and EtherChannel number. The range is from 1 to 4096.</td>
</tr>
<tr>
<td>number</td>
<td></td>
</tr>
<tr>
<td>sub_if-number</td>
<td>(Optional) Subinterface number. The range is from 1 to 4093.</td>
</tr>
</tbody>
</table>

**Command Default**

None

**Command Modes**

<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

This command does not require a license.

**Examples**

This example shows how to clear IGMP statistics for an interface:

```
switch# clear ip igmp interface statistics ethernet 2/1
switch#
```

**Related Commands**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>show ip igmp interface</td>
<td>Displays information about IGMP interfaces.</td>
</tr>
</tbody>
</table>
clear ip igmp route

To clear IGMP-related information in the IPv4 multicast routing table, use the `clear ip igmp route` command.

```
clear ip igmp route { * | group [source] | group-prefix} [vrf {vrf-name | all | default | management}] 
```

**Syntax Description**

- `*` Specifies all routes.
- `group` Group address in the format `A.B.C.D`.
- `source` (Optional) Source (S, G) route.
- `group-prefix` Group prefix in the format `A.B.C.D/length`.
- `vrf` (Optional) Clears the virtual routing and forwarding (VRF) instance information.
- `vrf-name` VRF name. The name can be a maximum of 32 alphanumeric characters and is case sensitive.
- `all` Specifies that all VRF entries be cleared from the IPv4 multicast routing table.
- `default` Specifies that the default VRF entry be cleared from the IPv4 multicast routing table.
- `management` Specifies that the management VRF entry be cleared from the IPv4 multicast routing table.

**Command Default**

None

**Command Modes**

Any command mode

**Command History**

```
Release   Modification
5.0(3)U1(1) This command was introduced.
```

**Usage Guidelines**

The `clear ip igmp groups` command is an alternative form of this command.

This command does not require a license.

**Examples**

This example shows how to clear all the IGMP-related routes in the IPv4 multicast routing table:

```
switch(config)# clear ip igmp route *
switch(config)#
```

**Related Commands**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>clear ip igmp groups</td>
<td>Clears IGMP-related information in the IPv4 multicast routing table.</td>
</tr>
<tr>
<td>show ip mroute</td>
<td>Displays information about the IPv4 multicast routing table.</td>
</tr>
</tbody>
</table>
clear ip igmp snooping event-history

To clear information from IGMP snooping event history buffers, use the clear ip igmp snooping event-history command.

```
clear ip igmp snooping event-history {rib | igmp-snoop-internal | mfdm | mfdm-sum | vlan | vlan-events}
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Syntax Description</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>rib</td>
<td>Clears the unicast Routing Information Base (RIB) event history buffer.</td>
</tr>
<tr>
<td>igmp-snoop-internal</td>
<td>Clears the IGMP snooping internal event history buffer.</td>
</tr>
<tr>
<td>mfdm</td>
<td>Clears the multicast FIB distribution (MFDM) event history buffer.</td>
</tr>
<tr>
<td>mfdm-sum</td>
<td>Clears the MFDM sum event history buffer.</td>
</tr>
<tr>
<td>vlan</td>
<td>Clears the VLAN event history buffer.</td>
</tr>
<tr>
<td>vlan-events</td>
<td>Clears the VLAN-events event history buffer.</td>
</tr>
</tbody>
</table>

**Command Default**

None

**Command Modes**

Any command mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

This command does not require a license.

**Examples**

This example shows how to clear information in the IGMP snooping VLAN event history buffer:

```
switch(config)# clear ip igmp event-history vlan
switch(config)#
```

**Related Commands**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ip igmp snooping event-history</td>
<td>Configures the size of the IGMP snooping event history buffers.</td>
</tr>
</tbody>
</table>
clear ip igmp snooping explicit-tracking vlan

To clear the IGMP snooping explicit host tracking information for VLANs, use the clear ip igmp snooping explicit-tracking vlan command.

```
clear ip igmp snooping explicit-tracking vlan vlan-id
```

### Syntax Description

- **vlan-id**: VLAN number. The range is from 1 to 3968 and 4049 to 4093.

### Command Default

None

### Command Modes

Any command mode

### Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

### Usage Guidelines

This command does not require a license.

### Examples

This example shows how to clear the explicit tracking information for VLAN 1:

```
switch# clear ip igmp snooping explicit-tracking vlan 1
switch#
```

### Related Commands

- **show ip igmp snooping explicit-tracking vlan**: Displays explicit host tracking information for IGMPv3.
clear ip igmp snooping statistics vlan

To clear the IGMP snooping statistics for VLANs, use the `clear ip igmp snooping statistics vlan` command.

```
clear ip igmp snooping statistics vlan [vlan-id | all]
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>vlan-id</code></td>
<td>(Optional) VLAN number. The range is from 1 to 3968 and 4049 to 4093.</td>
</tr>
<tr>
<td><code>all</code></td>
<td>(Optional) Applies to all VLANs.</td>
</tr>
</tbody>
</table>

**Command Default**

All VLANs

**Command Modes**

Any command mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

This command does not require a license.

**Examples**

This example shows how to clear IGMP snooping statistics for VLAN 1:

```
switch# clear ip igmp snooping statistics vlan 1
switch#
```

**Related Commands**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>show ip igmp snooping</td>
<td>Displays IGMP snooping statistics by VLAN.</td>
</tr>
<tr>
<td>statistics vlan</td>
<td></td>
</tr>
</tbody>
</table>
clear ip mfwd event-history

To clear the multicast forwarding (MFWD) static routes, use the `clear ip mfwd event-history` command.

```
clear ip mfwd event-history
```

**Syntax Description**
This command has no arguments or keywords.

**Command Default**
None

**Command Modes**
Any command mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U2(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Examples**
This example shows how to clear the multicast forwarding static routes configured on the switch:

```
switch# clear ip mfwd event-history
switch#
```

**Related Commands**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ip mfwd mstatic</td>
<td>Registers multicast forwarding static routes.</td>
</tr>
</tbody>
</table>
clear ip mroute

To clear the multicast routing table, use the clear ip mroute command.

```
clear ip mroute { * | group [source]} [vrf {vrf-name | all | default | management}]
```

**Syntax Description**

- **Syntax Description**
  - *: Specifies all mismatched routes between the hardware and software multicast routing tables.
  - **group**: Multicast group address in the format A.B.C.D.
    - **Note**: Make sure that you provide an address that is not a reserved multicast address.
  - **source**: (Optional) Source (S, G) route.
  - **vrf**: (Optional) Clears the virtual routing and forwarding (VRF) instance information.
  - **vrf-name**: VRF name. The name can be a maximum of 32 alphanumeric characters and is case sensitive.
  - **all**: Specifies that all VRF entries be cleared from the multicast routing table.
  - **default**: Specifies that the default VRF entry be cleared from the multicast routing table.
  - **management**: Specifies that the management VRF entry be cleared from the multicast routing table.

**Command Default**

None

**Command Modes**

Any command mode

**Command History**

```
Release      Modification
5.0(3)U1(1)  This command was introduced.
```

**Usage Guidelines**

The clear routing multicast command is an alternative form of this command.

This command is used to delete routes from the multicast Forwarding Information Base (FIB). It is generally used to clear the mismatched routes in the hardware and software multicast routing tables. When routes are cleared from the multicast FIB, the individual processes (such as PIM, IGMP) that create the routes would repopulate the routes into the multicast FIB.

The clear ip mroute * command does not permanently delete the routes from the multicast routing table. To delete the routes permanently from the multicast routing table, use the following clear commands to remove the routes for each process:

- clear ip pim route
- clear ip igmp groups

This command does not require a license.
Examples

This example shows how to clear the mismatched routes in the multicast routing table:

```
switch# clear ip mroute *
```

This command does not clear mroutes permanently. Please use clear commands from all mroute owners:

Pim : clear ip pim route
IGMP: clear ip igmp groups
IP/MPWD: clear ip mfwd mroute

to avoid owner process from repopulating routes into multicast routing table.

For further information regarding this behavior please check documentation.

```
switch#
```

<table>
<thead>
<tr>
<th>Related Commands</th>
<th>Command</th>
<th>Description</th>

</tr>
</tbody>
</table>
clear ip msdp event-history

To clear information in the Multicast Source Discovery Protocol (MSDP) event history buffers, use the clear ip msdp event-history command.

```
  clear ip msdp event-history
```

**Syntax Description**
This command has no arguments or keywords.

**Command Default**
None

**Command Modes**
Any command mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>

<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**
This command requires the LAN Base Services license.

**Examples**
This example shows how to clear information in the MSDP event history buffers:

```
switch(config)# clear ip msdp event-history
switch(config) #
```

**Related Commands**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>

</tr>
<tr>
<td>show ip msdp event-history</td>
<td>Displays information in the MSDP event history buffers.</td>
</tr>
</tbody>
</table>
clear ip msdp peer

To clear a TCP connection to Multicast Source Discovery Protocol (MSDP) peers, use the `clear ip msdp peer` command.

```
clear ip msdp peer peer-address [vrf {vrf-name | default | management}]
```

**Syntax Description**

- **peer-address**: IP address of the MSDP peer.
- **vrf**: (Optional) Clears the virtual routing and forwarding (VRF) instance information.
- **vrf-name**: VRF name. The name can be a maximum of 32 alphanumeric characters and is case sensitive.
- **default**: Specifies that the default VRF entry be cleared from the multicast routing table.
- **management**: Specifies that the management VRF entry be cleared from the multicast routing table.

**Command Default**

None

**Command Modes**

Any command mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>

clear ip msdp route

To clear routes that match group entries in the Multicast Source Discovery Protocol (MSDP) Source-Active (SA) cache, use the **clear ip msdp route** command.

```
clear ip msdp route { * | group | group-prefix } [vrf { vrf-name | all | default | management }]
```

<table>
<thead>
<tr>
<th>Syntax Description</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

</tbody>
</table>
clear ip msdp statistics

To clear statistics for Multicast Source Discovery Protocol (MSDP) peers, use the clear ip msdp statistics command.

```
clear ip msdp statistics [peer-address] [vrf vrf-name | default | management]
```

**Syntax Description**
- `peer-address` (Optional) IP address of the MSDP peer.
- `vrf` (Optional) Clears the virtual routing and forwarding (VRF) instance information.
- `vrf-name` VRF name. The name can be a maximum of 32 alphanumeric characters and is case sensitive.
- `default` (Optional) Specifies that the default VRF entry be cleared from the multicast routing table.
- `management` (Optional) Specifies that the management VRF entry be cleared from the multicast routing table.

**Command Default** None

**Command Modes** Any command mode

</tbody>
</table>
## clear ip pim interface statistics

To clear Protocol Independent Multicast (PIM) counters for a specified interface, use the **clear ip pim interface statistics** command.

```
clear ip pim interface statistics [ethernet slot/port | port-channel channel-number|sub_if-number] | vlan vlan-id]
```

### Syntax Description

<table>
<thead>
<tr>
<th>Keyword</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ethernet slot/port</td>
<td>(Optional) Specifies the Ethernet interface. The slot number is from 1 to 255, and the port number is from 1 to 128.</td>
</tr>
<tr>
<td>port-channel number</td>
<td>(Optional) Specifies the EtherChannel interface and EtherChannel number. The range is from 1 to 4096.</td>
</tr>
<tr>
<td>sub_if-number</td>
<td>(Optional) Subinterface number. The range is from 1 to 4093.</td>

clear ip pim route

To clear routes specific to Protocol Independent Multicast (PIM) for IPv4, use the **clear ip pim route** command.

```
clear ip pim route { * | group [source] | group-prefix } [vrf { vrf-name | all | default | management }]`
```

**Syntax Description**

- `*`: Specifies all routes.
- `group`: Group address in the format `A.B.C.D`.
- `source`: (Optional) Source `(S, G)` route.
- `group-prefix`: Group prefix in the format `A.B.C.D/length`.
- `vrf`: (Optional) Clears the virtual routing and forwarding (VRF) instance information.
- `vrf-name`: VRF name. The name can be a maximum of 32 alphanumeric characters and is case sensitive.
- `all`: Specifies that all VRF entries be cleared from the multicast routing table.
- `default`: Specifies that the default VRF entry be cleared from the multicast routing table.
- `management`: Specifies that the management VRF entry be cleared from the multicast routing table.

Cisco Nexus 3000 Series NX-OS Multicast Routing Command Reference
hardware profile multicast prefer-source-tree

To prevent duplication of packets during a switchover from the rendezvous point tree (RPT) to the shortest path tree (SPT), use the `hardware profile multicast prefer-source-tree` command. To allow duplication of packets, use the `no` form of this command.

`hardware profile multicast prefer-source-tree`

`no hardware profile multicast prefer-source-tree`

### Syntax Description
This command has no arguments or keywords.

### Command Default
None

### Command Modes
Global configuration mode

### Command History
<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(2)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

### Usage Guidelines
Use this command to ensure that there are no duplicate packets in the hardware when the transition from RPT to SPT is in progress.

**Note**
When you use this command to prevent duplication of packets during a RPT to SPT switchover, the switch supports source (S, G) route injections at a rate of only 500 routes every two minutes. The multicast routing table must have 500 entries free for source (S, G) routes.

### Examples
This example shows how to prevent duplication of packets during a RPT to SPT switchover:
```
switch# configure terminal
switch(config)# hardware profile multicast prefer-source-tree
switch(config)#
```

### Related Commands

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>show hardware profile status</td>
<td>Displays information about the multicast routing table limits.</td>
</tr>
</tbody>
</table>
hardware profile multicast soak-interval

To set the interval for multicast routes to be programmed into the hardware, use the **hardware profile multicast soak-interval** command.

**Note** Beginning in Release 7.0(3)I2(1), the **hardware profile multicast soak-interval** command is no longer necessary and has been removed.

**soak-interval**

**Syntax Description**

| soak-interval | Interval after which the multicast routes are programmed into the hardware. The range is from 50 milliseconds to 2 seconds. The default value of this interval is 1 second. Use a lower interval for low multicast route creation or deletion requests per second. A lower interval enables the multicast routes to be programmed faster when the rate of multicast creations requests is low. When the number of multicast route creation requests is high, you can use a higher interval to stagger the programming of these routes into the hardware. |

**Command Default**

1 second

**Command Modes**

Global configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>7.0(3)I2(1)</td>
<td>This command has been removed.</td>
</tr>
<tr>
<td>6.0(2)U3(2)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

When the Cisco Nexus 3000 Series switch has high multicast route creation or deletion rates (for example, too many IGMP join or leave requests), the switch cannot program the multicast routes into the hardware as fast as the requests are made. To resolve this problem, you can now configure an interval after which multicast routes are programmed into the hardware.

- When you have very low multicast route creations or deletions per second, configure a low interval (up to 50 milliseconds). A low interval enables the hardware to be programmed faster than it would be by using the default interval of 1 second.
- When you have very high multicast route creations or deletions per second, configure a high interval (up to 2 seconds). A high interval enables the hardware to be programmed over a longer period of time without dropping the requests.

**Examples**

This example shows how to set the interval for multicast routes to be programmed into the hardware to 2 seconds:
```bash
switch(config)# 2
switch(config)#
```

hardware profile multicast syslog-threshold

To configure the syslog threshold for the multicast route table so that a syslog message is generated when the table capacity reaches the specified percentage, use the `hardware profile multicast syslog-threshold` command. To reset the value to the default, use the `no` form of this command.

```
hardware profile multicast syslog-threshold percentage
no hardware profile multicast syslog-threshold
```

**Syntax Description**

| percentage | Percentage of table capacity. The range is a number from 1 to 100. The default value is 90 percent. |

**Defaults**

The multicast route table threshold is 50 percent.

**Command Modes**

Global configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U3(2)</td>
<td>This command was introduced.</td>

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

#### Usage Guidelines

The `ip igmp access-group` command is an alias of the `ip igmp report-policy` command. This command does not require a license but if you want to enable Layer 3 interfaces, you must install the LAN Base Services license.

#### Examples

This example shows how to enable a route-map policy:

```
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# ip igmp access-group my_access_group_policy
switch(config-if)#
```

This example shows how to disable a route-map policy:

```
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# no ip igmp access-group
switch(config-if)#
```

ip igmp flush-routes

To remove routes when the IGMP process is restarted, use the ip igmp flush-routes command. To leave routes in place, use the no form of this command.

ip igmp flush-routes

no ip igmp flush-routes

Syntax Description
This command has no arguments or keywords.

Command Default
The routes are not flushed.

Command Modes
Global configuration mode

Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

Usage Guidelines
To display whether flush routes are configured, use this command line:
```
switch(config)# show running-config | include flush-routes
```

This command does not require a license.

Examples
This example shows how to remove routes when the IGMP process is restarted:
```
switch(config)# ip igmp flush-routes
switch(config)#
```

This example shows how to leave routes in place when the IGMP process is restarted:
```
switch(config)# no ip igmp flush-routes
switch(config)#
```

ip igmp global-leave-ignore-gss-mrt

To use the general Maximum Response Time (MRT) in response to an IGMP global leave message for
general queries, use the ip igmp global-leave-ignore-gss-mrt command. To reset the query to the
default, use the no form of this command.

   ip igmp global-leave-ignore-gss-mrt
   no ip igmp global-leave-ignore-gss-mrt

Syntax Description
This command has no arguments or keywords.

Command Default
None

Command Modes
Global configuration mode

Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(2)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

Usage Guidelines
When you use this command, the switch uses the configured Maximum Response Time (MRT) value in
group-specific queries against a lower MRT value in response to IGMP global leave messages (IGMP
leave reports to group 0.0.0.0).

This command does not require a license.

Examples
This example shows how to set the MRT for IGMP general queries:

switch# configure terminal
switch(config)# ip igmp global-leave-ignore-gss-mrt
switch(config)#

Related Commands

</table>
ip igmp group-timeout

To configure a group membership timeout for IGMPv2, use the `ip igmp group-timeout` command. To return to the default timeout, use the `no` form of this command.

```
ip igmp group-timeout timeout

no ip igmp group-timeout [timeout]
```

**Syntax Description**
- `timeout` Timeout in seconds. The range is from 3 to 65,535. The default is 260.

**Command Default**
The group membership timeout is 260 seconds.

**Command Modes**
Interface configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**
This command does not require a license but if you want to enable Layer 3 interfaces, you must install the LAN Base Services license.

**Examples**
This example shows how to configure a group membership timeout:

```
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# ip igmp group-timeout 200
```

This example shows how to reset a group membership timeout to the default:

```
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# no ip igmp group-timeout
```

**Related Commands**
- `show ip igmp interface` Displays IGMP information about the interface.
ip igmp immediate-leave

To enable the device to remove the group entry from the multicast routing table immediately upon receiving a leave message for the group, use the `ip igmp immediate-leave` command. To disable the immediate leave option, use the `no` form of this command.

```
ip igmp immediate-leave
no ip igmp immediate-leave
```

**Syntax Description**

This command has no arguments or keywords.

**Command Default**

The immediate leave feature is disabled.

**Command Modes**

Interface configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Use the `ip igmp immediate-leave` command only when there is one receiver behind the interface for a given group.

This command does not require a license but if you want to enable Layer 3 interfaces, you must install the LAN Base Services license.

**Examples**

This example shows how to enable the immediate leave feature:

```
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# ip igmp immediate-leave
switch(config-if)#
```

This example shows how to disable the immediate leave feature:

```
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# no ip igmp immediate-leave
switch(config-if)#
```

**Related Commands**

<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>show ip igmp interface</code></td>
<td>Displays IGMP information about the interface.</td>
</tr>
</tbody>
</table>
ip igmp join-group

To statically bind a multicast group to an interface, use the `ip igmp join-group` command. To remove a group binding, use the `no` form of this command.

```
ip igmp join-group {group [source source] | route-map policy-name}
no ip igmp join-group {group [source source] | route-map policy-name}
```

### Syntax Description

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>group</code></td>
<td>Multicast group IP address.</td>
</tr>
<tr>
<td><code>source</code></td>
<td>(Optional) Configures a source IP address for the IGMPv3 (S,G) channel.</td>
</tr>
<tr>
<td><code>route-map</code></td>
<td>Specifies the route-map policy name that defines the group prefixes where this</td>
</tr>
<tr>
<td><code>policy-name</code></td>
<td>feature is applied. The route map name can be a maximum of 63 alphanumeric</td>
</tr>
<tr>
<td></td>
<td>characters.</td>
</tr>
</tbody>
</table>

### Command Default

None

### Command Modes

Interface configuration mode

### Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

### Usage Guidelines

If you specify only the group address, the (*, G) state is created. If you specify the source address, the (S, G) state is created.

If you use the route map, the only `match` command that is read from the route map is the `match ip multicast` command. You can specify the group prefix and source prefix.

**Note**

A source tree is built for the (S, G) state only if you enable IGMPv3.

**Caution**

When you enter this command, the traffic generated is handled by the device CPU, not the hardware.

This command does not require a license but if you want to enable Layer 3 interfaces, you must install the LAN Base Services license.

### Examples

This example shows how to statically bind a group to an interface:

```
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# ip igmp join-group 230.0.0.0
switch(config-if)#
```
This example shows how to remove a group binding from an interface:

```
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# no ip igmp join-group 230.0.0.0
switch(config-if)#
```

### ip igmp query-interval

To configure a query interval used when the IGMP process starts up, use the `ip igmp query-interval` command. To reset the query interval to the default, use the `no` form of this command.

```
ip igmp query-interval interval
no ip igmp query-interval [interval]
```

#### Syntax Description

- `interval`: Interval in seconds. The range is from 1 to 18,000. The default is 125.

#### Command Default

The query interval is 125 seconds.

#### Command Modes

Interface configuration mode

#### Command History

- **Release**: 5.0(3)U1(1)
- **Modification**: This command was introduced.

#### Usage Guidelines

This command does not require a license but if you want to enable Layer 3 interfaces, you must install the LAN Base Services license.

#### Examples

This example shows how to configure a query interval:

```
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# ip igmp query-interval 100
```

This example shows how to reset a query interval to the default:

```
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# no ip igmp query-interval
```

ip igmp report-policy

To enable an access policy that is based on a route-map policy for IGMP reports, use the `ip igmp report-policy` command. To disable the route-map policy, use the `no` form of this command.

```
ip igmp report-policy policy-name

no ip igmp report-policy [policy-name]
```

**Syntax Description**
- `policy-name` Route-map policy name. The route name is a maximum of 100 alphanumeric characters.

**Command Default**
Disabled

**Command Modes**
Interface configuration mode

**Command History**
<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**
You can configure the route map to prevent state from being created in the multicast routing table.

The `ip igmp report-policy` command is an alias of the `ip igmp access-group` command.

If you use the route map, the only `match` command that is read from the route map is the `match ip multicast` command. You can specify the group prefix, group range, and source prefix to filter messages.

This command does not require a license but if you want to enable Layer 3 interfaces, you must install the LAN Base Services license.

**Examples**
This example shows how to enable an access policy for IGMP reports:

```
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# ip igmp report-policy my_report_policy
switch(config-if)#
```

This example shows how to disable an access policy for IGMP reports:

```
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# no ip igmp report-policy
switch(config-if)#
```

ip igmp snooping (Global)

To enable IGMP snooping, use the `ip igmp snooping` command. To disable IGMP snooping, use the `no` form of this command.

```
ip igmp snooping
no ip igmp snooping
```

**Syntax Description**
This command has no arguments or keywords.

**Command Default**
Enabled

**Command Modes**
Global configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**
If the global configuration of IGMP snooping is disabled, then all VLANs are treated as disabled, whether they are enabled or not.

This command does not require a license.

**Examples**
This example shows how to enable IGMP snooping:

```
switch(config)# ip igmp snooping
switch(config)#
```

This example shows how to disable IGMP snooping:

```
switch(config)# no ip igmp snooping
switch(config)#
```

ip igmp snooping (VLAN)

To enable IGMP snooping on specified VLAN interfaces, use the `ip igmp snooping` command. To disable IGMP snooping on the interface, use the `no` form of this command.

Note

This command has two new sub-options beginning in Release 7.0(3)2(1):
- `group-timeout` - Configures the group membership timeout in all VLANs/BDs.
- `max-gq-miss` - Configures the general query miss count.

```
ip igmp snooping
no ip igmp snooping
```

Syntax Description

This command has no arguments or keywords.

Command Default

Enabled

Command Modes

VLAN configuration mode

Command History

+-----------------+--------------------------------------------------+
<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>

<tr>
<td>buffer-size</td>
<td>Buffer size that is one of the following values: disabled, large, medium, or small. The default buffer size is small.</td>
</tr>
</tbody>
</table>

### Command Default

All history buffers are allocated as small.

### Command Modes

- Global configuration mode
- Switch profile configuration mode

### Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
<tr>
<td>5.0(3)U2(1)</td>
<td>Support was added to configure IGMP snooping event history buffers in a switch profile.</td>
</tr>
</tbody>
</table>

The **vpc** keyword was added.

### Usage Guidelines

This command does not require a license.

### Examples

This example shows how to configure the IGMP snooping VLAN event history buffer size:

```
switch(config)# ip igmp snooping event-history vlan size large
switch(config)#
```
This example shows how to configure the IGMP snooping vPC event history buffer size in a switch profile:

```
switch# configure sync
Enter configuration commands, one per line. End with CNTL/Z.
switch(config-sync)# switch-profile s5010
Switch-Profile started, Profile ID is 1
switch(config-sync-sp)# ip igmp snooping event-history vpc size medium
switch(config-sync-sp)#
```

ip igmp snooping explicit-tracking

To enable tracking of IGMPv3 membership reports from individual hosts for each port on a per-VLAN basis, use the `ip igmp snooping explicit-tracking` command. To disable tracking, use the `no` form of this command.

```
ip igmp snooping explicit-tracking
no ip igmp snooping explicit-tracking
```

**Syntax Description**
This command has no arguments or keywords.

**Command Default**
Enabled

**Command Modes**
VLAN configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**
This command does not require a license.

**Examples**

This example shows how to enable tracking of IGMPv3 membership reports on a VLAN interface:

```
switch(config)# vlan 1
switch(config-vlan)# ip igmp snooping explicit-tracking
switch(config-vlan)#
```

This example shows how to disable IGMP snooping on a VLAN interface:

```
switch(config)# vlan 1
switch(config-vlan)# no ip igmp snooping explicit-tracking
switch(config-vlan)#
```

ip igmp snooping fast-leave

To enable support of IGMPv2 hosts that cannot be explicitly tracked because of the host report suppression mechanism of the IGMPv2 protocol, use the `ip igmp snooping fast-leave` command. To disable support of IGMPv2 hosts, use the `no` form of this command.

```
ip igmp snooping fast-leave
no ip igmp snooping fast-leave
```

Syntax Description
This command has no arguments or keywords.

Command Default
Disabled

Command Modes
VLAN configuration mode

Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

Usage Guidelines
When you enable fast leave, the IGMP software assumes that no more than one host is present on each VLAN port.

This command does not require a license.

Examples
This example shows how to enable support of IGMPv2 hosts:

```
switch(config)# vlan 1
switch(config-vlan)# ip igmp snooping fast-leave
switch(config-vlan)#
```

This example shows how to disable support of IGMPv2 hosts:

```
switch(config)# vlan 1
switch(config-vlan)# no ip igmp snooping fast-leave
switch(config-vlan)#
```

</tbody>
</table>

**Usage Guidelines**
If this setting is disabled on the entire device, then it is disabled on all VLANs on device, irrespective of the specific VLAN setting.
This command does not require a license.

**Examples**
This example shows how to enable suppression of IGMP reports from link-local groups:
```
switch(config)# vlan 1
switch(config-vlan)# ip igmp snooping link-local-groups-suppression
switch(config-vlan)#
```

This example shows how to disable suppression of IGMP reports from link-local groups:
```
switch(config)# vlan 1
switch(config-vlan)# no ip igmp snooping link-local-groups-suppression
switch(config-vlan)#
```

This example shows how to enable suppression of IGMP reports from link-local groups in a switch profile:
```
switch# configure sync
Enter configuration commands, one per line. End with CNTL/Z.
switch(config-sync)# switch-profile s5010
Switch-Profile started, Profile ID is 1
```
```
switch(config-sync-sp)# ip igmp snooping link-local-groups-suppression
switch(config-sync-sp)#
```

ip igmp snooping mrouter interface

To configure a static connection to a multicast router, use the `ip igmp snooping mrouter interface` command. To remove the static connection, use the `no` form of this command.

```
  ip igmp snooping mrouter interface {ethernet slot/port | port-channel number[.sub_if_number]}
  no ip igmp snooping mrouter interface {ethernet slot/port | port-channel number[.sub_if_number]}
```

**Syntax Description**

- **ethernet** *(Optional)* Specifies the Ethernet interface and the slot number and port number. The slot number is from 1 to 255, and the port number is from 1 to 128.
- **slot/port**
- **port-channel** *(Optional)* Specifies the EtherChannel interface and EtherChannel number. The range is from 1 to 4096.
- **number**
- **sub_if-number** *(Optional)* Subinterface number. The range is from 1 to 4093.

**Command Default**

None

**Command Modes**

VLAN configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

The interface to the router must be in the selected VLAN.

This command does not require a license.

**Examples**

This example shows how to configure a static connection to a multicast router:

```
  switch(config)# vlan 1
  switch(config-vlan)# ip igmp snooping mrouter interface ethernet 2/1
  switch(config-vlan)#
```

This example shows how to remove a static connection to a multicast router:

```
  switch(config)# vlan 1
  switch(config-vlan)# no ip igmp snooping mrouter interface ethernet 2/1
  switch(config-vlan)#
```

<td>Support was added to configure IGMP snooping Optimized Multicast Flood in a switch profile.</td>
</tr>
<tr>
<td>7.0(3)I2(1)</td>
<td>This command was removed.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

This command does not require a license.
Beginning in Release 7.0(3)I2(1), this release has been removed.

**Examples**

This example shows how to configure OMF on all VLANs:

```
switch(config)# ip igmp snooping optimise-multicast-flood
switch(config)#
```

This example shows how to remove OMF from all VLANs:

```
switch(config)# no ip igmp snooping optimise-multicast-flood
switch(config)#
```

This example shows how to configure OMF in a switch profile:

```
switch# configure sync
Enter configuration commands, one per line. End with CNTL/Z.
switch(config-sync)# switch-profile s5010
Switch-Profile started, Profile ID is 1
switch(config-sync-sp)# ip igmp snooping optimise-multicast-flood
switch(config-sync-sp)#
```

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

The querier IP address cannot be a multicast address.
This command does not require a license.

**Examples**

This example shows how to configure a snooping querier:

```
switch(config)# vlan 1
switch(config-vlan)# ip igmp snooping querier 192.168.0.106
switch(config-vlan)#
```

This example shows how to disable IGMP snooping on a VLAN interface:

```
switch(config)# vlan 1
switch(config-vlan)# no ip igmp snooping querier
switch(config-vlan)#
```

**ip igmp snooping report-suppression**

To enable limiting the membership report traffic sent to multicast-capable routers, use the `ip igmp snooping report-suppression` command. To disable the limitation, use the `no` form of this command.

```
ip igmp snooping report-suppression
no ip igmp snooping report-suppression
```

**Syntax Description**

This command has no arguments or keywords.

**Command Default**

Enabled

**Command Modes**

Global configuration mode
VLAN configuration mode
Switch profile configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
<tr>
<td>5.0(3)U2(1)</td>
<td>Support was added to configure IGMP snooping report suppression in a switch profile.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

When you disable report suppression, all IGMP reports are sent as is to multicast-capable routers. This command does not require a license.

**Examples**

This example shows how to enable limiting the membership report traffic:
```
switch(config)# vlan 1
switch(config-vlan)# ip igmp snooping report-suppression
switch(config-vlan)#
```

This example shows how to disable limiting the membership report traffic:
```
switch(config)# vlan 1
switch(config-vlan)# no ip igmp snooping report-suppression
switch(config-vlan)#
```

This example shows how to enable limiting the membership report traffic in a switch profile:
```
switch# configure sync
Enter configuration commands, one per line. End with CNTL/Z.
switch(config-sync)# switch-profile s5010
Switch-Profile started, Profile ID is 1
switch(config-sync-sp)# ip igmp snooping report-suppression
switch(config-sync-sp)#
```

**ip igmp snooping v3-report-suppression (VLAN)**

To configure IGMPv3 report suppression and proxy reporting for VLANs, use the `ip igmp snooping v3-report-suppression` command. To remove IGMPv3 report suppression, use the `no` form of this command.

```
  ip igmp snooping v3-report-suppression
  no ip igmp snooping v3-report-suppression
```

**Syntax Description**
This command has no arguments or keywords.

**Command Default**
Enabled

**Command Modes**
VLAN configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**
If this setting is disabled for the device, which is the default value, then it is disabled for all VLANs, irrespective of how you set this value for an individual VLAN. However, once you set the global setting to enabled, the settings for all the VLANs are enabled by default.

This command does not require a license.

**Examples**
This example shows how to configure IGMPv3 report suppression and proxy reporting for specified VLANs:

```
switch(config)# vlan 10-20
switch(config-vlan)# ip igmp snooping v3-report-suppression
switch(config-vlan)#
```

This example shows how to remove IGMPv3 report suppression on specified VLANs:

```
switch(config)# vlan 10-20
switch(config-vlan)# no ip igmp snooping v3-report-suppression
switch(config-vlan)#
```

ip igmp ssm-translate

To translate IGMPv1 or IGMPv2 membership reports to create the (S, G) state so that the router treats them as IGMPv3 membership reports, use the **ip igmp ssm-translate** command. To remove the translation, use the **no** form of this command.

```
ip igmp ssm-translate  group  source
no ip igmp ssm-translate  group  source
```

**Syntax Description**

- **group**: IPv4 multicast group range. By default, the group prefix range is 232.0.0.0/8. To modify the IPv4 Protocol Independent Multicast (PIM) Source Specific Multicast (SSM) range, see the **ip pim ssm range** command.
- **source**: IP multicast address source.

**Command Default**

None

**Command Modes**

Global configuration mode
VRF configuration mode

**Command History**

**Usage Guidelines**

To display SSM translation commands, use this command line:

```
switch(config)# show running-config | include ssm-translation
```

This command does not require a license.

**Examples**

This example shows how to configure a translation:

```
switch(config)# ip igmp ssm-translate 232.0.0.0/8 10.1.1.1
switch(config)#
```

This example shows how to remove a translation:

```
switch(config)# no ip igmp ssm-translate 232.0.0.0/8 10.1.1.1
switch(config)#
```

### Usage Guidelines

This command does not require a license but if you want to enable Layer 3 interfaces, you must install the LAN Base Services license.

### Examples

This example shows how to configure a query count:

```
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# ip igmp startup-query-count 3
switch(config-if)#
```

This example shows how to reset a query count to the default:

```
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# no ip igmp startup-query-count
switch(config-if)#
```

<td>(Optional) Configures the source IP address for IGMPv3 and creates the (S, G) state.</td>
</tr>
<tr>
<td>Note</td>
<td>A source tree is built for the (S, G) state only if you enable IGMPv3.</td>
</tr>
<tr>
<td>route-map policy-name</td>
<td>Specifies the route-map policy name that defines the group prefixes where this feature is applied. The route map name can be a maximum of 63 alphanumeric characters.</td>
</tr>
</tbody>
</table>

**Command Default**

None

**Command Modes**

Interface configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Before you use this command, make sure that you enable Protocol Independent Multicast (PIM) on the interface by using the `ip pim sparse-mode` command.

This command does not require a license but if you want to enable Layer 3 interfaces, you must install the LAN Base Services license.

**Examples**

This example shows how to statically bind a group to the OIF:

```
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# ip igmp static-oif 230.0.0.0
switch(config-if)#
```

This example shows how to remove a static binding from the OIF:

```
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# no ip igmp static-oif 230.0.0.0
switch(config-if)#
```
### Related Commands

To configure the syslog threshold for the IP Internet Group Management Protocol (IGMP) table so that a syslog message is generated when the table capacity reaches the specified percentage, use the `ip igmp syslog-threshold` command. To reset the value to the default, use the `no` form of this command.

```
ip igmp syslog-threshold percentage

no ip igmp syslog-threshold
```

### Syntax Description

| `percentage` | Percentage of table capacity. The range is from 1 to 100. The default value is 90 percent. |

### Defaults

The IP IGMP table threshold is 90 percent.

### Command Modes

Global configuration mode

### Command History

ip mfwd mstatic

To register multicast forwarding (MFWD) static routes, use the `ip mfwd mstatic` command. To remove the MFWD static routes, use the `no` form of this command.

```
ip mfwd mstatic register
no p mfwd mstatic register
```

**Syntax Description**

| register | Registers the multicast static routes. |

**Command Default**

None

**Command Modes**

Global configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U2(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

If the switch receives multicast traffic from a source that is not attached, a (S, G) route is not created and the traffic continuously enters the CPU.

Use this command after configuring multicast reverse path forwarding (RPF) static routes to create (S, G) routes and prevent the multicast traffic from coming to the CPU. For each multicast static route, the register messages are periodically sent to the rendezvous point (RP) and the Multicast Source Discovery Protocol (MSDP) Source-Active (SA) messages are sent to the peer.

This command does not require a license.

**Examples**

This example shows how to register a multicast forwarding static route:

```
switch(config)# ip mroute 192.0.2.33/24 192.0.2.1
switch(config)# ip mfwd mstatic register
```

This example shows how to deregister a multicast forwarding static route:

```
switch(config)# no mfwd mstatic register
```

**Related Commands**

<td></td>
</tr>
</tbody>
</table>
ip msdp originator-id

To configure the IP address used in the rendezvous point (RP) field of a Source-Active message entry, use the `ip msdp originator-id` command. To reset the value to the default, use the `no` form of this command.

```
ip msdp originator-id if-type if-number
no ip msdp originator-id [if-type if-number]
```

Syntax Description

<table>
<thead>
<tr>
<th>Syntax</th>

Usage Guidelines

This command requires the LAN Base Services license.

Examples

This example shows how to configure the IP address used in the RP field of SA messages:
```
switch(config)# ip msdp originator-id loopback0
switch(config)#
```

This example shows how to reset the RP address to the default:
```
switch(config)# no ip msdp originator-id loopback0
switch(config)#
```

</tbody>
</table>

**Usage Guidelines**

This command requires the LAN Base Services license.

**Examples**

This example shows how to enable an MD5 password for a peer:

```
switch(config)# ip msdp password 192.168.1.10 my_password
switch(config)#
```

This example shows how to disable an MD5 password for a peer:

```
switch(config)# no ip msdp password 192.168.1.10
switch(config)#
```

**Related Commands**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>show ip msdp peer</td>
<td>Displays MDSP peer information.</td>
</tr>
</tbody>
</table>
ip msdp peer

To configure a Multicast Source Discovery Protocol (MSDP) peer with the specified peer IP address, use the `ip msdp peer` command. To remove an MSDP peer, use the `no` form of this command.

\[
\text{ip msdp peer peer-address connect-source if-type if-number [remote-as asn]} \\
\text{no ip msdp peer peer-address [connect-source if-type if-number] [remote-as asn]}
\]

**Syntax Description**

- **peer-address**: IP address of the MSDP peer.
- **connect-source**: Configures a local IP address for a TCP connection.
- **if-type**: Interface type. For more information, use the question mark (?) online help function.
- **if-number**: Interface or subinterface number. For more information about the numbering syntax for your networking device, use the question mark (?) online help function.
- **remote-as asn**: (Optional) Configures a remote autonomous system (AS) number.

**Command Default**

None

**Command Modes**

Global configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

The software uses the source IP address of the interface for the TCP connection with the peer. If the AS number is the same as the local AS, then the peer is within the Protocol Independent Multicast (PIM) domain; otherwise, this peer is external to the PIM domain.

This command requires the LAN Base Services license.

**Examples**

This example shows how to configure an MSDP peer:

```
switch(config)# ip msdp peer 192.168.1.10 connect-source ethernet 1/0 remote-as 8
switch(config)#
```

This example shows how to remove an MSDP peer:

```
switch(config)# no ip msdp peer 192.168.1.10
switch(config)#
```

</tbody>
</table>

**Usage Guidelines**

To display the SA interval configuration command, use this command line:

```
switch(config)# show running-config | include sa-interval
```

This command requires the LAN Base Services license.

**Examples**

This example shows how to configure an SA transmission interval:

```
switch(config)# ip msdp sa-interval 100
switch(config)#
```

This example shows how to reset the interval to the default:

```
switch(config)# no ip msdp sa-interval
switch(config)#
```

Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

Usage Guidelines

Each command with the same Anycast-RP address forms an Anycast-RP set. The IP addresses of rendezvous points (RPs) are used for communication with RPs in the set.

To configure PIM Anycast-RP, you must configure the static RP address that will be used as the Anycast-RP address for all routes, and then configure the peer Anycast-RP address.

This command requires the LAN Base Services license.

Examples

This example shows how to configure a PIM Anycast-RP peer:

```bash
switch# configure terminal
switch(config)# ip pim rp-address 192.0.2.3
switch(config)# ip pim anycast-rp 192.0.2.3 192.0.2.31
switch(config)#
```

This example shows how to remove a peer:

```bash
switch# configure terminal
switch(config)# no ip pim anycast-rp 192.0.2.3 192.0.2.31
switch(config)#
```
## ip pim anycast-rp

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

This command can be used on client routers where you can specify mapping agent addresses.

You can specify mapping agent source addresses to filter messages from with the `match ip multicast` command in a route-map policy.

This command requires the LAN Base Services license.

**Examples**

This example shows how to enable a route-map policy to filter Auto-RP Discover messages:

```
switch(config)# ip pim auto-rp mapping-agent-policy my_mapping_agent_policy
switch(config)#
```

This example shows how to disable filtering:

```
switch(config)# no ip pim auto-rp mapping-agent-policy
switch(config)#
```

**Related Commands**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>

</tr>
<tr>
<td><code>ttl</code></td>
<td></td>
</tr>
<tr>
<td><code>interval</code></td>
<td>(Optional) Specifies an Auto-RP Announce message transmission interval in seconds. The range is from 1 to 65,535. The default is 60.</td>
</tr>
<tr>
<td><code>interval</code></td>
<td></td>
</tr>
</tbody>
</table>

### Command Default

The TTL is 32.
The Announce message interval is 60 seconds

### Command Modes

Global configuration mode
VRF configuration mode

### Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

### Usage Guidelines

The `scope` and `interval` keywords can be entered once and in any order.
The `ip pim send-rp-announce` command is an alternative form of this command.
Using a route map, you can add group ranges that this auto rendezvous point (RP) candidate-RP can serve.

**Note**

Use the same configuration guidelines for the route-map auto-rp-range that you used when you create a route map for static RPs.

This command requires the LAN Base Services license.
**Examples**

This example shows how to configure a PIM Auto-RP candidate RP:

```
switch(config)# ip pim auto-rp rp-candidate ethernet 2/1 group-list 239.0.0.0/24
```

```
switch(config)#
```

This example shows how to remove a PIM Auto-RP candidate RP:

```
switch(config)# no ip pim auto-rp rp-candidate ethernet 2/1 group-list 239.0.0.0/24
```

```
switch(config)#
```

**Related Commands**

<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

You can specify the rendezvous point (RP) and group addresses and whether the type is ASM with the `match ip multicast` command in a route-map policy.

This command requires the LAN Base Services license.

**Examples**

This example shows how to allow the Auto-RP mapping agents to filter Auto-RP Announce messages:

```
switch(config)# ip pim auto-rp rp-candidate-policy my_policy
```

This example shows how to disable filtering:

```
switch(config)# no ip pim auto-rp rp-candidate-policy
switch(config)#
```

ip pim border

To configure an interface on an IPv4 Protocol Independent Multicast (PIM) border, use the `ip pim border` command. To remove an interface from a PIM border, use the `no` form of this command.

```
  ip pim border
  no ip pim border
```

**Syntax Description**
This command has no arguments or keywords.

**Command Default**
The interface is not on a PIM border.

**Command Modes**
Interface configuration mode

ip pim bsr bsr-policy

To allow the bootstrap router (BSR) client routers to filter IPv4 Protocol Independent Multicast (PIM) BSR messages that are based on a route-map policy, use the `ip pim bsr bsr-policy` command. To disable filtering, use the `no` form of this command.

```
ip pim bsr bsr-policy policy-name
no ip pim bsr bsr-policy [policy-name]
```

**Syntax Description**
- `policy-name` Route-map policy name.

**Command Default**
- Disabled

**Command Modes**
- Global configuration mode
- VRF configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**
- You can specify which source addresses to filter messages from with the `match ip multicast` command in a route-map policy.
- This command requires the LAN Base Services license.

**Examples**
- This example shows how to allow the BSR client routers to filter BSR messages:

  ```
  switch(config)# interface ethernet 2/2
  switch(config-if)# no switchport
  switch(config-if)# ip pim bsr bsr-policy my_bsr_policy
  ```

- This example shows how to disable filtering:

  ```
  switch(config)# interface ethernet 2/2
  switch(config-if)# no switchport
  switch(config-if)# no ip pim bsr bsr-policy
  ```

**Related Commands**

ip pim bsr-candidate

To configure the router as an IPv4 Protocol Independent Multicast (PIM) bootstrap router (BSR) candidate, use the `ip pim bsr-candidate` command. To remove a router as a BSR candidate, use the no form of this command.

```
ip pim [bsr] bsr-candidate [if-type if-number [hash-len hash-len] [priority priority]]
no ip pim [bsr] bsr-candidate [if-type if-number] [hash-len hash-len] [priority priority]
```

**Syntax Description**

- **bsr** (Optional) Specifies the BSR protocol RP-distribution configuration.
- **if-type** Interface type. For more information, use the question mark (?) online help function.
- **if-number** Interface or subinterface number. For more information about the numbering syntax for your networking device, use the question mark (?) online help function.
- **hash-len** (Optional) Specifies the hash mask length used in BSR messages. The range is from 0 to 32. The default is 30.
- **hash-len**
- **priority** (Optional) Specifies the BSR priority used in BSR messages. The range is from 0 to 255. The default is 64.
- **priority**

**Command Default**

- The hash mask length is 30.
- The BSR priority is 64.

**Command Modes**

- Global configuration mode
- VRF configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- The interface specified is used to derive the BSR source IP address used in BSR messages.
- This command requires the LAN Base Services license.

**Examples**

This example shows how to configure a router as a BSR candidate:

```
switch(config)# ip pim bsr-candidate ethernet 2/2
```

This example shows how to remove a router as a BSR candidate:

```
switch(config)# no ip pim bsr-candidate
switch(config)#
```

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

### Usage Guidelines

A router configured as either a candidate rendezvous point (RP) or a candidate BSR will automatically listen to and forward all BSR protocol messages, unless an interface is configured with the domain border feature.

The `ip pim bsr listen` command is an alternative form of this command.

This command requires the LAN Base Services license.

### Examples

This example shows how to forward BSR and Candidate-RP messages:

```
switch(config)# ip pim bsr forward
```

This example shows how to disable forwarding:

```
switch(config)# no ip pim bsr forward
switch(config)#
```

</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

To display whether flush routes are configured, use this command line:

```
switch(config)# show running-config | include flush-routes
```

This command requires the LAN Base Services license.

**Examples**

This example shows how to remove routes when the PIM process is restarted:

```
switch(config)# ip pim flush-routes
switch(config)#
```

This example shows how to leave routes in place when the PIM process is restarted:

```
switch(config)# no ip pim flush-routes
switch(config)#
```

ip pim hello-authentication ah-md5

To enable an MD5 hash authentication key in IPv4 Protocol Independent Multicast (PIM) hello messages, use the `ip pim hello-authentication ah-md5` command. To disable hello-message authentication, use the `no` form of this command.

```
ip pim hello-authentication ah-md5 auth-key
no ip pim hello-authentication ah-md5 [auth-key]
```

**Syntax Description**

<table>
<thead>
<tr>
<th>auth-key</th>
<th>MD5 authentication key. You can enter an unencrypted (cleartext) key, or one of these values followed by a space and the MD5 authentication key:</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Specifies an unencrypted (cleartext) key</td>
</tr>
<tr>
<td>3</td>
<td>Specifies a 3-DES encrypted key</td>
</tr>
<tr>
<td>7</td>
<td>Specifies a Cisco Type 7 encrypted key</td>
</tr>
</tbody>
</table>

The key can be from 1 to 16 characters.

**Command Default**

Disabled

**Command Modes**

Interface configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Triple Data Encryption Standard (3-DES) is a strong form of encryption (168-bit) that allows sensitive information to be transmitted over untrusted networks. Cisco Type 7 encryption uses the algorithm from the Vigenère cipher.

This command requires the LAN Base Services license.

**Examples**

This example shows how to enable a 3-DES encrypted key for PIM hello-message authentication:

```
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# ip pim hello-authentication ah-md5 3 myauthkey
```

This example shows how to disable PIM hello-message authentication:

```
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# no ip pim hello-authentication ah-md5
switch(config-if)#
```
**ip pim hello-authentication ah-md5**

ip pim hello-interval

To configure the IPv4 Protocol Independent Multicast (PIM) hello-message interval on an interface, use the `ip pim hello-interval` command. To reset the hello interval to the default, use the `no` form of this command.

```
ip pim hello-interval interval
no ip pim hello-interval [interval]
```

### Syntax Description

- **interval**
  - Interval in milliseconds. The range is from 1 to 18,724,286. The default is 30000.

### Command Default

The PIM hello interval is 30,000 milliseconds.

### Command Modes

Interface configuration mode

### Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>

**ip pim jp-policy**

To filter IPv4 Protocol Independent Multicast (PIM) join-prune messages that are based on a route-map policy, use the `ip pim jp-policy` command. To disable filtering, use the `no` form of this command.

```bash
ip pim jp-policy policy-name [in | out]
no ip pim jp-policy [policy-name]
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>policy-name</code></td>
<td>Route-map policy name.</td>
</tr>
<tr>
<td><code>in</code></td>
<td>Specifies that the system applies a filter only for incoming messages.</td>
</tr>
<tr>
<td><code>out</code></td>
<td>Specifies that the system applies a filter only for outgoing messages.</td>
</tr>
</tbody>
</table>

**Command Default**

Disabled; no filter is applied for either incoming or outgoing messages.

**Command Modes**

Interface configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Beginning with Cisco NX-OS Release 4.2(3), the `ip pim jp-policy` command filters messages in both incoming and outgoing directions. To specify filtering only incoming messages, use the optional `in` keyword; to specify filtering only outgoing messages, use the optional `out` keyword. When you enter the command with no keywords, that is no explicit direction, the system rejects further configurations if given with explicit direction.

Use the `ip pim jp-policy` command to filter incoming messages. You can configure the route map to prevent state from being created in the multicast routing table.

You can specify group, group and source, or group and rendezvous point (RP) addresses to filter messages with the `match ip multicast` command.

This command requires the LAN Base Services license.

**Examples**

This example shows how to filter PIM join-prune messages:

```bash
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# ip pim jp-policy my_jp_policy
```

This example shows how to disable filtering:

```bash
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# no ip pim jp-policy
switch(config-if)#
```

ip pim neighbor-policy

To configure a route-map policy that determines which IPv4 Protocol Independent Multicast (PIM) neighbors should become adjacent, use the `ip pim neighbor-policy` command. To reset to the default, use the `no` form of this command.

```
ip pim neighbor-policy policy-name
no ip pim neighbor-policy [policy-name]
```

**Syntax Description**

- `policy-name` Route-map policy name.

**Command Default**
Forms adjacency with all neighbors.

**Command Modes**
Interface configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

You can use the `match ip address` command in a route-map policy to specify which groups to become adjacent to.

This command requires the LAN Base Services license.

**Examples**

This example shows how to configure a policy that determines which PIM neighbors should become adjacent:

```
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# ip pim neighbor-policy
```

This example shows how to reset to the default:

```
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# no ip pim neighbor-policy
```

ip pim pre-build-spt

To prebuild the shortest path tree (SPT) for all known (S,G) in the routing table by triggering Protocol Independent Multicast (PIM) joins upstream, use the `ip pim pre-build-spt` command. To reset to the default, use the `no` form of this command.

```
ip pim pre-build-spt
no ip pim pre-build-spt
```

Syntax Description
This command has no arguments or keywords.

Command Default
Joins are triggered only if the OIF list is not empty.

Command Modes
VRF configuration mode

Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

Usage Guidelines
To prebuild the SPT for all known (S,G)s in the routing table by triggering PIM joins upstream, even in the absence of any receivers, use the `ip pim pre-build-spt` command.

By default, PIM (S,G) joins are triggered upstream only if the OIF-list for the (S,G) is not empty. It is useful in certain scenarios to prebuild the SPTs and maintain the (S,G) states even when the system is not forwarding on these routes.

This command requires the LAN Base Services license.

Examples
This example shows how to prebuild the SPT in the absence of receivers:

```
switch(config)# vrf context Enterprise
switch(config-vrf)# ip pim pre-build-spt
switch(config-vrf)#
```

Related Commands

<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

You can use the match ip multicast command in a route-map policy to specify the group or group and source addresses whose register messages that should be filtered.

This command requires the LAN Base Services license.

**Examples**

This example shows how to enable filtering of PIM Register messages:

```
switch(config)# ip pim register-policy my_register_policy
```

This example shows how to disable message filtering:

```
switch(config)# no ip pim register-policy
switch(config)#
```

ip pim register-rate-limit

To configure a rate limit for IPv4 Protocol Independent Multicast (PIM) data registers, use the \texttt{ip pim register-rate-limit} command. To remove a rate limit, use the \texttt{no} form of this command.

\begin{verbatim}
  ip pim register-rate-limit \textit{rate}
  no ip pim register-rate-limit \textit{[rate]}
\end{verbatim}

\textbf{Syntax Description}

\begin{tabular}{ll}
  \textit{rate} & Rate in packets per second. The range is from 1 to 65,535. \\
\end{tabular}

\textbf{Command Default}

None

\textbf{Command Modes}

Global configuration mode

  Command & Description \\
  show ip pim vrf detail & Displays information about the PIM configuration. \\
\end{tabular}
ip pim register-source

To configure the IP source address of a register message to an interface address other than the outgoing interface address of the designated router (DR) leading toward the rendezvous point (RP), use the `ip pim register-source` command. To remove the IP source address register message configuration, use the `no` form of this command.

```
ip pim register-source [ethernet slot/port | loopback if_number | port-channel pc_number | tunnel tunnel_number | vlan vlan_number]

no ip pim register-source [ethernet slot/port | loopback if_number | port-channel pc_number | tunnel tunnel_number | vlan vlan_number]
```

**Syntax Description**

- `ethernet slot/port` (Optional) Specifies the Ethernet interface. The range is from 1 to 255.
- `loopback if_number` (Optional) Specifies the virtual interface. The range is from 0 to 1023.
- `port-channel pc_number` (Optional) Specifies the port-channel number. The range is from 1 to 4096.
- `tunnel tunnel_number` (Optional) Specifies the tunnel interface. The range is from 0 to 4095.
- `vlan vlan_number` (Optional) Specifies the VLAN interface. The range is from 1 to 4094.

**Command Default**

By default, the IP address of the outgoing interface of the DR leading toward the RP is used as the IP source address of a register message.

**Command Modes**

VRF configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U4(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

This command is required only when the IP source address of a register message is not a uniquely routed address to which the RP can send packets. This situation might occur if the source address is filtered so that packets sent to it are not be forwarded or if the source address is not unique to the network. In these cases, the replies sent from the RP to the source address fail to reach the DR, which results in Protocol Independent Multicast sparse mode (PIM-SM) protocol failures.

If no IP source address is configured or if the configured source address is not in service, the IP address of the outgoing interface of the DR leading toward the RP is used as the IP source address of the register message.

We recommend that you use a loopback interface with an IP address that is uniquely routed throughout the PIM-SM domain.

This command requires the LAN Base Services license.
ip pim register-source

Examples

This example shows how to configure the IP source address of the register message:

switch(config)# vrf context Enterprise
switch(config-vrf)# ip pim register-source ethernet 2/3
switch(config-vrf)#

This example shows how to remove the IP source address register message configuration:

switch(config-vrf)# no ip pim register-source ethernet 2/3
switch(config-vrf)#

Related Commands

<td>Displays information about the PIM configuration.</td>
</tr>
</tbody>
</table>
ip pim rp-address

To configure an IPv4 Protocol Independent Multicast (PIM) static rendezvous point (RP) address for a multicast group range, use the `ip pim rp-address` command. To remove a static RP address, use the `no` form of this command.

```
ip pim rp-address rp-address [group-list prefix | override | route-map policy-name]
no ip pim rp-address rp-address [group-list prefix | override | route-map policy-name]
```

**Syntax Description**

- `rp-address`: IP address of a router which is the RP for a group range.
- `group-list prefix`: (Optional) Specifies a group range for a static RP.
- `override`: (Optional) Specifies the RP address. The RP address overrides the dynamically learned RP addresses.
- `route-map policy-name`: (Optional) Specifies a route-map policy name.

**Command Default**
The group range is treated in ASM mode.

**Command Modes**
- Global configuration mode
- VRF configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**
The `match ip multicast` command is the only `match` command that is evaluated in the route map. You can specify group prefix to filter messages with the `match ip multicast` command.

Customers can use this “override” provision, if they want the static RPs always to override the dynamic ones.

This command requires the LAN Base Services license.

**Examples**

This example shows how to configure a PIM static RP address for a serving group range and to override any dynamically learned (through BSR) RP addresses:

```
switch(config)# ip pim rp-address 1.1.1.1 group-list 225.1.0.0/16 override
```

This example shows how to configure a PIM static RP address for a group range:

```
switch(config)# ip pim rp-address 192.0.2.33 group-list 224.0.0.0/9
```

This example shows how to remove a static RP address:

```
switch(config)# no ip pim rp-address 192.0.2.33
```

# ip pim rp-candidate

To configure the router as an IPv4 Protocol Independent Multicast (PIM) bootstrap router (BSR) rendezvous point (RP) candidate, use the `ip pim rp-candidate` command. To remove the router as an RP candidate, use the `no` form of this command.

```
ip pim [bsr] rp-candidate {ethernet slot/port | loopback if_number | port-channel number} {group-list prefix} [priority priority] [interval interval]
no ip pim [bsr] rp-candidate {ethernet slot/port | loopback if_number | port-channel number} {group-list prefix} [priority priority] [interval interval]
```

## Syntax Description

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>bsr</td>
<td>(Optional) Specifies the BSR protocol RP-distribution configuration.</td>
</tr>
<tr>
<td>ethernet slot/port</td>
<td>(Optional) Specifies the Ethernet interface and the slot number and port number. The slot number is from 1 to 255, and the port number is from 1 to 128.</td>
</tr>
<tr>
<td>loopback if_number</td>
<td>(Optional) Specifies the loopback interface. The loopback interface number is from 0 to 1023.</td>
</tr>
<tr>
<td>port-channel number</td>
<td>(Optional) Specifies the EtherChannel interface and EtherChannel number. The range is from 1 to 4096.</td>
</tr>
<tr>
<td>group-list prefix</td>
<td>Specifies a group range handled by the RP.</td>
</tr>
<tr>
<td>priority priority</td>
<td>(Optional) Specifies the RP priority used in candidate-RP messages. The range is from 0 to 65,535. The default is 192.</td>
</tr>
<tr>
<td>interval interval</td>
<td>(Optional) Specifies the BSR message transmission interval in seconds. The range is from 1 to 65,535. The default is 60.</td>
</tr>
</tbody>
</table>

## Command Default

The RP priority is 192.
The BSR message interval is 60 seconds.

## Command Modes

Global configuration mode
VRF configuration mode

## Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

## Usage Guidelines

We recommend that you configure the candidate RP interval to be a minimum of 15 seconds.
Using this route map, you can add a range of group lists that this candidate-RP can serve.

## Note

Use the same configuration guidelines for the route-map auto-rp-range that you used when you created a route map for static RPs.
This command requires the LAN Base Services license.

**Examples**

This example shows how to configure the router as a PIM BSR RP candidate:

```
switch(config)# ip pim rp-candidate ethernet 2/11 group-list 239.0.0.0/24
```

This example shows how to remove the router as an RP candidate:

```
switch(config)# no ip pim rp-candidate
switch(config)#
```

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>show ip pim rp</td>
<td>Displays information about PIM RPs.</td>
</tr>
</tbody>
</table>
ip pim send-rp-announce

To configure an IPv4 Protocol Independent Multicast (PIM) Auto-RP candidate rendezvous point (RP), use the **ip pim send-rp-announce** command. To remove an Auto-RP candidate RP, use the no form of this command.

```
ip pim send-rp-announce {ethernet slot/port | loopback if_number | port-channel number} {group-list prefix} {{scope ttl} | {interval interval}}
no ip pim send-rp-announce [{ethernet slot/port | loopback if_number | port-channel number} {group-list prefix} {{scope ttl} | {interval interval}}]
```

**Syntax Description**

- **ethernet slot/port**
  - (Optional) Specifies the Ethernet interface and the slot number and port number. The slot number is from 1 to 255, and the port number is from 1 to 128.

- **loopback if_number**
  - (Optional) Specifies the loopback interface. The loopback interface number is from 0 to 1023.

- **port-channel number**
  - (Optional) Specifies the EtherChannel interface and EtherChannel number. The range is from 1 to 4096.

- **group-list prefix**
  - Specifies a group range handled by the RP.

- **scope ttl**
  - (Optional) Specifies a time-to-live (TTL) value for the scope of Auto-RP Announce messages. The range is from 1 to 255. The default is 32.

  **Note** See the **ip pim border** command to explicitly define a router on the edge of a PIM domain rather than using the **scope** argument.

- **interval interval**
  - (Optional) Specifies an Auto-RP Announce message transmission interval in seconds. The range is from 1 to 65,535. The default is 60.

**Command Default**

The TTL is 32.
The Auto-RP Announce message interval is 60 seconds.

**Command Modes**

- Global configuration mode
- VRF configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

- The **scope** and **interval** keywords can be entered once and in any order.
- The **ip pim auto-rp rp-candidate** command is an alternative form of this command.
- This command requires the LAN Base Services license.
Examples

This example shows how to configure a PIM Auto-RP candidate RP:

```
switch(config)# ip pim send-rp-announce ethernet 2/1 group-list 239.0.0.0/24
```

This example shows how to remove a PIM Auto-RP candidate RP:

```
switch(config)# no ip pim send-rp-announce ethernet 2/1 group-list 239.0.0.0/24
switch(config)#
```

**ip pim sg-expiry-timer**

To adjust the (S, G) expiry timer interval for Protocol Independent Multicast sparse mode (PIM-SM) (S, G) multicast routes, use the `ip pim sg-expiry-timer` command. To reset to the default values, use the `no` form of the command.

```
ip pim [sparse] sg-expiry-timer seconds [sg-list route-map]
no ip pim [sparse] sg-expiry-timer seconds [sg-list route-map]
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>sparse</code></td>
<td>(Optional) Specifies sparse mode.</td>
</tr>
<tr>
<td><code>seconds</code></td>
<td>Expiry-timer interval. The range is from 181 to 57600 seconds.</td>
</tr>
<tr>
<td><code>sg-list</code></td>
<td>(Optional) Specifies S,G values to which the timer applies. The route map name can be a maximum of 100 alphanumeric characters.</td>
</tr>
<tr>
<td><code>route-map</code></td>
<td></td>
</tr>
</tbody>
</table>

**Command Default**

The default expiry time is 180 seconds. The timer applies to all (S, G) entries in the routing table.

**Command Modes**

VRF configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>

### ip pim sparse-mode

To enable IPv4 Protocol Independent Multicast (PIM) sparse mode on an interface, use the `ip pim sparse-mode` command. To disable PIM on an interface, use the `no` form of this command.

```
ip pim sparse-mode
no ip pim [sparse-mode]
```

**Syntax Description**
This command has no arguments or keywords.

**Command Default**
Disabled

**Command Modes**
Interface configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**
This command requires the LAN Base Services license.

**Examples**
This example shows how to enable PIM sparse mode on an interface:

```bash
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# ip pim sparse-mode
```

This example shows how to disable PIM on an interface:

```bash
switch(config)# interface ethernet 2/2
switch(config-if)# no switchport
switch(config-if)# no ip pim
```

ip pim spt-threshold infinity

To create the IPv4 Protocol Independent Multicast (PIM) (*, G) state only (where no source state is created), use the **ip pim spt-threshold infinity** command. To remove the creation of the shared tree state only, use the **no** form of this command.

```plaintext
ip pim spt-threshold infinity group-list route-map-name
no ip pim spt-threshold infinity [group-list route-map-name]
```

### Syntax Description
- **route-map-name**: Route-map policy name that defines the group prefixes where this feature is applied. A route-map policy name can be a maximum of 100 alphanumeric characters.

### Command Default
None

### Command Modes
- Global configuration mode
- VRF configuration mode

### Command History
- **Release** 5.0(3)U4(1) **Modification** This command was introduced.

### Usage Guidelines
You can specify up to 500 sequence lines in a route map.

The **match ip multicast** command is the only match command that is evaluated in the route map. You can specify the group prefix to filter messages with the **match ip multicast** command.

You must have enabled PIM before you can use the **ip pim spt-threshold infinity** command.

**Note**
This command is not supported for virtual port channels (vPCs).

This command requires the Enterprise Services license.

### Examples
This example shows how to create the PIM (*, G) state only for the group prefixes defined in my_group_map:
```
switch(config)# ip pim spt-threshold infinity group-list my_group_map
```

This example shows how to remove the creation of the (*, G) state only:
```
switch(config)# no ip pim spt-threshold infinity
```

### Related Commands
- **show ip pim rp**: Displays information about PIM RPs.
ip pim ssm policy

To configure group ranges for Source Specific Multicast (SSM) using a route-map policy, use the `ip pim ssm policy` command. To remove the SSM group range policy, use the `no` form of this command.

```
ip pim ssm policy policy-name
no ip pim ssm policy policy-name
```

**Syntax Description**

| `policy-name` | Route-map policy name that defines the group prefixes where this feature is applied. |

**Command Default**
The SSM range is 232.0.0.0/8.

**Command Modes**
Global configuration mode
VRF configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**
This command requires the LAN Base Services license.

**Examples**

This example shows how to configure a group range for SSM:

```
switch(config)# ip pim ssm policy my_ssm_policy
```

This example shows how to reset the group range to the default:

```
switch(config)# no ip pim ssm policy my_ssm_policy
```

**Related Commands**

ip pim state-limit

To configure a maximum number of IPv4 Protocol Independent Multicast (PIM) state entries in the current virtual routing and forwarding (VRF) instance, use the `ip pim state-limit` command. To remove the limit on state entries, use the `no` form of this command.

```
ip pim state-limit max-states [reserved policy-name max-reserved]
no ip pim state-limit [max-states [reserved policy-name max-reserved]]
```

**Syntax Description**

- `max-states`: Maximum number of (*, G) and (S, G) entries allowed in this VRF. The range is from 1 to 429,496,7295. The default is no limit.
- `reserved`: (Optional) Specifies that a number of state entries are to be reserved for the routes specified in a policy map.
- `policy-name`: (Optional) Route-map policy name.
- `max-reserved`: (Optional) Maximum reserved (*, G) and (S, G) entries allowed in this VRF. Must be less than or equal to the maximum states allowed. The range is from 1 to 429,496,7295.

**Command Default**

None

**Command Modes**

Global configuration mode
VRF configuration mode

**Command History**

<table>

</table>

**Usage Guidelines**

To display commands where state limits are configured, use this command line:

```
switch(config)# show running-config | include state-limit
```

This command requires the LAN Base Services license.

**Examples**

This example shows how to configure a state entry limit with a number of state entries reserved for routes in a policy map:

```
switch(config)# ip pim state-limit 100000 reserved my_reserved_policy 40000
```

This example shows how to remove the limits on state entries:

```
switch(config)# no ip pim state-limit
switch(config)#
```

</tr>
</tbody>
</table>

**Usage Guidelines**

You can use the `match ip multicast` command in a route-map policy to specify the groups where shared trees should be enforced.

This command requires the LAN Base Services license.

**Examples**

This example shows how to create the PIM (*, G) state only for the group prefixes defined in `my_group_policy`:

```
switch(config)# ip pim use-shared-tree-only group-list my_group_policy
```

This example shows how to remove the creation of the (*, G) state only:

```
switch(config)# no ip pim use-shared-tree-only
switch(config)#
```

ip routing multicast event-history

To configure the size of the IPv4 Multicast Routing Information Base (MRIB) event history buffers, use the ip routing multicast event-history command. To revert to the default buffer size, use the no form of this command.

```
ip routing multicast event-history { cli | mfdm-debugs | mfdm-events | mfdm-stats | rib | vrf } size buffer-size
no ip routing multicast event-history { cli | mfdm-debugs | mfdm-events | mfdm-stats | rib | vrf } size buffer-size
```

Syntax Description

- **cli**: Configures the CLI event history buffer.
- **mfdm-debugs**: Configures the multicast FIB distribution (MFDM) debug event history buffer.
- **mfdm-events**: Configures the multicast FIB distribution (MFDM) non-periodic events event history buffer.
- **mfdm-stats**: Configures the MFDM sum event history buffer.
- **rib**: Configures the RIB event history buffer.
- **vrf**: Configures the virtual routing and forwarding (VRF) event history buffer.
- **size**: Specifies the size of the buffer to allocate.
- **buffer-size**: Buffer size that is one of the following values: disabled, large, medium, or small. The default buffer size is small.

Command Default

All history buffers are allocated as small.

Command Modes

Global configuration mode

</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

Usage Guidelines

To display configured buffer sizes, use this command line:

```
switch(config)# show running-config | include “ip routing”
```

This command does not require a license.

Examples

This example shows how to configure the size of the MRIB MFDM event history buffer:

```
switch(config)# ip routing multicast event-history mfdm size large
```

switch(config)#

ip routing multicast holddown

To configure the IPv4 multicast routing initial holddown period, use the ip routing multicast holddown command. To revert to the default holddown period, use the no form of this command.

```
[ip | ipv4] routing multicast holddown holddown-period
no [ip | ipv4] routing multicast holddown holddown-period
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>holddown-period</td>
<td>Initial route holddown period in seconds. The range is from 90 to 210. Specify 0 to disable the holddown period. The default is 210.</td>
</tr>
</tbody>
</table>

**Command Default**

The holddown period is 210 seconds.

**Command Modes**

Global configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

To display the holddown period configuration, use this command line:

```
switch(config)# show running-config | include "ip routing multicast holddown"
```

This command does not require a license.

**Examples**

This example shows how to configure the routing holddown period:

```
switch(config)# ip routing multicast holddown 100
switch(config)#
```

**Related Commands**

ip routing multicast software-replicate

To enable software replication of IPv4 Protocol Independent Multicast (PIM) Any Source Multicast (ASM) packets that are leaked to the software for state creation, use the `ip routing multicast software-replicate` command. To reset to the default, use the `no` form of this command.

```
  ip routing multicast software-replicate
  no ip routing multicast software-replicate
```

**Syntax Description**
This command has no arguments or keywords.

**Command Default**
No software replication.

**Command Modes**
Global configuration mode

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.0(3)U1(1)</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**
By default, these packets are used by the software only for (S,G) state creation and then dropped. This command does not require a license.

**Examples**
This example shows how to enable software replication of IPv4 PIM ASM packets:

```
switch(config)# ip routing multicast software-replicate
switch(config)#
```

no switchport

To configure the interface as a Layer 3 Ethernet interface, use the no switchport command.

    no switchport

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

Interface configuration mode

Command History

Release   Modification
5.0(3)U1(1)  This command was introduced.

Usage Guidelines

You can configure any Ethernet port as a routed interface. When you configure an interface as a Layer 3 interface, any configuration specific to Layer 2 on this interface is deleted.

If you want to configure a Layer 3 interface for Layer 2, enter the switchport command. Then, if you change a Layer 2 interface to a routed interface, enter the no switchport command.

This command requires the LAN Base Services license.

Examples

This example shows how to enable an interface as a Layer 3 routed interface:

    switch(config)# interface ethernet 1/5
    switch(config-if)# no switchport
    switch(config-if)#

This example shows how to configure a Layer 3 interface as a Layer 2 interface:

    switch(config)# interface ethernet 1/5
    switch(config-if)# switchport
    switch(config-if)#
