

# Configuring Seamless Integration of EVPN with L3VPN (MPLS SR)

---

This chapter contains the following sections:

- [Information About Configuring Seamless Integration of EVPN with L3VPN \(MPLS SR\)](#), on page 1
- [Guidelines and Limitations for Configuring Seamless Integration of EVPN with L3VPN \(MPLS SR\)](#), on page 3
- [Configuring Seamless Integration of EVPN with L3VPN \(MPLS SR\)](#), on page 4
- [Example Configuration for Configuring Seamless Integration of EVPN with L3VPN \(MPLS SR\)](#), on page 8

## Information About Configuring Seamless Integration of EVPN with L3VPN (MPLS SR)

Data Center (DC) deployments have adopted VXLAN EVPN for its benefits such as EVPN control-plane learning, multitenancy, seamless mobility, redundancy, and easier POD additions. Similarly, the CORE is either an Label Distribution Protocol (LDP)-based MPLS L3VPN network or transitioning from the traditional MPLS L3VPN LDP-based underlay to a more sophisticated solution like Segment Routing (SR). Segment Routing is adopted for its benefits such as:

- Unified IGP and MPLS control planes
- Simpler traffic engineering methods
- Easier configuration
- SDN adoption

With two different technologies, one within the data center (DC) and one in the CORE, there is a natural necessity to handoff from VXLAN to an MPLS-based core at the DCI nodes, which sit on the edge of the DC domain, interfacing with the Core edge router.

Figure 1: Topology Overview

307534

In the previous diagram, two DC pods, each running VXLAN, are being Layer 3 extended over a WAN/Core running MPLS/SR. Another method is classical MPLS L3VPN using LDP. The edge devices in the DC domain (border PE1, PE2, PE3, and PE4) are the DCI nodes doing the handoff between VXLAN and the MPLS-based Core network.

# Guidelines and Limitations for Configuring Seamless Integration of EVPN with L3VPN (MPLS SR)

Feature	Cisco Nexus 3600	Comments
VXLAN EVPN to SR-L3VPN	Yes	Extend Layer 3 connectivity between different DC pods Underlay IGP/BGP with SR extensions.
VXLAN EVPN to SR-L3VPN	Yes	Extend Layer 3 connectivity between DC POD running VXLAN and any domain(DC or CORE) running SR.
VXLAN EVPN to MPLS L3VPN (LDP)	Yes	Underlay is LDP.

The following features are supported:

- Layer 3 orphans
- Layer 3 hand-off
- Layer 3 physical interfaces type for core-facing ports
- Per-VRF labels
- LDP
- Segment routing

---

**Note** Segment routing and LDP cannot co-exist.

---

The following features are not supported:

- vPC for redundancy
- Subnet stretches across the DC domain
- SVI/Subinterfaces configured MAC addresses
- Statistics
- SVI toward the MPLS core
- End-to-End Time to Live (TTL) support only in pipe mode for handoff scenario
- End-to-End Explicit Congestion Notification (ECN) for handoff scenario

# Configuring Seamless Integration of EVPN with L3VPN (MPLS SR)

The following procedure imports and reoriginates the routes from the VXLAN domain to the MPLS domain and in the other direction.

## Before you begin

### Procedure

	Command or Action	Purpose
<b>Step 1</b>	<b>configure terminal</b> <b>Example:</b> switch# <code>configure terminal</code>	Enters global configuration mode.
<b>Step 2</b>	<b>feature-set mpls</b> <b>Example:</b> switch(config)# <code>feature-set mpls</code>	Enable MPLS feature set.
<b>Step 3</b>	<b>nv overlay evpn</b> <b>Example:</b> switch(config)# <code>nv overlay evpn</code>	Enable VXLAN.
<b>Step 4</b>	<b>feature bgp</b> <b>Example:</b> switch(config)# <code>feature bgp</code>	Enable BGP.
<b>Step 5</b>	<b>feature mpls l3vpn</b> <b>Example:</b> switch(config)# <code>feature mpls l3vpn</code>	Enable Layer 3 VPN.
<b>Step 6</b>	<b>feature mpls segment-routing</b> <b>Example:</b> switch(config)# <code>feature mpls segment-routing</code>	Enable Segment Routing.
<b>Step 7</b>	<b>feature interface-vlan</b> <b>Example:</b> switch(config)# <code>feature interface-vlan</code>	Enable interface VLAN.
<b>Step 8</b>	<b>feature vn-segment-vlan-based</b> <b>Example:</b> <b>Example:</b>	Enable VLAN based VN segment.

	Command or Action	Purpose
	<code>switch(config)# feature vn-segment-vlan-based</code>	
<b>Step 9</b>	<b>feature nv overlay</b> <b>Example:</b> <b>Example:</b> <code>switch(config)# feature nv overlay</code>	Enable VXLAN.
<b>Step 10</b>	<b>router bgp <i>autonomous-system-number</i></b> <b>Example:</b> <code>switch(config)# router bgp 1</code>	Configure BGP. The value of <i>autonomous-system-number</i> is from 1 to 4294967295.
<b>Step 11</b>	<b>address-family ipv4 unicast</b> <b>Example:</b> <code>switch(config-router)# address-family ipv4 unicast</code>	Configure address family for IPv4.
<b>Step 12</b>	<b>redistribute direct route-map <i>route-map-name</i></b> <b>Example:</b> <code>switch(config-router-af)# redistribute direct route-map passall</code>	Configure redistribution.
<b>Step 13</b>	<b>network <i>address</i></b> <b>Example:</b> <code>switch(config-router-af)# network 0.0.0.0/0</code>	Injects prefixes into handoff BGP along with redistribution.
<b>Step 14</b>	<b>exit</b> <b>Example:</b> <code>switch(config-router-af)# exit</code>	Exit command mode.
<b>Step 15</b>	<b>address-family l2vpn evpn</b> <b>Example:</b> <code>switch(config-router)# address-family l2vpn evpn</code>	Configure L2VPN address family.
<b>Step 16</b>	<b>neighbor <i>address</i> remote-as <i>number</i></b> <b>Example:</b> <code>switch(config-router)# neighbor 108.108.108.108 remote-as 65535</code>	Define eBGP neighbor IPv4 address and remote Autonomous-System (AS) number.
<b>Step 17</b>	<b>update-source <i>type/id</i></b> <b>Example:</b> <code>switch(config-router-af)# update-source loopback100</code>	Define interface for eBGP peering.

	Command or Action	Purpose
Step 18	<b>ebgp-multihop</b> <i>number</i> <b>Example:</b> switch(config-router)# <b>ebgp-multihop</b> 10	Specifies multihop TTL for remote peer. The range of <i>number</i> is from 2 to 255.
Step 19	<b>address-family ipv4 unicast</b> <b>Example:</b> switch(config-router)# <b>address-family ipv4 unicast</b>	Configure the address family for IPv4.
Step 20	<b>send-community extended</b> <b>Example:</b> switch(config-router-af)# <b>send-community extended</b>	Configures community for BGP neighbors.
Step 21	<b>exit</b> <b>Example:</b> switch(config-router-af)# <b>exit</b>	Exit command mode.
Step 22	<b>address-family vpv4 unicast</b> <b>Example:</b> switch(config-router)# <b>address-family vpv4 unicast</b>	Configure the address family for IPv4.
Step 23	<b>send-community extended</b> <b>Example:</b> switch(config-router-af)# <b>send-community extended</b>	Configures community for BGP neighbors.
Step 24	<b>import l2vpn evpn reoriginate</b> <b>Example:</b> switch(config-router)# <b>import l2vpn evpn reoriginate</b>	Reoriginates the route with new RT. Can be extended to use an optional route-map.
Step 25	<b>neighbor</b> <i>address</i> <b>remote-as</b> <i>number</i> <b>Example:</b> switch(config-router)# <b>neighbor 175.175.175.2 remote-as 65535</b>	Define eBGP neighbor IPv4 address and remote Autonomous-System (AS) number.
Step 26	<b>address-family ipv4 unicast</b> <b>Example:</b> switch(config-router)# <b>address-family ipv4 unicast</b>	Configure the address family for IPv4.
Step 27	<b>send-community extended</b> <b>Example:</b>	Configures community for BGP neighbors.

	Command or Action	Purpose
	<code>switch(config-router-af) # send-community extended</code>	
<b>Step 28</b>	<b>exit</b> <b>Example:</b> <code>switch(config-router-af) # exit</code>	Exit command mode.
<b>Step 29</b>	<b>address-family ipv6 unicast</b> <b>Example:</b> <code>switch(config-router) # address-family ipv6 unicast</code>	Configure the IPv6 unicast address family. This is required for IPv6 over VXLAN with an IPv4 underlay.
<b>Step 30</b>	<b>send-community extended</b> <b>Example:</b> <code>switch(config-router-af) # send-community extended</code>	Configures community for BGP neighbors.
<b>Step 31</b>	<b>exit</b> <b>Example:</b> <code>switch(config-router-af) # exit</code>	Exit command mode.
<b>Step 32</b>	<b>address-family l2vpn evpn</b> <b>Example:</b> <code>switch(config-router) # address-family l2vpn evpn</code>	Configure L2VPN address family.
<b>Step 33</b>	<b>send-community extended</b> <b>Example:</b> <code>switch(config-router-af) # send-community extended</code>	Configures community for BGP neighbors.
<b>Step 34</b>	<b>exit</b> <b>Example:</b> <code>switch(config-router-af) # exit</code>	Exit command mode.
<b>Step 35</b>	<b>import vpn unicast reoriginate</b> <b>Example:</b> <code>switch(config-router) # import vpn unicast reoriginate</code>	Reoriginate the route with new RT. Can be extended to use an optional route-map.

## Example Configuration for Configuring Seamless Integration of EVPN with L3VPN (MPLS SR)

The following is a sample CLI configuration that is required to import and reoriginate the routes from the VXLAN domain to the MPLS domain and in the reverse direction.

```
switch# sh running-config

!Command: show running-config
!Running configuration last done at: Sat Mar 17 10:00:40 2001
