Configuring LLDP

This chapter contains the following sections:

Configuring LLDP

Before You Begin

Ensure that the Link Layer Discovery Protocol (LLDP) feature is enabled on the switch.

SUMMARY STEPS

1. switch# **configure terminal**
2. switch(config)# **lldp** {**holdtime** *seconds* | **reinit** *seconds* | **timer** *seconds* | **tlv-select** {**dcbxp** | **management-address** | **port-description** | **port-vlan** | **system-capabilities** | **system-description** | **system-name**}}
3. switch(config)# **no lldp** {**holdtime** | **reinit** | **timer**}
4. (Optional)switch# **show lldp**

DETAILED STEPS

	Command or Action	Purpose
Step 1	switch# **configure terminal**	Enters global configuration mode.
Step 2	switch(config)# **lldp** {**holdtime** *seconds* | **reinit** *seconds* | **timer** *seconds* | **tlv-select** {**dcbxp** | **management-address** | **port-description** | **port-vlan** | **system-capabilities** | **system-description** | **system-name**}}	Configures LLDP options. Use the **holdtime** option to set the length of time (10 to 255 seconds) that a device should save LLDP information received before discarding it. The default value is 120 seconds. Use the **reinit** option to set the length of time (1 to 10 seconds) to wait before performing LLDP initialization on any interface. The default value is 2 seconds.

	Command or Action	Purpose
		Use the **timer** option to set the rate (5 to 254 seconds) at which LLDP packets are sent. The default value is 30 seconds. Use the **tlv-select** option to specify the type length value (TLV). The default is enabled to send and receive all TLVs. Use the **dcbxp** option to specify the Data Center Ethernet Parameter Exchange (DCBXP) TLV messages. Use the **management-address** option to specify the management address TLV messages. Use the **port-description** option to specify the port description TLV messages. Use the **port-vlan** option to specify the port VLAN ID TLV messages. Use the **system-capabilities** option to specify the system capabilities TLV messages. Use the **system-description** option to specify the system description TLV messages. Use the **system-name** option to specify the system name TLV messages.
Step 3	switch(config)# **no lldp** {**holdtime** | **reinit** | **timer**}	Resets the LLDP values to their defaults.
Step 4	(Optional)switch# **show lldp**	Displays LLDP configurations.

This example shows how to configure the global LLDP hold time to 200 seconds:

```
switch# configure terminal
switch(config)# lldp holdtime 200
switch(config)#
```

This example shows how to enable LLDP to send or receive the management address TLVs:

```
switch# configure terminal
switch(config)# lldp tlv-select management-address
switch(config)#
```

Configuring Interface LLDP

SUMMARY STEPS

1. switch# **configure terminal**
2. switch(config)# **interface** *type slot/port*
3. switch(config-if)# [**no**] **lldp** {**receive** | **transmit**}
4. (Optional) switch# **show lldp** {**interface** | **neighbors** [**detail** | **interface** | **system-detail**] | **timers** | **traffic**}

DETAILED STEPS

	Command or Action	Purpose
Step 1	switch# **configure terminal**	Enters global configuration mode.
Step 2	switch(config)# **interface** *type slot/port*	Selects the interface to change.
Step 3	switch(config-if)# [**no**] **lldp** {**receive** | **transmit**}	Sets the selected interface to either receive or transmit. The **no** form of the command disables the LLDP transmit or receive.
Step 4	switch# **show lldp** {**interface** | **neighbors** [**detail** | **interface** | **system-detail**] | **timers** | **traffic**}	(Optional) Displays LLDP configurations.

This example shows how to set an interface to transmit LLDP packets:

```
switch# configure terminal
switch(config)# interface ethernet 1/2
switch(config-if)# lldp transmit
```

This example shows how to configure an interface to disable LLDP:

```
switch# configure terminal
switch(config)# interface ethernet 1/2
switch(config-if)# no lldp transmit
switch(config-if)# no lldp receive
```

This example shows how to display LLDP interface information:

```
switch# show lldp interface ethernet 1/2
tx_enabled: TRUE
rx_enabled: TRUE
dcbx_enabled: TRUE
Port MAC address:    00:0d:ec:a3:5f:48
Remote Peers Information
No remote peers exist
```

This example shows how to display LLDP neighbor information:

```
switch# show lldp neighbors

This example shows how to display the system details about LLDP neighbors:

```
switch# sh lldp neighbors system-detail
Capability codes:

This example shows how to display LLDP timer information:

```
switch# show lldp timers

```

This example shows how to display information about LLDP counters:

```
switch# show lldp traffic
