

Show Commands

This chapter describes the Cisco NX-OS interface commands.

show cdp all

To display the interfaces in the Cisco Discovery Protocol (CDP) database, use the **show cdp all** command.

show cdp all

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	5.0(3)N2(1)	This command was introduced.

Examples

This example shows how to display the interfaces in the CDP database:

```
switch# show cdp all
mgmt0 is up
  CDP enabled on interface
  Refresh time is 60 seconds
  Hold time is 180 seconds
Ethernet1/1 is down
  CDP enabled on interface
  Refresh time is 60 seconds
  Hold time is 180 seconds
Ethernet1/2 is down
  CDP enabled on interface
  Refresh time is 60 seconds
  Hold time is 180 seconds
Ethernet1/3 is down
  CDP enabled on interface
  Refresh time is 60 seconds
  Hold time is 180 seconds
Ethernet1/4 is down
  CDP enabled on interface
  Refresh time is 60 seconds
  Hold time is 180 seconds
Ethernet1/5 is down
  CDP enabled on interface
  Refresh time is 60 seconds
  Hold time is 180 seconds
Ethernet1/6 is down
  CDP enabled on interface
  Refresh time is 60 seconds
  Hold time is 180 seconds
<--Output truncated-->
switch#
```

Related Commands	Command	Description
	cdp	Enables CDP on the switch.

show cdp entry

To display the interfaces in the Cisco Discovery Protocol (CDP) database, use the **show cdp entry** command.

```
show cdp entry {all | name device-name}
```

Syntax Description	all	Displays all interfaces in the CDP database.
	name <i>device-name</i>	Displays a specific CDP entry matching a name. The device name can be a maximum of 256 alphanumeric characters.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	5.0(3)N2(1)	This command was introduced.

Examples

This example shows how to display all the entries in the CDP database:

```
switch# show cdp entry all
-----
Device ID:savbu-qa-dist-120
System Name:
Interface address(es):
  IPv4 Address: 192.168.0.82

Mgmt address(es):
    IPv4 Address: 192.168.0.95

switch#

```

This example shows how to display a specific entry from the CDP database:

```

switch# show cdp entry name swor95 (SSI13110AAS)
-----
Device ID:swor95 (SSI13110AAS)
System Name:swor95
Interface address(es):
    IPv4 Address: 192.168.0.95
Platform: N5K-C5010P-BF, Capabilities: Switch IGMP Filtering Supports-STP-Dispute
Interface: Ethernet1/29, Port ID (outgoing port): Ethernet1/19
Holdtime: 173 sec

```

■ show cdp entry

```
Version:
Cisco Nexus Operating System (NX-OS) Software, Version 5.0(3)N2(1)

Advertisement Version: 2
Native VLAN: 1
Duplex: full
Physical Location: snmplocation
Mgmt address(es):
    IPv4 Address: 192.168.0.95

switch#
```

Related Commands

Command	Description
cdp	Enables CDP on the switch.

show cdp global

To display the Cisco Discovery Protocol (CDP) global parameters, use the **show cdp global** command.

show cdp global

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	5.0(3)N2(1)	This command was introduced.

Examples This example shows how to display the CDP global parameters:

```
switch# show cdp global
Global CDP information:
  CDP enabled globally
  Refresh time is 60 seconds
  Hold time is 180 seconds
  CDPv2 advertisements is enabled
  DeviceID TLV in System-Name(Default) Format
switch#
```

Related Commands	Command	Description
	cdp	Enables CDP on the switch.

show cdp interface

To display the Cisco Discovery Protocol (CDP) parameters for an interface, use the **show cdp interface** command.

```
show cdp interface { ethernet slot/[QSFP-module]/port | mgmt mgmt-num }
```

Syntax Description	Parameter	Description
	ethernet <i>slot/port</i>	Specifies an Ethernet interface. The slot number is from 1 to 255 and the port number is from 1 to 128.
	<i>QSFP-module</i>	(Optional) The QSFP+ port on the Generic Expansion Module (GEM). The port numbers are from 1 to 4.
	mgmt <i>mgmt-num</i>	Specifies a management interface. The management interface number is 0.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	6.0(2)N1(2)	Support for the QSFP+ GEM.
	5.0(3)N2(1)	This command was introduced.

Examples

This example shows how to display the CDP parameters for an Ethernet interface:

```
switch# show cdp interface ethernet 1/30
Ethernet1/30 is down
  CDP enabled on interface
  Refresh time is 60 seconds
  Hold time is 180 seconds
switch#
```

This example shows how to display the CDP parameters for a management interface:

```
switch# show cdp interface mgmt 0
mgmt0 is up
  CDP enabled on interface
  Refresh time is 60 seconds
  Hold time is 180 seconds
switch#
```

Related Commands	Command	Description
	cdp	Enables CDP on the switch.

show cdp neighbors

To display the Cisco Discovery Protocol (CDP) neighbors, use the **show cdp neighbors** command.

show cdp neighbors [**interface** {**ethernet** *slot*[/*QSF**P*-*module*]/*port* | **mgmt** *mgmt-num*}] [**detail**]

Syntax Description	interface	(Optional) Displays CDP neighbor information for an interface, Ethernet or management.
	ethernet <i>slot/port</i>	(Optional) Displays CDP neighbor information for an Ethernet interface. The slot number is from 1 to 255 and the port number is from 1 to 128
	<i>QSF</i> <i>P</i> - <i>module</i>	(Optional) The QSFP+ port on the Generic Expansion Module (GEM). The port numbers are from 1 to 4.
	mgmt <i>mgmt-num</i>	(Optional) Displays CDP neighbor information for a management interface. The management interface number is 0.
	detail	(Optional) Displays the detailed information about CDP neighbors.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	6.0(2)N1(2)	Support for the QSFP+ GEM.
	5.0(3)N2(1)	This command was introduced.

Examples

This example shows how to display all CDP neighbors:

```
switch# show cdp neighbors
Capability Codes: R - Router, T - Trans-Bridge, B - Source-Route-Bridge
                  S - Switch, H - Host, I - IGMP, r - Repeater,
                  V - VoIP-Phone, D - Remotely-Managed-Device,
                  s - Supports-STP-Dispute, M - Two-port Mac Relay

Device ID         Local Intrfce   Hldtme   Capability   Platform         Port ID
savbu-qa-dist-120 mgmt0           177      S I          WS-C3750E-24T   Gig1/0/13
swor96 (SSI13110AAQ) Eth1/17         165      S I s        N5K-C5010P-BF   Eth1/19

swor96 (SSI13110AAQ) Eth1/18         165      S I s        N5K-C5010P-BF   Eth1/20

swor95 (SSI13110AAS) Eth1/29         171      S I s        N5K-C5010P-BF   Eth1/19

switch#
```

This example shows how to display the CDP neighbors for a specific Ethernet interface:

```
switch# show cdp neighbors interface ethernet 1/29
Capability Codes: R - Router, T - Trans-Bridge, B - Source-Route-Bridge
```

■ show cdp neighbors

S - Switch, H - Host, I - IGMP, r - Repeater,
 V - VoIP-Phone, D - Remotely-Managed-Device,
 s - Supports-STP-Dispute, M - Two-port Mac Relay

Device ID	Local Infrfce	Hldtme	Capability	Platform	Port ID
swor95 (SII13110AAS)	Eth1/29	146	S I s	N5K-C5010P-BF	Eth1/19

switch#

This example shows how to display the detailed information of the CDP neighbors for a specific Ethernet interface:

```
switch# show cdp neighbors interface ethernet 1/29 detail
```

```
-----
Device ID:swor95(SII13110AAS)
System Name:swor95
Interface address(es):
  IPv4 Address: 192.168.0.95

Related Commands

Command	Description
cdp	Enables CDP on the switch.

show cdp traffic

To display the Cisco Discovery Protocol (CDP) traffic statistics, use the **show cdp traffic** command.

```
show cdp traffic interface {ethernet slot[/QSFP-module]/port | mgmt mgmt-num }
```

Syntax Description	interface	Displays CDP traffic statistics for an interface, Ethernet or management.
	ethernet <i>slot/port</i>	Displays CDP traffic statistics for an Ethernet interface. The slot number is from 1 to 255 and the port number is from 1 to 128.
	<i>QSFP-module</i>	(Optional) The QSFP+ port on the Generic Expansion Module (GEM). The port numbers are from 1 to 4.
	mgmt <i>mgmt-num</i>	Displays CDP traffic statistics for a management interface. The management interface number is 0.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	6.0(2)N1(2)	Support for the QSFP+ GEM.
	5.0(3)N2(1)	This command was introduced.

Examples

This example shows how to display the CDP traffic statistics for an Ethernet interface:

```
switch# show cdp traffic interface ethernet 1/29
-----
Traffic statistics for Ethernet1/29
Input Statistics:
  Total Packets: 3203
  Valid CDP Packets: 3203
    CDP v1 Packets: 0
    CDP v2 Packets: 3203
  Invalid CDP Packets: 0
    Unsupported Version: 0
    Checksum Errors: 0
    Malformed Packets: 0

Output Statistics:
  Total Packets: 3203
    CDP v1 Packets: 0
    CDP v2 Packets: 3203
  Send Errors: 0

switch#
```

This example shows how to display CDP traffic statistics for a management interface:

```
switch# show cdp traffic interface mgmt 0
```

■ show cdp traffic

```

-----
Traffic statistics for mgmt0
Input Statistics:
  Total Packets: 3201
  Valid CDP Packets: 3201
    CDP v1 Packets: 0
    CDP v2 Packets: 3201
  Invalid CDP Packets: 0
    Unsupported Version: 0
    Checksum Errors: 0
    Malformed Packets: 0

Output Statistics:
  Total Packets: 3201
    CDP v1 Packets: 0
    CDP v2 Packets: 3201
  Send Errors: 0

switch#

```

Related Commands

Command	Description
cdp	Enables CDP on the switch.

show interface brief

To display a brief summary of the interface configuration information, use the **show interface brief** command.

show interface brief

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	5.2(1)N1(1)	This command was introduced.

Examples This example shows how to display the summary configuration information of the specified interface:

```
switch# show interface brief
```

```
-----
Ethernet      VLAN   Type Mode   Status Reason          Speed   Port
Interface                                           Ch #

Interface Status Description
-----
Lo10 up --
switch#
-----

```

Note the following in the above display:

- Ethernet 1/5 is a Layer 3-ready interface. The following fields in the display help identify an interface as a configured Layer 3 interface:
 - Mode—routed
 - Status—up
 - Reason—none
- Ethernet 1/5.2 is a Layer 3 subinterface; however, the interface is not ready for Layer 3 configuration (Status—down).
- Interface Lo10 is a Layer 3 loopback interface.

This example shows how to display a brief summary of interfaces configured as FabricPath interfaces on a switch that runs Cisco Nexus 5500 Release 5.1(3)N1(1):

```
switch# show interface brief
-----
Ethernet      VLAN   Type Mode   Status Reason                               Speed   Port
Interface                                           Ch#
-----
Eth1/1        1      eth  access down   SFP not inserted          1000(D) --
Eth1/2        --     eth  routed down   SFP not inserted          1000(D) --
Eth1/3        1      eth  access down   SFP not inserted          10G(D)  --
Eth1/4        1      eth  access down   SFP not inserted          10G(D)  --
Eth1/5        1      eth  f-path down   SFP not inserted          10G(D)  --
Eth1/6        1      eth  access down   Link not connected        10G(D)  --
Eth1/7        1      eth  fabric down   Link not connected        10G(D)  --
Eth1/8        1      eth  access down   SFP not inserted          10G(D)  --
Eth1/9        1      eth  access down   SFP not inserted          10G(D)  --
Eth1/10       1      eth  access down   SFP not inserted          10G(D)  --
Eth1/11       1      eth  access down   SFP not inserted          10G(D)  --
Eth1/12       1      eth  access down   SFP not inserted          10G(D)  --
Eth1/13       1      eth  access down   SFP not inserted          10G(D)  --
Eth1/14       1      eth  access down   SFP not inserted          10G(D)  --
Eth1/15       1      eth  pvlan  up     none                       1000(D) --
Eth1/16       1      eth  access down   SFP not inserted          10G(D)  --
Eth1/17       1      eth  access down   SFP not inserted          10G(D)  --
switch#
```

In the above display, Ethernet 1/5 has the mode shown as “f-path” indicating that it has been configured as a FabricPath port.

Related Commands

Command	Description
interface ethernet	Configures an Ethernet IEEE 802.3 interface.

show interface capabilities

To display detailed information about the capabilities of an interface, use the **show interface capabilities** command.

show interface ethernet *slot*[*QSFP-module*]/*port* capabilities

Syntax Description	ethernet <i>slot</i> / <i>port</i>	Specifies an Ethernet interface slot number and port number. The <i>slot</i> number is from 1 to 255, and the <i>port</i> number is from 1 to 128.
	<i>QSFP-module</i>	(Optional) The QSFP+ port on the Generic Expansion Module (GEM). The port numbers are from 1 to 4.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	6.0(2)N1(2)	Support for the QSFP+ GEM.
	5.2(1)N1(1)	This command was introduced.

Usage Guidelines You can use the **show interface capabilities** command only for physical interfaces.

If the interface and transceiver speed is mismatched, the SFP validation failed message is displayed when you enter the **show interface ethernet *slot*[*QSFP-module*]/*port*** command. For example, if you insert a 1-Gigabit SFP transceiver into a port without configuring the speed 1000 command, you will get this error. By default, all ports are 10 Gigabits.

Examples This example shows how to display the interface capabilities for a specific interface:

```
switch# show interface ethernet 1/1 capabilities
Ethernet1/1
  Model: N5K-C5020P-BF-XL-SU
  Type (SFP capable): SFP-H10GB-CU1M
  Speed: 1000,10000
  Duplex: full
  Trunk encap. type: 802.1Q
  Channel: yes
  Broadcast suppression: percentage (0-100)
  Flowcontrol: rx- (off/on) , tx- (off/on)
  Rate mode: none
  QOS scheduling: rx- (6q1t) , tx- (1p6q0t)
  CoS rewrite: no
  ToS rewrite: no
  SPAN: yes
  UDLD: yes
  Link Debounce: yes
```

■ show interface capabilities

```
Link Debounce Time:  yes
MDIX:                no
Pvlan Trunk capable: yes
TDR capable:         no
Port mode:           Switched
FEX Fabric:          yes
```

```
switch#
```

Related Commands	Command	Description
	interface ethernet	Configures an Ethernet IEEE 802.3 interface.

show interface debounce

To display the debounce time information for all interfaces, use the **show interface debounce** command.

show interface debounce

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	5.2(1)N1(1)	This command was introduced.

Examples This example shows how to display the debounce status of all interfaces:

```
switch# show interface debounce
```

```
-----
Port           Debounce time  Value(ms)
-----
Eth1/1         enable         100
Eth1/2         enable         100
Eth1/3         enable         100
Eth1/4         enable         100
Eth1/5         enable         100
Eth1/6         enable         100
Eth1/7         enable         100
Eth1/8         enable         100
Eth1/9         enable         100
Eth1/10        enable         100
Eth1/11        enable         100
Eth1/12        enable         100
Eth1/13        enable         100
Eth1/14        enable         100
Eth1/15        enable         100
Eth1/16        enable         100
Eth1/17        enable         100
Eth1/18        enable         100
Eth1/19        enable         100
Eth1/20        enable         100
Eth1/21        enable         100
Eth1/22        enable         100
Eth1/23        enable         100
Eth1/24        enable         100
Eth1/25        enable         100
Eth1/26        enable         100
Eth1/27        enable         100
Eth1/28        enable         100
Eth1/29        enable         100
```

■ show interface debounce

```
Eth1/30      enable      100

--More--
switch#
```

Related Commands

Command	Description
link debounce	Enables the debounce timer on an interface.

show interface ethernet

To display information about the interface configuration, use the **show interface ethernet** command.

```
show interface ethernet slot/[QSFP-module]/port[.subintf-port-no] [brief | counters | description
| status | switchport]
```

Syntax	Description
<i>slot/port</i>	Ethernet interface slot number and port number. The <i>slot</i> number is from 1 to 255, and the <i>port</i> number is from 1 to 128.
<i>QSFP-module</i>	(Optional) The QSFP+ port on the Generic Expansion Module (GEM). The port numbers are from 1 to 4.
.	(Optional) Specifies the subinterface separator. Note This keyword applies to Layer 3 interfaces.
<i>subintf-port-no</i>	(Optional) Port number for the subinterface. The range is from 1 to 48. Note This argument applies to Layer 3 interfaces.
brief	(Optional) Displays brief information about the interfaces.
counters	(Optional) Displays information about the counters configured on an interface.
description	(Optional) Displays the description of an interface configuration.
status	(Optional) Displays the operational state of the interface.
switchport	(Optional) Displays the switchport information of an interface.

Command Default Displays all information for the interface.

Command Modes EXEC mode

Command History	Release	Modification
	6.0(2)N1(2)	Support for the QSFP+ GEM.
	5.2(1)N1(1)	This command was introduced.

Usage Guidelines If the interface and transceiver speed is mismatched, the SFP validation failed message is displayed when you enter the **show interface ethernet** *slot/[QSFP-module]/port* command. For example, if you insert a 1-Gigabit SFP transceiver into a port without configuring the **speed 1000** command, you will get this error.

By default, all ports on a Cisco Nexus 5000 Series switch are 10 Gigabits.

Examples This example shows how to display the detailed configuration of the specified interface:

```
switch# show interface ethernet 1/1
Ethernet1/1 is up
```

show interface ethernet

switch#

```

This example shows how to display the detailed configuration information of a specified subinterface:

```

switch# show interface ethernet 1/5.2
Ethernet1/5.2 is up
  Hardware: 1000/10000 Ethernet, address: 0005.73a6.1dbc (bia 0005.73a6.1d6c)
  Description: Eth 1/5.2 subinterfaces
  Internet Address is 192.0.0.3/24
  MTU 1500 bytes, BW 1500 Kbit, DLY 2000 usec,
    reliability 255/255, txload 1/255, rxload 1/255
  Encapsulation 802.1Q Virtual LAN, Vlan ID 100
  EtherType is 0x8100

switch#

```

This example shows how to display the brief configuration information of a specified subinterface:

```
switch# show interface ethernet 1/5.2 brief
```

```
-----
Ethernet      VLAN   Type Mode   Status Reason          Speed   Port
Interface                                           Ch #
-----
Eth1/5.2      100   eth  routed up    none          10G(D)  --
switch#
```

This example shows how to display the purpose of a specified subinterface:

```
switch# show interface ethernet 1/5.2 description
```

```
-----
Port          Type   Speed  Description
-----
Eth1/5.2     eth    10G    Eth 1/5.2 subinterfaces
switch#
```

This example shows how to display the switchport information for a specific interface:

```
switch# show interface ethernet 1/2 switchport
Name: Ethernet1/2
Switchport: Enabled
Switchport Monitor: Not enabled
Operational Mode: trunk
Access Mode VLAN: 1 (default)
Trunking Native Mode VLAN: 1 (default)
Trunking VLANs Enabled: 1,300-800
Pruning VLANs Enabled: 2-1001
Administrative private-vlan primary host-association: none
Administrative private-vlan secondary host-association: none
Administrative private-vlan primary mapping: none
Administrative private-vlan secondary mapping: none
Administrative private-vlan trunk native VLAN: none
Administrative private-vlan trunk encapsulation: dot1q
Administrative private-vlan trunk normal VLANs: none
Administrative private-vlan trunk private VLANs: none
Operational private-vlan: none
Unknown unicast blocked: disabled
Unknown multicast blocked: disabled
Monitor destination rate-limit: 1G

switch#
```

In the above display, the Monitor destination rate-limit field displays the rate limit configured on a switchport interface on a Cisco Nexus 5010 Series switch.

Note

You can configure the monitor destination rate-limit only on a Cisco Nexus 5010 Series switch or Cisco Nexus 5020 Series switch.

Related Commands

Command	Description
interface ethernet	Configures an Ethernet IEEE 802.3 interface.
interface ethernet (Layer 3)	Configures a Layer 3 Ethernet IEEE 802.3 interface.

Command	Description
switchport mode vntag	Configures an Ethernet interface as a VNTag port.
switchport monitor rate-limit	Configures the rate limit for traffic on an interface.

show interface loopback

To display information about the loopback interface, use the **show interface loopback** command.

show interface loopback *lo-number* [**brief** | **description**]

Syntax Description	<i>lo-number</i>	Loopback interface number. The range is from 0 to 1023.
	brief	(Optional) Displays a brief summary of the loopback interface information.
	description	(Optional) Displays the description provided for the loopback interface.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	5.0(3)N1(1)	This command was introduced.

Examples

This example shows how to display the configuration information for a specific loopback interface:

```
switch# show interface loopback 10
loopback10 is up
  Hardware: Loopback
  MTU 1500 bytes, BW 8000000 Kbit, DLY 5000 usec,
    reliability 255/255, txload 1/255, rxload 1/255
  Encapsulation LOOPBACK
    0 packets input 0 bytes
    0 multicast frames 0 compressed
    0 input errors 0 frame 0 overrun 0 fifo
    0 packets output 0 bytes 0 underruns
    0 output errors 0 collisions 0 fifo

switch#
```

[Table 1](#) describes the significant fields shown in the display.

Table 1 *show interface loopback* Field Description

Field	Description
Loopback is ...	Indicates whether the interface hardware is currently active (whether carrier detect is present), is currently inactive (down), or has been taken down by an administrator (administratively down).
Hardware	Hardware is Loopback.
MTU	Maximum transmission unit (MTU) of the interface.
BW	Bandwidth (BW) of the interface in kilobits per second.
DLY	Delay (DLY) of the interface in microseconds.

Table 1 show interface loopback Field Description (continued)

Field	Description
reliability	Reliability of the interface as a fraction of 255 (255/255 is 100 percent reliability), calculated as an exponential average over 5 minutes.
txload	Load on the interface for transmitting packets as a fraction of 255 (255/255 is completely saturated), calculated as an exponential average over 5 minutes.
rxload	Load on the interface for receiving packets as a fraction of 255 (255/255 is completely saturated), calculated as an exponential average over 5 minutes.
Encapsulation	Encapsulation method assigned to interface.
LOOPBACK	Indicates whether loopback is set.
packets input	Total number of error-free packets received by the system.
bytes	Total number of bytes, including data and MAC encapsulation, in the error-free packets received by the system.
multicast frames	Total number of multicast frames enabled on the interface.
compressed	Total number of multicast frames compressed on the interface.
input errors	Sum of all errors that prevented the receipt of datagrams on the interface being examined. This may not balance with the sum of the enumerated output errors, because some datagrams may have more than one error and others may have errors that do not fall into any of the specifically tabulated categories.
frame	Number of packets received incorrectly having a CRC error and a noninteger number of octets. On a serial line, this is usually the result of noise or other transmission problems.
overrun	Number of times the serial receiver hardware was unable to hand received data to a hardware buffer because the input rate exceeded the receiver's ability to handle the data.
fifo	Number of First In, First Out (FIFO) errors in the receive direction.
packets output	Total number of messages transmitted by the system.
bytes	Total number of bytes, including data and MAC encapsulation, transmitted by the system.
underruns	Number of times that the far-end transmitter has been running faster than the near-end router's receiver can handle. This may never happen (be reported) on some interfaces.
output errors	Sum of all errors that prevented the final transmission of datagrams out of the interface being examined. Note that this may not balance with the sum of the enumerated output errors, as some datagrams may have more than one error, and others may have errors that do not fall into any of the specifically tabulated categories.
collisions	Loopback interface does not have collisions.
fifo	Number of First In, First Out (FIFO) errors in the transmit direction.

This example shows how to display the brief information for a specific loopback interface:

```
switch# show interface loopback 10 brief
```

```
-----  
Interface      Status      Description  
-----  
loopback10    up          --  
switch#
```

Related Commands

Command	Description
interface loopback	Configures a loopback interface.

show interface mac-address

To display the information about the MAC address, use the **show interface mac-address** command.

show interface [*type slot*/[*QSFP-module*]/*port* \ *portchannel-no*] **mac-address**

Syntax Description		
<i>type</i>	(Optional) Interface for which MAC addresses should be displayed. The <i>type</i> can be either Ethernet or EtherChannel.	
<i>slot/port</i>	Ethernet interface port number and slot number. The slot number is from 1 to 255, and the port number is from 1 to 128.	
<i>QSFP-module</i>	(Optional) The QSFP+ port on the Generic Expansion Module (GEM). The port numbers are from 1 to 4.	
<i>portchannel-no</i>	EtherChannel number. The EtherChannel number is from 1 to 4096.	

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	6.0(2)N1(2)	Support for the QSFP+ GEM.
	5.2(1)N1(1)	This command was introduced.

Usage Guidelines If you do not specify an interface, the system displays all the MAC addresses.

Examples This example shows how to display the information on MAC addresses for the entire switch:

```
switch# show interface mac-address
```

```
-----
Interface                Mac-Address           Burn-in Mac-Address
-----
Ethernet1/1              0005.9b78.6e7c       0005.9b78.6e48
Ethernet1/2              0005.9b78.6e7c       0005.9b78.6e49
Ethernet1/3              0005.9b78.6e7c       0005.9b78.6e4a
Ethernet1/4              0005.9b78.6e7c       0005.9b78.6e4b
Ethernet1/5              0005.9b78.6e7c       0005.9b78.6e4c
Ethernet1/6              0005.9b78.6e7c       0005.9b78.6e4d
Ethernet1/7              0005.9b78.6e7c       0005.9b78.6e4e
Ethernet1/8              0005.9b78.6e7c       0005.9b78.6e4f
Ethernet1/9              0005.9b78.6e7c       0005.9b78.6e50
Ethernet1/10             0005.9b78.6e7c       0005.9b78.6e51
Ethernet1/11             0005.9b78.6e7c       0005.9b78.6e52
Ethernet1/12             0005.9b78.6e7c       0005.9b78.6e53
Ethernet1/13             0005.9b78.6e7c       0005.9b78.6e54
Ethernet1/14             0005.9b78.6e7c       0005.9b78.6e55
Ethernet1/15             0005.9b78.6e7c       0005.9b78.6e56
```

```

Ethernet1/16          0005.9b78.6e7c  0005.9b78.6e57
Ethernet1/17          0005.9b78.6e7c  0005.9b78.6e58
Ethernet1/18          0005.9b78.6e7c  0005.9b78.6e59
Ethernet1/19          0005.9b78.6e7c  0005.9b78.6e5a

Ethernet1/21          0005.9b78.6e7c  0005.9b78.6e5c
Ethernet1/22          0005.9b78.6e7c  0005.9b78.6e5d
--More--
switch#

```

This example shows how to display the MAC address information for a specific port channel:

```
switch# show interface port-channel 5 mac-address
```

```

-----
Interface           Mac-Address      Burn-in Mac-Address
-----
port-channel5       0005.9b78.6e7c  0005.9b78.6e7c
switch#

```

Related Commands

Command	Description
mac address-table static	Adds static entries to the MAC address table or configures a static MAC address with IGMP snooping disabled for that address.
show mac address-table	Displays information on the MAC address table.

show interface mgmt

To display the configuration information for a management interface, use the **show interface mgmt** command.

```
show interface mgmt intf-num [brief | capabilities | counters [detailed [all] | errors [snmp]] |
description | status]
```

Syntax Description	
<i>intf-num</i>	Management interface number. The value is 0.
brief	(Optional) Displays a summary of the configuration information for the management interface.
capabilities	(Optional) Displays the interface capabilities information.
counters	(Optional) Displays information about the management interface counters.
detailed	(Optional) Displays detailed information of only the nonzero interface counters.
all	(Optional) Displays all nonzero interface counters.
errors	(Optional) Displays the interface error counters, such as receive or transmit error counters.
snmp	(Optional) Displays the Simple Network Management Protocol (SNMP) MIB values for the nonzero interface counters.
description	(Optional) Displays the interface description.
status	(Optional) Displays the interface line status.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	5.2(1)N1(1)	This command was introduced.

Examples

This example shows how to display the configuration information of the management interface:

```
switch# show interface mgmt 0
mgmt0 is up
  Hardware: GigabitEthernet, address: 0005.9b74.a6c1 (bia 0005.9b74.a6c1)
  Internet Address is 10.193.51.174/21
  MTU 1500 bytes, BW 1000000 Kbit, DLY 10 usec
  reliability 255/255, txload 1/255, rxload 1/255
  Encapsulation ARPA
  full-duplex, 1000 Mb/s
  EtherType is 0x0000
  1 minute input rate 11336 bits/sec, 9 packets/sec
  1 minute output rate 2248 bits/sec, 3 packets/sec
  Rx
    22722587 input packets 7487592 unicast packets 7082728 multicast packets
```

```
8152267 broadcast packets 3375124199 bytes
Tx
7618171 output packets 7283211 unicast packets 334751 multicast packets
209 broadcast packets 1056259251 bytes
```

```
switch#
```

This example shows how to display the summary configuration information of the management interface:

```
switch# show interface mgmt 0 brief
```

Related Commands

Command	Description
interface mgmt	Configures a management interface.

show interface port-channel

To display the information about an EtherChannel interface configuration, use the **show interface port-channel** command.

```
show interface port-channel number[.subinterface-number] [brief | counters | description | status]
```

Syntax Description	
<i>number</i>	EtherChannel number. The range is from 1 to 4096.
<i>.subinterface-number</i>	(Optional) Port-channel subinterface configuration. Use the EtherChannel number followed by a dot (.) indicator and the subinterface number. The format is: <i>portchannel-number.subinterface-number</i>
counters	(Optional) Displays information about the counters configured on the EtherChannel interface.
description	(Optional) Displays the description of the EtherChannel interface configuration.
status	(Optional) Displays the operational state of the EtherChannel interface.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	5.2(1)N1(1)	This command was introduced.

Examples This example shows how to display the configuration information of a specified EtherChannel interface:

```
switch# show interface port-channel 21
port-channel21 is up
  Hardware: Port-Channel, address: 000d.ece7.df72 (bia 000d.ece7.df72)
  MTU 1500 bytes, BW 10000000 Kbit, DLY 10 usec,
    reliability 255/255, txload 1/255, rxload 1/255
  Encapsulation ARPA
  Port mode is trunk
  full-duplex, 10 Gb/s
  Beacon is turned off
  Input flow-control is on, output flow-control is on
  Switchport monitor is off
  Members in this channel: Eth2/3
  Last clearing of "show interface" counters never
  30 seconds input rate 0 bits/sec, 0 packets/sec
  30 seconds output rate 352 bits/sec, 0 packets/sec
  Load-Interval #2: 5 minute (300 seconds)
    input rate 0 bps, 0 pps; output rate 368 bps, 0 pps
  RX
    0 unicast packets  0 multicast packets  0 broadcast packets
```

```

0 input packets 0 bytes
0 jumbo packets 0 storm suppression packets
0 runts 0 giants 0 CRC 0 no buffer
0 input error 0 short frame 0 overrun 0 underrun 0 ignored

switch#

```

Related Commands

Command	Description
interface port-channel	Configures an EtherChannel interface.

show interface status err-disabled

To display the error disabled state of interfaces, use the **show interface status err-disabled** command.

show interface status err-disabled

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	5.2(1)N1(1)	This command was introduced.

Examples This example shows how to display the error disabled state of interfaces:

```
switch# show interface status err-disabled
```

```
-----
Port          Name              Status  Reason
-----
Eth114/1/27  --                down    BPDUGuard errDisable
Eth114/1/28  --                down    BPDUGuard errDisable
Eth114/1/29  --                down    BPDUGuard errDisable
Eth114/1/30  --                down    BPDUGuard errDisable
Eth114/1/31  --                down    BPDUGuard errDisable
Eth114/1/32  --                down    BPDUGuard errDisable
Eth114/1/33  --                down    BPDUGuard errDisable
Eth114/1/34  --                down    BPDUGuard errDisable
Eth114/1/35  --                down    BPDUGuard errDisable
Eth114/1/36  --                down    BPDUGuard errDisable
Eth114/1/39  --                down    BPDUGuard errDisable
Eth114/1/40  --                down    BPDUGuard errDisable
Eth114/1/41  --                down    BPDUGuard errDisable
Eth114/1/42  --                down    BPDUGuard errDisable
Eth114/1/43  --                down    BPDUGuard errDisable
Eth114/1/44  --                down    BPDUGuard errDisable
Eth114/1/45  --                down    BPDUGuard errDisable
Eth114/1/46  --                down    BPDUGuard errDisable
Eth114/1/47  --                down    BPDUGuard errDisable
--More--
switch#
```

Related Commands	Command	Description
	errdisable detect cause	Enables the error disabled (err-disabled) detection.
	errdisable recovery cause	Enables error disabled recovery on an interface.

show interface switchport

To display information about all the switch port interfaces, use the **show interface switchport** command.

show interface switchport

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	5.2(1)N1(1)	This command was introduced.

Usage Guidelines You can configure the rate limit on the following Cisco Nexus 5000 Series switches using the **switchport monitor rate-limit 1G** command:

- Cisco Nexus 5010 Series
- Cisco Nexus 5020 Series

This command does not require a license.

Examples This example shows how to display information for all Ethernet interfaces:

```
switch# show interface switchport
Name: Ethernet1/1
  Switchport: Enabled
  Switchport Monitor: Not enabled
  Operational Mode: fex-fabric
  Access Mode VLAN: 1 (default)
  Trunking Native Mode VLAN: 1 (default)
  Trunking VLANs Enabled: 1-3967,4048-4093
  Administrative private-vlan primary host-association: none
  Administrative private-vlan secondary host-association: none
  Administrative private-vlan primary mapping: none
  Administrative private-vlan secondary mapping: none
  Administrative private-vlan trunk native VLAN: none
  Administrative private-vlan trunk encapsulation: dot1q
  Administrative private-vlan trunk normal VLANs: none
  Administrative private-vlan trunk private VLANs:
  Operational private-vlan: none
  Unknown unicast blocked: disabled
  Unknown multicast blocked: disabled

Name: Ethernet1/2
  Switchport: Enabled
```

```

Switchport Monitor: Not enabled
Operational Mode: fex-fabric

<--Output truncated-->
switch #

```

In the above display, the significant field for Ethernet interface 1/2 is highlighted.

This example shows how to display the voice VLAN information for an Ethernet interface on a switch that runs Cisco NX-OS Release 5.0(3)N2(1):

```

switch# show interface ethernet 1/28 switchport
Name: Ethernet1/28
Switchport: Enabled
Switchport Monitor: Not enabled
Operational Mode: access
Access Mode VLAN: 3000 (VLAN3000)
Trunking Native Mode VLAN: 1 (default)
Trunking VLANs Enabled: 1,200,300-302,500,2001-2248,3000-3001,4049,4090
Pruning VLANs Enabled: 2-1001
Voice VLAN: 3
Extended Trust State : not trusted [COS = 0]
Administrative private-vlan primary host-association: none
Administrative private-vlan secondary host-association: none
Administrative private-vlan primary mapping: none
Administrative private-vlan secondary mapping: none
Administrative private-vlan trunk native VLAN: none
Administrative private-vlan trunk encapsulation: dot1q
Administrative private-vlan trunk normal VLANs: none
Administrative private-vlan trunk private VLANs: none
Operational private-vlan: none
Unknown unicast blocked: disabled
Unknown multicast blocked: disabled

switch#

```

Related Commands

Command	Description
switchport access vlan	Sets the access VLAN when the interface is in access mode.
switchport monitor rate-limit	Configures the rate limit for traffic on an interface.

show interface switchport backup

To display information about all the switch port Flex Links interfaces, use the **show interface switchport backup** command.

show interface switchport backup [detail]

Syntax Description	detail (Optional) Displays detailed information for backup interfaces.				
Command Default	None				
Command Modes	EXEC mode				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>5.0(3)N2(1)</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	5.0(3)N2(1)	This command was introduced.
Release	Modification				
5.0(3)N2(1)	This command was introduced.				

Examples

This example shows how to display information for all Flex Links:

```
switch# show interface switchport backup
```

Switch Backup Interface Pairs:

Active Interface	Backup Interface	State
Ethernet1/2	Ethernet1/1	Active Down/Backup Down
Ethernet1/20	Ethernet1/21	Active Down/Backup Down
port-channel300	port-channel301	Active Up/Backup Down
port-channel500	port-channel501	Active Down/Backup Down
port-channel502	port-channel503	Active Down/Backup Down
port-channel504	Ethernet2/1	Active Down/Backup Down

```
switch#
```

This example shows how to display the detailed information for all Flex Links:

```
switch# show interface switchport backup detail
```

Switch Backup Interface Pairs:

Active Interface	Backup Interface	State
Ethernet1/2	Ethernet1/1	Active Down/Backup Down
Preemption Mode : off		
Multicast Fast Convergence : Off		
Bandwidth : 1000000 Kbit (Ethernet1/2), 10000000 Kbit (Ethernet1/1)		
Ethernet1/20	Ethernet1/21	Active Down/Backup Down
Preemption Mode : off		
Multicast Fast Convergence : Off		
Bandwidth : 10000000 Kbit (Ethernet1/20), 10000000 Kbit (Ethernet1/21)		

```

port-channel300      port-channel301      Active Up/Backup Down
  Preemption Mode   : forced
  Preemption Delay  : 35 seconds (default)
  Multicast Fast Convergence : On
  Bandwidth : 20000000 Kbit (port-channel300), 10000000 Kbit (port-channel
301)

port-channel500      port-channel501      Active Down/Backup Down
  Preemption Mode   : off
  Multicast Fast Convergence : On
  Bandwidth : 100000 Kbit (port-channel500), 100000 Kbit (port-channel501)

port-channel502      port-channel503      Active Down/Backup Down
  Preemption Mode   : off
  Multicast Fast Convergence : Off
  Bandwidth : 100000 Kbit (port-channel502), 100000 Kbit (port-channel503)

port-channel504      Ethernet2/1          Active Down/Backup Down
  Preemption Mode   : off
  Multicast Fast Convergence : Off
  Bandwidth : 100000 Kbit (port-channel504), 0 Kbit (Ethernet2/1)

switch#

```

Table 2 describes the significant fields displayed in the output.

Table 2 *show interface switchport backup Field Descriptions*

Field	Description
Active Interface	Layer 2 interface being configured.
Backup Interface	Layer 2 interface to act as a backup link to the interface being configured.
State	Flex Links status.
Preemption Mode	Preemption scheme for a backup interface pair.
Preemption Delay	Preemption delay configured for a backup interface pair.
Multicast Fast Convergence	Fast convergence configured on the backup interface.
Bandwidth	Bandwidth configured on the backup interface.

Related Commands

Command	Description
switchport backup interface	Configures Flex Links.
show running-config backup	Displays the running configuration information for backup interfaces.
show running-config flexlink	Displays the running configuration information for Flex Links.

show interface transceiver

To display information about the transceivers connected to a specific interface, use the **show interface transceiver** command.

show interface ethernet [*chassis*] *slot*/[*QSFP-module*]/*port transceiver* [*details* | *calibrations* | *sprom*]

Syntax Description		
ethernet <i>slot/port</i>		Displays information about an ethernet interface slot number and port number. <i>slot</i> —Valid values are from 1 to 255. <i>port</i> —Valid values are from 1 to 128.
<i>chassis</i>		(Optional) The chassis ID is an optional entry that you can use to address the ports of a connected Fabric Extender. The chassis ID is configured on a physical Ethernet or EtherChannel interface on the switch to identify the Fabric Extender discovered through the interface. Valid values are from 100 to 199.
<i>QSFP-module</i>		(Optional) The QSFP+ port on the Generic Expansion Module (GEM). Valid values for the port numbers are from 1 to 4.
transceiver		Displays information about interfaces connected to transceiver modules.
details		(Optional) Displays detailed information about the transceivers on an interface.
calibrations		(Optional) Displays calibration information about the transceivers on an interface.
sprom		(Optional) Displays sprom information about the transceivers on an interface.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	6.0(2)N1(2)	Support for the QSFP+ GEM port was added.
	5.2(1)N1(1)	This command was introduced.

Usage Guidelines You can use the **show interface transceiver** command only for physical interfaces.

Examples The following example shows how to display information on transceivers connected to a specified ethernet interface:

```
switch# show interface ethernet 1/1 transceiver
Ethernet1/1
```

```

transceiver is present
type is SFP-H10GB-CU1M
name is CISCO-MOLEX
part number is 74752-9044
revision is 07
serial number is MOC14081360
nominal bitrate is 10300 MBit/sec
Link length supported for copper is 1 m
cisco id is --
cisco extended id number is 4

```

The following example shows how to display calibration information of transceivers connected to a specified ethernet interface:

```

switch# show interface ethernet 1/1 transceiver calibrations
Ethernet1/1
transceiver is present
type is 10Gbase-SR
name is CISCO-SUMITOMO
part number is SPP5100SR-C1
revision is A
serial number is SPC142704M6
nominal bitrate is 10300 MBit/sec
Link length supported for 50/125um OM2 fiber is 82 m
Link length supported for 62.5/125um fiber is 26 m
Link length supported for 50/125um OM3 fiber is 300 m
cisco id is --
cisco extended id number is 4

```

```

-----

```

Note: ++ high-alarm; + high-warning; -- low-alarm; - low-warning

The **show interface transceiver details** command output:

- When the small form-factor pluggable (SFP) port is shut down and the laser is turned off, the value of the Current field in the output will be close to zero and the Tx power value will be at a minimum (close to -40 dBm).
- When the SFP port is shutdown and the laser is not turned off, the Current and Tx power values will stay at operational levels. The Rx power value will depend on the behavior of the remote side of the link and the interface status—it can either stay at an operational level, or at a minimum (close to -40 dBm), or N/A.

**Note**

The output for the **show interface transceiver** command will vary based on the transceiver type, name, part number, revision, and link length of the device.

Related Commands

Command	Description
interface ethernet	Configures an Ethernet IEEE 802.3 interface.
show interface capabilities	Displays detailed information about the capabilities of an interface.

show lacp

To display Link Aggregation Control Protocol (LACP) information, use the **show lacp** command.

```
show lacp { counters | interface ethernet slot[QSFP-module]/port | neighbor [interface
port-channel number] | port-channel [interface port-channel number] | system-identifier }
```

Syntax Description		
counters		Displays information about the LACP traffic statistics.
interface ethernet <i>slot</i> / <i>port</i>		Displays LACP information for a specific Ethernet interface. The <i>slot</i> number is from 1 to 255, and the <i>port</i> number is from 1 to 128.
<i>QSFP-module</i>		(Optional) The QSFP+ port on the Generic Expansion Module (GEM). The port numbers are from 1 to 4.
neighbor		Displays information about the LACP neighbor.
port-channel		Displays information about all EtherChannels.
interface port-channel <i>number</i>		(Optional) Displays information about a specific EtherChannel. The EtherChannel number is from 1 to 4096.
system-identifier		Displays the LACP system identification. It is a combination of the port priority and the MAC address of the device.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	6.0(2)N1(2)	Support for the QSFP+ GEM.
	5.2(1)N1(1)	This command was introduced.

Usage Guidelines Use the **show lacp** command to troubleshoot problems related to LACP in a network.

Examples This example shows how to display the LACP system identification:

```
switch# show lacp system-identifier
32768,0-5-9b-78-6e-7c
switch#
```

This example shows how to display the LACP information for a specific interface:

```
switch# show lacp interface ethernet 1/1
Interface Ethernet1/1 is up
Channel group is 1 port channel is Po1
PDUs sent: 1684
PDUs rcvd: 1651
Markers sent: 0
Markers rcvd: 0
```

■ show lacp

```

Related Commands

Command	Description
clear lacp counters	Clears LACP counters.
lacp port-priority	Sets the priority for the physical interfaces for the LACP.
lacp system-priority	Sets the system priority of the switch for the LACP.

show port-channel capacity

To display the total number of EtherChannel interfaces and the number of free or used EtherChannel interfaces, use the **show port-channel capacity** command.

show port-channel capacity

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	5.2(1)N1(1)	This command was introduced.

Examples This example shows how to display the EtherChannel capacity:

```
switch# show port-channel capacity
Port-channel resources
    768 total    29 used    739 free    3% used
switch#
```

Related Commands	Command	Description
	port-channel load-balance ethernet	Configures the load-balancing algorithm for EtherChannels.
	show tech-support port-channel	Displays Cisco Technical Support information about EtherChannels.

show port-channel compatibility-parameters

To display the parameters that must be the same among the member ports in order to join an EtherChannel interface, use the **show port-channel compatibility-parameters** command.

show port-channel compatibility-parameters

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	5.2(1)N1(1)	This command was introduced.

Examples This example shows how to display the EtherChannel interface parameters:

```
switch# show port-channel compatibility-parameters
* port mode
```

Members must have the same port mode configured.

```
* port mode
```

Members must have the same port mode configured, either E,F or AUTO. If they are configured in AUTO port mode, they have to negotiate E or F mode when they come up. If a member negotiates a different mode, it will be suspended.

```
* speed
```

Members must have the same speed configured. If they are configured in AUTO speed, they have to negotiate the same speed when they come up. If a member negotiates a different speed, it will be suspended.

```
* MTU
```

Members have to have the same MTU configured. This only applies to ethernet port-channel.

```
* shut lan
```

Members have to have the same shut lan configured. This only applies to ethernet port-channel.

```
* MEDIUM
```

Members have to have the same medium type configured. This only applies to ethernet port-channel.

```

* Span mode

Members must have the same span mode.

* load interval

Member must have same load interval configured.
--More--
<---output truncated--->
switch#

```

Related Commands

Command	Description
port-channel load-balance ethernet	Configures the load-balancing algorithm for EtherChannels.
show tech-support port-channel	Displays Cisco Technical Support information about EtherChannels.

show port-channel database

To display the aggregation state for one or more EtherChannel interfaces, use the **show port-channel database** command.

show port-channel database [**interface port-channel** *number*[*.subinterface-number*]]

Syntax Description	
interface	(Optional) Displays information for an EtherChannel interface.
port-channel <i>number</i>	(Optional) Displays aggregation information for a specific EtherChannel interface. The <i>number</i> range is from 1 to 4096.
<i>.subinterface-number</i>	(Optional) Subinterface number. Use the EtherChannel number followed by a dot (.) indicator and the subinterface number. The format is <i>portchannel-number.subinterface-number</i> .

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	5.2(1)N1(1)	This command was introduced.

Examples

This example shows how to display the aggregation state of all EtherChannel interfaces:

```
switch# show port-channel database
port-channel19
  Last membership update is successful
  4 ports in total, 4 ports up
  First operational port is Ethernet199/1/24
  Age of the port-channel is 0d:09h:11m:30s
  Time since last bundle is 0d:09h:12m:20s
  Last bundled member is
  Ports:   Ethernet199/1/24  [active ] [up] *
          Ethernet199/1/28  [active ] [up]
          Ethernet199/1/30  [active ] [up]
          Ethernet199/1/31  [active ] [up]

port-channel21
  Last membership update is successful
  1 ports in total, 1 ports up
  First operational port is Ethernet2/3
  Age of the port-channel is 0d:09h:11m:30s
  Time since last bundle is 0d:09h:12m:20s
  Last bundled member is
  Ports:   Ethernet2/3      [on] [up] *

port-channel50
  Last membership update is successful
--More--
<---output truncated--->
```

```
switch#
```

This example shows how to display the aggregation state for a specific EtherChannel interface:

```
switch# show port-channel database interface port-channel 21
port-channel21
  Last membership update is successful
  1 ports in total, 1 ports up
  First operational port is Ethernet2/3
  Age of the port-channel is 0d:09h:13m:14s
  Time since last bundle is 0d:09h:14m:04s
  Last bundled member is
  Ports:  Ethernet2/3      [on] [up] *
```

switch#

Related Commands

Command	Description
port-channel load-balance ethernet	Configures the load-balancing algorithm for EtherChannels.
show tech-support port-channel	Displays Cisco Technical Support information about EtherChannels.

show port-channel load-balance

To display information about EtherChannel load balancing, use the **show port-channel load-balance** command.

```
show port-channel load-balance [forwarding-path interface port-channel number {. | vlan
vlan_ID} [dst-ip ipv4-addr] [dst-ipv6 ipv6-addr] [dst-mac dst-mac-addr] [l4-dst-port
dst-port] [l4-src-port src-port] [src-ip ipv4-addr] [src-ipv6 ipv6-addr] [src-mac
src-mac-addr]]
```

Syntax Description	
forwarding-path interface port-channel	(Optional) Identifies the port in the EtherChannel interface that forwards the packet.
<i>number</i>	EtherChannel number for the load-balancing forwarding path that you want to display. The range is from 1 to 4096.
.	(Optional) Subinterface number separator. Use the EtherChannel number followed by a dot (.) indicator and the subinterface number. The format is <i>portchannel-number.subinterface-number</i> .
vlan	(Optional) Identifies the VLAN for hardware hashing.
<i>vlan_ID</i>	VLAN ID. The range is from 1 to 3967 and 4048 to 4093.
dst-ip	(Optional) Displays the load distribution on the destination IP address.
<i>ipv4-addr</i>	IPv4 address to specify a source or destination IP address. The format is <i>A.B.C.D</i> .
dst-ipv6	(Optional) Displays the load distribution on the destination IPv6 address.
<i>ipv6-addr</i>	IPv6 address to specify a source or destination IP address. The format is <i>A:B::C:D</i> .
dst-mac	(Optional) Displays the load distribution on the destination MAC address.
<i>dst-mac-addr</i>	Destination MAC address. The format is <i>AAAA:BBBB:CCCC</i> .
l4-dst-port	(Optional) Displays the load distribution on the destination port.
<i>dst-port</i>	Destination port number. The range is from 0 to 65535.
l4-src-port	(Optional) Displays the load distribution on the source port.
<i>src-port</i>	Source port number. The range is from 0 to 65535.
src-ip	(Optional) Displays the load distribution on the source IP address.
src-ipv6	(Optional) Displays the load distribution on the source IPv6 address.
src-mac	(Optional) Displays the load distribution on the source MAC address.
<i>src-mac-addr</i>	source MAC address. The format is <i>AA:BB:CC:DD:EE:FF</i> .

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	5.2(1)N1(1)	This command was introduced.

Usage Guidelines

You must use the **vlan** keyword to determine the use of hardware hashing.

When you do not use hardware hashing, the output displays all parameters used to determine the outgoing port ID. Missing parameters are shown as zero values in the output.

If you do not use hardware hashing, the outgoing port ID is determined by using control-plane selection. Hardware hashing is not used in the following scenarios:

- The specified VLAN contains an unknown unicast destination MAC address.
- The specified VLAN contains a known or an unknown multicast destination MAC or destination IP address.
- The specified VLAN contains a broadcast MAC address.
- The EtherChannel has only one active member.
- The destination MAC address is unknown when the load distribution is configured on the source IP address (src-ip), source port (l4-src-port), or source MAC address (src-mac).
- If multichassis EtherChannel trunk (MCT) is enabled and the traffic flows from a virtual port channel (vPC) peer link, the output displays “Outgoing port id (vPC peer-link traffic)”.

To get accurate results, you must do the following:

- (For unicast frames) Provide the destination MAC address (dst-mac) and the VLAN for hardware hashing (vlan). When the destination MAC address is not provided, hardware hashing is assumed.
- (For multicast frames) For IP multicast, provide either the destination IP address (dst-ip) or destination MAC address (dst-mac) with the VLAN for hardware hashing (vlan). For non-ip multicast, provide the destination MAC address with the VLAN for hardware hashing.
- (For broadcast frames) Provide the destination MAC address (dst-mac) and the VLAN for hardware hashing (vlan).

Examples

This example shows how to display the port channel load-balancing information:

```
switch# show port-channel load-balance
Port Channel Load-Balancing Configuration:
System: source-dest-ip

Port Channel Load-Balancing Addresses Used Per-Protocol:
Non-IP: source-dest-mac
IP: source-dest-ip source-dest-mac

switch#
```

[Table 3](#) describes the fields shown in the display.

Table 3 *show port-channel load-balance Field Descriptions*

Field	Description
System	The load-balancing method configured on the switch.
Non-IP	The field that will be used to calculate the hash value for non-IP traffic.
IP	The fields used for IPv4 and IPv6 traffic.

This example shows how to display the port channel load-balancing information when hardware hashing is not used:

```
switch# show port-channel load-balance forwarding-path interface port-channel 5 vlan 3
dst-ip 192.168.2.37
Missing params will be substituted by 0's.
Load-balance Algorithm on FEX: source-dest-ip
crc8_hash: Not Used      Outgoing port id: Ethernet133/1/3
Param(s) used to calculate load-balance (Unknown unicast, multicast and broadcast
packets):
    dst-mac: 0000.0000.0000
    vlan id: 3
switch#
```

This example shows how to display the port channel load-balancing information when hardware hashing is not used to determine the outgoing port ID:

```
switch# show port-channel load-balance forwarding-path interface port-channel 10 vlan 1
dst-ip 192.168.2.25 src-ip 192.168.2.10 dst-mac ffff.ffff.ffff src-mac aa:bb:cc:dd:ee:ff
l4-src-port 0 l4-dst-port 1
Missing params will be substituted by 0's.
Load-balance Algorithm on switch: source-dest-port
crc8_hash: Not Used      Outgoing port id: Ethernet1/1
Param(s) used to calculate load-balance (Unknown unicast, multicast and broadcast
packets):
    dst-mac: ffff.ffff.ffff
    vlan id: 1
switch#
```

This example shows how to display the port channel load-balancing information when MCT is enabled and traffic flows from a vPC peer link:

```
switch# show port-channel load-balance forwarding-path interface port-channel 10 vlan 1
dst-ip 192.168.2.25 src-ip 192.168.2.10 dst-mac ffff.ffff.ffff src-mac aa:bb:cc:dd:ee:ff
l4-src-port 0 l4-dst-port 1
Missing params will be substituted by 0's.
Load-balance Algorithm on switch: source-dest-port
crc8_hash: Not Used      Outgoing port id (non vPC peer-link traffic): ethernet1/2
crc8_hash: Not Used      Outgoing port id (vPC peer-link traffic): Ethernet1/1
Param(s) used to calculate load-balance (Unknown unicast, multicast and broadcast
packets):
    dst-mac: ffff.ffff.ffff
    vlan id: 1
switch#
```

This example shows how to display the port channel load-balancing information when hardware hashing is used to determine the outgoing port ID:

```

switch# show port-channel load-balance forwarding-path interface port-channel 10 vlan 1
dst-ip 192.168.2.25 src-ip 192.168.2.10 src-mac aa:bb:cc:dd:ee:ff 14-src-port 0
14-dst-port 1
Missing params will be substituted by 0's.
Load-balance Algorithm on switch: source-dest-port
crc8_hash: 204 Outgoing port id: Ethernet1/1
Param(s) used to calculate load-balance:
    dst-port: 1
    src-port: 0
    dst-ip:   192.168.2.25
    src-ip:   192.168.2.10
    dst-mac:  0000.0000.0000
    src-mac:  aabb.ccdd.eeff

switch#

```

Related Commands

Command	Description
port-channel load-balance ethernet	Configures the load-balancing method among the interfaces in the channel-group bundle.

show port-channel summary

To display summary information about EtherChannels, use the **show port-channel summary** command.

show port-channel summary

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes Global configuration mode
EXEC mode

Command History	Release	Modification
	5.2(1)N1(1)	This command was introduced.

Usage Guidelines Before you use this command, you must configure an EtherChannel group using the **interface port-channel** command.

Examples This example shows how to display summary information about EtherChannels:

```
switch# show port-channel summary
Flags:  D - Down          P - Up in port-channel (members)
        I - Individual   H - Hot-standby (LACP only)
        s - Suspended    r - Module-removed
        S - Switched     R - Routed
        U - Up (port-channel)

Related Commands

Command	Description
channel-group (Ethernet)	Assigns and configures a physical interface to an EtherChannel.
interface port-channel	Creates an EtherChannel interface and enters interface configuration mode.

show port-channel traffic

To display the traffic statistics for EtherChannels, use the **show port-channel traffic** command.

show port-channel traffic [**interface port-channel** *number* [*.subinterface-number*]]

Syntax Description	Parameter	Description
	interface	(Optional) Displays traffic statistics for a specified interface.
	port-channel <i>number</i>	(Optional) Displays information for a specified EtherChannel. The range is from 1 to 4096.
	<i>.subinterface-number</i>	(Optional) Subinterface number. Use the EtherChannel number followed by a dot (.) indicator and the subinterface number. The format is <i>portchannel-number.subinterface-number</i> .

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	5.2(1)N1(1)	This command was introduced.

Examples

This example shows how to display the traffic statistics for all EtherChannels:

```
switch# show port-channel traffic
ChanId      Port  Rx-Ucst Tx-Ucst  Rx-Mcst Tx-Mcst  Rx-Bcst Tx-Bcst
-----
    10    Eth1/7   0.0%   0.0%    0.0%   0.0%    0.0%   0.0%
    10    Eth1/8   0.0%   0.0%    0.0%   0.0%    0.0%   0.0%
    10    Eth1/9   0.0%   0.0%    0.0%   0.0%    0.0%   0.0%
    10   Eth1/10   0.0%   0.0%    0.0%   0.0%    0.0%   0.0%
-----
   4000   Eth1/1   0.0%   0.0%   99.64% 99.81%   0.0%   0.0%
   4000   Eth1/2   0.0%   0.0%   0.06% 0.06%   0.0%   0.0%
   4000   Eth1/3   0.0%   0.0%   0.23% 0.06%   0.0%   0.0%
   4000   Eth1/4   0.0%   0.0%   0.06% 0.06%   0.0%   0.0%
switch#
```

This example shows how to display the traffic statistics for a specific EtherChannel:

```
switch# show port-channel traffic interface port-channel 10
ChanId      Port  Rx-Ucst Tx-Ucst  Rx-Mcst Tx-Mcst  Rx-Bcst Tx-Bcst
-----
    10    Eth1/7   0.0%   0.0%    0.0%   0.0%    0.0%   0.0%
    10    Eth1/8   0.0%   0.0%    0.0%   0.0%    0.0%   0.0%
    10    Eth1/9   0.0%   0.0%    0.0%   0.0%    0.0%   0.0%
    10   Eth1/10   0.0%   0.0%    0.0%   0.0%    0.0%   0.0%
switch#
```

Related Commands	Command	Description
	port-channel load-balance ethernet	Configures the load-balancing algorithm for EtherChannels.
	show tech-support port-channel	Displays Cisco Technical Support information about EtherChannels.

show port-channel usage

To display the range of used and unused EtherChannel numbers, use the **show port-channel usage** command.

show port-channel usage

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	5.2(1)N1(1)	This command was introduced.

Examples This example shows how to display the EtherChannel usage information:

```
switch# show port-channel usage
Total 29 port-channel numbers used
=====
Used : 19 , 21 , 50 , 100 , 150 , 170 - 171 , 198 - 199 , 256
       301 , 400 - 401 , 1032 - 1033 , 1111 , 1504 , 1511 , 1514 , 1516 - 1520
       1532 , 1548 , 1723 , 1905 , 1912
Unused: 1 - 18 , 20 , 22 - 49 , 51 - 99 , 101 - 149 , 151 - 169
        172 - 197 , 200 - 255 , 257 - 300 , 302 - 399 , 402 - 1031
        1034 - 1110 , 1112 - 1503 , 1505 - 1510 , 1512 - 1513 , 1515 , 1521 - 1531
        1533 - 1547 , 1549 - 1722 , 1724 - 1904 , 1906 - 1911 , 1913 - 4096
        (some numbers may be in use by SAN port channels)

switch#
```

Related Commands	Command	Description
	port-channel load-balance ethernet	Configures the load-balancing algorithm for EtherChannels.
	show tech-support port-channel	Displays Cisco Technical Support information about EtherChannels.

show port-security

To display the port security configuration on an interface, use the **show port-security** command.

```
show port-security [address [interface {ethernet slot[/QSFP-module]/port | port-channel
channel-num}] | interface {ethernet slot[/QSFP-module]/port | port-channel channel-num} |
state]
```

Syntax Description	Parameter	Description
	address	(Optional) Displays the secure MAC address of a port.
	interface	(Optional) Displays the secure address for an interface.
	ethernet <i>slot/port</i>	(Optional) Displays the secure address for an Ethernet interface. The slot number is from 1 to 255 and the port number is from 1 to 128.
	<i>QSFP-module</i>	(Optional) The QSFP+ port on the Generic Expansion Module (GEM). The port numbers are from 1 to 4.
	port-channel <i>channel-num</i>	(Optional) Displays the secure address for an EtherChannel interface. The channel number is from 1 to 4096.
	state	(Optional) Displays whether a port is secure.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	6.0(2)N1(2)	Support for the QSFP+ GEM.
	5.1(3)N1(1)	This command was introduced.

Usage Guidelines This command does not require a license.

Examples This example shows how to display the port security configuration on an interface:

```
switch# show port-security

Total Secured Mac Addresses in System (excluding one mac per port)      : 0
Max Addresses limit in System (excluding one mac per port) : 8192

-----
Secure Port  MaxSecureAddr  CurrentAddr  SecurityViolation  Security Action
          (Count)          (Count)          (Count)
-----
Ethernet1/5          10              0              0              Shutdown
=====
switch#
```

■ show port-security

Related Commands	Command	Description
	clear port-security dynamic	Clears the dynamically secured addresses on a port.
	show running-config port-security	Displays the port security configuration information.
	switchport port-security	Configures the switchport parameters to establish port security.

show resource

To display the number of resources currently available in the system, use the **show resource** command.

show resource [*resource*]

Syntax Description	<i>resource</i>	Resource name, which can be one of the following: <ul style="list-style-type: none"> port-channel—Displays the number of EtherChannels available in the system. vlan—Displays the number of VLANs available in the system. vrf—Displays the number of virtual routing and forwardings (VRFs) available in the system.
---------------------------	-----------------	---

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	5.2(1)N1(1)	This command was introduced.

Examples

This example shows how to display the resources available in the system:

```
switch# show resource
```

Resource	Min	Max	Used	Unused	Avail
vlan	16	4094	509	0	3
monitor-session	0	2	0	0	2
vrf	2	1000	2	0	998
port-channel	0	768	2	0	766
u4route-mem	32	32	1	31	31
u6route-mem	16	16	1	15	15
m4route-mem	58	58	0	58	58
m6route-mem	8	8	0	8	8
bundle-map	0	16	2	0	14

```
switch#
```

Related Commands	Command	Description
	show interface port-channel	Displays information about EtherChannels.

show running-config

To display the contents of the currently running configuration file, use the **show running-config** command.

show running-config [all]

Syntax Description	all	(Optional) Displays the full operating information including default settings.
---------------------------	------------	--

Command Default	None
------------------------	------

Command Modes	EXEC mode
----------------------	-----------

Command History	Release	Modification
	5.2(1)N1(1)	This command was introduced.

Examples

This example shows how to display information on the running configuration:

```
switch# show running-config
```

This example shows how to display detailed information on the running configuration:

```
switch# show running-config all
```

Related Commands	Command	Description
	show startup-config	Displays the contents of the startup configuration file.

show running-config backup

To display the running configuration for backup interfaces, use the **show running-config backup** command.

show running-config backup [all]

Syntax Description	all	(Optional) Displays backup interface information including default settings.
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	5.0(3)N2(1)	This command was introduced.

Examples

This example shows how to display the running configuration for backup interfaces:

```
switch# show running-config backup

show tech-support flexlink	Displays troubleshooting information for Flex Links.

show running-config interface

To display the running configuration for a specific port channel, use the **show running-config interface** command.

```
show running-config interface [{ ethernet slot[/QSFP-module]/port | fc slot[/QSFP-module]/port
| loopback number | mgmt 0 | port-channel channel-number [membership] | vethernet
veth-id | vlan vlan-id] [all | expand-port-profile]
```

Syntax Description		
ethernet <i>slot/port</i>	(Optional) Displays the Ethernet interface slot number and port number. The slot number is from 1 to 255 and the port number is from 1 to 128.	
fc <i>slot/port</i>	(Optional) Displays the configuration information of the Fibre Channel interface. The slot number is from 1 to 2 and the port number is from 1 to 48.	
<i>QSFP-module</i>	(Optional) The QSFP+ port on the Generic Expansion Module (GEM). The port numbers are from 1 to 4.	
loopback <i>number</i>	(Optional) Displays the number of the loopback interface. The range of values is from 1 to 4096.	
mgmt <i>0</i>	(Optional) Displays the configuration information of the management interface.	
port-channel <i>channel-number</i>	(Optional) Displays the number of the port-channel group. The range of values is from 0 to 1023.	
membership	Displays the membership of the specified port channel.	
vethernet <i>veth-id</i>	(Optional) Displays the configuration information of the virtual Ethernet interface. The range is from 1 to 1048575.	
vlan <i>vlan-id</i>	(Optional) Displays the configuration information of the VLAN. The range of values is from 1 to 4096.	
all	(Optional) Displays configured and default information.	
expand-port-profile	(Optional) Displays the configuration information of port profiles.

Related Commands

Command	Description
show running-config backup	Displays the running configuration information for backup interfaces.
show running-config flexlink	Displays Flex Links running configuration information.

show tech-support port-channel

To display troubleshooting information about EtherChannel interfaces, use the **show tech-support port-channel** command.

show tech-support port-channel

Syntax Description This command has no arguments and keywords.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	5.2(1)N1(1)	This command was introduced.

Usage Guidelines The output from the **show tech-support port-channel** command is very long. To better manage this output, you can redirect the output to a file.

Examples This example shows how to display Cisco technical support information for EtherChannel interfaces:

```
switch# show tech-support port-channel
^show port-channel internal event-history all^
Low Priority Pending queue: len(0), max len(2) [Thu Jul  8 04:05:04 2010]
High Priority Pending queue: len(0), max len(32) [Thu Jul  8 04:05:04 2010]
PCM Control Block info:
pcm_max_channels      : 4096
pcm_max_channel_in_use : 1912
pc count              : 29
hif-pc count          : 20
Max PC Cnt            : 768

Related Commands	Command	Description
	port-channel load-balance ethernet	Configures the load-balancing method among the interfaces in the channel-group bundle.
	show port-channel load-balance	Displays information on EtherChannel load balancing.

show uddl

To display the Unidirectional Link Detection (UDLD) information for a switch, use the **show uddl** command.

show uddl [**ethernet** *slot*[/*QSFP-module*]/*port* | **global** | **neighbors**]

Syntax Description		
ethernet <i>slot/port</i>		Displays UDLD information for an Ethernet IEEE 802.3z interface. The <i>slot</i> number is from 1 to 255, and the <i>port</i> number is from 1 to 128.
<i>QSFP-module</i>		(Optional) The QSFP+ port on the Generic Expansion Module (GEM). The port numbers are from 1 to 4.
global		Displays the UDLD global status and configuration information on all interfaces.
neighbors		Displays information about UDLD neighbor interfaces.

Command Default None

Command Modes EXEC mode

Command History	Release	Modification
	6.0(2)N1(2)	Support for the QSFP+ GEM.
	5.2(1)N1(1)	This command was introduced.

Examples

This example shows how to display UDLD information for all interfaces:

```
switch# show uddl

Interface Ethernet1/1
-----
Port enable administrative configuration setting: device-default
Port enable operational state: enabled
Current bidirectional state: bidirectional
Current operational state: advertisement - Single neighbor detected
Message interval: 15
Timeout interval: 5

      Entry 1
      -----
      Expiration time: 41
      Cache Device index: 1
      Current neighbor state: bidirectional
      Device ID: FLC12280095
      Port ID: Ethernet1/1
      Neighbor echo 1 devices: SSI130205RT
      Neighbor echo 1 port: Ethernet1/1

      Message interval: 15
      Timeout interval: 5
```

```
CDP Device name: N5Kswitch-2(FLC12280095)
```

```
Interface Ethernet1/2
-----
Port enable administrative configuration setting: device-default
Port enable operational state: enabled
Current bidirectional state: bidirectional
Current operational state: advertisement - Single neighbor detected
Message interval: 15
Timeout interval: 5

Entry 1
-----
--More--
switch#
```

This example shows how to display the UDLD information for a specified interface:

```
switch# show uddl ethernet 1/1

Interface Ethernet1/1
-----
Port enable administrative configuration setting: device-default
Port enable operational state: enabled
Current bidirectional state: bidirectional
Current operational state: advertisement - Single neighbor detected
Message interval: 15
Timeout interval: 5

Entry 1
-----
Expiration time: 41
Cache Device index: 1
Current neighbor state: bidirectional
Device ID: FLC12280095
Port ID: Ethernet1/1
Neighbor echo 1 devices: SSI130205RT
Neighbor echo 1 port: Ethernet1/1

Message interval: 15
Timeout interval: 5
CDP Device name: N5Kswitch-2(FLC12280095)

switch#
```

This example shows how to display the UDLD global status and configuration on all interfaces:

```
switch# show uddl global

UDLD global configuration mode: enabled
UDLD global message interval: 15
switch#
```

This example shows how to display the UDLD neighbor interfaces:

```
switch# show uddl neighbors
```

Port	Device Name	Device ID	Port ID	Neighbor State
Ethernet1/1	FLC12280095	1	Ethernet1/1	bidirectional
Ethernet1/2	FLC12280095	1	Ethernet1/2	bidirectional
Ethernet1/3	FLC12280095	1	Ethernet1/3	bidirectional
Ethernet1/4	FLC12280095	1	Ethernet1/4	bidirectional
Ethernet1/7	JAF1346000H	1	Ethernet1/7	bidirectional
Ethernet1/8	JAF1346000H	1	Ethernet1/8	bidirectional

■ show udd

```

Ethernet1/9      JAF1346000C  1      Ethernet1/9      bidirectional
Ethernet1/10    JAF1346000C  1      Ethernet1/10    bidirectional

switch#

```

Related Commands

Command	Description
udd (configuration mode)	Configures the UDL D protocol on the switch.
udd (Ethernet)	Configures the UDL D protocol on an Ethernet interface.

show vpc brief

To display brief information about the virtual port channels (vPCs), use the **show vpc brief** command.

show vpc brief [*vpc number*]

Syntax Description	vpc number	(Optional) Displays the brief information for the specified vPC. The range is from 1 to 4096.
---------------------------	-------------------	---

Defaults	None
-----------------	------

Command Modes	Any command mode
----------------------	------------------

Supported Use Roles	network-admin
----------------------------	---------------

Command History	Release	Modification
	5.2(1)N1(1)	This command was introduced.

Usage Guidelines The **show vpc brief** command displays the vPC domain ID, the peer-link status, the keepalive message status, whether the configuration consistency is successful, and whether the peer-link formed or failed to form.

This command is not available if you have not enabled the vPC feature. See the **feature vpc** command for information on enabling vPCs.

You can display the track object, if you have configured a tracked object for running vPCs on a single module under the vpc-domain configuration mode.

This command does not require a license.

Examples This example shows how to display brief information about the vPCs:

```
switch(config)# show vpc brief
```

Legend:

(*) - local vpc is down, forwarding via vPC peer-link

```
vPC domain id           : 10
Peer status             : peer adjacency formed ok
vPC keep-alive status   : peer is alive
Configuration consistency status: success
vPC role                : primary
Number of vPC configured : 1
```

```
vPC Peer-link status
-----
```

show vpc brief

```

id   Port   Status Active vlans
--   -
1    Po10   up     1-100

vPC status
-----
id   Port   Status Consistency Reason           Active vlans
--   -
20   Po20   up     success    success           1-100

```

This example also shows how to display brief information about the vPCs. In this example, the port channel failed the consistency check, and the device displays the reason for the failure:

```
switch(config)# show vpc brief
```

Legend:

(*) - local vpc is down, forwarding via vpc peer-link

```

vPC domain id           : 10
Peer status             : peer adjacency formed ok
vPC keep-alive status   : peer is alive
Configuration consistency status: failed
Configuration consistency reason: vPC type-1 configuration incompatible - STP interface
port type inconsistent
vPC role                : secondary
Number of vPC configured : 1

```

vPC Peer-link status

```

id   Port   Status Active vlans
--   -
1    Po10   up     1-100

vPC status
-----
id   Port   Status Consistency Reason           Active vlans
--   -
20   Po20   up     failed    vPC type-1 configuration -
                    incompatible - STP
                    interface port type
                    inconsistent

```

This example shows how to display information about the tracked objects in the vPCs:

```
switch(config)# show vpc brief
```

Legend:

(*) - local vpc is down, forwarding via vpc peer-link

```

vPC domain id           : 1
Peer status             : peer adjacency formed ok
vPC keep-alive status   : peer is alive
Configuration consistency status: success
vPC role                : secondary
Number of vPC configured : 3
Track object           : 12

```

vPC Peer-link status

```

id   Port   Status Active vlans
--   -
1    Po10   up     1-100

```

Related Commands	Command	Description
	feature vpc	Enables vPCs on the device.
	show port channel summary	Displays information about port channels.
