New and Changed Information

The following table provides an overview of the significant changes made to this configuration guide. The table does not provide an exhaustive list of all changes made to this guide or all new features in a particular release.

Feature	Release	Description	Where Documented
QSFP+ GEM	6.0(2)N1(2)	Addition of the QSFP+ Generic Expansion Module (GEM).	**interface** command syntax was augmented where required.

Feature	Release	Description	Where Documented
Ingress Policing	6.0(2)N1(1)	Policing allows you to monitor the data rates for a particular class of traffic. When the data rate exceeds user-configured values, the switch drops packets immediately. Because policing does not buffer the traffic; transmission delays are not affected. When traffic exceeds the data rate, you instruct the system to drop the packets. You can define single-rate and two-color Ingress Policing.	Configuring Ingress Policing
