Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table at the end of this module.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to <http://www.cisco.com/go/cfn>. An account on Cisco.com is not required.

Information about the MTU

The default maximum transmission unit (MTU) size for frames received and transmitted on all interfaces is 1500 bytes. You can increase the MTU size for all interfaces operating at 10 or 100 Mb/s by using the **system mtu** global configuration command. You can increase the MTU size to support jumbo frames on all Gigabit Ethernet interfaces by using the **system mtu jumbo** global configuration command.

Note The switch supports jumbo frames at CPU.

System MTU Guidelines

When configuring the system MTU values, follow these guidelines:

- The default maximum transmission unit (MTU) size for frames received and transmitted on all interfaces is 1500 bytes. You can increase the MTU size for all interfaces operating at 10 or 100 Mb/s by using the

system mtu global configuration command. You can increase the MTU size to support jumbo frames on all Gigabit Ethernet interfaces by using the **system mtu jumbo** global configuration command.

- Gigabit Ethernet ports are not affected by the **system mtu** command; 10/100 ports are not affected by the **system mtu jumbo** command. If you do not configure the **system mtu jumbo** command, the setting of the **system mtu** command applies to all Gigabit Ethernet interfaces.

How to Configure MTU

Configuring the System MTU

Beginning in privileged EXEC mode, follow these steps to change the MTU size for all 10/100 or Gigabit Ethernet interfaces:

SUMMARY STEPS

1. **configure terminal**
2. **system mtu bytes**
3. **system mtu jumbo bytes**
4. **end**
5. **copy running-config startup-config**
6. **reload**
7. **show system mtu**

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure terminal Example: SwitchDevice# configure terminal	Enters global configuration mode.
Step 2	system mtu bytes Example: SwitchDevice(config)# system mtu 2500	The range is 1500 to 1998 bytes; the default is 1500 bytes.
Step 3	system mtu jumbo bytes Example: SwitchDevice(config)# system mtu jumbo 7500	The range is 1500 to 9198 bytes; the default is 1500 bytes.
Step 4	end Example: SwitchDevice(config)# end	Returns to privileged EXEC mode.
Step 5	copy running-config startup-config Example:	Saves your entries in the configuration file.

	Command or Action	Purpose
	SwitchDevice# copy running-config startup-config	
Step 6	reload Example: SwitchDevice# reload	Reloads the operating system.
Step 7	show system mtu Example: SwitchDevice# show system mtu	Verifies your settings.

Configuration Examples for System MTU

This example shows how to set the maximum packet size for a Gigabit Ethernet port to 7500 bytes:

```
SwitchDevice(config)# system mtu 1900
SwitchDevice(config)# system mtu jumbo 7500
SwitchDevice(config)# exit
```

If you enter a value that is outside the allowed range for the specific type of interface, the value is not accepted. This example shows the response when you try to set Gigabit Ethernet interfaces to an out-of-range number:

```
SwitchDevice(config)# system mtu jumbo 25000
                        ^
% Invalid input detected at '^' marker.
```

This is an example of output from the **show system mtu** command:

```
SwitchDevice# show system mtu
Global Ethernet MTU is 1500 bytes.
```
