## Restrictions for CoPP

Restrictions for control plane policing (CoPP) include the following:

- Only ingress CoPP is supported. The **system-cpp-policy** policy-map is available on the control plane interface, and only in the ingress direction.
- Only the **system-cpp-policy** policy-map can be installed on the control plane interface.
- The **system-cpp-policy** policy-map and the 17 system-defined classes cannot be modified or deleted.
- Only the **police** action is allowed under the **system-cpp-policy** policy-map. The police rate for system-defined classes must be configured only in packets per second (pps); for user-defined class maps this must be configured only in bits per second (bps).
- We recommend not disabling the policer for a system-defined class map, that is, do not configure the **no police rate rate pps** command. Doing so affects the overall system health in case of high traffic towards the CPU. Further, even if you disable the policer rate for a system-defined class map, the system automatically reverts to the default policer rate after system bootup in order to protect the system bring-up process.
- One or more CPU queues are part of each class-map. Where multiple CPU queues belong to one class-map, changing the policer rate of a class-map affects all CPU queues that belong to that class-map. Similarly, disabling the policer in a class-map disables all queues that belong to that class-map. See [Table 1: System-Defined Values for CoPP, on page 3](#) for information about which CPU queues belong to each class-map.

# Information About CoPP

This chapter describes how control plane policing (CoPP) works on your device and how to configure it.

## CoPP Overview

The CoPP feature improves security on your device protecting the CPU from unnecessary traffic and DoS attacks. It can also protect control and management traffic from traffic drops caused by high volumes of other, lower priority traffic.

Your device is typically segmented into three planes of operation, each with its own objective:

- The data plane, to forward data packets.
- The control plane, to route data correctly.
- The management plane, to manage network elements.

You can use CoPP to protect most of the CPU-bound traffic and ensure routing stability, reachability, and packet delivery. Most importantly, you can use CoPP to protect the CPU from a DoS attack.

CoPP uses the modular QoS command-line interface (MQC) and CPU queues to achieve these objectives. Different types of control plane traffic are grouped together based on certain criteria, and assigned to a CPU queue. You can manage these CPU queues by configuring dedicated policers in hardware. For example, you can modify the policer rate for certain CPU queues (traffic-type), or you can disable the policer for a certain type of traffic.

Although the policers are configured in hardware, CoPP does not affect CPU performance or the performance of the data plane. But since it limits the number of packets going to CPU, the CPU load is controlled. This means that services waiting for packets from hardware may see a more controlled rate of incoming packets (the rate being user-configurable).

## System-Defined Aspects of CoPP

When you power-up the device for the first time, the system automatically performs the following tasks:

- Looks for policy-map **system-cpp-policy**. If not found, the system creates and installs it on the control-plane.
- Creates 17 class-maps under **system-cpp-policy**.

The next time you power-up the device, the system detects the policy and class maps that have already been created.

- Enables sixteen out of the thirty-two CPU queues (after the policy is installed), with their respective default rate. The CPU queues that are enabled by default and their default rates are indicated in the table *System-Defined Values for CoPP*.

The following table lists the class-maps that the system creates when you load the device. It lists the policer that corresponds to each class-map and one or more CPU queues that are grouped under each class-map. There is a one-to-one mapping of class-map to policer, and a one-to-many mapping of class-map to CPU queues.

Table 1: System-Defined Values for CoPP

Class Maps Names	Policer Index (Policer No.)	CPU queues (Queue No.)	CPU Queues Enabled by Default	Default Policer Rate—in packets per second (pps)
system-cpp-police-data	WK_CPP_POLICE_DATA(0)	WK_CPU_Q_ICMP_GEN(3) WK_CPU_Q_BROADCAST(12)	Yes	200
system-cpp-police-l2-control	WK_CPP_POLICE_L2_CONTROL(1)	WK_CPU_Q_L2_CONTROL(1)	No	500
system-cpp-police-routing-control	WK_CPP_POLICE_ROUTING_CONTROL(2)	WK_CPU_Q_ROUTING_CONTROL(4)	Yes	500
system-cpp-police-control-low-priority	WK_CPP_POLICE_CONTROL_LOW_PRI(3)	WK_CPU_Q_ICMP_REDIRECT(6) WK_CPU_Q_GENERAL_PUNT(25)	No	500
system-cpp-police-punt-webauth	WK_CPP_POLICE_PUNT_WEBAUTH(7)	WK_CPU_Q_PUNT_WEBAUTH(22)	No	1000
system-cpp-police-topology-control	WK_CPP_POLICE_TOPOLOGY_CONTROL(8)	WK_CPU_Q_TOPOLOGY_CONTROL(15)	No	13000
system-cpp-police-multicast	WK_CPP_POLICE_MULTICAST(9)	WK_CPU_Q_TRANSIT_TRAFFIC(18) WK_CPU_Q_MCAST_DATA(30)	Yes	500
system-cpp-police-sys-data	WK_CPP_POLICE_SYS_DATA(10)	WK_CPU_Q_LEARNING_CACHE_OVFL(13) WK_CPU_Q_CRYPTO_CONTROL(23) WK_CPU_Q_EXCEPTION(24) WK_CPU_Q_EGR_EXCEPTION(28) WK_CPU_Q_NFL_SAMPLED_DATA(26) WK_CPU_Q_GOLD_PKT(31) WK_CPU_Q_RPF_FAILED(19)	Yes	100
system-cpp-police-dot1x-auth	WK_CPP_POLICE_DOT1X(11)	WK_CPU_Q_DOT1X_AUTH(0)	No	1000
system-cpp-police-protocol-snooping	WK_CPP_POLICE_PR	WK_CPU_Q_PROTO_SNOOPING(16)	No	500
system-cpp-police-sw-forward	WK_CPP_POLICE_SW_FWD(13)	WK_CPU_Q_SW_FORWARDING_Q(14) WK_CPU_Q_SGT_CACHE_FULL(27) WK_CPU_Q_LOGGING(21)	Yes	1000

Class Maps Names	Policer Index (Policer No.)	CPU queues (Queue No.)	CPU Queues Enabled by Default	Default Policer Rate in packets per second (pps)
system-cpp-police-forus	WK_CPP_POLICE_FORUS(14)	WK_CPU_Q_FORUS_ADDR_RESOLUTION(5) WK_CPU_Q_FORUS_TRAFFIC(2)	No	1000
system-cpp-police-multicast-end-station	WK_CPP_POLICE_MULTICAST_SNOOPING(15)	WK_CPU_Q_MCAST_END_STATION_SERVICE(20)	Yes	2000
system-cpp-default	WK_CPP_POLICE_DEFAULT_POLICER	WK_CPU_Q_DHCP_SNOOPING WK_CPU_Q_SHOW_FORWARD	No	1000

The following table lists the CPU queues and the feature(s) associated with each CPU queue.

**Table 2: CPU Queues and Associated Feature(s)**

CPU queues (Queue No.)	Feature(s)
WK_CPU_Q_DOT1X_AUTH(0)	IEEE 802.1x Port-Based Authentication
WK_CPU_Q_L2_CONTROL(1)	Dynamic Trunking Protocol (DTP) VLAN Trunking Protocol (VTP) Port Aggregation Protocol (PAgP) Client Information Signaling Protocol (CISP) Message session relay protocol Multiple VLAN Registration Protocol (MVRP) Metropolitan Mobile Network (MMN) Link Level Discovery Protocol (LLDP) UniDirectional Link Detection (UDLD) Link Aggregation Control Protocol (LACP) Cisco Discovery Protocol (CDP) Spanning Tree Protocol (STP)
WK_CPU_Q_FORUS_TRAFFIC(2)	Host such as Telnet, Pingv4 and Pingv6, and SNMP Keepalive / loopback detection Initiate-Internet Key Exchange (IKE) protocol (IPSec)
WK_CPU_Q_ICMP_GEN(3)	ICMP - destination unreachable ICMP-TTL expired

CPU queues (Queue No.)	Feature(s)
WK_CPU_Q_ROUTING_CONTROL(4)	Routing Information Protocol version 1 (RIPv1) RIPv2 Interior Gateway Routing Protocol (IGRP) Border Gateway Protocol (BGP) PIM-UDP Virtual Router Redundancy Protocol (VRRP) Hot Standby Router Protocol version 1 (HSRPv1) HSRPv2 Gateway Load Balancing Protocol (GLBP) Label Distribution Protocol (LDP) Web Cache Communication Protocol (WCCP) Routing Information Protocol next generation (RIPng) Open Shortest Path First (OSPF) Open Shortest Path First version 3(OSPFv3) Enhanced Interior Gateway Routing Protocol (EIGRP) Enhanced Interior Gateway Routing Protocol version 6 (EIGRPv6) DHCPv6 Protocol Independent Multicast (PIM) Protocol Independent Multicast version 6 (PIMv6) Hot Standby Router Protocol next generation (HSRPng) IPv6 control Generic Routing Encapsulation (GRE) keepalive Network Address Translation (NAT) punt Intermediate System-to-Intermediate System (IS-IS)
WK_CPU_Q_FORUS_ADDR_RESOLUTION(5)	Address Resolution Protocol (ARP) IPv6 neighbor advertisement and neighbor solicitation
WK_CPU_Q_ICMP_REDIRECT(6)	Internet Control Message Protocol (ICMP) redirect
WK_CPU_Q_BROADCAST(12)	All types of broadcast
WK_CPU_Q_LEARNING_CACHE_OVFL(13)	Learning cache overflow (Layer 2 + Layer 3)
WK_CPU_Q_SW_FORWARDING_Q(14)	Software forwarding

CPU queues (Queue No.)	Feature(s)
WK_CPU_Q_TOPOLOGY_CONTROL(15)	Spanning Tree Protocol (STP) Resilient Ethernet Protocol (REP) Shared Spanning Tree Protocol (SSTP)
WK_CPU_Q_PROTO_SNOOPING(16)	Address Resolution Protocol (ARP) snooping for Dynamic ARP Inspection (DAI)
WK_CPU_Q_DHCP_SNOOPING(17)	DHCP snooping
WK_CPU_Q_TRANSIT_TRAFFIC(18)	This is used for packets punted by NAT, which need to be handled in the software path.
WK_CPU_Q_RPF_FAILED(19)	Data – mRPF (multicast RPF) failed
WK_CPU_Q_MCAST_END_STATION_SERVICE(20)	Internet Group Management Protocol (IGMP) / Multicast Listener Discovery (MLD) control
WK_CPU_Q_LOGGING(21)	Access control list (ACL) logging
WK_CPU_Q_PUNT_WEBAUTH(22)	Web Authentication
WK_CPU_Q_HIGH_RATE_APP(23)	Broadcast
WK_CPU_Q_CRYPTO_CONTROL(24)	Crypto control
WK_CPU_Q_GENERAL_PUNT(25)	General punt
WK_CPU_Q_NFL_SAMPLED_DATA(26)	Netflow sampled data and Media Services Proxy (MSP)
WK_CPU_Q_SGT_CACHE_FULL(27)	Cache full
WK_CPU_Q_EGR_EXCEPTION(28)	Egress resolution exception
WK_CPU_Q_MCAST_DATA(30)	Data - (S,G) creation Data - local joins Data - PIM Registration Data - SPT switchover Data - Multicast
WK_CPU_Q_GOLD_PKT(31)	Gold

## User-Configurable Aspects of CoPP

You can perform these tasks to manage control plane traffic:

**Note** All `system-cpp-policy` configurations must be saved so they are retained after reboot.

### Enable or Disable a Policer for CPU Queues

Enable a policer for a CPU queue, by configuring a policer action (in packets per second) under the corresponding class-map, within the `system-cpp-policy` policy-map.

Disable a policer for CPU queue, by removing the policer action under the corresponding class-map, within the `system-cpp-policy` policy-map.

---

**Note** If a default policer is already present, carefully consider and control its removal; otherwise the system may see a CPU hog or other anomalies, such as control packet drops.

---

### Set Policer Rates to Default

Set the policer for CPU queues to their default values, by entering the `cpp system-default` command in global configuration mode.

### Create User-Defined Class Maps

If a given traffic class does not have a designated class map, and you want to protect this traffic, you can create specific class maps (with filters) for such traffic packets and add these user-defined class maps to `system-cpp-policy`.

While `system-cpp-policy` is applied in the ingress direction, the forwarding engine driver (FED) changes policers on user-defined class maps to the egress. The filters and the policers in all user-defined classes must therefore be applied as egress classifications and actions, respectively. The policy map itself is unaffected by this change in the direction.

When you add a user-defined class map to `system-cpp-policy`, the system automatically installs it on all 32 CPU queues (in addition to the control plane), resulting in 33 instances of the policy. You can see this by entering the `show platform software fed switch { switch_number } qos policy target status` command in privileged EXEC mode.

The police rate on these class maps is controlled by the Active Queue Management (AQM) policer. AQM provides buffering control of traffic flows prior to queuing a packet into the transmit queue of a port, ensuring that certain flows do not hog the switch packet memory. If the AQM policer feature is enabled, any user-defined police rates exceeding the AQM policer limits are disregarded.

User defined class maps have normal QoS or ACL classification filters.

## Upgrading or Downgrading the Software Version

### Software Version Upgrades and CoPP

When you upgrade the software version on your device, the system checks and make the necessary updates as required for CoPP (For instance, it checks for the `system-cpp-policy` policy map and creates it if missing). You may also have to complete certain tasks before or after the upgrade activity. This is to ensure that any configuration updates are reflected correctly and CoPP continues to work as expected. Depending on the method you use to upgrade the software, upgrade-related tasks may be optional or recommended in some scenarios, and mandatory in others.

The system actions and user actions for an upgrade, are described here. Also included, are any release-specific caveats.

### System Actions for an Upgrade

When you upgrade the software version on your device, the system performs these actions. This applies to all upgrade methods:

- If the device did not have a `system-cpp-policy` policy map before upgrade, then on upgrade, the system creates a default policy map.
- If the device had a `system-cpp-policy` policy map before upgrade, then on upgrade, the system does not re-generate the policy.

### User Actions for an Upgrade

User actions for an upgrade – depending on upgrade method:

Upgrade Method	Condition	Action Time and Action	Purpose
Regular <sup>1</sup>	None	<b>After upgrade (required)</b> Enter the <b>cpp system-default</b> command in global configuration mode	To get the latest, default policer rates.

<sup>1</sup> Refers to a software upgrade method that involves a reload of the switch. Can be install or bundle mode.

## Software Version Downgrades and CoPP

The system actions and user actions for a downgrade, are described here.

### System Actions for a Downgrade

When you downgrade the software version on your device, the system performs these actions. This applies to all downgrade methods:

- The system retains the `system-cpp-policy` policy map on the device, and installs it on the control plane.

### User Actions for a Downgrade

User actions for a downgrade:

Upgrade Method	Condition	Action Time and Action	Purpose
Regular <sup>2</sup>	None	No action required	Not applicable

<sup>2</sup> Refers to a software upgrade method that involves a reload of the switch. Can be install or bundle mode.

If you downgrade the software version and then again upgrade, the system action and user actions that apply are the same as those mentioned for upgrades.

# How to Configure CoPP

## Enabling a CPU Queue or Changing the Policer Rate

The procedure to enable a CPU queue and change the policer rate of a CPU queue is the same. Follow these steps:

### Procedure

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b> <b>Example:</b> Device> <b>enable</b>	Enables privileged EXEC mode. <ul style="list-style-type: none"> <li>• Enter your password if prompted.</li> </ul>
<b>Step 2</b>	<b>configure terminal</b> <b>Example:</b> Device# <b>configure terminal</b>	Enters global configuration mode.
<b>Step 3</b>	<b>policy-map</b> <i>policy-map-name</i> <b>Example:</b> Device(config)# <b>policy-map</b> <b>system-cpp-policy</b> Device(config-pmap)#	Enters the policy map configuration mode.
<b>Step 4</b>	<b>class</b> <i>class-name</i> <b>Example:</b> Device(config-pmap)# <b>class</b> <b>system-cpp-police-protocol-snooping</b> Device(config-pmap-c)#	Enters the class action configuration mode. Enter the name of the class that corresponds to the CPU queue you want to enable. See table <i>System-Defined Values for CoPP</i> .
<b>Step 5</b>	<b>police rate</b> <i>rate</i> <i>pps</i> <b>Example:</b> Device(config-pmap-c)# <b>police rate</b> 100 <b>pps</b> Device(config-pmap-c-police)#	Specifies an upper limit on the number of incoming packets processed per second, for the specified traffic class.  <b>Note</b> The rate you specify is applied to all CPU queues that belong to the class-map you have specified.
<b>Step 6</b>	<b>exit</b> <b>Example:</b> Device(config-pmap-c-police)# <b>exit</b>	Returns to the global configuration mode.

	Command or Action	Purpose
	Device (config-pmap-c) # <b>exit</b> Device (config-pmap) # <b>exit</b> Device (config) #	
<b>Step 7</b>	<b>control-plane</b> <b>Example:</b>  Device (config) # <b>control-plane</b> Device (config-cp) #	Enters the control plane (config-cp) configuration mode
<b>Step 8</b>	<b>service-policy input</b> <i>policy-name</i> <b>Example:</b>  Device (config) # <b>control-plane</b> Device (config-cp) # <b>service-policy input</b> <b>system-cpp-policy</b> Device (config-cp) #	Installs system-cpp-policy in FED. This command is required for you to see the FED policy. Not configuring this command will lead to an error.
<b>Step 9</b>	<b>end</b> <b>Example:</b>  Device (config-cp) # <b>end</b>	Returns to the privileged EXEC mode.
<b>Step 10</b>	<b>show policy-map control-plane</b> <b>Example:</b>  Device# <b>show policy-map control-plane</b>	Displays all the classes configured under <code>system-cpp policy</code> , the rates configured for the various traffic types, and statistics

## Disabling a CPU Queue

Follow these steps to disable a CPU queue:

### Procedure

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b> <b>Example:</b>  Device> <b>enable</b>	Enables privileged EXEC mode. <ul style="list-style-type: none"> <li>• Enter your password if prompted.</li> </ul>
<b>Step 2</b>	<b>configure terminal</b> <b>Example:</b>  Device# <b>configure terminal</b>	Enters global configuration mode.

	Command or Action	Purpose
<b>Step 3</b>	<b>policy-map</b> <i>policy-map-name</i> <b>Example:</b> Device(config)# <b>policy-map</b> <b>system-cpp-policy</b> Device(config-pmap)#	Enters the policy map configuration mode.
<b>Step 4</b>	<b>class</b> <i>class-name</i> <b>Example:</b> Device(config-pmap)# <b>class</b> <b>system-cpp-police-protocol-snooping</b> Device(config-pmap-c)#	Enters the class action configuration mode. Enter the name of the class that corresponds to the CPU queue you want to disable. See the table, <i>System-Defined Values for CoPP</i> .
<b>Step 5</b>	<b>no police rate</b> <i>rate</i> <b>pps</b> <b>Example:</b> Device(config-pmap-c)# <b>no police rate</b> <b>100 pps</b>	Disables incoming packet processing for the specified traffic class.  <b>Note</b> This disables all CPU queues that belong to the class-map you have specified.
<b>Step 6</b>	<b>end</b> <b>Example:</b> Device(config-pmap-c)# <b>end</b>	Returns to the privileged EXEC mode.
<b>Step 7</b>	<b>show policy-map control-plane</b> <b>Example:</b> Device# <b>show policy-map control-plane</b>	Displays all the classes configured under <code>system-cpp policy</code> and the rates configured for the various traffic types and statistics.

## Setting the Default Policer Rates for All CPU Queues

Follow these steps to set the policer rates for all CPU queues to their default rates:

### Procedure

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b> <b>Example:</b> Device> <b>enable</b>	Enables privileged EXEC mode. <ul style="list-style-type: none"> <li>• Enter your password if prompted.</li> </ul>
<b>Step 2</b>	<b>configure terminal</b> <b>Example:</b>	Enters global configuration mode.

	Command or Action	Purpose
	Device# <code>configure terminal</code>	
<b>Step 3</b>	<b>cpp system-default</b> <b>Example:</b> Device(config)# <code>cpp system-default</code> Defaulting CPP : Policer rate for all classes will be set to their defaults	Sets the policer rates for all the classes to the default rate.
<b>Step 4</b>	<b>end</b> <b>Example:</b> Device(config)# <code>end</code>	Returns to the privileged EXEC mode.

## Creating A User-Defined Class Map

Follow these steps to create user-defined class maps in system-cpp-policy and set the policer rates in bps

### Procedure

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b> <b>Example:</b> Device> <code>enable</code>	Enables privileged EXEC mode. <ul style="list-style-type: none"> <li>• Enter your password if prompted.</li> </ul>
<b>Step 2</b>	<b>configure terminal</b> <b>Example:</b> Device# <code>configure terminal</code>	Enters global configuration mode.
<b>Step 3</b>	<b>class-map class-map-name</b> <b>Example:</b> Device(config)# <code>class-map example_class</code> Device(config-cmap)#	Specify the class map you want to create. Enters the class map configuration mode.
<b>Step 4</b>	<b>exit</b> <b>Example:</b> Device(config-cmap)# <code>exit</code> Device(config)#	Exits the class map configuration mode.

	Command or Action	Purpose
<b>Step 5</b>	<b>policy-map</b> <i>policy-map-name</i> <b>Example:</b> Device(config)# <b>policy-map</b> <b>system-cpp-policy</b> Device(config-pmap)#	Enter the policy map name. Enters the policy map configuration mode.
<b>Step 6</b>	<b>class-map</b> <i>class-map-name</i> <b>Example:</b> Device(config-pmap)# <b>class example_class</b> Device(config-pmap-c)#	Enters the class action configuration mode. Enter the name of the class.
<b>Step 7</b>	<b>[no] police rate</b> <i>target_bit_rate</i> <b>Example:</b> Device(config-pmap-c)# <b>police 90000</b>	Specifies the bit rate per second, enter a value between 8000 and 10000000000.  <b>Note</b> The police rate for user-defined class-maps must not exceed 10000 pps worth of traffic.
<b>Step 8</b>	<b>end</b> <b>Example:</b> Device(config-pmap-c-police)# <b>end</b> Device#	Returns to the privileged EXEC mode.
<b>Step 9</b>	<b>show policy-map control-plane</b> <b>Example:</b> Device# <b>show policy-map control-plane</b>	Displays all the classes configured under <code>system-cpp policy</code> , including the user-defined class maps, and the rates configured.

## Configuration Examples for CoPP

### Example: Enabling a CPU Queue or Changing the Policer Rate of a CPU Queue

This example shows how to enable a CPU queue or to change the policer rate of a CPU queue. Here the `class system-cpp-police-protocol-snooping` CPU queue is enabled with the policer rate of 2000 pps.

```
Device> enable
Device# configure terminal
Device(config)# policy-map system-cpp-policy
Device(config-pmap)# class system-cpp-police-protocol-snooping
Device(config-pmap-c)# police rate 2000 pps
Device(config-pmap-c-police)# end
```

```
Device# show policy-map control-plane
```

```

Control Plane

Service-policy input: system-cpp-policy

<output truncated>

Class-map: system-cpp-police-dot1x-auth (match-any)
 0 packets, 0 bytes
 5 minute offered rate 0000 bps, drop rate 0000 bps
 Match: none
 police:
   rate 1000 pps, burst 244 packets
   conformed 0 bytes; actions:
     transmit
   exceeded 0 bytes; actions:
     drop

Class-map: system-cpp-police-protocol-snooping (match-any)
 0 packets, 0 bytes
 5 minute offered rate 0000 bps, drop rate 0000 bps
 Match: none
 police:
   rate 2000 pps, burst 488 packets
   conformed 0 bytes; actions:
     transmit
   exceeded 0 bytes; actions:
     drop

<output truncated>

Class-map: class-default (match-any)
 0 packets, 0 bytes
 5 minute offered rate 0000 bps, drop rate 0000 bps
 Match: any

```

## Example: Disabling a CPU Queue

This example shows how to disable a CPU queue. Here the **class system-cpp-police-protocol-snooping** CPU queue is disabled.

```

Device> enable
Device# configure terminal
Device(config)# policy-map system-cpp-policy
Device(config-pmap)# class system-cpp-police-protocol-snooping
Device(config-pmap-c)# no police rate 100 pps
Device(config-pmap-c)# end

```

```

Device# show running-config | begin system-cpp-policy

```

```

policy-map system-cpp-policy
 class system-cpp-police-data
   police rate 200 pps
 class system-cpp-police-sys-data
   police rate 100 pps
 class system-cpp-police-sw-forward
   police rate 1000 pps
 class system-cpp-police-multicast
   police rate 500 pps

```

```

class system-cpp-police-multicast-end-station
  police rate 2000 pps
class system-cpp-police-punt-webauth
class system-cpp-police-l2-control
class system-cpp-police-routing-control
  police rate 500 pps
class system-cpp-police-control-low-priority
class system-cpp-police-wireless-priority1
class system-cpp-police-wireless-priority2
class system-cpp-police-wireless-priority3-4-5
class system-cpp-police-topology-control
class system-cpp-police-dot1x-auth
class system-cpp-police-protocol-snooping
class system-cpp-police-forus
class system-cpp-default

```

<output truncated>

## Example: Setting the Default Policer Rates for All CPU Queues

This example shows how to set the policer rates for all CPU queues to their default and then verify the setting.

```

Device> enable
Device# configure terminal
Device(config)# cpp system-default
Defaulting CPP : Policer rate for all classes will be set to their defaults
Device(config)# end

Device# show platform hardware fed switch 1 qos queue stats internal cpu policer

(default) (set)
QId PlcIdx Queue Name Enabled Rate Rate Drop
-----
0 11 DOT1X Auth No 1000 1000 0
1 1 L2 Control No 500 400 0
2 14 Forus traffic No 1000 1000 0
3 0 ICMP GEN Yes 200 200 0
4 2 Routing Control Yes 1800 1800 0
5 14 Forus Address resolution No 1000 1000 0
6 3 Punt Copy to ICMP Redirect No 500 400 0
7 6 WLESS PRI-5 No 1000 1000 0
8 4 WLESS PRI-1 No 1000 1000 0
9 5 WLESS PRI-2 No 1000 1000 0
10 6 WLESS PRI-3 No 1000 1000 0
11 6 WLESS PRI-4 No 1000 1000 0
12 0 BROADCAST Yes 200 200 0
13 10 Learning cache ovfl Yes 100 200 0
14 13 Sw forwarding Yes 1000 1000 0
15 8 Topology Control No 13000 13000 0
16 12 Proto Snooping No 500 400 0
17 16 DHCP Snooping No 1000 1000 0
18 9 Transit Traffic Yes 500 400 0
19 10 RPF Failed Yes 100 200 0
20 15 MCAST END STATION Yes 2000 2000 0
21 13 LOGGING Yes 1000 1000 0
22 7 Punt Webauth No 1000 1000 0
23 10 Crypto Control Yes 100 200 0
24 10 Exception Yes 100 200 0
25 3 General Punt No 500 400 0
26 10 NFL SAMPLED DATA Yes 100 200 0
27 2 Low Latency Yes 1800 1800 0

```

## Example: Creating a User-Defined Class Map

```

28 10    EGR Exception          Yes    100    200    0

## Example: Creating a User-Defined Class Map

Device

This example shows how to create a user-defined class map, apply it to `system-cpp-policy` and display information about where the policy is applied.

A user-defined class map is applied to `system-cpp-policy`, which means that any control traffic matching the user-defined class map `class-cpp-user` is subject to the aggregate policer, under the user-defined class map. Statistics for the user defined traffic class are reported in Bytes.

```

Device> enable
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# class-map match-any class-cpp-user
Device(config-cmap)# match dscp cs1
Device(config-cmap)# exit
Device(config)# policy-map system-cpp-policy
Device(config-pmap)# class class-cpp-user
Device(config-pmap-c)# police rate 2m bps
Device(config-pmap-c-police)# end

Device# show policy-map control-plane
<output truncated>
Class-map: class-cpp-user (match-any)
  0 packets, 0 bytes
  5 minute offered rate 0000 bps, drop rate 0000 bps
  Match: dscp cs1 (8)
  police:
    rate 2000000 bps, burst 62500 bytes
    conformed 0 bytes; actions:
      transmit
    exceeded 0 bytes; actions:
      drop
    conformed 0000 bps, exceeded 0000 bps
<output truncated>

```

When you add a user-defined class map to `system-cpp-policy`, the system automatically installs it on all 32 CPU queues, in addition to the control plane (resulting in 33 instances of the policy).

Note how the direction is display as egress (OUT), even though `system-cpp-policy` is applied in the ingress

```

Device# show platform software fed switch active qos policy target status

TCG status summary:

```

## Monitoring CoPP

Use these commands to display policer settings, such as, traffic types and policer rates (user-configured and default rates) for CPU queues:

Command	Purpose
<b>show policy-map control-plane</b>	Displays the rates configured for the various traffic types
<b>show policy-map system-cpp-policy</b>	Displays all the classes configured under system-cpp policy, and policer rates
<b>show platform hardware fed switch {switch-number} qos que stats internal cpu policer</b>	Displays the rates configured for the various traffic types
<b>show platform software fed {switch-number} qos policy target status</b>	Displays information about policy status and the target port type.

## Feature History and Information for CoPP

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

<b>Feature</b>	<b>Release</b>	<b>Feature Information</b>
Control Plane Policing (CoPP) or CPP	Cisco IOS XE 3.3SE	This feature was introduced.
CLI configuration for CoPP	Cisco IOS XE Denali 16.1.2	This feature was made user-configurable. CLI configuration options to enable and disable CPU queues, to change the policer rate, and to set policer rates to default.
User-defined class maps	Cisco IOS XE Everest 16.5.1a	Starting with this release, you can create class maps (with filters) and add these user-defined class maps to system-cpp-policy.
