arp

I

	To display the contents of the Address Resolution Protocol (ARP) table, use the arp command in boot loader mode.		
	arp [<i>ip_address</i>]		
Syntax Description	<i>ip_address</i> (Optional) Shows the ARP table or the n	napping for a specific IP address.	
Command Default	No default behavior or values.		
Command Modes	Boot loader		
Command History	Release Modifica	ation	
	Cisco IOS XE 3.3SECisco IOS XE 3.3SE This com	nmand was introduced.	
Usage Guidelines	The ARP table contains the IP-address-to-MAC-add	dress mappings.	
Examples	This example shows how to display the ARP table:		
	Device: arp 172.20.136.8 arp'ing 172.20.136.8 172.20.136.8 is at 00:1b:78:dl:25:ae, via p	port 0	

I

boot

To load and boot an executable image and display the command-line interface (CLI), use the **boot** command in boot loader mode.

boot [**-post** | **-n** | **-p** | *flag*] *filesystem:/file-url...*

Syntax Description	-post	(Optional) Run the loaded image with an extended or comprehensive power-on self-test (POST). Using this keyword causes POST to take longer to complete.	
	-n	(Optional) Pause for the Cisco IOS Debugger immediately after launching.	
	-р	(Optional) Pause for the JTAG Debugger right after loading the image.	
	filesystem:	Alias for a file system. Use flash: for the system board flash device; use usbflash0: for USB memory sticks.	
	/file-url	Path (directory) and name of a bootable image. Separate image names with a semicolon.	
Command Default	No default beh	navior or values.	
Command Modes	Boot loader		
Command History	Release	Modification	
	Cisco IOS XE	E 3.3SECisco IOS XE 3.3SE This command was introduced.	
Usage Guidelines	•	er the boot command without any arguments, the device attempts to automatically boot the ng the information in the BOOT environment variable, if any.	
	If you supply an image name for the <i>file-url</i> variable, the boot command attempts to boot the specified image		
	When you specify boot loader boot command options, they are executed immediately and apply only to the current boot loader session.		
	These settings are not saved for the next boot operation.		
	Filenames and directory names are case sensitive.		
	Example		
	This example shows how to boot the device using the new-image.bin image:		
	Device: set BOOT flash:/new-images/new-image.bin Device: boot		
	After entering	this command, you are prompted to start the setup program.	

cat

I

To display the contents of one or more files, use the **cat** command in boot loader mode.

	cat filesystem:/file-url		
Syntax Description	filesystem: Specifies a file system. /file-url Specifies the path (directory) and name of the files to display. Separate each filename with a space.		
Command Default	No default behavior or values.		
Command Modes	Boot loader		
Command History	Release Modification		
	Cisco IOS XE 3.3SECisco IOS XE 3.3SE This command was introduced.		
Usage Guidelines	Filenames and directory names are case sensitive.		
	If you specify a list of files, the contents of each file appears sequentially.		
Examples	This example shows how to display the contents of an image file:		
	Device: cat flash : <i>image_file_name</i> version_suffix: universal-122-xx.SEx version_directory: <i>image_file_name</i> <i>image_system_type_id</i> : 0x0000002 <i>image_name</i> : <i>image_file_name</i> .bin ios_image_file_size: 8919552 total_image_file_size: 11592192 <i>image_feature</i> : IP LAYER_3 PLUS MIN_DRAM_MEG=128 <i>image_family: family</i> stacking_number: 1.34 board_ids: 0x00000068 0x00000069 0x0000006a 0x0000006b info_end:		

clear location

To clear a specific radio frequency identification (RFID) tag or all of the RFID tags information in the entire database, use the **clear location** command in EXEC mode.

	clear location [mac-addre	ess mac-address rfid]
Syntax Description	mac-address mac-address	MAC address of a specific RFID tag.
	rfid	Specifies all of the RFID tags in the database.
Command Default	No default behavior or value	'S.
Command Modes	User EXEC	
	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE 3.3SECisco IO	OS XE 3.3SE This command was introduced.

This example shows how to clear information about all of the RFID tags in the database:

Device> clear location rfid

clear location statistics

To clear radio-frequency identification (RFID) statistics, use the **clear location statistics** command in EXEC mode.

 clear location statistics

 Syntax Description
 This command has no arguments or keywords.

 Command Default
 No default behavior or values.

 Command Modes
 User EXEC

 Privileged EXEC
 Privileged EXEC

 Command History
 Release
 Modification

 Cisco IOS XE 3.3SECisco IOS XE 3.3SE
 This command was

The following is sample output from the **clear location rfid** command and shows how to clear RFID statistics:

introduced.

Device> clear location statistics

System Management

сору

	To copy a file from a source to a destination, use the copy command in boot loader mode.		
	copy filesystem:/s	ource-file-url filesystem:/destination-file-url	
Syntax Description	filesystem:	Alias for a file system. Use usbflash0: for USB memory sticks.	
	/source-file-url	Path (directory) and filename (source) to be copied.	
	/destination-file-u	<i>d</i> Path (directory) and filename of the destination.	
Command Default	No default behavi	or or values.	
Command Modes	Boot loader		
Command History	Release	Modification	
	Cisco IOS XE 3.3	SECisco IOS XE 3.3SE This command was introduced.	
Usage Guidelines	Filenames and directory names are case sensitive.		
	Directory names are limited to 127 characters between the slashes (/); the name cannot contain control characters, spaces, deletes, slashes, quotes, semicolons, or colons.		
	Filenames are limi quotes, semicolon	ted to 127 characters; the name cannot contain control characters, spaces, deletes, slashes s, or colons.	
	If you are copying	a file to a new directory, the directory must already exist.	
Examples	This example show	vs how to copy a file at the root:	
		<pre>bflash0:test1.text usbflash0:test4.text :test1.text" successfully copied to "usbflash0:test4.text"</pre>	
	You can verify that	t the file was copied by entering the dir filesystem: boot loader command.	

copy startup-config tftp:

To copy the configuration settings from a switch to a TFTP server, use the **copy startup-config tftp:** command in Privileged EXEC mode.

copy startup-config tftp: *remote host {ip-address}/{name}*

Syntax Description	<i>remote host {ip-address}/{name}</i> Host name or IP-address of Remote host.		
Command Default	No default behavior or va	alues.	
Command Modes	Privileged EXEC		
Command History	Release	Modification	-
	Cisco IOS XE Release 1	6.1 This command was introduced.	-
Usage Guidelines		figurations from the switch, run the figurations are copied onto the TFT	command copy startup-config tftp: and follow P server.
	, e	vitch and run the command copy tft ow copied onto the other switch.	p: startup-config and follow the instructions.
Examples	This example shows how	to copy the configuration settings	onto a TFTP server:
	Device: copy startup- Address or name of re	5 1	

copy tftp: startup-config

To copy the configuration settings from a TFTP server onto a new switch, use the **copy tftp: startup-config** command in Privileged EXEC mode on the new switch.

copy tftp: startup-config remote host {ip-address}/{name}

Syntax Description	remote host {ip-address}/{name} Host name or IP-address of Remote host.		
Command Default	No default behavior	r or values.	
Command Modes	Privileged EXEC		
Command History	Release	Modification	
	Cisco IOS XE Rele	ease 16.1 This command was introduced.	
Usage Guidelines	U	tions are copied, to save your configuration run the copy startup-config running-co	as, use write memory command and then either nfig command.
Examples	This example show	s how to copy the configuration settings f	rom the TFTP server onto a switch:
		p: startup-config of remote host []?	

debug voice diagnostics mac-address

To enable debugging of voice diagnostics for voice clients, use the **debug voice diagnostics mac-address** command in privileged EXEC mode. To disable debugging, use the **no** form of this command.

debug voice diagnostics mac-address mac-address l verbose mac-address mac-address verbose nodebug voice diagnostics mac-address mac-address l verbose mac-address mac-address verbose

Syntax Description	voice diagnostics	Configures voice debugging for voice clients.
	mac-address mac-address 1 mac-addre	ss mac-address2 Specifies MAC addresses of the voice clients.
	verbose	Enables verbose mode for voice diagnostics.
Command Default	No default behavior or values.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE 3.3SECisco IOS XE 3.3SE	This command was introduced.
	• • •	ebug voice diagnostics mac-address command and shows ics for voice client with MAC address of 00:1f:ca:cf:b6:60:

Device# debug voice diagnostics mac-address 00:1f:ca:cf:b6:60

delete

	To delete one or more file	les from the specified file system, use the delete command in bo
	delete filesystem:/file-url	1
Syntax Description	filesystem: Alias for a fil	ile system. Use usbflash0: for USB memory sticks.
	/file-url Path (director	bry) and filename to delete. Separate each filename with a space.
Command Default	No default behavior or va	alues.
Command Modes	Boot loader	
Command History	Release	Modification
	Cisco IOS XE 3.3SECisc	aco IOS XE 3.3SE This command was introduced.
Usage Guidelines	Filenames and directory	names are case sensitive.
	The device prompts you	for confirmation before deleting each file.
Examples	This example shows how	v to delete two files:
	Are you sure you want File "usbflash0:test2	t to delete "usbflash0:test5.text" (y/n)? ${f y}$
	You can verify that the fill	iles were deleted by entering the dir usbflash0: boot loader con

dir

	To display the list of files and directories on the specified file system, use the dir command in boot loader mode.		
	dir filesystem:/file-url		
Syntax Description	filesystem	<i>n</i> : Alias for a file system. Use flash: for the system board flash device; use usbflash0: for USB memory sticks.	
	/file-url	(Optional) Path (directory) and directory name that contain the contents you want to display. Separate each directory name with a space.	
Command Default	No default behavior or values.		
Command Modes	Boot Loa	der	
	Privilege	d EXEC	
Command History	Release	Modification	
	Cisco IC	S XE 3.3SECisco IOS XE 3.3SE This command was introduced.	
Usage Guidelines	Directory names are case sensitive.		
Examples	This exa	nple shows how to display the files in flash memory:	
	Director 2 - 3 - 4 - 6	.rwx 4316 Mar 01 2013 01:14:05 config.text .rwx 5 Mar 01 2013 00:01:39 private-config.text 3632 bytes available (25732096 bytes used) Field Descriptions	
	Field	Description Index number of the file.	
	2		

2	Index number of the file.
-rwx	File permission, which can be any or all of the following:
	 d—directory r—readable w—writable x—executable

I

Field	Description
1644045	Size of the file.
<date></date>	Last modification date.
env_vars	Filename.

emergency-install

To perform an emergency installation on your system, use the **emergency-install** command in boot loader mode.

emergency-install url://<url>

Syntax Description	<url></url>	RL and name of the file containing the emergency installation bundle image.	

Command Default No default behavior or values.

Command Modes Boot loader

Command History	Release	Modification
	Cisco IOS XE 3.3SECisco IOS XE 3.3SE	This command was introduced.

Usage Guidelines The boot flash is erased during the installation operation.

Example

This example shows how to perform the emergency install operation using the contents of an image file:

```
Device: emergency-install tftp:<url>
The bootflash will be erased during install operation, continue (y/n)?y
Starting emergency recovery (tftp:<url> ...

The system is not configured to boot automatically. The
following command will finish loading the operating system
software:
```

boot

exit

I

	To return to the previous mode or exit from the CLI EXEC mode, use the exit command. exit			
Syntax Description	This command has no arguments or keyw	ords.		
Command Default	No default behavior or values.			
Command Modes	Privileged EXEC Global configuration			
Command History	Release	Modification		
	Cisco IOS XE 3.3SECisco IOS XE 3.3SE	This command was introduced.		
	This example shows how to exit the confi	guration mode:		

Device(config)# exit
Device#

factory-reset

To remove all the customer specific data that has been added on the device since the time of shipping from the factory, use the **factory-reset** command in the Privileged EXEC mode.

factory-reset { all | config | boot-vars }

Syntax Description	all	all Removes all the data from the device, including configuration data, crash information, log to boot variables, core files, IOS images including the current boot image.				
	config	Removes all the configura	ation data, including user data, startup, and running configuration.			
	boot-vars	Resets boot variables.				
Command Default	There are	no defaults for this comma	and.			
Command Modes	Privileged	1 EXEC				
Command History	Release		Modification			
	Cisco IO	S XE 16.6.1	This command was introduced.			
Usage Guidelines	No system enabled.	n configuration is required	to use the factory-reset command. Use the command with all options			
		The factory-reset command erases IOS images, boot variables, configuration data and all user data. Data of be in the form of configuration, log files, boot variables, and core files.				
	The system	m reloads to perform the fa	actory reset and boots into ROMMON mode.			
	After the TFTP.	After the factory reset command is executed, you can load the IOS image from ROMMON using USB or TFTP.				
	I					
Note	Do not un	plug the power or interrup	t the factory reset operation.			
	This com	mand is used in the followi	ing two scenarios:			
			(RMA) for a device: If you have to return a device to Cisco for RMA, ata before obtaining a RMA certificate for the device.			

• Recovering the compromised device: If the key material or credentials stored on a device is compromised, reset the device to factory configuration and then reconfigure the device.

flash_init

To initialize the flash: file system, use the **flash_init** command in boot loader mode.

	flash_init			
Syntax Description	This command has no arguments or keywords.			
Command Default	The flash: file system is	The flash: file system is automatically initialized during normal system operation.		
Command Modes	Boot loader			
Command History	Release	Modification		
	Cisco IOS XE 3.3SECis	to IOS XE 3.3SE This command was introduced.		
Usage Guidelines	During the normal boot	process, the flash: file system is automatically initialized.		
-	Use this command to me	nually initialize the flash: file system. For example, you use this command of	during	

help

To display the available commands, use the help command in boot loader mode.

	help		
Syntax Description	This command has no arguments or keywords.		
Command Default	No default behavior or values.		
Command Modes	Boot loader		
Command History	Release	Modification	
	Cisco IOS XE 3.3SECisco IOS XE 3.3SE	This command was introduced.	

Example

This example shows how to display a list of available boot loader commands:

```
Device:help
? -- Present list of available commands
arp -- Show arp table or arp-resolve an address
boot -- Load and boot an executable image
cat -- Concatenate (type) file(s)
copy -- Copy a file
delete -- Delete file(s)
dir -- List files in directories
emergency-install -- Initiate Disaster Recovery
...
unset -- Unset one or more environment variables
version -- Display boot loader version
```

install

To install Software Maintenance Upgrade (SMU) packages, use the **install** command in privileged EXEC mode.

install {abort | activate | file {bootflash: | flash: | harddisk: | webui:} [{auto-abort-timer timer prompt-level {all | none}}] | add file {bootflash: | flash: | ftp: | harddisk: | http: | https: | pram: | rcp: | scp: | tftp: | webui:} [{activate [{auto-abort-timer timer prompt-level {all | none}commit}]}] | commit | auto-abort-timer stop | deactivate file {bootflash: | flash: | harddisk: | webui:} | label id{description description | label-name name} | remove {file {bootflash: | flash: | harddisk: | webui:} | inactive } | rollback to {base | committed | id {install-ID } | label {label-name}}}}

Syntax Description	abort	Aborts the current install operation.
	activate	Validates whether the SMU is added through the install add command.
		This keyword runs a compatibility check, updates package status, and if the package can be restarted, it triggers post-install scripts to restart the necessary processes, or triggers a reload for non-restartable packages.
	file	Specifies the package to be activated.
	{bootflash: flash: harddisk: webui:}	Specifies the location of the installed package.
	auto-abort-timer timer	(Optional) Installs an auto-abort timer.
	prompt-level {all none}	(Optional) Prompts the user about installation activities.
		For example, the activate keyword, automatically triggers a reload for packages that require a reload. Before activating the package, a message will prompt users as to whether they want to continue.
		The all keyword allows you to enable prompts. The none keyword disables prompts.
	add	Copies files from a remote location (via FTP, TFTP) to a device and performs Software Maintenance Upgrade (SMU) compatibility check for the platform and image versions.
		This keyword runs base compatibility checks to ensure that a specified package is supported on a platform. It also adds an entry in the package file, so that the status can be monitored and maintained.
	{ bootflash: flash: ftp: harddisk: http: https: pram: rcp: scp: tftp: webui:}	Specifies the package to be added.

I

	commit	Makes SMU changes persistent over reloads.	
		You can do a commit after activating a package, while the system is up, or after the first reload. If a package is activated, but not committed, it remains active after the first reload, but not after the second reload.	
	auto-abort-timer stop	Stops the auto-abort timer.	
	deactivate	Deactivates an installed package.	
		Deactivating a package also updates the package status and triggers a process restart or a reload.	
	label id	Specifies the id of the install point to label.	
	description	Adds a description to specified install point.	
	label-name name	Adds a description to specified install point.	
	remove	Remove installed packages.	
		The package file is removed from the file system. The remove keyword can only be used on package that are currently inactive.	
	inactive	Removes all inactive packages from the device.	
	rollback	Rollbacks the data model interface (DMI) package (DMP) SMU to the base version, the last committee version, or a known commit ID.	
	to base	Returns to the base image.	
	committed	Returns to the installation state when the last commis operation was performed.	
	id install-ID	Returns to the specific install point ID. Valid value are from 1 to 4294967295.	
Command Default	Packages are not installed.		
Command Modes	Privileged EXEC (#)		
Command History	Release	Modification	
	Cisco IOS XE Everest 16.6.1	This command was introduced.	
Usage Guidelines		d on a system to provide a patch fix or security resolution to a release set of files for patching the release along with some metadata that	
	Dealeagas must be added prior to activate	ing the SMU	

Packages must be added prior to activating the SMU.

A package must be deactivated, before it is removed from the bootflash. A removed packaged must be added again.

Example

The following example shows how to add an install package on a device:

```
Device# install add file tftp://172.16.0.1//tftpboot/folder1/cat3k-
universalk9.2017-01-10_13.15.1.CSCxxxxxx.SSA.dmp.bin
```

```

L

12 traceroute

To enable the Layer 2 traceroute server, use the **l2 traceroute** command in global configuration mode. Use the **no** form of this command to disable the Layer 2 traceroute server.

12 traceroute no 12 traceroute

Syntax Description This command has no arguments or keywords.

Command Modes Global configuration (config#)

Command History	Release	Modification	
	Cisco IOS XE 3.3SE	The command was introduced.	

Usage Guidelines Layer 2 traceroute is enabled by default and opens a listening socket on User Datagram Protocol (UDP) port 2228. To close the UDP port 2228 and disable Layer 2 traceroute, use the no l2 traceroute command in global configuration mode.

The following example shows how to configure Layer 2 traceroute using the l2 traceroute command.

Device# configure terminal Device(config)# 12 traceroute

license right-to-use

To configure right-to-use access point adder licenses on the device, use the **license right-to-use** command in privileged EXEC mode.

license right-to-use {activate | deactivate} apcount | ipbase | ipservices | lanbase

Syntax Description	activate		Activates permanent or evaluation ap-count licenses.
	deactivate		Deactivates permanent or evaluation ap-count licenses.
	apcount count		Specifies the number of ap-count licenses added.
			You can configure the number of adder licenses from 5 to 50.
	ipbase count		Activates ipbase licenses on the switch.
	ipservices count		Activates ipservices licenses on the switch.
	lanbase count		Activates lanbase licenses on the switch.
Syntax Description	This command has no arg	uments or keywords.	
Command Default	No default behavior or values.		
Command Modes	Privileged EXEC		
Command History	Release	Modification	
	Cisco IOS XE 3.3SECisco	o IOS XE 3.3SE This command was introduce	ed.
	This example shows how to activate an ap-count evaluation license:		
	Device# license right-to-use activate apcount evaluation Device# end		
	This example shows how	to activate an ap-count permanent license:	
	Device# license right- Device# end	to-use deactivate apcount evaluation	

This example shows how to add a new ap-count license:

Device# license right-to-use activate apcount 500 slot 1 Device# end

location

To configure location information for an endpoint, use the **location** command in global configuration mode. To remove the location information, use the **no** form of this command.

location {admin-tag string | civic-location identifier {hostid} | civic-location identifier {hostid} |elin-location {string | identifier id} | geo-location identifier {hostid} | prefer {cdp weightpriority-value | lldp-med weight priority-value | static config weight priority-value}no location {admin-tag string | civic-location identifier {hostid} | civic-location identifier {hostid} |elin-location {string | identifier id} | geo-location identifier {hostid} | prefer {cdp weight priority-value}priority-value | lldp-med weight priority-value | static config weight priority-value}

Syntax Description	admin-tagstring		Configures administrative tag or site information. Site or locatio information in alphanumeric format.	
	civic-location			res civic location information.
	identifier		Specifies the name of the civic location, emergency, or geograp location.	
	host	De	efines	the host civic or geo-spatial location.
	id	Na	ame of	the civic, emergency, or geographical location.
		No	Note The identifier for the civic location in the LLDP- switch TLV is limited to 250 bytes or less. To avo messages about available buffer space during sw configuration, be sure that the total length of all civic-location information specified for each civic-location identifier does not exceed 250 byte	
	elin-location Configures emerg		res emergency location information (ELIN).	
	geo-location Co		Configures geo-spatial location information.	
	prefer		ets loca	ation information source priority.
Command Default	No default behavi	or or values.		
Command Modes	Global configurati	ion		
Command History	Release	Modification		
	Cisco IOS XE 3.3SE	This command was in	troduc	ped.
Usage Guidelines	configuration mod		ation	ifier global configuration command, you enter civic location geo-location identifier global configuration command,

The civic-location identifier must not exceed 250 bytes.

The host identifier configures the host civic or geo-spatial location. If the identifier is not a host, the identifier only defines a civic location or geo-spatial template that can be referenced on the interface.

The **host** keyword defines the device location. The civic location options available for configuration using the **identifier** and the **host** keyword are the same. You can specify the following civic location options in civic location configuration mode:

- additional-code—Sets an additional civic location code.
- additional-location-information-Sets additional civic location information.
- branch-road-name—Sets the branch road name.
- building—Sets building information.
- city—Sets the city name.
- country—Sets the two-letter ISO 3166 country code.
- **county**—Sets the county name.
- default—Sets a command to its defaults.
- division—Sets the city division name.
- exit—Exits from the civic location configuration mode.
- floor—Sets the floor number.
- · landmark—Sets landmark information.
- · leading-street-dir-Sets the leading street direction.
- name—Sets the resident name.
- neighborhood—Sets neighborhood information.
- no-Negates the specified civic location data and sets the default value.
- number—Sets the street number.
- post-office-box—Sets the post office box.
- postal-code—Sets the postal code.
- postal-community-name—Sets the postal community name.
- primary-road-name-Sets the primary road name.
- · road-section-Sets the road section.
- room—Sets room information.
- seat—Sets seat information.
- state—Sets the state name.
- street-group—Sets the street group.
- street-name-postmodifier-Sets the street name postmodifier.
- street-name-premodifier—Sets the street name premodifier.
- street-number-suffix—Sets the street number suffix.
- street-suffix—Sets the street suffix.
- sub-branch-road-name—Sets the sub-branch road name.
- trailing-street-suffix—Sets the trailing street suffix.
- type-of-place—Sets the type of place.
- unit—Sets the unit.

You can specify the following geo-spatial location information in geo-location configuration mode:

- altitude—Sets altitude information in units of floor, meters, or feet.
- **latitude**—Sets latitude information in degrees, minutes, and seconds. The range is from -90 degrees to 90 degrees. Positive numbers indicate locations north of the equator.

- longitude—Sets longitude information in degrees, minutes, and seconds. The range is from -180 degrees to 180 degrees. Positive numbers indicate locations east of the prime meridian.
- **resolution**—Sets the resolution for latitude and longitude. If the resolution value is not specified, default value of 10 meters is applied to latitude and longitude resolution parameters. For latitude and longitude, the resolution unit is measured in meters. The resolution value can also be a fraction.
- default—Sets the geographical location to its default attribute.
- exit—Exits from geographical location configuration mode.
- no—Negates the specified geographical parameters and sets the default value.

Use the **no lldp med-tlv-select location information** interface configuration command to disable the location TLV. The location TLV is enabled by default.

This example shows how to configure civic location information on the switch:

```
Device(config)# location civic-location identifier 1
Device(config-civic)# number 3550
Device(config-civic)# primary-road-name "Cisco Way"
Device(config-civic)# city "San Jose"
Device(config-civic)# state CA
Device(config-civic)# building 19
Device(config-civic)# room C6
Device(config-civic)# county "Santa Clara"
Device(config-civic)# county US
Device(config-civic)# end
```

You can verify your settings by entering the show location civic-location privileged EXEC command.

This example shows how to configure the emergency location information on the switch:

Device(config)# location elin-location 14085553881 identifier 1

You can verify your settings by entering the **show location elin** privileged EXEC command.

The example shows how to configure geo-spatial location information on the switch:

```
Device(config)# location geo-location identifier host
Device(config-geo)# latitude 12.34
Device(config-geo)# longitude 37.23
Device(config-geo)# altitude 5 floor
Device(config-geo)# resolution 12.34
```

You can use the **show location geo-location identifier** command to display the configured geo-spatial location details.

location plm calibrating

To configure path loss measurement (CCX S60) request for calibrating clients, use the **location plm calibrating** command in global configuration mode.

location plm calibrating {multiband | uniband} **Syntax Description** multiband Specifies the path loss measurement request for calibrating clients on the associated 802.11a or 802.11b/g radio. uniband Specifies the path loss measurement request for calibrating clients on the associated 802.11a/b/g radio. No default behavior or values. **Command Default** Global configuration **Command Modes Command History** Release Modification Cisco IOS XE 3.3SECisco IOS XE 3.3SE This command was introduced. The uniband is useful for single radio clients (even if the radio is a dual band and can operate in the 2.4-GHz **Usage Guidelines** and the 5-GHz bands). The multiband is useful for multiple radio clients. This example shows how to configure the path loss measurement request for calibrating clients on the associated 802.11a/b/g radio: Device# configure terminal Device(config)# location plm calibrating uniband Device(config) # end

mac address-table move update

To enable the MAC address table move update feature, use the **mac address-table move update** command in global configuration mode on the switch stack or on a standalone switch. To return to the default setting, use the **no** form of this command.

mac address-table move update {receive | transmit}
no mac address-table move update {receive | transmit}

Syntax Description receive Specifies that the switch processes MAC address-table move update messages. Specifies that the switch sends MAC address-table move update messages to other switches in transmit the network if the primary link goes down and the standby link comes up. By default, the MAC address-table move update feature is disabled. **Command Default** Global configuration **Command Modes Command History Command History** Release Modification Cisco IOS XE 3.3SECisco IOS XE 3.3SE This command was introduced. The MAC address-table move update feature allows the switch to provide rapid bidirectional convergence if **Usage Guidelines** a primary (forwarding) link goes down and the standby link begins forwarding traffic. You can configure the access switch to send the MAC address-table move update messages if the primary link goes down and the standby link comes up. You can configure the uplink switches to receive and process the MAC address-table move update messages. **Examples** This example shows how to configure an access switch to send MAC address-table move update messages: Device# configure terminal Device(config)# mac address-table move update transmit Device (config) # end This example shows how to configure an uplink switch to get and process MAC address-table move update messages: Device# configure terminal Device (config) # mac address-table move update receive Device(config)# end You can verify your setting by entering the show mac address-table move update privileged EXEC command

mgmt_init

To initialize the Ethernet management port, use the **mgmt_init** command in boot loader mode.

	mgmt_init		
Syntax Description	This command has no arguments or keywords.		
Command Default	No default behavior or values.		
Command Modes	Boot loader		
Command History	Release	Modification	
	Cisco IOS XE 3.3SECi	isco IOS XE 3.3SE This command was introduced.	
Usage Guidelines	Use the mgmt_init command only during debugging of the Ethernet management port.		
Examples	This example shows how to initialize the Ethernet management port:		
	Device: mgmt_init		

mkdir

	To create one or more directories on the specified file system, use the mkdir command in boot loader mo				
	mkdir filesystem:/directory-url				
Syntax Description	<i>filesystem:</i> Alias for a file system. Use usbflash0: for USB memory sticks.				
	/directory-url Name of the directories to create. Separate each directory name with a space.				
Command Default	No default behavior or v	/alues.			
Command Modes	Boot loader				
Command History	Release	Modification			
	Cisco IOS XE 3.3SECis	sco IOS XE 3.3SE This command was introduced.			
Usage Guidelines	Directory names are case sensitive.				
	Directory names are limited to 127 characters between the slashes (/); the name cannot contain control characters, spaces, deletes, slashes, quotes, semicolons, or colons.				
	Example				
	This example shows how	w to make a directory called Saved_Configs:			

Device: mkdir usbflash0:Saved_Configs Directory "usbflash0:Saved_Configs" created

more

	To display the contents of one or more files, use the more command in boot loader mode.				
	more filesystem:/file-url				
Syntax Description	<i>filesystem:</i> Alias for a file system. Use flash: for the system board flash device.				
	/file-url Path (directory) and name of the files to display. Separate each filename with a space.				
Command Default	No default behavior or values.				
Command Modes	Boot loader				
Command History	Release	Modification			
	Cisco IOS XE 3.3SECisc	co IOS XE 3.3SE This command was introduced.			
Usage Guidelines	 Filenames and directory names are case sensitive. If you specify a list of files, the contents of each file appears sequentially. 				
Examples	This example shows how to display the contents of a file:				
	<pre>image_family: family stacking_number: 1.34</pre>	ersal-122-xx.SEx mage_file_name : 0x00000002 le_name.bin 8919552 e: 11592192 KER_3 PLUS MIN_DRAM_MEG=128			

no debug all

To disable debugging on a switch, use the **no debug all** command in Privileged EXEC mode.

	no debug all			
Command Default	No default behavior or values.			
Command Modes	Privileged EXEC			
Command History	Release	Modification		
	Cisco IOS XE Rel	ease 16.1 This command was introduced.		
Examples	This example shows how to disable debugging on a switch.			
	Device : no debug All possible deb	a ll ugging has been turned off.		

rename

	To rename a file, use the rename command in boot loader mode.				
	rename filesystem:/source-file-url filesystem:/destination-file-url				
Syntax Description	filesystem:	Alias for a file system. Use usbflash0: for USB memory sticks.			
	/source-file-url	Original path (directory) and filename.			
	/destination-file-u	<i>rl</i> New path (directory) and filename.			
Command Default	No default behavi	or or values.			
Command Modes	Boot loader				
Command History	Release	Modification			
	Cisco IOS XE 3.3	SECisco IOS XE 3.3SE This command was introduced.			
Usage Guidelines	Filenames and dir	ectory names are case sensitive.			
	2	are limited to 127 characters between the slashes (/); the name cannot contain control , deletes, slashes, quotes, semicolons, or colons.	1		
	Filenames are lim quotes, semicolon	ited to 127 characters; the name cannot contain control characters, spaces, deletes, sl s, or colons.	lashes,		
Examples	This example show	ws a file named <i>config.text</i> being renamed to <i>config1.text</i> :			
	Device: rename usbflash0:config.text usbflash0:config1.text				
	You can verify that	at the file was renamed by entering the dir <i>filesystem</i> : boot loader command.			

request platform software console attach switch

To start a session on a member switch, use the **request platform software console attach switch** command in privileged EXEC mode.

Note On stacking switches (Catalyst 3650/3850/9300/9500 switches), this command can only be used to start a session on the standby console. You cannot start a session on member switches. By default, all consoles are already active, so a request to start a session on the active console will result in an error.

	request platfor	atform software console attach switch { switch-number active standby } {		
Syntax Description	switch-number Specifies the switch number. The range is from 1 to 9. active Specifies the active switch.			rom 1 to 9.
	standby	Specifie	es the standby switch.	
	0/0	Specifie	es that the SPA-Inter-Processor slot is	s 0, and bay is 0.
		Note Do not use this option with stacking switches. It will result in an error.		
	R0	Specifie	es that the Route-Processor slot is 0.	
Command Default	By default, all s	switches	in the stack are active.	
Command Modes	Privileged EXE	EC (#)		
Command History	Release		Modification	
	Cisco IOS XE 16.1.1	Denali	This command was introduced.	
Usage Guidelines	To start a session	on on the	standby switch, you must first enabl	le it in the configuration.
Examples	This example shows how to session to the standby switch:			
	Device (config Device (config Device (config Device (config	uration g)# redu g-red)# : g-r-mc)# g-r-mc)#	commands, one per line. End windancy main-cpu standby console enable	

Device-stby> **enable** Device-stby#

request platform software package clean

To remove media files that are not required, use the **request platform software package clean** command in privileged EXEC mode.

request platform software package clean [{file URL | pattern URL | switch switch-ID {file URL | pattern URL }}]

Syntax Description	file URL		(Optional) Specifies the URL to the file. The URL contains the file system, directories, and the filename.	
	pattern URL		(Optional) Specifies the pattern to clean one or more matching paths.	
	switch switch-ID	(Optional) Specifies the switch for provisioning.		
Command Default	No default behavior or values			
Command Modes	Privileged EXEC (#)			
Command History	Release	Modification		
	Cisco IOS XE Denali 16.1.1	This command was intro	oduced.	
Usage Guidelines	- Example			
	The following example shows how to clean unused media files from the device:			
	Device# request platform software package clean			
	This operation may take several min Running command on switch 1 Cleaning up unnecessary package fil. No path specified, will use booted y Cleaning sw/isos Scanning boot directory for packa Preparing packages list to delete cat3k_caa-guestshell.BLD_V168_T File is in use, will not dele cat3k_caa-rpbase.BLD_V168_THROT File is in use, will not dele cat3k_caa-rpcore.BLD_V168_THROT File is in use, will not dele cat3k_caa-srdriver.BLD_V168_THROT File is in use, will not dele cat3k_caa-srdriver.BLD_V168_THROT File is in use, will not dele cat3k_caa-webui.BLD_V168_THROTT File is in use, will not dele packages.conf	es path consolidated:packages.cor ges done. File is in use, will not delete. done.

SUCCESS: No extra package or provisioning files found on media. Nothing to clean.

Related Commands	Command	Description
	request platform software package install file	Upgrades a consolidated package or sub-package.
	request platform software package install rollback	Rolls back a previous software upgrade.

request platform software package copy

To copy a Cisco IOS XE image file, use the **request platform software package copy** command in privileged EXEC mode.

request platform software package copy switch switch-ID file file-URL to file-URL

Syntax Description	switch switch-ID Specifies the switch for provisioning.				
	file file-URL	URL to the consoli	lidated package or sub-package.		
	to	Specifies the destin	nation URL to where the files are to be copie	ed.	
Command Default	No default behavior or values.				
Command Modes	Privileged EXEC	XEC (#)			
Command History	Release		Modification		
	Cisco IOS XE E	Denali 16.1.1	This command was introduc	ed.	

Usage Guidelines

Example

The following example shows how to copy an image file to a destination directory:

Device# request platform software package copy switch all file tftp://10.10.11.250/cat3k_caa-universalk9.16.08.05.SPA.bin to ftp:cat3k_caa-universalk9.16.08.05.SPA.bin

Command	Description
request platform software package install file	Upgrades a consolidated package or sub-package.
request platform software package install rollback	Rolls back a previous software upgrade.

request platform software package describe file

To gather descriptive information about an individual module or a Cisco IOS-XE image file, use the **request platform software package describe file**command in privileged EXEC or diagnostic mode.

request platform software package describe file URL [detail] [verbose]

Syntax Description	URL	Specifies the URL to the file. The URL contains the file system, directories, and the filename.			
	detail	(Optional) Specifies detailed output	t.		
	verbose	(Optional) Displays verbose information, meaning that all information about the file is displayed on the console.			
Command Default	No defaul	It behavior or values.			
Command Modes	Privileged	LEXEC (#)			
Command History	Release		Modification		
	Cisco IO	S XE Denali 16.1.1	This command was introduced.		
Usage Guidelines			rmation on individual module and Cisco IOS-XE image files. any other file will generate output, but the generated output is		
	The output of this command can be used for the following functions:				
	• To confirm the individual module files that are part of a Cisco IOS-XE image.				
	• To co	onfirm whether or not a file is bootab	le.		
	• To confirm the contexts in which a file must be reloaded or booted.				
	• To confirm whether or not a file is corrupted.				
	• To confirm file and header sizes, build dates, and various other general information.				
Examples	In the following example, this command is entered to gather information about an individual SIP Base module file on the bootflash: file system.				
		Device# request platform software package describe file bootflash:cat3k_caa-universalk9_universalk9.16.09.02.SPA.bin			
	Package: cat3k_caa-universalk9_universalk9.16.09.02.SPA.bin Size: 36954316 Timestamp: 2018-11-07 15:36:27 UTC Canonical path: /bootflash/cat3k_caa-universalk9_universalk9.16.09.02.SPA.bin

request platform software package expand

To extract the individual modules from a Cisco IOS-XE image, use the **request platform software package expand** command in privileged EXEC mode.

request platform software package expand {file *source-URL* | switch *switch-ID* file *source-URL*}[to *destination-URL*] [auto-copy] [force] [overwrite] [retain-source-file] [verbose] [wipe]

Syntax Description	source-URL	Specifies the URL to the Cisco extracted.	o IOS-XE file that stores the contents that will be			
	switch switch-ID	Specifies the switch ID.				
	to destination-URL	(Optional) Specifies the destin Cisco IOS-XE file are left afte	nation URL where the files that were extracted from the er the operation is complete.			
			e Cisco IOS-XE image file contents are extracted onto Cisco IOS-XE image file is currently stored.			
	auto-copy	(Optional) Copies packages to provisioning directory.				
	force	(Optional) Specifies that the o proceed despite any warning r	peration will be forced, meaning that the upgrade will nessages.			
	over-write	(Optional) Overwrites non-ide	entical packages and unused provisioning files.			
	retain-to-source (Optional) Retains the source file after expansion.					
	verbose	(Optional) Displays verbose information, meaning all output that can be displayed on the console during the process will be displayed.				
	wipe	(Optional) Erases all content of the files and placing them on t	on the destination snapshot directory before extracting the snapshot directory.			
Command Default	No default behavior of	or values				
Command Modes	Privileged EXEC (#)					
Command History	Release		Modification			
	Cisco IOS XE Dena	li 16.1.1	This command was introduced.			
Usage Guidelines	This command only extracts individual module files and a provisioning file from the Cisco IOS-XE ima Additional configuration is needed to configure the router to boot using the provisioning files and run u the individual modules.					
	When this command is used, copies of each module and the provisioning file within the Cisco IOS-XE image are copied and placed on the destination directory. The Cisco IOS-XE image file is unchanged after the operation is complete.					

If the **to** destination-URL option is not entered, the Cisco IOS-XE image contents will be extracted onto the same directory where the Cisco IOS-XE image is currently stored.

If this command is used to extract individual module files onto a directory that already contains individual module files, the files are extracted to an automatically created directory on the destination device.

Examples

The following example shows how to extract individual modules and the provisioning file from a Cisco IOS-XE image that has already been placed in the directory where the user wants to store the individual modules and the provisioning file.

Output of the directory before and after the extraction is given to confirm that files were extracted.

Device# dir bootflash:

Directory of bootflash:/ 11 drwx 16384 Dec 4 2018 11:26:07 +00:00 lost+found 14401 drwx 4096 Dec 4 2018 11:27:41 +00:00 .installer 12 -rw- 218783948 Dec 4 2018 12:12:16 +00:00 cat3k_caa-universalk9.16.09.02.SPA.bin

```
Device# request platform software package expand file
bootflash:cat3k_caa-universalk9.16.09.02.SPA.bin
```

Verifying parameters Validating package type Copying package files

request platform software package install file

To upgrade a consolidated package or an individual sub-package, use the **request platform software package install file** command in privileged EXEC mode.

request platform software package install switch *switch-ID* file *file-URL* [auto-rollback *minutes*] [interface-module-delay *seconds*] [provisioning-file *provisioning-file-URL*] [slot *slot-number*] [bay *bay-number*] [auto-copy] [force] [ignore-compact-check] [mdr] [new] [on-reboot] [retain-source-file] [verbose]

Syntax Description	switch switch-ID	Specifies the switch for provisioning.
	file-URL	URL to the consolidated package or sub-package.
	auto-rollback minutes	(Optional) Specifies the setting of a rollback timer, and sets the number of minutes on the rollback timer before the rollback timer expires.
	interface-module-delay seconds	(Optional) Specifies the interface module restart timeout delay.
	provisioning-file provisioning-file-URL	(Optional) Specifies the URL to the provisioning file. A provisioning file is used for booting only when a device is booted using individual sub-packages.
	slot slot-number	(Optional) Specifies the device slot number where a shared port adapter interface processor (SIP) can be installed.
	bay bay-number	(Optional) Specifies the shared port adapter (SPA) bay number within a SIP.
	auto-copy	(Optional) Specifies that the device will automatically copy packages to provisioning directory.
	force	(Optional) Specifies that the operation will be forced, meaning that the upgrade will proceed despite any warning messages.
	ignore-compact-check	(Optional) Specifies that the compatibility check is ignored.
	mdr	(Optional) Specifies that minimal disruptive restart is used.
	new	(Optional) Creates a new package provisioning file.
	on-reboot	(Optional) Specifies that the installation will not be completed until the next RP reboot.
	retain-source-file	(Optional) Retains the source file after installation.
	verbose	(Optional) Displays verbose information, meaning all output that can be displayed on the console during the process will be displayed.

Command Default

If you do not enter the **request platform software package install file** command, the consolidated or sub package upgrades are not initiated on the device.

Privileged EXEC (#)

Command Modes Command History Modification Release Cisco IOS XE Denali 16.1.1 This command was introduced. This command is used to upgrade consolidated packages and individual sub-packages. **Usage Guidelines** When the auto-rollback minutes option is used, the request platform software package install switch *switch-ID* commit command must be entered before the rollback timer expires to complete the upgrade. If this command is not entered, the device rolls back to the previous software version. The rollback timer expires after the number of specified *minutes*. If the **auto-rollback** *minutes* option is not used, the upgrade automatically happens. In the following example, the request platform software package install command is used to upgrade a consolidated package. The **force** option, which forces the upgrade past any prompt (such as, already having the same consolidated package installed), is used in this example. Device# request platform software package install rp 0 file bootflash:cat3k caa-universalk9.16.03.05.SPA.bin force --- Starting installation state synchronization ---Finished installation state synchronization --- Starting file path checking ---Finished file path checking --- Starting image file verification ---Checking image file names Verifying image file locations Locating image files and validating name syntax Inspecting image file types Processing image file constraints Extracting super package content Verifying parameters Validating package type Copving package files Checking and verifying packages contained in super package Creating candidate provisioning file WARNING: WARNING: Candidate software will be installed upon reboot WARNING: Finished image file verification --- Starting candidate package set construction ---Verifying existing software set Processing candidate provisioning file Constructing working set for candidate package set Constructing working set for running package set Checking command output Constructing merge of running and candidate packages Finished candidate package set construction --- Starting compatibility testing ---Determining whether candidate package set is compatible WARNING: WARNING: Candidate software combination not found in compatibility database WARNING: Determining whether installation is valid Determining whether installation is valid ... skipped Checking IPC compatibility with running software

Related	Commands

Command	Description
request platform software package install commit	Cancels the rollback timer and commits a software upgrade.
request platform software package install rollback	Rolls back a previous software upgrade.
request platform software package install snapshot	Creates a snapshot directory that will contain all the files extracted from a consolidated package.

request platform software package install rollback

To roll back a previous software upgrade, use the **request platform software package install rollback** command in privileged EXEC mode.

request platform software package install switch *switch-ID* rollback [{as-booted | provisioning-file *provisioning-file-URL*}] [auto-copy] [force] [ignore-compact-check] [new] [on-reboot] [retain-source-file] [verbose]

Syntax Description	switch switch-ID	Specifies the switch for provisioning.		
	as-booted	(Optional) Specifies that the software update will not occur, and that the device will instead boot using the same procedure that it used during the last reboot.		
	provisioning-file provisioning-file-URL	(Optional) Specifies that the software update will not occur, and that the device will instead boot using the specified provisioning file.		
	auto-copy	(Optional) Specifies that the device will automatically copy packages to provisioning directory.		
	force	(Optional) Specifies that the operation will be forced, meaning that the upgrade will proceed despite any warning messages.		
	ignore-compact-check	(Optional) Specifies that the compatibility check is ignored.		
	new	(Optional) Creates a new package provisioning file.		
	on-reboot	(Optional) Specifies that the installation will not be completed until the next reboot.		
	retain-source-file	(Optional) Retains the source file after installation,		
	verbose	(Optional) Displays verbose information, meaning all output that can be displayed on the console during the process will be displayed.		
Command Default	No default behavior or values			
Command Modes	Privileged EXEC (#)			
Command History	Release	Modification		
	Cisco IOS XE Everest 16.1.1	This command was introduced.		
Usage Guidelines		figuration that has an active rollback timer. Active rollback timers are used is entered when software is being upgraded using the request platform ommand.		

Examples

The following example shows that an upgrade using a rollback timer is rolled back to the previous configuration:

Device# request platform software package install switch all rollback

Related Commands

Command	Description
request platform software package install commit	Cancel the rollback timer and commits a software upgrade.
request platform software package install file	Upgrades a consolidated package or an individual sub-package.

request platform software package install snapshot

To create a snapshot directory that contains all the files extracted from a consolidated package, use the **request platform software package install snapshot** command in privileged EXEC mode.

request platform software package install switch *switch-ID* snapshot to *URL* [as *snapshot-provisioning-filename*] [force] [verbose] [wipe]

Syntax Description	switch switch-ID	Specifies the switch	h for provisioning		
Syntax Description	Switch Switch-ID Specifies the Switch		n for provisioning.		
	snapshot to URL		and extracts all files from the consolidated package into directory is named in the command-line as part of the		
	If the <i>URL_FS</i> is specified as a file system, the files in the consolidated package will be extracted onto the file system and not a directory on the system.				
	as	(Optional) Rename	es the provisioning file in the snapshot directory.

Example

The following example shows how to uninstall a software package:

Device# request platform software package uninstall

Related Commands	Command	Description
	request platform software package install commit	Cancels the rollback timer and commits a software upgrade.
	request platform software package install rollback	Rolls back a previous software upgrade.
	request platform software package install snapshot	Creates a snapshot directory that will contain all the files extracted from a consolidated package.

reset

To perform a hard reset on the system, use the **reset** command in boot loader mode. A hard reset is similar to power-cycling the device; it clears the processor, registers, and memory.

	reset	
Syntax Description	This command has no arguments or keyw	vords.
Command Default	No default behavior or values.	
Command Modes	Boot loader	
Command History	Release	Modification
	Cisco IOS XE 3.3SECisco IOS XE 3.3SE	This command was introduced.
Examples	This example shows how to reset the syst	em:
	Device: reset	

Are you sure you want to reset the system (y/n)? ${\boldsymbol{y}}$

System resetting...

rmdir

To remove one or more empty directories from the specified file system, use the **rmdir** command in boot loader mode.

rmdir filesystem:/directory-url...

Syntax Description	filesystem:	Alias for a file system. Use usbflash0: for USB memory sticks.	
	/directory-url	Path (directory) and name of the empty directories to remove. Separate each directory name with a space.	
Command Default	No default beha	vior or values.	
Command Modes	Boot loader		
Command History	Release	Modification	
	Cisco IOS XE 3	3.3SECisco IOS XE 3.3SE This command was introduced.	
Usage Guidelines	•	s are case sensitive and limited to 45 characters between the slashes (/); the name cannot characters, spaces, deletes, slashes, quotes, semicolons, or colons.	
	Before removing a directory, you must first delete all of the files in the directory.		
	The device prompts you for confirmation before deleting each directory.		
	Example		
	This example sh	nows how to remove a directory:	
		usbflash0:Test	

You can verify that the directory was deleted by entering the dir filesystem: boot loader command.

sdm prefer

To specify the SDM template for use on the switch, use the **sdm prefer** command in global configuration mode.

 sdm prefer
{advanced}

 Syntax Description
 advanced

 advanced
 Supports advanced features such as NetFlow.

 Command Default
 No default behavior or values.

 Command Modes
 Global configuration

 Command History
 Release
 Modification

 Cisco IOS XE 3.3SECisco IOS XE 3.3SE
 This command was introduced.

Usage Guidelines In a device stack, all stack members must use the same SDM template that is stored on the active device.

When a new device is added to a stack, the SDM configuration that is stored on the active device overrides the template configured on an individual device.

Example

This example shows how to configure the advanced template:

```
Device(config)# sdm prefer advanced
Device(config)# exit
Device# reload
```

set

To set or display environment variables, use the **set** command in boot loader mode. Environment variables can be used to control the boot loader or any other software running on the device.

set variable value

Syntax Description	variable	Use one of the following keywords for <i>variable</i> and the appropriate value for <i>value</i> :			
	value	MANUAL_BOOT—Decides whether the device automatically or manually boots.			
		Valid values are 1/Yes and 0/No. If it is set to 0 or No, the boot loader attempts to automatically boot the system. If it is set to anything else, you must manually boot the device from the boot loader mode.			
		BOOT <i>filesystem:/file-url</i> —Identifies a semicolon-separated list of executable files to try to load and execute when automatically booting.			
		If the BOOT environment variable is not set, the system attempts to load and execute the first executable image it can find by using a recursive, depth-first search through the flash: file system. If the BOOT variable is set but the specified images cannot be loaded, the system attempts to boot the first bootable file that it can find in the flash: file system.			
		ENABLE_BREAK —Allows the automatic boot process to be interrupted when the user presses the Break key on the console.			
		Valid values are 1, Yes, On, 0, No, and Off. If set to 1, Yes, or On, you can interrupt the automatic boot process by pressing the Break key on the console after the flash: file system has initialized.			
		HELPER <i>filesystem:/file-url</i> —Identifies a semicolon-separated list of loadable files to dynamically load during the boot loader initialization. Helper files extend or patch the functionality of the boot loader.			
		PS1 <i>prompt</i> —Specifies a string that is used as the command-line prompt in boot loader mode.			
		CONFIG_FILE flash: <i>/file-url</i> —Specifies the filename that Cisco IOS uses to read and write a nonvolatile copy of the system configuration.			
		BAUD <i>rate</i> —Specifies the number of bits per second (b/s) that is used for the baud rate for the console. The Cisco IOS software inherits the baud rate setting from the boot loader and continues to use this value unless the configuration file specifies another setting. The range is from 0 to 128000 b/s. Valid values are 50, 75, 110, 150, 300, 600, 1200, 1800, 2000, 2400, 3600, 4800, 7200, 9600, 14400, 19200, 28800, 38400, 56000, 57600, 115200, and 128000.			
		The most commonly used values are 300, 1200, 2400, 9600, 19200, 57600, and 115200.			
		SWITCH_NUMBER <i>stack-member-number</i> —Changes the member number of a stack member.			
		SWITCH_PRIORITY <i>priority-number</i> —Changes the priority value of a stack member.			

Command Default The environment variables have these default values:

MANUAL_BOOT: No (0) BOOT: Null string ENABLE BREAK: No (Off or 0) (the automatic boot process cannot be interrupted by pressing the Break key on the console). HELPER: No default value (helper files are not automatically loaded). PS1 device: CONFIG_FILE: config.text BAUD: 9600 b/s SWITCH NUMBER: 1 SWITCH_PRIORITY: 1 Note Environment variables that have values are stored in the flash: file system in various files. Each line in the files contains an environment variable name and an equal sign followed by the value of the variable. A variable has no value if it is not listed in these files; it has a value if it is listed even if the value is a null string. A variable that is set to a null string (for example, "") is a variable with a value. Many environment variables are predefined and have default values. Boot loader **Command Modes Command History** Release Modification Cisco IOS XE 3.3SECisco IOS XE 3.3SE This command was introduced. Environment variables are case sensitive and must be entered as documented. **Usage Guidelines** Environment variables that have values are stored in flash memory outside of the flash: file system. Under typical circumstances, it is not necessary to alter the setting of the environment variables. The MANUAL BOOT environment variable can also be set by using the **boot manual** global configuration command. The BOOT environment variable can also be set by using the **boot system** *filesystem:/file-url* global configuration command. The ENABLE_BREAK environment variable can also be set by using the boot enable-break global configuration command. The HELPER environment variable can also be set by using the **boot helper** filesystem: / file-url global configuration command. The CONFIG FILE environment variable can also be set by using the **boot config-file flash**: /file-url global configuration command. The SWITCH NUMBER environment variable can also be set by using the **switch** current-stack-member-number new-stack-member-number global configuration command.

The SWITCH_PRIORITY environment variable can also be set by using the device *stack-member-number* **priority***priority-number* global configuration command.

The boot loader prompt string (PS1) can be up to 120 printable characters not including the equal sign (=).

Example

This example shows how to set the SWITCH_PRIORITY environment variable:

```
Device: set SWITCH_PRIORITY 2
```

You can verify your setting by using the set boot loader command.

show avc client

To display information about top number of applications, use the **show avc client** command in privileged EXEC mode.

show avc client *client-mac* top *n* application [aggregate | upstream | downstream]

Syntax Description	client client-mac	Specifies the client MAC address.

top *n* application Specifies the number of top "N" applications for the given client.

Command Default No default behavior or values.

Command Modes Privileged EXEC

show cable-diagnostics tdr

To display the Time Domain Reflector (TDR) results, use the **show cable-diagnostics tdr** command in privileged EXEC mode.

show cable-diagnostics tdr interface interface-id

<i>interface-id</i> Specifies the interface on which TDR is run.		
No default behavior or values.		
Privileged EXEC		
Release	Modification	
Cisco IOS XE 3.3SECisco IOS XE 3.3SE	This command was introduced.	
	No default behavior or values. Privileged EXEC	

Usage Guidelines TDR is supported only on 10/100/100 copper Ethernet ports. It is not supported on 10-Gigabit Ethernet ports and small form-factor pluggable (SFP) module ports.

Examples

This example shows the output from the **show cable-diagnostics tdr interface** *interface-id* command on a device:

Device# show cable-diagnostics tdr interface gigabitethernet1/0/23					
TDR test last rur	n on: March (00:	04:08		
Interface Speed	Local pair	Pair	length	Remote pair	Pair status
Gi1/0/23 1000M			.,	Pair A	Normal
			.,	Pair B	Normal
			,	Pair C	Normal
	Pair D	1	+/- 1 meters	Pair D	Normal

Table 2: Field Descriptions for the show cable-diagnostics tdr Command Output

Field	Description
Interface	The interface on which TDR is run.
Speed	The speed of connection.
Local pair	The name of the pair of wires that TDR is testing on the local interface.

Field	Description		
Pair length	The location of the problem on the cable, with respect to your device. TDR can only find the location in one of these cases:		
	 The cable is properly connected, the link is up, and the interface speed is 1000 Mb/s. The cable is open. The cable has a short. 		
Remote pair	The name of the pair of wires to which the local pair is connected. TDR can learn about the remote pair only when the cable is properly connected and the link is up.		
Pair status	The status of the pair of wires on which TDR is running:		
	• Normal—The pair of wires is properly connected.		
	 Not completed—The test is running and is not completed. 		
	• Not supported—The interface does not support TDR.		
	• Open—The pair of wires is open.		
	• Shorted—The pair of wires is shorted.		
	• ImpedanceMis—The impedance is mismatched.		
	Short/Impedance Mismatched—The impedance mismatched or the cable is short.		
	• InProgress—The diagnostic test is in progress.		

This example shows the output from the **show interface** *interface-id* command when TDR is running:

```
Device# show interface gigabitethernet1/0/2
gigabitethernet1/0/2 is up, line protocol is up (connected: TDR in Progress)
```

This example shows the output from the **show cable-diagnostics tdr interface** *interface-id* command when TDR is not running:

```
Device# show cable-diagnostics tdr interface gigabitethernet1/0/2 % TDR test was never issued on gigabitethernet1/0/2
```

If an interface does not support TDR, this message appears:

% TDR test is not supported on device 1

show debug

To display all the debug commands available on a switch, use the **show debug** command in Privileged EXEC mode.

show debug

show debug condition Condition identifier | All conditions

Syntax Description	Condition identifier Sets the value of the condition identifier to be used. Range is between 1 and 1000.				
	All conditions	Shows all conditional debugging optic	ons available.		
Command Default	No default behavior or values.				
Command Modes	Privileged EXEC				
Command History	Release	Modification	-		
	Cisco IOS XE Re	elease 16.1 This command was introduced.	-		
Usage Guidelines	Because debugging output is assigned high priority in the CPU process, it can render the system unusable. For this reason, use debug commands only to troubleshoot specific problems or during troubleshooting sessions with Cisco technical support staff. Moreover, it is best to use debug commands during periods of lower network traffic and fewer users. Debugging during these periods decreases the likelihood that increased debug command processing overhead will affect system use.				
Examples	This example sho	ws the output of a show debug command:			
	Device# show debug condition all				
	To disable debugg	ging, use the no debug all command.			

show env

To display fan, temperature, and power information for the switch (standalone switch, stack master, or stack member), use the **show env** command in EXEC modes.

show env { all | fan | power [all | switch [switch-number]] | stack [stack-number] |
temperature [status] }

Syntax Description	all	Displays fan, temperature and power environmental status.			
	fan	Displays the switch fan status.			
	power	Displays the power supply status.			
	all	(Optional) Displays the status for all power supplies.			
	switch switch-number	(Optional) Displays the power supply status for a specific switch.			
	stack switch-number	(Optional) Displays all environmental status for each switch in the stack or for a specified switch. The range is 1 to 9, depending on the switch member numbers in the stack.			
	temperature	Displays the switch temperature status.			
	status	(Optional) Displays the temperature status and threshold values.			
Command Default	No default behavior or values.				
Command Modes	User EXEC				
	Privileged EXEC				
Command History	Release	Modification			
	Cisco IOS XE 3.3SECisco IOS Z	XE 3.3SE This command was introduced.			
Usage Guidelines	Use the show env stack [<i>switch-number</i>] command to display information about any switch in the stack from any member switch.				
	Use the show env temperature s	status command to display the switch temperature states and threshold levels.			
Examples	This example shows how to disp	play information about stack member 1 from the master switch:			
	Device> show env stack 1 Device 1: Device Fan 1 is OK Device Fan 2 is OK Device Fan 3 is OK FAN-PS1 is OK				

FAN-PS2 is NOT PRESENT Device 1: SYSTEM TEMPERATURE is OK Temperature Value: 32 Degree Celsius Temperature State: GREEN Yellow Threshold : 41 Degree Celsius Red Threshold : 56 Degree Celsius

Device>

This example shows how to display temperature value, state, and threshold values:

```
Device> show env temperature status
Temperature Value: 32 Degree Celsius
Temperature State: GREEN
Yellow Threshold : 41 Degree Celsius
Red Threshold : 56 Degree Celsius
```

Device>

Table 3: States in the show env temperature status Command Output

State	Description	
Green	The switch temperature is in the <i>normal</i> operating range.	
Yellow	The temperature is in the <i>warning</i> range. You should check the external temperature around the switch.	
Red	The temperature is in the <i>critical</i> range. The switch might not run properly if the temperature is in this range.	

show env xps

To display budgeting, configuration, power, and system power information for the Cisco eXpandable Power System (XPS) 2200, use the **show env xps** command in privileged EXEC mode.

show env xps { budgeting | configuration | port [all | number] | power | system |
thermal | upgrade | version }

Syntax Description	budgeting	Displays XPS power budgeting, the allocated and budgeted power of all switches in the power stack.			
	configuration	Displays the configuration resulting from the power xps privileged EXEC commands. The XPS configuration is stored in the XPS. Enter the show env xps configuration command to retrieve the non-default configuration. Displays the configuration and status of all ports or the specified XPS port. Port numbers are from 1 to 9.			
	port [all number]				
	power	Displays the status of the XPS power supplies.Displays the XPS system status.Displays the XPS thermal status.Displays the XPS upgrade status.			
	system				
	thermal				
	upgrade				
	version	Displays the XPS version details.			
Command Modes	Privileged EXEC				
Command History	Release Modification	_			
	12.2(55)SE1 This command was introduced	 _			
Usage Guidelines	Use the show env xps privileged EXEC con	nmand to display the information for XPS 2200.			
Examples	This is an example of output from the show	env xps budgeting command:			
	Switch# ======				
	XPS 0101.0100.0000 :				
	Data Current Powe Committed Budget	er Power Port Switch # PS A PS B Role-State

This is an example of output from the show env xps version command:

Switch# show env xps version

Table 4: Related Commands

Command	Description
power xps(global configuration command)	Configures XPS and XPS port names.
power xps(privileged EXEC command)	Configures the XPS ports and system.

I

show flow monitor

To display the status and statistics for a Flexible NetFlow flow monitor, use the **show flow monitor** command in privileged EXEC mode.

show flow monitor [{broker [{detail | picture}] | [name] monitor-name [{cache [format {csv | record | table}]}] | provisioning | statistics}]

Syntax Description	broker	(Optional) Displays information about the state of the broker for the flow monitor			
	detail	(Optional) Displays detailed information about the flow monitor broker.			
	picture	(Optional) Displays a picture of the broker state.			
	name	(Optional) Specifies the name of a flow monitor.			
	monitor-name	(Optional) Name of a flow monitor that was previously configured.			
	cache	(Optional) Displays the contents of the cache for the flow monitor.			
	format(Optional) Specifies the use of one of the format options for formatting the display output.csv(Optional) Displays the flow monitor cache contents in comma-separated variables (CSV) format.record(Optional) Displays the flow monitor cache contents in record format.				
	table (Optional) Displays the flow monitor cache contents in table format.				
	provisioning (Optional) Displays the flow monitor provisioning information.				
	statistics	(Optional) Displays the statistics for the flow monitor.			
Command Modes	Privileged EXE	С			
Command History	Release	Modification			
	Cisco IOS XE 3	3.3SE This command was introduced.			
Usage Guidelines	The cache keyv	vord uses the record format by default.			
J	are key fields th output of the sh	field names in the display output of the show flowmonitor <i>monitor-name</i> cache command nat Flexible NetFlow uses to differentiate flows. The lowercase field names in the display tow flow monitor <i>monitor-name</i> cache command are nonkey fields from which Flexible ts values as additional data for the cache.			
Examples	The following e	example displays the status for a flow monitor:			
	Device# show	flow monitor FLOW-MONITOR-1			
	Flow Monitor Description	FLOW-MONITOR-1: : Used for basic traffic analysis			

Flow Record:	flow-record-1
Flow Exporter:	flow-exporter-1
	flow-exporter-2
Cache:	
Type:	normal
Status:	allocated
Size:	4096 entries / 311316 bytes
Inactive Timeout:	15 secs
Active Timeout:	1800 secs
Update Timeout:	1800 secs

This table describes the significant fields shown in the display.

Table 5: show flow monitor monitor-name Field Descriptions

Field	Description	
Flow Monitor	Name of the flow monitor that you configured.	
Description	Description that you configured or the monitor, or the default description User defined.	
Flow Record	Flow record assigned to the flow monitor.	
Flow Exporter	Exporters that are assigned to the flow monitor.	
Cache	Information about the cache for the flow monitor.	
Туре	Flow monitor cache type.	
	The possible values are:	
	• immediate—Flows are expired immediately.	
	• normal—Flows are expired normally.	
	• Permanent—Flows are never expired.	
Status	Status of the flow monitor cache.	
	The possible values are:	
	• allocated—The cache is allocated.	
	• being deleted—The cache is being deleted.	
	• not allocated—The cache is not allocated.	
Size	Current cache size.	
Inactive Timeout	t Current value for the inactive timeout in seconds.	
Active Timeout	Current value for the active timeout in seconds.	
Update Timeout Current value for the update timeout in seconds.		

The following example displays the status, statistics, and data for the flow monitor named FLOW-MONITOR-1:

Device# show flow monitor FLOW-MONITOR-1	cache
Cache type:	Normal (Platform cache)
Cache size:	Unknown
Current entries:	1
Flows added:	3

This table describes the significant fields shown in the display.

Table 6: show flow monitor monitor-name cache Fi	ield Descriptions

Field	Description
Cache type	Flow monitor cache type. The value is always normal, as it is the only supported cache type.
Cache Size	Number of entries in the cache.
Current entries	Number of entries in the cache that are in use.
Flows added	Flows added to the cache since the cache was created.
Flows aged	Flows expired from the cache since the cache was created.
Active timeout	Current value for the active timeout in seconds.
Inactive timeout	Current value for the inactive timeout in seconds.
DATALINK MAC SOURCE ADDRESS INPUT	MAC source address of input packets.
DATALINK MAC DESTINATION ADDRESS INPUT	MAC destination address of input packets.
IPV6 SOURCE ADDRESS	IPv6 source address.
IPV6 DESTINATION ADDRESS	IPv6 destination address.
TRNS SOURCE PORT	Source port for the transport protocol.
TRNS DESTINATION PORT	Destination port for the transport protocol.

Field	Description
IP VERSION	IP version.
IP PROTOCOL	Protocol number.
IP TOS	IP type of service (ToS) value.
IP TTL	IP time-to-live (TTL) value.
tcp flags	Value of the TCP flags.
counter bytes	Number of bytes that have been counted.
counter packets	Number of packets that have been counted.

The following example displays the status, statistics, and data for the flow monitor named FLOW-MONITOR-1 in a table format:

	OW-MONITOR-1 cache format tab	
Cache type:	Normal (Platform	cache)
Cache size:	Unknown	
Current entries:	1

show install

To display information about install packages, use the show install command in privileged EXEC mode.

show install {active | committed | inactive | log | package {bootflash: | flash: | webui:} | rollback | summary | uncommitted}

Syntax Description	active	Displays information about active packages.
	committed	Displays package activations that are persistent.
	inactive	Displays inactive packages.
	log	Displays entries stored in the logging installation buffer.
	package	Displays metadata information about the package including description, restart information, components in the package, and so on.
	{bootflash: flash: harddisk: webui:}	Specifies the location of the install package.
	rollback	Displays the software set associated with a saved installation.
	summary	Displays information about the list of active, inactive, committed, and superseded packages.
	uncommitted	Displays package activations that are nonpersistent
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Everest 16.6.1	This command was introduced.
Usage Guidelines	Use the show commands to view the status of	the install package.

Example

The following is sample output from the show install package command:

```
Device# show install package bootflash:cat3k-universalk9.2017-01-10_13.15.1.
CSCxxx.SSA.dmp.bin
Name: cat3k-universalk9.2017-01-10_13.15.1.CSCxxx.SS
Version: 16.6.1.0.199.1484082952..Everest
Platform: Catalyst3k
Package Type: dmp
Defect ID: CSCxxx
Package State: Added
Supersedes List: {}
Smu ID: 1
```

The following is sample output from the **show install summary** command:

```
Device# show install summary
Active Packages:
    bootflash:cat3k-universalk9.2017-01-10_13.15.1.CSCxxx.SSA.dmp.bin
Inactive Packages:
    No packages
Committed Packages:
    bootflash:cat3k-universalk9.2017-01-10_13.15.1.CSCxxx.SSA.dmp.bin
Uncommitted Packages:
    No packages
Device#
```

The table below lists the significant fields shown in the display.

Field	Description
Active Packages	Name of the active install package.
Inactive Packages	List of inactive packages.
Committed Packages	Install packages that have saved or committed changes to the harddisk, so that the changes become persistent across reloads.
Uncommitted Packages	Intall package activations that are nonpersistent.

The following is sample output from the **show install log** command:

```
Device# show install log
```

```
[0|install_op_boot]: START Fri Feb 24 19:20:19 Universal 2017

show license right-to-use

To display detailed information for apcount adder licenses installed on the device, use the **show license right-to-use** command in EXEC modes.

show license right-to-use {default | detail | eula | mismatch | slot | summary | usage}

Cuntax Description				
Syntax Description	default	Displays the default license information.		
	detail	Displays details of all the licenses in the sta	.ck.	
	eula	Displays the EULA text.		
	mismatch	Displays mismatch license information.		
	slot	Specifies the switch number.		
	summary	Displays consolidated stack-wide license information.		
	usage	Displays the usage details of all licenses.		
Command Default	No default behavior or values.			
Command Modes	User EXEC			
	Privileged EXEC			
Command History	Release	Modification		
	Cisco IOS XE 3.3SECisco IOS XE 3.3SE	This command was introduced.		

The following is sample output from the **show license right-to-use usage** command and displays all the detailed information:

Device# show license right-to-use usage

Slot#	License Name	Туре	usage-duration(y:m:d)	In-Use	EULA
1	ipservices	permanent	0 :0 :1	yes	yes
1	ipbase	permanent	0 :0 :0	no	no
1	ipbase	evaluation	0 :0 :0	no	no
1	lanbase	permanent	0 :0 :7	no	yes
1	apcount	evaluation	0 :0 :0	no	no
1	apcount	base	0 :0 :0	no	no
1	apcount	adder	0 :0 :0	no	yes
1	apcount	adder	0 :0 :0	no	yes
1	apcount	adder	0 :0 :0	no	yes
1	apcount	adder	0 :0 :0	no	yes
1	apcount	adder	0 :0 :0	no	yes

Device#

The following is sample output from the **show license right-to-use detail** command and displays the detailed information of licenses:

Device# show license right-to-use detail
Index 1: License Name: apcount
 Period left: 16
 License Type: evaluation
 License State: Not Activated
 License Count: 1000
 License Location: Slot 1

 License Type: adder
 License State: Active, In use
 License Count: 125
 License Location: Slot 1

The following is sample output from the **show license right-to-use summary** command when the evaluation license is active:

The following is sample output from the **show license right-to-use summary** command when the adder licenses are active:

show location

To display location information, use the show location command in privileged EXEC mode.

show location {detail *mac-addr* | plm | statistics| summary rfid | rfid {client | config | detail *MAC-addr* | summary}}

Syntax Description	detail mac-addr	Displays detailed location information with the RSSI table for a particular client					
	plm	Displays location path loss measurement (CCX S60) configuration.					
	statistics	Displays location-based system statistics.					
	summary	Displays location-based system summary information.					
	rfid	Displays the RFID tag tracking information.					
	client	Displays the summary of RFID tags that are clients.					
	config	g Displays the configuration options for RFID tag tracking.					
	detail MAC-addr	• Displays the detailed information for one rfid tag.					
	summary Displays summary information for all known rfid tags.						
Command Default	No default behavio	r or values.					
Command Modes	Privileged EXEC						
Command History	Release	Modification					
	Cisco IOS XE 3.3S	SECisco IOS XE 3.3SE This command was introduced.					
	The following is sa	mple output from the show location plm command:					
	Device# show loc Location Path Lo	ss Configuration					
	Calbration clien	t : Disabled, Radio: Multiband					

Normal clients : Disabled Burst interval : 60

show location ap-detect

To display the location information detected by specified access point, use the **show location ap-detect** command in privileged EXEC mode.

show location ap-detect {all | client | rfid | rogue-ap | rogue-client} ap-name

Syntax Description	all	Displays information of	the client, RF	ID, rogue	access p	oint, and rogue cl	ent.	
	client	Displays the client information.						
	rfid	Displays RFID informat	ion.					
	rogue-ap	Displays rogue access point information.						
	rogue-client	Displays rogue client in	formation.					
	ap-name	Specified access point n	ame.					
Command Default	No default beh	avior or values.

System Management

show sdm prefer

To display information about the templates that can be used to maximize system resources for a particular feature, use the **show sdm prefer** command in privileged EXEC mode. To display the current template, use the command without a keyword.

show sdm prefer [advanced]

Syntax Description	advanced	(Optional) Displays informat	ion on the advanced template.
Command Default	No default	behavior or values.	
Command Modes	Privileged I	EXEC	
Command History	Release		Modification
	Cisco IOS	XE 3.3SECisco IOS XE 3.3SE	This command was introduced.
Usage Guidelines	•		ring the sdm prefer global confi ys the template currently in use a

Guidelines If you did not reload the switch after entering the **sdm prefer** global configuration command, the **show sdm prefer** privileged EXEC command displays the template currently in use and not the newly configured template.

The numbers displayed for each template represent an approximate maximum number for each feature resource. The actual number might vary, depending on the actual number of other features configured. For example, in the default template if your device had more than 16 routed interfaces (subnet VLANs), the number of possible unicast MAC addresses might be less than 6000.

Example

The following is sample output from the **show sdm prefer** command:

Device# show sdm prefer

Showing SDM Template Info

This is the Advanced template.	
Number of VLANs:	4094
Unicast MAC addresses:	32768
Overflow Unicast MAC addresses:	512
IGMP and Multicast groups:	8192
Overflow IGMP and Multicast groups:	512
Directly connected routes:	32768
Indirect routes:	7680
Security Access Control Entries:	3072
QoS Access Control Entries:	3072
Policy Based Routing ACEs:	1024
Netflow ACEs:	1024
Input Microflow policer ACEs:	256
Output Microflow policer ACEs:	256
Flow SPAN ACEs:	256
Tunnels:	256
Control Plane Entries:	512

Input Netflow flows: 8192 Output Netflow flows: 16384 SGT/DGT entries: 4096 SGT/DGT Overflow entries: 512 These numbers are typical for L2 and IPv4 features. Some features such as IPv6, use up double the entry size; so only half as many entries can be created.

Device#

I

system env temperature threshold yellow

		To configure the difference between the yellow and red temperature thresholds that determines the value of yellow threshold, use the system env temperature threshold yellow command in global configuration mode. To return to the default value, use the no form of this command.			
		•	v temperature threshold ye env temperature threshold

test cable-diagnostics tdr

To run the Time Domain Reflector (TDR) feature on an interface, use the **test cable-diagnostics tdr** command in privileged EXEC mode.

test cable-diagnostics tdr interface interface-id

Syntax Description	<i>interface-id</i> The interface on which to run T	DR.	
Command Default	No default behavior or values.		
Command Modes	Privileged EXEC		
Command History	Release	Modification	
	Cisco IOS XE 3.3SECisco IOS XE 3.3SE	This command was introduced.	
Usage Guidelines	TDR is supported only on 10/100/100 copp or small form-factor pluggable (SFP) mode	er Ethernet ports. It is not supported on 10-Gigabit Ethernet ports ile ports.	
	After you run TDR by using the test cable-diagnostics tdr interface <i>interface-id</i> command, use the show cable-diagnostics tdr interface <i>interface-id</i> privileged EXEC command to display the results.		
	This example shows how to run TDR on a	n interface:	
	Device# test cable-diagnostics tdr i TDR test started on interface Gil/0/ A TDR test can take a few seconds to Use 'show cable-diagnostics tdr' to	2 run on an interface	
	If you enter the test cable-diagnostics tdr an link up status and a speed of 10 or 100 l	interface <i>interface-id</i> command on an interface that has <i>Ab/s</i> , these messages appear:	
	Device# test cable-diagnostics tdr i TDR test on Gi1/0/9 will affect lin TDR test started on interface Gi1/0/ A TDR test can take a few seconds to	state and traffic 3	

Use 'show cable-diagnostics tdr' to read the TDR results.

traceroute mac

To display the Layer 2 path taken by the packets from the specified source MAC address to the specified destination MAC address, use the **traceroute mac** command in privileged EXEC mode.

traceroute mac [interface interface-id] source-mac-address [interface interface-id] destination-mac-address [vlan vlan-id] [detail]

Syntax Description	interface interface-id	(Optional) Specifies an interface on the source or destination device.			
	source-mac-address	The MAC address of the source device in hexadecimal format.			
	destination-mac-address The MAC address of the destination device in hexadecimal format.				
	vlan vlan-id	(Optional) Specifies the VLAN on which to trace the Layer 2 path that the packets take from the source device to the destination device. Valid VLAN IDs are 1 to 4094.			
	detail	(Optional) Specifies that detailed information appears.			
Command Default	No default behavior or v	values.			
Command Modes	Privileged EXEC				
Command History	Release	Modification			
	Cisco IOS XE 3.3SECis	co IOS XE 3.3SE This command was introduced.			
Usage Guidelines	For Layer 2 traceroute to function properly, Cisco Discovery Protocol (CDP) must be enabled on all of the devicees in the network. Do not disable CDP.				
	When the device detects a device in the Layer 2 path that does not support Layer 2 traceroute, the device continues to send Layer 2 trace queries and lets them time out.				
		a device in the Layer 2 path that does not support Layer 2 traceroute, the device			
	continues to send Layer	a device in the Layer 2 path that does not support Layer 2 traceroute, the device

	continues to send Layer The maximum number of Layer 2 traceroute suppo the physical path is not i The traceroute mac cor addresses belong to the s If you specify source and identified, and an error r If the source or destination both the source and dest	 a device in the Layer 2 path that does not support Layer 2 traceroute, the device 2 trace queries and lets them time out. of hops identified in the path is ten. orts only unicast traffic. If you specify a multicast source or destination MAC address dentified, and an error message appears. mmand output shows the Layer 2 path when the specified source and destination same VLAN. d destination addresses that belong to different VLANs, the Layer 2 path is not nessage appears. on MAC address belongs to multiple VLANs, you must specify the VLAN to whic 			

When more than one CDP neighbor is detected on a port, the Layer 2 path is not identified, and an error message appears.

This feature is not supported in Token Ring VLANs.

Examples

This example shows how to display the Layer 2 path by specifying the source and destination MAC addresses:

```
Device# traceroute mac 0000.0201.0601 0000.0201.0201
  Source 0000.0201.0601 found on con6[WS-C3750E-24PD] (2.2.6.6)
  con6 (2.2.6.6) :Gi0/0/1 => Gi0/0/3
  con5
                       (2.2.5.5
                                      ) :
                                              Gi0/0/3 => Gi0/0/1
                                ) :
) :
                                              Gi0/0/1 => Gi0/0/2
  con1
                      (2.2.1.1)
                                              Gi0/0/2 => Gi0/0/1
  con2
                       (2.2.2.2
  Destination 0000.0201.0201 found on con2[WS-C3550-24] (2.2.2.2)
  Layer 2 trace completed
```

This example shows how to display the Layer 2 path by using the **detail** keyword:

```
Device# traceroute mac 0000.0201.0601 0000.0201.0201 detail
Source 0000.0201.0601 found on con6[WS-C3750E-24PD] (2.2.6.6)
con6 / WS-C3750E-24PD / 2.2.6.6 :
        Gi0/0/2 [auto, auto] => Gi0/0/3 [auto, auto]
con5 / WS-C2950G-24-EI / 2.2.5.5 :
        Fa0/3 [auto, auto] => Gi0/1 [auto, auto]
con1 / WS-C3550-12G / 2.2.1.1 :
        Gi0/1 [auto, auto] => Gi0/2 [auto, auto]
con2 / WS-C3550-24 / 2.2.2.2 :
        Gi0/2 [auto, auto] => Fa0/1 [auto, auto]
Destination 0000.0201.0201 found on con2[WS-C3550-24] (2.2.2.2)
Layer 2 trace completed.
```

This example shows how to display the Layer 2 path by specifying the interfaces on the source and destination devicees:

```
Device# traceroute mac interface fastethernet0/1 0000.0201.0601 interface fastethernet0/3
0000.0201.0201
Source 0000.0201.0601 found on con6[WS-C3750E-24PD] (2.2.6.6)
con6 (2.2.6.6) :Gi0/0/1 => Gi0/0/3
con5 (2.2.5.5 ) : Gi0/0/3 => Gi0/0/1
con1 (2.2.1.1 ) : Gi0/0/1 => Gi0/0/2
```

 con1
 (2.2.1.1
)
 :
 G10/0/1 => G10/0/2

 con2
 (2.2.2.2)
)
 :
 Gi0/0/2 => Gi0/0/1

 Destination 0000.0201.0201 found on con2[WS-C3550-24]
 (2.2.2.2)

 Layer 2 trace completed

This example shows the Layer 2 path when the device is not connected to the source device:

```
Device# traceroute mac 0000.0201.0501 0000.0201.0201 detail
Source not directly connected, tracing source .....
Source 0000.0201.0501 found on con5[WS-C3750E-24TD] (2.2.5.5)
con5 / WS-C3750E-24TD / 2.2.5.5 :
        Gi0/0/1 [auto, auto] => Gi0/0/3 [auto, auto]
```

L

```
con1 / WS-C3550-12G / 2.2.1.1 :
    Gi0/1 [auto, auto] => Gi0/2 [auto, auto]
con2 / WS-C3550-24 / 2.2.2.2 :
    Gi0/2 [auto, auto] => Fa0/1 [auto, auto]
Destination 0000.0201.0201 found on con2[WS-C3550-24] (2.2.2.2)
Layer 2 trace completed.
```

This example shows the Layer 2 path when the device cannot find the destination port for the source MAC address:

```
Device# traceroute mac 0000.0011.1111 0000.0201.0201
Error:Source Mac address not found.
Layer2 trace aborted.
```

This example shows the Layer 2 path when the source and destination devices are in different VLANs:

```
Device# traceroute mac 0000.0201.0601 0000.0301.0201
Error:Source and destination macs are on different vlans.
Layer2 trace aborted.
```

This example shows the Layer 2 path when the destination MAC address is a multicast address:

```
Device# traceroute mac 0000.0201.0601 0100.0201.0201
Invalid destination mac address
```

This example shows the Layer 2 path when source and destination devicees belong to multiple VLANs:

```
Device# traceroute mac 0000.0201.0601 0000.0201.0201
Error:Mac found on multiple vlans.
Layer2 trace aborted.
```

traceroute mac ip

To display the Layer 2 path taken by the packets from the specified source IP address or hostname to the specified destination IP address or hostname, use the **traceroute mac ip** command in privileged EXEC mode.

traceroute mac ip {source-ip-address source-hostname} {destination-ip-address destination-hostname}
[detail]

Syntax Description	source-ip-address	The IP address of the source device as a 32-bit quantity in dot	tted-decimal format.	
	source-hostname	The IP hostname of the source device.		
	destination-ip-address	The IP address of the destination device as a 32-bit quantity in	dotted-decimal format.	
	destination-hostname The IP hostname of the destination device.			
	detail	(Optional) Specifies that detailed information appears.		
Command Default	No default behavior o	r values.		
Command Modes	Privileged EXEC			
Command History	Release	Modification		
	Cisco IOS XE 3.3SEC	Cisco IOS XE 3.3SE This command was introduced.		
Usage Guidelines	For Layer 2 traceroute to function properly, Cisco Discovery Protocol (CDP) must be enabled on each device in the network. Do not disable CDP.			
	When the device detects a device in the Layer 2 path that does not support Layer 2 traceroute, the device continues to send Layer 2 trace queries and lets them time out.			
	The maximum number of hops identified in the path is ten.			
	The traceroute mac ip command output shows the Layer 2 path when the specified source and destination IP addresses are in the same subnet.			
	When you specify the IP addresses, the device uses Address Resolution Protocol (ARP) to associate the IP addresses with the corresponding MAC addresses and the VLAN IDs.			
	• If an ARP entry exists for the specified IP address, the device uses the associated MAC address and identifies the physical path.			
	• If an ARP entry does not exist, the device sends an ARP query and tries to resolve the IP address. The IP addresses must be in the same subnet. If the IP address is not resolved, the path is not identified, and an error message appears.			
	The Layer 2 traceroute feature is not supported when multiple devices are attached to one port through hubs (for example, multiple CDP neighbors are detected on a port).			
	When more than one CDP neighbor is detected on a port, the Layer 2 path is not identified, and an error message appears.			

This feature is not supported in Token Ring VLANs.

Examples

This example shows how to display the Layer 2 path by specifying the source and destination IP addresses and by using the **detail** keyword:

```
Device# traceroute mac ip 2.2.66.66 2.2.22.22 detail
Translating IP to mac .....
2.2.66.66 => 0000.0201.0601
2.2.22.22 => 0000.0201.0201
Source 0000.0201.0601 found on con6[WS-C2950G-24-EI] (2.2.6.6)
con6 / WS-C3750E-24TD / 2.2.6.6 :
        Gi0/0/1 [auto, auto] => Gi0/0/3 [auto, auto]
con5 / WS-C2950G-24-EI / 2.2.5.5 :
        Fa0/3 [auto, auto] => Gi0/1 [auto, auto]
con1 / WS-C3550-12G / 2.2.1.1 :
        Gi0/1 [auto, auto] => Gi0/2 [auto, auto]
con2 / WS-C3550-24 / 2.2.2.2 :
        Gi0/2 [auto, auto] => Fa0/1 [auto, auto]
Destination 0000.0201.0201 found on con2[WS-C3550-24] (2.2.2.2)
Layer 2 trace completed.
```

This example shows how to display the Layer 2 path by specifying the source and destination hostnames:

```
Device# traceroute mac ip con6 con2
Translating IP to mac ....
2.2.66.66 => 0000.0201.0601
2.2.22.22 => 0000.0201.0201
Source 0000.0201.0601 found on con6
con6 (2.2.6.6) :Gi0/0/1 => Gi0/0/3
con5 (2.2.5.5 ) : Gi0/0/3 => Gi0/1
con1 (2.2.1.1 ) : Gi0/0/1 => Gi0/2
con2 (2.2.2.2 ) : Gi0/0/2 => Fa0/1
Destination 0000.0201.0201 found on con2
Layer 2 trace completed
```

This example shows the Layer 2 path when ARP cannot associate the source IP address with the corresponding MAC address:

```
Device# traceroute mac ip 2.2.66.66 2.2.77.77
Arp failed for destination 2.2.77.77.
Layer2 trace aborted.
```

I

type

	To display the contents of one or more files, use the type command in boot loader mode.			
	type filesystem:/file-url			
Syntax Description	<i>filesystem:</i> Alias for a filmemory stick	•	for the system board flash do	evice; use usbflash0: for USB
	/file-url Path (director	ry) and name of the fi	iles to display. Separate each	filename with a space.
Command Default	No default behavior or va	alues.		
Command Modes	Boot loader			
Command History	Release	Ma	dification	
	Cisco IOS XE 3.3SECisc	co IOS XE 3.3SE Th	is command was introduced.	
Usage Guidelines	Filenames and directory	names are case sensit	ive.	
	If you specify a list of file	es, the contents of eac	ch file appear sequentially.	
Examples	This example shows how	to display the conter	its of a file:	
	Device: type flash :im version_suffix: unive version_directory: im image_system_type_id: image_name: image_fil ios_image_file_size total_image_file_size image_feature: IP LAY image_family: family stacking_number: 1.34 board_ids: 0x00000068 info_end:	ersal-122-xx.SEx mage_file_name 0x00000002 Le_name.bin 8919552 e: 11592192 YER_3 PLUS MIN_DRAM		

unset

To reset one or more environment variables, use the **unset** command in boot loader mode.

unset variable...

Syntax Description	variable	Use one of these keywords for variable:
		MANUAL_BOOT—Specifies whether the device automatically or manually boots.
		BOOT —Resets the list of executable files to try to load and execute when automatically booting. If the BOOT environment variable is not set, the system attempts to load and execute the first executable image it can find by using a recursive, depth-first search through the flash: file system. If the BOOT variable is set but the specified images cannot be loaded, the system attempts to boot the first bootable file that it can find in the flash: file system.
		ENABLE_BREAK —Specifies whether the automatic boot process can be interrupted by using the Break key on the console after the flash: file system has been initialized.
		HELPER —Identifies the semicolon-separated list of loadable files to dynamically load during the boot loader initialization. Helper files extend or patch the functionality of the boot loader.
		PS1 —Specifies the string that is used as the command-line prompt in boot loader mode.
		CONFIG_FILE —Resets the filename that Cisco IOS uses to read and write a nonvolatile copy of the system configuration.
		BAUD —Resets the rate in bits per second (b/s) used for the console. The Cisco IOS software inherits the baud rate setting from the boot loader and continues to use this value unless the configuration file specifies another setting.
Command Default	No default be	havior or values.
Command Modes	Boot loader	
Command History	Release	Modification
	Cisco IOS X	E 3.3SECisco IOS XE 3.3SE This command was introduced.
Usage Guidelines	Under typical	circumstances, it is not necessary to alter the setting of the environment variables.
	The MANUA configuration	L_BOOT environment variable can also be reset by using the no boot manual global command.
	The BOOT er	nvironment variable can also be reset by using the no boot system global configuration command.
	The ENABLI configuration	E_BREAK environment variable can also be reset by using the no boot enable-break global command.
	The HELPER command.	environment variable can also be reset by using the no boot helper global configuration

The CONFIG_FILE environment variable can also be reset by using the **no boot config-file** global configuration command.

Example

This example shows how to unset the SWITCH_PRIORITY environment variable:

Device: unset SWITCH_PRIORITY

version

To display the boot loader version, use the **version** command in boot loader mode.

	version
Syntax Description	This command has no arguments or keywords.
Command Default	No default behavior or values.
Command Modes	Boot loader
Command History	Release Modification
	Cisco IOS XE 3.3SECisco IOS XE 3.3SE This command was introduced.
Examples	This example shows how to display the boot loader version on a device:
	Device: version

Device: **version** CAT3K_CAA Boot Loader (CAT3K_CAA-HBOOT-M) Version 1.2, RELEASE SOFTWARE (P) Compiled Sun Jul 14 20:22:00 PDT 2013 by rel version
