## Prerequisites for IPv6 WLAN Security

A client VLAN must be mapped to the WLAN configured on the switch

## Restrictions for IPv6 WLAN Security

### **RADIUS Server Support**

- If multiple RADIUS servers are configured for redundancy, the user database must be identical in all the servers for the backup to work properly.

### **Radius ACS Support**

- You must configure RADIUS on both your Cisco Secure Access Control Server (ACS) and your switch
- RADIUS is supported on Cisco Secure ACS version 3.2 and later releases.

# Information About IPv6 WLAN Security

## Information About RADIUS

Remote Authentication Dial-In User Service (RADIUS) is a client/server protocol that provides centralized security for users attempting to gain management access to a network. It serves as a back-end database similar to Local EAP and provides authentication and accounting services.

- **Authentication**—The process of verifying users when they attempt to log into the switch

Users must enter a valid username and password for the switch to authenticate users to the RADIUS server. If multiple databases are configured, then specify the sequence in which the backend database must be tried.

- **Accounting**— The process of recording user actions and changes.

Whenever a user successfully executes an action, the RADIUS accounting server logs the changed attributes, the user ID of the person who made the change, the remote host where the user is logged in, the date and time when the command was executed, the authorization level of the user, and a description of the action performed and the values provided. If the RADIUS accounting server is unreachable, the users can continue their sessions uninterrupted.

**User Datagram Protocol**— RADIUS uses User Datagram Protocol (UDP) for its transport. It maintains a database and listens on UDP port 1812 for incoming authentication requests and UDP port 1813 for incoming accounting requests. The switch, which requires access control, acts as the client and requests AAA services from the server. The traffic between the switch and the server is encrypted by an algorithm defined in the protocol and a shared secret key configured on both devices.

Configures multiple RADIUS accounting and authentication servers. For example, you can have one central RADIUS authentication server but several RADIUS accounting servers in different regions. If you configure multiple servers of the same type and the first one fails or becomes unreachable, the controller automatically tries the second one, then the third one if necessary, and so on.

When RADIUS method is configured for the WLAN, the switch will use the RADIUS method configured for the WLAN. When the WLAN is configured to use local EAP, the RADIUS method configured on the WLAN points to Local. The WLAN must also be configured with the name of the local EAP profile to use.

If no RADIUS method is configured in the WLAN, the switch will use the default RADIUS method defined in global mode.

## Information About Local EAP

Local EAP is an authentication method that allows users and wireless clients to be authenticated locally. It is designed for use in remote offices that maintain connectivity to wireless clients when the back-end system is disrupted or the external authentication server goes down. When you enable local EAP, the switch serves as the authentication server and the local user database, which removes dependence on an external authentication server. Local EAP retrieves user credentials from the local user database or the LDAP back-end database to authenticate users. Local EAP supports LEAP, EAP-FAST, EAP-TLS, PEAPv0/MSCHAPv2, and PEAPv1/GTC authentication between the controller and wireless clients.

Without an EAP profile name being provided, or if a name was provided for an EAP profile that does not exist, then EAP by default allows no EAP method for local authentication.

**Note** The LDAP back-end database supports these local EAP methods: EAP-TLS, EAP-FAST/GTC, and PEAPv1/GTC. LEAP, EAP-FAST/MSCHAPv2, and PEAPv0. MSCHAPv2 is supported only if the LDAP server is set up to return a clear-text password.

**Note** Switch support Local EAP authentication against external LDAP databases such as Microsoft Active Directory and Novell's eDirectory. For more information about configuring the controller for Local EAP authentication against Novell's eDirectory, see the Configure Unified Wireless Network for Authentication Against Novell's eDirectory Database whitepaper.

# How to Configure IPv6 WLAN Security

## Configuring Local Authentication

### Creating a Local User

**SUMMARY STEPS**

1. **configure terminal**
2. **username aaa\_test**
3. **password 0 aaa\_test**
4. **end**

**DETAILED STEPS**

	Command or Action	Purpose
<b>Step 1</b>	<b>configure terminal</b>  <b>Example:</b> Switch# <b>configure terminal</b>	Enters global command mode.
<b>Step 2</b>	<b>username aaa_test</b>  <b>Example:</b> Switch(config)# <b>username aaa_test</b>	Creates a username.
<b>Step 3</b>	<b>password 0 aaa_test</b>  <b>Example:</b> Switch(config)# <b>usernameaaa_test password 0 aaa_test</b>	Assigns a password for the username.
<b>Step 4</b>	<b>end</b>  <b>Example:</b> Switch(config)# <b>end</b>	Returns to privileged EXEC mode. Alternatively, you can also press <b>Ctrl-Z</b> to exit the global configuration mode.

```
Switch# configure terminal
Switch(config)# username aaa_test password 0 aaa_test
Switch(config)# end
```

## Creating an Client VLAN and Interface

### SUMMARY STEPS

1. **configure terminal**
2. **vlan**
3. **exit**
4. **interface vlan vlan\_ID**
5. **ip address**
6. **ipv6 address**
7. **end**

### DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	<b>configure terminal</b>  <b>Example:</b> Switch# <b>configure terminal</b>	Enters global command mode.
<b>Step 2</b>	<b>vlan</b>  <b>Example:</b> Switch(config)# <b>vlan 137</b>	Creates a VLAN.
<b>Step 3</b>	<b>exit</b>  <b>Example:</b> Switch (config-vlan)# <b>exit</b>	Exits VLAN configuration mode.
<b>Step 4</b>	<b>interface vlan vlan_ID</b>  <b>Example:</b> Switch (config)# <b>interface vlan 137</b>	Associates the VLAN to an interface.
<b>Step 5</b>	<b>ip address</b>  <b>Example:</b> Switch(config-if)# <b>ip address 10.7.137.10</b> <b>255.255.255.0</b>	Assigns an IP address to the VLAN interface.

	Command or Action	Purpose
<b>Step 6</b>	<b>ipv6 address</b>  <b>Example:</b> Switch(config-if)#ipv6 address 2001:db8::20:1/64	Assigns an IPv6 address to the VLAN interface.
<b>Step 7</b>	<b>end</b>  <b>Example:</b> Switch(config)# <b>end</b>	Returns to privileged EXEC mode. Alternatively, you can also press <b>Ctrl-Z</b> to exit the global configuration mode.

```
Switch# configure terminal
Switch(config)# vlan 137
Switch(config-vlan)#exit
Switch(config)#interface vlan 137
Switch(config-if)#ip address 10.7.137.10 255.255.255.0
Switch(config-if)#ipv6 address 2001:db8::20:1/64
Switch(config-if)#end
```

## Configuring a EAP Profile

### SUMMARY STEPS

1. **eap profile name**
2. **method leap**
3. **method tls**
4. **method peap**
5. **method mschapv2**
6. **method md5**
7. **method gtc**
8. **method fast profile my-fast**
9. **description my\_localeap profile**
10. **exit**
11. **eap method fast profilemyFast**
12. **authority-id [identity|information]**
13. **local-key 0 key-name**
14. **pac-password 0 password**
15. **end**

## DETAILED STEPS

	Command or Action	Purpose
Step 1	<b>eap profile</b> name  <b>Example:</b> Switch(config)# eap profile wcm_eap_prof	Creates a EAP profile.
Step 2	<b>method leap</b>  <b>Example:</b> Switch(config-eap-profile)# method leap	Configures EAP-LEAP method on the profile.
Step 3	<b>method tls</b>  <b>Example:</b> Switch(config-eap-profile)# method tls	Configures EAP-TLS method on the profile.
Step 4	<b>method peap</b>  <b>Example:</b> Switch(config-eap-profile)# method peap	Configures PEAP method on the profile.
Step 5	<b>method mschapv2</b>  <b>Example:</b> Switch(config-eap-profile)# method mschapv2	Configures EAP-MSCHAPV2 method on the profile.
Step 6	<b>method md5</b>  <b>Example:</b> Switch(config-eap-profile)# method md5	Configures EAP-MD5 method on the profile.
Step 7	<b>method gtc</b>  <b>Example:</b> Switch(config-eap-profile)# method gtc	Configures EAP-GTC method on the profile.
Step 8	<b>method fast profile</b> my-fast  <b>Example:</b> Switch(config-eap-profile)# eap method fast profile my-fast Switch (config-eap-profile)#description my_local eap profile	Creates a EAP profile named my-fast.
Step 9	<b>description my_localeap profile</b>  <b>Example:</b> Switch (config-eap-profile)#description my_local eap profile	Provides a description for the local profile.
Step 10	<b>exit</b>  <b>Example:</b> Switch (config-eap-profile)# exit	Exits the eap-profile configuration mode.

	Command or Action	Purpose
<b>Step 11</b>	<b>eap method fast profile</b> myFast  <b>Example:</b> Switch (config)# eap method fast profile myFast	Configures the EAP method profile.
<b>Step 12</b>	<b>authority-id</b> [identity information]  <b>Example:</b> Switch(config-eap-method-profile)# authority-id identity my_identity Switch(config-eap-method-profile)#authority-id information my_information	Configure the authority ID and information for the EAP method profile.
<b>Step 13</b>	<b>local-key 0</b> key-name  <b>Example:</b> Switch(config-eap-method-profile)# local-key 0 test	Configures the local server key.
<b>Step 14</b>	<b>pac-password 0</b> password  <b>Example:</b> Switch(config-eap-method-profile)# pac-password 0 test	Configures the PAC password for manual PAC provisioning.
<b>Step 15</b>	<b>end</b>  <b>Example:</b> Switch(config)# end	Returns to privileged EXEC mode. Alternatively, you can also press <b>Ctrl-Z</b> to exit the global configuration mode.

```
Switch(config)#eap profile wcm_eap_prof
Switch(config-eap-profile)#method leap
Switch(config-eap-profile)#method tls
Switch(config-eap-profile)#method peap
Switch(config-eap-profile)#method mschapv2
Switch(config-eap-profile)#method md5
Switch(config-eap-profile)#method gtc
Switch(config-eap-profile)#eap method fast profile my-fast
Switch (config-eap-profile)#description my_local eap profile
Switch(config-eap-profile)# exit
Switch (config)# eap method fast profile myFast
Switch(config-eap-method-profile)#authority-id identity my_identity
Switch(config-eap-method-profile)#authority-id information my_information
Switch(config-eap-method-profile)#local-key 0 test
Switch(config-eap-method-profile)#pac-password 0 test
Switch(config-eap-method-profile)# end
```

## Creating a Local Authentication Model

### SUMMARY STEPS

1. **aaa new-model**
2. **authentication dot1x default local**
3. **dot1x method\_list local**
4. **aaa authentication dot1x dot1x\_name local**
5. **aaa authorization credential-download name local**
6. **aaa local authentication auth-name authorization authorization-name**
7. **session ID**
8. **dot1x system-auth-control**

### DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	<b>aaa new-model</b>  <b>Example:</b> Switch(config)# aaa new-model	Creates a AAA authentication model.
<b>Step 2</b>	<b>authentication dot1x default local</b>  <b>Example:</b> Switch(config)# aaa authentication dot1x default local	Implies that the dot1x must use the default local RADIUS when no other method is found.
<b>Step 3</b>	<b>dot1x method_list local</b>  <b>Example:</b> Switch(config)# aaa authentication dot1x wcm_local local	Assigns the local authentication for wcm_local method list.
<b>Step 4</b>	<b>aaa authentication dot1x dot1x_name local</b>  <b>Example:</b> Switch(config)# aaa authentication dot1x aaa_auth local	Configures the local authentication for the dot1x method.
<b>Step 5</b>	<b>aaa authorization credential-download name local</b>  <b>Example:</b> Switch(config)# aaa authorization credential-download wcm_author local	Configures local database to download EAP credentials from Local/RADIUS/LDAP.
<b>Step 6</b>	<b>aaa local authentication auth-name authorization authorization-name</b>  <b>Example:</b> Switch(config)# aaa local authentication wcm_local authorization wcm_author	Selects local authentication and authorization.

	Command or Action	Purpose
<b>Step 7</b>	<b>session ID</b>  <b>Example:</b> Switch(config)# aaa session-id common	Configures a session ID for AAA.
<b>Step 8</b>	<b>dot1x system-auth-control</b>  <b>Example:</b> Switch(config)# dot1x system-auth-control	Enables dot.1x system authentication control.

```
Switch(config)# aaa new-model
Switch(config)# aaa authentication dot1x default local
Switch(config)# aaa authentication dot1x wcm-local local
Switch(config)# aaa authentication dot1x aaa_auth local
Switch(config)# aaa authorization credential-download wcm_author local
Switch(config)# aaa local authentication wcm_local authorization wcm_author
Switch(config)# aaa session-id common
Switch(config)# dot1x system-auth-control
```

## Creating a Client WLAN

### Note

This example uses 802.1x with dynamic WEP. You can use any other security mechanism supported by the wireless client and configurable on the switch

## SUMMARY STEPS

1. **configure terminal**
2. **wlan wlan name <identifier> SSID**
3. **broadcast-ssid**
4. **no security wpa**
5. **security dot1x**
6. **security dot1x authentication-list wcm-local**
7. **local-auth wcm\_eap\_prof**
8. **client vlan 137**
9. **no shutdown**
10. **end**

## DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	<b>configure terminal</b>  <b>Example:</b> Switch# <code>configure terminal</code>	Enters global command mode.
<b>Step 2</b>	<b>wlan wlan name &lt;identifier&gt; SSID</b>  <b>Example:</b> Switch(config)# <code>wlan wlanProfileName 1 ngwcSSID</code>	Creates a WLAN.
<b>Step 3</b>	<b>broadcast-ssid</b>  <b>Example:</b> Switch(config-wlan)# <code>broadcast-ssid</code>	Configures to broadcast the SSID on a WLAN.
<b>Step 4</b>	<b>no security wpa</b>  <b>Example:</b> Switch(config-wlan)# <code>no security wpa</code>	Disables the wpa for WLAN to enable 802.1x.
<b>Step 5</b>	<b>security dot1x</b>  <b>Example:</b> Switch(config-wlan)# <code>security dot1x</code>	Configures the 802.1x encryption security for the WLAN.
<b>Step 6</b>	<b>security dot1x authentication-list wcm-local</b>  <b>Example:</b> Switch(config-wlan)# <code>security dot1x authentication-list wcm-local</code>	Configures the server group mapping to the WLAN for dot1x authentication.
<b>Step 7</b>	<b>local-auth wcm_eap_prof</b>  <b>Example:</b> Switch (config-wlan)# <code>local-auth wcm_eap_profile</code>	Configures the eap profile on the WLAN for local authentication.
<b>Step 8</b>	<b>client vlan 137</b>  <b>Example:</b> Switch(config-wlan)# <code>client vlan 137</code>	Associates the VLAN to a WLAN.
<b>Step 9</b>	<b>no shutdown</b>  <b>Example:</b> Switch(config-wlan)# <code>no shutdown</code>	Enables the WLAN.
<b>Step 10</b>	<b>end</b>  <b>Example:</b> Switch(config)# <code>end</code>	Returns to privileged EXEC mode. Alternatively, you can also press <b>Ctrl-Z</b> to exit the global configuration mode.

```

Switch# config terminal
Switch(config)#wlan wlanProfileName 1 ngwcSSID
Switch(config-wlan)#broadcast-ssid
Switch(config-wlan)#no security wpa
Switch(config-wlan)#security dot1x
Switch(config-wlan)#security dot1x authentication-list wcm-local
Switch (config-wlan)# local-auth wcm_eap_prof
Switch(config-wlan)#client vlan 137
Switch(config-wlan)#no shutdown
Switch(config-wlan)#end
Switch#

```

## Configuring Local Authentication with WPA2+AES

### SUMMARY STEPS

1. **configure terminal**
2. **aaa new model**
3. **dot1x system-auth-control**
4. **aaa authentication dot1x default local**
5. **aaa local authorization credential-download default local**
6. **aaa local authentication default authorization default**
7. **eap profile wcm\_eap\_profile**
8. **method leap**
9. **end**

### DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	<b>configure terminal</b>  <b>Example:</b> Switch# <b>configure terminal</b>	Enters global command mode.
<b>Step 2</b>	<b>aaa new model</b>  <b>Example:</b> Switch(config)# <b>aaa new-model</b>	Creates a AAA authentication model.
<b>Step 3</b>	<b>dot1x system-auth-control</b>  <b>Example:</b> Switch(config)# <b>dot1x system-auth-control</b>	Enables dot1x system authentication control.

	Command or Action	Purpose
Step 4	<b>aaa authentication dot1x default local</b>  <b>Example:</b> Switch(config)# aaa authentication dot1x default local	Configures the local authentication for the default dot1x method.
Step 5	<b>aaa local authorization credential-download default local</b>  <b>Example:</b> Switch(config)# aaa authorization credential-download default local	Configures default database to download EAP credentials from local server.
Step 6	<b>aaa local authentication default authorization default</b>  <b>Example:</b> Switch(config)# aaa local authentication default authorization default	Selects the default local authentication and authorization.
Step 7	<b>eap profile wcm_eap_profile</b>  <b>Example:</b> Switch(config)# eap profile <b>wcm_eap_profile</b>	Creates an EAP profile.
Step 8	<b>method leap</b>  <b>Example:</b> Switch(config)# method leap	Configures EAP-LEAP method on the profile.
Step 9	<b>end</b>  <b>Example:</b> Switch(config)# <b>end</b>	Returns to privileged EXEC mode. Alternatively, you can also press <b>Ctrl-Z</b> to exit the global configuration mode.

```

Switch# configure terminal
Switch(config)# aaa new-model
Switch(config)# dot1x system-auth-control
Switch(config)# aaa authentication dot1x default local
Switch(config)# aaa authorization credential-download default local
Switch(config)# aaa local authentication default authorization default
Switch(config)# eap profile wcm_eap_profile
Switch(config)# method leap
Switch(config)# end

```

### Creating Client VLAN for WPA2+AES

Create a VLAN for the WPA2+AES type of local authentication. This VLAN is later mapped to a WLAN.

## SUMMARY STEPS

1. **configure terminal**
2. **vlan** vlan\_ID
3. **exit**
4. **interface** vlan vlan\_ID
5. **ip address**
6. **ipv6 address**
7. **exit**

## DETAILED STEPS

	Command or Action	Purpose
Step 1	<b>configure terminal</b>  <b>Example:</b> Switch# <b>configure terminal</b>	Enters global command mode.
Step 2	<b>vlan</b> vlan_ID  <b>Example:</b> Switch (config)# <b>vlan 105</b>	Creates a VLAN.
Step 3	<b>exit</b>  <b>Example:</b> Switch (config-vlan)# <b>exit</b>	Exits from the VLAN mode.
Step 4	<b>interface</b> vlan vlan_ID  <b>Example:</b> Switch(config)# <b>interface vlan 105</b>	Associates the VLAN to the interface.
Step 5	<b>ip address</b>  <b>Example:</b> Switch(config-if)# <b>ip address 10.8.105.10 255.255.255.0</b>	Assigns IP address to the VLAN interface.
Step 6	<b>ipv6 address</b>  <b>Example:</b> Switch(config-if)# <b>ipv6 address 2001:db8::10:1/64</b>	Assigns IPv6 address to the VLAN interface.
Step 7	<b>exit</b>  <b>Example:</b> Switch (config-if)# <b>exit</b>	Exits from the interface mode.

```
Switch# configure terminal
Switch(config)# vlan105
Switch (config-vlan)# exit
Switch (config)# interface vlan 105
Switch(config-if)#ip address 10.8.105.10 255.255.255.0
Switch(config-if)#ipv6 address 2001:db8::10:1/64
Switch(config-if)#exit
Switch(config)#
```

## Creating WLAN for WPA2+AES

Create a WLAN and map it to the client VLAN created for WPA2+AES.

### SUMMARY STEPS

1. **configure terminal**
2. **wlan wpa2-aes-wlan 1 wpa2-aes-wlan**
3. **client vlan 105**
4. **local-auth wcm\_eap\_profile**
5. **security dot1x authentication-list default**
6. **no shutdown**
7. **end**

### DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	<b>configure terminal</b>  <b>Example:</b> Switch# <b>configure terminal</b>	Enters global command mode.
<b>Step 2</b>	<b>wlan wpa2-aes-wlan 1 wpa2-aes-wlan</b>  <b>Example:</b> Switch(config)# <b>wlan wpa2-aes-wlan 1 wpa2-aes-wlan</b> Switch(config-wlan)#	Creates a WLAN.
<b>Step 3</b>	<b>client vlan 105</b>  <b>Example:</b> Switch(config-wlan)# <b>client vlan 105</b> Switch(config-wlan)#	Maps the WLAN to the client VLAN.

	Command or Action	Purpose
<b>Step 4</b>	<b>local-auth wcm_eap_profile</b>  <b>Example:</b> Switch(config-wlan)#local-auth wcm_eap_profile	Creates and sets the EAP profile on the WLAN.
<b>Step 5</b>	<b>security dot1x authentication-list default</b>  <b>Example:</b> Switch(config-wlan)#security dot1x authentication-list default	Uses the default dot1x authentication list.
<b>Step 6</b>	<b>no shutdown</b>  <b>Example:</b> Switch(config-wlan)#no shutdown Switch(config-wlan)#	Enables the WLAN.
<b>Step 7</b>	<b>end</b>  <b>Example:</b> Switch(config)# <b>end</b>	Returns to privileged EXEC mode. Alternatively, you can also press <b>Ctrl-Z</b> to exit global configuration mode.

```
Switch# configure terminal
Switch(config)#wlan wpa2-aes-wlan 1 wpa2-aes-wlan
Switch(config-wlan)#client vlan 105
Switch(config-wlan)#local-auth wcm_eap_profile
Switch(config-wlan)#security dot1x authentication-list default
Switch(config-wlan)#no shutdown
Switch(config-wlan)# exit
```

## Configuring External RADIUS Server

### Configuring RADIUS Authentication Server Host

#### SUMMARY STEPS

1. **configure terminal**
2. **radius server One**
3. **address ipv4 address auth-portauth\_port\_number acct-port acct\_port\_number**
4. **address ipv6 address auth-portauth\_port\_number acct-port acct\_port\_number**
5. **key 0cisco**
- 6.

## DETAILED STEPS

	Command or Action	Purpose
Step 1	<b>configure terminal</b>  <b>Example:</b> Switch# <b>configure terminal</b>	Enters global command mode.
Step 2	<b>radius server One</b>  <b>Example:</b> Switch (config)# radius server One	Creates a radius server.
Step 3	<b>address ipv4 address auth-port auth_port_number acct-port acct_port_number</b>  <b>Example:</b> Switch (config-radius-server)# address ipv4 10.10.10.10 auth-port 1812 acct-port 1813	Configures the IPv4 address for the radius server.
Step 4	<b>address ipv6 address auth-port auth_port_number acct-port acct_port_number</b>  <b>Example:</b> Switch (config-radius-server)# address ipv6 2001:db8::25:2 auth-port 1812 acct-port 1813	Configures the IPv6 address for the radius server.
Step 5	<b>key 0 cisco</b>  <b>Example:</b> Switch (config-radius-server)# key 0 cisco	<b>exit</b>
Step 6	<b>Example:</b> Switch (config-radius-server)# exit	Exits from the radius server mode.

```
Switch# configure terminal
Switch (config)# radius server One
Switch (config-radius-server)# address ipv4 10.10.10.10 auth-port 1812 acct-port 1813
Switch (config-radius-server)# address ipv6 2001:db8::25:2 auth-port 1812 acct-port 1813
Switch (config-radius-server)# key 0 cisco
Switch (config-radius-server)#exit
```

## Configuring RADIUS Authentication Server Group

### SUMMARY STEPS

1. **configure terminal**
2. **aaa new-model**
3. **aaa group server radius wcm\_rad**
4. **server <ip address>auth-port1812acct-port1813**
5. **aaa authentication dot1x method\_list group wcm\_rad**
6. **dot1x system-auth-control**
7. **aaa session-idcommon**

### DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	<b>configure terminal</b>  <b>Example:</b> Switch# <code>configure terminal</code>	Enters global command mode.
<b>Step 2</b>	<b>aaa new-model</b>  <b>Example:</b> Switch(config)# <code>aaa new-model</code>	Creates a AAA authentication model.
<b>Step 3</b>	<b>aaa group server radius wcm_rad</b>  <b>Example:</b> Switch(config)# <code>aaa group server radius wcm_rad</code> Switch(config-sg-radius)#	Creates an radius server-group.
<b>Step 4</b>	<b>server &lt;ip address&gt;auth-port1812acct-port1813</b>  <b>Example:</b> Switch(config-sg-radius)# <code>server One auth-port 1812</code> <code>acct-port 1813</code> Switch(config-sg-radius)# <code>server Two auth-port 1812</code> <code>acct-port 1813</code> Switch(config-sg-radius)# <code>server Three auth-port 1812</code> <code>acct-port 1813</code>	Adds servers to the radius group created in Step 3. Configures the UDP port for RADIUS accounting server and authentication server.
<b>Step 5</b>	<b>aaa authentication dot1x method_list group wcm_rad</b>  <b>Example:</b> Switch(config)# <code>aaa authentication dot1x method_list</code> <code>group wcm_rad</code>	Maps the method list to the radius group.
<b>Step 6</b>	<b>dot1x system-auth-control</b>  <b>Example:</b> Switch(config)# <code>dot1x system-auth-control</code>	Enables the system authorization control for the radius group.

	Command or Action	Purpose
<b>Step 7</b>	<b>aaa session-id common</b>  <b>Example:</b> Switch(config)# aaa session-id common	Ensures that all session IDs information sent out, from the radius group, for a given call are identical.

```
Switch# configure terminal
Switch(config)# aaa new-model
Switch(config)# aaa group server radius wcm_rad
Switch(config-sg-radius)# server One auth-port 1812 acct-port 1813
Switch(config-sg-radius)# server Two auth-port 1812 acct-port 1813
Switch(config-sg-radius)# server Three auth-port 1812 acct-port 1813
Switch(config)# aaa authentication dot1x method_list group wcm_rad
Switch(config)# dot1x system-auth-control
Switch(config)# aaa session-id common
Switch(config)#
```

## Creating a Client VLAN

### SUMMARY STEPS

1. **configure terminal**
2. **vlan 137**
3. **exit**
4. **interface vlan 137**
5. **ip address 10.7.137.10 255.255.255.0**
6. **ipv6 address 2001:db8::30:1/64**
7. **end**

### DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	<b>configure terminal</b>  <b>Example:</b> Switch# <b>configure terminal</b>	Enters global command mode.
<b>Step 2</b>	<b>vlan 137</b>  <b>Example:</b> Switch(config)# <b>vlan 137</b>	Creates a VLAN and associate it to the interface.

	Command or Action	Purpose
<b>Step 3</b>	<b>exit</b>  <b>Example:</b> Switch (config-vlan)# exit	Exits from the VLAN mode.
<b>Step 4</b>	<b>interface vlan 137</b>  <b>Example:</b> Switch (config)# interface vlan 137	Assigns a VLAN to an interface.
<b>Step 5</b>	<b>ip address 10.7.137.10 255.255.255.0</b>  <b>Example:</b> Switch(config-if)# ip address 10.7.137.10 255.255.255.0	Assigns an IPv4 address to the VLAN interface.
<b>Step 6</b>	<b>ipv6 address 2001:db8::30:1/64</b>  <b>Example:</b> Switch(config-if)# ipv6 address 2001:db8::30:1/64	Assigns an IPv6 address to the VLAN interface.
<b>Step 7</b>	<b>end</b>  <b>Example:</b> Switch(config)# end	Returns to privileged EXEC mode. Alternatively, you can also press <b>Ctrl-Z</b> to exit global configuration mode.

```
Switch# configure terminal
Switch(config)# vlan137
Switch(config-vlan)# exit
Switch(config)# interface vlan137
Switch(config-if)# ip address 10.7.137.10 255.255.255.0
Switch(config-if)# ipv6 address 2001:db8::30:1/64
Switch(config-if)# end
```

## Creating 802.1x WLAN Using an External RADIUS Server

### SUMMARY STEPS

1. **configure terminal**
2. **wlan ngwc-lx<ssid>ngwc-lx**
3. **broadcast-ssid**
4. **no security wpa**
5. **security dot1x**
6. **security dot1x authentication-list wcm-rad**
7. **client vlan 137**
8. **no shutdown**
9. **end**

### DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	<b>configure terminal</b>  <b>Example:</b> Switch# <code>configure terminal</code>	Enters global command mode.
<b>Step 2</b>	<b>wlan ngwc-lx&lt;ssid&gt;ngwc-lx</b>  <b>Example:</b> Switch(config)# <code>wlan ngwc_8021x 2 ngwc_8021x</code>	Creates a new WLAN for 802.1x authentication.
<b>Step 3</b>	<b>broadcast-ssid</b>  <b>Example:</b> Switch(config-wlan)# <code>broadcast-ssid</code>	Configures to broadcast the SSID on WLAN.
<b>Step 4</b>	<b>no security wpa</b>  <b>Example:</b> Switch(config-wlan)# <code>no security wpa</code>	Disables the WPA for WLAN to enable 802.1x.
<b>Step 5</b>	<b>security dot1x</b>  <b>Example:</b> Switch(config-wlan)# <code>security dot1x</code>	Configures the 802.1x encryption security for the WLAN.
<b>Step 6</b>	<b>security dot1x authentication-list wcm-rad</b>  <b>Example:</b> Switch(config-wlan)# <code>security dot1x authentication-list wcm-rad</code>	Configures the server group mapping to the WLAN for dot1x authentication.

	Command or Action	Purpose
<b>Step 7</b>	<b>client vlan 137</b>  <b>Example:</b> Switch(config-wlan)# client vlan 137	Associates the VLAN to a WLAN.
<b>Step 8</b>	<b>no shutdown</b>  <b>Example:</b> Switch(config-wlan)# no shutdown	Enables the WLAN.
<b>Step 9</b>	<b>end</b>  <b>Example:</b> Switch(config)# end	Returns to privileged EXEC mode. Alternatively, you can also press <b>Ctrl-Z</b> to exit the global configuration mode.

```
Switch# configure terminal
Switch(config)# wlan ngwc_8021x 2 ngwc_8021x
Switch(config-wlan)# broadcast-ssid
Switch(config-wlan)# no security wpa
Switch(config-wlan)# security dot1x
Switch(config-wlan)# security dot1x authentication-list wcm-rad
Switch(config-wlan)# client vlan 137
Switch(config-wlan)# no shutdown
Switch(config-wlan)# end
```

## Feature Information for IPv6 WLAN Security

This table lists the features in this module and provides links to specific configuration information:

Feature	Release	Modification
IPv6 WLAN Security Functionality	Cisco IOS XE 3.2SE Cisco IOS XE 3.3SE	This feature was introduced.
