Catalyst 3750-X and 3560-X Switch Debug Commands

This appendix describes the **debug** privileged EXEC commands that have been created or changed for use with the Catalyst 3750-X and 3560-X switch. These commands are helpful in diagnosing and resolving internetworking problems and should be enabled only under the guidance of Cisco technical support staff.

Because debugging output is assigned high priority in the CPU process, it can render the system unusable. For this reason, use the **debug** commands only to troubleshoot specific problems or during troubleshooting sessions with Cisco technical support staff. It is best to use the **debug** commands during periods of lower network traffic and fewer users. Debugging during these periods decreases the likelihood that increased **debug** command processing overhead will affect system use.

debug authentication

Use the **debug authentication** privileged EXEC command to enable debugging of the authentication settings on an interface. Use the **no** form of this command to disable debugging.

debug authentication {all | errors | events | sync | feature [all] [acct] [auth_fail_vlan]
 [auth_policy] [autocfg] [critical] [dhcp] [guest_vlan] [mab_pm] [mda] [multi_auth]
 [switch_pm] [switch_sync] [vlan_assign] [voice] [webauth] [all | errors | events]}

no debug authentication {all | errors | events | sync | feature [all] [acct] [auth_fail_vlan] [auth_policy] [autocfg] [critical] [dhcp] [guest_vlan] [mab_pm] [mda] [multi_auth] [switch_pm] [switch_sync] [vlan_assign] [voice] [webauth] [all | errors | events]}

Syntax Description	acct	(Optional) Display authentication manager accounting information.
	all	(Optional) Display all authentication manager debug messages.
	auth_fail_vlan	(Optional) Display authentication manager errors for the restricted VLAN.
	auth_policy	(Optional) Display authentication policy messages.
	autocfg	(Optional) Display autoconfiguration authentication manager debug messages.
	critical	(Optional) Display the inaccessible authentication bypass messages.
		Note The inaccessible authentication bypass feature is also referred to as critical authentication or the authentication, authorization, and accounting (AAA) fail policy.
	dhcp	(Optional) Display authentication manager debug messages on DHCP dynamic address-enable interfaces.
	errors	(Optional) Display all authentication manager error debug messages.
	events	(Optional) Display all authentication manager event debug messages, including registry and miscellaneous events.
	feature	(Optional) Display authentication manager feature debug messages
	guest_vlan	(Optional) Display guest VLAN authentication manager messages.
	mab_pm	(Optional) Display MAC authentication manager bypass authentication debug messages.
	mda	(Optional) Display multidomain authentication manager debug messages.
	multi_auth	(Optional) Display multi-authentication manager debug authentication messages.
	switch_pm	(Optional) Display switch port manager messages.
	switch_sync	(Optional) Display synchronization messages between the switch, the authentication server, and the connected devices.
	sync	(Optional) Display operational synchronization authentication manager debug messages.
	vlan_assign	(Optional) Display the VLAN-assignment debug messages.
	voice	(Optional) Display the voice-VLAN debug messages.
	webauth	(Optional) Display web authentication manager debug messages.

Defaults Authentication debugging is disabled.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(53)SE2	This command was introduced.

Usage Guidelines The **undebug authentication** command is the same as the **no debug authentication** command.

On a 3750-E switch, when you enable debugging, it is enabled only on the stack master.

To enable debugging on a stack member, you can start a session from the stack master by using the **session switch-number** privileged EXEC command and then entering the **debug authentication** command at the command-line prompt of the stack member. You also can use the **remote command stack-member-number** *line* privileged EXEC command on the stack master switch to enable debugging on a stack member.

Related Commands	Command	Description
	authentication control-direction	Configures the port mode as unidirectional or bidirectional.
	authentication event	Sets the action for specific authentication events.
	authentication fallback	Configures a port to use web authentication as a fallback method for clients that do not support IEEE 802.1x authentication.
	authentication host-mode	Sets the authorization manager mode on a port.
	authentication open	Enables or disables open access on a port.
	authentication order	Sets the order of authentication methods used on a port.
	authentication periodic	Enables or disables reauthentication on a port.
	authentication port-control	Enables manual control of the port authorization state.
	authentication priority	Adds an authentication method to the port-priority list.
	authentication violation	Configures the violation modes that occur when a new device connects to a port or when a new device connects to a port after the maximum number of devices are connected to that port.
	show authentication	Displays information about authentication manager events on the switch.

debug auto qos

Use the **debug auto qos** privileged EXEC command to enable debugging of the automatic quality of service (auto-QoS) feature. Use the **no** form of this command to disable debugging.

debug auto qos

no debug auto qos

- Syntax Description This command has no keywords or arguments.
- **Defaults** Auto-QoS debugging is disabled.
- Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(53)SE2	This command was introduced.

Usage Guidelines To display the QoS configuration that is automatically generated when auto-QoS is enabled, enable debugging *before* you enable auto-QoS. You enable debugging by entering the **debug auto qos** privileged EXEC command.

The undebug auto qos command is the same as the no debug auto qos command.

When you enable debugging on a switch stack, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member. You also can use the **remote command** *stack-member-number LINE* privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.

Examples

This example shows how to display the QoS configuration that is automatically generated when auto-QoS is enabled:

Switch# debug auto qos
AutoQoS debugging is on
Switch# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Switch(config)# interface gigabitethernet2/0/1
Switch(config-if)# auto qos voip cisco-phone

debug fastethernet

Use the **debug fastethernet** privileged EXEC command to enable debugging of the Ethernet management port. Use the **no** form of this command to disable debugging.

debug fastethernet {af | events | packets}

no debug fastethernet {af | events | packets}

Syntax Description	af	Display Ethernet management port software-address-filter debug messages.
	events	Display Ethernet management port event debug messages.
	packets	Display Ethernet management port packet debug messages.
Defaults	Debugging	is disabled.
Command Modes	Privileged I	EXEC
Command History	Release	Modification
	12.2(53)SE	E2 This command was introduced.
Usage Guidelines		ug fastethernet { af events packets } command is the same as the no debug fastethernet s packets } command.
	debugging switch-num prompt of t	enable debugging on a switch stack, it is enabled only on the stack master. To enable on a stack member, you can start a session from the stack master by using the session <i>aber</i> privileged EXEC command. Then enter the debug command at the command-line the stack member. You also can use the remote command <i>stack-member-number LINE</i> EXEC command on the stack master switch to enable debugging on a member switch without g a session.
Related Commands	Command	Description
	show debu	
	show contr ethernet-c	rollers Displays information about the Ethernet management port.

fastethernet

debug ilpower

Use the **debug ilpower** privileged EXEC command to enable debugging of the power controller and Power over Ethernet (PoE) system. Use the **no** form of this command to disable debugging.

debug ilpower {cdp | controller | event | ha | port | powerman | registries}

no debug ilpower {cdp | controller | event | ha | port | powerman | registries}

Syntax Description	cdp	Display PoE Cisco Discovery Protocol (CDP) debug messages.
- /	controller	Display PoE controller debug messages.
	event	Display PoE event debug messages.
	ha	Display PoE high-availability messages.
	port	Display PoE port manager debug messages.
	powerman	Display PoE power management debug messages.
	registries	Display PoE registries debug messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(53)SE2	This command was introduced.
Usage Guidelines	When you enable debugg debugging on a stack men <i>switch-number</i> privileged prompt of the stack mem	ted only on PoE-capable switches. ging on a switch stack, it is enabled only on the stack master. To enable mber, you can start a session from the stack master by using the session I EXEC command. Then enter the debug command at the command-line ber. You also can use the remote command <i>stack-member-number LINE</i>
Usage Guidelines	When you enable debugg debugging on a stack men <i>switch-number</i> privileged prompt of the stack mem privileged EXEC comman	ted only on PoE-capable switches. ging on a switch stack, it is enabled only on the stack master. You also can use the remote command <i>stack-member-number LINE</i> nd on the stack master switch to enable debugging on a member switch without Description

debug interface

Use the **debug interface** privileged EXEC command to enable debugging of interface-related activities. Use the **no** form of this command to disable debugging.

debug interface { interface-id | null interface-number | port-channel port-channel-number |
 vlan vlan-id }

no debug interface {*interface-id* | **null** *interface-number* | **port-channel** *port-channel-number* | **vlan** *vlan-id*}

Syntax Description	interface-id	Display debug messages for the specified physical port, identified by type switch number/module number/ port, for example gigabitethernet 1/0/2 .
	null interface-number	Display debug messages for null interfaces. The <i>interface-number</i> is always 0 .
	port-channel port-channel-number	Display debug messages for the specified EtherChannel port-channel interface. The <i>port-channel-number</i> range is 1 to 48.
	vlan vlan-id	Display debug messages for the specified VLAN. The <i>vlan-id</i> range is 1 to 4094.
Defaults	Debugging is disabled.	
command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(53)SE2	This command was introduced.
Usage Guidelines	If you do not specify a	keyword, all debug messages appear.
	The undebug interface	e command is the same as the no debug interface command.
	debugging on a stack m switch-number privileg prompt of the stack me	gging on a switch stack, it is enabled only on the stack master. To enable tember, you can start a session from the stack master by using the session ed EXEC command. Then enter the debug command at the command-line mber. You also can use the remote command <i>stack-member-number LINE</i> hand on the stack master switch to enable debugging on a member switch without
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

Displays EtherChannel information for the channel.

show etherchannel

debug ip dhcp snooping

Use the **debug ip dhcp snooping** privileged EXEC command to enable debugging of DHCP snooping. Use the **no** form of this command to disable debugging.

debug ip dhcp snooping {*mac-address* | **agent** | **event** | **packet**}

no debug ip dhcp snooping {*mac-address* | **agent** | **event** | **packet**}

Syntax Description	mac-address	Display debug messages for a DHCP packet with the specified MAC address.
	agent	Display debug messages for DHCP snooping agents.
	event	Display debug messages for DHCP snooping events.
	packet	Display debug messages for DHCP snooping.
Defaults	Debugging is d	isabled.
Command Modes	Privileged EXE	C
Command History	Release	Modification
	12.2(53)SE2	This command was introduced.
Usage Guidelines	The undebug i	p dhcp snooping command is the same as the no debug ip dhcp snooping command.
	When you enable debugging on a switch stack, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the session <i>switch-number</i> privileged EXEC command. Then enter the debug command at the command-line prompt of the stack member. You also can use the remote command <i>stack-member-number LINE</i> privileged EXEC command on the stack master switch to enable debugging on a member switch with first starting a session.	
Related Commands	Command	Description
	show debuggin	ng Displays information about the types of debugging that are enabled.

debug ip verify source packet

Use the **debug ip verify source packet** privileged EXEC command to enable debugging of IP source guard. Use the **no** form of this command to disable debugging.

debug ip verify source packet

no debug ip verify source packet

Syntax Description	This command has no arguments or keywords.
--------------------	--

- **Defaults** Debugging is disabled.
- **Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(53)SE2	This command was introduced.

Usage Guidelines The **undebug ip verify source packet** command is the same as the **no debug ip verify source packet** command.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

1-21

Displays information about the types of debugging that are enabled.

debug ip igmp filter

Use the **debug ip igmp filter** privileged EXEC command to enable debugging of Internet Group Management Protocol (IGMP) filter events. Use the **no** form of this command to disable debugging.

debug ip igmp filter

show debugging

no debug ip igmp filter

Syntax Description	This command has no arguments or keywords.		
Defaults	Debugging is disable	ed.	
Command Modes	Privileged EXEC		
Command History	Release	Modification	
	12.2(53)SE2	This command was introduced.	
Usage Guidelines	The undebug ip igm	p filter command is the same as the no debug ip igmp filter command.	
	When you enable debugging on a switch stack, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the session <i>switch-number</i> privileged EXEC command. Then enter the debug command at the command-line prompt of the stack member. You also can use the remote command <i>stack-member-number LINE</i> privileged EXEC command on the stack master switch to enable debugging on a member switch with first starting a session.		
Related Commands	Command	Description	

debug ip igmp max-groups

Use the **debug ip igmp max-groups** privileged EXEC command to enable debugging of Internet Group Management Protocol (IGMP) maximum groups events. Use the **no** form of this command to disable debugging.

debug ip igmp max-groups

no debug ip igmp max-groups

- **Syntax Description** This command has no arguments or keywords.
- **Defaults** Debugging is disabled.
- **Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(53)SE2	This command was introduced.

Usage Guidelines The **undebug ip igmp max-groups** command is the same as the **no debug ip igmp max-groups** command.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

debug ip igmp snooping

Use the **debug igmp snooping** privileged EXEC command to enable debugging of Internet Group Management Protocol (IGMP) snooping activity. Use the **no** form of this command to disable debugging.

debug ip igmp snooping [group | management | querier | router | timer]

no debug ip igmp snooping [group | management | querier | router | timer]

Syntax Description	group	(Optional) Display IGMP snooping group activity debug messages.
	management	(Optional) Display IGMP snooping management activity debug messages.
	querier	(Optional) Display IGMP snooping querier debug messages.
	router	(Optional) Display IGMP snooping router activity debug messages.
	timer	(Optional) Display IGMP snooping timer event debug messages.
Defaults	Debugging is disabled	L
Command Modes	Privileged EXEC

debug lacp

Use the **debug lacp** privileged EXEC command to enable debugging of Link Aggregation Control Protocol (LACP) activity. Use the **no** form of this command to disable debugging.

debug lacp [all | event | fsm | misc | packet]

no debug lacp [all | event | fsm | misc | packet]

Syntax Description	all	(Optional) Display all LACP debug messages.
	event	(Optional) Display LACP event debug messages.
	fsm	(Optional) Display LACP finite state-machine debug messages.
	misc	(Optional) Display miscellaneous LACP debug messages.
	packet	(Optional) Display LACP packet debug messages.
Defaults	Debugging is di	sabled.

Displays LACP channel-group information.

show lacp

debug IIdp packets

Use the **debug lldp packets** privileged EXEC command to enable debugging of Link Layer Discovery Protocol (LLDP) packets. Use the **no** form of this command to disable debugging.

debug lldp packets

no debug lldp packets

Syntax Description	This command has no arguments or keywords.	

Defaults Debugging is disabled.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(53)SE2	This command was introduced.

Usage Guidelines The **undebug lldp packets** command is the same as the **no debug lldp packets** command.

When you enable debugging on a switch stack, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member. You also can use the **remote command** *stack-member-number LINE* privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

debug logging smartlog debug

To debug smart logging, use the **debug logging smartlog debug** command in privileged EXEC mode. To disable smart logging debugging, use the **no** form of this command.

debug logging smartlog debug

no debug logging smartlog debug

Syntax Description	This command has no arguments or keywords.
--------------------	--

- **Defaults** Debugging is disabled.
- Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(58)SE	This command was introduced.

Usage Guidelines The undebug logging smartlog debug command is the same as the no debug logging smartlog debug command.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

debug mac-notification

Use the **debug mac-notification** privileged EXEC command to enable debugging of MAC notification events. Use the **no** form of this command to disable debugging.

debug mac-notification

no debug mac-notification

Syntax Description	This command has no arguments or keywords.
--------------------	--

Defaults Debugging is disabled.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(53)SE2	This command was introduced.

Usage Guidelines The **undebug mac-notification** command is the same as the **no debug mac-notification** command.

When you enable debugging on a switch stack, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member. You also can use the **remote command** *stack-member-number LINE* privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show mac address-table notification	Displays the MAC address notification information for all interfaces or the specified interface.

debug macsec

To enable debugging of 802.1ae Media Access Control Security (MACsec), use the **debug macsec** privileged EXEC command. To disable debugging, use the **no** form of this command.

debug macsec [errors | events]

no debug macsec [errors | events]

Syntax Description	errors	(Optional) Displays MACsec error debugging messages.
	events	(Optional) Displays MACsec event debugging messages.
Defaults	MACsec debuggir	ng is disabled.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(53)SE2	This command was introduced.
Usage Guidelines	Entering the debu	g macsec command with no keywords starts all MACsec debugging facilities.
	The undebug made	esec command is the same as the no debug macsec command.
	member, you can s EXEC command. ' can use the remot	debugging, it is enabled only on the stack master. To enable debugging on a stack start a session from the stack master by using the session <i>switch-number</i> privileged Then enter the debug command at the command-line prompt of the stack member. You e command <i>stack-member-number LINE</i> privileged EXEC command on the stack nable debugging on a member switch without starting a session.
Related Commands	Command	Description

Displays information about the types of debugging that are enabled.

show debugging

debug matm

Use the **debug matm** privileged EXEC command to enable debugging of platform-independent MAC address management. Use the **no** form of this command to disable debugging.

debug matm

no debug matm

Syntax Description	This command has no	arguments or keywords.
--------------------	---------------------	------------------------

Defaults Debugging is disabled.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(53)SE2	This command was introduced.

Usage Guidelines The **undebug matm** command is the same as the **no debug matm** command.

Related Commands	Command	Description
	debug platform matm	Displays information about platform-dependent MAC address management.
	show debugging	Displays information about the types of debugging that are enabled.

debug matm move update

Use the **debug matm move update** privileged EXEC command to enable debugging of MAC address-table move update message processing.

debug matm move update

no debug matm move update

- **Syntax Description** This command has no arguments or keywords.
- **Defaults** Debugging is disabled.
- Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(53)SE2	This command was introduced.

Usage Guidelines The **undebug matm move update** command is the same as the **no debug matm move update** command.

Related Commands	Command	Description
	mac address-table move update {receive transmit}	Configures MAC address-table move update feature on the switch.
	show debugging	Displays information about the types of debugging that are enabled.
	show mac address-table move update	Displays the MAC address-table move update information on the switch.

debug mka

To enable debugging of the MACsec Key Agreement (MKA) protocol sessions, use the **debug mka** privileged EXEC command. To disable debugging, use the **no** form of this command.

debug mka [errors | events | lli | mli | packets | trace]

no debug mka [errors | events | lli | mli | packets | trace]

Syntax Description	errors	(Optional) Displays MKA errors that occur during normal MKA operation. You can use this command for verification of MKA sessions.	
	events	(Optional) Displays MKA debugging messages for significant events that occur during MKA operation. You can use this command for verification of MKA sessions.	
	lli	(Optional) Displays MKA debugging messages for events passing through the LinkSec Layer Interface (LLI) to see the interaction between MKA and Authentication manager.	
	mli	(Optional) Displays MKA debugging messages for events passing through the MACSec Layer Interface (lli) to see the interaction between MKA and MACsec.	
	packets	(Optional) Displays MKA debugging messages for MKPDU transmissions and receptions during normal MKA operation.	
	trace	(Optional) Displays MKA debugging messages for tracing the normal operation of MKA sessions.	
Command Modes	Privileged EXEC		
Command History	Release	Modification	
	12.2(53)SE2	This command was introduced.	
Usage Guidelines	Entering the debug mka command with no keywords enables all MKA debugging facilities.		
	The undebug backup command is the same as the no debug backup command.		
	member, you can EXEC command. also can use the re	debugging, it is enabled only on the stack master. To enable debugging on a stack start a session from the stack master by using the session <i>switch-number</i> privileged Then enter the debug command at the command-line prompt of the stack member. You emote command <i>stack-member-number LINE</i> privileged EXEC command on the stack enable debugging on a member switch without starting a session.	

Related Commands	Command	Description
	show debugging	Displays information about the enabled types of debugging.

debug monitor

Use the **debug monitor** privileged EXEC command to enable debugging of the Switched Port Analyzer (SPAN) feature. Use the **no** form of this command to disable debugging.

debug monitor {all | errors | idb-update | info | list | notifications | platform | requests | snmp}

 $no\ debug\ monitor\ \{all\ |\ errors\ |\ idb-update\ |\ info\ |\ list\ |\ notifications\ |\ platform\ |\ requests\ |\ snmp\ \}$

Syntax Description	all	Display all SPAN debug messages.
	errors	Display detailed SPAN error debug messages.
	idb-update	Display SPAN interface description block (IDB) update-trace debug messages.
	info	Display SPAN informational-tracing debug messages.
	list	Display SPAN port and VLAN-list tracing debug messages.
	notifications	Display SPAN notification debug messages.
	platform	Display SPAN platform-tracing debug messages.
	requests	Display SPAN request debug messages.
	snmp	Display SPAN and Simple Network Management Protocol (SNMP) tracing debug messages.
Defaults	Debugging is disabl	ed.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(53)SE2	This command was introduced.
Usage Guidelines	When you enable de debugging on a stac	tor command is the same as the no debug monitor command. ebugging on a switch stack, it is enabled only on the stack master. To enable k member, you can start a session from the stack master by using the session ileged EXEC command. Then enter the debug command at the command-line
		member. You also can use the remote command <i>stack-member-number LINE</i> mmand on the stack master switch to enable debugging on a member switch without on.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show monitor	Displays information about all SPAN and remote SPAN (RSPAN) sessions

debug mvrdbg

Use the **debug mvrdbg** privileged EXEC command to enable debugging of Multicast VLAN Registration (MVR). Use the **no** form of this command to disable debugging.

debug mvrdbg {all | events | igmpsn | management | ports}

no debug mvrdbg {all | events | igmpsn | management | ports}

Syntax Description	all	Display all MVR activity debug messages.
	events	Display MVR event-handling debug messages.
	igmpsn	Display MVR Internet Group Management Protocol (IGMP) snooping-activity
		debug messages.
	management	Display MVR management-activity debug messages.
	ports	Display MVR port debug messages.
Defaults	Debugging is disabl	ed.
Command Modes	Privileged EXEC

debug nmsp

Use the **debug nmsp** privileged EXEC command to the enable debugging of the Network Mobility Services Protocol (NMSP) on the switch. Use the **no** form of this command to disable debugging.

debug nmsp {all | connection | error | event | packet | rx | tx}

no debug nmsp

Syntax Description	This command has no	arguments or keywords.
--------------------	---------------------	------------------------

Defaults Debugging is disabled.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(53)SE2	This command was introduced.

Usage Guidelines The **undebug nmsp** command is the same as the **no debug nmsp** command.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show nmsp	Displays the NMSP information.

debug nvram

Use the **debug nvram** privileged EXEC command to enable debugging of NVRAM activity. Use the **no** form of this command to disable debugging.

debug nvram

no debug nvram

- **Syntax Description** This command has no arguments or keywords.
- **Defaults** Debugging is disabled.
- **Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(53)SE2	This command was introduced.

Usage Guidelines The **undebug nvram** command is the same as the **no debug nvram** command.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

debug pagp

se the debug pagp privileged EXEC command to enable debugging of Port Aggregation Protocol PAgP) activity. Use the no form of this command to disable debugging.
debug pagp [all dual-active event fsm misc packet]

no debug pagp [all | dual-active | event | fsm | misc | packet]

Syntax Description	all	(Optional) Display all PAgP debug messages.
	dual-active	(Optional) Display dual-active detection messages.
	event	(Optional) Display PAgP event debug messages.
	fsm	(Optional) Display PAgP finite state-machine debug messages.
	misc	(Optional) Display miscellaneous PAgP debug messages.
	packet	(Optional) Display PAgP packet debug messages.
Defaults	Debugging is dis	sabled.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(53)SE2	This command was introduced.
Usage Guidelines	The undebug pa	agp command is the same as the no debug pagp command.
	debugging on a s switch-number p prompt of the sta	e debugging on a switch stack, it is enabled only on the stack master. To enable stack member, you can start a session from the stack master by using the session privileged EXEC command. Then enter the debug command at the command-line ack member. You also can use the remote command <i>stack-member-number LINE</i> C command on the stack master switch to enable debugging on a member switch without ession.
Related Commands	Command	Description
	show debugging	•
	show pagp	Displays PAgP channel-group information.

debug platform acl

Use the **debug platform acl** privileged EXEC command to enable debugging of the access control list (ACL) manager. Use the **no** form of this command to disable debugging.

debug platform acl {all | exit | label | main | racl | stack | vacl | vlmap | warn}

no debug platform acl {all | exit | label | main | racl | stack | vacl | vlmap | warn}

Syntax Description	all	Display all ACL manager debug messages.
	exit	Display ACL exit-related debug messages.
	label	Display ACL label-related debug messages.
	main	Display the main or important ACL debug messages.
	racl	Display router ACL related debug messages.
	stack	Display ACL stack-related debug messages.
		This keyword is supported only on Catalyst 3750-X switches.
	vacl	Display VLAN ACL-related debug messages.
	vlmap	Display ACL VLAN-map-related debug messages.
	warn	Display ACL warning-related debug messages.
Note	Though visit switches.	ble in the command-line help strings, the stack keyword is not supported on Catalyst 3560-X
Command Default	Debugging i	s disabled.
Command Modes	Privileged E	XEC
Command History	Release	Modification
	12.2(53)SE2	2 This command was introduced.
Usage Guidelines	The undebu	g platform acl command is the same as the no debug platform acl command.
	debugging of	hable debugging on a switch stack, it is enabled only on the stack master. To enable n a stack member, you can start a session from the stack master by using the session <i>er</i> privileged EXEC command. Then enter the debug command at the command-line

switch-number privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member. You also can use the **remote command** *stack-member-number LINE* privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

debug platform backup interface

Use the **debug platform backup interface** privileged EXEC command to enable debugging of the Flex Links platform backup interface. Use the **no** form of this command to disable debugging.

debug platform backup interface

no debug platform backup interface

Syntax Description	This command has no	arguments or keywords.
--------------------	---------------------	------------------------

- **Command Default** Platform backup interface debugging is disabled.
- Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(53)SE2	This command was introduced.

Usage Guidelines The undebug platform backup interface command is the same as the no platform debug backup interface command.

When you enable debugging on a switch stack, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member. You also can use the **remote command** *stack-member-number LINE* privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.

debug platform ip dhcp

Use the **debug platform ip dhcp** privileged EXEC command to debug DHCP events. Use the **no** form of this command to disable debugging.

debug platform ip dhcp [all | error | event | packet | rpc]

no debug platform ip dhcp [all | error | event | packet | rpc]

Syntax Description	all	(Optional) Display all DHCP debug messages.
	error	(Optional) Display DHCP error debug messages.
	event	(Optional) Display DHCP event debug messages.
	packet	(Optional) Display DHCP packet-related debug messages.
	rpc	(Optional) Display DHCP remote procedure call (RPC) request debug messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(53)SE2	This command was introduced.
Usage Guidelines	The undebug platform i	p dhcp command is the same as the no debug platform ip dhcp command.
	debugging on a stack mer <i>switch-number</i> privileged prompt of the stack mem	ing on a switch stack, it is enabled only on the stack master. To enable nber, you can start a session from the stack master by using the session EXEC command. Then enter the debug command at the command-line per. You also can use the remote command <i>stack-member-number LINE</i> and on the stack master switch to enable debugging on a member switch without
Related Commands	Command	Description
	show ip dhcp snooping	Displays the DHCP snooping configuration.
	show ip dhcp snooping binding	Displays the DHCP snooping binding information.
	show debugging	Displays information about the types of debugging that are enabled.

debug platform ip igmp snooping

Use the **debug platform ip igmp snooping** privileged EXEC command to enable debugging of platform-dependent Internet Group Management Protocol (IGMP) snooping. Use the **no** form of this command to disable debugging.

- debug platform ip igmp snooping {all | di | error | event | group | mgmt | pak | retry | rpc | warn}
- debug platform ip igmp snooping pak {*ip-address* | error | ipopt | leave | query | report | rx | svi | tx}

debug platform ip igmp snooping rpc [cfg | l3mm | misc | vlan]

no debug platform ip igmp snooping {all | di | error | event | group | mgmt | pak | retry | rpc | warn}

Syntax Description	all	Display all IGMP snooping debug messages.
	di	Display IGMP snooping destination index (di) coordination remote procedure call (RPC) debug messages.
	error	Display IGMP snooping error messages.
	event	Display IGMP snooping event debug messages.
	group	Display IGMP snooping group debug messages.
	mgmt	Display IGMP snooping management debug messages.
	pak { <i>ip-address</i> error ipopt leave	Display IGMP snooping packet event debug messages. The keywords have these meanings:
	query report rx svi tx }	• <i>ip-address</i> —IP address of the IGMP group.
	, , , , , , , , , , , , , , , , , , ,	• error—Display IGMP snooping packet error debug messages.
		• ipopt —Display IGMP snooping IP bridging options debug messages.
		• leave—Display IGMP snooping leave debug messages.
		• query —Display IGMP snooping query debug messages.
		• report —Display IGMP snooping report debug messages.
		• rx —Display IGMP snooping received packet debug messages.
		• svi —Display IGMP snooping switched virtual interface (SVI) packet debug messages.
		• tx —Display IGMP snooping sent packet debug messages.
	retry	Display IGMP snooping retry debug messages.

	rpc [cfg l3mm misc vlan]	Display IGMP snooping remote procedure call (RPC) event debug messages. The keywords have these meanings:
		• cfg —(Optional) Display IGMP snooping RPC debug messages.
		• I3mm —(Optional) IGMP snooping Layer 3 multicast router group RPC debug messages.
		• misc —(Optional) IGMP snooping miscellaneous RPC debug messages.
		• vlan—(Optional) IGMP snooping VLAN assert RPC debug messages.
	warn	Display IGMP snooping warning messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(53)SE2	This command was introduced.
Usage Guidelines	 snooping command. When you enable debuddebugging on a stack meret switch-number privileg prompt of the stack meret 	a ip igmp snooping command is the same as the no debug platform ip igmp gging on a switch stack, it is enabled only on the stack master. To enable tember, you can start a session from the stack master by using the session ed EXEC command. Then enter the debug command at the command-line mber. You also can use the remote command <i>stack-member-number LINE</i> hand on the stack master switch to enable debugging on a member switch without
Related Commands	Command	Description
	debug ip igmp snooping	Displays information about platform-independent IGMP snooping activity.
	show debugging	Displays information about the types of debugging that are enabled.

debug platform ip multicast

Use the **debug platform ip multicast** privileged EXEC command to enable debugging of IP multicast routing. Use the **no** form of this command to disable debugging.

debug platform ip multicast {all | mdb | mdfs-rp-retry | midb | mroute-rp | resources | retry | rpf-throttle | snoop-events | software-forward | swidb-events | vlan-locks}

no debug platform ip multicast {all | mdb | mdfs-rp-retry | midb | mroute-rp | resources | retry | rpf-throttle | snoop-events | software-forward | swidb-events | vlan-locks}

Syntax Description	all	Display all platform IP-multicast event debug messages.
		Note Using this command can degrade the performance of the switch.
	mdb	Display IP-multicast debug messages for multicast distributed fast switching (MDFS) multicast descriptor block (mdb) events.
	mdfs-rp-retry	Display IP-multicast MDFS rendezvous point (RP) retry event debug messages.
	midb	Display IP-multicast MDFS multicast interface descriptor block (MIDB) debug messages.
	mroute-rp	Display IP-multicast RP event debug messages.
	resources	Display IP-multicast hardware resource debug messages.
	retry	Display IP-multicast retry processing event debug messages.
	rpf-throttle	Display IP-multicast reverse path forwarding (RPF) throttle event debug messages.
	snoop-events	Display IP-multicast IGMP snooping event debug messages.
	software-forward	Display IP-multicast software forwarding event debug messages.
	swidb-events	Display IP-multicast MDFS software interface descriptor block (swidb) or global event debug messages.
	vlan-locks	Display IP-multicast VLAN lock and unlock event debug messages.
Defaults	Debugging is disable	d.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(53)SE2	This command was introduced.

Usage Guidelines The **undebug platform ip multicast** command is the same as the **no debug platform ip multicast** command.

When you enable debugging on a switch stack, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member. You also can use the **remote command** *stack-member-number LINE* privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

debug platform ip unicast

Use the **debug platform ip unicast** privileged EXEC command to enable debugging of platform-dependent IP unicast routing. Use the **no** form of this command to disable debugging.

debug platform ip unicast {adjacency | all | arp | dhcp | errors | events | interface | mpath | registries | retry | route | rpc | rpf | standby | statistics}

no debug platform ip unicast {adjacency | all | arp | dhcp | errors | events | interface | mpath | registries | retry | route | rpc | rpf | standby | statistics}

Syntax Description	adjacency	Display IP unicast routing adjacency programming event debug messages.
	all	Display all platform IP unicast routing debug messages.
		Note Using this command can degrade the performance of the switch.
	arp	Display IP unicast routing Address Resolution Protocol (ARP) and ARP throttling debug messages.
	dhcp	Display IP unicast routing DHCP dynamic address-related event debug messages.
	errors	Display all IP unicast routing error debug messages, including resource allocation failures.
	events	Display all IP unicast routing event debug messages, including registry and miscellaneous events.
	interface	Display IP unicast routing interface event debug messages.
	mpath	Display IP unicast routing multi-path adjacency programming event debug messages (present when performing equal or unequal cost routing).
	registries	Display IP unicast routing forwarding information database (FIB), adjacency add, update, and delete registry event debug messages.
	retry	Display IP unicast routing reprogram FIBs with hardware memory allocation failure debug messages.
	route	Display IP unicast routing FIB hardware programming event debug messages.
	rpc	Display IP unicast routing Layer 3 unicast remote procedure call (RPC) interaction debug messages.
	rpf	Display IP unicast routing Layer 3 unicast reverse path forwarding (unicast RPF) event debug messages.
	standby	Display IP unicast routing standby event debug messages, helpful in troubleshooting Hot Standby Routing Protocol (HSRP) issues.
	statistics	Display IP unicast routing statistics gathering-related event debug messages.

Defaults Debugging is disabled.

debug platform ipc

Use the **debug platform ipc** privileged EXEC command to enable debugging of the platform-dependent Interprocess Communication (IPC) Protocol. Use the **no** form of this command to disable debugging.

debug platform ipc {all | init | receive | send | trace}

no debug platform {all | init | receive | send | trace}

Note

This command is supported only on Catalyst 3750-X switches.

Syntax Description	all	Display all platform IPC debug messages.		
		Note Using this command can degrade the performance of the switch.		
	init	Display debug messages related to IPC initialization.		
	receive	Display IPC traces each time an IPC packet is received by the switch.		
	send	Display IPC traces each time an IPC packet is sent by the switch.		
	trace	Display IPC trace debug messages, tracing the code path as the IPC functions are executed.		
Defaults	Debugging is	Debugging is disabled.

debug platform messaging application

Use the **debug platform messaging application** privileged EXEC command to enable debugging of application messaging activity. Use the **no** form of this command to disable debugging.

no debug platform messaging application {all | badpak | cleanup | events | memerr | messages | stackchg | usererr}

Syntax Description	all	Display all application-messaging debug messages.
Syntax Description	badpak	Display bad-packet debug messages.
	-	Display clean-up debug messages.
	cleanup	
	events	Display event debug messages.
	memerr	Display memory-error debug messages.
	messages	Display application-messaging debug messages.
	stackchg	Display stack-change debug messages.
		This keyword is supported only on Catalyst 3750-X switches.
	usererr	Display user-error debug messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification

debug platform messaging application {all | badpak | cleanup | events | memerr | messages | stackchg | usererr}

debug platform phy

Use the **debug platform phy** privileged EXEC command to enable debugging of PHY driver information. Use the **no** form of this command to disable debugging.

- debug platform phy {automdix | cablediag | dual-purpose | flcd {configure | ipc | iter | trace} |
 flowcontrol | forced | init-seq | link-status | read | sfp | show-controller | speed | write |
 xenpak}
- no debug platform phy {automdix | cablediag | dual-purpose | flcd { configure | ipc | iter | trace } | flowcontrol | forced | init-seq | link-status | read | sfp | show-controller | speed | write | xenpak }

Syntax Description	automdix	Display PHY automatic medium-dependent interface crossover (auto-MDIX) debug messages.
	cablediag	Display PHY cable-diagnostic debug messages.
	dual-purpose	Display PHY dual-purpose event debug messages.
	flcd {configure ipc iter trace}	Display PHY FLCD debug messages. The keywords have these meanings:
		• configure —Display PHY configure debug messages.
		• ipc —Display Interprocess Communication Protocol (IPC) debug messages.
		• iter—Display iter debug messages.
		• trace —Display trace debug messages.
	flowcontrol	Display PHY flowcontrol debug messages.
	forced	Display PHY forced-mode debug messages.
	init-seq	Display PHY initialization-sequence debug messages.
	link-status	Display PHY link-status debug messages.
	read	Display PHY-read debug messages.
	sfp	Display PHY small form-factor pluggable (SFP) modules debug messages.
	show-controller	Display PHY show-controller debug messages.
	speed	Display PHY speed-change debug messages.
	write	Display PHY-write debug messages.
	xenpak	Display PHY XENPAK debug messages
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(53)SE2	This command was introduced.

Usage Guidelines The **undebug platform phy** command is the same as the **no debug platform phy** command.

When you enable debugging on a switch stack, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member. You also can use the **remote command** *stack-member-number LINE* privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

debug platform pm

Use the **debug platform pm** privileged EXEC command to enable debugging of the platform-dependent port manager software module. Use the **no** form of this command to disable debugging.

- debug platform pm {all | counters | errdisable | etherchnl | exceptions | hpm-events | idb-events | if-numbers | ios-events | link-status | platform | pm-events | pm-span | pm-vectors [detail] | rpc [general | oper-info | state | vectors | vp-events] | soutput-vectors | stack-manager | sync | vlans }
- no debug platform pm {all | counters | errdisable | etherchnl | exceptions | hpm-events | idb-events | if-numbers | ios-events | link-status | platform | pm-events | pm-span | pm-vectors [detail] | rpc [general | oper-info | state | vectors | vp-events] | soutput-vectors | stack-manager | sync | vlans}

all	Display all port-manager debug messages.
counters	Display counters for remote procedure call (RPC) debug messages.
errdisable	Display error-disabled related-events debug messages.
etherchnl	Display EtherChannel related-events debug messages.
exceptions	Display system exception debug messages.
hpm-events	Display platform port-manager event debug messages.
idb-events	Display interface descriptor block (IDB) related-events debug messages.
if-numbers	Display interface-number translation-event debug messages.
ios-events	Display Cisco IOS event debug messages.
link-status	Display interface link-detection event debug messages.
platform	Display port-manager function-event debug messages.
pm-events	Display port manager event debug messages.
pm-span	Display port manager Switched Port Analyzer (SPAN) event debug messages
pm-vectors [detail]	Display port-manager vector-related-event debug messages. The keyword has this meaning:
	• detail —Display vector-function details.
rpc [general oper-info state vectors vp-events]	Display RPC related-event debug messages. The keywords have these meanings:
	• general—(Optional) Display RPC general events.
	• oper-info —(Optional) Display operational- and informational-related RPC messages.
	• state —(Optional) Display administrative- and operational-related RPC messages.
	• vectors—(Optional) Display vector-related RPC messages.
	• vp-events —(Optional) Display virtual ports related-events RP messages
soutput-vectors	Display IDB output vector event debug messages.
stack-manager	Display stack-manager related-events debug messages.
	counters errdisable etherchnl exceptions hpm-events idb-events if-numbers ios-events link-status platform pm-events pm-span pm-vectors [detail]

	sync	Display operational synchronization and VLAN line-state event debug
		messages.
	vlans	Display VLAN creation and deletion event debug messages.
Defaults	- Debugging is dischlas	4
Delauits	Debugging is disabled	1.
Command Modes	Privileged EXEC

To enable debugging on a stack member, you can start a session from the stack master by using the session <i>switch-number</i> privileged EXEC command. Then enter the debug command at the command-line prompt of the stack member. You also can use the remote command <i>stack-member-number LINE</i> privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.		
Usage Guidelines	The undebug platform qos-acl-tcam command is the same as the no debug platform qos-acl-tcam command.		
	12.2(53)SE2	This command was introduced.	
Command History	Release	Modification	
Command Modes	Privileged EXEC		
Defaults	Debugging is disa	bled.	
	tcam	Display QATM hardware-memory-related events debug messages.	
	rpc	Display QATM remote procedure call (RPC) related-events debug messages.	
	mask	Display QATM mask-related-events debug messages.	
	labels	Display QATM label-related-events debug messages.	
	errors	Display QATM error-related-events debug messages.	
	ctcam	Display Cisco TCAM (CTCAM) related-events debug messages.	
Syntax Description		Display all QoS and ACL ternary content addressable memory (QATM) manager debug messages.	

debug platform remote-commands

Use the **debug platform remote-commands** privileged EXEC command to enable debugging of remote commands. Use the **no** form of this command to disable debugging.

debug platform remote-commands

no debug platform remote-commands

This command is not supported on switches running the LAN base feature set.

Syntax Description	This command has no arguments or keywords.		
Defaults	Debugging is disable	ed.	
Command Modes	Privileged EXEC		
Command History	Release 12.2(53)SE2	Modification This command was introduced.	
Usage Guidelines	The undebug platfo remote-commands	rm remote-commands command is the same as the no debug platform command.	
	When you enable debugging on a switch stack, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the session <i>switch-number</i> privileged EXEC command. Then enter the debug command at the command-line prompt of the stack member. You also can use the remote command <i>stack-member-number LINE</i>		

privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

debug platform resource-manager

Use the **debug platform resource-manager** privileged EXEC command to enable debugging of the resource manager software. Use the **no** form of this command to disable debugging.

debug platform resource-manager {all | dm | erd | errors | madmed | sd | stats | vld}

no debug platform resource-manager {all | dm | erd | errors | madmed | sd | stats | vld}

Cuntary Decemination		
Syntax Description	all	Display all resource manager debug messages.
	dm	Display destination-map debug messages.
	erd	Display equal-cost-route descriptor-table debug messages.
	errors	Display error debug messages.
	madmed	Display the MAC address descriptor table and multi-expansion descriptor table debug messages.
	sd	Display the station descriptor table debug messages.
	stats	Display statistics debug messages.
	vld	Display the VLAN-list descriptor debug messages.
Defaults	Debugging is d	isabled.

Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(53)SE2	This command was introduced.
Usage Guidelines	lines The undebug platform vlan command is the same as the no debug platform vlan command. When you enable debugging on a switch stack, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the session <i>switch-number</i> privileged EXEC command. Then enter the debug command at the command-line prompt of the stack member. You also can use the remote command <i>stack-member-number LINA</i> privileged EXEC command on the stack master switch to enable debugging on a member switch we first starting a session.	
Related Commands	Command	Description

debug pm

Use the **debug pm** privileged EXEC command to enable debugging of port manager (PM) activity. The port manager is a state machine that controls all the logical and physical interfaces. All features, such as VLANs, UniDirectional Link Detection (UDLD), and so forth, work with the port manager to provide switch functions. Use the **no** form of this command to disable debugging.

debug pm {all | assert | card | etherchnl | hatable | messages | port | redundancy | registry | sm | span | split | vlan | vp}

no debug pm {all | assert | card | etherchnl | hatable | messages | port | redundancy | registry | sm | span | split | vlan | vp}

Syntax Description	all	Display all PM debug messages.
	assert	Display assert debug messages.
	card	Display line-card related-events debug messages.
	etherchnl	Display EtherChannel related-events debug messages.
	hatable	Display Host Access Table events debug messages.
	messages	Display PM debug messages.
	port	Display port related-events debug messages.
	redundancy	Display redundancy debug messages.
	registry	Display PM registry invocation debug messages.
	sm	Display state-machine related-events debug messages.
	span	Display spanning-tree related-events debug messages.
	split	Display split-processor debug messages.
	vlan	Display VLAN related-events debug messages.
	vp	Display virtual port related-events debug messages.

Though visible in the command-line help strings, the scp and pvlan keywords are not supported.

Defaults Debugging is disabled.

Command Modes Privileged EXEC

Command History Release Modification 12.2(53)SE2 This command was introduced.

Usage Guidelines

The **undebug pm** command is the same as the **no debug pm** command.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

debug port-security

Use the **debug port-security** privileged EXEC command to enable debugging of the allocation and states of the port security subsystem. Use the **no** form of this command to disable debugging.

debug port-security

no debug port-security

Syntax Description	This command has no arguments or key	words.
--------------------	--------------------------------------	--------

Defaults Debugging is disabled.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(53)SE2	This command was introduced.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show port-security	Displays port-security settings for an interface or for the switch.

debug qos-manager

Use the **debug qos-manager** privileged EXEC command to enable debugging of the quality of service (QoS) manager software. Use the **no** form of this command to disable debugging.

debug qos-manager {all | event | verbose}

no debug qos-manager {all | event | verbose}

Syntax Description	all	Display all QoS-manager debug messages.
	event	Display QoS-manager related-event debug messages.
	verbose	Display QoS-manager detailed debug messages.
Defaults	Debugging is disab	led.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(53)SE2	This command was introduced.
Usage Guidelines	The undebug qos-manager command is the same as the no debug qos-manager command. When you enable debugging on a switch stack, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the session <i>switch-number</i> privileged EXEC command. Then enter the debug command at the command-line prompt of the stack member. You also can use the remote command <i>stack-member-number LINE</i> privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.	

debug spanning-tree

Use the **debug spanning-tree** privileged EXEC command to enable debugging of spanning-tree activities. Use the **no** form of this command to disable debugging.

- debug spanning-tree {all | backbonefast | bpdu | bpdu-opt | config | csuf/csrt | etherchannel | events | exceptions | general | mstp | pvst+ | root | snmp | switch | synchronization | uplinkfast}
- no debug spanning-tree {all | backbonefast | bpdu | bpdu-opt | config | csuf/csrt | etherchannel | events | exceptions | general | mstp | pvst+ | root | snmp | switch | synchronization | uplinkfast}

Syntax Description	all	Display all spanning-tree debug messages.
	backbonefast	Display BackboneFast-event debug messages.
	bpdu	Display spanning-tree bridge protocol data unit (BPDU) debug messages.
	bpdu-opt	Display optimized BPDU handling debug messages.
	config	Display spanning-tree configuration change debug messages.
	csuf/csrt	Display cross-stack UplinkFast and cross-stack rapid transition activity debug messages.
		This keyword is supported only on Catalyst 3750-X switches.
	etherchannel	Display EtherChannel-support debug messages.
	events	Display spanning-tree topology event debug messages.
	exceptions	Display spanning-tree exception debug messages.
	general	Display general spanning-tree activity debug messages.
	mstp	Debug Multiple Spanning Tree Protocol events.
	pvst+	Display per-VLAN spanning-tree plus (PVST+) event debug messages.
	root	Display spanning-tree root-event debug messages.
	snmp	Display spanning-tree Simple Network Management Protocol (SNMP) handling debug messages.
	synchronization	Display the spanning-tree synchronization event debug messages.
	switch	Display switch shim command debug messages. This shim is the software module that is the interface between the generic Spanning Tree Protocol (STP code and the platform-specific code of various switch platforms.
	uplinkfast	Display UplinkFast-event debug messages.

Defaults Debugging is disabled.

Command Modes Privileged EXEC

Displays spanning-tree state information.

show spanning-tree

debug spanning-tree mstp

Use the **debug spanning-tree mstp** privileged EXEC command to enable debugging of the Multiple Spanning Tree Protocol (MSTP) software. Use the **no** form of this command to disable debugging.

debug spanning-tree mstp {all | boundary | bpdu-rx | bpdu-tx | errors | flush | init | migration | pm | proposals | region | roles | sanity_check | sync | tc | timers}

no debug spanning-tree mstp {all | boundary | bpdu-rx | bpdu-tx | errors | flush | init | migration | pm | proposals | region | roles | sanity_check | sync | tc | timers}

Syntax Description	all	Enable all the debugging messages.	
	boundary	Debug flag changes at these boundaries:	
		• An multiple spanning-tree (MST) region and a single spanning-tree region running Rapid Spanning Tree Protocol (RSTP)	
		• An MST region and a single spanning-tree region running 802.1D	
		• An MST region and another MST region with a different configuration	
	bpdu-rx	Debug the received MST bridge protocol data units (BPDUs).	
	bpdu-tx	Debug the sent MST BPDUs.	
	errors	Debug MSTP errors.	
	flush	Debug the port flushing mechanism.	
	init	Debug the initialization of the MSTP data structures.	
	migration	Debug the protocol migration state machine.	
	pm	Debug MSTP port manager events.	
	proposals	Debug handshake messages between the designated switch and the root switch.	
	region	Debug the region synchronization between the switch processor (SP) and the route processor (RP).	
	roles	Debug MSTP roles.	
	sanity_check	Debug the received BPDU sanity check messages.	
	sync	Debug the port synchronization events.	
	tc	Debug topology change notification events.	
	timers	Debug the MSTP timers for start, stop, and expire events.	
Defaults	Debugging is disabled.		
Command Modes	Privileged EXE	C	
Command History	Release	Modification	
	12.2(53)SE2	This command was introduced.	

Usage Guidelines The undebug spanning-tree mstp command is the same as the no debug spanning-tree mstp command.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show spanning-tree	Displays spanning-tree state information.

debug spanning-tree switch

Use the **debug spanning-tree switch** privileged EXEC command to enable debugging of the software interface between the Spanning Tree Protocol (STP) software module and the port manager software module. Use the **no** form of this command to disable debugging.

debug spanning-tree switch {all | errors | flush | general | helper | pm | rx {decode | errors | interrupt | process} | state | tx [decode] | uplinkfast}

no debug spanning-tree switch {all | errors | flush | general | helper | pm | rx {decode | errors | interrupt | process} | state | tx [decode] | uplinkfast}

Syntax Description	all	Display all spanning-tree switch debug messages.	
	errors	Display debug messages for the interface between the spanning-tree software module and the port manager software module.	
	flush	Display debug messages for the shim flush operation.	
	general	Display general event debug messages.	
	helper	Display spanning-tree helper-task debug messages. Helper tasks handle bulk spanning-tree updates.	
	pm	Display port-manager event debug messages.	
	rx	Display received bridge protocol data unit (BPDU) handling debug messages. The keywords have these meanings:	
		• decode —Display decoded received packets.	
		• errors—Display receive error debug messages.	
		• interrupt —Display interrupt service request (ISR) debug messages.	
		• process—Display process receive BPDU debug messages.	
	state	Display spanning-tree port state change debug messages;	
	tx [decode]	Display sent BPDU handling debug messages. The keyword has this meaning:	
		• decode —(Optional) Display decoded sent packets.	
	uplinkfast	Display uplinkfast packet transmission debug messages.	
Defaults	Debugging is d	isabled.	
Command Modes	Privileged EXE	C	
Command History	Release	Modification	
	12.2(53)SE2	This command was introduced.	

Usage Guidelines The **undebug spanning-tree switch** command is the same as the **no debug spanning-tree switch** command.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show spanning-tree	Displays spanning-tree state information.

Syntax Description

Defaults

debug spanning-tree uplinkfast

exceptions

Debugging is disabled.

Use the debug spanning-tree uplinkfast privileged EXEC command to enable debugging of spanning-tree UplinkFast events. Use the no form of this command to disable debugging.

(Optional) Display spanning-tree UplinkFast-exception debug messages.

debug spanning-tree uplinkfast [exceptions]

no debug spanning-tree uplinkfast [exceptions]

debug sw-vlan

Use the **debug sw-vlan** privileged EXEC command to enable debugging of VLAN manager activities. Use the **no** form of this command to disable debugging.

debug sw-vlan {badpmcookies | cfg-vlan {bootup | cli} | events | ifs | management | mapping | notification | packets | redundancy | registries | vtp}

no debug sw-vlan {badpmcookies | cfg-vlan {bootup | cli} | events | ifs | management | mapping | notification | packets | redundancy | registries | vtp}

Syntax Description	badpmcookies	Display debug messages for VLAN manager incidents of bad port manager cookies.
	cfg-vlan {bootup cli}	Display config-vlan debug messages. The keywords have these meanings:
		• bootup —Display messages when the switch is booting up.
		• cli —Display messages when the command-line interface (CLI) is in config-vlan mode.
	events	Display debug messages for VLAN manager events.
	ifs	See the debug sw-vlan ifs command.
	management	Display debug messages for VLAN manager management of internal VLANs.
	mapping	Display debug messages for VLAN mapping.
	notification	See the debug sw-vlan notification command.
	packets	Display debug messages for packet handling and encapsulation processes.
	redundancy	Display debug messages for VTP VLAN redundancy.
	registries	Display debug messages for VLAN manager registries.
	vtp	See the debug sw-vlan vtp command.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	

Command History	Release	Modification
	12.2(53)SE2	This command was introduced.

Usage Guidelines

The **undebug sw-vlan** command is the same as the **no debug sw-vlan** command.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show vlan	Displays the parameters for all configured VLANs or one VLAN (if the VLAN name or ID is specified) in the administrative domain.
	show vtp	Displays general information about VTP management domain, status, and counters.

debug sw-vlan ifs

Use the **debug sw-vlan ifs** privileged EXEC command to enable debugging of the VLAN manager IOS file system (IFS) error tests. Use the **no** form of this command to disable debugging.

debug sw-vlan ifs {open {read | write} | read {1 | 2 | 3 | 4} | write}

no debug sw-vlan ifs {open {read | write} | read {1 | 2 | 3 | 4} | write}

Syntax Description	open {read write}	Display VLAN manager IFS file-open operation debug messages. The keywords have these meanings:
		• read—Display VLAN manager IFS file-read operation debug messages.
		• write—Display VLAN manager IFS file-write operation debug messages.
	read {1 2 3 4}	Display file-read operation debug messages for the specified error test $(1, 2, 3, $ or 4).
	write	Display file-write operation debug messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(53)SE2	This command was introduced.
Usage Guidelines	The undebug sw-vlan	ifs command is the same as the no debug sw-vlan ifs command.
	When you enable debu debugging on a stack n <i>switch-number</i> privileg prompt of the stack me	gging on a switch stack, it is enabled only on the stack master. To enable nember, you can start a session from the stack master by using the session ged EXEC command. Then enter the debug command at the command-line ember. You also can use the remote command <i>stack-member-number LINE</i> nand on the stack master switch to enable debugging on a member switch without
	verification word and t contains most of the do	e read operation, Operation 1 reads the file header, which contains the header he file version number. Operation 2 reads the main body of the file, which omain and VLAN information. Operation 3 reads type length version (TLV) Operation 4 reads TLV data.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show vlan	Displays the parameters for all configured VLANs or one VLAN (if the VLAN name or ID is specified) in the administrative domain.

debug sw-vlan notification

Use the **debug sw-vlan notification** privileged EXEC command to enable debugging of the activation and deactivation of Inter-Link Switch (ISL) VLAN IDs. Use the **no** form of this command to disable debugging.

debug sw-vlan notification {accfwdchange | allowedvlancfgchange | fwdchange | linkchange | modechange | pruningcfgchange | statechange}

no debug sw-vlan notification {accfwdchange | allowedvlancfgchange | fwdchange | linkchange | modechange | pruningcfgchange | statechange}

Syntax Description	accfwdchange	Display debug messages for VLAN manager notification of aggregated access interface spanning-tree forward changes.
	allowedvlancfgchange	Display debug messages for VLAN manager notification of changes to the allowed VLAN configuration.
	fwdchange	Display debug messages for VLAN manager notification of spanning-tree forwarding changes.
	linkchange	Display debug messages for VLAN manager notification of interface link-state changes.
	modechange	Display debug messages for VLAN manager notification of interface mode changes.
	pruningcfgchange	Display debug messages for VLAN manager notification of changes to the pruning configuration.
	statechange	Display debug messages for VLAN manager notification of interface state changes.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(53)SE2	This command was introduced.
Usage Guidelines	The undebug sw-vlan no command.	otification command is the same as the no debug sw-vlan notification
	debugging on a stack mer switch-number privileged prompt of the stack mem	ing on a switch stack, it is enabled only on the stack master. To enable mber, you can start a session from the stack master by using the session I EXEC command. Then enter the debug command at the command-line ber. You also can use the remote command <i>stack-member-number LINE</i> nd on the stack master switch to enable debugging on a member switch without

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

Syntax Description

Appendix 1

	packets	Display debug messages for the contents of all incoming VTP packets that have been passed into the VTP code from the IOS VTP platform-dependent layer, except for pruning packets.
	pruning [packets xmit	Display debug messages generated by the pruning segment of the VTP code. The keywords have these meanings:
		• packets —(Optional) Display debug messages for the contents of all incoming VTP pruning packets that have been passed into the VTP code from the IOS VTP platform-dependent layer.
		• xmit —(Optional) Display debug messages for the contents of all outgoing VTP packets that the VTP code requests the IOS VTP platform-dependent layer to send.
	redundancy	Display debug messages for VTP redundancy.
	xmit	Display debug messages for the contents of all outgoing VTP packets that the VTP code requests the IOS VTP platform-dependent layer to send, except for pruning packets.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
-	12.2(53)SE2	This command was introduced.

events

Catalyst 3750-X and 3560-X Switch Debug Commands

Use the **debug sw-vlan vtp** privileged EXEC command to enable debugging of the VLAN Trunking Protocol (VTP) code. Use the **no** form of this command to disable debugging.

Display debug messages for general-purpose logic flow and detailed VTP messages generated by the VTP_LOG_RUNTIME macro in the VTP

debug sw-vlan vtp {events | packets | pruning [packets | xmit] | redundancy | xmit}

no debug sw-vlan vtp {events | packets | pruning | redundancy | xmit}

code.

Usage Guidelines The undebug sw-vlan vtp command is the same as the no debug sw-vlan vtp command.

When you enable debugging on a switch stack, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member. You also can use the **remote command** *stack-member-number LINE* privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.

If no further parameters are entered after the **pruning keyword**, VTP pruning debugging messages appear. They are generated by the VTP_PRUNING_LOG_NOTICE, VTP_PRUNING_LOG_INFO, VTP_PRUNING_LOG_DEBUG, VTP_PRUNING_LOG_ALERT, and VTP_PRUNING_LOG_WARNING macros in the VTP pruning code.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show vtp	Displays general information about VTP management domain, status, and counters.

debug udld

Use the **debug udld** privileged EXEC command to enable debugging of the UniDirectional Link Detection (UDLD) feature. Use the **no** form of this command to disable UDLD debugging.

debug udld {events | packets | registries}

no debug udld {events | packets | registries}

Syntax Description	events	Display debug messages for UDLD process events as they occur.			
	packets	Display debug messages for the UDLD process as it receives packets from the packet queue and tries to send them at the request of the UDLD protocol code.			
	registriesDisplay debug messages for the UDLD process as it processes registry calls f the UDLD process-dependent module and other feature modules.				
Defaults	Debugging is disabled. Privileged EXEC

I events , these debugging messages appear: DLD program logic flow ine state changes etions for the set and clear ErrDisable state			

For debug udld packets, these debugging messages appear:

- General packet processing program flow on receipt of an incoming packet
- Indications of the contents of the various pieces of packets received (such as type length versions [TLVs]) as they are examined by the packet reception code
- Packet transmission attempts and the outcome

For debug udld registries, these categories of debugging messages appear:

- Sub-block creation
- Fiber-port status changes
- State change indications from the port manager software
- MAC address registry calls

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show udld	Displays UDLD administrative and operational status for all ports or the specified port.

debug vqpc

Use the **debug vqpc** privileged EXEC command to enable debugging of the VLAN Query Protocol (VQP) client. Use the **no** form of this command to disable debugging.

debug vqpc [all | cli | events | learn | packet]

no debug vqpc [all | cli | events | learn | packet]

Syntax Description	all	(Optional) Display all VQP client debug messages.
	cli	(Optional) Display the VQP client command-line interface (CLI) debug messages.
	events	(Optional) Display VQP client event debug messages.
	learn	(Optional) Display VQP client address learning debug messages.
	packet	(Optional) Display VQP client packet information debug messages.
Defaults	Debugging is disab	led.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(53)SE2	This command was introduced.
Usage Guidelines	The undebug vqpc command is the same as the no debug vqpc command. When you enable debugging on a switch stack, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the sessio <i>switch-number</i> privileged EXEC command. Then enter the debug command at the command-liprompt of the stack member. You also can use the remote command <i>stack-member-number LII</i> privileged EXEC command on the stack master switch to enable debugging on a member switch first starting a session.
