

# Configuring BFD-EIGRP Support

---

- [BFD - EIGRP Support, on page 1](#)

## BFD - EIGRP Support

The BFD-EIGRP Support feature configures the Enhanced Interior Gateway Routing Protocol (EIGRP) with Bidirectional Forwarding Detection (BFD) so that EIGRP registers with BFD and receives all forwarding path detection failure messages from BFD.

## Prerequisites for BFD-EIGRP Support

- Enhanced Interior Gateway Routing Protocol (EIGRP) must be running on all participating routers.
- The baseline parameters for Bidirectional Forwarding Detection (BFD) sessions on the interfaces over which you want to run BFD sessions to BFD neighbors must be configured using the **bfd** command.

## Information About BFD - EIGRP Support

### Overview of BFD-EIGRP Support

The BFD-EIGRP Support feature configures Bidirectional Forwarding Detection (BFD) feature for Enhanced Interior Gateway Routing Protocol (EIGRP) so that EIGRP registers with the BFD sessions on the routing interfaces, and receives forwarding path detection failure messages from BFD.

Use **bfd interval milliseconds min\_rx milliseconds multiplier interval-multiplier** command to enable BFD on any interface. Use the **bfd all-interfaces** command in router configuration mode to enable BFD for all of the interfaces where EIGRP routing is enabled. Use the **bfd interface type number** command in router configuration mode to enable BFD for a subset of the interfaces where EIGRP routing is enabled.

# How to Configure BFD - EIGRP Support

## Configuring BFD - EIGRP Support

### SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **router eigrp *as-number***
4. Do one of the following:
  - **bfd all-interfaces**
  - **bfd interface *type number***
5. **end**
6. **show bfd neighbors [details]**
7. **show ip eigrp interfaces [*type number*] [*as-number*] [detail]**

### DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b> <b>Example:</b> Device> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> <li>• Enter your password if prompted.</li> </ul>
<b>Step 2</b>	<b>configure terminal</b> <b>Example:</b> Device# configure terminal	Enters global configuration mode.
<b>Step 3</b>	<b>router eigrp <i>as-number</i></b> <b>Example:</b> Device(config)# router eigrp 123	Configures the EIGRP routing process and enters router configuration mode.
<b>Step 4</b>	Do one of the following: <ul style="list-style-type: none"> <li>• <b>bfd all-interfaces</b></li> <li>• <b>bfd interface <i>type number</i></b></li> </ul> <b>Example:</b> Device(config-router)# bfd all-interfaces  <b>Example:</b> Device(config-router)# bfd interface Gigabit Ethernet 2/0/2	Enables BFD globally on all interfaces associated with the EIGRP routing process.  or  Enables BFD on a per-interface basis for one or more interfaces associated with the EIGRP routing process.

	Command or Action	Purpose
<b>Step 5</b>	<b>end</b> <b>Example:</b> <pre>Device(config-router)# end</pre>	Exits router configuration mode and returns the router to privileged EXEC mode.
<b>Step 6</b>	<b>show bfd neighbors [details]</b> <b>Example:</b> <pre>Device# show bfd neighbors details</pre>	(Optional) Verifies that the BFD neighbor is active and displays the routing protocols that BFD has registered.
<b>Step 7</b>	<b>show ip eigrp interfaces [type number] [as-number] [detail]</b> <b>Example:</b> <pre>Device# show ip eigrp interfaces detail</pre>	(Optional) Displays the interfaces for which BFD support for EIGRP has been enabled.

## Configuration Examples for BFD - EIGRP Support

### Example: Configuring BFD in an EIGRP Network with Echo Mode Enabled by Default

In the following example, the EIGRP network contains DeviceA, DeviceB, and DeviceC. Gigabit Ethernet 2/0/2 on DeviceA is connected to the same network as Gigabit Ethernet 2/0/2 on Device B. Gigabit Ethernet 2/0/2 on DeviceB is connected to the same network as Gigabit Ethernet 2/0/2 on DeviceC.

DeviceA and DeviceB are running BFD Version 1, which supports echo mode, and DeviceC is running BFD Version 0, which does not support echo mode. The BFD sessions between DeviceC and its BFD neighbors are said to be running echo mode with asymmetry because echo mode will run on the forwarding path for DeviceA and DeviceB, and their echo packets will return along the same path for BFD sessions and failure detections, while their BFD neighbor DeviceC runs BFD Version 0 and uses BFD control packets for BFD sessions and failure detections.

The figure below shows a large EIGRP network with several devices, three of which are BFD neighbors that are running EIGRP as their routing protocol.

3556850

The example, starting in global configuration mode, shows the configuration of BFD.

### Configuration for DeviceA

```
interface Gigabit Ethernet 2/0/2
no shutdown

line vty 0 4
login
!
!
end

```

The output from the **show bfd neighbors details** command from DeviceA verifies that BFD sessions are created among all three devices and that EIGRP is registered for BFD support. The first group of output shows that DeviceC with the IP address 172.16.1.3 runs BFD Version 0 and therefore does not use the echo mode. The second group of output shows that DeviceB with the IP address 172.16.1.2 runs BFD Version 1, and the 50 millisecond BFD interval parameter had been adopted. The relevant command output is shown in bold in the output.

```
DeviceA# show bfd neighbors details
```

```

OurAddr
  NeighAddr
    LD/RD  RH/RS  Holdown(mult)  State  Int
172.16.1.1  172.16.1.3
    5/3    1(RH)    150 (3 )           Up    Fa1/0
Session state is UP and not using echo function.
Local Diag: 0, Demand mode: 0, Poll bit: 0
MinTxInt: 50000, MinRxInt: 50000, Multiplier: 3

  Min Echo interval: 0
OurAddr  NeighAddr

```

```

        LD/RD  RH/RS  Holdown(mult)  State      Int
172.16.1.1  172.16.1.2

        6/1    Up      0      (3 )    Up        Fal/0
Session state is UP and using echo function with 50 ms interval.
Local Diag: 0, Demand mode: 0, Poll bit: 0
MinTxInt: 1000000, MinRxInt: 1000000, Multiplier: 3
Received MinRxInt: 1000000, Received Multiplier: 3
Holdown (hits): 3000(0), Hello (hits): 1000(317)
Rx Count: 305, Rx Interval (ms) min/max/avg: 1/1016/887 last: 448 ms ago
Tx Count: 319, Tx Interval (ms) min/max/avg: 1/1008/880 last: 532 ms ago
Registered protocols: EIGRP
Uptime: 00:04:30
Last packet: Version: 1

    - Diagnostic: 0
      State bit: Up          - Demand bit: 0
      Poll bit: 0           - Final bit: 0
      Multiplier: 3         - Length: 24
      My Discr.: 1         - Your Discr.: 6
      Min tx interval: 1000000 - Min rx interval: 1000000
      Min Echo interval: 50000

```

The output from the **show bfd neighbors details** command on Device B verifies that BFD sessions have been created and that EIGRP is registered for BFD support. As previously noted, DeviceA runs BFD Version 1, therefore echo mode is running, and DeviceC runs BFD Version 0, so echo mode does not run. The relevant command output is shown in bold in the output.

DeviceB# **show bfd neighbors details**

```

    - Diagnostic: 0
      State bit: Up          - Demand bit: 0
      Poll bit: 0           - Final bit: 0
      Multiplier: 3         - Length: 24
      My Discr.: 6         - Your Discr.: 1
      Min tx interval: 1000000 - Min rx interval: 1000000
      Min Echo interval: 50000

OurAddr      NeighAddr
        LD/RD  RH/RS  Holdown(mult)  State      Int
172.16.1.2  172.16.1.3
        3/6    1(RH)  118  (3 )    Up        Fal/0
Session state is UP and not using echo function.
Local Diag: 0, Demand mode: 0, Poll bit: 0
MinTxInt: 50000, MinRxInt: 50000, Multiplier: 3
Received MinRxInt: 50000, Received Multiplier: 3
Holdown (hits): 150(0), Hello (hits): 50(5735)
Rx Count: 5731, Rx Interval (ms) min/max/avg: 32/72/49 last: 32 ms ago

```

## Example: Configuring BFD in an EIGRP Network with Echo Mode Enabled by Default

```

Tx Count: 5740, Tx Interval (ms) min/max/avg: 40/64/50 last: 44 ms ago
Registered protocols: EIGRP
Uptime: 00:04:45
Last packet: Version: 0
             - Diagnostic: 0
               I Hear You bit: 1   - Demand bit: 0
               Poll bit: 0         - Final bit: 0
               Multiplier: 3       - Length: 24
               My Discr.: 6        - Your Discr.: 3
               Min tx interval: 50000 - Min rx interval: 50000
               Min Echo interval: 0

```

The figure below shows that Gigabit Ethernet 2/0/2 on DeviceB has failed. When Gigabit Ethernet 2/0/2 on DeviceB is shut down, the BFD statistics of the corresponding BFD sessions on DeviceA and DeviceB are reduced.

When Gigabit Ethernet 2/0/2 on DeviceB fails, BFD will no longer detect Device B as a BFD neighbor for DeviceA or for DeviceC. In this example, Gigabit Ethernet 2/0/2 has been administratively shut down on DeviceB.

The following output from the **show bfd neighbors** command on DeviceA now shows only one BFD neighbor for DeviceA in the EIGRP network. The relevant command output is shown in bold in the output.

```

DeviceA# show bfd neighbors
OurAddr      NeighAddr
-----
LD/RD RH/RS Holdown(mult) State Int
172.16.1.1  172.16.1.3
5/3 1(RH) 134 (3 ) Up Fal/0

```

The following output from the **show bfd neighbors** command on DeviceC also now shows only one BFD neighbor for DeviceC in the EIGRP network. The relevant command output is shown in bold in the output.

```

DeviceC# show bfd neighbors
OurAddr      NeighAddr
-----
LD/RD RH Holdown(mult) State Int
172.16.1.3  172.16.1.1

```

3/5 1 114 (3 ) Up Fa1/0

## Feature Information for BFD-EIGRP Support

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to [www.cisco.com/go/cfn](http://www.cisco.com/go/cfn). An account on Cisco.com is not required.

**Table 1: Feature Information for BFD-EIGRP Support**

Feature Name	Releases	Feature Information
BFD-EIGRP Support	Cisco IOS XE Gibraltar 16.10.1	The BFD-EIGRP Support feature configures the Enhanced Interior Gateway Routing Protocol (EIGRP) with Bidirectional Forwarding Detection (BFD) so that EIGRP registers with BFD and receives all forwarding path detection failure messages from BFD.  The feature was introduced.
