Configuring MPLS VPN InterAS Options

Information About MPLS VPN InterAS Options

The MPLS VPN InterAS Options provide various ways of interconnecting VPNs between different MPLS VPN service providers. This allows sites of a customer to exist on several carrier networks (autonomous systems) and have seamless VPN connectivity between these sites.

ASes and ASBRs

An autonomous system (AS) is a single network or group of networks that is controlled by a common system administration group and using a single, clearly defined protocol. In many cases, VPNs extend to different ASes in different geographical areas. Some VPNs must extend across multiple service providers; these VPNs are called overlapping VPNs. The connection between ASes must be seamless to the customer, regardless of the complexity or location of the VPNs.

An AS boundary router (ASBR) is a device in an AS that is connected by using more than one routing protocol, and exchanges routing information with other ASBRs by using an exterior routing protocol (for example, eBGP), or use static routes, or both.

Separate ASes from different service providers communicate by exchanging information in the form of VPN IP addresses and they use the following protocols to share routing information:

- Within an AS, routing information is shared using iBGP.

  iBGP distributes network layer information for IP prefixes within each VPN and each AS.

- Between ASes, routing information is shared using eBGP.

  eBGP allows service providers to set up an interdomain routing system that guarantees loop-free exchange of routing information between separate ASes. The primary function of eBGP is to exchange network reachability information between ASes, including information about the list of AS routes. The ASes use

eBGP border edge routers to distribute the routes, which includes label-switching information. Each border edge router rewrites the next-hop and MPLS labels.

MPLS VPN InterAS Options configuration is supported and can include an inter provider VPN, which is MPLS VPNs that include two or more ASes, connected by separate border edge routers. The ASes exchange routes using eBGP, and no iBGP or routing information is exchanged between the ASes.

MPLS VPN InterAS Options

The following options defined in RFC4364 provide MPLS VPN connectivity between different ASes:

- InterAS Option A – This option provides back-to-back virtual routing and forwarding (VRF) connectivity. Here, MPLS VPN providers exchange routes across VRF interfaces.
- InterAS Option B – This option provides VPNv4 route distribution between ASBRs.

InterAS Option A

In terms of configuration, interAS Option A is the simplest of all available options.

A typical AS consists of these devices – Provider Edge(PE), Customer Edge(CE) and an Autonomous System Boundary Router(ASBR). The target is to enable VRF connectivity between CE devices (also referred to as VPN sites) in a network. In order to facilitate interAS option A, you have to perform the following for each VPN site:

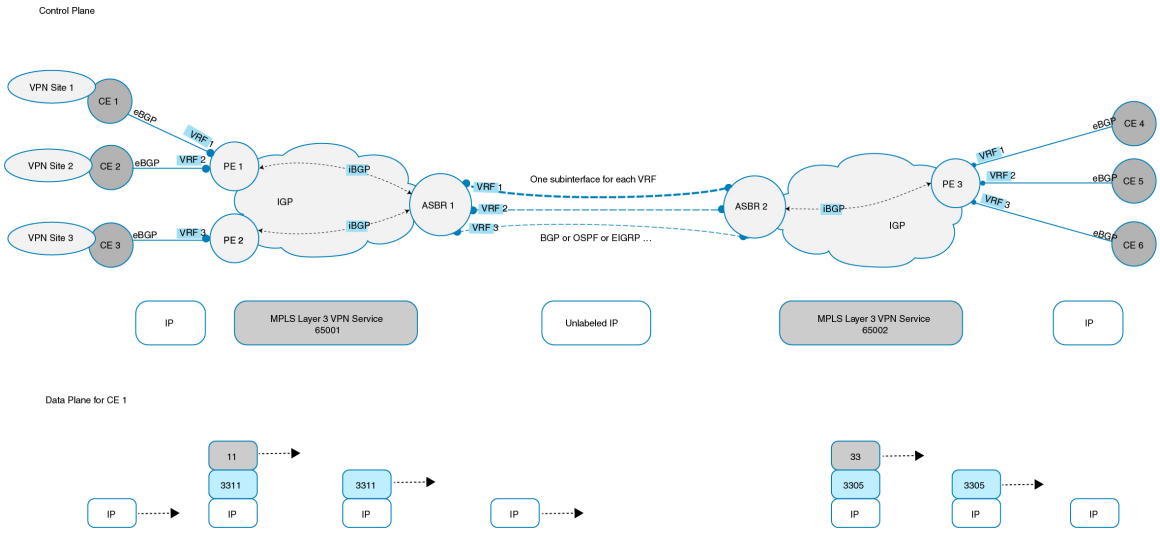
- Assign a VRF interface to each VPN site
- Define an interface or sub-interface for each VRF interface. (If multiple VPN sites are involved, they cannot all be associated with a single interface, and therefore, a sub-interface must be configured for each VRF). Optionally, a dedicated QoS policy may be applied to each subinterface.
- Create a BGP (or other routing protocol) session for each VRF.

With the above configuration in place, traffic flow with option A is as follows: Within the AS, data packets travel like regular Layer 3 VPN traffic. Traffic flow between ASBRs when traversing ASes is in the form of unlabeled IP packets on a VRF interface. Any routing protocol may be used to exchange routing information between the ASBRs in the different ASes.

While this option provides certain advantages (flexibility in terms of the routing protocol that can be used within an AS and between ASBRs, and security by means of a QoS policy on a subinterface), the scale for interAS option A is limited by the scale numbers for subinterfaces and VRFs. This option is therefore suited only to scenarios where the number of VPNs and the number of routes to transfer, is limited (and not likely to increase).

The figure below shows the data packet flow from CE 1, CE 2, CE 3 to CE 4, CE 5, CE 6 respectively. The explanation below takes the instance of the route advertisement and data packet flow from CE1 in AS-65001 to CE 4 in AS-65002.

Figure 1: MPLS VPN InterAS Option A Topology

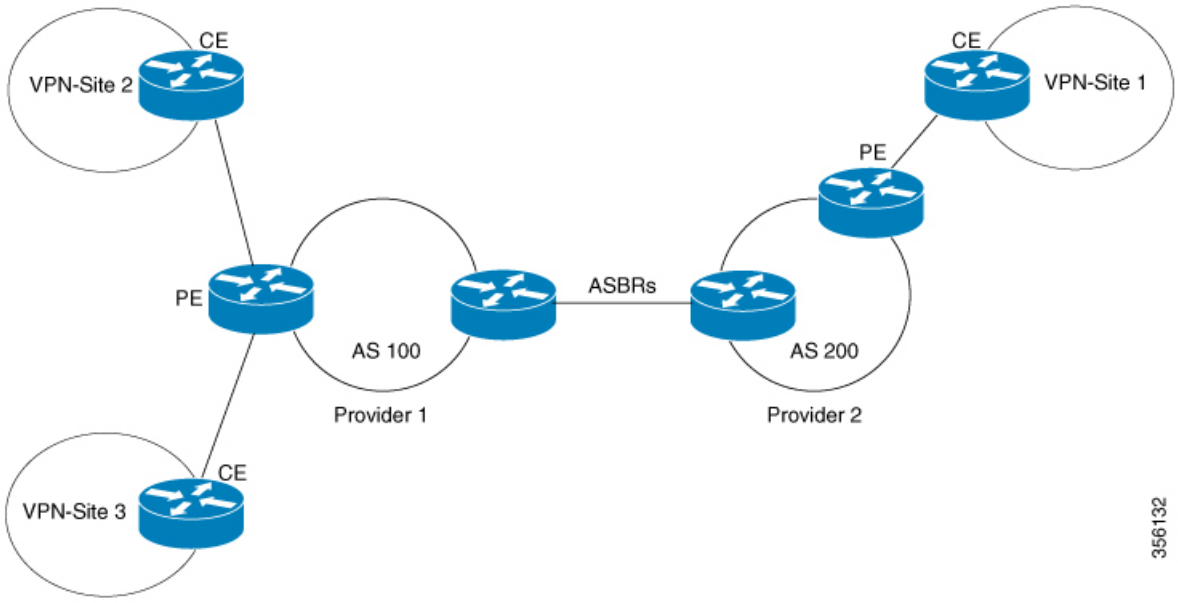


The IP traffic between CE 1 and PE 1 is sent over a VRF sub-interface by using eBGP. Once the packet reaches PE 1 it is sent to ASBR 1 as a two-label MPLS stack. The outermost label is the Interior Gateway protocol (IGP) label and the inner label is the VPN label. Layer 3 VPN traffic is sent from PE 1 to ASBR 1 in AS-65001 and from ASBR 2 to PE 3 in AS-65002 over a MPLS cloud. At ASBR 1, both the labels (IGP and VPN) are popped (removed). From ASBR 1 to ASBR 2 traffic flows as an unlabelled IP packet on a VRF interface. In this example, the routing protocol used between the two ASBRs is eBGP. The two label MPLS stack is pushed once the IP packet reaches ASBR 2. After the packet reaches PE 3, the VPN label is removed. The IGP label is also popped in case of explicit NULL IGP. The VPN packet is sent to CE4 through a VRF interface.

InterAS Option B

In an interAS option B network, ASBR ports are connected by one or more interfaces that are enabled to receive MPLS traffic. With this option, the ASBRs peer with each other using eBGP session. The ASBR also functions as a PE router and peers with every PE router in their AS. The ASBR does not hold any VRFs but holds all or a subset of VPNv4 routes from PE router that need to be passed to the other AS. VPNv4 routes are kept unique in ASBR using route-distinguisher and are filtered using route targets. The ASBRs exchange VPNv4 routes and VPN labels using eBGP.

Figure 2: Topology for InterAS Option B



Two methods are supported to distribute the next hop for VPNv4 routes between ASBRs. There is no requirement for LDP or any IGP to be enabled on the link connecting the two ASBRs. The MP-eBGP session between directly connected interfaces on the ASBRs enables the interfaces to forward labeled packets. To ensure this MPLS forwarding for directly connected BGP peers, you must configure mpls bgp forwarding command on the interface connecting to ASBR. This command is implemented in the IOS for directly connected interfaces. Upto 200 BGP neighbors can be configured.

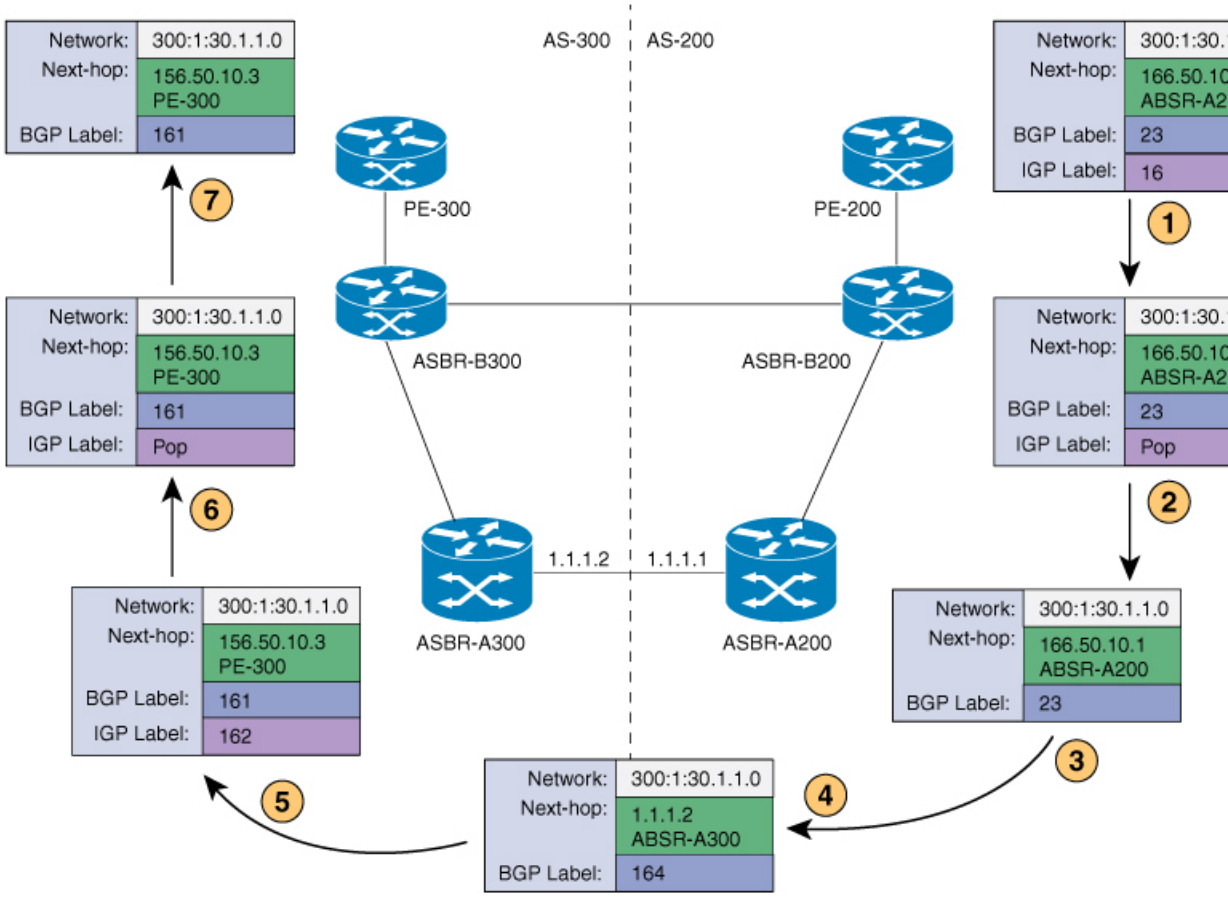
- **Next-hop-self Method:** Changing next-hop to that of the local ASBR for all VPNv4 routes learnt from the other ASBR.
- **Redistribute Connected Subnets Method:** Redistributing the next hop address of the remote ASBR into the local IGP using redistribute connected subnets command , i.e., the next hop is not changed when the VPNv4 routes are redistributed into the local AS.

Note In case of multiple equal paths - ECMP towards remote AS, you have to configure MPLS static label bindings towards remote Loopback on ASBR. Otherwise, you may experience packet loss.

The label switch path forwarding sections described below has AS200 configured with the Next-hop-self method and the AS300 is configured with Redistribute-subnet method.

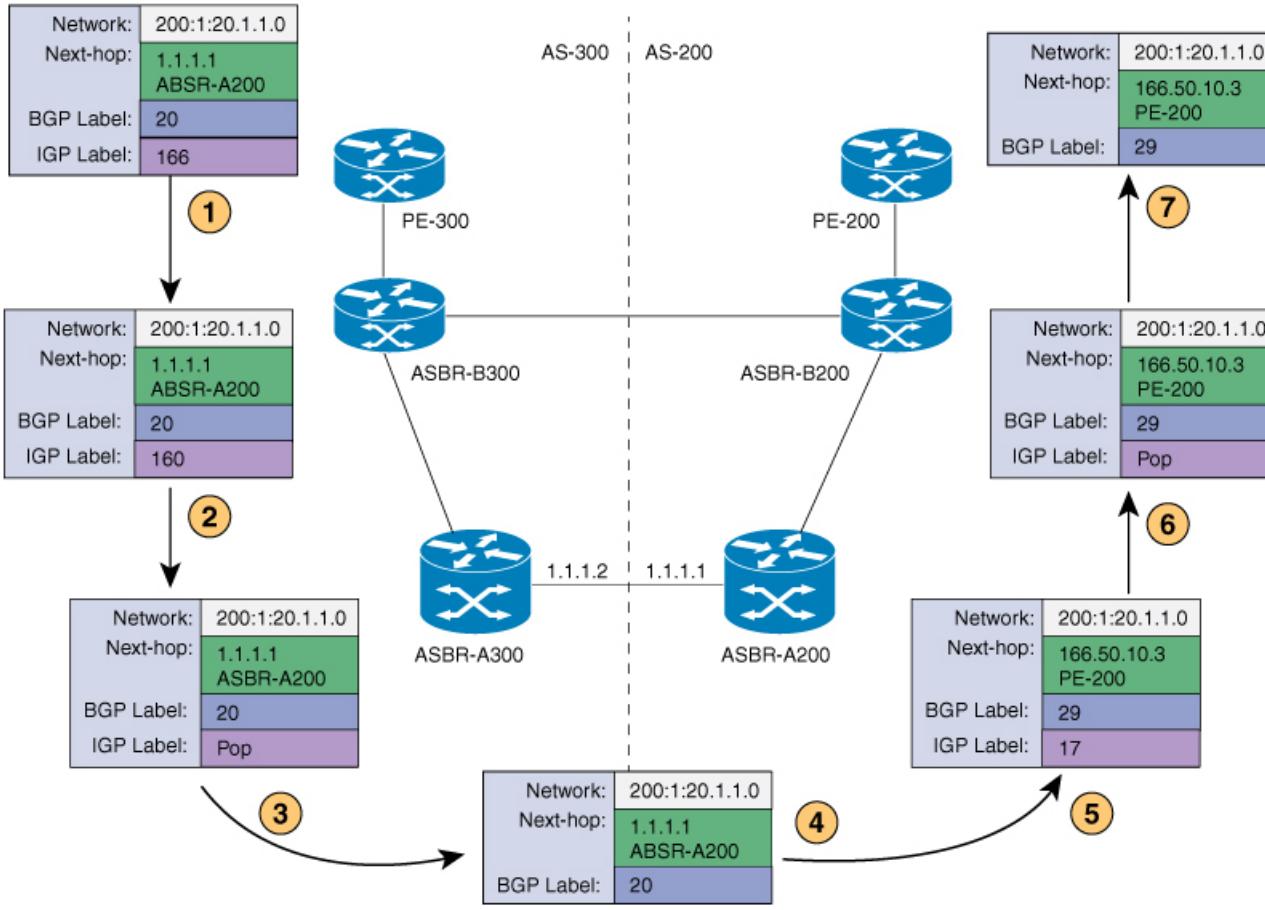
Next-Hop Self Method

The following figure shows the label forwarding path for next-hop-self method. The labels get pushed, swapped and popped on the stack as packet makes its way from PE-200 in AS 200 to PE-300 in AS 300. In step 5, ASBR-A300 receives labeled frame, replaces label 164 with label 161 pushes IGP label 162 onto the label stack.



Redistribute Connected Subnet Method

The following figure shows the label forwarding path for Redistribute connected subnets method. The labels get pushed, swapped and popped on the stack as packet travels from PE- 300 in AS 300 to PE-200 in AS 200. In step 5, ASBR-A200 receives frame with BGP label 20, swaps it with label 29 and pushes label 17.



How to Configure MPLS VPN InterAS Options

The following section provides information about how to configure MPLS VPN InterAS Options.

Configuring MPLS VPN InterAS Option A

Sending AS: Configuring PE

Complete the following tasks to configure the PE which is in the AS sending data to another AS.

Sending AS: Configuring a VRF for a PE

Beginning in user EXEC mode complete the following steps to configure a VRF for a PE which is in the sending AS:

Procedure

	Command or Action	Purpose
Step 1	**enable** **Example:** `Device> enable`	Enables privileged EXEC mode. Enter your password if prompted.
Step 2	**configure terminal** **Example:** `Device# configure terminal`	Enters global configuration mode.

Step 3	**vrf definition** *vrf-name*
	Example:
	`Device(config)# vrf definition cu1`
	`Device(config-vrf)#`
		Configures a VRF table and enters VRF configuration mode.

Step 4	**rd** *route-distinguisher* **Example:** `Device(config-vrf)# rd 1:1`	Creates routing and forwarding tables for a VRF instance.

Step 5	**address-family ipv4**
	Example:
	`Device(config-vrf)# address-family ipv4`
	`Device(config-vrf-af)#`
		Places the device in address family configuration mode, from which you can configure routing sessions that use standard IPv6 address prefixes.

Step 6	**route-target export** *route-target-ext-community* **Example:** `Device(config-vrf-af)# route-target export 100:1`	Creates a list of export route target communities for the specified VRF.
Step 7	**route-target import** *route-target-ext-community* **Example:** `Device(config-vrf-af)# route-target import 100:2`	Creates a list of import route target communities for the specified VRF.
Step 8	**exit-address-family** **Example:** `Device(config-vrf-af)#`	Exits the address family configuration mode and returns to VRF configuration mode.

	Command or Action	Purpose
	exit-address-family Device(config-vrf)#	
Step 9	**address-family ipv6** **Example:** Device(config-vrf)# **address-family ipv6**	Places the device in address family configuration mode, from which you can configure routing sessions that use standard IPv6 address prefixes.
Step 10	**route-target export** *route-target-ext-community* **Example:** Device(config-vrf-af)# **route-target export 100:101**	Creates a list of export route target communities for the specified VRF.
Step 11	**route-target import** *route-target-ext-community* **Example:** Device(config-vrf-af)# **route-target import 100:102**	Creates a list of import route target communities for the specified VRF.
Step 12	**exit-address-family** **Example:** Device(config-vrf-af)# **exit-address-family** Device(config-vrf)#	Exits the address family configuration mode and returns to VRF configuration mode.

Sending AS: Configuring a PE-CE Interface

Beginning in privileged EXEC mode complete the following steps to configure a PE-CE interface which is in the sending AS:

Procedure

	Command or Action	Purpose
Step 1	**configure terminal** **Example:** Device# **configure terminal**	Enters global configuration mode.
Step 2	**interface** {*interface-id* | *subinterface-id* | *vlan-id*} **Example:**	Enters interface configuration mode and specifies the Ethernet interface, subinterface, or VLAN to be associated with the VRF.

	Command or Action	Purpose
	`Device(config)# interface Gi1/1/0/13.1` `Device(config-if)#`	
Step 3	**encapsulation dot1q** *vlan-id* **Example:** `Device(config-if)# encapsulation dot1q 900`	Enables IEEE 802.1Q encapsulation of traffic on a specified interface.
Step 4	**vrf forwarding** *vrf-name* **Example:** `Device(config-if)# vrf forwarding cu1`	Associates the VRF with the Layer 3 interface.
Step 5	**ip address** *ip address mask* [**secondary**] **Example:** `Device(config-if)# ip address 140.1.1.1 255.255.255.0`	Sets a primary or secondary IP address for an interface.

Step 6	**exit**
	Example:
	`Device(config-if)# exit`
	`Device(config)#`
		Exits interface configuration mode and returns to global configuration mode.

Sending AS: Configuring BGP

Beginning in user EXEC mode complete the following steps to configure a BGP session for a PE which is in the sending AS:

Procedure

	Command or Action	Purpose
Step 1	**enable** **Example:** `Device> enable`	Enables privileged EXEC mode. Enter your password if prompted.
Step 2	**configure terminal** **Example:** `Device# configure terminal`	Enters global configuration mode.
Step 3	**router bgp** *autonomous-system-number* **Example:**	Configures a BGP routing process.

	Command or Action	Purpose
	`Device(config)# router bgp 65001` `Device(config-router)#`	
Step 4	**neighbor** *ip-address* **remote-as** *as-number* **Example:** `Device(config-router)# neighbor 2.2.2.2 remote-as 65001`	Configures an entry to the BGP neighbor table.

Step 5	**address-family** *ipv4* [**mdt** | **multicast** | **tunnel** | **unicast** [**vrf** *vrf-name*] | [**vrf** *vrf-name*]
	Example:
	`Device(config-router)# address-family ipv4`
	`Device(config-router-af)#`
		Enters address family configuration mode for configuring BGP routing sessions that use standard IPv4 address prefixes.

Step 6	**neighbor** *ip-address* **activate** **Example:** `Device(config-router-af)# neighbor 2.2.2.2 activate`	Enables the exchange of information with a BGP neighbor.

Step 7	**exit address-family**
	Example:
	`Device(config-router-af)# exit address-family`
	`Device(config-router)#`
		Exits BGP address-family submode.

Step 8	**address-family** *vpnv4*
	Example:
	`Device(config-router)# address-family vpnv4`
	`Device(config-router-af)#`
		Configures the device in address family configuration mode for configuring routing sessions, such as BGP, that use standard VPNv4 address prefixes.

Step 9	**neighbor** *ip-address* **activate** **Example:** `Device(config-router-af)# neighbor 2.2.2.2 activate`	Enables the exchange of information with a BGP neighbor.
Step 10	**neighbor** {*ip-address* | *ipv6-address* | *peer-group-name*} **send-community** [**both** | **standard** | **extended**] **Example:**	Enables the exchange of information with a BGP neighbor.

	Command or Action	Purpose
	`Device(config-router-af)# neighbor 2.2.2.2 send-community both`	

Step 11	**exit address-family**
	Example:
	`Device(config-router-af)# exit address-family`
	`Device(config-router)#`
		Exits BGP address-family submode.

Step 12	**address-family** *vpnv6*
	Example:
	`Device(config-router)# address-family vpnv6`
	`Device(config-router-af)#`
		Configures the device in address family configuration mode for configuring routing sessions, such as BGP, that use standard VPNv6 address prefixes.

Step 13	**neighbor** *ip-address* **activate** **Example:** `Device(config-router-af)# neighbor 2.2.2.2 activate`	Enables the exchange of information with a BGP neighbor.
Step 14	**neighbor** *ip-address* **send-community extended** **Example:** `Device(config-router-af)# neighbor 2.2.2.2 send-community extended`	Specifies that a community attribute should be sent to a BGP neighbor.

Step 15	**exit address-family**
	Example:
	`Device(config-router-af)# exit address-family`
	`Device(config-router)#`
		Exits BGP address-family submode.

Step 16	**address-family ipv4 vrf** *vrf-name*
	Example:
	`Device(config-router)# address-family ipv4 vrf cu1`
	`Device(config-router-af)#`
		Enters address family configuration mode for configuring BGP routing sessions that use standard IPv4 address prefixes.

Step 17	**redistribute** *protocol* **Example:** `Device(config-router-af)# redistribute connected`	Redistributes routes from one routing domain into another routing domain.

	Command or Action	Purpose
Step 18	**neighbor** *ip-address* **remote-as** *as-number* **Example:** `Device(config-router-af)# neighbor 140.1.1.2 remote-as 65002`	Configures an entry to the BGP neighbor table.
Step 19	**neighbor** *ip-address* **activate** **Example:** `Device(config-router-af)# neighbor 140.1.1.2 activate`	Enables the exchange of information with a BGP neighbor.

Step 20	**exit address-family**
	Example:
	`Device(config-router-af)# exit address-family`
	`Device(config-router)#`
		Exits BGP address-family submode.

Step 21	**exit** **Example:** `Device(config-router)# exit`	Exits router BGP mode.

Sending AS: Configuring a PE-P Interface and IGP

Beginning in user EXEC mode complete the following steps to configure a PE-P interface and IGP which is in the sending AS:

Procedure

	Command or Action	Purpose
Step 1	**enable** **Example:** `Device> enable`	Enables privileged EXEC mode. Enter your password if prompted.
Step 2	**configure terminal** **Example:** `Device# configure terminal`	Enters global configuration mode.
Step 3	**interface** { *interface-id* | *subinterface-id* | *vlan-id* } **Example:**	Enters interface configuration mode and specifies the Ethernet interface, subinterface, or VLAN to be associated with the VRF.

	Command or Action	Purpose
	`Device(config)# interface po91` `Device(config-if)#`	
Step 4	**no switchport** **Example:** `Device(config-if)# no switchport`	Sets the interface to the routed-interface status and erases all Layer 2 configurations.
Step 5	**ip address** *ip-address mask* **Example:** `Device(config-if)# ip address 91.1.1.1 255.255.255.248`	Sets a primary or secondary IP address for an interface.
Step 6	**ip ospf** *process-id* **area** *area-id* **Example:** `Device(config-if)# ip ospf 2 area 0`	Enables OSPF on an interface.
Step 7	**mpls ip** **Example:** `Device(config-if)# mpls ip`	Enables MPLS forwarding of IPv4 and IPv6 packets along normally routed paths for a particular interface.
Step 8	**exit** **Example:** `Device(config-if)# exit`	Exits interface configuration mode.
Step 9	**router ospf** *process-id* **Example:** `Device(config)# router ospf 2`	Configures an OSPF routing process and assigns a process number.
Step 10	**router-id** *ip-address* **Example:** `Device(config-router)# router-id 1.1.1.1`	Specifies a fixed router ID.
Step 11	**end** **Example:** `Device(config-router)# end`	Exits router configuration mode and returns to privileged EXEC mode.

Sending AS: Configuring P

Complete the following tasks to configure the P which is in the AS sending data to another AS.

Sending AS: Configuring P-PE Interface and IGP

Beginning in user EXEC mode complete the following steps to configure a P-PE interface and IGP which is in the sending AS:

Procedure

	Command or Action	Purpose
Step 1	**enable** **Example:** `Device> enable`	Enables privileged EXEC mode. Enter your password if prompted.
Step 2	**configure terminal** **Example:** `Device# configure terminal`	Enters global configuration mode.

Step 3	**interface** {*interface-id* | *subinterface-id* | *vlan-id*}
	Example:
	`Device(config)# interface Port-channel91`
	`Device(config-if)#`
		Enters interface configuration mode and specifies the Ethernet interface, subinterface, or VLAN to be associated with the VRF.

Step 4	**no switchport** **Example:** `Device(config-if)# no switchport`	Sets the interface to the routed-interface status and erases all Layer 2 configuration.
Step 5	**ip address** *ip-address mask* **Example:** `Device(config-if)# ip address 91.1.1.2 255.255.255.248`	Sets a primary or secondary IP address for an interface.
Step 6	**ip ospf** *process-id* **area** *area-id* **Example:** `Device(config-if)# ip ospf 2 area 0`	Enables OSPF on an interface.
Step 7	**mpls ip** **Example:** `Device(config-if)# mpls ip`	Enables MPLS forwarding of IPv4 and IPv6 packets along normally routed paths for a particular interface.

Step 8	**exit**
	Example:
	`Device(config-if)# exit`
	`Device(config)#`
		Exits interface configuration mode.

Step 9	**interface** {*interface-id* | *subinterface-id* | *vlan-id*} **Example:**	Enters interface configuration mode and specifies the Ethernet interface, subinterface, or VLAN to be associated with the VRF.

	Command or Action	Purpose
	`Device(config)# interface Port-channel92`	
Step 10	**no switchport** **Example:** `Device(config-if)# no switchport`	Set the interface to the routed-interface status erases all Layer 2 configurations.
Step 11	**ip address** *ip-address mask* **Example:** `Device(config-if)# ip address 92.1.1.2 255.255.255.248`	Sets a primary or secondary IP address for an interface.
Step 12	**ip ospf** *process-id* **area** *area-id* **Example:** `Device(config-if)# ip ospf 2 area 0`	Enables OSPF on an interface.
Step 13	**mpls ip** **Example:** `Device(config-if)# mpls ip`	Enables MPLS forwarding of IPv4 and IPv6 packets along normally routed paths for a particular interface.
Step 14	**exit** **Example:** `Device(config-if)# exit`	Exits interface configuration mode.

Step 15	**router ospf** *process-id*
	Example:
	`Device(config)# router ospf 2`
	`Device(config-router)#`
		Configures an OSPF routing process and assign a process number.

Step 16	**router-id** *ip-address* **Example:** `Device(config-router)# router-id 5.5.5.5`	Specifies a fixed router ID.
Step 17	**end** **Example:** `Device(config-router)# end`	Exits router configuration mode, and returns to privileged EXEC mode.

Sending AS: Configuring ASBR

Complete the following tasks to configure the ASBR which is in the AS sending data to another AS.

Sending AS: Configuring VRF for ASBR

Beginning in user EXEC mode complete the following steps to configure a VRF for a ASBR which is in the sending AS:

Procedure

	Command or Action	Purpose
Step 1	**enable** **Example:** `Device> enable`	Enables privileged EXEC mode. Enter your password if prompted.
Step 2	**configure terminal** **Example:** `Device# configure terminal`	Enters global configuration mode.

Step 3	**vrf definition** *vrf-name*
	Example:
	`Device(config)# vrf definition cu1`
	`Device(config-vrf)#`
		Configures a VRF table and enters VRF configuration mode.

Step 4	**rd** *route-distinguisher* **Example:** `Device(config-vrf)# rd 1:2`	Creates routing and forwarding tables for a VRF instance.

Step 5	**address-family ipv4**
	Example:
	`Device(config-vrf)# address-family ipv4`
	`Device(config-vrf-af)#`
		The address-family ipv4 command places the device in address family configuration mode, from which you can configure routing sessions that use standard IPv4 address prefixes.

Step 6	**route-target export** *route-target-ext-community* **Example:** `Device(config-vrf-af)# route-target export 100:2`	Creates a list of export route target communities for the specified VRF.
Step 7	**route-target import** *route-target-ext-community* **Example:** `Device(config-vrf-af)# route-target import 100:1`	Creates a list of import route target communities for the specified VRF.

	Command or Action	Purpose

Step 8	**exit-address-family**
	Example:
	`Device(config-vrf-af)# exit-address-family`
	`Device(config-vrf)#`
		Leaves the address family configuration mode and returns to router configuration mode.

Step 9	**address-family ipv6** **Example:** `Device(config-vrf)# address-family ipv6`	Places the device in address family configuration mode, from which you can configure routing sessions that use standard IPv6 address prefixes.
Step 10	**route-target export** *route-target-ext-community* **Example:** `Device(config-vrf-af)# route-target export 100:102`	Creates a list of export route target communities for the specified VRF.
Step 11	**route-target import***route-target-ext-community* **Example:** `Device(config-vrf-af)# route-target import 100:101`	Creates a list of import route target communities for the specified VRF.

Step 12	**exit-address-family**
	Example:
	`Device(config-vrf-af)# exit-address-family`
	`Device(config-vrf)#`
		Exits the address family configuration mode and returns to router configuration mode.

Step 13	**exit** **Example:** `Device(config-vrf)# exit`	Exits the router configuration mode and returns to global configuration mode.

Sending AS: Configuring Interface Towards the Receiving ASBR

Beginning in privileged EXEC mode complete the following steps to configure an interface towards the receiving ASBR:

Procedure

	Command or Action	Purpose
Step 1	**configure terminal** **Example:** `Device# configure terminal`	Enters global configuration mode.

Step 2	**interface** {*interface-id* | *subinterface-id* | *vlan-id*}
	Example:
	`Device(config)# interface fo1/0/10.1`
	`Device(config-subif)#`
		Enters interface configuration mode and specifies the Ethernet interface, subinterface, or VLAN to be associated with the VRF.

Step 3	**encapsulation dot1q** *vlan-id* **Example:** `Device(config-subif)# encapsulation dot1q 900`	Enables IEEE 802.1Q encapsulation of traffic on a specified interface.
Step 4	**vrf forwarding** *vrf-name* **Example:** `Device(config-subif)# vrf forwarding cu1`	Associates the VRF with the Layer 3 interface.
Step 5	**ip address** *ip address mask* [**secondary**] **Example:** `Device(config-subif)# ip address 141.1.1.1 255.255.255.0`	Sets a primary or secondary IP address for an interface.

Sending AS: Configuring BGP

Beginning in privileged EXEC mode complete the following steps to configure a BGP session on the ASBR which is in the sending AS:

Procedure

	Command or Action	Purpose
Step 1	**configure terminal** **Example:** `Device# configure terminal`	Enters global configuration mode.

	Command or Action	Purpose
Step 2	**router bgp** *autonomous-system-number* **Example:** `Device(config-if)# router bgp 65001`	Configures a BGP routing process.
Step 3	**bgp log-neighbor changes** **Example:** `Device(config-router)# bgp log-neighbor-changes`	Enables logging of BGP neighbor resets.
Step 4	**neighbor** *ip-address* **remote-as** *as-number* **Example:** `Device(config-router)# neighbor 1.1.1.1 remote-as 65001`	Configures an entry to the BGP neighbor table.
Step 5	**neighbor** *ip-address* **update-source** *interface-type interface-number* **Example:** `Device(config-router)# neighbor 1.1.1.1 update-source Loopback0`	Allows Cisco IOS software to use a specific operational interface for TCP connections by the BGP sessions.

Step 6	**address-family ipv4** [**mdt** | **multicast** | **tunnel** | **unicast** [**vrf** *vrf-name*] | [**vrf** *vrf-name*]
	Example:
	`Device(config-router)# address-family ipv4`
	`Device(config-router-af)#`
		Enters address family configuration mode for configuring BGP routing sessions that use standard IP Version 4 address prefixes.

Step 7	**neighbor** *ip-address* **activate** **Example:** `Device(config-router-af)# neighbor 1.1.1.1 activate`	Enables the exchange of information with a BGP neighbor.
Step 8	**exit-address-family** **Example:** `Device(config-router-af)# exit-address-family`	Exits BGP address-family submode.
Step 9	**address-family** *vpnv4* **Example:**	Configures the device in address family configuration mode for configuring routing

	Command or Action	Purpose
	`Device(config-router)# address-family vpnv4`	sessions, such as BGP, that use standard VPNv4 address prefixes.
Step 10	**neighbor** *ip-address* **activate** **Example:** `Device(config-router-af)# neighbor 1.1.1.1 activate`	Enables the exchange of information with a BGP neighbor.
Step 11	**neighbor** {*ip-address* | *ipv6-address* | *peer-group-name*} **send-community** [**both** | **standard** | **extended**] **Example:** `Device(config-router-af)# neighbor 1.1.1.1 send-community both`	Enables the exchange of information with a BGP neighbor.

Step 12	**exit-address-family**
	Example:
	`Device(config-router-af)# exit-address-family`
	`Device(config-router)#`
		Exits BGP address-family submode.

Step 13	**address-family** *vpnv6*
	Example:
	`Device(config-router)# address-family vpnv6`
	`Device(config-router-af)#`
		Configures the device in address family configuration mode for configuring routing sessions, such as BGP, that use standard VPNv6 address prefixes.

Step 14	**neighbor** *ip-address* **activate** **Example:** `Device(config-router-af)# neighbor 1.1.1.1 activate`	Enables the exchange of information with a BGP neighbor.
Step 15	**neighbor** {*ip-address* | *ipv6-address* | *peer-group-name*} **send-community** [**both** | **standard** | **extended**] **Example:** `Device(config-router-af)# neighbor 1.1.1.1 send-community both`	Enables the exchange of information with a BGP neighbor.
Step 16	**exit-address-family** **Example:**	Exits BGP address-family submode.

	Command or Action	Purpose
	`Device(config-router-af)# exit-address-family` `Device(config-router)#`	
Step 17	**address-family ipv4 vrf** *vrf-name* **Example:** `Device(config-router)# address-family ipv4 vrf cu1`	Enters address family configuration mode for configuring BGP routing sessions that use standard IP Version 4 address prefixes.
Step 18	**redistribute** *protocol* **Example:** `Device(config-router-af)# redistribute connected`	Redistributes routes from one routing domain into another routing domain.
Step 19	**neighbor** *ip-address* **remote-as** *as-number* **Example:** `Device(config-router-af)# neighbor 141.1.1.2 remote-as 65002`	Configures an entry to the BGP neighbor table.
Step 20	**neighbor** *ip-address* **activate** **Example:** `Device(config-router-af)# neighbor 141.1.1.2 activate`	Enables the exchange of information with a BGP neighbor.
Step 21	**exit-address-family** **Example:** `Device(config-router-af)# exit-address-family`	Exits BGP address-family submode.

Sending AS: Configuring a ASBR-P Interface and a IGP

Beginning in privileged EXEC mode complete the following steps to configure a ASBR-P interface and a IGP in the sending AS:

Procedure

	Command or Action	Purpose
Step 1	**configure terminal** **Example:** `Device# configure terminal`	Enters global configuration mode.

	Command or Action	Purpose
Step 2	**interface** {*interface-id* | *subinterface-id* | *vlan-id*} **Example:** `Device(config)# interface Port-channel92`	Enters interface configuration mode and specifies the Ethernet interface, subinterface, or VLAN to be associated with the VRF.
Step 3	**no switchport** **Example:** `Device(config-if)# no switchport`	Set the interface to the routed-interface status erases all Layer 2 configurations.
Step 4	**ip address** *ip-address mask* **Example:** `Device(config-if)# ip address 92.1.1.1 255.255.255.248`	Sets a primary or secondary IP address for an interface.
Step 5	**ip ospf** *process-id* **area** *area-id* **Example:** `Device(config-if)# ip ospf 2 area 0`	Enables OSPF on an interface.
Step 6	**mpls ip** **Example:** `Device(config-if)# mpls ip`	Enables Multiprotocol Label Switching (MPLS) forwarding of IPv4 and IPv6 packets along normally routed paths for a particular interface.
Step 7	**end** **Example:** `Device(config-if)# end`	Exits interface configuration mode and returns to privileged EXEC mode.

Receiving AS: Configuring ASBR

Complete the following tasks to configure the ASBR which is in the AS receiving data from another AS.

Receiving AS: Configuring VRF for ASBR

Beginning in user EXEC mode complete the following steps to configure a VRF for a ASBR which is in the receiving AS:

Procedure

	Command or Action	Purpose
Step 1	**enable** **Example:** `Device> enable`	Enables privileged EXEC mode. Enter your password if prompted.
Step 2	**configure terminal** **Example:**	Enters global configuration mode.

	Command or Action	Purpose
	`Device# configure terminal`	

Step 3	**vrf definition** *vrf-name*
	Example:
	`Device(config)# vrf definition cu1`
	`Device(config-vrf)#`
		Configures a VRF table and enters VRF configuration mode.

Step 4	**rd** *route-distinguisher* **Example:** `Device(config-vrf)# rd 1:3`	Creates routing and forwarding tables for a VRF instance.

Step 5	**address-family ipv4**
	Example:
	`Device(config-vrf)# address-family ipv4`
	`Device(config-vrf-af)#`
		The address-family ipv4 command places the device in address family configuration mode, from which you can configure routing sessions that use standard IPv4 address prefixes.

Step 6	**route-target import** *route-target-ext-community* **Example:** `Device(config-vrf-af)# route-target import 200:2`	Creates a list of export route target communities for the specified VRF.
Step 7	**route-target export** *route-target-ext-community* **Example:** `Device(config-vrf-af)# route-target export 200:1`	Creates a list of import route target communities for the specified VRF.
Step 8	**exit-address-family** **Example:** `Device(config-vrf-af)# exit-address-family`	Leaves the address family configuration mode and returns to router configuration mode.

Step 9	**address-family ipv6**
	Example:
	`Device(config-vrf)# address-family ipv6`
	`Device(config-vrf-af)#`
		Places the device in address family configuration mode, from which you can configure routing sessions that use standard IPv6 address prefixes.

	Command or Action	Purpose
Step 10	**route-target export** *route-target-ext-community* **Example:** `Device(config-vrf-af)# route-target export 200:101`	Creates a list of export route target communities for the specified VRF.
Step 11	**route-target import** *route-target-ext-community* **Example:** `Device(config-vrf-af)# route-target import 200:102`	Creates a list of import route target communities for the specified VRF.

Step 12	**exit-address-family**
	Example:
	`Device(config-vrf-af)# exit-address-family`
	`Device(config-vrf)#`
		Exits the address family configuration mode and returns to router configuration mode.

Step 13	**exit** **Example:** `Device(config-vrf)# exit`	Exits the router configuration mode and returns to global configuration mode.

Receiving AS: Configuring Interface Towards the Sending ASBR

Beginning in privileged EXEC mode complete the following steps to configure an interface towards the sending ASBR:

Procedure

	Command or Action	Purpose
Step 1	**configure terminal** **Example:** `Device# configure terminal`	Enters global configuration mode.

Step 2	**interface** {*interface-id* | *subinterface-id* | *vlan-id*}
	Example:
	`Device(config)# interface fo1/0/10.1`
	`Device(config-subif)#`
		Enters interface configuration mode and specifies the Ethernet interface, subinterface, or VLAN to be associated with the VRF.

	Command or Action	Purpose
Step 3	**encapsulation dot1q** *vlan-id* **Example:** `Device(config-subif)# encapsulation dot1q 900`	Enables IEEE 802.1Q encapsulation of traffic on a specified interface.
Step 4	**vrf forwarding** *vrf-name* **Example:** `Device(config-subif)# vrf forwarding cu1`	Associates the VRF with the Layer 3 interface.
Step 5	**ip address** *ip address mask* [**secondary**] **Example:** `Device(config-subif)# ip address 141.1.1.1 255.255.255.0`	Sets a primary or secondary IP address for an interface.

Step 6	**exit**
	Example:
	`Device(config-subif)# exit`
	`Device(config)#`
		Exits to global configuration mode.

Receiving AS: Configuring BGP

Beginning in privileged EXEC mode complete the following steps to configure a BGP session on the ASBR which is in the receiving AS:

Procedure

	Command or Action	Purpose
Step 1	**configure terminal** **Example:** `Device# configure terminal`	Enters global configuration mode.

Step 2	**router bgp** *autonomous-system-number*
	Example:
	`Device(config)# router bgp 65002`
	`Device(config-router)#`
		Configures a BGP routing process.

Step 3	**neighbor** *ip-address* **remote-as** *as-number* **Example:**	Configures an entry to the BGP neighbor table.

	Command or Action	Purpose
	`Device(config-router)# neighbor 30.30.30.30 remote-as 65002`	

Step 4	**address-family** *ipv4* [**mdt** | **multicast** | **tunnel** | **unicast** [**vrf** *vrf-name*] | [**vrf** *vrf-name*]
	Example:
	`Device(config-router)# address-family ipv4`
	`Device(config-router-af)#`
		Enters address family configuration mode for configuring BGP routing sessions that use standard IP Version 4 address prefixes.

Step 5	**neighbor** *ip-address* **activate** **Example:** `Device(config-router-af)# neighbor 30.30.30.30 activate`	Enables the exchange of information with a BGP neighbor.

Step 6	**exit**
	Example:
	`Device(config-router-af)# exit`
	`Device(config-router)#`
		Exits BGP address-family submode.

Step 7	**address-family** *ipv6*
	Example:
	`Device(config-router)# address-family ipv6`
	`Device(config-router-af)#`
		Configures the device in address family configuration mode for configuring routing sessions, such as BGP, that use standard VPNv4 address prefixes.

Step 8	**neighbor** *ip-address* **activate** **Example:** `Device(config-router-af)# neighbor 30.30.30.30 activate`	Enables the exchange of information with a BGP neighbor.

Step 9	**exit address-family**
	Example:
	`Device(config-router-af)# exit address-family`
	`Device(config-router)#`
		Exits BGP address-family submode.

Step 10	**address-family** *vpnv4* **Example:** `Device(config-router)# address-family`	Configures the device in address family configuration mode for configuring routing sessions, such as BGP, that use standard VPNv6 address prefixes.

	Command or Action	Purpose
	vpnv4 Device(config-router-af)#	
Step 11	**neighbor** *ip-address* **activate** **Example:** Device(config-router-af)# **neighbor 30.30.30.30 activate**	Enables the exchange of information with a BGP neighbor.
Step 12	**neighbor** {*ip-address* | *ipv6-address* | *peer-group-name*} **send-community** [**both** | **standard** | **extended**] **Example:** Device(config-router-af)# **neighbor 30.30.30.30 send-community both**	Enables the exchange of information with a BGP neighbor.
Step 13	**exit** **Example:** Device(config-router-af)# **exit** Device(config-router)#	Exits BGP address-family submode.
Step 14	**address-family** *vpnv6* **Example:** Device(config-router)# **address-family vpnv6** Device(config-router-af)#	Enters address family configuration mode for configuring BGP routing sessions that use standard IP Version 4 address prefixes.
Step 15	**neighbor** *ip-address* **activate** **Example:** Device(config-router-af)# **neighbor 30.30.30.30 activate**	Enables the exchange of information with a BGP neighbor.
Step 16	**neighbor** {*ip-address* | *ipv6-address* | *peer-group-name*} **send-community** [**both** | **standard** | **extended**] **Example:** Device(config-router-af)# **neighbor 30.30.30.30 send-community both**	Enables the exchange of information with a BGP neighbor.
Step 17	**exit** **Example:**	Exits BGP address-family submode.

	Command or Action	Purpose
	`Device(config-router-af)# exit` `Device(config-router)#`	

Step 18	**address-family** *ipv4*
	Example:
	`Device(config-router)# address-family ipv4 vrf cu1`
	`Device(config-router-af)#`
		Enters address family configuration mode for configuring BGP routing sessions that use standard IP Version 4 address prefixes.

Step 19	**neighbor** *ip-address* **remote-as** *as-number* **Example:** `Device(config-router-af)# neighbor 141.1.1.1 remote-as 65001`	Configures an entry to the BGP neighbor table.
Step 20	**neighbor** *ip-address* **activate** **Example:** `Device(config-router-af)# neighbor 141.1.1.1 activate`	Enables the exchange of information with a BGP neighbor.

Step 21	**exit address-family**
	Example:
	`Device(config-router-af)# exit address-family`
	`Device(config-router)#`
		Exits BGP address-family submode.

Step 22	**end** **Example:** `Device(config-router)# end`	Exits router BGP mode and returns to privileged EXEC mode.

Receiving AS: Configuring a ASBR-P Interface and a IGP

Beginning in privileged EXEC mode complete the following steps to configure a ASBR-P interface and a IGP which is in the receiving AS:

Procedure

	Command or Action	Purpose
Step 1	**configure terminal** **Example:** `Device# configure terminal`	Enters global configuration mode.

	Command or Action	Purpose
Step 2	**interface** { *interface-id* | *subinterface-id* | *vlan-id* } **Example:** `Device(config)# interface FortyGigabitEthernet1/0/13`	Enters interface configuration mode and specifies the Ethernet interface, subinterface, or VLAN to be associated with the VRF.
Step 3	**no switchport** **Example:** `Device(config-if)# no switchport`	Set the interface to the routed-interface status erases all Layer 2 configurations.
Step 4	**ip address** *ip-address mask* **Example:** `Device(config-if)# ip address 10.1.1.1 255.255.255.0`	Sets a primary or secondary IP address for an interface.
Step 5	**ip ospf** *process-id* **area** *area-id* **Example:** `Device(config-if)# ip ospf 10 area 0`	Enables OSPF on an interface.
Step 6	**mpls ip** **Example:** `Device(config-if)# mpls ip`	Enables Multiprotocol Label Switching (MPLS) forwarding of IPv4 and IPv6 packets along normally routed paths for a particular interface.
Step 7	**end** **Example:** `Device(config-if)# end`	Exits interface configuration mode and returns to privileged EXEC mode.

Receiving AS: Configuring P

Complete the following tasks to configure the P which is in the AS receiving data from another AS.

Receiving AS: Configuring ASBR-P Interface and IGP

Beginning in user EXEC mode complete the following steps to configure a ASBR-P interface and IGP which is in the receiving AS:

Procedure

	Command or Action	Purpose
Step 1	**configure terminal** **Example:**	Enters global configuration mode.

	Command or Action	Purpose
	`Device# configure terminal`	

Step 2	**interface** { *interface-id* | *subinterface-id* | *vlan-id* }
	Example:
	`Device(config)# interface HundredGigE1/0/13`
	`Device(config-if)#`
		Enters interface configuration mode and specifies the Ethernet interface, subinterface, or VLAN to be associated with the VRF.

Step 3	**no switchport** **Example:** `Device(config-if)# no switchport`	Set the interface to the routed-interface status erases all Layer 2 configurations.
Step 4	**ip address** *ip-address mask* **Example:** `Device(config-if)# ip address 10.1.1.2 255.255.255.0`	Sets a primary or secondary IP address for an interface.
Step 5	**ip ospf** *process-id* **area** *area-id* **Example:** `Device(config-if)# ip ospf 10 area 0`	Enables OSPF on an interface.
Step 6	**mpls ip** **Example:** `Device(config-if)# mpls ip`	Enables Multiprotocol Label Switching (MPLS) forwarding of IPv4 and IPv6 packets along normally routed paths for a particular interface.
Step 7	**exit** **Example:** `Device(config-if)# exit`	Exits interface configuration mode.

Step 8	**interface** { *interface-id* | *subinterface-id* | *vlan-id* }
	Example:
	`Device(config)# interface HundredGigE1/0/4`
	`Device(config-if)#`
		Enters interface configuration mode and specifies the Ethernet interface, subinterface, or VLAN to be associated with the VRF.

Step 9	**no switchport** **Example:** `Device(config-if)# no switchport`	Set the interface to the routed-interface status and erases all Layer 2 configurations.
Step 10	**ip address** *ip-address mask* **Example:**	Sets a primary or secondary IP address for an interface.

	Command or Action	Purpose
	`Device(config-if)# ip address 20.1.1.1 255.255.255.0`	
Step 11	**ip ospf** *process-id* **area** *area-id* **Example:** `Device(config-if)# ip ospf 10 area 0`	Enables OSPF on an interface.
Step 12	**mpls ip** **Example:** `Device(config-if)# mpls ip`	Enables MPLS forwarding of IPv4 and IPv6 packets along normally routed paths for a particular interface.

Step 13	**exit**
	Example:
	`Device(config-if)# exit`
	`Device(config)#`
		Exits interface configuration mode and returns to global configuration mode.

Step 14	**exit** **Example:** `Device(config)# exit`	Exits router configuration mode, and returns to privileged EXEC mode.

Receiving AS: Configuring PE

Complete the following tasks to configure the PE which is in the AS receiving data from another AS.

Configuring VRF for PE2

Beginning in privileged EXEC mode complete the following steps to configure a VRF for a PE:

Procedure

	Command or Action	Purpose
Step 1	**configure terminal** **Example:** `Device# configure terminal`	Enters global configuration mode.

Step 2	**vrf definition** *vrf-name*
	Example:
	`Device(config)# vrf definition cu1`
	`Device(config-vrf)#`
		Configures a VRF table and enters VRF configuration mode.

Step 3	**rd** *route-distinguisher* **Example:** `Device(config-vrf)# rd 1:4`	Creates routing and forwarding tables for a VRF instance.

	Command or Action	Purpose

Step 4	**address-family ipv4**
	Example:
	`Device(config-vrf)# address-family ipv4`
	`Device(config-vrf-af)#`
		The address-family ipv4 command places the device in address family configuration mode, from which you can configure routing sessions that use standard IPv4 address prefixes.

Step 5	**route-target export** *route-target-ext-community* **Example:** `Device(config-vrf-af)# route-target export 200:2`	Creates a list of export route target communities for the specified VRF.
Step 6	**route-target import** *route-target-ext-community* **Example:** `Device(config-vrf-af)# route-target import 200:1`	Creates a list of import route target communities for the specified VRF.

Step 7	**exit-address-family**
	Example:
	`Device(config-vrf-af)#`
	`exit-address-family`
	`Device(config-vrf)#`
		Leaves the address family configuration mode and returns to router configuration mode.

Step 8	**address-familyipv6**
	Example:
	`Device(config-vrf)# address-family ipv6`
	`Device(config-vrf-af)#`
		Places the device in address family configuration mode, from which you can configure routing sessions that use standard IPv6 address prefixes.

Step 9	**route-target export** *route-target-ext-community* **Example:** `Device(config-vrf-af)# route-target export 200:102`	Creates a list of export route target communities for the specified VRF.
Step 10	**route-target import** *route-target-ext-community* **Example:** `Device(config-vrf-af)# route-target import 200:101`	Creates a list of import route target communities for the specified VRF.

	Command or Action	Purpose

Step 11	**exit-address-family**
	Example:
	`Device(config-vrf-af)# exit-address-family`
	`Device(config-vrf)#`
		Exits the address family configuration mode and returns to router configuration mode.

Step 12	**exit**
	Example:
	`Device(config-vrf)# exit`
	`Device(config)#`
		Exits the router configuration mode and returns to global configuration mode.

Receiving AS: Configuring PE-CE Interface

Beginning in privileged EXEC mode complete the following steps to configure a PE-CE interface which is in the receiving AS:

Procedure

	Command or Action	Purpose
Step 1	**configure terminal** **Example:** `Device# configure terminal`	Enters global configuration mode.

Step 2	**interface** { *interface-id* | *subinterface-id* | *vlan-id* }
	Example:
	`Device(config)# interface FortyGigabitEthernet1/0/5.1`
	`Device(config-subif)#`
		Enters interface configuration mode and specifies the Ethernet interface, subinterface, or VLAN to be associated with the VRF.

Step 3	**encapsulation dot1q** *vlan-id* **Example:** `Device(config-subif)# encapsulation dot1q 900`	Enables IEEE 802.1Q encapsulation of traffic on a specified interface.
Step 4	**vrf forwarding** *vrf-name* **Example:** `Device(config-subif)# vrf forwarding cu1`	Associates the VRF with the Layer 3 interface.

	Command or Action	Purpose
Step 5	**ip address** *ip address mask* [**secondary**] **Example:** `Device(config-subif)# ip address 151.1.1.1 255.255.255.0`	Sets a primary or secondary IP address for an interface.

Step 6	**exit**
	Example:
	`Device(config-subif)# exit`
	`Device(config)#`
		Exits interface configuration mode and returns to global configuration mode.

Receiving AS: Configuring BGP

Beginning in privileged EXEC mode complete the following steps to configure a BGP session on a PE which is in the receiving AS:

Procedure

	Command or Action	Purpose
Step 1	**configure terminal** **Example:** `Device# configure terminal`	Enters global configuration mode.
Step 2	**router bgp** *autonomous-system-number* **Example:** `Device(config-if)# router bgp 65002`	Configures a BGP routing process.
Step 3	**bgp log-neighbor changes** **Example:** `Device(config-router)# bgp log-neighbor-changes`	Enables logging of BGP neighbor resets.
Step 4	**neighbor** *ip-address* **remote-as** *as-number* **Example:** `Device(config-router)# neighbor 10.10.10.10 remote-as 65002`	Configures an entry to the BGP neighbor table.
Step 5	**neighbor** *ip-address* **update-source** *interface-type interface-number* **Example:**	Allows Cisco IOS software to use a specific operational interface for TCP connections by the BGP sessions.

	Command or Action	Purpose
	`Device(config-router)# neighbor 10.10.10.10 update-source Loopback30`	

Step 6	**address-family ipv4**
	Example:
	`Device(config-router)# address-family ipv4`
	`Device(config-router-af)#`
		Enters address family configuration mode for configuring BGP routing sessions that use standard IP Version 4 address prefixes.

Step 7	**neighbor** *ip-address* **activate** **Example:** `Device(config-router-af)# neighbor 10.10.10.10 activate`	Enables the exchange of information with a BGP neighbor.

Step 8	**exit-address-family**
	Example:
	`Device(config-router-af)# exit address-family`
	`Device(config-router)#`
		Exits BGP address-family submode.

Step 9	**address-family** *vpnv4*
	Example:
	`Device(config-router)# address-family vpnv4`
	`Device(config-router-af)#`
		Configures the device in address family configuration mode for configuring routing sessions, such as BGP, that use standard VPNv4 address prefixes.

Step 10	**neighbor** *ip-address* **activate** **Example:** `Device(config-router-af)# neighbor 10.10.10.10 activate`	Enables the exchange of information with a BGP neighbor.
Step 11	**neighbor** {*ip-address* | *ipv6-address* | *peer-group-name*} **send−community** [**both** | **standard** | **extended**] **Example:** `Device(config-router-af)# neighbor 10.10.10.10 send-community both`	Enables the exchange of information with a BGP neighbor.
Step 12	**exit-address-family** **Example:** `Device(config-router-af)#`	Exits BGP address-family submode.

	Command or Action	Purpose
	exit-address-family Device(config-router)#	
Step 13	**address-family ipv6** **Example:** Device(config-router)# **address-family ipv6**	Configures the device in address family configuration mode for configuring routing sessions, such as BGP, that use standard VPNv6 address prefixes.
Step 14	**neighbor** *ip-address* **activate** **Example:** Device(config-router-af)# **neighbor 10.10.10.10 activate**	Enables the exchange of information with a BGP neighbor.
Step 15	**exit-address-family** **Example:** Device(config-router-af)# **exit-address-family** Device(config-router)#	Exits BGP address-family submode.
Step 16	**address-family** *vpnv6* **Example:** Device(config-router)# **address-family vpnv6**	Configures the device in address family configuration mode for configuring routing sessions, such as BGP, that use standard VPNv4 address prefixes.
Step 17	**neighbor** *ip-address* **activate** **Example:** Device(config-router-af)# **neighbor 10.10.10.10 activate**	Enables the exchange of information with a BGP neighbor.
Step 18	**neighbor** {*ip-address* | *ipv6-address* | *peer-group-name*} **send−community** [**both** | **standard** | **extended**] **Example:** Device(config-router-af)# **neighbor 10.10.10.10 send-community both**	Enables the exchange of information with a BGP neighbor.
Step 19	**exit address-family** **Example:** Device(config-router-af)# **exit address-family**	Exits BGP address-family submode.

	Command or Action	Purpose

Step 20	**address-family ipv4 vrf** *vrf-name*]
	Example:
	`Device(config-router)# address-family ipv4 vrf cu1`
	`Device(config-router-af)#`
		Enters address family configuration mode for configuring BGP routing sessions that use standard IP Version 4 address prefixes.

Step 21	**redistribute** *protocol* **Example:** `Device(config-router-af)# redistribute connected`	Redistributes routes from one routing domain into another routing domain.
Step 22	**neighbor** *ip-address* **remote-as** *as-number* **Example:** `Device(config-router-af)# neighbor 151.1.1.2 remote-as 65003`	Configures an entry to the BGP neighbor table.
Step 23	**neighbor** *ip-address* **activate** **Example:** `Device(config-router-af)# neighbor 151.1.1.2 activate`	Enables the exchange of information with a BGP neighbor.

Step 24	**exit address-family**
	Example:
	`Device(config-router-af)# exit address-family`
	`Device(config-router)#`
		Exits BGP address-family submode.

Step 25	**exit** **Example:** `Device(config-router)# exit`	Exits router configuration mode.

Receiving AS: Configuring a PE-P Interface and IGP

Beginning in user EXEC mode complete the following steps to configure a PE-P interface and IGP which is in the receiving AS:

Procedure

	Command or Action	Purpose
Step 1	**enable** **Example:**	Enables privileged EXEC mode. Enter your password if prompted.

	Command or Action	Purpose
	`Device> enable`	
Step 2	**configure terminal** **Example:** `Device# configure terminal`	Enters global configuration mode.

Step 3	**interface** { *interface-id* | *subinterface-id* | *vlan-id* }
	Example:
	`Device(config)# interface FortyGigabitEthernet1/0/4`
	`(config-if)#`
		Enters interface configuration mode and specifies the Ethernet interface, subinterface, or VLAN to be associated with the VRF.

Step 4	**no switchport** **Example:** `Device(config-if)# no switchport`	Set the interface to the routed-interface status erases all Layer 2 configurations.
Step 5	**ip address** *ip-address mask* **Example:** `Device(config-if)# ip address 20.1.1.2 255.255.255.0`	Sets a primary or secondary IP address for an interface.
Step 6	**ip ospf** *process-id* **area** *area-id* **Example:** `Device(config-if)# ip ospf 10 area 0`	Enables OSPF on an interface.

Step 7	**end**
	Example:
	`Device(config-if)# end`
	`Device(config)#`
		Exits interface configuration mode and returns to privileged EXEC mode.

Configuring MPLS VPN InterAS Option B

Configuring InterAS Option B using the Next-Hop-Self Method

To configure interAS Option B on ASBRs using the next-hop-self method, complete the following steps:

Procedure

	Command or Action	Purpose
Step 1	**enable** **Example:**	Enables privileged EXEC mode. • Enter your password if prompted.

	Command or Action	Purpose
	`Device> enable`	
Step 2	**configure terminal** **Example:** `Device# configure terminal`	Enters global configuration mode.
Step 3	**router ospf** *process-id* **Example:** `Device(config)# router ospf 1`	Configures an OSPF routing process and assign a process number.
Step 4	**router-id** *ip-address* **Example:** `Device(config)# router-id 4.1.1.1`	Specifies a fixed router ID.
Step 5	**nsr** **Example:** `Device(config-router)# nsr`	Configures OSPF non-stop routing (NSR).
Step 6	**nsf** **Example:** `Device(config-router)# nsf`	Confgures OSPF non-stop forwarding (NSF).
Step 7	**redistribute bgp** *autonomous-system-number* **Example:** `Device(config-router)# redistribute bgp 200`	Redistributes routes from a BGP autonomous system into and OSPF routing process.

Step 8	**passive-interface** *interface-type interface-number*
	Example:
	`Device(config-router)# passive-interface GigabitEthernet 1/0/10`
	`Device(config-router)# passive-interface Tunnel0`
		Disables Open Shortest Path First (OSPF) routing updates on an interface.

Step 9	**network** *ip-address wildcard-mask* **aread** *area-id* **Example:** `Device(config-router)# network 4.1.1.0 0.0.0.255 area 0`	Defines an interface on which OSPF runs and defines the area ID for that interface.

	Command or Action	Purpose
Step 10	**exit** **Example:** `Device(config-router)# exit`	Exits router configuration mode.
Step 11	**router bgp** *autonomous-system-number* **Example:** `Device(config)# router bgp 200`	Configures a BGP routing process.
Step 12	**bgp router-id** *ip-address* **Example:** `Device(config-router)# bgp router-id 4.1.1.1`	Configures a fixed router ID for the BGP routing process.
Step 13	**bgp log-neighbor changes** **Example:** `Device(config-router)# bgp log-neighbor changes`	Enables logging of BGP neighbor resets.
Step 14	**no bgp default ipv4-unicast** **Example:** `Device(config-router)# no bgp default ipv4-unicast`	Disables advertisement of routing information for address family IPv4.
Step 15	**no bgp default route-target filter** **Example:** `Device(config-router)# no bgp default route-target filter`	Disables automatic BGP route-target community filtering.
Step 16	**neighbor** *ip-address* **remote-as** *as-number* **Example:** `Device(config-router)# neighbor 4.1.1.3 remote-as 200`	Configures an entry to the BGP neighbor table.
Step 17	**neighbor** *ip-address* **update-source** *interface-type interface-number* **Example:** `Device(config-router)# neighbor 4.1.1.3 update-source Loopback0`	Allows Cisco IOS software to use a specific operational interface for TCP connections by the BGP sessions.

	Command or Action	Purpose
Step 18	**neighbor** *ip-address* **remote-as** *as-number* **Example:** `Device(config-router)# neighbor 4.1.1.3 remote-as 300`	Configures an entry to the BGP neighbor table.
Step 19	**address-family** *ipv4* **Example:** `Device(config-router)# address-family ipv4`	Enters address family configuration mode for configuring BGP routing sessions that use standard IP Version 4 address prefixes.
Step 20	**neighbor** *ip-address* **activate** **Example:** `Device(config-router-af)# neighbor 10.32.1.2 activate`	Enables the exchange of information with a BGP neighbor.
Step 21	**neighbor** *ip-address* **send-label** **Example:** `Device(config-router-af)# neighbor 10.32.1.2 send-label`	Sends MPLS labels with BGP routes to a neighboring BGP router.
Step 22	**exit address-family** **Example:** `Device(config-router-af)# exit address-family`	Exits BGP address-family submode.
Step 23	**address-family** *vpnv4* **Example:** `Device(config-router)# address-family vpnv4`	Configures the device in address family configuration mode for configuring routing sessions, such as BGP, that use standard VPNv4 address prefixes.
Step 24	**neighbor** *ip-address* **activate** **Example:** `Device(config-router-af)# neighbor 4.1.1.3 activate`	Enables the exchange of information with a BGP neighbor.
Step 25	**neighbor** *ip-address* **send-community extended** **Example:** `Device(config-router-af)# neighbor 4.1.1.3 send-community extended`	Specifies that a communities attribute should be sent to a BGP neighbor.

	Command or Action	Purpose
Step 26	**neighbor** *ip-address* **next-hop-self** **Example:** `Device(config-router-af)# neighbor 4.1.1.3 next-hop-self`	Configure a router as the next hop for a BGP-speaking neighbor. This is the command that implements the next-hop-self method.
Step 27	**neighbor** *ip-address* **activate** **Example:** `Device(config-router-af)# neighbor 10.30.1.2 activate`	Enables the exchange of information with a BGP neighbor.
Step 28	**neighbor** *ip-address* **send-community extended** **Example:** `Device(config-router-af)# neighbor 10.30.1.2 send-community extended`	Specifies that a communities attribute should be sent to a BGP neighbor.
Step 29	**exit address-family** **Example:** `Device(config-router-af)# exit address-family`	Exits BGP address-family submode.
Step 30	**bgp router-id** *ip-address* **Example:** `Device(config-router)# bgp router-id 4.1.1.3`	Configures a fixed router ID for the BGP routing process.
Step 31	**bgp log-neighbor changes** **Example:** `Device(config-router)# bgp log-neighbor changes`	Enables logging of BGP neighbor resets.
Step 32	**neighbor** *ip-address* **remote-as** *as-number* **Example:** `Device(config-router)# neighbor 4.1.1.1 remote-as 200`	Configures an entry to the BGP neighbor table.
Step 33	**neighbor** *ip-address* **update-source** *interface-type interface-number* **Example:** `Device(config-router)# neighbor 4.1.1.1 update-source Loopback0`	Allows Cisco IOS software to use a specific operational interface for TCP connections by the BGP sessions.

	Command or Action	Purpose
Step 34	**address-family** *vpnv4* **Example:** `Device(config-router)# address-family vpnv4`	Configures the device in address family configuration mode for configuring routing sessions, such as BGP, that use standard VPNv4 address prefixes.
Step 35	**neighbor** *ip-address* **activate** **Example:** `Device(config-router-af)# neighbor 4.1.1.1 activate`	Enables the exchange of information with a BGP neighbor.
Step 36	**neighbor** *ip-address* **send-community extended** **Example:** `Device(config-router-af)# neighbor 4.1.1.1 send-community extended`	Specifies that a communities attribute should be sent to a BGP neighbor.
Step 37	**exit address-family** **Example:** `Device(config-router-af)# exit address-family`	Exits BGP address-family submode.

Configuring InterAS Option B using Redistribute Connected Method

To configure interAS Option B on ASBRs using the redistribute connected method, complete the following steps:

Procedure

	Command or Action	Purpose
Step 1	**enable** **Example:** `Device> enable`	Enables privileged EXEC mode. • Enter your password if prompted.
Step 2	**configure terminal** **Example:** `Device# configure terminal`	Enters global configuration mode.
Step 3	**router ospf** *process-id* **Example:**	Configures an OSPF routing process and assign a process number.

	Command or Action	Purpose
	`Device(config)# router ospf 1`	
Step 4	**router-id** *ip-address* **Example:** `Device(config)# router-id 5.1.1.1`	Specifies a fixed router ID.
Step 5	**nsr** **Example:** `Device(config-router)# nsr`	Configures OSPF non-stop routing (NSR).
Step 6	**nsf** **Example:** `Device(config-router)# nsf`	Confgures OSPF non-stop forwarding (NSF).
Step 7	**redistribute connected** **Example:** `Device(config-router)# redistribute connected`	Redistributes the next hop address of the remote ASBR into the local IGP. This is the command that implements redistribute connected method.

Step 8	**passive-interface** *interface-type interface-number*
	Example:
	`Device(config-router)# passive-interface GigabitEthernet 1/0/10`
	`Device(config-router)# passive-interface Tunnel0`
		Disables Open Shortest Path First (OSPF) routing updates on an interface.

Step 9	**network** *ip-address wildcard-mask* **aread** *area-id* **Example:** `Device(config-router)# network 5.1.1.0 0.0.0.255 area 0`	Defines an interface on which OSPF runs and defines the area ID for that interface.
Step 10	**exit** **Example:** `Device(config-router)# exit`	Exits router configuration mode.
Step 11	**router bgp** *autonomous-system-number* **Example:** `Device(config)# router bgp 300`	Configures a BGP routing process.

	Command or Action	Purpose
Step 12	**bgp router-id** *ip-address* **Example:** `Device(config-router)# bgp router-id 5.1.1.1`	Configures a fixed router ID for the BGP routing process.
Step 13	**bgp log-neighbor changes** **Example:** `Device(config-router)# bgp log-neighbor changes`	Enables logging of BGP neighbor resets.
Step 14	**no bgp default ipv4-unicast** **Example:** `Device(config-router)# no bgp default ipv4-unicast`	Disables advertisement of routing information for address family IPv4.
Step 15	**no bgp default route-target filter** **Example:** `Device(config-router)# no bgp default route-target filter`	Disables automatic BGP route-target community filtering.
Step 16	**neighbor** *ip-address* **remote-as** *as-number* **Example:** `Device(config-router)# neighbor 5.1.1.3 remote-as 300`	Configures an entry to the BGP neighbor table.
Step 17	**neighbor** *ip-address* **update-source** *interface-type interface-number* **Example:** `Device(config-router)# neighbor 4.1.1.3 update-source Loopback0`	Allows Cisco IOS software to use a specific operational interface for TCP connections by the BGP sessions.
Step 18	**neighbor** *ip-address* **remote-as** *as-number* **Example:** `Device(config-router)# neighbor 10.30.1.2 remote-as 200`	Configures an entry to the BGP neighbor table.
Step 19	**address-family** *vpnv4* **Example:** `Device(config-router)# address-family vpnv4`	Configures the device in address family configuration mode for configuring routing sessions, such as BGP, that use standard VPNv4 address prefixes.

	Command or Action	Purpose
Step 20	**neighbor** *ip-address* **activate** **Example:** `Device(config-router-af)# neighbor 5.1.1.3 activate`	Enables the exchange of information with a BGP neighbor.
Step 21	**neighbor** *ip-address* **send-community extended** **Example:** `Device(config-router-af)# neighbor 5.1.1.3 send-community extended`	Specifies that a communities attribute should be sent to a BGP neighbor.
Step 22	**neighbor** *ip-address* **activate** **Example:** `Device(config-router-af)# neighbor 10.30.1.1 activate`	Enables the exchange of information with a BGP neighbor.
Step 23	**neighbor** *ip-address* **send-community extended** **Example:** `Device(config-router-af)# neighbor 10.30.1.2 send-community extended`	Specifies that a communities attribute should be sent to a BGP neighbor.
Step 24	**exit address-family** **Example:** `Device(config-router-af)# exit address-family`	Exits BGP address-family submode.
Step 25	**mpls ldp router-id** *interface-id* [**force**] **Example:** `Device(config-router)# mpls ldp router-id Loopback0 force`	Specifies the preferred interface for determining the LDP router ID.

Verifying MPLS VPN InterAS Options Configuration

To verify InterAS option B configuration information, perform one of the following tasks:

Command	Purpose
ping *ip-address* **source** *interface-type*	Checks the accessibility of devices. Use this command to check the connection between CE1 and CE2 using the loopback interface.

Command	Purpose
show bgp vpnv4 unicast labels	Displays incoming and outgoing BGP labels.
show mpls forwarding-table	Display the contents of the MPLS Label Forwarding Information Base.
show ip bgp	Displays entries in the BGP routing table.
show { **ip** | **ipv6** } **bgp** [**vrf** *vrf-name*]	Displays information about BGP on a VRF.
show ip route [*ip-address* [*mask*]] [*protocol*] **vrf** *vrf-name*	Displays the current state of the routing table. Use the ip-address argument to verify that CE1 has a route to CE2. Verify the routes learned by CE1. Make sure that the route for CE2 is listed.
show { **ip** | **ipv6** } **route vrf** *vrf-name*	Displays the IP routing table that is associated with a VRF. Check that the loopback addresses of the local and remote CE routers are in the routing table of the PE routers.
show running-config bgp	Displays the running configuration for BGP.
show running-config vrf *vrf-name*	Displays the running configuration for VRFs.
show vrf *vrf-name* **interface** *interface-type interface-id*	Verifies the route distinguisher (RD) and interface that are configured for the VRF.
trace destination [**vrf** *vrf-name*]	Discovers the routes that packets take when traveling to their destination. The **trace** command can help isolate a problem if two routers cannot communicate.

Feature History for MPLS VPN InterAS Options

This table provides release and related information for features explained in this module.

These features are available on all releases subsequent to the one they were introduced in, unless noted otherwise.

.

Release	Feature	Feature Information
Cisco IOS XE Gibraltar 16.11.1	MPLS VPN InterAS Option B	InterAS Options use iBGP and eBGP peering to allow VPNs in different AS to communicate with each other. In an interAS option B network, ASBR ports are connected by one or more interfaces that are enabled to receive MPLS traffic.
Cisco IOS XE Amsterdam 17.1.1	MPLS VPN InterAS Option A	MPLS VPN InterAS Option A is the simplest to configure of the available InterAS Options. This option provides back to back virtual routing and forwarding (VRF) connectivity. Here, MPLS VPN providers exchange routes across VRF interfaces.

Use Cisco Feature Navigator to find information about platform and software image support. To access Cisco Feature Navigator, go to http://www.cisco.com/go/cfn.
