Hardware Features in Cisco IOS XE 17.14.1

Feature Name	Description
Cisco 100GBASE QSFP-100G Module	<p>Supported transceiver module product number:</p> <ul style="list-style-type: none"> • QSFP-100G-DR-S <p>Compatible Supervisor modules:</p> <ul style="list-style-type: none"> • C9400X-SUP-2 • C9400X-SUP-2XL <p>For information about the module, see Cisco 100GBASE QSFP-100G Modules Data Sheet. For information about device compatibility, see the Transceiver Module Group (TMG) Compatibility Matrix.</p>

Software Features in Cisco IOS XE 17.14.1

Feature Name	Description
BGP EVPN VXLAN <ul style="list-style-type: none"> • fast-detection command • show lisp instance {ipv4 ipv6 ethernet} command 	<p>The following BGP EVPN VXLAN features are introduced in this release:</p> <ul style="list-style-type: none"> • fast-detection command: fast-detection command enables SD-Access support for fast wireless roaming of end points. • show lisp instance {ipv4 ipv6 ethernet} command: The output of show lisp instance {ipv4 ipv6 ethernet} command is enhanced to display the affinity ID for the local device.

Feature Name	Description
Distributed Processing for IPsec	Distributed processing increases the IPsec throughput which was earlier limited to 100G. On the Cisco Catalyst 9400X Series Switches, IPsec throughput is increased to 300G.
IP SLA Probe Configuration Modification Capability	Introduces support to reconfigure the parameters of a scheduled IP SLA session using the configure replace command.
mDNS Protocol Options	The mDNS protocol option is introduced in the device sensor filter spec command. This allows the user to apply the mDNS protocol TLV filter list to the device sensor output. The device sensor filter list mdns command is introduced to create a mDNS protocol filter containing a list of Type-Length-Value (TLV) fields that can be included or excluded in the device sensor output. The tlv command is introduced to configure the list of Type Length Value (TLVs) in mDNS protocol configuration mode.
NAT SSO support with StackWise Virtual	Introduces support for synchronization of the NAT state information across active and standby devices so that if the active device fails, the standby device can take over smoothly and update its software without interrupting In-Service Software Upgrade (ISSU).
OSPF Local RIB Path Limit Enhancement	The OSPF Local RIB Path Limit feature is designed to restrict the number of paths stored by OSPF in its Local RIB, offering enhanced control over network path selection. With the maximum-paths command enabled, the network administrators can now control the number of paths OSPF installs in the Local RIB for a specific prefix.
Programmability: <ul style="list-style-type: none"> • gNMI: Stream Subscriptions with on-Change Mode • gNMI: SubscribeResponse with sync_response • YANG Data Models • YANG Support for Mutiple Next-Hops 	The following programmability features are introduced in this release: <ul style="list-style-type: none"> • gNMI: Stream Subscriptions with on-Change Mode: gNMI telemetry supports on-change subscriptions on the same set of models as other telemetry protocols. • gNMI: SubscribeResponse with sync_response: The sync_response is a boolean field that is part of the SubscribeResponse response message. The sync_response message is sent after the first update message. • YANG Data Models: For the list of Cisco IOS XE YANG models available with this release, navigate to: https://github.com/YangModels/yang/tree/main/vendor/cisco/xe/17141. • YANG Support for Mutiple Next-Hops: A new container is added under the next-hop-options choice node to retrieve all next-hops for a given route or prefix. Also, an uptime leaf node is added to provide the timestamp for each next hop.
show reload history command	The show reload history command is introduced. It displays the reason for device reload and its history.

New on the WebUI

There are no new WebUI features in this release.

Hardware and Software Behavior Changes in Cisco IOS XE 17.14.1

Behavior Change	Description
Single Supervisor Power Budget Mode	Single Supervisor power budget mode is now available on the Catalyst 9400 Series Switches running in Stackwise Virtual mode.
show crypto engine accelerator statistic command	The show crypto engine accelerator statistic command is now available on the Cisco Catalyst 9400 Series Switches.
Switch Integrated Security Features (SISF) – Enhanced Throttling Limit for ARP Packets	<p>In Cisco IOS XE Amsterdam 17.3.1, a throttling limit was introduced to mitigate high CPU utilization scenarios. In a five second window, a maximum of 50 ARP broadcast packets per source IP were processed by SISF.</p> <p>In Cisco IOS XE 17.14.1, this limit is increased to a maximum of 100 ARP broadcast packets for each source IP. When the limit is reached, incoming ARP packets are dropped.</p>
