Information About SSH Algorithms for Common Criteria Certification

This section provides information about the Secure Shell (SSH) Algorithms for Common Criteria Certification, the Cisco IOS SSH Server Algorithms and Cisco IOS SSH Client Algorithms.

SSH Algorithms for Common Criteria Certification

A Secure Shell (SSH) configuration enables a Cisco IOS SSH server and client to authorize the negotiation of only those algorithms that are configured from the allowed list. If a remote party tries to negotiate using only those algorithms that are not part of the allowed list, the request is rejected and the session is not established.

Cisco IOS SSH Server Algorithms

Cisco IOS secure shell (SSH) servers support the encryption algorithms (Advanced Encryption Standard Counter Mode [AES-CTR], AES Cipher Block Chaining [AES-CBC], Triple Data Encryption Standard [3DES]) in the following order:

Supported Default Encryption Order:

1. aes128-gcm
2. aes256-gcm
3. aes128-ctr
4. aes192-ctr
5. aes256-ctr
Supported Non-Default Encryption Order:
1. aes128-cbc
2. aes192-cbc
3. aes256-cbc
4. 3des

Cisco IOS SSH clients support the Message Authentication Code (MAC) algorithms in the following order:

Supported Default HMAC order:
1. hmac-sha2-256
2. hmac-sha2-512

Cisco IOS SSH clients support only one host key algorithm and do not need a CLI configuration.

Supported Default Host Key order:
1. x509v3-ssh-rsa
2. ssh-rsa

Cisco IOS SSH Client Algorithms

Cisco IOS secure shell (SSH) clients support the encryption algorithms (Advanced Encryption Standard counter mode [AES-CTR], AES Cipher Block Chaining [AES-CBC], Triple Data Encryption Standard [3DES]) in the following order:

Supported Default Encryption Order:
1. aes128-gcm
2. aes256-gcm
3. aes128-ctr
4. aes192-ctr
5. aes256-ctr

Supported Non-Default Encryption Order:
1. aes128-cbc
2. aes192-cbc
3. aes256-cbc
4. 3des

Cisco IOS SSH clients support the Message Authentication Code (MAC) algorithms in the following order:

Supported Default HMAC order:
1. hmac-sha2-256
2. hmac-sha2-512

Cisco IOS SSH clients support only one host key algorithm and do not need a CLI configuration.

Supported Default Host Key order:
1. x509v3-ssh-rsa
2. ssh-rsa

How to Configure SSH Algorithms for Common Criteria Certification

This section provides information on how to configure and troubleshoot:
- Encryption key algorithm for a Cisco IOS SSH server and client
- MAC algorithm for a Cisco IOS SSH server and client
- Host Key algorithm for a Cisco IOS SSH server

Configuring an Encryption Key Algorithm for a Cisco IOS SSH Server and Client

**Procedure**

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
</table>
| Step 1 | enable | Enables privileged EXEC mode.
<p>| | Example: Device&gt; enable | Enter your password if prompted. |
| Step 2 | configure terminal | Enters global configuration mode. |
| | Example: Device# configure terminal | |
| Step 3 | <code>ip ssh {server | client} algorithm encryption {aes128-ctr | aes192-ctr | aes256-ctr | aes128-cbc | aes192-cbc | aes256-cbc | 3des-cbc}</code> | Defines the order of encryption algorithms in the SSH server and client. This order is presented during algorithm negotiation. |
| | Example: Device(config)# <code>ip ssh server algorithm encryption aes128-ctr aes192-ctr</code> | Note: The Cisco IOS SSH server and client must have at least one configured encryption algorithm. |</p>
<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>aes256-ctr aes128-cbc 3des-cbc aes192-cbc aes256-cbc</td>
<td>Note To disable one algorithm from the previously configured algorithm list, use the no form of this command. To disable more than one algorithm, use the no form of this command multiple times with different algorithm names.</td>
</tr>
<tr>
<td>Device(config)# ip ssh client algorithm encryption aes128-ctr aes192-ctr aes256-ctr aes128-cbc 3des-cbc aes192-cbc aes256-cbc</td>
<td></td>
</tr>
</tbody>
</table>

**Step 4**

**end**

**Example:**

```
Device(config)# end
```

Exits global configuration mode and returns to privileged EXEC mode.

### Troubleshooting Tips

If you try to disable the last encryption algorithm in the configuration, the following message is displayed and the command is rejected:

```
% SSH command rejected: All encryption algorithms cannot be disabled
```

### Configuring a MAC Algorithm for a Cisco IOS SSH Server and Client

**Procedure**

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong></td>
<td>Enables privileged EXEC mode.</td>
</tr>
<tr>
<td><code>enable</code></td>
<td>• Enter your password if prompted.</td>
</tr>
<tr>

**Troubleshooting Tips**

If you try to disable the last host key algorithm in the configuration, the following message is displayed and the command is rejected:
Configuration Examples For SSH Algorithms for Common Criteria Certification

This section provides configuration examples for SSH algorithms for common certification.

Example: Configuring Encryption Key Algorithms for a Cisco IOS SSH Server

Device> enable
Device# configure terminal
Device(config)# ip ssh server algorithm encryption aes128-ctr aes192-ctr aes256-ctr aes128-cbc aes192-cbc aes256-cbc 3des
Device(config)# end

Example: Configuring Encryption Key Algorithms for a Cisco IOS SSH Client

Device> enable
Device# configure terminal
Device(config)# ip ssh client algorithm encryption aes128-ctr aes192-ctr aes256-ctr aes128-cbc aes192-cbc aes256-cbc 3des
Device(config)# end

Example: Configuring MAC Algorithms for a Cisco IOS SSH Server

Device> enable
Device# configure terminal
Device(config)# ip ssh server algorithm mac hmac-sha2-256 hmac-sha2-512
Device(config)# end

Example: Configuring Host Key Algorithms for a Cisco IOS SSH Server

Device> enable
Device# configure terminal
Device(config)# ip ssh server algorithm hostkey x509v3-ssh-rsa ssh-rsa
Device(config)# end
Verifying SSH Algorithms for Common Criteria Certification

Procedure

**Step 1**  
**enable**  
Enables privileged EXEC mode.  
- Enter your password if prompted.

*Example:*

```
Device> enable
```

**Step 2**  
**show ip ssh**  
Displays configured Secure Shell (SSH) encryption, host key, and Message Authentication Code (MAC) algorithms.

*Example:*

The following sample output from the `show ip ssh` command shows the encryption algorithms configured in the default order:

```
Device# show ip ssh
```

The following sample output from the `show ip ssh` command shows the MAC algorithms configured in the default order:

```
Device# show ip ssh
MAC Algorithms: hmac-sha2-256, hmac-sha2-512
```

The following sample output from the `show ip ssh` command shows the host key algorithms configured in the default order:

```
Device# show ip ssh
Hostkey Algorithms: x509v3-ssh-rsa, ssh-rsa
```
Feature Information for Secure Shell Algorithms for Common Criteria Certification

This table provides release and related information for features explained in this module.

These features are available on all releases subsequent to the one they were introduced in, unless noted otherwise.

<table>
<thead>
<tr>
<th>Release</th>
<th>Feature</th>
<th>Feature Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cisco IOS XE Everest 16.5.1a</td>
<td>Secure Shell Algorithms for Common Criteria Certification</td>
<td>The SSH Algorithms for Common Criteria Certification feature provides the list and order of the algorithms that are allowed for Common Criteria Certification. This module describes how to configure the encryption, Message Authentication Code (MAC), and host key algorithms for a secure shell (SSH) server and client so that SSH connections can be limited on the basis of the allowed algorithms list.</td>
