Configuring Tenant Routed Multicast

Restrictions for Tenant Routed Multicast

- Layer 2 tenant routed multicast (TRM) is not supported. Only Layer 3 TRM is supported.

- TRM uses only default multicast distribution tree (MDT).

- TRM is supported for IPv4 and IPv6 traffic in the overlay network and on IPv4 underlay network.

- In the underlay network, TRM is supported only in the PIM-SM mode.

- In the underlay network, the spine switch should be configured as the rendezvous point (RP).

 The RP for the underlay network can also be elected using PIM Bootstrap Router (BSR) or Auto-RP.

Information about Tenant Routed Multicast

TRM enables multicast forwarding in a VXLAN fabric that uses a BGP-based EVPN control plane. TRM provides multi-tenancy aware multicast forwarding between senders and receivers within the same or different subnets local or across VTEPs.

TRM enables the delivery of a customer's IP multicast traffic in a multi-tenant fabric in an efficient and resilient manner. The delivery of TRM improves Layer 3 overlay multicast functionality in the networks. With TRM enabled, multicast forwarding in the underlay is leveraged to replicate VXLAN-encapsulated routed multicast traffic. A default MDT is built per-VRF. This is in addition to the existing multicast groups for broadcast and unknown unicast traffic in a Layer 2 virtual network instance (VNI), and for Layer 2 multicast replication group. The individual multicast group addresses in the overlay are mapped to the respective underlay multicast address for replication and transport. The advantage of using a BGP-based approach is that it allows the BGP EVPN VXLAN fabric with TRM to operate as fully distributed overlay rendezvous point (RP), with the RP presence on every edge device or VTEP.

A multicast-enabled data center fabric is typically part of an overall multicast network. Multicast sources, receivers, and multicast rendezvous points, might reside inside the data center but might also be inside the campus or externally reachable via the WAN. Thus, TRM allows a seamless integration with existing multicast networks with newer enterprise fabric.

Figure 1: Tenant Routed Multicast Topology
For IPv4 and IPv6 multicast traffic, TRM uses BGP EVPN and multicast virtual private network (MVPN) routes to perform multicast routing. All the VTEPs in the network do not need to be BGP peers. There can be BGP peering between the VTEPs and the spine switches with the spine switches acting as route reflectors. Source reachability is distributed via EVPN route type 2 and EVPN route type 5 in the fabric. RPF is installed based on these routes. Source-active and receiver-join information is carried in the MVPN address family using route types 5, 6, and 7.

In an EVPN VXLAN network, TRM is supported in the overlay network in PIM sparse mode and PIM source specific multicast (SSM) mode. VTEPs have BGP peering in MVPN as well as EVPN address families to exchange routes for TRM.

TRM in PIM Sparse Mode

PIM-SM distributes information about active sources by forwarding data packets on the shared tree. Because PIM-SM uses shared trees, it requires the use of a rendezvous point (RP). An RP is used for the initial convergence of multicast traffic between sources and receivers.

The following section describes the different ways the RP can be configured for TRM in PIM sparse mode.

RP Placement

For TRM in PIM sparse mode, the overlay RP can be configured either within the BGP EVPN VXLAN fabric, or outside of the fabric.

Anycast RP in the Overlay Network

In Anycast RP in the overlay network, every VTEP acts as an RP.

Figure 2: Anycast RP in the Overlay Network
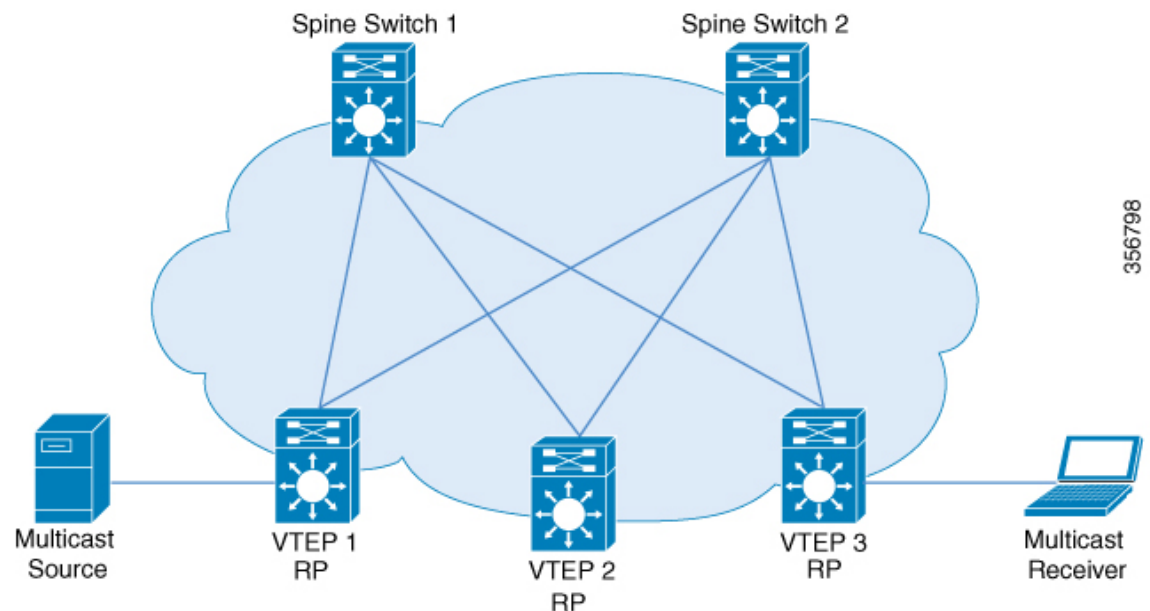

RP Inside the BGP EVPN VXLAN Fabric

In a TRM scenario where all sources and receivers are within the EVPN VXLAN network, the overlay RP can be placed on a border spine or on a VTEP.

Figure 3: Border Spine Switch as an RP
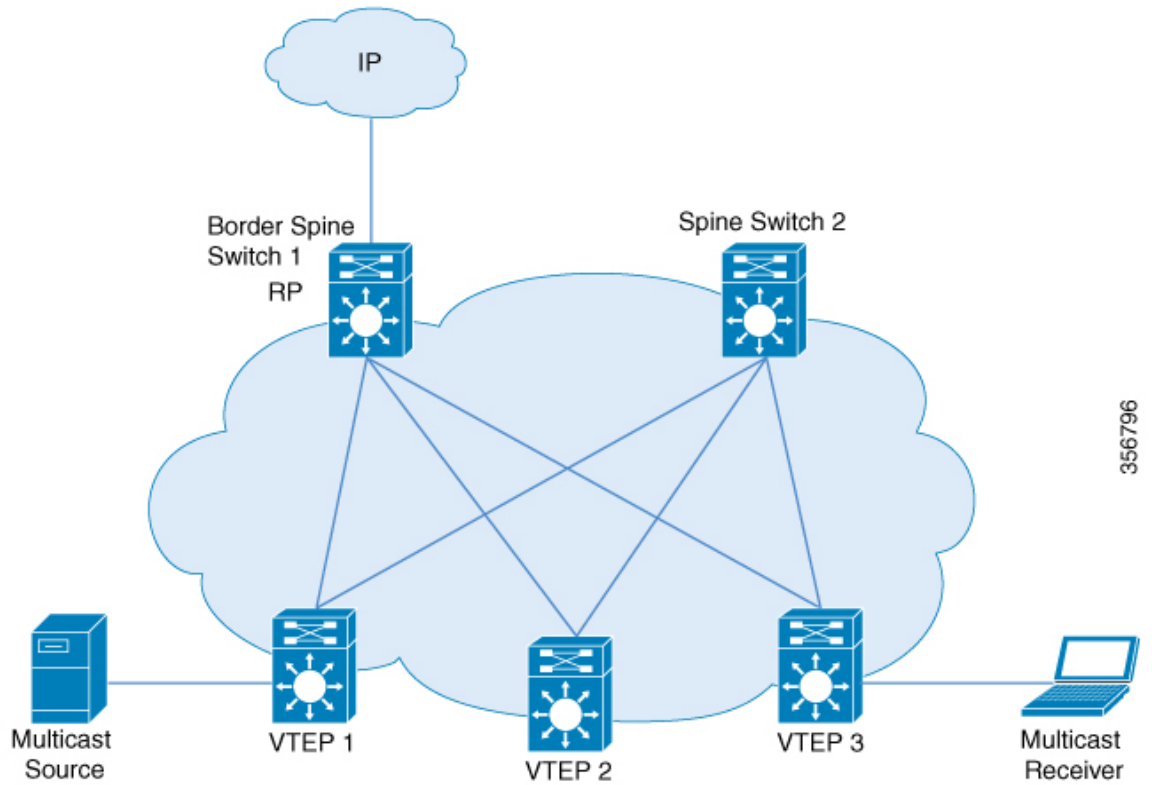

Figure 4: VTEP as an RP
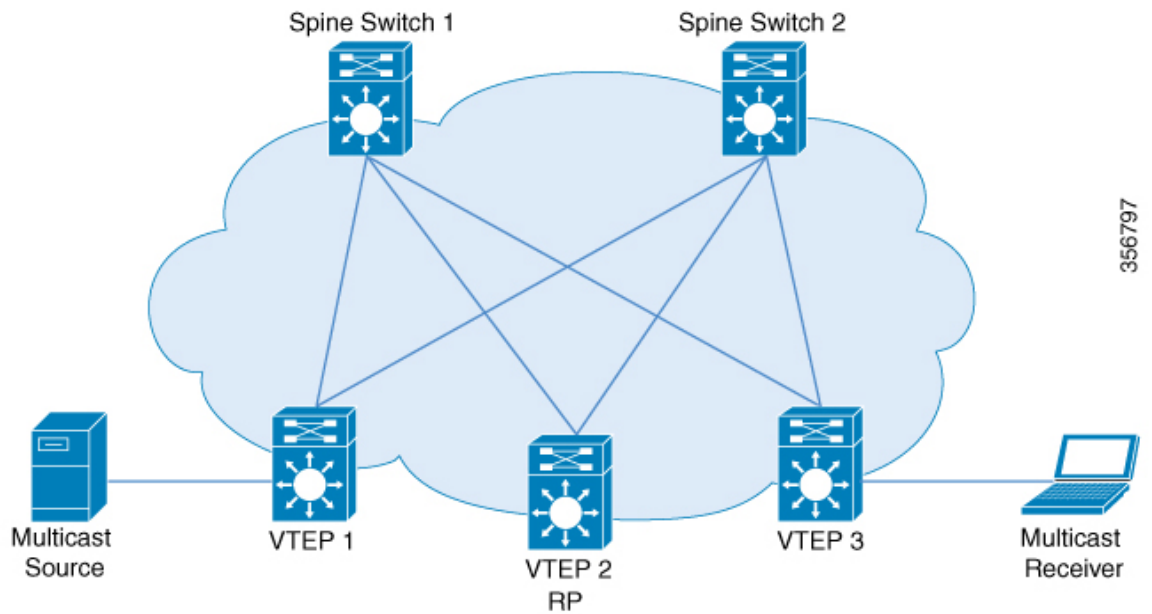

RP Outside the BGP EVPN VXLAN Fabric

In a TRM scenario where sources and receivers need to interwork with the overlay network and the EVPN VXLAN network, the RP can be placed on an external router connected to a VTEP.

Figure 5: RP Outside the BGP EVPN VXLAN Fabric
In PIM sparse mode, TRM can be configured in three different ways depending on how the RP is configured:

  • PIM Sparse Mode with Anycast RP

  • PIM Sparse Mode with RP Inside the BGP EVPN VXLAN Fabric

  • PIM Sparse Mode with RP Outside the BGP EVPN VXLAN Fabric

PIM Sparse Mode with Anycast RP

In PIM sparse mode with anycast RP, every VTEP in the EVPN VXLAN network acts as an RP in the overlay network for its respective multicast group. The RPs in the underlay network must be configured on the spine switches.

When a VTEP discovers a source device, it sends Source A-D Routes (MVPN route type 5) to all the other VTEPs. Based on these Source A-D routes, the other VTEPs send (S,G) join requests as MVPN route type 7 to the source VTEP.

Figure 6: PIM Sparse Mode with Anycast RP
In PIM sparse mode with anycast RP, the following sequence of events occurs:

1. Receiver sends (*,G) IGMP Join to VTEP 3. Since VTEP 3 is an RP, (*,G) is created at VTEP 3.

2. The source device starts streaming data and (S,G) is created on VTEP 1.

3. VTEP 1 performs self-source-registration since it is also an RP.

   The source VTEP (VTEP 1) advertises Source A-D Routes (also called MVPN route type 5) for the (S,G) to all the other VTEPs which are BGP peers in the MVPN address family.

4. VTEP 2 and VTEP 3 receive and install the Source A-D Route for the (S,G).

(S,G) is created at VTEP 3. VTEP 3 now has an overlay route for the (S,G) and also has a unicast route to the source device from the EVPN Control plane. It then sends an MVPN route type 7 (S,G) BGP join to VTEP 1 and starts accepting traffic.

5. VTEP 1 receives and installs MVPN route type 7 from VTEP 3. It uses the Layer 3 VNI's SVI as the forwarding interface for the (S,G) and starts forwarding traffic.

PIM Sparse Mode with RP Inside the BGP EVPN VXLAN Fabric

In PIM sparse mode with RP inside the BGP EVPN VXLAN Fabric, the RP can be any VTEP in the EVPN VXLAN network.

Figure 7: PIM Sparse Mode with RP Inside the BGP EVPN VXLAN Fabric
The following sequence of events occurs when TRM is enabled in PIM sparse mode with the RP inside the fabric:

1. Receiver sends (*,G) IGMP Join to VTEP 3. (*,G) is created at VTEP 3.

2. VTEP 3 sends MVPN route type 6 to VTEP 2 which is the RP. (*,G) is created at VTEP 2.

3. The source device starts streaming data and (S,G) is created on VTEP 1.

4. VTEP 1 performs source-registration at VTEP 2 since it is the RP. (S,G) is created at VTEP 2.

5. Since the RP has a receiver for (S,G), it sends an MVPN route type 7 to VTEP 1 and forwards PIM-register traffic towards receivers in the (*,G) tree.

6. VTEP 1 receives and installs MVPN route type 7 from VTEP 2. It uses the Layer 3 VNI's SVI as the forwarding interface for (S,G).

   The source VTEP (VTEP 1) advertises Source A-D Routes for (S,G) to all the other VTEPs which are BGP peers in the MVPN address family.

   VTEP 2 and VTEP 3 receive and install the Source A-D Routes for (S,G).

7. (S,G) is created at VTEP 3. VTEP 3 now has an overlay route for (S,G) and also has a unicast route to the source device from the EVPN Control plane. It then sends an MVPN route type 7 to VTEP 1 and starts accepting traffic.

   VTEP 1 receives and installs MVPN route type 7 from VTEP 3 and starts forwarding traffic.

Note For the receiver VTEP to be able to send an MVPN route type 7 to the source VTEP, there can be two triggers:

- The (*,G) packets being forwarded to the receiver VTEP from the RP.

- The Source A-D route received from the source VTEP.

Once either of these are received, the receiver VTEP sends MVPN route type 7 to the source VTEP.

PIM Sparse Mode with RP Outside the BGP EVPN VXLAN Fabric

In PIM sparse mode with RP outside the BGP EVPN VXLAN Fabric, the RP can be a PIM router behind any VTEP in the EVPN VXLAN network.

Note When the RP is configured outside the BGP EVPN VXLAN fabric, TRM in PIM sparse mode functions the same way as it does when the RP is inside the fabric.

Figure 8: PIM Sparse Mode with RP Outside the BGP EVPN VXLAN Fabric
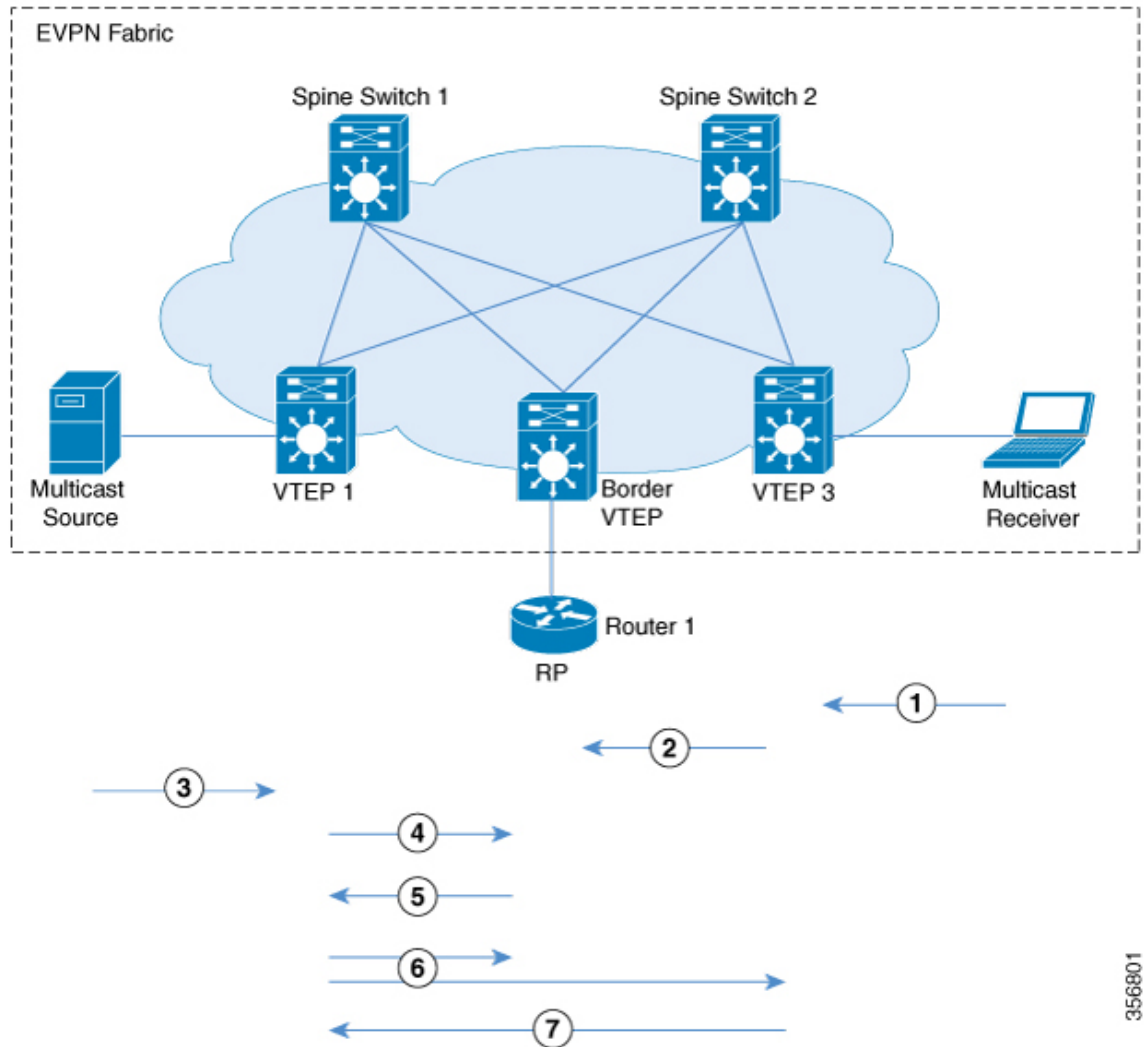

The chronological traffic flow from the image above is as follows:

1. Receiver sends (*,G) IGMP Join to VTEP 3. (*,G) is created at VTEP 3.

2. VTEP3 sends and MVPN route type 6 to VTEP 2 which has the RP in its overlay network. This route is converted to a (*,G) join towards the RP by VTEP2.

3. The source device starts streaming data and (S,G) is created on VTEP 1.

4. VTEP1 performs source registration with RP. (S,G) join from RP creates (S,G) state at VTEP 2.

5. Since the RP has a receiver for (S,G), it sends an MVPN route type 7 to VTEP 1 and forwards PIM-register traffic towards receivers in the (*,G) tree.

6. VTEP 1 receives and installs MVPN route type 7 from VTEP 2. It uses the Layer 3 VNI's SVI as the forwarding interface for (S,G).

The source VTEP (VTEP 1) advertises Source A-D Routes for (S,G) to all the other VTEPs which are BGP peers in the MVPN address family.

VTEP 2 and VTEP 3 receive and install the Source A-D Routes for (S,G).

7. (S,G) is created at VTEP 3. VTEP 3 now has an overlay route for (S,G) and also has a unicast route to the source device from the EVPN Control plane. It then sends an MVPN route type 7 to VTEP 1 and starts accepting traffic.

VTEP 1 receives and installs MVPN route type 7 from VTEP 3 and starts forwarding traffic.

Note   For the receiver VTEP to be able to send an MVPN route type 7 to the source VTEP, there can be two triggers:

  • The (*,G) packets being forwarded to the receiver VTEP from the RP.

  • The Source A-D route received from the source VTEP.

Once either of these are received, the receiver VTEP sends MVPN route type 7 to the source VTEP.

See for the sequence of events that happen when TRM is enabled in PIM sparse mode with the RP outside the fabric.

TRM in PIM Source Specific Mode

In PIM source specific mode, the Source A-D route (MVPN route type 5) is not needed for the multicast convergence to happen. The receiver VTEP does not wait to receive the Source A-D route to send the MVPN route type 7.

Figure 9: PIM Source Specific Mode
In PIM Source Specific Mode, the following sequence of events occurs:

1. When the source device sends a unicast packet, VTEP 1 sends out EVPN routes to all the other VTEPs, letting them know that the packet is from the source device.

    The receiver sends an (S,G) IGMP join towards VTEP 3 and an (S,G) entry is created.

2. VTEP 3 performs an RPF lookup for the source device. If the SVI of the Layer 3 VNI is found to be the RPF interface, VTEP 3 sends MVPN route type 7 towards VTEP 1.

3. VTEP 1 receives and installs the MVPN route type 7. VTEP 1 creates an (S,G) entry, using the Layer 3 VNI's SVI as the forwarding interface for (S,G).

    The source device sends (S,G) data to VTEP 1.

4. VTEP 1 starts forwarding the traffic to VTEP 3.

How to Configure Tenant Routed Multicast

Prerequisites to Configuring TRM

Before configuring TRM, ensure that EVPN VXLAN Layer 2 and Layer 3 Overlay networks have been configured. See How to Configure EVPN VXLAN Integrated Routing and Bridging for detailed steps to configure Layer 2 and Layer 3 overlay networks.

Perform the following set of procedures to configure TRM in an EVPN VXLAN network:

Configuring TRM with PIM Sparse Mode

To configure TRM with PIM Sparse Mode, perform the following tasks:

Configuring the TRM Multicast Distribution Tree in the VRF

To configure the TRM MDT, perform the following steps:

Procedure

	Command or Action	Purpose
Step 1	**enable** **Example:** `Device> enable`	Enables privileged EXEC mode. Enter your password, if prompted.
Step 2	**configure terminal** **Example:** `Device# configure terminal`	Enters global configuration mode.
Step 3	**vrf definition** *vrf-name* **Example:** `Device(config)# vrf definition green`	Names the VRF and enters VRF configuration mode.
Step 4	**address-family** {**ipv4** | **ipv6** } **Example:** `Device(config-vrf)# address-family ipv4`	Specifies the VRF and enters VRF address family configuration mode. • Use the **ipv4** keyword to configure IPv4 address family. • Use the **ipv6** keyword to configure IPv6 address family.
Step 5	**mdt default vxlan** *group-address* **Example:** `Device(config-vrf-af)# mdt default vxlan 225.2.2.2`	Configures the multicast group address range for default MDT groups for a VRF in a VXLAN.

	Command or Action	**Purpose**
Step 6	**mdt auto-discovery vxlan** [**inter-as**] **Example:** Device(config-vrf-af)# **mdt auto-discovery vxlan**	Enables VXLAN with BGP auto-discovery. Use the **inter-as** keyword for the MVPN address family routes to cross the BGP autonomous system (AS) boundaries.
Step 7	**mdt overlay use-bgp** [**spt-only**] **Example:** Device(config-vrf-af)# **mdt overlay use-bgp spt-only**	Configures the mechanism that is used by TRM in PIM sparse mode to operate within the BGP EVPN VXLAN fabric. Specifies BGP as the overlay protocol. • Use the **mdt overlay use-bgp spt-only** command to configure PIM sparse mode with anycast RP. • Use the **mdt overlay use-bgp** command to configure PIM sparse mode with a single RP either inside or outside the BGP EVPN VXLAN fabric.
Step 8	**exit-address-family** **Example:** Device(config-vrf-af)# **exit-address-family**	Exits VRF address family configuration mode and returns to VRF configuration mode.
Step 9	**end** **Example:** Device(config-vrf)# **end**	Returns to privileged EXEC mode.

Configuring Multicast Routing on the Overlay VRF

To enable multicast routing on the overlay VRF, perform the following steps:

Procedure

	Command or Action	**Purpose**
Step 1	**enable** **Example:** Device> **enable**	Enables privileged EXEC mode. Enter your password, if prompted.
Step 2	**configure terminal** **Example:** Device# **configure terminal**	Enters global configuration mode.
Step 3	**ip multicast-routing vrf** *vrf-name* **Example:**	Enables IP multicast forwarding on the overlay VRF.

	Command or Action	Purpose
	Device(config)# **ip multicast-routing vrf green**	
Step 4	**ipv6 unicast-routing** **Example:** Device(config)# **ipv6 unicast-routing**	Enables IPv6 unicast forwarding.
Step 5	**ipv6 multicast-routing vrf** *vrf-name* **Example:** Device(config)# **ipv6 multicast-routing vrf green**	Enables IPv6 multicast forwarding on the overlay VRF.
Step 6	**end** **Example:** Device(config)# **end**	Returns to privileged EXEC mode.

Configuring Multicast on Switch Virtual Interfaces for the Core-facing and Access-facing VLANs

To configure multicast on SVIs for the core-facing and access-facing VLANs on the VTEP, perform the following steps:

Procedure

	Command or Action	Purpose
Step 1	**enable** **Example:** Device> **enable**	Enables privileged EXEC mode. Enter your password, if prompted.
Step 2	**configure terminal** **Example:** Device# **configure terminal**	Enters global configuration mode.
Step 3	**interface vlan** *core-facing-vlan-id* **Example:** Device(config)# **interface vlan 200**	Enters interface configuration mode for the specified VLAN.
Step 4	**ip pim sparse-mode** **Example:** Device(config-if) # **ip pim sparse-mode**	Enables IPv4 multicast on the core-facing SVI.
Step 5	**exit** **Example:** Device(config-if)# **end**	Returns to privileged EXEC mode.

	Command or Action	Purpose
Step 6	**interface vlan** *access-facing-vlan-id* **Example:** Device(config)# **interface vlan 202**	Enters interface configuration mode for the specified VLAN.
Step 7	**ip pim sparse-mode** **Example:** Device(config-if) # **ip pim sparse-mode**	Enables IPv4 multicast on the access-facing SVI where sources or receivers are connected. Repeat this step for all the access-facing SVIs that are part of the Layer 2 VNI where sources and receivers are connected.
Step 8	**end** **Example:** Device(config-if)# **end**	Returns to privileged EXEC mode.

Configuring BGP with MVPN Address Family on VTEP

To configure BGP on a VTEP with MVPN address family, perform the following steps:

Procedure

	Command or Action	Purpose
Step 1	**enable** **Example:** Device> **enable**	Enables privileged EXEC mode. Enter your password, if prompted.
Step 2	**configure terminal** **Example:** Device# **configure terminal**	Enters global configuration mode.
Step 3	**router bgp** *autonomous-system-number* **Example:** Device(config)# **router bgp 1**	Enables a BGP routing process, assigns it an autonomous system number, and enters router configuration mode.
Step 4	**address-family** {**ipv4** | **ipv6** } **mvpn** **Example:** Device(config-router)# **address-family ipv4 mvpn**	Specifies the MVPN address family and enters address family configuration mode. • Use the **ipv4** keyword to configure IPv4 MVPN address family. • Use the **ipv6** keyword to configure IPv6 MVPN address family.
Step 5	**neighbor** *ip-address* **activate** **Example:** Device(config-router-af)# **neighbor 10.2.2.20 activate**	Enables the exchange of information with a BGP neighbor. Use the IP address of the spine switch as the neighbor IP address.

	Command or Action	**Purpose**
Step 6	**neighbor** *ip-address* **send-community extended** **Example:** Device(config-router-af)# **neighbor 10.2.2.20 send-community both**	Specifies the communities attribute sent to a BGP neighbor. Use the IP address of the spine switch as the neighbor IP address.
Step 7	**neighbor** *ip-address* **advertisement-interval** *seconds* **Example:** Device(config-router-af)# **neighbor 10.2.2.20 advertisement-interval 10**	(Optional) Sets the minimum route advertisement interval (MRAI) between the sending of BGP routing updates.
Step 8	**exit-address-family** **Example:** Device(config-router-af)# **exit-address-family**	Exits address family configuration mode and returns to router configuration mode.
Step 9	**end** **Example:** Device(config-router)# **end**	Returns to privileged EXEC mode.

Configuring RP for Underlay Network

To configure RP for the underlay network, perform the following steps:

✎

Note It is recommended that you configure the Spine Switch as the RP for the underlay network.

Procedure

	Command or Action	**Purpose**
Step 1	**enable** **Example:** Device> **enable**	Enables privileged EXEC mode. Enter your password, if prompted.
Step 2	**configure terminal** **Example:** Device# **configure terminal**	Enters global configuration mode.
Step 3	**ip pim rp-address** *ip-address-of-rp* **Example:** Device(config)# **ip pim rp-address <rp-ip-address>**	Configures the RP in the underlay network. For information about RP redundancy, see to *IP Multicast Routing Configuration Guide*.

	Command or Action	Purpose
Step 4	**end** **Example:** Device(config)# **end**	Returns to privileged EXEC mode.

Configuring RP for Overlay Network

To configure RP for the overlay network, perform the following steps:

Procedure

	Command or Action	Purpose
Step 1	**enable** **Example:** Device> **enable**	Enables privileged EXEC mode. Enter your password, if prompted.
Step 2	**configure terminal** **Example:** Device# **configure terminal**	Enters global configuration mode.
Step 3	**interface** *loopback-interface* **Example:** Device(config)# **interface Loopback 13**	Enters interface configuration mode for the specified Loopback interface.
Step 4	**vrf forwarding** *vrf-name* **Example:** Device(config-if)# **vrf forwarding green**	Configures forwarding table for the Loopback interface.
Step 5	**ip-address** *ip-address subnet-mask* **Example:** Device(config-if)# **ip address 10.1.13.13 255.255.255.255**	Configures the IP address for the Loopback interface.
Step 6	**ip pim sparse-mode** **Example:** Device(config-if)# **ip pim sparse-mode**	Enables IPv4 multicast on the Loopback interface. **Note** Enable PIM sparse mode only if EVPN VXLAN Layer 2 overlay network is also configured on the VTEP with underlay multicast as the mechanism for forwarding BUM traffic.
Step 7	**exit** **Example:** Device(config-if)# **exit**	Returns to global configuration mode.

	Command or Action	Purpose
Step 8	{**ip** | **ipv6** } **pim vrf** *vrf-name* **rp-address** *rp-address* **Example:** Device(config)# **ip pim vrf green rp-address 10.1.13.13**	Configures the address of the local VTEP as the PIM RP for the multicast group. • In PIM-SM with Anycast RP mode, use the address of the loopback interface of the local VTEP. • In PIM-SM with RP either inside or outside the BGP EVPN VXLAN fabric, use the IP address of the RP. **Note** The loopback interface specified must be part of the same VRF.
Step 9	{**ip** | **ipv6** } **pim vrf** *vrf-name* **register-source** *loopback-address-of-vtep* **Example:** Device(config)# **ip pim vrf green register-source loopback901**	Configures a unique IP address for the loopback interface of the VTEP that acts as the first hop router to multicast traffic.
Step 10	**end** **Example:** Device(config)# **end**	Returns to privileged EXEC mode.

Configuring TRM with PIM Source Specific Mode

To configure TRM with PIM Source Specific Mode, perform the following tasks:

Configuring SSM for Overlay Network

To configure SSM for the overlay network, perform the following steps:

Procedure

	Command or Action	Purpose
Step 1	**enable**	Enables privileged EXEC mode.

	Command or Action	Purpose
	Example: Device> **enable**	Enter your password, if prompted.
Step 2	**configure terminal** **Example:** Device# **configure terminal**	Enters global configuration mode.
Step 3	**ip pim** [**vrf** *vrf-name*] **ssm** {**default** | **range** *access-list* } **Example:** Device(config)# **ip pim vrf green ssm default**	Configures an SSM range for TRM. The **default** keyword defines the SSM range access list as 232/8. The **range** keyword specifies the standard IP access list number or name that defines the SSM range.
Step 4	**end** **Example:** Device(config)# **end**	Returns to privileged EXEC mode.

Verifying Tenant Routed Multicast

The following table lists the **show** commands that are used to verify TRM:

Command	Purpose
show nve peers	Displays NVE interface state information for peer leaf switches.
show l2vpn evpn peers vxlan	Displays Layer 2 EVPN peer route counts in the VXLAN and up time.
show ip igmp vrf green groups	Displays the multicast groups with receivers that are directly connected to the router pertaining to the specific Multicast Virtual Routing and Forwarding (MVRF) instance and that were learned through IGMP.
show bgp ipv4 mvpn all	Displays the MVPN options for BGP MVPN C-route signaling.
show ip mroute vrf green	Displays the contents of the mroute table that pertain to a specific MVRF instance.
show ip mfib vrf green	Displays forwarding entries and interfaces in the IPv4 Multicast Forwarding Information Base (MFIB) associated with MVRF instances.
show ip mroute	Displays multicast routing table information.

Command	Purpose
show ip mfib	Displays the forwarding entries and interfaces in the IPv4 MFIB.

Troubleshooting Tenant Routed Multicast

See Troubleshoot EVPN VxLAN TRM on Catalyst 9000 Switches document to learn how to troubleshoot issues with TRM in a BGP EVPN VXLAN fabric.

Configuration Examples for Tenant Routed Multicast

The following sections provide configuration examples for TRM in different scenarios.

Example: Configuring TRM in PIM Sparse Mode with Anycast RP

This example shows how to configure and verify Layer 3 TRM with PIM-SM for IPv4 and IPv6 multicast traffic when the every VTEP is an RP is inside the BGP EVPN VXLAN fabric.
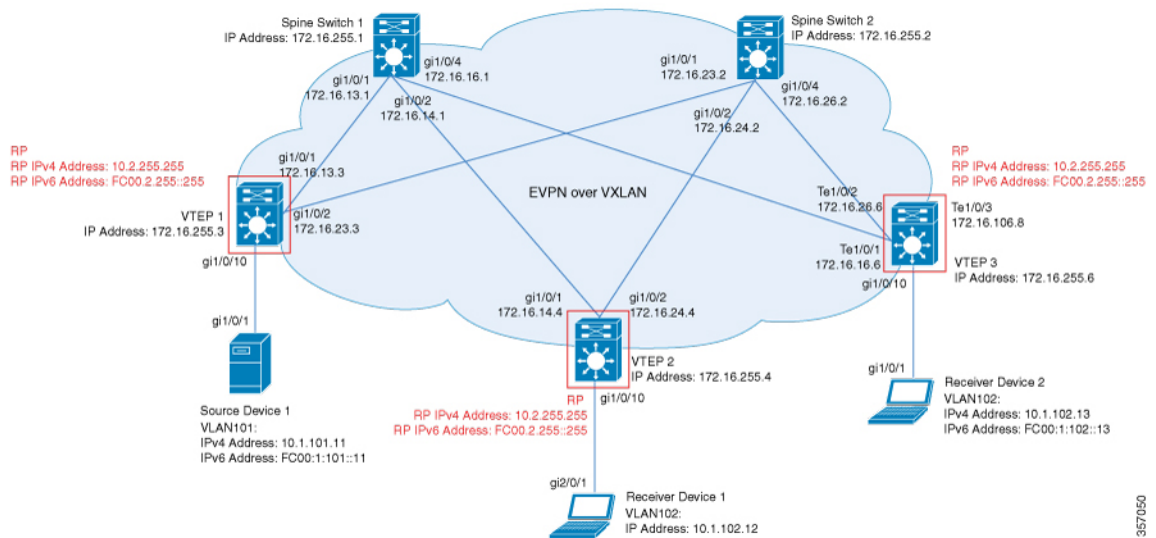

The topology shows an EVPN VXLAN network with a receiver device and a source device connected to VTEP 1 and VTEP 2 respectively. The IPv4 multicast group is 226.1.1.1 and the IPv6 multicast group is FF06:1::1 in this topology. The following tables provide sample configurations for the devices in this topology:

Table 1: Configuring VTEP 1, VTEP 2, and VTEP 3 to Configure TRM in PIM-SM with Anycast RP for IPv4 and IPv6 Multicast Traffic

Verifying TRM in PIM-SM with Anycast RP for IPv4 and IPv6 Multicast Traffic

The following sections provide sample outputs for **show** commands to verify TRM with PIM-SM on the devices in the topology configured above:

Outputs to Verify the Configuration on VTEP 1

The following example shows the output for the **show nve peers** command on VTEP 1:

```
Leaf-01# show nve peers
Interface  VNI      Type Peer-IP        RMAC/Num_RTs    eVNI     state flags UP time
nve1       50901    L3CP 172.16.254.6   0c75.bd67.ef48 50901     UP  A/-/4  01:47:43
nve1       50901    L3CP 172.16.254.4   7c21.0dbd.9548 50901     UP  A/-/4  01:47:43
nve1       50901    L3CP 172.16.254.6   0c75.bd67.ef48 50901     UP  A/M/6  01:47:43
nve1       50901    L3CP 172.16.254.4   7c21.0dbd.9548 50901     UP  A/M/6  01:47:43
nve1       10102    L2CP 172.16.254.4   7              10102     UP  N/A   01:47:43
nve1       10102    L2CP 172.16.254.6   7              10102     UP  N/A   01:47:43
Leaf-01#
```

The following example shows the output for the **show l2vpn evpn peers vxlan** command on VTEP 1:

```
Leaf-01# show l2vpn evpn peers vxlan
Interface VNI      Peer-IP                 Num routes eVNI     UP time
--------- -------- ----------------------- ---------- -------- --------
nve1      10102    172.16.254.4            7          10102    01:47:43
nve1      10102    172.16.254.6            7          10102    01:47:43

Leaf-01#show bgp ipv6 mvpn all summary

Outputs to Verify the Configuration on Spine Switch 1

The following example shows the output for the **show bgp ipv6 mvpn all summary** command on Spine Switch 1:

```
Spine-01# show bgp ipv6 mvpn all summary
BGP router identifier 172.16.255.1, local AS number 65001
BGP table version is 20, main routing table version 20
2 network entries using 784 bytes of memory
5 path entries using 800 bytes of memory
2/2 BGP path/bestpath attribute entries using 608 bytes of memory
3 BGP rrinfo entries using 120 bytes of memory
1 BGP community entries using 24 bytes of memory
13 BGP extended community entries using 1808 bytes of memory
0 BGP route-map cache entries using 0 bytes of memory
0 BGP filter-list cache entries using 0 bytes of memory
BGP using 4144 total bytes of memory
BGP activity 1001/969 prefixes, 7359/7288 paths, scan interval 60 secs
2 networks peaked at 11:16:15 Sep 16 2020 UTC (02:20:36.059 ago)

Return to Verifying TRM in PIM-SM with Anycast RP for IPv4 and IPv6 Multicast Traffic, on page 28

Example: Configuring TRM with PIM-SM for IPv4 Multicast Traffic when the RP is Inside the BGP EVPN VXLAN Fabric

This example shows how to configure and verify Layer 3 TRM with PIM-SM for IPv4 multicast traffic when the RP is inside the BGP EVPN VXLAN fabric. The example uses the following topology:

Figure 10: TRM with PIM-SM when the RP is Inside the BGP EVPN VXLAN Fabric

The topology shows an EVPN VXLAN network, with two spine switches and three VTEPs, connected to an external network with three routers. VTEP 1 inside the BGP EVPN VXLAN fabric acts as the RP in this topology and Border VTEP connects the fabric to the external network through Router 1. The IPv4 multicast group is 226.1.1.1 in this topology. The following tables provide sample configurations for the devices in this topology:

Example: Configuring TRM with PIM-SM for IPv4 Multicast Traffic when the RP is Inside the BGP EVPN VXLAN Fabric

Table 3: Configuring VTEP 1, Border VTEP, and VTEP 2 to Configure TRM with PIM-SM for IPv4 Multicast Traffic when the RP is Inside the BGP EVPN VXLAN Fabric

Verifying TRM with PIM-SM for IPv4 Multicast Traffic when the RP is Inside the BGP EVPN VXLAN Fabric

The following sections provide sample outputs for **show** commands to verify TRM with PIM-SM on the devices in the topology configured above:

Outputs to Verify the Configuration on VTEP 1 (RP Inside the BGP EVPN VXLAN Fabric)

The following example shows the output for the **show nve peers** command on VTEP 1:

```
Leaf-01# show nve peers
Interface  VNI       Type Peer-IP         RMAC/Num_RTs   eVNI      state flags UP time
nve1       50901     L3CP 172.16.254.6    0c75.bd67.ef48 50901      UP  A/-/4 1d05h
nve1       50901     L3CP 172.16.254.4    7c21.0dbd.9548 50901      UP  A/-/4 1d05h
nve1       50901     L3CP 172.16.254.6    0c75.bd67.ef48 50901      UP  A/M/6 1d05h
nve1       50901     L3CP 172.16.254.4    7c21.0dbd.9548 50901      UP  A/M/6 1d05h
nve1       10102     L2CP 172.16.254.4    7              10102      UP  N/A  1d05h
nve1       10102     L2CP 172.16.254.6    5              10102      UP  N/A  1d05h
Leaf-01#
```

The following example shows the output for the **show l2vpn evpn peers vxlan** command on VTEP 1:

```
Leaf-01# show l2vpn evpn peers vxlan
Interface VNI       Peer-IP                   Num routes eVNI      UP time
--------- --------  ------------------------  ---------- --------  --------
nve1      10102     172.16.254.4              7          10102     1d05h

Example: Configuring TRM with PIM-SM for IPv4 and IPv6 Multicast Traffic when the RP is Inside the BGP EVPN VXLAN Fabric

This example shows how to configure and verify Layer 3 TRM with PIM-SM for IPv4 and IPv6 multicast traffic when the RP is inside the BGP EVPN VXLAN fabric. The example uses the topology in the Figure 10: TRM with PIM-SM when the RP is Inside the BGP EVPN VXLAN Fabric, on page 61 figure.

The topology shows an EVPN VXLAN network, with two spine switches and three VTEPs, connected to an external network with three routers. VTEP 1 inside the BGP EVPN VXLAN fabric acts as the RP in this topology and Border VTEP connects the fabric to the external network through Router 1. The IPv4 multicast

Configuring Tenant Routed Multicast

Example: Configuring TRM with PIM-SM for IPv4 and IPv6 Multicast Traffic when the RP is Inside the BGP EVPN VXLAN Fabric

group is 226.1.1.1 and the IPv6 multicast group is FF06:1::1 in this topology. The following tables provide sample configurations for the devices in this topology:

Table 6: Configuring VTEP 1, Border VTEP, and VTEP 2 to Configure TRM with PIM-SM for IPv4 and IPv6 Multicast Traffic when the RP is Inside the BGP EVPN VXLAN Fabric

Configuring Tenant Routed Multicast

Example: Configuring TRM with PIM-SM for IPv4 and IPv6 Multicast Traffic when the RP is Inside the BGP EVPN VXLAN Fabric ■

Router 1	Router 2	Router 3
| ```
router ospfv3 1
!
address-family ipv6 unicast
exit-address-family
!
router ospf 1
router-id 10.2.255.1
!
ip pim rp-address 10.2.255.255
!
ipv6 pim rp-address FC00:2:255::255
!
end
!
R1#
``` | ```
!
ipv6 pim rp-address FC00:2:255::255
!
end
!
R2#
``` | ```
ipv6 pim rp-address FC00:2:255::255
!
end
!
R3#
``` |

Verifying TRM with PIM-SM for IPv4 and IPv6 Multicast Traffic when the RP is Inside the BGP EVPN VXLAN Fabric

The following sections provide sample outputs for **show** commands to verify TRM with PIM-SM on the devices in the topology configured above:

Outputs to Verify the Configuration on VTEP 1 (RP Inside the BGP EVPN VXLAN Fabric)

The following example shows the output for the **show nve peers** command on VTEP 1:

```
Leaf-01# show nve peers
Interface  VNI      Type Peer-IP         RMAC/Num_RTs  eVNI     state flags UP time
nve1       50901    L3CP 172.16.254.6    0c75.bd67.ef48 50901    UP   A/-/4 1d05h
nve1       50901    L3CP 172.16.254.4    7c21.0dbd.9548 50901    UP   A/-/4 1d05h
nve1       50901    L3CP 172.16.254.6    0c75.bd67.ef48 50901    UP   A/M/6 1d05h
nve1       50901    L3CP 172.16.254.4    7c21.0dbd.9548 50901    UP   A/M/6 1d05h
nve1       10102    L2CP 172.16.254.4    7             10102     UP   N/A   1d05h
nve1       10102    L2CP 172.16.254.6    5             10102     UP   N/A   1d05h
Leaf-01#
```

The following example shows the output for the **show l2vpn evpn peers vxlan** command on VTEP 1:

```
Leaf-01# show l2vpn evpn peers vxlan
Interface VNI      Peer-IP                 Num routes eVNI     UP time
--------- -------- ----------------------- ---------- -------- --------
nve1      10102    172.16.254.4            7          10102    1d05h
nve1      10102    172.16.254.6            5          10102    1d05h
Leaf-01#
```

Configuring Tenant Routed Multicast

Example: Configuring TRM with PIM-SM for IPv4 and IPv6 Multicast Traffic when the RP is Inside the BGP EVPN VXLAN Fabric

The following example shows the output for the **show bgp ipv6 mvpn all summary** command on VTEP 1:

```
Leaf-01# show bgp ipv6 mvpn all summary
BGP router identifier 172.16.255.3, local AS number 65001
BGP table version is 60, main routing table version 60
5 network entries using 1960 bytes of memory
8 path entries using 1280 bytes of memory
4/4 BGP path/bestpath attribute entries using 1248 bytes of memory
4 BGP rrinfo entries using 160 bytes of memory
1 BGP community entries using 24 bytes of memory
18 BGP extended community entries using 2396 bytes of memory
0 BGP route-map cache entries using 0 bytes of memory
0 BGP filter-list cache entries using 0 bytes of memory
BGP using 7068 total bytes of memory
BGP activity 139/41 prefixes, 275/138 paths, scan interval 60 secs
5 networks peaked at 15:46:09 Aug 6 2020 UTC (1d02h ago)

Neighbor        V         AS MsgRcvd MsgSent    TblVer  InQ OutQ Up/Down  State/PfxRcd
172.16.255.1    4      65001    2135    2003        60    0    0 1d05h           3
172.16.255.2    4      65001    2131    2003        60    0    0 1d05h           3
Leaf-01#
```

The following example shows the output for the **show ipv6 pim vrf** *vrf-name* **group-map** command on VTEP 1:

```
Leaf-01# show ipv6 pim vrf green group-map ff06:1::1
IP PIM Group Mapping Table
(* indicates group mappings being used)

FF00::/8*
    SM, RP: FC00:2:255::255
    RPF: Tu7,FC00:2:255::255 (us)
    Info source: Static
    Uptime: 1d02h, Groups: 1
Leaf-01#
```

The following example shows the output for the **show ipv6 routing vrf** command on VTEP 1:

```
Leaf-01# show ipv6 routing vrf green FC00:2:255::255
Routing entry for FC00:2:255::255/128
  Known via "connected", distance 0, metric 0, type receive, connected
  Redistributing via bgp 65001
  Route count is 1/1, share count 0
  Routing paths:
    receive via Loopback255
      Last updated 04:21:51 ago
Leaf-01#
```

The following example shows the output for the **show ipv6 mld vrf** *vrf-name* **groups** command on VTEP 1:

```
Leaf-01# show ipv6 mld vrf green groups
MLD Connected Group Membership
Group Address                          Interface
    Uptime    Expires

The following example shows the output for the **show bgp ipv6 mvpn all summary** command on Border VTEP:

```
Border# show bgp ipv6 mvpn all summary
BGP router identifier 172.16.255.6, local AS number 65001
BGP table version is 85, main routing table version 85
5 network entries using 1960 bytes of memory
7 path entries using 1120 bytes of memory
5/5 BGP path/bestpath attribute entries using 1560 bytes of memory
4 BGP rrinfo entries using 160 bytes of memory
1 BGP community entries using 24 bytes of memory
20 BGP extended community entries using 2706 bytes of memory
0 BGP route-map cache entries using 0 bytes of memory
0 BGP filter-list cache entries using 0 bytes of memory
BGP using 7530 total bytes of memory
BGP activity 137/41 prefixes, 272/148 paths, scan interval 60 secs
5 networks peaked at 15:42:39 Aug 6 2020 UTC (1d02h ago)

Outputs to Verify the Configuration on Spine Switch 2

The following example shows the output for the **show bgp ipv6 mvpn all summary** command on Spine Switch 2:

```
Spine-02# show bgp ipv6 mvpn all summary
BGP router identifier 172.16.255.2, local AS number 65001
BGP table version is 77, main routing table version 77
5 network entries using 1960 bytes of memory
13 path entries using 2080 bytes of memory
4/4 BGP path/bestpath attribute entries using 1216 bytes of memory
3 BGP rrinfo entries using 120 bytes of memory
1 BGP community entries using 24 bytes of memory
17 BGP extended community entries using 2356 bytes of memory
0 BGP route-map cache entries using 0 bytes of memory
0 BGP filter-list cache entries using 0 bytes of memory
BGP using 7756 total bytes of memory
BGP activity 301/251 prefixes, 3143/3036 paths, scan interval 60 secs
5 networks peaked at 15:49:16 Aug 6 2020 UTC (1d02h ago)
```

Configuring Tenant Routed Multicast

Example: Configuring TRM with PIM-SM for IPv4 and IPv6 Multicast Traffic when the RP is Inside the BGP EVPN VXLAN Fabric

```

Example: Configuring TRM with PIM-SM for IPv4 Multicast Traffic when the RP is Outside the BGP EVPN VXLAN Fabric

This example shows how to configure and verify Layer 3 TRM with PIM-SM for IPv4 multicast traffic when the RP is outside the BGP EVPN VXLAN fabric. The example uses the following topology:

Figure 11: TRM with PIM-SM when the RP is Outside the BGP EVPN VXLAN Fabric

The topology shows an EVPN VXLAN network, with two spine switches and three VTEPs, connected to an external network with three routers. Router 3 in the external network acts as the RP in this topology and Border VTEP connects the fabric to the external network through Router 1. The IPv4 multicast group is 226.1.1.1 for this topology. The following tables provide sample configurations for the devices in this topology:

Table 9: Configuring VTEP 1, Border VTEP, and VTEP 2 to Configure TRM with PIM-SM for IPv4 Multicast Traffic when the RP is Outside the BGP EVPN VXLAN Fabric

Verifying TRM with PIM-SM for IPv4 Multicast Traffic when the RP is Outside the BGP EVPN VXLAN Fabric

The following sections provide sample outputs for **show** commands to verify TRM with PIM-SM on the devices in the topology configured above:

Outputs to Verify the Configuration on VTEP 1

The following example shows the output for the **show nve peers** command on VTEP 1:

```

Example: Configuring TRM with PIM-SM for IPv4 and IPv6 Multicast Traffic when the RP is Outside the BGP EVPN VXLAN Fabric

This example shows how to configure and verify Layer 3 TRM with PIM-SM for IPv4 and IPv6 multicast traffic when the RP is outside the BGP EVPN VXLAN fabric. The example uses the topology in the Figure 11: TRM with PIM-SM when the RP is Outside the BGP EVPN VXLAN Fabric, on page 132 figure.

The topology shows an EVPN VXLAN network, with two spine switches and three VTEPs, connected to an external network with three routers. Router 3 in the external network acts as the RP in this topology and Border VTEP connects the fabric to the external network through Router 1. The IPv4 multicast group is 226.1.1.1 and the IPv6 multicast group is FF06:1::1 in this topology. The following tables provide sample configurations for the devices in this topology:

Configuring Tenant Routed Multicast

Example: Configuring TRM with PIM-SM for IPv4 and IPv6 Multicast Traffic when the RP is Outside the BGP EVPN VXLAN Fabric

Verifying TRM with PIM-SM for IPv4 and IPv6 Multicast Traffic when the RP is Outside the BGP EVPN VXLAN Fabric

The following sections provide sample outputs for **show** commands to verify TRM with PIM-SM on the devices in the topology configured above:

-
-
-
-
-
-

Outputs to Verify the Configuration on VTEP 1

The following example shows the output for the **show nve peers** command on VTEP 1:

```
Leaf-01# show nve peers
Interface  VNI      Type Peer-IP         RMAC/Num_RTs  eVNI     state flags UP time
nve1       50901    L3CP 172.16.254.6    0c75.bd67.ef48 50901     UP  A/-/4 1d01h
nve1       50901    L3CP 172.16.254.4    7c21.0dbd.9548 50901     UP  A/-/4 1d01h
nve1       50901    L3CP 172.16.254.6    0c75.bd67.ef48 50901     UP  A/M/6 1d01h
nve1       50901    L3CP 172.16.254.4    7c21.0dbd.9548 50901     UP  A/M/6 1d01h
nve1       10102    L2CP 172.16.254.4    7             10102     UP   N/A  1d00h
nve1       10102    L2CP 172.16.254.6    5             10102     UP   N/A  1d01h
Leaf-01#
```

The following example shows the output for the **show l2vpn evpn peers vxlan** command on VTEP 1:

```
Leaf-01# show l2vpn evpn peers vxlan
Interface VNI      Peer-IP                 Num routes eVNI     UP time
```

Configuring Tenant Routed Multicast

Example: Configuring TRM with PIM-SM for IPv4 and IPv6 Multicast Traffic when the RP is Outside the BGP EVPN VXLAN Fabric

```

Spine-02#
```

The following example shows the output for the **show ip mfib** command on Spine Switch 2:

```
Spine-02# show ip mfib
Entry Flags:    C - Directly Connected, S - Signal, IA - Inherit A flag,
                ET - Data Rate Exceeds Threshold, K - Keepalive
                DDE - Data Driven Event, HW - Hardware Installed
                ME - MoFRR ECMP entry, MNE - MoFRR Non-ECMP entry, MP - MFIB
                MoFRR Primary, RP - MRIB MoFRR Primary, P - MoFRR Primary
                MS  - MoFRR  Entry in Sync, MC - MoFRR entry in MoFRR Client.
I/O Item Flags: IC - Internal Copy, NP - Not platform switched,
                NS - Negate Signalling, SP - Signal Present,
```

Configuring Tenant Routed Multicast

Example: Configuring TRM with PIM-SM for IPv4 and IPv6 Multicast Traffic when the RP is Outside the BGP EVPN VXLAN Fabric

```
                          A - Accept, F - Forward, RA - MRIB Accept, RF - MRIB Forward,
                          MA - MFIB Accept, A2 - Accept backup,
                          RA2 - MRIB Accept backup, MA2 - MFIB Accept backup

Outputs to Verify the Configuration on Router 3 (RP Outside the BGP EVPN VXLAN Fabric)

The following example shows the output for the **show ip pim group-map** command on Router 3:

```
R3# show ipv6 pim group-map ff06:1::1
IP PIM Group Mapping Table
(* indicates group mappings being used)

FF00::/8*
    SM, RP: FC00:2:255::255
    RPF: Tu4,FC00:2:255::255 (us)
    Info source: Static
    Uptime: 1d04h, Groups: 1
R3#
```

The following example shows the output for the **show ipv6 mroute** command on Router 3:

```
R3# show ipv6 mroute
Multicast Routing Table
Flags: D - Dense, S - Sparse, B - Bidir Group, s - SSM Group,
       C - Connected, L - Local, I - Received Source Specific Host Report,
       P - Pruned, R - RP-bit set, F - Register flag, T - SPT-bit set,
       J - Join SPT, Y - Joined MDT-data group,
       y - Sending to MDT-data group
```

Configuring Tenant Routed Multicast

Example: Configuring TRM with PIM-SM for IPv4 and IPv6 Multicast Traffic when the RP is Outside the BGP EVPN VXLAN Fabric

```
          g - BGP signal originated, G - BGP Signal received,
          N - BGP Shared-Tree Prune received, n - BGP C-Mroute suppressed,
          q - BGP Src-Active originated, Q - BGP Src-Active received
          E - Extranet
