

Configuring EVPN VXLAN Layer 3 Overlay Network

- [Information About EVPN VXLAN Layer 3 Overlay Network](#), on page 1
- [How to Configure EVPN VXLAN Layer 3 Overlay Network](#), on page 2
- [Configuration Examples for EVPN VXLAN Layer 3 Overlay Network](#), on page 12
- [Verifying EVPN VXLAN Layer 3 Overlay Network](#), on page 19

Information About EVPN VXLAN Layer 3 Overlay Network

An EVPN VXLAN Layer 3 overlay network allows host devices in different Layer 2 networks to send Layer 3 or routed traffic to each other. The network forwards the routed traffic using a Layer 3 virtual network instance (VNI) and an IP VRF.

This module provides information only about how to configure a Layer 3 overlay network. You can also configure both Layer 2 and Layer 3 overlay networks together to enable integrated routing and bridging (IRB). For more information about IRB, see *Configuring EVPN VXLAN Integrated Routing and Bridging* module.

The following figure shows the movement of traffic in an EVPN VXLAN Layer 3 overlay network using a Layer 3 VNI:

How to Configure EVPN VXLAN Layer 3 Overlay Network

The following figure shows a sample topology of an EVPN VXLAN Network. Host device 3 and host device 5 are part of different subnets. The network forwards traffic from host device 1 to host device 3 using a Layer 3 VNI and an IP VRF.

Note In a two-VTEP topology, a spine switch is not mandatory. For information about configuration of spine switches in an EVPN VXLAN network, see *Configuring Spine Switches in a BGP EVPN VXLAN Fabric* module.

Perform the following set of procedures to configure an EVPN VXLAN Layer 3 overlay network:

- Configure the IP VRF on the VTEPs.
- Configure the core-facing VLAN on the VTEPs.
- Configure the access-facing VLAN on the VTEPs.
- Configure the switch virtual interface (SVI) for the core-facing VLAN.
- Configure the SVI for the access-facing VLAN.
- Configure the loopback interface on the VTEPs.
- Configure the network virtualization endpoint (NVE) interface on the VTEPs.
- Configure BGP with either IPv4 or IPv6 or both address families on the VTEPs.

Configuring an IP VRF on a VTEP

To configure an IP VRF on a VTEP, perform the following steps:

Procedure

	Command or Action	Purpose
Step 1	<code>enable</code>	Enables privileged EXEC mode.

	Command or Action	Purpose
	Example: Device> enable	Enter your password, if prompted.
Step 2	configure terminal Example: Device# configure terminal	Enters global configuration mode.
Step 3	vrf definition <i>vrf-name</i> Example: Device (config)# vrf definition Green	Enters the VRF configuration mode for the specified VRF instance.
Step 4	rd <i>vpn-route-distinguisher</i> Example: Device (config-vrf)# rd 100:1	Specifies the route distinguisher for the VRF instance.
Step 5	address-family ipv4 [multicast unicast] Example: Device (config-vrf)# address-family ipv4	Enters the IPv4 address family configuration mode.
Step 6	route-target { export import both } <i>route-target-ext-community</i> Example: Device (config-vrf-af)# route-target export 100:1 Example: Device (config-vrf-af)# route-target import 100:1	Creates a list of import, export, or both import and export route target communities for the specified VRF. Enter either an autonomous system number and an arbitrary number (xxx:y), or an IP address and an arbitrary number (A.B.C.D:y).
Step 7	route-target { export import both } <i>route-target-ext-community</i> stitching Example: Device (config-vrf-af)# route-target export 100:1 stitching Example: Device (config-vrf-af)# route-target import 100:1 stitching	Configures importing, exporting, or both importing and exporting of EVPN route target communities for the VRF.
Step 8	exit-address-family Example: Device (config-vrf-af)# exit-address-family	Exits VRF address family configuration mode and enters VRF configuration mode.
Step 9	address-family ipv6 [multicast unicast] Example: Device (config-vrf)# address-family ipv6	Enters the IPv6 address family configuration mode.

	Command or Action	Purpose
Step 10	route-target {export import both} <i>route-target-ext-community</i> Example: Device (config-vrf-af) # route-target export 100:1 Example: Device (config-vrf-af) # route-target import 100:1	Creates a list of import, export, or both import and export route target communities for the specified VRF. Enter either an autonomous system number and an arbitrary number (xxx:y), or an IP address and an arbitrary number (A.B.C.D:y).
Step 11	route-target {export import both} <i>route-target-ext-community stitching</i> Example: Device (config-vrf-af) # route-target export 100:1 stitching Example: Device (config-vrf-af) # route-target import 100:1 stitching	Configures importing, exporting, or both importing and exporting of VXLAN route target communities for the VRF.
Step 12	exit-address-family Example: Device (config-vrf-af) # exit-address-family	Exits VRF address family configuration mode and enters VRF configuration mode.
Step 13	end Example: Device (config-vrf) # end	Returns to privileged EXEC mode.

Configuring the Core-facing VLAN on a VTEP

To configure the core-facing VLAN on a VTEP, perform the following steps:

Procedure

	Command or Action	Purpose
Step 1	enable Example: Device> enable	Enables privileged EXEC mode. Enter your password, if prompted.
Step 2	configure terminal Example: Device# configure terminal	Enters global configuration mode.
Step 3	vlan configuration <i>vlan-id</i> Example:	Enters VLAN feature configuration mode for the specified VLAN interface.

	Command or Action	Purpose
	Device(config) # vlan configuration 11	
Step 4	member vni l3-vni-number Example: Device(config-vlan) # member vni 5000	Adds EVPN instance as a member of the VLAN configuration. The VNI here is used as a Layer 3 VNI.
Step 5	end Example: Device(config-vlan) # end	Returns to privileged EXEC mode.

Configuring Access-facing VLAN on a VTEP

To configure the access-facing VLAN on a VTEP, perform the following steps:

Procedure

	Command or Action	Purpose
Step 1	enable Example: Device> enable	Enables privileged EXEC mode. Enter your password, if prompted.
Step 2	configure terminal Example: Device# configure terminal	Enters global configuration mode.
Step 3	interface interface-name Example: Device(config) # interface GigabitEthernet1/0/1	Enters interface configuration mode for the specified interface.
Step 4	switchport access vlan vlan-id Example: Device(config-if) # switchport access vlan 40	Configures the interface as a static-access port of the specified VLAN. Interface can also be configured as a trunk interface, if required.
Step 5	end Example: Device(config-if) # end	Returns to privileged EXEC mode.

Configuring Switch Virtual Interface for the Core-facing VLAN

To configure an SVI for the core-facing VLAN on the VTEP:

Procedure

	Command or Action	Purpose
Step 1	enable Example: Device> enable	Enables privileged EXEC mode. Enter your password, if prompted.
Step 2	configure terminal Example: Device# configure terminal	Enters global configuration mode.
Step 3	interface vlan <i>vlan-id</i> Example: Device(config)# interface vlan 11	Enters interface configuration mode for the specified VLAN.
Step 4	vrf forwarding <i>vrf-name</i> Example: Device(config-if)# vrf forwarding Green	Configures the SVI for the VLAN.
Step 5	ip unnumbered <i>Loopback-interface</i> Example: Device(config-if)# ip unnumbered Loopback0	Enables IP processing on the Loopback interface without assigning an explicit IP address to the interface.
Step 6	no autostate Example: Device(config-if)# no autostate	Disables autostate on the interface. In EVPN deployments, once a VLAN is used for a core-facing SVI, it should not be allowed in any trunk. For a core-facing SVI to function properly, the no autostate command must be configured under the SVI.
Step 7	end Example: Device(config-if)# end	Returns to privileged EXEC mode.

Configuring the Switch Virtual Interface for the Access-facing VLANs

To configure the SVI for the access-facing VLAN on a VTEP, perform the following steps:

Procedure

	Command or Action	Purpose
Step 1	enable Example: Device> enable	Enables privileged EXEC mode. Enter your password, if prompted.

	Command or Action	Purpose
Step 2	configure terminal Example: Device# <code>configure terminal</code>	Enters global configuration mode.
Step 3	interface vlan <i>vlan-id</i> Example: Device(config)# <code>interface vlan 40</code>	Enters interface configuration mode for the specified VLAN.
Step 4	vrf forwarding <i>vrf-name</i> Example: Device(config-if)# <code>vrf forwarding Green</code>	Configures the SVI for the VLAN.
Step 5	ip address <i>ip-address</i> Example: Device(config-if)# <code>ip address 192.168.10.100 255.255.255.0</code>	Configures the IP address of the SVI.
Step 6	mac-address <i>mac-address-value</i> Example: Device(config-if)# <code>mac-address aabb.cc01.f100</code>	(Optional) Manually sets the MAC address for the VLAN interface.
Step 7	exit Example: Device(config-if)# <code>exit</code>	Returns to global configuration mode.
Step 8	end Example: Device(config-if)# <code>end</code>	Returns to privileged EXEC mode.

Configuring the Loopback Interface on a VTEP

To configure the loopback interface on a VTEP, perform the following steps:

Procedure

	Command or Action	Purpose
Step 1	enable Example: Device> <code>enable</code>	Enables privileged EXEC mode. Enter your password, if prompted.
Step 2	configure terminal Example: Device# <code>configure terminal</code>	Enters global configuration mode.

	Command or Action	Purpose
Step 3	interface <i>loopback-interface-id</i> Example: Device(config)# interface Loopback0	Enters interface configuration mode for the specified Loopback interface.
Step 4	ip address <i>ipv4-address</i> Example: Device(config-if)# ip address 10.12.11.11 255.255.255.255	Configures the IP address for the Loopback interface.
Step 5	ip pim sparse mode Example: Device(config-if)# ip pim sparse mode	(Optional) Enables Protocol Independent Multicast (PIM) sparse mode on the Loopback interface. Note Enable PIM sparse mode only if EVPN VXLAN Layer 2 overlay network is also configured on the VTEP with underlay multicast as the mechanism for forwarding BUM traffic.
Step 6	end Example: Device(config-vlan)# end	Returns to privileged EXEC mode.

Configuring the NVE Interface on a VTEP

To add a Layer 3 VNI member to the NVE interface on a VTEP, perform the following steps:

Procedure

	Command or Action	Purpose
Step 1	enable Example: Device> enable	Enables privileged EXEC mode. Enter your password, if prompted.
Step 2	configure terminal Example: Device# configure terminal	Enters global configuration mode.
Step 3	interface <i>nve-interface-id</i> Example: Device(config)# interface nve1	Defines the interface to be configured as a trunk, and enters interface configuration mode.
Step 4	no ip address Example:	Disables IP processing on the interface by removing its IP address.

	Command or Action	Purpose
	<code>Device(config-if)# no ip address</code>	
Step 5	source-interface <i>loopback-interface-id</i> Example: <code>Device(config-if)# source-interface loopback0</code>	Sets the IP address of the specified loopback interface as the source IP address.
Step 6	host-reachability protocol bgp Example: <code>Device(config-if)# host-reachability protocol bgp</code>	Configures BGP as the host-reachability protocol on the interface. Note You must configure the host reachability protocol on the interface. If you do not execute this step, the VXLAN tunnel defaults to static VXLAN tunnel, which is currently not supported on the Cisco Catalyst 9000 Series switches.
Step 7	member vni <i>vni-id</i> vrf <i>vrf-name</i> Example: <code>Device(config-if)# member vni 5000 vrf Green</code>	Associates the Layer 3 VNI id with the NVE interface. Note The Layer 3 VNI id must match with the VNI id configured in the core VLAN on the VTEP.
Step 8	end Example: <code>Device(config-if)# end</code>	Returns to privileged EXEC mode.

Configuring BGP with IPv4 or IPv6 or Both Address Families on VTEP

To configure BGP on a VTEP with IPv4 or IPv6 or both address families and a spine switch as the neighbor, perform the following steps:

Procedure

	Command or Action	Purpose
Step 1	enable Example: <code>Device> enable</code>	Enables privileged EXEC mode. Enter your password, if prompted.
Step 2	configure terminal Example: <code>Device# configure terminal</code>	Enters global configuration mode.

	Command or Action	Purpose
Step 3	router bgp <i>autonomous-system-number</i> Example: Device (config) # router bgp 1	Enables a BGP routing process, assigns it an autonomous system number, and enters router configuration mode.
Step 4	bgp log-neighbor-changes Example: Device (config-router) # bgp log-neighbor-changes	(Optional) Enables the generation of logging messages when the status of a BGP neighbor changes. For more information, see <i>Configuring BGP</i> module of the <i>IP Routing Configuration Guide</i> .
Step 5	bgp update-delay <i>time-period</i> Example: Device (config-router) # bgp update-delay 1	(Optional) Sets the maximum initial delay period before sending the first update. For more information, see <i>Configuring BGP</i> module of the <i>IP Routing Configuration Guide</i> .
Step 6	bgp graceful-restart Example: Device (config-router) # bgp graceful-restart	(Optional) Enables the BGP graceful restart capability for all BGP neighbors. For more information, see <i>Configuring BGP</i> module of the <i>IP Routing Configuration Guide</i> .
Step 7	no bgp default ipv4-unicast Example: Device (config-router) # no bgp default ipv4-unicast	(Optional) Disables default IPv4 unicast address family for BGP peering session establishment. For more information, see <i>Configuring BGP</i> module of the <i>IP Routing Configuration Guide</i> .
Step 8	neighbor ip-address remote-as <i>number</i> Example: Device (config-router) # neighbor 10.11.11.11 remote-as 1	Defines multiprotocol-BGP neighbors. Under each neighbor, define the configuration. Use the IP address of the spine switch as the neighbor IP address.
Step 9	neighbor {ip-address group-name} update-source <i>interface</i> Example: Device (config-router) # neighbor 10.11.11.11 update-source Loopback0	Configures update source. Update source can be configured per neighbor or per peer-group. Use the IP address of the spine switch as the neighbor IP address.
Step 10	address-family l2vpn evpn Example: Device (config-router) # address-family l2vpn evpn	Specifies the L2VPN address family and enters address family configuration mode.
Step 11	neighbor ip-address activate Example: Device (config-router-af) # neighbor 10.11.11.11 activate	Enables the exchange information from a BGP neighbor. Use the IP address of the spine switch as the neighbor IP address.

	Command or Action	Purpose
Step 12	neighbor <i>ip-address</i> send-community [both extended standard] Example: Device(config-router-af)# neighbor 10.11.11.11 send-community both	Specifies the communities attribute sent to a BGP neighbor. Use the IP address of the spine switch as the neighbor IP address.
Step 13	exit-address-family Example: Device(config-router-af)# exit-address-family	Exits address family configuration mode and returns to router configuration mode.
Step 14	address-family ipv4 vrf <i>vrf-name</i> Example: Device(config-router)# address-family ipv4 vrf Green	Specifies the IPv4 address family and enters address family configuration mode.
Step 15	advertise l2vpn evpn Example: Device(config-router-af)# advertise l2vpn evpn	Advertises Layer 2 VPN EVPN routes within a tenant VRF in an EVPN VXLAN fabric.
Step 16	redistribute connected Example: Device(config-router-af)# redistribute connected	(Optional) Redistributes connected routes to BGP.
Step 17	redistribute static Example: Device(config-router-af)# redistribute static	(Optional) Redistributes static routes to BGP.
Step 18	exit-address-family Example: Device(config-router-af)# exit-address-family	Exits address family configuration mode and returns to router configuration mode.
Step 19	address-family ipv6 vrf <i>vrf-name</i> Example: Device(config-router)# address-family ipv6 vrf green	Specifies the IPv6 address family and enters address family configuration mode.
Step 20	advertise l2vpn evpn Example: Device(config-router-af)# advertise l2vpn evpn	Advertises Layer 2 VPN EVPN routes within a tenant VRF in an EVPN VXLAN fabric.

	Command or Action	Purpose
Step 21	redistribute connected Example: Device(config-router-af) # redistribute connected	(Optional) Redistributes connected routes to BGP.
Step 22	redistribute static Example: Device(config-router-af) # redistribute static	(Optional) Redistributes static routes to BGP.
Step 23	exit-address-family Example: Device(config-router-af) # exit-address-family	Exits address family configuration mode and returns to router configuration mode.
Step 24	end Example: Device(config-router) # end	Returns to privileged EXEC mode.

Configuration Examples for EVPN VXLAN Layer 3 Overlay Network

This section provides an example for configuring an EVPN VXLAN Layer 3 overlay network. This example shows a sample configuration for a VXLAN network with 2 VTEPs, VTEP 1 and VTEP 2, connected to perform routing.

356465

Note In a two-VTEP topology, a spine switch is not mandatory. For information about configuration of spine switches in an EVPN VXLAN network, see *Configuring Spine Switches in a BGP EVPN VXLAN Fabric* module.

Table 1: Configuration Example for a VXLAN Network with Two VTEPs Connected to Perform Routing

The following examples provide outputs for **show** commands on VTEP 1 and VTEP 2 in the topology configured above.

- [show nve peers, on page 16](#)
- [show bgp l2vpn evpn all, on page 16](#)
- [show ip route vrf, on page 17](#)
- [show platform software fed switch active matm mactable vlan, on page 18](#)

show nve peers**VTEP 1**

The following example shows the output for the **show nve peers** command on VTEP 1:

```
VTEP1# show nve peers
Interface VNI      Type Peer-IP          RMAC/Num_RTs  eVNI  state flags UP time
nve10    5000    L3CP 10.2.2.20      380e.4d9b.6a4a 5000    UP  A/M/4 00:38:37
nve10    5000    L3CP 10.2.2.20      380e.4d9b.6a4a 5000    UP  A/-/6 00:03:16
```

VTEP 2

The following example shows the output for the **show nve peers** command on VTEP 2:

```
VTEP2# show nve peers
Interface VNI      Type Peer-IP          RMAC/Num_RTs  eVNI  state flags UP time
nve10    5000    L3CP 10.1.1.10      a0f8.4910.bce2 5000    UP  A/-/4 00:38:53
nve10    5000    L3CP 10.1.1.10      a0f8.4910.bce2 5000    UP  A/M/6 00:38:53
```

show bgp l2vpn evpn all**VTEP 1**

The following example shows the output for the **show bgp l2vpn evpn all** command on VTEP 1:

```
VTEP1# show bgp l2vpn evpn all

show ip route vrf

VTEP 1

The following example shows the output for the **show ip route vrf** command on VTEP 1:

```

VTEP1# show ip route vrf green
Routing Table: green
Codes: L - local, C - connected, S - static, R - RIP, M - mobile, B - BGP
       D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area
       N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
       E1 - OSPF external type 1, E2 - OSPF external type 2, m - OMP
       n - NAT, Ni - NAT inside, No - NAT outside, Nd - NAT DIA
       i - IS-IS, su - IS-IS summary, L1 - IS-IS level-1, L2 - IS-IS level-2
       ia - IS-IS inter area, * - candidate default, U - per-user static route
       H - NHRP, G - NHRP registered, g - NHRP registration summary
       o - ODR, P - periodic downloaded static route, l - LISP
       a - application route
       + - replicated route, % - next hop override, p - overrides from PfR

Gateway of last resort is not set

      10.0.0.0/8 is variably subnetted, 3 subnets, 2 masks
C       10.1.13.0/24 is directly connected, Loopback13
L       10.1.13.13/32 is directly connected, Loopback13
B       10.1.14.0/24 [200/0] via 10.2.2.20, 00:42:01, Vlan200
      192.168.1.0/24 is variably subnetted, 2 subnets, 2 masks
C       192.168.1.0/24 is directly connected, Vlan201
L       192.168.1.201/32 is directly connected, Vlan201
B       192.168.2.0/24 [200/0] via 10.2.2.20, 00:06:00, Vlan200

```

VTEP 2

The following example shows the output for the **show ip route vrf** command on VTEP 2:

```

VTEP2# show ip route vrf green
Routing Table: green
Codes: L - local, C - connected, S - static, R - RIP, M - mobile, B - BGP
        D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area
        N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
        E1 - OSPF external type 1, E2 - OSPF external type 2, m - OMP
        n - NAT, Ni - NAT inside, No - NAT outside, Nd - NAT DIA
        i - IS-IS, su - IS-IS summary, L1 - IS-IS level-1, L2 - IS-IS level-2
        ia - IS-IS inter area, * - candidate default, U - per-user static route
        H - NHRP, G - NHRP registered, g - NHRP registration summary
        o - ODR, P - periodic downloaded static route, l - LISP
        a - application route
        + - replicated route, % - next hop override, p - overrides from PFR

Gateway of last resort is not set

    10.0.0.0/8 is variably subnetted, 3 subnets, 2 masks
B       10.1.13.0/24 [200/0] via 10.1.1.10, 00:42:38, Vlan200
C       10.1.14.0/24 is directly connected, Loopback14
L       10.1.14.14/32 is directly connected, Loopback14
B       192.168.1.0/24 [200/0] via 10.1.1.10, 00:42:38, Vlan200
        192.168.2.0/24 is variably subnetted, 2 subnets, 2 masks

Verifying EVPN VXLAN Layer 3 Overlay Network

The following table lists the **show** commands that are used to verify a Layer 3 VXLAN overlay network:

Table 2: Commands to Verify EVPN VXLAN Layer 3 Overlay Network

Command	Purpose
show nve vni	Displays information about VXLAN network identifier members associated with an NVE interface.
show nve vni vni-id detail	Displays detailed NVE interface state information for a VXLAN network identifier member.
show nve peers	Displays NVE interface state information for peer leaf switches.
show mac address-table vlan vlan-id	Displays MAC addresses for a VLAN.
show platform software fed switch active matm macTable vlan vlan-id	Displays MAC addresses for a VLAN from MAC address table manager database for Forwarding Engine Driver (FED).
show ip route vrf vrf-name	Displays the IP routing table associated with a specific VRF.
show ip cef vrf vrf-name	Displays entries in the Cisco Express Forwarding (CEF) table associated with a VRF.
show arp vrf vrf-name	Displays entries in the Address Resolution Protocol (ARP) table associated with a VRF.
show bgp l2vpn evpn route-type 5	Displays BGP information for route type 5 of Layer 2 VPN EVPN address family.

Command	Purpose
show bgp l2vpn evpn all	Displays all BGP information for L2VPN EVPN address family.
