arp

To display the contents of the Address Resolution Protocol (ARP) table, use the **arp** command in boot loader mode.

arp [ip_address]

Syntax Description	<i>ip_address</i> (Optional) Shows the ARP table or the mapping for a specific IP address.
---------------------------	--------------------------------------------------------------------------------------------

Command Default	No default behavior or values.
------------------------	--------------------------------

Command Modes	Boot loader
----------------------	-------------

Command History	Release	Modification
Cisco IOS XE Everest 16.5.1a		This command was introduced.

Usage Guidelines	The ARP table contains the IP-address-to-MAC-address mappings.
-------------------------	----------------------------------------------------------------

Examples	This example shows how to display the ARP table:
-----------------	--------------------------------------------------

```
Device: arp 172.20.136.8
arp'ing 172.20.136.8...
172.20.136.8 is at 00:1b:78:d1:25:ae, via port 0
```

boot

To load and boot an executable image and display the command-line interface (CLI), use the **boot** command in boot loader mode.

boot [-post | -n | -p | flag] filesystem:/file-url...

Syntax Description	<p>-post (Optional) Run the loaded image with an extended or comprehensive power-on self-test (POST). Using this keyword causes POST to take longer to complete.</p> <p>-n (Optional) Pause for the Cisco IOS Debugger immediately after launching.</p> <p>-p (Optional) Pause for the JTAG Debugger right after loading the image.</p> <p>filesystem: Alias for a file system. Use flash: for the system board flash device; use usbflash0: for USB memory sticks.</p> <p>/file-url Path (directory) and name of a bootable image. Separate image names with a semicolon.</p>				
Command Default	No default behavior or values.				
Command Modes	Boot loader				
Command History	<table border="1"> <thead> <tr> <th>Release</th><th>Modification</th></tr> </thead> <tbody> <tr> <td>Cisco IOS XE Everest 16.5.1a</td><td>This command was introduced.</td></tr> </tbody> </table>	Release	Modification	Cisco IOS XE Everest 16.5.1a	This command was introduced.
Release	Modification				
Cisco IOS XE Everest 16.5.1a	This command was introduced.				
Usage Guidelines	<p>When you enter the boot command without any arguments, the device attempts to automatically boot the system by using the information in the BOOT environment variable, if any.</p> <p>If you supply an image name for the <i>file-url</i> variable, the boot command attempts to boot the specified image.</p> <p>When you specify boot loader boot command options, they are executed immediately and apply only to the current boot loader session.</p> <p>These settings are not saved for the next boot operation.</p> <p>Filenames and directory names are case sensitive.</p>				

Example

This example shows how to boot the device using the *new-image.bin* image:

```
Device: set BOOT flash:/new-images/new-image.bin
Device: boot
```

After entering this command, you are prompted to start the setup program.

cat

To display the contents of one or more files, use the **cat** command in boot loader mode.

cat *filesystem:/file-url...*

Syntax Description

filesystem: Specifies a file system.

/file-url Specifies the path (directory) and name of the files to display. Separate each filename with a space.

Command Default

No default behavior or values.

Command Modes

Boot loader

Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

Usage Guidelines

Filenames and directory names are case sensitive.

If you specify a list of files, the contents of each file appears sequentially.

Examples

This example shows how to display the contents of an image file:

```
Device: cat flash:image_file_name
version_suffix: universal-122-xx.SEx
version_directory: image_file_name
image_system_type_id: 0x00000002
image_name: image_file_name.bin
ios_image_file_size: 8919552
total_image_file_size: 11592192
image_feature: IP|LAYER_3|PLUS|MIN_DRAM_MEG=128
image_family: family
stacking_number: 1.34
board_ids: 0x00000068 0x00000069 0x0000006a 0x0000006b
info_end:
```

copy

copy

To copy a file from a source to a destination, use the **copy** command in boot loader mode.

copy *filesystem:/source-file-url filesystem:/destination-file-url*

Syntax Description

<i>filesystem:</i>	Alias for a file system. Use usbflash0: for USB memory sticks.
<i>/source-file-url</i>	Path (directory) and filename (source) to be copied.
<i>/destination-file-url</i>	Path (directory) and filename of the destination.

Command Default

No default behavior or values.

Command Modes

Boot loader

Command History

Release	Modification
---------	--------------

Cisco IOS XE Everest 16.5.1a This command was introduced.

Usage Guidelines

Filenames and directory names are case sensitive.

Directory names are limited to 127 characters between the slashes (/); the name cannot contain control characters, spaces, deletes, slashes, quotes, semicolons, or colons.

Filenames are limited to 127 characters; the name cannot contain control characters, spaces, deletes, slashes, quotes, semicolons, or colons.

If you are copying a file to a new directory, the directory must already exist.

Examples

This example shows how to copy a file at the root:

```
Device: copy usbflash0:test1.text usbflash0:test4.text
File "usbflash0:test1.text" successfully copied to "usbflash0:test4.text"
```

You can verify that the file was copied by entering the **dir** *filesystem:* boot loader command.

copy startup-config tftp:

To copy the configuration settings from a switch to a TFTP server, use the **copy startup-config tftp:** command in Privileged EXEC mode.

copy startup-config tftp: *remote host {ip-address}/{name}*

Syntax Description	<i>remote host {ip-address}/{name}</i> Host name or IP-address of Remote host.
---------------------------	--------------------------------------------------------------------------------

Command Default	No default behavior or values.
------------------------	--------------------------------

Command Modes	Privileged EXEC
----------------------	-----------------

Command History	Release	Modification
	Cisco IOS XE Release 16.1	This command was introduced.

Usage Guidelines	To copy your current configurations from the switch, run the command copy startup-config tftp: and follow the instructions. The configurations are copied onto the TFTP server.
-------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Then, login to another switch and run the command **copy tftp: startup-config** and follow the instructions. The configurations are now copied onto the other switch.

Examples	This example shows how to copy the configuration settings onto a TFTP server:
-----------------	-------------------------------------------------------------------------------

```
Device: copy startup-config tftp:  
Address or name of remote host []?
```

copy tftp: startup-config

copy tftp: startup-config

To copy the configuration settings from a TFTP server onto a new switch, use the **copy tftp: startup-config** command in Privileged EXEC mode on the new switch.

copy tftp: startup-config *remote host {ip-address}/{name}*

Syntax Description

remote host {ip-address}/{name} Host name or IP-address of Remote host.

Command Default

No default behavior or values.

Command Modes

Privileged EXEC

Command History

Release	Modification
---------	--------------

Cisco IOS XE Release 16.1 This command was introduced.

Usage Guidelines

After the configurations are copied, to save your configurations, use **write memory** command and then either reload the switch or run the **copy startup-config running-config** command.

Examples

This example shows how to copy the configuration settings from the TFTP server onto a switch:

```
Device: copy tftp: startup-config
Address or name of remote host []?
```

debug voice diagnostics mac-address

To enable debugging of voice diagnostics for voice clients, use the **debug voice diagnostics mac-address** command in privileged EXEC mode. To disable debugging, use the **no** form of this command.

```
debug voice diagnostics mac-address mac-address1 verbose mac-address mac-address2 verbose
nodebug voice diagnostics mac-address mac-address1 verbose mac-address mac-address2 verbose
```

Syntax Description	voice diagnostics Configures voice debugging for voice clients. mac-address mac-address1 mac-address mac-address2 Specifies MAC addresses of the voice clients. verbose Enables verbose mode for voice diagnostics.				
Command Default	No default behavior or values.				
Command Modes	Privileged EXEC				
Command History	<table border="1"> <thead> <tr> <th>Release</th><th>Modification</th></tr> </thead> <tbody> <tr> <td>Cisco IOS XE Everest 16.5.1a</td><td>This command was introduced.</td></tr> </tbody> </table>	Release	Modification	Cisco IOS XE Everest 16.5.1a	This command was introduced.
Release	Modification				
Cisco IOS XE Everest 16.5.1a	This command was introduced.				

The following is sample output from the **debug voice diagnostics mac-address** command and shows how to enable debugging of voice diagnostics for voice client with MAC address of 00:1f:ca:cf:b6:60:

```
Device# debug voice diagnostics mac-address 00:1f:ca:cf:b6:60
```

debug platform condition feature multicast controlplane

debug platform condition feature multicast controlplane

To enable radioactive tracing for the Internet Group Management Protocol (IGMP) and Multicast Listener Discovery (MLD) snooping features, use the **debug platform condition feature multicast controlplane** command in privileged EXEC mode. To disable radioactive tracing, use the **no** form of this command.

```
debug platform condition feature multicast controlplane {{igmp-debug | pim} group-ip {ipv4 address / ipv6 address} | {mld-snooping | igmp-snooping} mac mac-address ip {ipv4 address / ipv6 address} vlan vlan-id } level {debug | error | info | verbose | warning}
no debug platform condition feature multicast controlplane {{igmp-debug | pim} group-ip {ipv4 address / ipv6 address} | {mld-snooping | igmp-snooping} mac mac-address ip {ipv4 address / ipv6 address} vlan vlan-id } level {debug | error | info | verbose | warning}
```

Syntax Description		
igmp-debug		Enables IGMP control radioactive tracing.
pim		Enables Protocol Independent Multicast (PIM) control radioactive tracing.
mld-snooping		Enables MLD snooping control radioactive tracing.
igmp-snooping		Enables IGMP snooping control radioactive tracing.
mac mac-address		MAC address of the receiver.
group-ip {ipv4 address / ipv6 address}		IPv4 or IPv6 address of the igmp-debug or pim group.
ip {ipv4 address / ipv6 address}		IPv4 or IPv6 address of the mld-snooping or igmp-snooping group.
vlan vlan-id		VLAN ID. The range is from 1 to 4094.
level		Enables debug severity levels.
debug		Enables debugging level.
error		Enables error debugging.
info		Enables information debugging.
verbose		Enables detailed debugging.
warning		Enables warning debugging.

Command Modes Privileged EXEC (#)

Command History**Release****Modification**

Cisco IOS XE Gibraltar 16.10.1 This command was introduced.

The following example shows how to enable radioactive tracing for IGMP snooping:

```
Device# debug platform condition feature multicast controlplane igmp-snooping mac
000a.f330.344a ip 10.1.1.10 vlan 550 level warning
```

Related Commands

Command	Description
clear debug platform condition all	Removes the debug conditions applied to a platform.
debug platform condition	Filters debugging output for debug commands on the basis of specified conditions.
debug platform condition start	Starts conditional debugging on a system.
debug platform condition stop	Stops conditional debugging on a system.
show platform condition	Displays the currently active debug configuration.

debug platform condition mac

debug platform condition mac

To enable radioactive tracing for MAC learning, use the **debug platform condition mac** command in privileged EXEC mode. To disable radioactive tracing for MAC learning, use the **no** form of this command.

```
debug platform condition mac {mac-address {control-plane | egress | ingress} | access-list access-list name {egress | ingress}}
no debug platform condition mac {mac-address {control-plane | egress | ingress} | access-list access-list name {egress | ingress}}
```

Syntax Description	mac <i>mac-address</i> access-list <i>access-list name</i> control-plane egress ingress	Filters output on the basis of the specified MAC address. Filters output on the basis of the specified access list. Displays messages about the control plane routines. Filters output on the basis of outgoing packets. Filters output on the basis of incoming packets.
---------------------------	----------------------------------------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Command Modes	Privileged EXEC (#)
----------------------	---------------------

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

The following example shows how to filter debugging output on the basis of a MAC address:

```
Device# debug platform condition mac bc16.6509.3314 ingress
```

Related Commands	Command	Description
	show platform condition	Displays the currently active debug configuration.
	debug platform condition	Filters debugging output for debug commands on the basis of specified conditions.
	debug platform condition start	Starts conditional debugging on a system.
	debug platform condition stop	Stops conditional debugging on a system.
	clear debug platform condition all	Removes the debug conditions applied to a platform.

debug platform rep

To enable debugging of Resilient Ethernet Protocol (REP) functions, use the **debug platform rep** command in privileged EXEC mode. To remove the specified condition, use the **no** form of this command.

```
debug platform rep {all | error | event | packet | verbose}
no debug platform rep {all | error | event | packet | verbose}
```

Syntax Description	
all	Enables all REP debugging functions.
error	Enables REP error debugging.
event	Enables REP event debugging.
packet	Enables REP packet debugging.
verbose	Enables REP verbose debugging.

Command Modes	Privileged EXEC (#)
---------------	---------------------

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

The following example shows how to enable debugging for all functions:

```
Device# debug platform rep all

debug platform rep verbose debugging is on
debug platform rep control pkt handle debugging is on
debug platform rep error debugging is on
debug platform rep event debugging is on
```

Related Commands	Command	Description
	show platform condition	Displays the currently active debug configuration.
	debug platform condition	Filters debugging output for debug commands on the basis of specified conditions.
	debug platform condition start	Starts conditional debugging on a system.
	debug platform condition stop	Stops conditional debugging on a system.
	clear debug platform condition all	Removes the debug conditions applied to a platform.

debug ilpower powerman

debug ilpower powerman

To enable debugging of the power controller and Power over Ethernet (PoE) system, use the **debug ilpower powerman** command in privileged EXEC mode. Use the no form of this command to disable debugging.

Command Default	This command has no arguments or keywords.				
Command Modes	Privileged EXEC				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Gibraltar 16.10.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
Release	Modification				
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.				

This example shows the output for the **debug ilpower powerman** command for releases prior to Cisco IOS XE Gibraltar 16.10.1:

```
Device# debug ilpower powerman
1. %ILPOWER-3-CONTROLLER_PORT_ERR: Controller port error, Interface

delete

To delete one or more files from the specified file system, use the **delete** command in boot loader mode.

delete *filesystem:/file-url...*

Syntax Description

filesystem: Alias for a file system. Use **usbflash0**: for USB memory sticks.

/file-url... Path (directory) and filename to delete. Separate each filename with a space.

Command Default

No default behavior or values.

Command Modes

Boot loader

Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

Usage Guidelines

Filenames and directory names are case sensitive.

The device prompts you for confirmation before deleting each file.

Examples

This example shows how to delete two files:

```
Device: delete usbflash0:test2.text usbflash0:test5.text
Are you sure you want to delete "usbflash0:test2.text" (y/n)?y
File "usbflash0:test2.text" deleted
Are you sure you want to delete "usbflash0:test5.text" (y/n)?y
File "usbflash0:test2.text" deleted
```

You can verify that the files were deleted by entering the **dir usbflash0**: boot loader command.

dir

To display the list of files and directories on the specified file system, use the **dir** command in boot loader mode.

dir *filesystem:/file-url*

Syntax Description

filesystem: Alias for a file system. Use **flash:** for the system board flash device; use **usbflash0:** for USB memory sticks.

/file-url (Optional) Path (directory) and directory name that contain the contents you want to display. Separate each directory name with a space.

Command Default

No default behavior or values.

Command Modes

Boot Loader

Privileged EXEC

Command History

Release

Modification

Cisco IOS XE Everest 16.5.1a This command was introduced.

Usage Guidelines

Directory names are case sensitive.

Examples

This example shows how to display the files in flash memory:

```
Device: dir flash:
Directory of flash:/
      2 -rwx        561  Mar  01 2013 00:48:15  express_setup.debug

emergency-install

To perform an emergency installation on your system, use the **emergency-install** command in boot loader mode.

Note This feature is not supported on the Cisco Catalyst 9500 Series High Performance Switches.

emergency-install *url://<url>*

Syntax Description	< <i>url</i> > URL and name of the file containing the emergency installation bundle image.
---------------------------	---------------------------------------------------------------------------------------------

Command Default	No default behavior or values.
------------------------	--------------------------------

Command Modes	Boot loader
----------------------	-------------

Command History	Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.	

Usage Guidelines	The boot flash is erased during the installation operation. After you perform the emergency install operation, set the BOOT variable in the ROMMON prompt by using the set BOOT flash:packages.conf command, and run the boot flash:packages.conf command manually in boot loader mode to boot the system. If the BOOT variable is not set in the ROMMON prompt, once the system has booted, set the BOOT variable in the device prompt by using the boot system flash:packages.conf command in global configuration mode.
-------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Example

This example shows how to perform the emergency install operation using the contents of an image file:

```
Device: emergency-install tftp:<url>
The bootflash will be erased during install operation, continue (y/n)?y
Starting emergency recovery (tftp:<url> ...

The system is not configured to boot automatically. The
following command will finish loading the operating system
software:
```

exit

exit

To return to the previous mode or exit from the CLI EXEC mode, use the **exit** command.

exit

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes Privileged EXEC

Global configuration

Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

This example shows how to exit the configuration mode:

```
Device(config)# exit  
Device#
```

flash_init

To initialize the flash: file system, use the **flash_init** command in boot loader mode.

flash_init

Syntax Description This command has no arguments or keywords.

Command Default The flash: file system is automatically initialized during normal system operation.

Command Modes Boot loader

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

Usage Guidelines During the normal boot process, the flash: file system is automatically initialized.

Use this command to manually initialize the flash: file system. For example, you use this command during the recovery procedure for a lost or forgotten password.

help

To display the available commands, use the **help** command in boot loader mode.

help

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes Boot loader

Command History **Release** **Modification**

Cisco IOS XE Everest 16.5.1a This command was introduced.

Example

This example shows how to display a list of available boot loader commands:

```
Device:>help
? -- Present list of available commands
arp -- Show arp table or arp-resolve an address
boot -- Load and boot an executable image
cat -- Concatenate (type) file(s)
copy -- Copy a file
delete -- Delete file(s)
dir -- List files in directories
emergency-install -- Initiate Disaster Recovery
...
...
...
unset -- Unset one or more environment variables
version -- Display boot loader version
```

install

To install Software Maintenance Upgrade (SMU) packages, use the **install** command in privileged EXEC mode.

```
install {abort | activate | file {bootflash: | flash: | harddisk: | webui:} [{auto-abort-timer timer
prompt-level {all | none}}] | add file {bootflash: | flash: | ftp: | harddisk: | http: | https: | rep: | scp:
| tftp: | webui:} [{activate [{auto-abort-timer timer prompt-level {all | none}}commit]}] | commit |
auto-abort-timer stop | deactivate file {bootflash: | flash: | harddisk: | webui:} | label id{description
description | label-name name} | remove {file {bootflash: | flash: | harddisk: | webui:} | inactive } | 
rollback to {base | committed | id {install-ID } | label {label-name}}}}
```

Syntax Description		
	abort	Terminates the current install operation.
	activate	Validates whether the SMU is added through the install add command. This keyword runs a compatibility check, updates package status, and if the package can be restarted, triggers post-install scripts to restart the necessary processes, or triggers a reload for nonrestartable packages.
	file	Specifies the package to be activated.
	{bootflash: flash: harddisk: webui:}	Specifies the location of the installed package.
	auto-abort-timer timer	(Optional) Installs an auto-abort timer.
	prompt-level {all none}	(Optional) Prompts a user about installation activities. For example, the activate keyword automatically triggers a reload for packages that require a reload. Before activating the package, a message prompts users about wanting to continue or not. The all keyword allows you to enable prompts. The none keyword disables prompts.
	add	Copies files from a remote location (through FTP or TFTP) to a device and performs SMU compatibility check for the platform and image versions. This keyword runs base compatibility checks to ensure that a specified package is supported on a platform.
	{ bootflash: flash: ftp: harddisk: http: https: rep: scp: tftp: webui:}	Specifies the package to be added.

commit	Makes SMU changes persistent over reloads. You can perform a commit after activating a package while the system is up, or after the first reload. If a package is activated, but not committed, it remains active after the first reload, but not after the second reload.						
auto-abort-timer stop	Stops the auto-abort timer.						
deactivate	Deactivates an installed package. Note Deactivating a package also updates the package status and might trigger a process restart or reload.						
label <i>id</i>	Specifies the ID of the install point to label.						
description	Adds a description to the specified install point.						
label-name <i>name</i>	Adds a label name to the specified install point.						
remove	Removes the installed packages. The remove keyword can only be used on packages that are currently inactive.						
inactive	Removes all the inactive packages from the device.						
rollback	Rolls back the data model interface (DMI) package SMU to the base version, the last committed version, or a known commit ID.						
to base	Returns to the base image.						
committed	Returns to the installation state when the last commit operation was performed.						
id <i>install-ID</i>	Returns to the specific install point ID. Valid values are from 1 to 4294967295.						
Command Default	Packages are not installed.						
Command Modes	Privileged EXEC (#)						
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Everest 16.6.1</td> <td>This command was introduced.</td> </tr> <tr> <td>Cisco IOS XE Fuji 16.9.1</td> <td>Hot-patching support is introduced. Release	Modification						
Cisco IOS XE Everest 16.6.1	This command was introduced.						
Cisco IOS XE Fuji 16.9.1	Hot-patching support is introduced. Sample output updated with hot SMU outputs.						

Usage Guidelines

An SMU is a package that can be installed on a system to provide a patch fix or security resolution to a released image. This package contains a minimal set of files for patching the release along with metadata that describes the contents of the package.

Packages must be added before the SMU is activated.

A package must be deactivated before it is removed from Flash. A removed package must be added again.

The following example shows how to add an install package to a device:

```
Device# install add file
flash:cat9k_iosxe.BLD_SMU_20180302_085005_TWIG_LATEST_20180306_013805.3.SSA.smu.bin

install_add: START Mon Mar  5 21:48:51 PST 2018
install_add: Adding SMU

Related Commands

Command	Description
show install	Displays information about the install packages.

l2 traceroute

To enable the Layer 2 traceroute server, use the **l2 traceroute** command in global configuration mode. Use the **no** form of this command to disable the Layer 2 traceroute server.

l2 traceroute
no l2 traceroute

Syntax Description This command has no arguments or keywords.

Command Modes Global configuration (config#)

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	The command was introduced.

Usage Guidelines Layer 2 traceroute is enabled by default and opens a listening socket on User Datagram Protocol (UDP) port 2228. To close the UDP port 2228 and disable Layer 2 traceroute, use the **no l2 traceroute** command in global configuration mode.

The following example shows how to configure Layer 2 traceroute using the **l2 traceroute** command.

```
Device# configure terminal  
Device(config)# l2 traceroute
```

license boot level

To boot a new software license on the device, use the **license boot level** command in global configuration mode. Use the **no** form of this command to remove all software licenses from the device.

license boot level *base-license-level* **addon** *addon-license-level*
no **license boot level**

Syntax Description

base-license-level Level at which the switch is booted, for example, **network-essentials**

Base licenses that are available are:

- Network Essentials
- Network Advantage (includes Network Essentials)

addon-license-level Additional licenses that can be subscribed for a fixed term of three, five, or seven years.

Add-on licenses that are available are:

- Digital Networking Architecture (DNA) Essentials
- DNA Advantage (includes DNA Essentials)

Command Default

The switch boots the configured image.

Command Modes

Global configuration (config)

Command History

	Release	Modification
	Cisco IOS XE Fuji 16.9.1	This command was introduced.

Usage Guidelines

Use the **license boot level** command for these purposes:

- Downgrade or upgrade licenses
- Enable or disable an evaluation or extension license
- Clear an upgrade license

This command forces the licensing infrastructure to boot the configured license level instead of the license hierarchy maintained by the licensing infrastructure for a given module:

- When the switch reloads, the licensing infrastructure checks the configuration in the startup configuration for licenses, if any. If there is a license in the configuration, the switch boots with that license. If there is no license, the licensing infrastructure follows the image hierarchy to check for licenses.
- If the forced boot evaluation license expires, the licensing infrastructure follows the regular hierarchy to check for licenses.
- If the configured boot license has already expired, the licensing infrastructure follows the hierarchy to check for licenses.

Examples

The following example shows how to activate the *network-essentials* license on a switch at the next reload:

```
Device(config)# license boot level network-essentials
```

license smart deregister

license smart deregister

To cancel device registration from Cisco Smart Software Manager (CSSM), use the **license smart deregister** command in privileged EXEC mode.

license smart deregister

Syntax Description This command has no arguments or keywords.

Command Default Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Fuji 16.9.1	This command was introduced.

Usage Guidelines Use the **license smart deregister** command for these purposes:

- When your device is taken off the inventory
- When your device is shipped elsewhere for redeployment
- When your device is returned to Cisco for replacement using the return merchandise authorization (RMA) process

Example

This example shows how to deregister a device from CSSM:

```
Device# license smart deregister
*Jun 25 00:20:13.291 PDT: %SMART_LIC-6-AGENT_DEREG_SUCCESS: Smart Agent for Licensing
De-registration with the Cisco Smart Software Manager or satellite was successful
*Jun 25 00:20:13.291 PDT: %SMART_LIC-5-EVAL_START: Entering evaluation period
*Jun 25 00:20:13.291 PDT: %SMART_LIC-6-EXPORT_CONTROLLED: Usage of export controlled features
is Not Allowed for udi PID:ISR4461/K9,SN:FDO2213A0GL
```

Related Commands

Command	Description
license smart register idtoken	Registers a device in CSSM.
show license all	Displays entitlements information.
show license status	Displays compliance status of a license.
show license summary	Displays summary of all active licenses.
show license usage	Displays license usage information

license smart register idtoken

To register a device with the token generated from Cisco Smart Software Manager (CSSM), use the **license smart register idtoken** command in privileged EXEC mode.

license smart register idtoken *token_ID* {force}

Syntax Description	<i>token_ID</i>	Device with the token generated from CSSM.
	force	Forcefully registers your device irrespective of whether the device is registered or not.
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Fuji 16.9.1	This command was introduced.

Example

This example shows how to register a device on CSSM:

```
Device# license smart register idtoken
$T14UytrNxBzbEs1ck8veUtWaG5abnZJOFdDa1FwbVRa%0Ab1RMBz0%3D%0A
Registration process is in progress. Use the 'show license status' command to check the
progress and result
Device#% Generating 2048 bit RSA keys, keys will be exportable...
[OK] (elapsed time was 0 seconds)
```

Related Commands	Command	Description
	license smart deregister	Cancels the device registration from CSSM.
	show license all	Displays entitlements information.
	show license status	Displays compliance status of a license.
	show license summary	Displays summary of all active licenses.
	show license usage	Displays license usage information

license smart renew

license smart renew

To manually renew your device's ID or authorization with Cisco Smart Software Manager (CSSM), use the **license smart renew** command in privileged EXEC mode.

license smart renew {auth | id}

Syntax Description	auth	Renews your authorization.
	id	Renews your ID.
Command Default	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Fuji 16.9.1	This command was introduced.

Usage Guidelines Authorization periods are renewed by the smart licensing system every 30 days. As long as the license is in an *Authorized* or *Out of compliance* state, the authorization period is renewed. The grace period starts when an authorization period expires. During the grace period or when the license is in the *Expired* state, the system continues to try and renew the authorization period. If a retry is successful, a new authorization period starts.

Example

This example shows how to renew a device license:

```
Device# license smart renew auth
```

Related Commands	Command	Description
	show license all	Displays entitlements information.
	show license status	Displays compliance status of a license.
	show license usage	Displays license usage information

location

To configure location information for an endpoint, use the **location** command in global configuration mode. To remove the location information, use the **no** form of this command.

```
location {admin-tag string | civic-location identifier {hostid} | civic-location identifier {hostid} | elin-location {string | identifier id} | geo-location identifier {hostid} | prefer {cdp weight priority-value | lldp-med weight priority-value | static config weight priority-value}}
no location {admin-tag string | civic-location identifier {hostid} | civic-location identifier {hostid} | elin-location {string | identifier id} | geo-location identifier {hostid} | prefer {cdp weight priority-value | lldp-med weight priority-value | static config weight priority-value}}
```

Syntax Description	admin-tag <i>string</i>	Configures administrative tag or site information. Site or location information in alphanumeric format.
	civic-location	Configures civic location information.
	identifier	Specifies the name of the civic location, emergency, or geographical location.
	host	Defines the host civic or geo-spatial location.
	<i>id</i>	Name of the civic, emergency, or geographical location.
	Note	The identifier for the civic location in the LLDP-MED switch TLV is limited to 250 bytes or less. To avoid error messages about available buffer space during switch configuration, be sure that the total length of all civic-location information specified for each civic-location identifier does not exceed 250 bytes.
	elin-location	Configures emergency location information (ELIN).
	geo-location	Configures geo-spatial location information.
	prefer	Sets location information source priority.
Command Default	No default behavior or values.	
Command Modes	Global configuration	
Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.
Usage Guidelines	After entering the location civic-location identifier global configuration command, you enter civic location configuration mode. After entering the location geo-location identifier global configuration command, you enter geo location configuration mode.	

The civic-location identifier must not exceed 250 bytes.

The host identifier configures the host civic or geo-spatial location. If the identifier is not a host, the identifier only defines a civic location or geo-spatial template that can be referenced on the interface.

The **host** keyword defines the device location. The civic location options available for configuration using the **identifier** and the **host** keyword are the same. You can specify the following civic location options in civic location configuration mode:

- **additional-code**—Sets an additional civic location code.
- **additional-location-information**—Sets additional civic location information.
- **branch-road-name**—Sets the branch road name.
- **building**—Sets building information.
- **city**—Sets the city name.
- **country**—Sets the two-letter ISO 3166 country code.
- **county**—Sets the county name.
- **default**—Sets a command to its defaults.
- **division**—Sets the city division name.
- **exit**—Exits from the civic location configuration mode.
- **floor**—Sets the floor number.
- **landmark**—Sets landmark information.
- **leading-street-dir**—Sets the leading street direction.
- **name**—Sets the resident name.
- **neighborhood**—Sets neighborhood information.
- **no**—Negates the specified civic location data and sets the default value.
- **number**—Sets the street number.
- **post-office-box**—Sets the post office box.
- **postal-code**—Sets the postal code.
- **postal-community-name**—Sets the postal community name.
- **primary-road-name**—Sets the primary road name.
- **road-section**—Sets the road section.
- **room**—Sets room information.
- **seat**—Sets seat information.
- **state**—Sets the state name.
- **street-group**—Sets the street group.
- **street-name-postmodifier**—Sets the street name postmodifier.
- **street-name-premodifier**—Sets the street name premodifier.
- **street-number-suffix**—Sets the street number suffix.
- **street-suffix**—Sets the street suffix.
- **sub-branch-road-name**—Sets the sub-branch road name.
- **trailing-street-suffix**—Sets the trailing street suffix.
- **type-of-place**—Sets the type of place.
- **unit**—Sets the unit.

You can specify the following geo-spatial location information in geo-location configuration mode:

- **altitude**—Sets altitude information in units of floor, meters, or feet.
- **latitude**—Sets latitude information in degrees, minutes, and seconds. The range is from -90 degrees to 90 degrees. Positive numbers indicate locations north of the equator.

- **longitude**—Sets longitude information in degrees, minutes, and seconds. The range is from -180 degrees to 180 degrees. Positive numbers indicate locations east of the prime meridian.
- **resolution**—Sets the resolution for latitude and longitude. If the resolution value is not specified, default value of 10 meters is applied to latitude and longitude resolution parameters. For latitude and longitude, the resolution unit is measured in meters. The resolution value can also be a fraction.
- **default**—Sets the geographical location to its default attribute.
- **exit**—Exits from geographical location configuration mode.
- **no**—Negates the specified geographical parameters and sets the default value.

Use the **no lldp med-tlv-select location information** interface configuration command to disable the location TLV. The location TLV is enabled by default.

This example shows how to configure civic location information on the switch:

```
Device(config)# location civic-location identifier 1
Device(config-civic)# number 3550
Device(config-civic)# primary-road-name "Cisco Way"
Device(config-civic)# city "San Jose"
Device(config-civic)# state CA
Device(config-civic)# building 19
Device(config-civic)# room C6
Device(config-civic)# county "Santa Clara"
Device(config-civic)# country US
Device(config-civic)# end
```

You can verify your settings by entering the **show location civic-location** privileged EXEC command.

This example shows how to configure the emergency location information on the switch:

```
Device(config)# location elin-location 14085553881 identifier 1
```

You can verify your settings by entering the **show location elin** privileged EXEC command.

The example shows how to configure geo-spatial location information on the switch:

```
Device(config)# location geo-location identifier host
Device(config-geo)# latitude 12.34
Device(config-geo)# longitude 37.23
Device(config-geo)# altitude 5 floor
Device(config-geo)# resolution 12.34
```

You can use the **show location geo-location identifier** command to display the configured geo-spatial location details.

location plm calibrating

location plm calibrating

To configure path loss measurement (CCX S60) request for calibrating clients, use the **location plm calibrating** command in global configuration mode.

location plm calibrating {multiband | uniband}

Syntax Description	multiband Specifies the path loss measurement request for calibrating clients on the associated 802.11a or 802.11b/g radio. uniband Specifies the path loss measurement request for calibrating clients on the associated 802.11a/b/g radio.				
Command Default	No default behavior or values.				
Command Modes	Global configuration				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Everest 16.5.1a</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Everest 16.5.1a	This command was introduced.
Release	Modification				
Cisco IOS XE Everest 16.5.1a	This command was introduced.				

The uniband is useful for single radio clients (even if the radio is a dual band and can operate in the 2.4-GHz and the 5-GHz bands). The multiband is useful for multiple radio clients.

This example shows how to configure the path loss measurement request for calibrating clients on the associated 802.11a/b/g radio:

```
Device# configure terminal
Device(config)# location plm calibrating uniband
Device(config)# end
```

mac address-table move update

To enable the MAC address table move update feature, use the **mac address-table move update** command in global configuration mode on the switch stack or on a standalone switch. To return to the default setting, use the **no** form of this command.

```
mac address-table move update {receive | transmit}
no mac address-table move update {receive | transmit}
```

Syntax Description

receive	Specifies that the switch processes MAC address-table move update messages.
transmit	Specifies that the switch sends MAC address-table move update messages to other switches in the network if the primary link goes down and the standby link comes up.

Command Default

By default, the MAC address-table move update feature is disabled.

Command Modes

Global configuration

Command History

Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

Usage Guidelines

The MAC address-table move update feature allows the switch to provide rapid bidirectional convergence if a primary (forwarding) link goes down and the standby link begins forwarding traffic.

You can configure the access switch to send the MAC address-table move update messages if the primary link goes down and the standby link comes up. You can configure the uplink switches to receive and process the MAC address-table move update messages.

Examples

This example shows how to configure an access switch to send MAC address-table move update messages:

```
Device# configure terminal
Device(config)# mac address-table move update transmit
Device(config)# end
```

This example shows how to configure an uplink switch to get and process MAC address-table move update messages:

```
Device# configure terminal
Device(config)# mac address-table move update receive
Device(config)# end
```

You can verify your setting by entering the **show mac address-table move update** privileged EXEC command.

mgmt_init

To initialize the Ethernet management port, use the **mgmt_init** command in boot loader mode.

mgmt_init

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes Boot loader

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

Usage Guidelines Use the **mgmt_init** command only during debugging of the Ethernet management port.

Examples This example shows how to initialize the Ethernet management port:

```
Device: mgmt_init
```

mkdir

To create one or more directories on the specified file system, use the **mkdir** command in boot loader mode.

mkdir *filesystem:/directory-url...*

Syntax Description

filesystem: Alias for a file system. Use **usbflash0:** for USB memory sticks.

/directory-url... Name of the directories to create. Separate each directory name with a space.

Command Default

No default behavior or values.

Command Modes

Boot loader

Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

Usage Guidelines

Directory names are case sensitive.

Directory names are limited to 127 characters between the slashes (/); the name cannot contain control characters, spaces, deletes, slashes, quotes, semicolons, or colons.

Example

This example shows how to make a directory called Saved_Configs:

```
Device: mkdir usbflash0:Saved_Configs
Directory "usbflash0:Saved_Configs" created
```

more

more

To display the contents of one or more files, use the **more** command in boot loader mode.

more *filesystem:/file-url...*

Syntax Description

filesystem: Alias for a file system. Use **flash:** for the system board flash device.

/file-url... Path (directory) and name of the files to display. Separate each filename with a space.

Command Default

No default behavior or values.

Command Modes

Boot loader

Command History

Release	Modification
---------	--------------

Cisco IOS XE Everest 16.5.1a This command was introduced.

Usage Guidelines

Filenames and directory names are case sensitive.

If you specify a list of files, the contents of each file appears sequentially.

Examples

This example shows how to display the contents of a file:

```
Device: more flash:image_file_name
version_suffix: universal-122-xx.SEx
version_directory: image_file_name
image_system_type_id: 0x00000002
image_name: image_file_name.bin
ios_image_file_size: 8919552
total_image_file_size: 11592192
image_feature: IP|LAYER_3|PLUS|MIN_DRAM_MEG=128
image_family: family
stacking_number: 1.34
board_ids: 0x00000068 0x00000069 0x0000006a 0x0000006b
info_end:
```

no debug all

To disable debugging on a switch, use the **no debug all** command in Privileged EXEC mode.

no debug all

Command Default	No default behavior or values.				
Command Modes	Privileged EXEC				
Command History	<table><thead><tr><th>Release</th><th>Modification</th></tr></thead><tbody><tr><td>Cisco IOS XE Release 16.1</td><td>This command was introduced.</td></tr></tbody></table>	Release	Modification	Cisco IOS XE Release 16.1	This command was introduced.
Release	Modification				
Cisco IOS XE Release 16.1	This command was introduced.				

Examples This example shows how to disable debugging on a switch.

```
Device: no debug all
All possible debugging has been turned off.
```

rename

To rename a file, use the **rename** command in boot loader mode.

rename *filesystem:/source-file-url filesystem:/destination-file-url*

Syntax Description

<i>filesystem:</i>	Alias for a file system. Use usbflash0: for USB memory sticks.
<i>/source-file-url</i>	Original path (directory) and filename.
<i>/destination-file-url</i>	New path (directory) and filename.

Command Default

No default behavior or values.

Command Modes

Boot loader

Command History

Release	Modification
---------	--------------

Cisco IOS XE Everest 16.5.1a This command was introduced.

Usage Guidelines

Filenames and directory names are case sensitive.

Directory names are limited to 127 characters between the slashes (/); the name cannot contain control characters, spaces, deletes, slashes, quotes, semicolons, or colons.

Filenames are limited to 127 characters; the name cannot contain control characters, spaces, deletes, slashes, quotes, semicolons, or colons.

Examples

This example shows a file named *config.text* being renamed to *config1.text*:

```
Device: rename usbflash0:config.text usbflash0:config1.text
```

You can verify that the file was renamed by entering the **dir** *filesystem:* boot loader command.

request platform software console attach switch

To start a session on a member switch, use the **request platform software console attach switch** command in privileged EXEC mode.

Note On stacking switches (Catalyst 3650/3850/9200/9300 switches), this command can only be used to start a session on the standby console. On Catalyst 9500 switches, this command is supported only in a stackwise virtual setup. You cannot start a session on member switches. By default, all consoles are already active, so a request to start a session on the active console will result in an error.

request platform software console attach switch { *switch-number* | **active | **standby** } { **0/0** | **R0** }**

Syntax Description

switch-number Specifies the switch number. The range is from 1 to 9.

active Specifies the active switch.

Note This argument is not supported on Catalyst 9500 switches.

standby Specifies the standby switch.

0/0 Specifies that the SPA-Inter-Processor slot is 0, and bay is 0.

Note Do not use this option with stacking switches. It will result in an error.

R0 Specifies that the Route-Processor slot is 0.

Command Default

By default, all switches in the stack are active.

Command Modes

Privileged EXEC (#)

Command History

Release

Modification

Cisco IOS XE Everest
16.5.1a This command was introduced.

Usage Guidelines

To start a session on the standby switch, you must first enable it in the configuration.

Examples

This example shows how to session to the standby switch:

```
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# redundancy
Device(config-red)# main-cpu
Device(config-r-mc)# standby console enable
Device(config-r-mc)# end
```

request platform software console attach switch

```
Device# request platform software console attach switch standby R0
#
# Connecting to the IOS console on the route-processor in slot 0.
# Enter Control-C to exit.
#
Device-stby> enable
Device-stby#
```

reset

To perform a hard reset on the system, use the **reset** command in boot loader mode. A hard reset is similar to power-cycling the device; it clears the processor, registers, and memory.

reset

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes Boot loader

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

Examples This example shows how to reset the system:

```
Device: reset
Are you sure you want to reset the system (y/n)? y
System resetting...
```

rmdir

To remove one or more empty directories from the specified file system, use the **rmdir** command in boot loader mode.

rmdir *filesystem:/directory-url...*

Syntax Description

filesystem: Alias for a file system. Use **usbflash0:** for USB memory sticks.

/directory-url... Path (directory) and name of the empty directories to remove. Separate each directory name with a space.

Command Default

No default behavior or values.

Command Modes

Boot loader

Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

Usage Guidelines

Directory names are case sensitive and limited to 45 characters between the slashes (/); the name cannot contain control characters, spaces, deletes, slashes, quotes, semicolons, or colons.

Before removing a directory, you must first delete all of the files in the directory.

The device prompts you for confirmation before deleting each directory.

Example

This example shows how to remove a directory:

```
Device: rmdir usbflash0:Test
```

You can verify that the directory was deleted by entering the **dir** *filesystem:* boot loader command.

sdm prefer

To specify the SDM template for use on the switch, use the **sdm prefer** command in global configuration mode.

sdm prefer
{advanced}

Syntax Description	advanced Supports advanced features such as NetFlow.
---------------------------	-------------------------------------------------------------

Command Default	No default behavior or values.
------------------------	--------------------------------

Command Modes	Global configuration
----------------------	----------------------

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

Usage Guidelines	In a device stack, all stack members must use the same SDM template that is stored on the active device.
-------------------------	----------------------------------------------------------------------------------------------------------

When a new device is added to a stack, the SDM configuration that is stored on the active device overrides the template configured on an individual device.

Example

This example shows how to configure the advanced template:

```
Device(config)# sdm prefer advanced
Device(config)# exit
Device# reload
```

service private-config-encryption

service private-config-encryption

To enable private configuration file encryption, use the **service private-config-encryption** command. To disable this feature, use the **no** form of this command.

service private-config-encryption
no service private-config-encryption

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes Global configuration (config)

Command History	Release	Modification
	Cisco IOS XE Fuji 16.8.1a	This command was introduced.

Examples The following example shows how to enable private configuration file encryption:

```
Device> enable
Device# configure terminal
Device(config)# service private-config-encryption
```

Related Commands	Command	Description
	show parser encrypt file status	Displays the private configuration encryption status.

set

To set or display environment variables, use the **set** command in boot loader mode. Environment variables can be used to control the boot loader or any other software running on the device.

set variable value

Syntax Description

<i>variable value</i>	Use one of the following keywords for <i>variable</i> and the appropriate value for <i>value</i> :
	MANUAL_BOOT —Decides whether the device automatically or manually boots. Valid values are 1/Yes and 0/No. If it is set to 0 or No, the boot loader attempts to automatically boot the system. If it is set to anything else, you must manually boot the device from the boot loader mode.
	BOOT filesystem:/file-url —Identifies a semicolon-separated list of executable files to try to load and execute when automatically booting. If the BOOT environment variable is not set, the system attempts to load and execute the first executable image it can find by using a recursive, depth-first search through the flash: file system. If the BOOT variable is set but the specified images cannot be loaded, the system attempts to boot the first bootable file that it can find in the flash: file system.
	ENABLE_BREAK —Allows the automatic boot process to be interrupted when the user presses the Break key on the console. Valid values are 1, Yes, On, 0, No, and Off. If set to 1, Yes, or On, you can interrupt the automatic boot process by pressing the Break key on the console after the flash: file system has initialized.
	HELPER filesystem:/file-url —Identifies a semicolon-separated list of loadable files to dynamically load during the boot loader initialization. Helper files extend or patch the functionality of the boot loader.
	PS1 prompt —Specifies a string that is used as the command-line prompt in boot loader mode.
	CONFIG_FILE flash: /file-url —Specifies the filename that Cisco IOS uses to read and write a nonvolatile copy of the system configuration.
	BAUD rate —Specifies the number of bits per second (b/s) that is used for the baud rate for the console. The Cisco IOS software inherits the baud rate setting from the boot loader and continues to use this value unless the configuration file specifies another setting. The range is from 0 to 128000 b/s. Valid values are 50, 75, 110, 150, 300, 600, 1200, 1800, 2000, 2400, 3600, 4800, 7200, 9600, 14400, 19200, 28800, 38400, 56000, 57600, 115200, and 128000. The most commonly used values are 300, 1200, 2400, 9600, 19200, 57600, and 115200.
	SWITCH_NUMBER stack-member-number —Changes the member number of a stack member.
	SWITCH_PRIORITY priority-number —Changes the priority value of a stack member.

Command Default

The environment variables have these default values:

set

MANUAL_BOOT: No (0)

BOOT: Null string

ENABLE_BREAK: No (Off or 0) (the automatic boot process cannot be interrupted by pressing the **Break** key on the console).

HELPER: No default value (helper files are not automatically loaded).

PS1 device:

CONFIG_FILE: config.text

BAUD: 9600 b/s

SWITCH_NUMBER: 1

SWITCH_PRIORITY: 1

Note Environment variables that have values are stored in the flash: file system in various files. Each line in the files contains an environment variable name and an equal sign followed by the value of the variable.

A variable has no value if it is not listed in these files; it has a value if it is listed even if the value is a null string. A variable that is set to a null string (for example, “ ”) is a variable with a value.

Many environment variables are predefined and have default values.

Command Modes Boot loader

Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

Usage Guidelines

Environment variables are case sensitive and must be entered as documented.

Environment variables that have values are stored in flash memory outside of the flash: file system.

Under typical circumstances, it is not necessary to alter the setting of the environment variables.

The MANUAL_BOOT environment variable can also be set by using the **boot manual** global configuration command.

The BOOT environment variable can also be set by using the **boot system filesystem:/file-url** global configuration command.

The ENABLE_BREAK environment variable can also be set by using the **boot enable-break** global configuration command.

The HELPER environment variable can also be set by using the **boot helper filesystem: /file-url** global configuration command.

The CONFIG_FILE environment variable can also be set by using the **boot config-file flash: /file-url** global configuration command.

The SWITCH_NUMBER environment variable can also be set by using the **switch current-stack-member-number renumber new-stack-member-number** global configuration command.

The SWITCH_PRIORITY environment variable can also be set by using the device *stack-member-number priority priority-number* global configuration command.

The boot loader prompt string (PS1) can be up to 120 printable characters not including the equal sign (=).

Example

This example shows how to set the SWITCH_PRIORITY environment variable:

```
Device: set SWITCH_PRIORITY 2
```

You can verify your setting by using the **set** boot loader command.

show avc client

show avc client

To display information about top number of applications, use the **show avc client** command in privileged EXEC mode.

show avc client *client-mac* top *n* application [aggregate | upstream | downstream]

Syntax Description

client *client-mac* Specifies the client MAC address.

top *n* application Specifies the number of top "N" applications for the given client.

Command Default

No default behavior or values.

Command Modes

Privileged EXEC

Command History

Release Modification

This command was introduced.

The following is sample output from the **show avc client** command:

```
Device# sh avc client 0040.96ae.65ec top 10 application aggregate
```

<hr/>					
1	skinny	9	540	60	100

show debug

To display all the debug commands available on a switch, use the **show debug** command in Privileged EXEC mode.

show debug

show debug condition *Condition identifier / All conditions*

Syntax Description

Condition identifier Sets the value of the condition identifier to be used. Range is between 1 and 1000.

All conditions Shows all conditional debugging options available.

Command Default

No default behavior or values.

Command Modes

Privileged EXEC

Command History

Release	Modification
---------	--------------

Cisco IOS XE Release 16.1 This command was introduced.

Usage Guidelines

Because debugging output is assigned high priority in the CPU process, it can render the system unusable. For this reason, use debug commands only to troubleshoot specific problems or during troubleshooting sessions with Cisco technical support staff. Moreover, it is best to use debug commands during periods of lower network traffic and fewer users. Debugging during these periods decreases the likelihood that increased debug command processing overhead will affect system use.

Examples

This example shows the output of a **show debug** command:

```
Device# show debug condition all
```

To disable debugging, use the **no debug all** command.

show env

show env

To display fan, temperature, and power information for the switch (standalone switch, stack master, or stack member), use the **show env** command in EXEC modes.

```
show env { all | fan | power [all | switch [switch-number] ] | stack [stack-number] | temperature [status] }
```

Syntax Description	
all	Displays fan, temperature and power environmental status.
fan	Displays the switch fan status.
power	Displays the power supply status.
all	(Optional) Displays the status for all power supplies.
switch switch-number	(Optional) Displays the power supply status for a specific switch.
stack switch-number	(Optional) Displays all environmental status for each switch in the stack or for a specified switch. The range is 1 to 9, depending on the switch member numbers in the stack.
temperature	Displays the switch temperature status.
status	(Optional) Displays the temperature status and threshold values.

Command Default	No default behavior or values.				
Command Modes	User EXEC Privileged EXEC				
Command History	<table border="1"> <thead> <tr> <th>Release</th><th>Modification</th></tr> </thead> <tbody> <tr> <td>Cisco IOS XE Everest 16.5.1a</td><td>This command was introduced.</td></tr> </tbody> </table>	Release	Modification	Cisco IOS XE Everest 16.5.1a	This command was introduced.
Release	Modification				
Cisco IOS XE Everest 16.5.1a	This command was introduced.				
Usage Guidelines	<p>Use the show env stack [switch-number] command to display information about any switch in the stack from any member switch.</p> <p>Use the show env temperature status command to display the switch temperature states and threshold levels.</p>				
Examples	This example shows how to display information about stack member 1 from the master switch:				

```
Device> show env stack 1
Device 1:
Device Fan 1 is OK
Device Fan 2 is OK
Device Fan 3 is OK
FAN-PS1 is OK
```

```
FAN-PS2 is NOT PRESENT
Device 1: SYSTEM TEMPERATURE is OK
Temperature Value: 32 Degree Celsius
Temperature State: GREEN
Yellow Threshold : 41 Degree Celsius
Red Threshold : 56 Degree Celsius
```

```
Device>
```

This example shows how to display temperature value, state, and threshold values:

```
Device> show env temperature status
Temperature Value: 32 Degree Celsius
Temperature State: GREEN
Yellow Threshold : 41 Degree Celsius
Red Threshold : 56 Degree Celsius
```

```
Device>
```

Table 2: States in the show env temperature status Command Output

State	Description
Green	The switch temperature is in the <i>normal</i> operating range.
Yellow	The temperature is in the <i>warning</i> range. You should check the external temperature around the switch.
Red	The temperature is in the <i>critical</i> range. The switch might not run properly if the temperature is in this range.

show env xps

show env xps

To display budgeting, configuration, power, and system power information for the Cisco eXpandable Power System (XPS) 2200, use the **show env xps** command in privileged EXEC mode.

```
show env xps { budgeting | configuration | port [ all | number ] | power | system | thermal | upgrade | version }
```

Syntax Description	budgeting configuration port [all number] power system thermal upgrade version	Displays XPS power budgeting, the allocated and budgeted power of all switches in the power stack. Displays the configuration resulting from the power xps privileged EXEC commands. The XPS configuration is stored in the XPS. Enter the show env xps configuration command to retrieve the non-default configuration. Displays the configuration and status of all ports or the specified XPS port. Port numbers are from 1 to 9. Displays the status of the XPS power supplies. Displays the XPS system status. Displays the XPS thermal status. Displays the XPS upgrade status. Displays the XPS version details.
---------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Command Modes	Privileged EXEC
----------------------	-----------------

Command History	Release	Modification
	12.2(55)SE1	This command was introduced.

Usage Guidelines	Use the show env xps privileged EXEC command to display the information for XPS 2200.
-------------------------	----------------------------------------------------------------------------------------------

Examples	This is an example of output from the show env xps budgeting command:
-----------------	-----------------------------------------------------------------------

```

Command	Description
power xps(global configuration command)	Configures XPS and XPS port names.
power xps(privileged EXEC command)	Configures the XPS ports and system.

show flow monitor

show flow monitor

To display the status and statistics for a flow monitor, use the **show flow monitor** command in privileged EXEC mode.

Syntax Description	name (Optional) Specifies the name of a flow monitor. monitor-name (Optional) Name of a flow monitor that was previously configured. cache (Optional) Displays the contents of the cache for the flow monitor. format (Optional) Specifies the use of one of the format options for formatting the display output. csv (Optional) Displays the flow monitor cache contents in comma-separated variables (CSV) format. record (Optional) Displays the flow monitor cache contents in record format. table (Optional) Displays the flow monitor cache contents in table format. statistics (Optional) Displays the statistics for the flow monitor.
---------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Command Modes	Privileged EXEC
----------------------	-----------------

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

Usage Guidelines	The cache keyword uses the record format by default.
-------------------------	-------------------------------------------------------------

The uppercase field names in the display output of the **show flowmonitor monitor-name cache** command are key fields that uses to differentiate flows. The lowercase field names in the display output of the **show flow monitor monitor-name cache** command are nonkey fields from which collects values as additional data for the cache.

Examples	The following example displays the status for a flow monitor:
-----------------	---------------------------------------------------------------

```
Device# show flow monitor FLOW-MONITOR-1

Flow Monitor FLOW-MONITOR-1:
  Description:      Used for basic traffic analysis
  Flow Record:     flow-record-1
  Flow Exporter:   flow-exporter-1
                  flow-exporter-2
  Cache:
    Type:          normal
    Status:         allocated
    Size:          4096 entries / 311316 bytes
    Inactive Timeout: 15 secs
    Active Timeout: 1800 secs
```

This table describes the significant fields shown in the display.

Table 4: show flow monitor monitor-name Field Descriptions

Field	Description
Flow Monitor	Name of the flow monitor that you configured.
Description	Description that you configured or the monitor, or the default description User defined.
Flow Record	Flow record assigned to the flow monitor.
Flow Exporter	Exporters that are assigned to the flow monitor.
Cache	Information about the cache for the flow monitor.
Type	Flow monitor cache type. The value is always normal, as it is the only supported cache type.
Status	<p>Status of the flow monitor cache.</p> <p>The possible values are:</p> <ul style="list-style-type: none"> • allocated—The cache is allocated. • being deleted—The cache is being deleted. • not allocated—The cache is not allocated.
Size	Current cache size.
Inactive Timeout	Current value for the inactive timeout in seconds.
Active Timeout	Current value for the active timeout in seconds.

The following example displays the status, statistics, and data for the flow monitor named FLOW-MONITOR-1:

This table describes the significant fields shown in the display.

The following example displays the status, statistics, and data for the flow monitor named FLOW-MONITOR-1 in a table format:

The following example displays the status, statistics, and data for the flow monitor named FLOW-MONITOR-IPv6 (the cache contains IPv6 data) in record format:

The following example displays the status and statistics for a flow monitor:

show install

show install

To display information about install packages, use the **show install** command in privileged EXEC mode.

```
show install {active | committed | inactive | log | package {bootflash: | flash: | webui:} | rollback | summary | uncommitted}
```

Syntax Description					
active	Displays information about active packages.				
committed	Displays package activations that are persistent.				
inactive	Displays inactive packages.				
log	Displays entries stored in the logging installation buffer.				
package	Displays metadata information about the package, including description, restart information, components in the package, and so on.				
{bootflash: flash: harddisk: webui:}	Specifies the location of the install package.				
rollback	Displays the software set associated with a saved installation.				
summary	Displays information about the list of active, inactive, committed, and superseded packages.				
uncommitted	Displays package activations that are nonpersistent.				
Command Modes	Privileged EXEC (#)				
Command History	<table border="1"> <thead> <tr> <th>Release</th><th>Modification</th></tr> </thead> <tbody> <tr> <td>Cisco IOS XE Everest 16.6.1</td><td>This command was introduced.</td></tr> </tbody> </table>	Release	Modification	Cisco IOS XE Everest 16.6.1	This command was introduced.
Release	Modification				
Cisco IOS XE Everest 16.6.1	This command was introduced.				
Usage Guidelines	Use the show commands to view the status of the install package.				

Example

The following is sample output from the **show install package** command:

```
Device# show install package bootflash:cat3k-universalk9.2017-01-10_13.15.1.
CSCxxx.SSA.dmp.bin
Name: cat3k-universalk9.2017-01-10_13.15.1.CSCxxx.SS
Version: 16.6.1.0.199.1484082952.Everest
Platform: Catalyst3k
Package Type: dmp
Defect ID: CSCxxx
Package State: Added
Supersedes List: {}
Smu ID: 1
```

The following is sample output from the **show install summary** command:

```
Device# show install summary

Active Packages:
    bootflash:cat3k-universalk9.2017-01-10_13.15.1.CSCxxx.SSA.dmp.bin

Inactive Packages:
    No packages

Committed Packages:
    bootflash:cat3k-universalk9.2017-01-10_13.15.1.CSCxxx.SSA.dmp.bin

Uncommitted Packages:
    No packages

Device#
```

The table below lists the significant fields shown in the display.

Table 5: show install summary Field Descriptions

Field	Description
Active Packages	Name of the active install package.
Inactive Packages	List of inactive packages.
Committed Packages	Install packages that have saved or committed changes to the harddisk, so that the changes become persistent across reloads.
Uncommitted Packages	Intall package activations that are nonpersistent.

The following is sample output from the **show install log** command:

```
Device# show install log

```

Related Commands

Command	Description
show license all	Displays entitlements information.
show license status	Displays compliance status of a license.
show license summary	Displays summary of all active licenses.
show license udi	Displays UDI.
show tech-support license	Displays the debug output.

show location

To display location information for an endpoint, use the **show location** command in privileged EXEC mode.

show location

```
[{admin-tag | civic-location{identifier identifier-string | interface type number | static} |  
custom-location{identifier identifier-string | interface type number | static} | elin-location{identifier  
identifier-string | interface type number | static} | geo-location{identifier identifier-string | interface  
type number | static} | host}]
```

Syntax Description	admin-tag Displays administrative tag or site information. civic-location Specifies civic location information. identifier <i>identifier-string</i> Information identifier of the civic location, custom location, or geo-spatial location. interface <i>type number</i> Interface type and number. For information about the numbering syntax for your device, use the question mark (?) online help function. static Displays configured civic, custom, or geo-spatial location information. custom-location Specifies custom location information. elin-location Specifies emergency location information (ELIN). geo-location Specifies geo-spatial location information. host Specifies the civic, custom, or geo-spatial host location information.				
Command Default	No default behavior or values.				
Command Modes	Privileged EXEC				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Everest 16.5.1a</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Everest 16.5.1a	This command was introduced.
Release	Modification				
Cisco IOS XE Everest 16.5.1a	This command was introduced.				

The following sample output of the **show location civic-location** command displays civic location information for the specified identifier (**identifier 1**):

```
Device# show location civic-location identifier 1
Civic location information
-----
Identifier      : 1
County          : Santa Clara
Street number   : 3550
Building        : 19
Room            : C6
Primary road name : Example
```

show location

City : San Jose
State : CA
Country : US

Related Commands

Command	Description
location	Configures location information for an endpoint.

show logging onboard switch uptime

To display a history of all reset reasons for all modules or switches in a system, use the **show logging onboard switch uptime** command.

show logging onboard switch { switch-number | active | standby } uptime [[[**continuous | detail**] **start hour day month [year]** [**end hour day month year**]]] | **summary**]

Syntax Description	
switch <i>switch-number</i>	Specifies a switch. Enter the switch number.
active	Specifies the active instance.
standby	Specifies the standby instance.
continuous	(Optional) Displays continuous data.
detail	(Optional) Displays detailed data.
start <i>hour day month year</i>	(Optional) Specifies the start time to display data.
end <i>hour day month year</i>	(Optional) Specifies the end time to display data.
summary	(Optional) Displays summary data.

Command Modes	Privileged EXEC(#)	
Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was implemented on the Cisco Catalyst 9500 Series Switches
	Cisco IOS XE Gibraltar 16.10.1	The output of this command was updated to display the reload reasons for members in a stack.

Examples:

The following is a sample output from the **show logging onboard switch active uptime continuous** command:

```
Device# show logging onboard switch active uptime continuous

show mac address-table

show mac address-table

To display the MAC address table, use the **show mac address-table** command in privileged EXEC mode.

```
show mac address-table [{ address mac-addr [ interface type/number | vlan vlan-id ] | aging-time [ routed-mac | vlan vlan-id ] | control-packet-learn | count [ summary | vlan vlan-id ] | [ dynamic | secure | static ] [ address mac-addr ] [ interface type/number | vlan vlan-id ] | interface type/number | learning [ vlan vlan-id ] | multicast [ count ] [ igmp-snooping | mld-snooping | user ] [ vlan vlan-id ] | notification { change [ interface [ type/number ] ] | mac-move | threshold } | vlan vlan-id }]
```

Syntax Description		
address <i>mac-addr</i>	(Optional)	Displays information about the MAC address table for a specific MAC address.
interface <i>type/number</i>	(Optional)	Displays addresses for a specific interface.
vlan <i>vlan-id</i>	(Optional)	Displays addresses for a specific VLAN.
aging-time [routed-mac vlan <i>vlan-id</i>]	(Optional)	Displays the aging time for the routed MAC or VLAN.
control-packet-learn	(Optional)	Displays the controlled packet MAC learning parameters.
count	(Optional)	Displays the number of entries that are currently in the MAC address table.
dynamic	(Optional)	Displays only the dynamic addresses.
secure	(Optional)	Displays only the secure addresses.
static	(Optional)	Displays only the static addresses.
learning	(Optional)	Displays learnings of a VLAN or interface.
multicast	(Optional)	Displays information about the multicast MAC address table entries only.
igmp-snooping	(Optional)	Displays the addresses learned by Internet Group Management Protocol (IGMP) snooping.
mld-snooping	(Optional)	Displays the addresses learned by Multicast Listener Discover version 2 (MLDv2) snooping.
user	(Optional)	Displays the manually entered (static) addresses.
notification change		Displays the MAC notification parameters and history table.
notification mac-move		Displays the MAC-move notification status.
notification threshold		Displays the Counter-Addressable Memory (CAM) table utilization notification status.

Command Modes	Privileged EXEC (#)
Command History	Release Cisco IOS XE Everest 16.5.1a This command was introduced.

Usage Guidelines	The <i>mac-addr</i> value is a 48-bit MAC address. The valid format is H.H.H.
	The interface <i>number</i> argument designates the module and port number. Valid values depend on the specified interface type and the chassis and module that are used. For example, if you specify a Gigabit Ethernet interface and have a 48-port 10/100BASE-T Ethernet module that is installed in a 13-slot chassis, valid values for the module number are from 1 to 13 and valid values for the port number are from 1 to 48.

The following is sample output from the **show mac address-table** command:

```
Device# show mac address-table
```

<output truncated>

The table below describes the significant fields shown in the **show mac address-table** display.

Table 6: show mac address-table Field Descriptions

Field	Description
VLAN	VLAN number.
Mac Address	MAC address of the entry.
Type	Type of address.
Ports	Port type.
Total MAC addresses	Total MAC addresses in the MAC address table.

Related Commands

Command	Description
clear mac address-table	Deletes dynamic entries from the MAC address table.

show mac address-table move update

show mac address-table move update

To display the MAC address-table move update information on the device, use the **show mac address-table move update** command in EXEC mode.

show mac address-table move update

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes User EXEC

Privileged EXEC

Command History **Release**

Cisco IOS XE Everest 16.5.1a

Mo

The

Example

This example shows the output from the **show mac address-table move update** command:

```
Device# show mac address-table move update

Switch-ID : 010b.4630.1780
Dst mac-address : 0180.c200.0010
Vlans/Macs supported : 1023/8320
Default/Current settings: Rcv Off/On, Xmt Off/On
Max packets per min : Rcv 40, Xmt 60
Rcv packet count : 10
Rcv conforming packet count : 5
Rcv invalid packet count : 0
Rcv packet count this min : 0
Rcv threshold exceed count : 0
Rcv last sequence# this min : 0
Rcv last interface : Po2
Rcv last src-mac-address : 0003.fd6a.8701
Rcv last switch-ID : 0303.fd63.7600
Xmt packet count : 0
Xmt packet count this min : 0
Xmt threshold exceed count : 0
Xmt pak buf unavail cnt : 0
Xmt last interface : None
```

show parser encrypt file status

To view the private configuration encryption status, use the **show parser encrypt file status** command.

show parser encrypt file status

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes User EXEC

Command History	Release	Modification
Cisco IOS XE Fuji 16.8.1a		This command was introduced.

Examples

The following command output indicates that the feature is available and the file is encrypted. The file is in ‘cipher text’ format.

```
Device> enable
Device# show parser encrypt file status
Feature:           Enabled
File Format:       Cipher text
Encryption Version: ver1
```

Related Commands

Command	Description
service private-config-encryption	Enables private configuration file encryption.

show platform hardware fpga

show platform hardware fpga

To display the system field-programmable gate array (FPGA) settings, use the **show platform hardware fpga** command in privileged EXEC mode.

show platform hardware fpga

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Fuji 16.9.1	This command was introduced.

Example

The following is a sample output from the **show platform hardware fpga** command on a Cisco Catalyst 9300 Series switch:

```
Device# show platform hardware fpga

Register Addr      FPGA Reg Description      Value
-----            -----

show platform software audit

show platform software audit

To display the SE Linux Audit logs, use the **show platform software audit** command in privileged EXEC mode.

```
show platform software audit {all | summary | [switch {switch-number | active | standby}] {0 | F0 | R0 | {FP | RP} {active}}}}
```

Syntax Description		
all		Shows the audit log from all the slots.
summary		Shows the audit log summary count from all the slots.
switch		Shows the audit logs for a slot on a specific switch.
<i>switch-number</i>		Selects the switch with the specified switch number.
switch active		Selects the active instance of the switch.
standby		Selects the standby instance of the switch.
0		Shows the audit log for the SPA-Inter-Processor slot 0.
F0		Shows the audit log for the Embedded-Service-Processor slot 0.
R0		Shows the audit log for the Route-Processor slot 0.
FP active		Shows the audit log for the active Embedded-Service-Processor slot.
RP active		Shows the audit log for the active Route-Processor slot.

Command Modes	Privileged EXEC (#)				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Gibraltar 16.10.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
Release	Modification				
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.				

Usage Guidelines	This command was introduced in the Cisco IOS XE Gibraltar 16.10.1 as a part of the SELinux Permissive Mode feature. The show platform software audit command displays the system logs containing the access violation events.
-------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

In Cisco IOS XE Gibraltar 16.10.1, operation in a permissive mode is available - with the intent of confining specific components (process or application) of the IOS-XE platform. In the permissive mode, access violation events are detected and system logs are generated, but the event or operation itself is not blocked. The solution operates mainly in an access violation detection mode.

The following is a sample output of the **show software platform software audit summary** command:

```
Device# show platform software audit summary
=====
AUDIT LOG ON switch 1
-----
AVC Denial count: 58
=====
```

The following is a sample output of the **show software platform software audit all** command:

```
Device# show platform software audit all

show platform software fed switch punt cause

show platform software fed switch punt cause

To display information about why the packets received on an interface are punted to the Router Processor (RP), use the **show platform software fed switch punt ccpuq cause** command in privileged EXEC mode.

show platform software fed switch {switch-number | active | standby} punt{cause_id | clear | summary}

Syntax Description

switch {switch-number | active | standby} Displays information about the switch. You have the following options:

- *switch-number*.
- **active**—Displays information relating to the active switch.
- **standby**—Displays information relating to the standby switch, if available.

Note This keyword is not supported.

cause_id Specifies the ID of the cause for which the details have to be displayed.

clear Clears the statistics for all the causes. Clearing the causes might result in inconsistent statistics.

summary Displays a high-level overview of the punt reason.

Command Default

None

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
----------------	---------------------

Cisco IOS XE Gibraltar 16.10.1 This command was introduced.

Usage Guidelines

None

Example

The following is sample output from the **show platform software fed switch active punt cause summary** command.

```
Device# show platform software fed switch active punt cause summary
Statistics for all causes

Cause Cause Info Rcvd Dropped
-----  

7 ARP request or response 1 0
21 RP<->QFP keepalive 22314 0
55 For-us control 12 0
60 IP subnet or broadcast packet 21 0
96 Layer2 control protocols 133808 0
```

The following is sample output from the **show platform software fed switch active punt cause cause-id** command.

```
Device# show platform software fed switch active punt cause 21
Detailed Statistics

Sub Cause      Rcvd          Dropped
-----
0              22363          0
-----
```

show platform software fed switch punt cpuq

show platform software fed switch punt cpuq

To display information about the punt traffic on CPU queues, use the **show platform software fed switch punt cpuq** command in privileged EXEC mode.

```
show platform software fed switch {switch-number | active | standby} punt cpuq {cpuq_id | all | brief | clear | rates}
```

Syntax Description	switch {switch-number active standby} punt cpuq cpuq_id all brief clear rates	<p>Displays information about the switch. You have the following options:</p> <ul style="list-style-type: none"> • <i>switch-number</i>. • active—Displays information relating to the active switch. • standby—Displays information relating to the standby switch, if available. <p>Note This keyword is not supported.</p> <p>Displays the punt informtnion.</p> <p>Displays information about the CPU receive queue.</p> <p>Specifies details specific to a particular CPU queue.</p> <p>Displays the statistics for all the CPU queues.</p> <p>Displays summarized statistics for all the queues like details about punt packets received and dropped.</p> <p>Clears the statistics for all the CPU queues. Clearing the CPU queue might result in inconsistent statistics.</p> <p>Displays the rate at which the packets are punted.</p>
Command Default	None	
Command Modes	Privileged EXEC (#)	
Command History	Release Cisco IOS XE Gibraltar 16.10.1	Modification This command was introduced.
Usage Guidelines	None	

Example

The following is sample output from the **show platform software fed switch active punt cpuq brief** command.

```
Device#show platform software fed switch active punt cpuq brief
```

show running-config

show running-config

To display the contents of the current running configuration file or the configuration for a specific module, Layer 2 VLAN, class map, interface, map class, policy map, or virtual circuit (VC) class, use the **show running-config** command in privileged EXEC mode.

show running-config [options]

Syntax Description

options (Optional) Keywords used to customize output. You can enter more than one keyword.

- **aaa [accounting | attribute | authentication | authorization | diameter | group | ldap | miscellaneous | radius-server | server | tacacs-server | user-name | username]**: Displays AAA configurations.
 - **all**: Expands the output to include the commands that are configured with default parameters. If the **all** keyword is not used, the output does not display commands configured with default parameters.
 - **bridge-domain {id | parameterized vlan}**: Displays the running configuration for bridge domains.
 - **brief**: Displays the configuration without certification data and encrypted filter details.
 - **class-map [name] [linenum]**: Displays class map information.
 - **cts [interface | policy-server | rbm-rbac | server | sxp]**: Displays Cisco TrustSec configurations.
 - **deprecated**: Displays deprecated configuration along with the running configuration.
 - **eap {method | profiles}**: Displays EAP method configurations and profiles.
 - **flow {exporter | monitor | record}**: Displays global flow configuration commands.
 - **full**: Displays the full configuration.
 - **identity {policy | profile}**: Displays identity profile or policy information.
-

- **interface type number**: Displays interface-specific configuration information. If you use the **interface** keyword, you must specify the interface type and the interface number (for example, **interface GigabitEthernet 1/0/1**). Use the **show run interface ?** command to determine the interfaces available on your system.
- **ip dhcp pool [name]**: Displays IPv4 DHCP pool configuration.
- **ipv6 dhcp pool [name]**: Displays IPv6 DHCP pool configuration.
- **linenum [brief | full | partition]**: Displays line numbers in the output.
- **map-class [atm | dialer | frame-relay] [name]**: Displays map class information.
- **mdns-sd [gateway | location-group | service-definition | service-list | service-peer | service-policy]**: Displays Multicast DNS Service Discovery (mDNS-SD) configurations.
- **partition {access-list | class-map | common | global-cdp | interface | ip-as-path | ip-community | ip-prefix-list | ip-static-routes | line | policy-map | route-map | router | snmp | tacacs}**: Displays the configuration corresponding to a partition.
- **policy-map [name] [linenum]**: Displays policy map information.
- **switch number**: Displays configuration for the specified switch.
- **view [full]**: Enables the display of a full running configuration. This is for view-based users who typically can only view the configuration commands that they are entitled to access for that particular view.
- **vlan [vlan-id]**: Displays the specific VLAN information; valid values are from 1 to 4094.
- **vrf [vrf-name]**: Displays the Virtual routing and forwarding (VRF)-aware configuration module number .

Command Default

The default syntax, **show running-config**, displays the contents of the running configuration file, except commands configured using the default parameters.

Command Modes

Privileged EXEC (#)

Command History**Release** **Modification**

Cisco IOS XE Everest 16.5.1a This command was introduced.

Usage Guidelines

The **show running-config** command is technically a command alias (substitute or replacement syntax) of the **more system:running-config** command. Although the use of more commands is recommended (because of their uniform structure across platforms and their expandable syntax), the **show running-config** command remains enabled to accommodate its widespread use, and to allow typing shortcuts such as **show run**.

The **show running-config interface** command is useful when there are multiple interfaces and you want to look at the configuration of a specific interface.

The **linenum** keyword causes line numbers to be displayed in the output. This option is useful for identifying a particular portion of a very large configuration.

You can enter additional output modifiers in the command syntax by including a pipe character (|) after the optional keyword. For example, **show running-config interface GigabitEthernet 1/0/1 linenum | begin 3**.

show running-config

To display the output modifiers that are available for a keyword, enter `| ?` after the keyword. Depending on the platform you are using, the keywords and the arguments for the *options* argument may vary.

The **show running-config all** command displays complete configuration information, including the default settings and values. For example, if the Cisco Discovery Protocol (abbreviated as CDP in the output) hold-time value is set to its default of 180:

- The **show running-config** command does not display this value.
- The **show running-config all** displays the following output: `cdp holdtime 180`.

If the Cisco Discovery Protocol holdtime is changed to a nondefault value (for example, 100), the output of the **show running-config** and **show running-config all** commands is the same; that is, the configured parameter is displayed.

The **show running-config** command displays ACL information. To exclude ACL information from the output, use the **show running | section exclude ip access | access list** command.

Examples

The following example shows the configuration for GigabitEthernet0/0 interface. The fields are self-explanatory.

```
Device# show running-config interface gigabitEthernet0/0
Building configuration...
Current configuration : 130 bytes
!
interface GigabitEthernet0/0
vrf forwarding Mgmt-vrf
ip address 10.5.20.10 255.255.0.0
negotiation auto
ntp broadcast
end
```

The following example shows how to set line numbers in the command output and then use the output modifier to start the display at line 10. The fields are self-explanatory.

```
Device# show running-config linenum | begin 10
10 : boot-start-marker
11 : boot-end-marker
12 : !
13 : no logging buffered
14 : enable password #####
15 : !
16 : spe 1/0 1/7
17 : firmware location bootflash:mica-modem-pw.10.16.0.0.bin
18 : !
19 : !
20 : resource-pool disable
21 : !
22 : no aaa new-model
23 : ip subnet-zero
24 : ip domain name cisco.com
25 : ip name-server 172.16.11.48
26 : ip name-server 172.16.2.133
27 : !
28 : !
29 : isdn switch-type primary-5ess
30 : !
```

```

.
.
126 : end
```

In the following sample output from the **show running-config** command, the **shape average** command indicates that the traffic shaping overhead accounting for ATM is enabled. The BRAS-DSLAM encapsulation type is qinq and the subscriber line encapsulation type is snap-rbe based on the ATM adaptation layer 5 (AAL5) service. The fields are self-explanatory.

```
Device# show running-config
.
.
.

Related Commands	Command	Description
	copy running-config startup-config	Copies the running configuration to the startup configuration. (Command alias for the copy system:running-config nvram:startup-config command.)
	show startup-config	Displays the contents of NVRAM (if present and valid) or displays the configuration file pointed to by the CONFIG_FILE environment variable. (Command alias for the more:nvram startup-config command.)

show sdm prefer

show sdm prefer

To display information about the templates that can be used to maximize system resources for a particular feature, use the **show sdm prefer** command in privileged EXEC mode. To display the current template, use the command without a keyword.

show sdm prefer [advanced]

Syntax Description	advanced (Optional) Displays information on the advanced template.				
Command Default	No default behavior or values.				
Command Modes	Privileged EXEC				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Everest 16.5.1a</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Everest 16.5.1a	This command was introduced.
Release	Modification				
Cisco IOS XE Everest 16.5.1a	This command was introduced.				

Usage Guidelines If you did not reload the switch after entering the **sdm prefer** global configuration command, the **show sdm prefer** privileged EXEC command displays the template currently in use and not the newly configured template.

The numbers displayed for each template represent an approximate maximum number for each feature resource. The actual number might vary, depending on the actual number of other features configured. For example, in the default template if your device had more than 16 routed interfaces (subnet VLANs), the number of possible unicast MAC addresses might be less than 6000.

Example

The following is sample output from the **show sdm prefer** command:

```
Device# show sdm prefer
Showing SDM Template Info

This is the Advanced template.
Number of VLANs: 4094
Unicast MAC addresses: 32768
Overflow Unicast MAC addresses: 512
IGMP and Multicast groups: 8192
Overflow IGMP and Multicast groups: 512
Directly connected routes: 32768
Indirect routes: 7680
Security Access Control Entries: 3072
QoS Access Control Entries: 3072
Policy Based Routing ACEs: 1024
Netflow ACEs: 1024
Input Microflow policer ACEs: 256
Output Microflow policer ACEs: 256
Flow SPAN ACEs: 256
Tunnels: 256
```

Control Plane Entries:	512
Input Netflow flows:	8192
Output Netflow flows:	16384
SGT/DGT entries:	4096
SGT/DGT Overflow entries:	512

These numbers are typical for L2 and IPv4 features.
Some features such as IPv6, use up double the entry size;
so only half as many entries can be created.

Device#

show tech-support license

show tech-support license

To display the debug output, use the **show license tech support** command in privileged EXEC mode.

show tech-support license

Syntax Description This command has no arguments or keywords.

Command Default Privileged EXEC (#)

show tech-support platform

show tech-support platform

To display detailed information about a platform for use by technical support, use the **show tech-support platform** command in privileged EXEC mode.

show tech-support platform

Syntax Description This command has no arguments or keywords.

Command Modes Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Usage Guidelines This command is used for platform-specific debugging. The output provides detailed information about a platform, such as CPU usage, Ternary Content Addressable Memory (TCAM) usage, capacity, and memory usage.

The output of the **show tech-support platform** command is very long. To better manage this output, you can redirect the output to an external file (for example, **show tech-support platform | redirect flash:filename**) in the local writable storage file system or remote file system.

The output of the **show tech-support platform** command displays a list commands and their output. These commands may differ based on the platform.

Examples

The following is sample output from the **show tech-support platform** command:

```
Device# show tech-support platform
.
.

Related Commands	Command	Description
	show tech-support platform	Displays detailed information about a platform for use by technical support.

show tech-support platform fabric

show tech-support platform fabric

To display information about the switch fabric, use the **show tech-support platform fabric** command in privileged EXEC mode.

```
show tech-support platform fabric [{display-cli | vrf vrf-name {ipv4 display-cli | ipv6 display-cli | source instance-id instance-id {ipv4 ip-address/ip-prefix | ipv6 ipv6-address/ipv6-prefix | mac mac-address} {dest instance-id instance-id} {ipv4 ip-address/ip-prefix | ipv6 ipv6-address/ipv6-prefix | mac mac-address} [{display-cli]}]}]
```

Syntax Description	display-cli	(Optional) Displays the list of show commands available in the output of this command.
	vrf vrf-name	(Optional) Displays fabric-related information for the specified virtual routing and forwarding (VRF) instance.
	ipv4 ip-address/ip-prefix	(Optional) Displays fabric-related information for the source or destination IP VRF.
	ipv6 ipv6-address/ipv6-prefix	(Optional) Displays fabric-related information for the source or destination IPv6 VRF.
	source	(Optional) Displays fabric-related information for the source VRF.
	instance-id instance-id	(Optional) Displays information about the endpoint identifier (EID) of the source.
	mac mac-address	(Optional) Displays fabric-related information for the source and destination MAC VRF for Layer 2 extension deployments.
Command Modes	Privileged EXEC (#)	
Command History	Release Cisco IOS XE Gibraltar 16.10.1	Modification This command was introduced.
Usage Guidelines	The output of this command is very long. To better manage this output, you can redirect the output to an external file (for example, show tech-support platform fabric redirect flash:filename) in the local writable storage file system or remote file system.	

The output of this command displays a list commands and their output. These commands may differ based on the platform.

Examples

The following is sample output from the **show tech-support platform fabric vrf source instance-id ipv4 dest instance-id ipv4** command:

```
Device# show tech-support platform fabric vrf DEFAULT_VN source instance-id
4098 ipv4 10.1.1.1/32 dest instance-id 4098 ipv4 10.12.12.12/32

Related Commands

Command	Description
ip igmp snooping	Enables IGMP snooping globally or on an interface.
show ip igmp snooping	Displays the IGMP snooping configuration of a device.
show tech-support platform	Displays detailed information about a platform for use by technical support.

show tech-support platform layer3

To display Layer 3 platform forwarding information, use the **show tech-support platform layer3** command in privileged EXEC mode.

```
show tech-support platform layer3 {multicast Group_ipAddr ipv4-address switch switch-number srcIP
ipv4-address | unicast {dstIP ipv4-address srcIP ipv4-address | vrf vrf-name destIP ipv4-address srcIP
ipv4-address}}
```

Syntax Description		
multicast		Displays multicast information.
Group_ipv6Addr ipv4-address		Displays information about the specified multicast group address.
switch switch-number		Displays information about the specified switch. Valid values are from 1 to 9.
srcIP ipv4-address		Displays information about the specified source address.
unicast		Displays unicast-related information.
dstIP ipv4-address		Displays information about the specified destination address.
vrf vrf-name		Displays unicast-related virtual routing and forwarding (VRF) information.

Related Commands

Command	Description
show tech-support platform	Displays detailed information about a platform for use by technical support.

show tech-support platform mld_snooping

To display Multicast Listener Discovery (MLD) snooping information about a group, use the **show tech-support platform mld_snooping** command in privileged EXEC mode.

show tech-support platform mld_snooping [{Group_ipv6Addr *ipv6-address*}][{vlan** *vlan-ID*}]**

Syntax Description	Group_ipv6Addr	(Optional) Displays snooping information about the specified group address.				
	<i>ipv6-address</i>	(Optional) IPv6 address of the group.				
	vlan <i>vlan-ID</i>	(Optional) Displays MLD snooping VLAN information. Valid values are from 1 to 4094.				
Command Modes		Privileged EXEC (#)				
Command History		<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Gibraltar 16.10.1</td><td>This command was introduced.</td></tr> </tbody> </table>	Release	Modification	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
Release	Modification					
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.					

Usage Guidelines The output of this command is very long. To better manage this output, you can redirect the output to an external file (for example, **show tech-support platform mld_snooping | redirect flash:filename**) in the local writable storage file system or remote file system.

Examples

The following is sample output from the **show tech-support platform mld_snooping** command:

```

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Usage Guidelines	The output of the show tech-support port command is very long. To better manage this output, you can redirect the output to an external file (for example, show tech-support port redirect flash:filename) in the local writable storage file system or remote file system.
-------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

The output of this command displays the following commands:

- **show clock**
- **show version**
- **show module**
- **show inventory**
- **show interface status**
- **show interface counters**
- **show interface counters errors**
- **show interfaces**
- **show interfaces capabilities**
- **show controllers**
- **show controllers utilization**
- **show idprom interface**
- **show controller ethernet-controller phy detail**
- **show switch**
- **show platform software fed switch active port summary**
- **show platform software fed switch ifm interfaces ethernet**
- **show platform software fed switch ifm mappings**
- **show platform software fed switch ifm mappings lpn**

- **show platform software fed switch ifm mappings gpn**
- **show platform software fed switch ifm mappings port-le**
- **show platform software fed switch ifm if-id**
- **show platform software fed switch active port if_id**

Examples

The following is sample output from the **show tech-support port** command:

```
Device# show tech-support port
.
.
.
----- show controllers utilization -----
Port      Receive Utilization  Transmit Utilization
Gi1/0/1      0    0

Configuration register is 0x102

```
system env temperature threshold yellow
```

system env temperature threshold yellow

To configure the difference between the yellow and red temperature thresholds that determines the value of yellow threshold, use the **system env temperature threshold yellow** command in global configuration mode. To return to the default value, use the **no** form of this command.

```
system env temperature threshold yellow value
no system env temperature threshold yellow value
```

Syntax Description

value Specifies the difference between the yellow and red threshold values (in Celsius). The range is 10 to 25.

Command Default

These are the default values

Table 8: Default Values for the Temperature Thresholds

Device	Difference between Yellow and Red	Red ¹
Catalyst 9500	14°C	60°C

¹ You cannot configure the red temperature threshold.

Command Modes

Global configuration

Command History

Release	Modification
---------	--------------

Cisco IOS XE Everest 16.5.1a	This command was introduced.
------------------------------	------------------------------

Usage Guidelines

You cannot configure the green and red thresholds but can configure the yellow threshold. Use the **system env temperature threshold yellow** global configuration command to specify the difference between the yellow and red thresholds and to configure the yellow threshold. For example, if the red threshold is 66 degrees C and you want to configure the yellow threshold as 51 degrees C, set the difference between the thresholds as 15 by using the **system env temperature threshold yellow 15** command. For example, if the red threshold is 60 degrees C and you want to configure the yellow threshold as 51 degrees C, set the difference between the thresholds as 15 by using the **system env temperature threshold yellow 9** command.

Note The internal temperature sensor in the device measures the internal system temperature and might vary ±5 degrees C.

Examples

This example sets 15 as the difference between the yellow and red thresholds:

```
Device(config)# system env temperature threshold yellow 15
Device(config) #
```

traceroute mac

To display the Layer 2 path taken by the packets from the specified source MAC address to the specified destination MAC address, use the **traceroute mac** command in privileged EXEC mode.

```
traceroute mac [interface interface-id] source-mac-address [interface interface-id]
destination-mac-address [vlan vlan-id] [detail]
```

Syntax Description

interface interface-id	(Optional) Specifies an interface on the source or destination device.
source-mac-address	The MAC address of the source device in hexadecimal format.
destination-mac-address	The MAC address of the destination device in hexadecimal format.
vlan vlan-id	(Optional) Specifies the VLAN on which to trace the Layer 2 path that the packets take from the source device to the destination device. Valid VLAN IDs are 1 to 4094.
detail	(Optional) Specifies that detailed information appears.

Command Default

No default behavior or values.

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

Usage Guidelines

For Layer 2 traceroute to function properly, Cisco Discovery Protocol (CDP) must be enabled on all of the devices in the network. Do not disable CDP.

When the device detects a device in the Layer 2 path that does not support Layer 2 traceroute, the device continues to send Layer 2 trace queries and lets them time out.

The maximum number of hops identified in the path is ten.

Layer 2 traceroute supports only unicast traffic. If you specify a multicast source or destination MAC address, the physical path is not identified, and an error message appears.

The **traceroute mac** command output shows the Layer 2 path when the specified source and destination addresses belong to the same VLAN.

If you specify source and destination addresses that belong to different VLANs, the Layer 2 path is not identified, and an error message appears.

If the source or destination MAC address belongs to multiple VLANs, you must specify the VLAN to which both the source and destination MAC addresses belong.

If the VLAN is not specified, the path is not identified, and an error message appears.

The Layer 2 traceroute feature is not supported when multiple devices are attached to one port through hubs (for example, multiple CDP neighbors are detected on a port).

When more than one CDP neighbor is detected on a port, the Layer 2 path is not identified, and an error message appears.

This feature is not supported in Token Ring VLANs.

Examples

This example shows how to display the Layer 2 path by specifying the source and destination MAC addresses:

```
Device# traceroute mac 0000.0201.0601 0000.0201.0201
Source 0000.0201.0601 found on con6[WS-C3750E-24PD] (2.2.6.6)
con6 (2.2.6.6) :Gi0/0/1 => Gi0/0/3
    con5          (2.2.5.5) : Gi0/0/3 => Gi0/0/1
    con1          (2.2.1.1) : Gi0/0/1 => Gi0/0/2
    con2          (2.2.2.2) : Gi0/0/2 => Gi0/0/1
Destination 0000.0201.0201 found on con2[WS-C3550-24] (2.2.2.2)
Layer 2 trace completed
```

This example shows how to display the Layer 2 path by using the **detail** keyword:

```
Device# traceroute mac 0000.0201.0601 0000.0201.0201 detail
Source 0000.0201.0601 found on con6[WS-C3750E-24PD] (2.2.6.6)
con6 / WS-C3750E-24PD / 2.2.6.6 :
    Gi0/0/2 [auto, auto] => Gi0/0/3 [auto, auto]
con5 / WS-C2950G-24-EI / 2.2.5.5 :
    Fa0/3 [auto, auto] => Gi0/1 [auto, auto]
con1 / WS-C3550-12G / 2.2.1.1 :
    Gi0/1 [auto, auto] => Gi0/2 [auto, auto]
con2 / WS-C3550-24 / 2.2.2.2 :
    Gi0/2 [auto, auto] => Fa0/1 [auto, auto]
Destination 0000.0201.0201 found on con2[WS-C3550-24] (2.2.2.2)
Layer 2 trace completed.
```

This example shows how to display the Layer 2 path by specifying the interfaces on the source and destination devices:

```
Device# traceroute mac interface fastethernet0/1 0000.0201.0601 interface fastethernet0/3
0000.0201.0201
Source 0000.0201.0601 found on con6[WS-C3750E-24PD] (2.2.6.6)
con6 (2.2.6.6) :Gi0/0/1 => Gi0/0/3
    con5          (2.2.5.5) : Gi0/0/3 => Gi0/0/1
    con1          (2.2.1.1) : Gi0/0/1 => Gi0/0/2
    con2          (2.2.2.2) : Gi0/0/2 => Gi0/0/1
Destination 0000.0201.0201 found on con2[WS-C3550-24] (2.2.2.2)
Layer 2 trace completed
```

This example shows the Layer 2 path when the device is not connected to the source device:

```
Device# traceroute mac 0000.0201.0501 0000.0201.0201 detail
Source not directly connected, tracing source .....
Source 0000.0201.0501 found on con5[WS-C3750E-24TD] (2.2.5.5)
con5 / WS-C3750E-24TD / 2.2.5.5 :
    Gi0/0/1 [auto, auto] => Gi0/0/3 [auto, auto]
```

traceroute mac

```

con1 / WS-C3550-12G / 2.2.1.1 :
    Gi0/1 [auto, auto] => Gi0/2 [auto, auto]
con2 / WS-C3550-24 / 2.2.2.2 :
    Gi0/2 [auto, auto] => Fa0/1 [auto, auto]
Destination 0000.0201.0201 found on con2[WS-C3550-24] (2.2.2.2)
Layer 2 trace completed.

```

This example shows the Layer 2 path when the device cannot find the destination port for the source MAC address:

```

Device# traceroute mac 0000.0011.1111 0000.0201.0201
Error:Source Mac address not found.
Layer2 trace aborted.

```

This example shows the Layer 2 path when the source and destination devices are in different VLANs:

```

Device# traceroute mac 0000.0201.0601 0000.0301.0201
Error:Source and destination macs are on different vlans.
Layer2 trace aborted.

```

This example shows the Layer 2 path when the destination MAC address is a multicast address:

```

Device# traceroute mac 0000.0201.0601 0100.0201.0201
Invalid destination mac address

```

This example shows the Layer 2 path when source and destination devicees belong to multiple VLANs:

```

Device# traceroute mac 0000.0201.0601 0000.0201.0201
Error:Mac found on multiple vlans.
Layer2 trace aborted.

```

traceroute mac ip

To display the Layer 2 path taken by the packets from the specified source IP address or hostname to the specified destination IP address or hostname, use the **traceroute mac ip** command in privileged EXEC mode.

traceroute mac ip {*source-ip-address source-hostname*} {*destination-ip-address destination-hostname*} [**detail**]

Syntax Description	<p><i>source-ip-address</i> The IP address of the source device as a 32-bit quantity in dotted-decimal format.</p> <p><i>source-hostname</i> The IP hostname of the source device.</p> <p><i>destination-ip-address</i> The IP address of the destination device as a 32-bit quantity in dotted-decimal format.</p> <p><i>destination-hostname</i> The IP hostname of the destination device.</p> <p>detail (Optional) Specifies that detailed information appears.</p>				
Command Default	No default behavior or values.				
Command Modes	Privileged EXEC				
Command History	<table border="1"> <thead> <tr> <th>Release</th><th>Modification</th></tr> </thead> <tbody> <tr> <td>Cisco IOS XE Everest 16.5.1a</td><td>This command was introduced.</td></tr> </tbody> </table>	Release	Modification	Cisco IOS XE Everest 16.5.1a	This command was introduced.
Release	Modification				
Cisco IOS XE Everest 16.5.1a	This command was introduced.				
Usage Guidelines	<p>For Layer 2 traceroute to function properly, Cisco Discovery Protocol (CDP) must be enabled on each device in the network. Do not disable CDP.</p> <p>When the device detects a device in the Layer 2 path that does not support Layer 2 traceroute, the device continues to send Layer 2 trace queries and lets them time out.</p> <p>The maximum number of hops identified in the path is ten.</p> <p>The traceroute mac ip command output shows the Layer 2 path when the specified source and destination IP addresses are in the same subnet.</p> <p>When you specify the IP addresses, the device uses Address Resolution Protocol (ARP) to associate the IP addresses with the corresponding MAC addresses and the VLAN IDs.</p> <ul style="list-style-type: none"> • If an ARP entry exists for the specified IP address, the device uses the associated MAC address and identifies the physical path. • If an ARP entry does not exist, the device sends an ARP query and tries to resolve the IP address. The IP addresses must be in the same subnet. If the IP address is not resolved, the path is not identified, and an error message appears. <p>The Layer 2 traceroute feature is not supported when multiple devices are attached to one port through hubs (for example, multiple CDP neighbors are detected on a port).</p> <p>When more than one CDP neighbor is detected on a port, the Layer 2 path is not identified, and an error message appears.</p>				

traceroute mac ip

This feature is not supported in Token Ring VLANs.

Examples

This example shows how to display the Layer 2 path by specifying the source and destination IP addresses and by using the **detail** keyword:

```
Device# traceroute mac ip 2.2.66.66 2.2.22.22 detail
Translating IP to mac .....
2.2.66.66 => 0000.0201.0601
2.2.22.22 => 0000.0201.0201

Source 0000.0201.0601 found on con6[WS-C2950G-24-EI] (2.2.6.6)
con6 / WS-C3750E-24TD / 2.2.6.6 :
    Gi0/0/1 [auto, auto] => Gi0/0/3 [auto, auto]
con5 / WS-C2950G-24-EI / 2.2.5.5 :
    Fa0/3 [auto, auto] => Gi0/1 [auto, auto]
con1 / WS-C3550-12G / 2.2.1.1 :
    Gi0/1 [auto, auto] => Gi0/2 [auto, auto]
con2 / WS-C3550-24 / 2.2.2.2 :
    Gi0/2 [auto, auto] => Fa0/1 [auto, auto]
Destination 0000.0201.0201 found on con2[WS-C3550-24] (2.2.2.2)
Layer 2 trace completed.
```

This example shows how to display the Layer 2 path by specifying the source and destination hostnames:

```
Device# traceroute mac ip con6 con2
Translating IP to mac .....
2.2.66.66 => 0000.0201.0601
2.2.22.22 => 0000.0201.0201

Source 0000.0201.0601 found on con6
con6 (2.2.6.6) :Gi0/0/1 => Gi0/0/3
con5          (2.2.5.5      ) : Gi0/0/3 => Gi0/1
con1          (2.2.1.1      ) : Gi0/0/1 => Gi0/2
con2          (2.2.2.2      ) : Gi0/0/2 => Fa0/1
Destination 0000.0201.0201 found on con2
Layer 2 trace completed
```

This example shows the Layer 2 path when ARP cannot associate the source IP address with the corresponding MAC address:

```
Device# traceroute mac ip 2.2.66.66 2.2.77.77
Arp failed for destination 2.2.77.77.
Layer2 trace aborted.
```

type

To display the contents of one or more files, use the **type** command in boot loader mode.

type *filesystem:/file-url...*

Syntax Description	<i>filesystem:</i> Alias for a file system. Use flash: for the system board flash device; use usbflash0: for USB memory sticks.				
	<i>/file-url...</i> Path (directory) and name of the files to display. Separate each filename with a space.				
Command Default	No default behavior or values.				
Command Modes	Boot loader				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Everest 16.5.1a</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Everest 16.5.1a	This command was introduced.
Release	Modification				
Cisco IOS XE Everest 16.5.1a	This command was introduced.				
Usage Guidelines	Filenames and directory names are case sensitive. If you specify a list of files, the contents of each file appear sequentially.				

Examples This example shows how to display the contents of a file:

```
Device: type flash:image_file_name
version_suffix: universal-122-xx.SEx
version_directory: image_file_name
image_system_type_id: 0x00000002
image_name: image_file_name.bin
ios_image_file_size: 8919552
total_image_file_size: 11592192
image_feature: IP|LAYER_3|PLUS|MIN_DRAM_MEG=128
image_family: family
stacking_number: 1.34
board_ids: 0x00000068 0x00000069 0x0000006a 0x0000006b
info_end:
```

unset

unset

To reset one or more environment variables, use the **unset** command in boot loader mode.

unset *variable...*

Syntax Description	<p><i>variable</i> Use one of these keywords for <i>variable</i>:</p> <p>MANUAL_BOOT—Specifies whether the device automatically or manually boots.</p>				
	<p>BOOT—Resets the list of executable files to try to load and execute when automatically booting. If the BOOT environment variable is not set, the system attempts to load and execute the first executable image it can find by using a recursive, depth-first search through the flash: file system. If the BOOT variable is set but the specified images cannot be loaded, the system attempts to boot the first bootable file that it can find in the flash: file system.</p>				
	<p>ENABLE_BREAK—Specifies whether the automatic boot process can be interrupted by using the Break key on the console after the flash: file system has been initialized.</p>				
	<p>HELPER—Identifies the semicolon-separated list of loadable files to dynamically load during the boot loader initialization. Helper files extend or patch the functionality of the boot loader.</p>				
	<p>PS1—Specifies the string that is used as the command-line prompt in boot loader mode.</p>				
	<p>CONFIG_FILE—Resets the filename that Cisco IOS uses to read and write a nonvolatile copy of the system configuration.</p>				
	<p>BAUD—Resets the rate in bits per second (b/s) used for the console. The Cisco IOS software inherits the baud rate setting from the boot loader and continues to use this value unless the configuration file specifies another setting.</p>				
Command Default	No default behavior or values.				
Command Modes	Boot loader				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Everest 16.5.1a</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Everest 16.5.1a	This command was introduced.
Release	Modification				
Cisco IOS XE Everest 16.5.1a	This command was introduced.				
Usage Guidelines	<p>Under typical circumstances, it is not necessary to alter the setting of the environment variables.</p> <p>The MANUAL_BOOT environment variable can also be reset by using the no boot manual global configuration command.</p> <p>The BOOT environment variable can also be reset by using the no boot system global configuration command.</p> <p>The ENABLE_BREAK environment variable can also be reset by using the no boot enable-break global configuration command.</p>				

The **HELPER** environment variable can also be reset by using the **no boot helper** global configuration command.

The **CONFIG_FILE** environment variable can also be reset by using the **no boot config-file** global configuration command.

Example

This example shows how to unset the **SWITCH_PRIORITY** environment variable:

```
Device: unset SWITCH_PRIORITY
```

version

To display the boot loader version, use the **version** command in boot loader mode.

version
