# bluetooth pin

To configure a new Bluetooth pin, use the **bluetooth pin** command in interface configuration or global configuration mode.

	bluetooth pin pin		
Syntax Description	pin	Pairing pin for the Bluetooth interface.	
		The pin is a 4-digit number.	
Command Modes	Interface configuration (config-if)		
	Global configuration (config)		
Command History	Release	Modification	
	Cisco IOS XE Amsterdam 17.1.1	This command was introduced.	
		This command was introduced for the Cisco Catalyst Series High Performance Switches.	
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.	
		This command was introduced for the Cisco Catalyst Series Switches.	
Usage Guidelines	The <b>bluetooth pin</b> command can be configured either in the interface configuration or global configuration mode. Cisco recommends using the global configuration mode to configure the Bluetooth pin.		
Examples	This example shows how to configure a new Bluetooth pin using the <b>bluetooth pin</b> command.		
	Device> enable Device# configure terminal Device(config)# bluetooth pin 1111 Device(config)#		
Related Commands	Command	Description	
	show platform hardware bluetooth	Displays information about the Bluetooth interface	

### debug ilpower

To enable debugging of the power controller and Power over Ethernet (PoE) system, use the **debug ilpower** command in privileged EXEC mode. To disable debugging, use the **no** form of this command.

debug ilpower {cdp | event | ha | ipc | police | port | powerman | registries | scp | sense | upoe} no debug ilpower {cdp | event | ha | ipc | police | port | powerman | registries | scp | sense | upoe}

Syntax Description	cdp Displays PoE Cisco Discovery Protocol (CDP) debug messages.			
	event	vent Displays PoE event debug messages.		
	ha	Displays PoE high-availability messages.		
	<b>ipc</b> Displays PoE Inter-Process Communication (IPC) debug messages.		essages.	
	police	Displays PoE police debug messages.		
	portDisplays PoE port manager debug messages.powermanDisplays PoE power management debug messages.			
			es.	
	registries	Displays PoE registries debug messages.		
	scp	Displays PoE SCP debug messages.		
	sense	Displays PoE sense debug messages.		
	upoe	Displays Cisco UPOE debug messages.		
Command Default	Debugging is disabled.			
Command Modes	Privileged I	leged EXEC		
Command History	Release		Modification	
	Cisco IOS	XE Everest 16.5.1a	This command was introduced.	
Usage Guidelines	This command is supported only on PoE-capable switches.			
	When you enable debugging on a switch stack, it is enabled only on the active switch. To enable debugging on a stack member, you can start a session from the active switch by using the <b>session</b> <i>switch-number</i> EXEC command. Then enter the <b>debug</b> command at the command-line prompt of the stack member. You also can use the <b>remote command</b> <i>stack-member-number</i> LINE EXEC command on the active switc to enable debugging on a member switch without first starting a session.			

### debug interface

To enable debugging of interface-related activities, use the **debug interface** command in privileged EXEC mode. To disable debugging, use the **no** form of this command.

**debug interface** {*interface-id* | **counters** {**exceptions** | **protocol memory**} | **null** *interface-number* | **port-channel** *port-channel-number* | **states** | **vlan** *vlan-id*}

**no debug interface** {*interface-id* | **counters** {**exceptions** | **protocol memory**} | **null** *interface-number* | **port-channel** *port-channel-number* | **states** | **vlan** *vlan-id*}

null interface-numberDisplays debug messages for null interfaces. The interface numb 0.port-channel port-channel-numberDisplays debug messages for the specified EtherChannel port-c interface. The port-channel-number range is 1 to 48.vlan vlan-idDisplays debug messages for the specified VLAN. The vlan ran 4094.			
port-channel-numberinterface. The port-channel-number range is 1 to 48.vlan vlan-idDisplays debug messages for the specified VLAN. The vlan range	hannel		
4094.	nge is 1 to		
<b>counters</b> Displays counters debugging information.			
<b>exceptions</b> Displays debug messages when a recoverable exceptional conducting the computation of the interface packet and data rate states			
<b>protocol memory</b> Displays debug messages for memory operations of protocol co	ounters.		
states Displays intermediary debug messages when an interface's state	transitions.		
Command Default Debugging is disabled.			
Command Modes Privileged EXEC (#)			
Command History Release Modification			
Cisco IOS XE Everest 16.5.1a This command was intr	roduced.		
<b>Usage Guidelines</b> If you do not specify a keyword, all debug messages appear.	- If you do not specify a keyword, all debug messages appear.		
The <b>undebug interface</b> command is the same as the <b>no debug interface</b> command.	The undebug interface command is the same as the no debug interface command.		
When you enable debugging on a switch stack, it is enabled only on the active switch. To enable on a stack member, you can start a session from the active switch by using the <b>session</b> <i>switch-nu</i> command. Then enter the <b>debug</b> command at the command-line prompt of the stack member. Yo use the <b>remote command</b> <i>stack-member-number LINE</i> EXEC command on the active switch to	<i>mber</i> EXEC ou also can		

### debug IIdp packets

To enable debugging of Link Layer Discovery Protocol (LLDP) packets, use the **debug lldp packets** command in privileged EXEC mode. To disable debugging, use the **no** form of this command.

debug lldp packets no debug lldp packets

**Syntax Description** This commnd has no arguments or keywords.

**Command Default** Debugging is disabled.

**Command Modes** Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

Usage Guidelines The undebug lldp packets command is the same as the no debug lldp packets command.

When you enable debugging on a switch stack, it is enabled only on the active switch. To enable debugging on a stack member, you can start a session from the active switch by using the **session** *switch-number* EXEC command.

### debug platform poe

To enable debugging of a Power over Ethernet (PoE) port, use the **debug platform poe** command in privileged EXEC mode. To disable debugging, use the **no** form of this command.

debug platform poe [{error | info}] [switch switch-number] no debug platform poe [{error | info}] [switch switch-number]

Syntax Description	error	(Optional) Displays PoE-related error debug messages.		
	info	(Optional) Displays PoE-related information debug messages.		
	switch switch-number	(Optional) Specifies the stack member. This keyword is supported only on stacking-capable switches.		
Command Default	Debugging is disabled.			
Command Modes	Privileged EXEC (#)			
Command History	Release	Modification		
	Cisco IOS XE Everest 1	16.5.1aThis command was introduced.		
Usage Guidelines	The undebug platform	poe command is the same as the no debug platform poe command.		

# debug platform software fed switch active punt packet-capture start

To enable debugging of packets during high CPU utilization, for an active switch, use the **debug platform** software fed switch active punt packet-capture start command in privileged EXEC mode. To disable debugging of packets during high CPU utilization, for an active switch, use the **debug platform software** fed switch active punt packet-capture stop command in privileged EXEC mode.

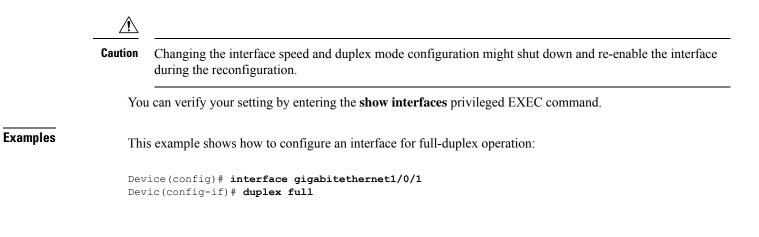

debug platform software fed switch active punt packet-capture start debug platform software fed switch active punt packet-capture stop

Syntax Description	switch active	Displays information about the active switch.	
	punt	Specifies the punt information.	
	packet-capture	Specifies information about the captured packet.	
	start	Enables debugging of the active switch.	
	stop	Disables debugging of the active switch.	
Command Modes	Privileged EXEC (#)		
Command History	Release	Modification	
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.	
Usage Guidelines	The <b>debug platform software fed switch active punt packet-capture start</b> command starts the debugging of packets during high CPU utilization. The packet capture is stopped when the 4k buffer size is exceeded.		
Examples	The following is a sample output from the <b>debug platform software fed switch active punt packet-capture start</b> command:		
	Device# <b>debug platform software fed switch active packet-capture start</b> Punt packet capturing started.		
	The following is a sample output from the <b>debug platform software fed switch active punt packet-capture stop</b> command:		
	Device# <b>debug platform software fed switch active packet-capture stop</b> Punt packet capturing stopped. Captured 101 packet(s)		

# duplex

To specify the duplex mode of operation for a port, use the **duplex** command in interface configuration mode. To return to the default value, use the **no** form of this command.

	(		
Syntax Description	<ul><li>auto Enables automatic duplex configuration. The port automatically detects whether it should run in full-or half-duplex mode, depending on the attached device mode.</li><li>full Enables full-duplex mode.</li></ul>		
Command Default			
	half Enables half-duplex mode (only for interfaces half-duplex mode for interfaces operating at 10		
	The default is <b>auto</b> for Gigabit Ethernet ports.		
	Duplex options are not supported on the 1000BASE- or -ZX) small form-factor pluggable (SFP) modules.	x or 10GBASE-x (where -x is -BX, -CWDM, -LX, -SX,	
Command Modes	Interface configuration		
Command History	Release	Modification	
Usage Guidelines	Cisco IOS XE Everest 16.5.1a For Gigabit Ethernet ports, setting the port to <b>auto</b> ha does not autonegotiate the duplex parameter.	This command was introduced.	
Usage Guidelines	For Gigabit Ethernet ports, setting the port to auto hadoes not autonegotiate the duplex parameter.         Note         Half-duplex mode is supported on Gigabit Ether

The duplex setting remains as configured on each	

### enable (interface configuration)

To enable the 100 GigabitEthernet interface, use the **enable** command in interface configuration mode. Use the **no** form of the command to disable a 100 GigabitEthernet interface.

#### enable no enable The 100 GigabitEthernet interface is enabled on physical port numbers 25 through 32. **Command Default** The 100 GigabitEthernet interface is disabled on physical port numbers 1 through 24. Interface configuration **Command Modes Command History** Release Modification Cisco IOS XE Fuji The command was introduced on the Cisco Catalyst 9500 Series Switches - High 16.8.1a Performance. Use the **enable** command in the interface configuration mode, to enable the 100 GigabitEthernet interface. **Usage Guidelines** Use the **no** version of the command to disable the 100 GigabitEthernet interface. To display the current state of an interface, enter the **show interface** interface-id command in privileged EXEC mode. The following example shows how to enable interface HundredGigabitEthernet 1/0/40. When you enable the interface HundredGigabitEthernet 1/0/40, the corresponding 40 GigabitEthernet interfaces, FortyGigabitEthernet 1/0/15 and FortyGigabitEthernet 1/0/16 become inactive. Device> enable Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device (config) # interface hundredgigabitethernet 1/0/40 Device (config-if) # enable The following example shows how to disable interface HundredGigabitEthernet 1/0/40 to use interface 40 GigabitEthernet 1/0/16. When you disable a HundredGigabitEthernet interface, both the corresponding 40 GigabitEthernet interfaces, FortyGigabitEthernet1/015 and FortyGigabitEthernet1/0/16 become active. Device> enable Device# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Device(config) # interface hundredgigabitethernet 1/0/40 Device(config-if) # no enable Device(config-if)# exit

### errdisable detect cause

To enable error-disable detection for a specific cause or for all causes, use the **errdisable detect cause** command in global configuration mode. To disable the error-disable detection feature, use the **no** form of this command.

errdisable detect cause {all | arp-inspection | bpduguard shutdown vlan | dhcp-rate-limit | dtp-flap | gbic-invalid | inline-power | link-flap | loopback | pagp-flap | pppoe-ia-rate-limit | psp shutdown vlan | security-violation shutdown vlan | sfp-config-mismatch}

no errdisable detect cause {all|arp-inspection|bpduguard shutdown vlan|dhcp-rate-limit|dtp-flap |gbic-invalid|inline-power|link-flap|loopback|pagp-flap|pppoe-ia-rate-limit |psp\_shutdown vlan|security-violation\_shutdown\_vlan|sfp-config-mismatch}

Syntax Description	all	Enables error detection for all error-disabled causes.	
	arp-inspection	Enables error detection for dynamic Address Resolution Protocol (ARP) inspection.	
	bpduguard shutdown vlan	Enables per-VLAN error-disable for BPDU guard.	
	dhcp-rate-limit	Enables error detection for DHCP snooping.	
	dtp-flap	Enables error detection for the Dynamic Trunking Protocol (DTP) flapping.	
	gbic-invalid	Enables error detection for an invalid Gigabit Interface Converter (GBIC) module.	
		Note This error refers to an invalid small form-factor pluggable (SFP) module.	
	inline-power	Enables error detection for the Power over Ethernet (PoE) error-disabled cause.	
		<b>Note</b> This keyword is supported only on switches with PoE ports.	
	link-flap	Enables error detection for link-state flapping.	
	loopback	Enables error detection for detected loopbacks.	
	pagp-flap	Enables error detection for the Port Aggregation Protocol (PAgP) flap error-disabled cause.	
	pppoe-ia-rate-limit	Enables error detection for the PPPoE Intermediate Agent rate-limit error-disabled cause.	
	psp shutdown vlan	Enables error detection for protocol storm protection (PSP).	
	security-violation shutdown vlan	Enables voice aware 802.1x security.	
	sfp-config-mismatch	Enables error detection on an SFP configuration mismatch.	

Command Default	Detection is enabled for all causes. All causes, except per-VLAN error disabling, are configured to shut dow the entire port.		
Command Modes	Global configuration		
Command History	Release	Modification	
	Cisco IOS XE Everest 16.5.1a	This command was introduced.	
Usage Guidelines	A cause (such as a link-flap or dhcp-rate-limit) is the reason for the error-disabled state. When a cause is detected on an interface, the interface is placed in an error-disabled state, an operational state that is similar to a link-down state.		
	When a port is error-disabled, it is effectively shut down, and no traffic is sent or received on the port. For the bridge protocol data unit (BPDU) guard, voice-aware 802.1x security, and port-security features, you can configure the switch to shut down only the offending VLAN on the port when a violation occurs, instead of shutting down the entire port.		
	If you set a recovery mechanism for the cause by entering the <b>errdisable recovery</b> global configuration command, the interface is brought out of the error-disabled state and allowed to retry the operation when all causes have timed out. If you do not set a recovery mechanism, you must enter the <b>shutdown</b> and then the <b>no shutdown</b> commands to manually recover an interface from the error-disabled state.		
	For protocol storm protection, excess packets are dropped for a maximum of two virtual ports. Virtual port error disabling using the <b>psp</b> keyword is not supported for EtherChannel and Flexlink interfaces.		
	To verify your settings, enter the <b>show errdisable detect</b> privileged EXEC command.		
	This example shows how to enable error-disabled de Device(config)# errdisable detect cause lin		
	This command shows how to globally configure BP Device(config)# errdisable detect cause bpd		
	This command shows how to globally configure voice-aware 802.1x security for a per-VLAN error-disabled state:		
	Device(config)# errdisable detect cause sec	urity-violation shutdown vlan	
	You can verify your setting by entering the <b>show</b> entering the show entering the sh	rrdisable detect privileged EXEC command.	

### errdisable recovery cause

To enable the error-disabled mechanism to recover from a specific cause, use the **errdisable recovery cause** command in global configuration mode. To return to the default setting, use the **no** form of this command.

errdisable recovery cause {all | arp-inspection | bpduguard | channel-misconfig | dhcp-rate-limit | dtp-flap | gbic-invalid | inline-power | link-flap | loopback | mac-limit | pagp-flap | port-mode-failure | pppoe-ia-rate-limit | psecure-violation | psp | security-violation | sfp-config-mismatch | storm-control | udld}

no errdisable recovery cause {all | arp-inspection | bpduguard | channel-misconfig | dhcp-rate-limit | dtp-flap | gbic-invalid | inline-power | link-flap | loopback | mac-limit | pagp-flap | port-mode-failure | pppoe-ia-rate-limit | psecure-violation | psp | security-violation | sfp-config-mismatch | storm-control | udld}

Syntax Description	all	Enables the timer to recover from all error-disabled causes.
	arp-inspection	Enables the timer to recover from the Address Resolution Protocol (ARP) inspection error-disabled state.
	bpduguard	Enables the timer to recover from the bridge protocol data unit (BPDU) guard error-disabled state.
	channel-misconfig	Enables the timer to recover from the EtherChannel misconfiguration error-disabled state.
	dhcp-rate-limit	Enables the timer to recover from the DHCP snooping error-disabled state.
	dtp-flap	Enables the timer to recover from the Dynamic Trunking Protocol (DTP) flap error-disabled state.
	gbic-invalid	Enables the timer to recover from an invalid Gigabit Interface Converter (GBIC) module error-disabled state.
		<b>Note</b> This error refers to an invalid small form-factor pluggable (SFP) error-disabled state.
	inline-power	Enables the timer to recover from the Power over Ethernet (PoE) error-disabled state.
		This keyword is supported only on switches with PoE ports.
	link-flap	Enables the timer to recover from the link-flap error-disabled state.
	loopback	Enables the timer to recover from a loopback error-disabled state.
	mac-limit	Enables the timer to recover from the mac limit error-disabled state.
	pagp-flap	Enables the timer to recover from the Port Aggregation Protocol (PAgP)-flap error-disabled state.

	port-mode-failure	Enables the timer to recover from the port mode change failure error-disabled state.
	pppoe-ia-rate-limit	Enables the timer to recover from the PPPoE IA rate limit error-disabled state.
	psecure-violation	Enables the timer to recover from a port security violation disable state.
	psp	Enables the timer to recover from the protocol storm protection (PSP) error-disabled state.
	security-violation	Enables the timer to recover from an IEEE 802.1x-violation disabled state.
	sfp-config-mismatch	Enables error detection on an SFP configuration mismatch.
	storm-control	Enables the timer to recover from a storm control error.
	udld	Enables the timer to recover from the UniDirectional Link Detection (UDLD) error-disabled state.
Command Default	Recovery is disabled for all cause	·S.
Command Modes	Global configuration (config)	
Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

### errdisable recovery cause

To enable the error-disabled mechanism to recover from a specific cause, use the **errdisable recovery cause** command in global configuration mode. To return to the default setting, use the **no** form of this command.

errdisable recovery cause {all | arp-inspection | bpduguard | channel-misconfig | dhcp-rate-limit | dtp-flap | gbic-invalid | inline-power | link-flap | loopback | mac-limit | pagp-flap | port-mode-failure | pppoe-ia-rate-limit | psecure-violation | psp | security-violation | sfp-config-mismatch | storm-control | udld}

no errdisable recovery cause {all | arp-inspection | bpduguard | channel-misconfig | dhcp-rate-limit | dtp-flap | gbic-invalid | inline-power | link-flap | loopback | mac-limit | pagp-flap | port-mode-failure | pppoe-ia-rate-limit | psecure-violation | psp | security-violation | sfp-config-mismatch | storm-control | udld}

Syntax Description	all	Enables the timer to recover from all error-disabled causes.
	arp-inspection	Enables the timer to recover from the Address Resolution Protocol (ARP) inspection error-disabled state.
	bpduguard	Enables the timer to recover from the bridge protocol data unit (BPDU) guard error-disabled state.
	channel-misconfig	Enables the timer to recover from the EtherChannel misconfiguration error-disabled state.
	dhcp-rate-limit	Enables the timer to recover from the DHCP snooping error-disabled state.
	dtp-flap	Enables the timer to recover from the Dynamic Trunking Protocol (DTP) flap error-disabled state.
	gbic-invalid	Enables the timer to recover from an invalid Gigabit Interface Converter (GBIC) module error-disabled state.
		<b>Note</b> This error refers to an invalid small form-factor pluggable (SFP) error-disabled state.
	inline-power	Enables the timer to recover from the Power over Ethernet (PoE) error-disabled state.
		This keyword is supported only on switches with PoE ports.
	link-flap	Enables the timer to recover from the link-flap error-disabled state.
	loopback	Enables the timer to recover from a loopback error-disabled state.
	mac-limit	Enables the timer to recover from the mac limit error-disabled state.
	pagp-flap	Enables the timer to recover from the Port Aggregation Protocol (PAgP)-flap error-disabled state.

port-mode-failure	Enables the timer to recover from the port mode change failure error-disabled state.
pppoe-ia-rate-limit	Enables the timer to recover from the PPPoE IA rate limit error-disabled state.
psecure-violation	Enables the timer to recover from a port security violation disable state.
psp	Enables the timer to recover from the protocol storm protection (PSP) error-disabled state.
security-violation	Enables the timer to recover from an IEEE 802.1x-violation disabled state.
sfp-config-mismatch	Enables error detection on an SFP configuration mismatch.
storm-control	Enables the timer to recover from a storm control error.
udld	Enables the timer to recover from the UniDirectional Link Detection (UDLD) error-disabled state.
Recovery is disabled for all cause	·S.
Global configuration (config)

### interface

To configure an interface, use the interface command.

#### interface {Auto-Template interface-number | FortyGigabitEthernet

switch-number/slot-number/port-number | GigabitEthernet switch-number/slot-number/port-number | Group VI Group VI interface number | Internal Interface Internal Interface number | Loopback interface-number Null interface-number Port-channel interface-number TenGigabitEthernet switch-number/slot-number/port-number Tunnel interface-number Vlan interface-number }

Syntax Description	Auto-Template interface-number	Enables you to configure a auto-template interface. The range is from 1 to 999.
	FortyGigabitEthernet switch-number/slot-number/port-number	Enables you to configure a 40-Gigabit Ethernet interface.
		• <i>switch-number</i> — Switch ID. The range is from 1 to 8.
		• <i>slot-number</i> — Slot number. Value is 1.
		• <i>port-number</i> — Port number. The range is from 1 to 2.
	<b>GigabitEthernet</b> switch-number/slot-number/port-number	Enables you to configure a Gigabit Ethernet IEEE 802.3z interface.
		• <i>switch-number</i> — Switch ID. The range is from 1 to 8.
		• <i>slot-number</i> — Slot number. The range is from 0 to 1.
		• <i>port-number</i> — Port number. The range is from 1 to 48.
	Group VI Group VI interface number	Enables you to configure a Group VI interface. The range is from 0 to 9.
	Internal Interface Internal Interface	Enables you to configure an internal interface.
	Loopback interface-number	Enables you to configure a loopback interface. The range is from 0 to 2147483647.
	Null interface-number	Enables you to configure a null interface. The default value is 0.
	Port-channel interface-number	Enables you to configure a port-channel interface. The range is from 1 to 128.

I

	TenGigabitEthernet switch-number/slot-n		Enables you to configure a 10-Gigabit Ethernet interface.
			• <i>switch-number</i> — Switch ID. The range is from 1 to 8.
			• slot-number
			<ul> <li>Slot number. The range is from 0 to 1.</li> <li><i>port-number</i> — Port number. The range is from 1 to 24 and 37 to 48</li> </ul>
	Tunnel interface-nur	nber	Enables you to configure a tunnel interface. The range is from 0 to 2147483647.
	Vlan interface-numb	er	Enables you to configure a switch VLAN. The range is from 1 to 4094.
Command Default	None		
Command Modes	Global configuration	(config)	
Command History	Release	Modification	
	Cisco IOS XE Everes	st 16.5.1a This command w	as introduced.
Usage Guidelines	You can not use the "	no" form of this command.	
Examples	The following examp	le shows how to configure	a tunnel interface:
•	0 1	e	
	Device(config)# in Device(config-if)#		
	Device(config)# in Device(config-if)#		a 40-Gigabit Ethernet interface

### interface range

To configure an interface range, use the interface range command.

interface range {Auto-Template interface-number | FortyGigabitEthernet

switch-number/slot-number/port-number | GigabitEthernet switch-number/slot-number/port-number | Group VI Group VI interface number | Internal Interface Internal Interface number | Loopback interface-number Null interface-number Port-channel interface-number TenGigabitEthernet switch-number/slot-number/port-number Tunnel interface-number Vlan interface-number }

Syntax Description	Auto-Template interface-number	Enables you to configure a auto-template interface. The range is from 1 to 999.
	FortyGigabitEthernet switch-number/slot-number/port-number	Enables you to configure a 40-Gigabit Ethernet interface.
		• <i>switch-number</i> — Switch ID. The range is from 1 to 8.
		• <i>slot-number</i> — Slot number. Value is 1.
		• <i>port-number</i> — Port number. The range is from 1 to 2.
	<b>GigabitEthernet</b> switch-number/slot-number/port-number	Enables you to configure a Gigabit Ethernet IEEE 802.3z interface.
		• <i>switch-number</i> — Switch ID. The range is from 1 to 8.
		• <i>slot-number</i> — Slot number. The range is from 0 to 1.
		• <i>port-number</i> — Port number. The range is from 1 to 48.
	Group VI Group VI interface number	Enables you to configure a Group VI interface. The range is from 0 to 9.
	Internal Interface Internal Interface	Enables you to configure an internal interface.
	Loopback interface-number	Enables you to configure a loopback interface. The range is from 0 to 2147483647.
	Null interface-number	Enables you to configure a null interface. The default value is 0.
	Port-channel interface-number	Enables you to configure a port-channel interface. The range is from 1 to 128.

	TenGigabitEthern switch-number/slot	<b>et</b> -number/port-number	Enables you to configure a 10-Gigabit Ethernet interface.	
			• <i>switch-number</i> — Switch ID. The range is from 1 to 8.	m
			• slot-number	
			<ul> <li>Slot number. The range is from 0 to 1.</li> <li><i>port-number</i> — Port number. The range is from 1 to 24 and 37 to 48</li> </ul>	m
	Tunnel interface-n	umber	Enables you to configure a tunnel interface. The ran is from 0 to 2147483647.	ge
	Vlan interface-nun	ıber	Enables you to configure a switch VLAN. The ran is from 1 to 4094.	ge
Command Default	None			
Command Modes	Global configuration	n (config)		
Command History	Release	Modification		
	Cisco IOS XE Ever	est 16.5.1a This command w	vas introduced.	
Examples	This example shows	s how you can configure inter	rface range:	

Device(config)# interface range vlan 1-100

### ip mtu

To set the IP maximum transmission unit (MTU) size of routed packets on all routed ports of the switch or switch stack, use the ip mtu command in interface configuration mode. To restore the default IP MTU size, use the no form of this command. ip mtu bytes no ip mtu bytes Syntax Description *bytes* MTU size, in bytes. The range is from 68 up to the system MTU value (in bytes). The default IP MTU size for frames received and sent on all switch interfaces is 1500 bytes. **Command Default** Interface configuration (config-if) **Command Modes Command History** Release Modification Cisco IOS XE Everest 16.5.1a This command was introduced. The upper limit of the IP value is based on the switch or switch stack configuration and refers to the currently **Usage Guidelines** applied system MTU value. For more information about setting the MTU sizes, see the system mtu global configuration command. To return to the default IP MTU setting, you can apply the **default ip mtu** command or the **no ip mtu** command on the interface. You can verify your setting by entering the show ip interface interface-id or show interfaces interface-id privileged EXEC command. The following example sets the maximum IP packet size for VLAN 200 to 1000 bytes: Device (config) # interface vlan 200 Device (config-if) # ip mtu 1000 The following example sets the maximum IP packet size for VLAN 200 to the default setting of 1500 bytes: Device (config) # interface vlan 200 Device (config-if) # default ip mtu This is an example of partial output from the **show ip interface** interface-id command. It displays the current IP MTU setting for the interface. Device# show ip interface gigabitethernet4/0/1 GigabitEthernet4/0/1 is up, line protocol is up Internet address is 18.0.0.1/24 Broadcast address is 255.255.255.255 Address determined by setup command MTU is 1500 bytes Helper address is not set <output truncated>

### ipv6 mtu

To set the IPv6 maximum transmission unit (MTU) size of routed packets on all routed ports of the switch or switch stack, use the ipv6 mtu command in interface configuration mode. To restore the default IPv6 MTU size, use the no form of this command. ipv6 mtu bytes no ipv6 mtu bytes Syntax Description *bytes* MTU size, in bytes. The range is from 1280 up to the system MTU value (in bytes). The default IPv6 MTU size for frames received and sent on all switch interfaces is 1500 bytes. **Command Default** Interface configuration **Command Modes Command History** Release Modification Cisco IOS XE Everest 16.5.1a This command was introduced. The upper limit of the IPv6 MTU value is based on the switch or switch stack configuration and refers to the **Usage Guidelines** currently applied system MTU value. For more information about setting the MTU sizes, see the system mtu global configuration command. To return to the default IPv6 MTU setting, you can apply the **default ipv6 mtu** command or the **no ipv6 mtu** command on the interface. You can verify your setting by entering the **show ipv6 interface** interface-id or **show interface** interface-id privileged EXEC command. The following example sets the maximum IPv6 packet size for an interface to 2000 bytes: Device(config) # interface gigabitethernet4/0/1 Device (config-if) # ipv6 mtu 2000 The following example sets the maximum IPv6 packet size for an interface to the default setting of 1500 bytes: Device (config) # interface gigabitethernet4/0/1 Device(config-if) # default ipv6 mtu This is an example of partial output from the **show ipv6 interface** interface-id command. It displays the current IPv6 MTU setting for the interface. Device# show ipv6 interface gigabitethernet4/0/1 GigabitEthernet4/0/1 is up, line protocol is up Internet address is 18.0.0.1/24 Broadcast address is 255.255.255.255 Address determined by setup command MTU is 1500 bytes Helper address is not set <output truncated>

# IIdp (interface configuration)

To enable Link Layer Discovery Protocol (LLDP) on an interface, use the **lldp** command in interface configuration mode. To disable LLDP on an interface, use the **no** form of this command.

**lldp** {med-tlv-select tlv | receive | tlv-select power-management | transmit} no lldp {med-tlv-select tlv | receive | tlv-select power-management | transmit}

Syntax Description	med-tlv-select	Selects an LLDP Media Endpoint Discovery (MED) time-length-value (TLV) element to send.String that identifies the TLV element. Valid values are the following: • inventory-management— LLDP MED Inventory Management TLV.• location— LLDP MED Location TLV. • network-policy— LLDP MED Network Policy TLV. • power-management— LLDP MED Power Management TLV.Enables the interface to receive LLDP MED Power Management TLV.Selects the LLDP TLVs to send.Sends the LLDP Power Management TLV.Enables LLDP transmission on the interface.			
	tlv	String that identifies the TLV element. Valid values are the following:			
		Iocation— LLDP MED Location TLV.			
		• network-policy— LLDP MED Network Policy TLV.			
		• power-management— LLDP MED Power Management TLV.			
	receive	Enables the interface to receive LLDP transmissions.			
	tlv-select	Sends the LLDP Power Management TLV.			
	power-management				
	transmit				
Command Default	LLDP is disabled.				
Command Modes	Interface configuration (config-i	f)			
Command History	Release	Modification			
	Cisco IOS XE Everest 16.5.1a	This command was introduced.			
Jsage Guidelines	This command is supported on 8	302.1 media types.			
	If the interface is configured as a	a tunnel port, LLDP is automatically disabled.			
	The following example shows he	ow to disable LLDP transmission on an interface:			
	Device(config)# <b>interface g</b> Device(config-if)# <b>no lldp</b>	-			
	The following example shows he	ow to enable LLDP transmission on an interface:			
	Device(config)# interface g	igabitethernet1/0/1			

Device(config-if) # lldp transmit

# mode (power-stack configuration)

To configure power stack mode for the power stack, use the **mode** command in power-stack configuration mode. To return to the default settings, use the **no** form of the command.

mode {power-shared | redundant} [strict]
no mode

Syntax Description	power-shared	Sets the power stack to o	perate in power-shared mode. This is the default.				
	redundant	Sets the power stack to operate in redundant mode. The largest power s is removed from the power pool to be used as backup power in case of the other power supplies fails.					
	strict		(Optional) Configures the power stack mode to run a strict power budget. The stack power needs cannot exceed the available power.				
Command Default	The default modes are	power-shared and nonstrict.					
Command Modes	Power-stack configurat	ion (config-stackpower)					
Command History	Release		Modification				
	Cisco IOS XE Everest	16.5.1a	This command was introduced.				
_	command. Entering the <b>no mode</b> of <b>Solution</b>	command sets the switch to the def	<b>power stack</b> <i>power stack name</i> global configuration Faults of <b>power-shared</b> and non-strict mode.				
	· · ·	ower is the power allocated to all po s the actual power consumed by th	owered devices connected to PoE ports in the stack, an ne powered devices.				
	as one large power supp	ply. The power budget includes all	d for loads, and the total available power appears power from all supplies. No power is set aside for ng (shutting down of powered devices or switches)				
	one of the other power supply. This reduces the	supplies fails. The available power e available power in the pool for sw	from the power pool to use as backup power in case r budget is the total power minus the largest power vitches and powered devices, but in case of a failure o shut down switches or powered devices.				
	In <b>strict</b> mode, when a p balances the budget thre		power drops below the budgeted power, the system				

the actual power does not exceed the available power. In this mode, a powered device drawing more than normal power could cause the power stack to start shedding loads. This is normally not a problem because most devices do not run at full power. The chances of multiple powered devices in the stack requiring maximum power at the same time is small.

In both strict and nonstrict modes, power is denied when there is no power available in the power budget.

This is an example of setting the power stack mode for the stack named power1 to power-shared with strict power budgeting. All power in the stack is shared, but when the total available power is allotted, no more devices are allowed power.

```
Device(config)# stack-power stack power1
Device(config-stackpower)# mode power-shared strict
Device(config-stackpower)# exit
```

This is an example of setting the power stack mode for the stack named power2 to redundant. The largest power supply in the stack is removed from the power pool to provide redundancy in case one of the other supplies fails.

```
Device(config)# stack-power stack power2
Device(config-stackpower)# mode redundant
Device(config-stackpower)# exit
```

### monitoring

To enable monitoring of all optical transceivers and to specify the time period for monitoring the transceivers, use the **monitoring** command in transceiver type configuration mode. To disable the monitoring, use the **no** form of this command.

monitoring [ interval seconds ]
no monitoring [interval]

Syntax Description	interval	(0-+1) 6				
Syntax Description	interval seconds(Optional) Specifies the time interval for monitoring optical transceivers.The range is from 300 to 3600 seconds, and the default interval time is 600 seconds.					
Command Default	The interval time	e is 600 secor	ıds.			
Command Modes	Transceiver type	Transceiver type configuration (config-xcvr-type)				
Command History	Release		Modification			
	Cisco IOS XE E 16.5.1a	Everest	This command was introduced	1.		
Usage Guidelines	configure the mo	nitoring con		ceiver module compatibility information to ity matrix to get the lists of Cisco platforms and ernet transceiver modules.		
	Gigabit Ethernet Transceivers transmit and receive Ethernet frames at a rate of a gigabit per second, as defined by the IEEE 802.3-2008 standard. Cisco's Gigabit Ethernet Transceiver modules support Ethernet applications across all Cisco switching and routing platforms. These pluggable transceivers offer a convenient and cost effective solution for the adoption in data center, campus, metropolitan area access and ring networks, and storage area networks.					
	as 1500 seconds,	polling happ	ens at every 1500th second. Dur	ing interval. For example, if you set the interval ring the polling period entSensorStatus of optical nes entSensorStatus shows the actual status.		
<b>Examples</b> This example shows how to enable monitoring of optical transceivers and set the monitoring to 1500 seconds:			nsceivers and set the interval time for			
	Device# <b>configure terminal</b> Device(config)# <b>transceiver type all</b> Device(config-xcvr-type)# <b>monitoring interval 1500</b>					
	This example sh	ows how to d	isable monitoring for all transc	eiver types:		
	Device(config-	xcvr-type)#	no monitoring			
Related Commands	Command	Descript	ion			
	transceiver typ	e Enables	monitoring on all transceivers.			

all

# network-policy

To apply a network-policy profile to an interface, use the **network-policy** command in interface configuration mode. To remove the policy, use the **no** form of this command.

network-policy profile-number
no network-policy

Syntax Description	profile-number The network-policy profile number	to apply to the interface.
Command Default	No network-policy profiles are applied.	
Command Modes	Interface configuration (config-if)	
Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.
Usage Guidelines	Use the <b>network-policy</b> profile number interface c	configuration command to apply a profile to an interface.
		and on an interface if you first configure a network-policy <i>m-id</i> is already configured on the interface, you can apply face then has the voice or voice-signaling VLAN
	This example shows how to apply network-policy p Device(config)# interface gigabitethernet1/ Device(config-if)# network-policy 60	

### network-policy profile (global configuration)

To create a network-policy profile and to enter network-policy configuration mode, use the **network-policy profile** command in global configuration mode. To delete the policy and to return to global configuration mode, use the **no** form of this command.

network-policy profile profile-number no network-policy profile profile-number

**Syntax Description** profile-number Network-policy profile number. The range is 1 to 4294967295. No network-policy profiles are defined. **Command Default** Global configuration (config) **Command Modes Command History** Release Modification Cisco IOS XE Everest 16.5.1a This command was introduced. Use the **network-policy profile** global configuration command to create a profile and to enter network-policy **Usage Guidelines** profile configuration mode. To return to privileged EXEC mode from the network-policy profile configuration mode, enter the exit command. When you are in network-policy profile configuration mode, you can create the profile for voice and voice signaling by specifying the values for VLAN, class of service (CoS), differentiated services code point (DSCP), and tagging mode. These profile attributes are contained in the Link Layer Discovery Protocol for Media Endpoint Devices (LLDP-MED) network-policy time-length-value (TLV).

This example shows how to create network-policy profile 60:

Device(config)# network-policy profile 60
Device(config-network-policy)#

### power-priority

To configure Cisco StackPower power-priority values for a switch in a power stack and for its high-priority and low-priority PoE ports, use the **power-priority** command in switch stack-power configuration mode. To return to the default setting, use the **no** form of the command.

power-priority {high value | low value | switch value}
no power-priority {high | low | switch}

ports to 11, and for the low-priority ports to 20.

Syntax Description	high value	Sets the power priority for the ports configured as high-priority ports. The range is 1 to 27, with 1 as the highest priority. The <b>high</b> value must be lower than the value set for the low-priority ports and higher than the value set for the switch.			
	low value	Sets the power priority for the ports configured as low-priority ports. The range is 1 to 27. The <b>low</b> value must be higher than the value set for the high-priority ports and the value set for the switch.			
	<b>switch</b> value	Sets the power priority for the switch. The range is 1 to 27. The <b>switch</b> value must be lower than the values set for the low and high-priority ports.			
Command Default	If no values a	are configured, the power stack randomly determines a default priority.			
	The default ra	anges are 1 to 9 for switches, 10 to 18 for high-priority ports, 19 to 27 for low-priority ports.			
	On non-PoE	switches, the high and low values (for port priority) have no effect.			
Command Modes	Switch stack-	-power configuration (config-stack)			
Command History	Release	Modification			
	Cisco IOS X	XE Everest 16.5.1aThis command was introduced.			
Usage Guidelines	To access sw configuration	itch stack-power configuration mode, enter the <b>stack-power switch</b> <i>switch-number</i> global n command.			
		ower power-priority values determine the order for shutting down switches and ports when powe ad shedding must occur. Priority values are from 1 to 27; the highest numbers are shut down first			
	We recommend that you configure different priority values for each switch and for its high priority low priority ports to limit the number of devices shut down at one time during a loss of power. If y configure the same priority value on different switches in a power stack, the configuration is allowe receive a warning message.				
	Note This cor	mmand is available only on switch stacks running the IP Base or IP Services feature set.			
Examples	This is an exa	mple of setting the power priority for switch 1 in power stack a to 7, for the high-priority			

Device(config)# stack-power switch 1
Device(config-switch-stackpower)# stack-id power\_stack\_a
Device(config-switch-stackpower)# power-priority high 11
Device(config-switch-stackpower)# power-priority low 20
Device(config-switch-stackpower)# power-priority switch 7
Device(config-switch-stackpower)# exit

# power supply

To configure and manage the internal power supplies on a switch, use the **power supply** command in privileged EXEC mode.

power supply *stack-member-number* slot {A | B} {off | on}

Syntax Description	stack-member-number		ember number for which to configure the internal power . The range is 1 to 9, depending on the number of switches ack.		
		This par	ameter is available only on stacking-capable switches.		
	slot	Selects t	Selects the switch power supply to set.		
	Α	Selects t	he power supply in slot A.		
	В	Selects t	he power supply in slot B.		
		Note	Power supply slot B is the closest slot to the outer edge of the switch.		
	off	Sets the	switch power supply to off.		
	on	Sets the	switch power supply to on.		
Command Default	The switch power supply is on.				
Command Modes	Privileged EXEC				
Command History	Release		Modification		
	Cisco IOS XE Everest 16.5.1a		This command was introduced.		
Usage Guidelines	The <b>power supply</b> command app	olies to a switch or t	to a switch stack where all switches are the same platform.		
	In a switch stack with the same platform switches, you must specify the stack member before entering the slot $\{A \mid B\}$ off or on keywords.				
	To return to the default setting, use the <b>power supply</b> stack-member-number on command.				
	You can verify your settings by entering the show env power privileged EXEC command.				
Examples	This example shows how to set the power supply in slot A to off:				
	Continue? (yes/[no]): <b>yes</b>		ower loss to PoE devices and/or switches $\dots$		
			S_OIR: FRU Power Supply 1 powered off DT_PRESENT: Fan is not present		

This example shows how to set the power supply in slot A to on:

Device> power supply 1 slot B on Jun 10 04:54:39.600: %PLATFORM\_ENV-6-FRU\_PS\_OIR: FRU Power Supply 1 powered on

This example shows the output of the show env power command:

Device>	show	env	power	
---------	------	-----	-------	--

SW	PID	Serial#	Status	Sys Pwr	PoE Pwr	Watts
1A	PWR-1RUC2-640WAC	DCB1705B05B	OK	Good	Good	250/390
1B	Not Present					

# shell trigger

To create an event trigger, use the **shell trigger** command in global configuration mode. Use the **no** form of this command to delete the trigger.

shell trigger identifier description

no shell trigger identifier description

Syntax Description	identifier	Specifies the event trigger identifier. The identifier should have no spaces or hyphens between words.				
	description	Specifies the event trigger description text.				
Command Default	System-defined event triggers:					
	• CISCO_DMP_EVENT					
	• CISCO_IPVSC_AUTO_EVENT					
	• CISCO_PHONE_EVENT					
	• CISCO_SWITCH_EVEN	Т				
	• CISCO_ROUTER_EVEN	Т				
	• CISCO_WIRELESS_AP_EVENT					
	• CISCO_WIRELESS_LIGHTWEIGHT_AP_EVENT					
Command Modes Global configuration (config)						
Command History	Release	Modification				
	Cisco IOS XE Everest 16.5.1a	This command was introduced.				
Usage Guidelines	Use this command to create use <b>auto execute</b> commands.	er-defined event triggers for use with the macro auto device and the macro				
	To support dynamic device discovery when using IEEE 802.1x authentication, you need to configure the RADIUS authentication server to support the Cisco attribute-value pair: <b>auto-smart-port</b> = <i>event trigger</i> .					
	Example					
	This example shows how to create a user-defined event trigger called RADIUS_MAB_EVENT:					
	Device(config)# <b>shell trigger RADIUS_MAB_EVENT MAC_AuthBypass Event</b> Device(config)# <b>end</b>					

### show beacon all

To display the status of beacon LED on the device, use the **show beacon all** command in privileged EXEC mode.

show beacon { rp { active | standby } | slot slot-number } | all }

Syntax Description	<b>rp</b> { active   standby }	Specifies the active or the standby Switch whose beacon LED status is to be displayed.			
	slot slot-num	Specifies the slot whose beacon LED status is to be displayed.			
	all	Displays the status of all beacon LEDs.			
Command History	Release	Modification			
	Cisco IOS XE Fuji 16.9.1	This command was introduced.			
Command Default	This command has no default settings.				
Command Modes	Privileged EXEC (#)				
Usage Guidelines	Use the command <b>show beacon all</b> to know the status of all beacon LEDs.				
	Sample output of show beacon all command.				
	Device# <b>show beacon all</b> Switch# Beacon Status				
	*1 OFF				
	Sample output of <i>show beacon rp</i> command.				
	Device# <b>show beacon rp active</b> Switch# Beacon Status				

Switch# Beacon Status ------\*1 OFF

Device#**show beacon slot 1** Switch# Beacon Status \*1 OFF

## show environment

To display information about the sensors, and status of fan and power supply, use the **show environment** command in EXEC mode.

show environment { all | counters | fan-air-direction | history | location | sensor | status |
summary | table }

Syntax Description	all	(Optional) Displays the list of sensors.			
	counters	<b>nters</b> (Optional) Displays the operational counters of the sensors.			
	fan-air-direction	(Optional) Displays information of the fan tray and power supply fan air direction.			
	history	(Optional) Displays history of the sensor state changes.			
	location	(Optional) Displays the sensors by location.			
	sensor	(Optional) Displays sensor summary.			
	status	(Optional) Displays the power supply and fan tray status of the switch.			
	summary	(Optional) Displays a summary of all the environment monitoring sensors.			
	table	(Optional) Displays sensor state table.			
Command Default	None				
Command Modes	User EXEC (>)				
	Privileged EXEC (#)				
Command History	Release	Modification			
	Cisco IOS XE Everest 16.5	5.1a This command was introduced.			
Usage Guidelines	Use the <b>show environment</b> standalone switch or the act	EXEC command to display the information for the switch being accessed—a tive switch.			
Examples	This example shows a samp	ble output of the show environment all command:			
	Device> show environment all				
	Sensor List: Environme Sensor Locat Temp: UADP_0_0 R1 Temp: UADP_0_1 R1 Temp: UADP_0_2 R1 Temp: UADP_0_3 R1	ion State Reading Normal 52 Celsius Normal 50 Celsius Normal 50 Celsius Normal 52 Celsius			
	Temp:UADP_0_4 R1 Temp:UADP_0_5 R1	Normal 51 Celsius Normal 52 Celsius			

Temp: UADP_0_6	R1	Normal	63 Celsius
Temp: UADP_0_7	R1	Normal	54 Celsius

<output truncated>

This example shows a sample output of the **show environment status** command:

Device> show environment status

4

# show errdisable detect

To display error-disabled detection status, use the show errdisable detect command in EXEC mode.

	show errdisable detect	
Syntax Description	This command has no arguments or keywords.	
Command Default	None	
Command Modes	User EXEC (>)	
	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.
Usage Guidelines	A gbic-invalid error reason refers to an invalid small f	form-factor pluggable (SFP) module.
	The error-disable reasons in the command output are l how error-disable is configured for each feature.	isted in alphabetical order. The mode column shows
	You can configure error-disabled detection in these me	odes:
	• port mode—The entire physical port is error-disa	bled if a violation occurs.
	• vlan mode—The VLAN is error-disabled if a vio	lation occurs.
	• port/vlan mode—The entire physical port is error- on other ports.	disabled on some ports and is per-VLAN error-disabled

This is an example of output from the show errdisable detect command:

Device> show errdisable detect				
ErrDisable Reason	Detection	Mode		
arp-inspection	Enabled	port		
bpduguard	Enabled	vlan		
channel-misconfig	Enabled	port		
community-limit	Enabled	port		
dhcp-rate-limit	Enabled	port		
dtp-flap	Enabled	port		
gbic-invalid	Enabled	port		
inline-power	Enabled	port		
invalid-policy	Enabled	port		
l2ptguard	Enabled	port		
link-flap	Enabled	port		
loopback	Enabled	port		
lsgroup	Enabled	port		
pagp-flap	Enabled	port		
psecure-violation	Enabled	port/vlan		
security-violatio	Enabled	port		
sfp-config-mismat	Enabled	port		
storm-control	Enabled	port		

udld	Enabled	port
vmps	Enabled	port

# show errdisable recovery

To display the error-disabled recovery timer information, use the **show errdisable recovery** command in EXEC mode.

#### show errdisable recovery

Syntax Description	This command has no arguments or keywords.	
Command Default	None	
Command Modes	User EXEC (>)	
	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.
Usage Guidelines	A gbic-invalid error-disable reason refers to an ir	avalid small form-factor pluggable (SFP) module interface.
-	Note Though visible in the output, the unicast-flo	od field is not valid
		ion for is not varia.

# show ip interface

To display the usability status of interfaces configured for IP, use the **show ip interface** command in privileged EXEC mode.

show ip interface [type number] [brief]

	_				
Syntax Description	type	(Option	al) Interface type.		
	number	(Optional) Interface number.			
	brief	(Option	al) Displays a summary of the usability status inf	formation for each interface.	
		Note	The output of the <b>show ip interface brief</b> co available interfaces whether or not the corres interfaces are connected. These interfaces ca is connected. Run the <b>show interface status</b> c are connected.	sponding network module for these n be configured if the network module	
			This is not applicable for Cisco Catalyst 950	0 Series High-Performance switches.	
Command Default	The full u	usability s	tatus is displayed for all interfaces configured for	· IP.	
Command Modes	Privilege	d EXEC (	#)		
Command History	Release			Modification	
	Cisco IC	OS XE Eve	erest 16.5.1a	This command was introduced.	
Usage Guidelines	usable (w routing e	which mean ntry is ren	ware automatically enters a directly connected ro ns that it can send and receive packets). If an inter noved from the routing table. Removing the entry nine backup routes to the network, if any.	face is not usable, the directly connected	
	If the interface can provide two-way communication, the line protocol is marked "up." If the interface hardw is usable, the interface is marked "up." If you specify an optional interface type, information for that specific interface is displayed. If you specif no optional arguments, information on all the interfaces is displayed.			l is marked "up." If the interface hardware	
	When an asynchronous interface is encapsulated with PPP or Serial Line Internet Protocol (SLIP), IP fast switching is enabled. A <b>show ip interface</b> command on an asynchronous interface encapsulated with PPP or SLIP displays a message indicating that IP fast switching is enabled.				
			ow ip interface brief command to display a sum the IP address, the interface status, and other info		
	The show	v ip interf	ace brief command does not display any information	ation related to Unicast RPF.	
Examples	The following example shows interface information on Gigabit Ethernet interface 1/0/1:				

Device# show ip interface gigabitethernet 1/0/1 GigabitEthernet1/0/1 is up, line protocol is up Internet address is 10.1.1.1/16 Broadcast address is 255.255.255.255 Address determined by setup command MTU is 1500 bytes Helper address is not set Directed broadcast forwarding is disabled Outgoing access list is not set Inbound access list is not set Proxy ARP is enabled Local Proxy ARP is disabled Security level is default Split horizon is enabled ICMP redirects are always sent ICMP unreachables are always sent ICMP mask replies are never sent IP fast switching is enabled IP fast switching on the same interface is disabled IP Flow switching is disabled IP CEF switching is enabled IP Feature Fast switching turbo vector IP VPN Flow CEF switching turbo vector IP multicast fast switching is enabled IP multicast distributed fast switching is disabled IP route-cache flags are Fast, CEF Router Discovery is disabled IP output packet accounting is disabled IP access violation accounting is disabled TCP/IP header compression is disabled RTP/IP header compression is disabled Policy routing is enabled, using route map PBR Network address translation is disabled BGP Policy Mapping is disabled IP Multi-Processor Forwarding is enabled IP Input features, "PBR", are not supported by MPF and are IGNORED IP Output features, "NetFlow", are not supported by MPF and are IGNORED

The following example shows how to display the usability status for a specific VLAN:

Device# show ip interface vlan 1 Vlan1 is up, line protocol is up Internet address is 10.0.0.4/24 Broadcast address is 255.255.255.255 Address determined by non-volatile memory MTU is 1500 bytes Helper address is not set Directed broadcast forwarding is disabled Outgoing access list is not set Inbound access list is not set Proxy ARP is enabled Local Proxy ARP is disabled Security level is default Split horizon is enabled ICMP redirects are always sent ICMP unreachables are always sent ICMP mask replies are never sent IP fast switching is enabled

IP fast switching on the same interface is disabled IP Flow switching is disabled IP CEF switching is enabled IP Fast switching turbo vector IP Normal CEF switching turbo vector IP multicast fast switching is enabled IP multicast distributed fast switching is disabled IP route-cache flags are Fast, CEF Router Discovery is disabled IP output packet accounting is disabled IP access violation accounting is disabled TCP/IP header compression is disabled RTP/IP header compression is disabled Probe proxy name replies are disabled Policy routing is disabled Network address translation is disabled WCCP Redirect outbound is disabled WCCP Redirect inbound is disabled WCCP Redirect exclude is disabled BGP Policy Mapping is disabled Sampled Netflow is disabled IP multicast multilayer switching is disabled Netflow Data Export (hardware) is enabled

The table below describes the significant fields shown in the display.

Field	Description
Broadcast address is	Broadcast address.
Peer address is	Peer address.
MTU is	MTU value set on the interface, in bytes.
Helper address	Helper address, if one is set.
Directed broadcast forwarding	Shows whether directed broadcast forwarding is enabled.
Outgoing access list	Shows whether the interface has an outgoing access list set.
Inbound access list	Shows whether the interface has an incoming access list set.
Proxy ARP	Shows whether Proxy Address Resolution Protocol (ARP) is enabled for the interface.
Security level	IP Security Option (IPSO) security level set for this interface.
Split horizon	Shows whether split horizon is enabled.
ICMP redirects	Shows whether redirect messages will be sent on this interface.
ICMP unreachables	Shows whether unreachable messages will be sent on this interface.
ICMP mask replies	Shows whether mask replies will be sent on this interface.
IP fast switching	Shows whether fast switching is enabled for this interface. It is generally enabled on serial interfaces, such as this one.

Table 1: show ip interface Field Descriptions

Field	Description
IP Flow switching	Shows whether Flow switching is enabled for this interface.
IP CEF switching	Shows whether Cisco Express Forwarding switching is enabled for the interface.
IP multicast fast switching	Shows whether multicast fast switching is enabled for the interface.
IP route-cache flags are Fast	Shows whether NetFlow is enabled on an interface. Displays "Flow init" to specify that NetFlow is enabled on the interface. Displays "Ingress Flow" to specify that NetFlow is enabled on a subinterface using the <b>ip flow ingress</b> command. Shows "Flow" to specify that NetFlow is enabled on a main interface using the <b>ip route-cache flow</b> command.
Router Discovery	Shows whether the discovery process is enabled for this interface. It is generally disabled on serial interfaces.
IP output packet accounting	Shows whether IP accounting is enabled for this interface and what the threshold (maximum number of entries) is.
TCP/IP header compression	Shows whether compression is enabled.
WCCP Redirect outbound is disabled	Shows the status of whether packets received on an interface are redirected to a cache engine. Displays "enabled" or "disabled."
WCCP Redirect exclude is disabled	Shows the status of whether packets targeted for an interface will be excluded from being redirected to a cache engine. Displays "enabled" or "disabled."
Netflow Data Export (hardware) is enabled	NetFlow Data Expert (NDE) hardware flow status on the interface.

The following example shows how to display a summary of the usability status information for each interface:

#### Device# show ip interface brief

Interface	IP-Address	OK? Met	thod Status	Protocol
Vlan1	unassigned	YES NVE	RAM administrat	ively down down
GigabitEthernet0/0	unassigned	YES NVE	RAM down	down
GigabitEthernet1/0/1	unassigned	YES NVE	RAM down	down

GigabitEthernet1/0/3	unassigned	YES uns	set down	down
GigabitEthernet1/0/4	unassigned	YES uns	set down	down
GigabitEthernet1/0/5	unassigned	YES uns	set down	down
GigabitEthernet1/0/6	unassigned	YES uns	set down	down
GigabitEthernet1/0/7	unassigned	YES uns	set down	down

<output truncated>

Г

Field	Description	
Interface	Type of interface.	
IP-Address	IP address assigned to the interface.	
OK?	"Yes" means that the IP Address is valid. "No" means that the IP Address is not valid.	
Method	The Method field has the following possible values:	
	• RARP or SLARP: Reverse Address Resolution Protocol (RARP) or Serial Line Address Resolution Protocol (SLARP) request.	
	BOOTP: Bootstrap protocol.	
	• TFTP: Configuration file obtained from the TFTP server.	
	• manual: Manually changed by the command-line interface.	
	NVRAM: Configuration file in NVRAM.	
	• IPCP: ip address negotiated command.	
	• DHCP: ip address dhcp command.	
	• unset: Unset.	
	• other: Unknown.	
Status	Shows the status of the interface. Valid values and their meanings are:	
	• up: Interface is up.	
	• down: Interface is down.	
	administratively down: Interface is administratively down.	
Protocol	Shows the operational status of the routing protocol on this interface.	

#### Table 2: show ip interface brief Field Descriptions

#### **Related Commands**

;	Command	Description
	ip interface	Configures a virtual gateway IP interface on a Secure Socket Layer Virtual Private Network (SSL VPN) gateway
	show interface status	Displays the status of the interface.

# show interfaces

To display the administrative and operational status of all interfaces or for a specified interface, use the **show interfaces** command in the EXEC mode.

show interfaces [{ interface-id | vlan vlan-id }] [{ accounting | capabilities [ module number ] | description | etherchannel | flowcontrol | link [ module number ] | private-vlan mapping | pruning | stats | status [{ err-disabled | inactive }] | trunk }]

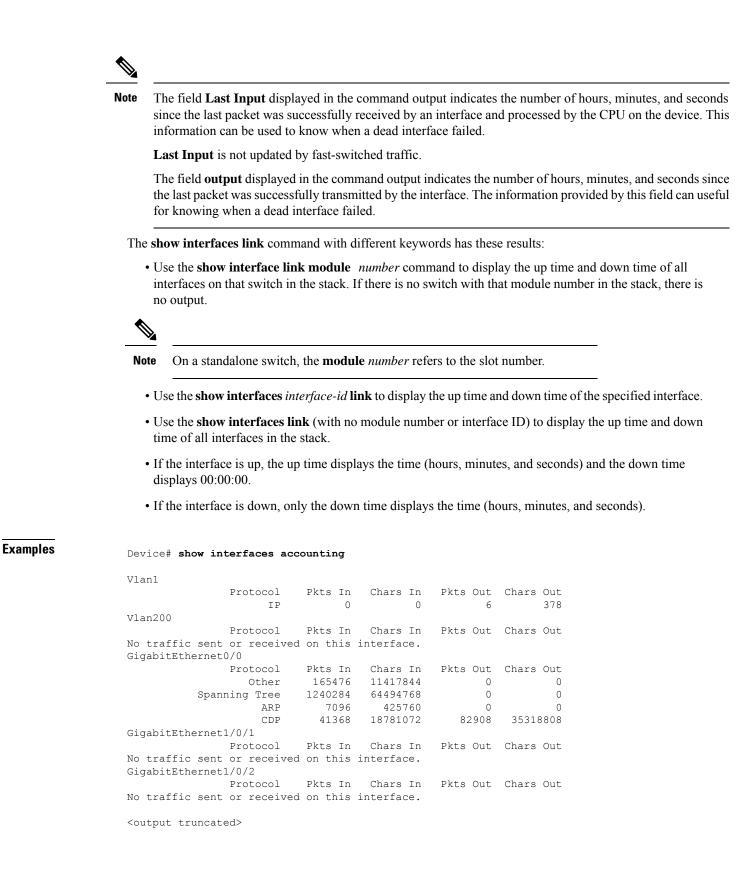

Syntax Description	interface-id	(Optional) ID of the interface. Valid interfaces include physical ports (including type, stack member for stacking-capable switches, module, and port number) and port channels.		
		The port	channel range is 1 to 128.	
	vlan vlan-id	(Optiona	l) VLAN identification. The range is 1 to 4094.	
	accounting	(Optional) Displays accounting information on the interface, including active protocols and input and output packets and octets		
		Note	The display shows only packets processed in software; hardware-switched packets do not appear.	
	capabilities	(Optional) Displays the capabilities of all interfaces or the specified interface, including the features and options that you can configure on the interface. Though visible in the command line help, this option is not available for VLAN IDs.		
	module number	(Optional) Displays capabilities of all interfaces on the switch or specified stack member. The range is 1 to 9.		
		This opti	on is not available if you entered a specific interface ID.	
	description	(Optional) Displays the administrative status and descrip for interfaces.		
		Note	The output of the <b>show interfaces description</b> command displays information of all the available interfaces whether or not the corresponding network module for these interfaces are connected. These interfaces can be configured if the network module is connected. Run the <b>show interface status</b> command to see which network modules are connected.	
			This is not applicable for Cisco Catalyst 9500 Series High-Performance switches.	
	etherchannel	(Optiona	l) Displays interface EtherChannel information.	
	flowcontrol	(Optiona	l) Displays interface flow control information.	

link [modulenumber]	(Optional) Displays the up time and down time of the interface.
private-vlan mapping	(Optional) Displays private-VLAN mapping information for the VLAN switch virtual interfaces (SVIs). This keyword is not available if the switch is running the LAN base feature set.
pruning	(Optional) Displays trunk VTP pruning information for the interface.
stats	(Optional) Displays the input and output packets by switching the path for the interface.
status	(Optional) Displays the status of the interface. A status of unsupported in the Type field means that a non-Cisco small form-factor pluggable (SFP) module is inserted in the module slot.
err-disabled	(Optional) Displays interfaces in an error-disabled state.
inactive	(Optional) Displays interfaces in an inactive state.
trunk	(Optional) Displays interface trunk information. If you do not specify an interface, only information for active trunking ports appears.

**Note** Though visible in the command-line help strings, the **crb**, **fair-queue**, **irb**, **mac-accounting**, **precedence**, **random-detect**, **rate-limit**, and **shape** keywords are not supported.

Command Default	None		
Command Modes	Privileged EXEC (#)		
Command History	Release	Modification	
	Cisco IOS XE Everest 16.5.1a	This command was introduced.	
	Cisco IOS XE Gibraltar 16.12.1	The <b>link</b> keyword was introduced.	
Usage Guidelines	The <b>show interfaces capabilities</b> command with dif	ferent keywords has these results:	
	• Use the <b>show interface capabilities module</b> <i>number</i> command to display the capabilities of on that switch in the stack. If there is no switch with that module number in the stack, there		
	• Use the show interfaces interface-id capability	ties to display the capabilities of the specified interface.	
	• Use the show interfaces capabilities (with no n	nodule number or interface ID) to display the capabilities	

of all interfaces in the stack.

This is an example of output from the **show interfaces** *interface* **description** command when the interface has been described as *Connects to Marketing* by using the **description** interface configuration command:

Device# show interfaces fortyGigabitEthernet6/0/2 description

Interface State Fo1/0/2 up

StatusProtocol DescriptionupConnects to Marketing

Device# show interfaces etherchannel

```
Port-channel34:
Age of the Port-channel = 28d:18h:51m:46s
Logical slot/port = 12/34 Number of ports = 0
GC = 0x00000000 HotStandBy port = null
Passive port list =
Port state = Port-channel L3-Ag Ag-Not-Inuse
Protocol = -
Port security = Disabled
```

This is an example of output from the **show interfaces stats** command for a specified VLAN interface:

Device# show interfaces vlan 1 stats

Switching path	Pkts In	Chars In	Pkts Out	Chars Out
Processor	1165354	136205310	570800	91731594
Route cache	0	0	0	0
Total	1165354	136205310	570800	91731594

This is an example of output from the **show interfaces status err-disabled** command. It displays the status of interfaces in the error-disabled state:

Device# show interfaces status err-disabled

Port	Name	Status	Reason
Fo1/0/2		err-disabled	gbic-invalid
Fo2/0/3		err-disabled	dtp-flap

This is an example of output from the **show interfaces** *interface-id* **pruning** command:

Device# show interfaces gigabitethernet1/0/2 pruning

Port Vlans pruned for lack of request by neighbor

This is an example of output from the **show interfaces description** command:

Pruning VLANs Enabled: 2-1001 Capture Mode Disabled Capture VLANs Allowed: ALL

Protected: false Unknown unicast blocked: disabled Unknown multicast blocked: disabled Appliance trust: none

Field	Description
Name	Displays the port name.
Switchport	Displays the administrative and operational status of the port. In this display, the port is in switchport mode.
Administrative Mode	Displays the administrative and operational modes.
Operational Mode	
Administrative Trunking Encapsulation Operational Trunking Encapsulation Negotiation of Trunking	Displays the administrative and operational encapsulation method and whether trunking negotiation is enabled.
Access Mode VLAN	Displays the VLAN ID to which the port is configured.
Trunking Native Mode VLAN Trunking VLANs Enabled Trunking VLANs Active	Lists the VLAN ID of the trunk that is in native mode. Lists the allowed VLANs on the trunk. Lists the active VLANs on the trunk.
Pruning VLANs Enabled	Lists the VLANs that are pruning-eligible.
Protected	Displays whether or not protected port is enabled (True) or disabled (False) on the interface.
Unknown unicast blocked	Displays whether or not unknown multicast and
Unknown multicast blocked	unknown unicast traffic is blocked on the interface.
Voice VLAN	Displays the VLAN ID on which voice VLAN is enabled.
Appliance trust	Displays the class of service (CoS) setting of the data packets of the IP phone.

# show interfaces transceiver

To display the physical properties of a small form-factor pluggable (SFP) module interface, use the **show interfaces transceiver** command in EXEC mode.

**show interfaces** [*interface-id*] **transceiver** [{**detail** | **module** *number* | **properties** | **supported-list** | **threshold-table**}]

Syntax Description	interface-id	<i>interface-id</i> (Optional) ID of the physical interface, including type, stack member (stacking-capable switches only) module, and port number.					
	detail	(Optional) Displays calibration properties, including high and low numbers and any alarm information for any Digital Optical Monitoring (DoM)-capable transceiver if one is installed in the switch.					
	module number	(Option	al) Limits o	display to ir	iterfaces on 1	nodule on the switch.	
		This op	tion is not a	available if	you entered	a specific interface ID.	
	properties	(Option	al) Display	vs speed, du	plex, and inl	ne power settings on an interface.	
	supported-list	(Option	al) Lists al	l supported	transceivers.		
	threshold-table	(Option	al) Display	vs alarm and	warning thr	eshold table.	
Command Modes	User EXEC (>)						
	Privileged EXEC	(#)					
Command History	Release					Modification	
	Cisco IOS XE E	verest 16.:	5.1a			This command was introduc	ed.
Examples	This is an example of output from the <b>show interfaces</b> <i>interface-id</i> <b>transceiver properties</b> command:						
	Device# show interfaces transceiver						
		n, + : h applicab	nigh warni ble, Tx: t	ing, - : transmit, 1	low warning Rx: receive	values are printed. g, : low alarm. e.	
	-	berature sius)	Voltage (Volts)	Current (mA)	Optical Tx Power (dBm)	Optical Rx Power (dBm)	
		2.9	3.28 3.28	22.1 19.8	-5.4 2.4	-8.1 -4.2	
		nterfaces	gigabite			iver properties	

Administrative Speed: auto

L

Operational Speed: auto Administrative Duplex: auto Administrative Power Inline: enable Operational Duplex: auto Administrative Auto-MDIX: off Operational Auto-MDIX: off

This is an example of output from the show interfaces interface-id transceiver detail command:

Device# show interfaces gigabitethernet1/1/1 transceiver detail

ITU Channel not available (Wavelength not available), Transceiver is internally calibrated. mA:milliamperes, dBm:decibels (milliwatts), N/A:not applicable. ++:high alarm, +:high warning, -:low warning, -- :low alarm. A2D readouts (if they differ), are reported in parentheses. The threshold values are uncalibrated.

Port	Temperature (Celsius)	Threshold	Threshold	Low Warn Threshold (Celsius)	Threshold
Gi1/1/1	29.9	74.0 High Alarm			-4.0 Low Alarm
Port	Voltage (Volts)	Threshold (Volts)	Threshold (Volts)	Threshold (Volts)	Threshold
Gi1/1/1		3.60			3.00
Port	Optical Transmit Power (dBm)	High Alarm Threshold (dBm)	Threshold	Low Warn Threshold (dBm)	Threshold
Gi1/1/1	1.8	7.9	3.9	0.0	-4.0
				0.0	4.0
Port	Optical Receive Power (dBm)	High Alarm Threshold (dBm)	High Warn Threshold	Low Warn Threshold	Low Alarm Threshold

#### **Related Commands**

_	Command	Description
	transceiver type all	Enters the transceiver type configuration mode.
	monitoring	Enables digital optical monitoring.

# show inventory

To display the product inventory listing of all Cisco products installed in the networking device, use the **show inventory** command in user EXEC or privileged EXEC mode.

	show	inventory	{fru	oid	raw}	[entity]
--	------	-----------	------	-----	------	----------

fru	(Optional) Retrieves information about all Field Replaceable Units (FRUs) installed in the Cisco networking device.
oid	(Optional) Retrieves information about the vendor specific hardware registration identifier referred to as object identifier (OID).
	The OID identifies the MIB object's location in the MIB hierarchy, and provides a means of accessing the MIB object in a network of managed devices
raw	(Optional) Retrieves information about all Cisco products referred to as entities installed in the Cisco networking device, even if the entities do not have a product ID (PID) value, a unique device identifier (UDI), or other physical identification.
entity	(Optional) Name of a Cisco entity (for example, chassis, backplane, module, or slot). A quoted string may be used to display very specific UDI information; for example "sfslot 1" will display the UDI information for slot 1 of an entity named sfslot.

#### Command Modes Privileged EXEC (#)

Command History	Release	Modification				
,	Cisco IOS XE Everest 16.6.1	This command was introduced.				
	Cisco IOS XE Everest 16.6.3	This command was enhanced to display the serial number for the chassis.				
Usage Guidelines	ũ là chí	and displays inventory information about each Cisco product in the n of three separate data elements: a product identifier (PID), a version SN).				
	The PID is the name by which the product can be ordered; it has been historically called the "Product Name" or "Part Number." This is the identifier that one would use to order an exact replacement part.					
	The VID is the version of the product. Whenever a product has been revised, the VID will be incremented. The VID is incremented according to a rigorous process derived from Telcordia GR-209-CORE, an industry guideline that governs product change notices.					
	-	n of the product. Each manufactured product will carry a unique serial annot be changed in the field. This is the means by which to identify				

The UDI refers to each product as an entity. Some entities, such as a chassis, will have subentities like slots. Each entity will display on a separate line in a logically ordered presentation that is arranged hierarchically by Cisco entities.

an individual, specific instance of a product.

Use the **show inventory** command without options to display a list of Cisco entities installed in the networking device that are assigned a PID.

The following is sample output from the **show** inventory command:

Device#show inventorv 9500-32QC-SVL#show inv NAME: "Switch 1 Chassis", DESCR: "Cisco Catalyst 9500 Series Chassis" , VID: V00 , SN: CAT2144L10V PID: C9500-320C NAME: "Switch 1 Power Supply Module 0", DESCR: "Cisco Catalyst 9500 Series 650W AC Power Supply" PID: C9K-PWR-650WAC-R , VID: V00 , SN: ART2148F53T NAME: "Switch 1 Power Supply Module 1", DESCR: "Cisco Catalyst 9500 Series 650W AC Power Supply" PID: C9K-PWR-650WAC-R , VID: V01 , SN: ART2151FC04 NAME: "Switch 1 Fan Tray 0", DESCR: "Cisco Catalyst 9500 Series Fan Tray" PID: C9K-T1-FANTRAY , VID: , SN: NAME: "Switch 1 Fan Tray 1", DESCR: "Cisco Catalyst 9500 Series Fan Tray" PID: C9K-T1-FANTRAY , VID: , SN: NAME: "Switch 1 Slot 1 Supervisor", DESCR: "Cisco Catalyst 9500 Series Router" PID: C9500-32QC , VID: V00 , SN: CAT2144L10V NAME: "FortyGigabitEthernet1/0/2", DESCR: "QSFP 40GE CU3M" PID: QSFP-H40G-CU3M , VID: A0 , SN: JPC2144034J-A NAME: "FortyGigabitEthernet1/0/4", DESCR: "QSFP 40GE SR4" PID: QSFP-40G-SR4 , VID: 03 , SN: AVP1824S0YQ NAME: "FortyGigabitEthernet1/0/5", DESCR: "QSFP 40GE AOC3M" PID: QSFP-H40G-AOC3M , VID: D , SN: FIW211101UL-B NAME: "FortyGigabitEthernet1/0/8", DESCR: "QSFP 40GE AOC3M" , SN: FIW211101N6-B PID: QSFP-H40G-AOC3M , VID: D NAME: "FortyGigabitEthernet1/0/10", DESCR: "OSFP 40GE AOC3M" PID: QSFP-H40G-AOC3M , VID: A , SN: DTS2045A271-B NAME: "FortyGigabitEthernet1/0/11", DESCR: "QSFP 40GE CU3M" PID: QSFP-H40G-CU3M , VID: D , SN: TED2047K013-B NAME: "FortyGigabitEthernet1/0/15", DESCR: "QSFP 40GE AOC3M" PID: QSFP-H40G-AOC3M , VID: D , SN: FIS1922011T-B NAME: "FortyGigabitEthernet1/0/16-qsa", DESCR: "CVR 10GE SFP " PID: CVR-QSFP-SFP10G , VID: V01 , SN: DTY204604UN NAME: "FortyGigabitEthernet1/0/16", DESCR: "10GE CU3M" PID: SFP-H10GB-CU3M , VID: R , SN: TED1739B9HY NAME: "FortyGigabitEthernet1/0/18", DESCR: "QSFP 40GE CU3M" PID: QSFP-H40G-CU3M , VID: D , SN: TED2047K10U-A NAME: "FortyGigabitEthernet1/0/19", DESCR: "QSFP 40GE CU3M" PID: OSFP-H40G-CU3M , VID: D , SN: TED2030K4U6-B NAME: "FortyGigabitEthernet1/0/22", DESCR: "QSFP 40GE CU5M" PID: QSFP-H40G-CU5M , VID: A0 , SN: JPC203508YN-B NAME: "FortyGigabitEthernet1/0/24", DESCR: "QSFP 40GE CU3M"

#### **Table 3: show inventory Field Descriptions**

Field	Description
NAME	Physical name (text string) assigned to the Cisco entity. For example, console or a simple component number (port or module number), such as "1," depending on the physical component naming syntax of the device.
DESCR	Physical description of the Cisco entity that characterizes the object. The physical description includes the hardware serial number and the hardware revision.
PID	Entity product identifier. Equivalent to the entPhysicalModelName MIB variable in RFC 2737.
VID	Entity version identifier. Equivalent to the entPhysicalHardwareRev MIB variable in RFC 2737.
SN	Entity serial number. Equivalent to the entPhysicalSerialNum MIB variable in RFC 2737.

For diagnostic purposes, the **show inventory** command can be used with the **raw** keyword to display every RFC 2737 entity including those without a PID, UDI, or other physical identification.

Note

The **raw** keyword option is primarily intended for troubleshooting problems with the **show inventory** command itself.

Enter the **show inventory** command with an *entity* argument value to display the UDI information for a specific type of Cisco entity installed in the networking device. In this example, a list of Cisco entities that match the sfslot argument string is displayed.

```

You can request even more specific UDI information with the *entity* argument value enclosed in quotation marks.

# show memory platform

To display memory statistics of a platform, use the **show memory platform** command in privileged EXEC mode.

#### show memory platform [{compressed-swap | information | page-merging}]

Syntax Description	compressed-swap	(Optional) Displays platform memory compressed-swap information.				
	information	<b>information</b> (Optional) Displays general information about the platform.				
	page-merging	(Optional) Displays platform memory page-merging information.				
Command Modes	Privileged EXEC (#	)				
Command History	Release	Modification				
	Cisco IOS XE Ever 16.5.1a	This command was introduced.				
Isage Guidelines	Free memory is accu	arately computed and displayed in the Free Memory field of the command outp				
Examples	The following is sample output from the <b>show memory platform</b> command:					
	Switch# show memo	ry platform				
	Virtual memory Pages resident Major page faul Minor page faul	: 627041 ts: 2220

# show module

To display module information such as switch number, model number, serial number, hardware revision number, software version, MAC address and so on, use this command in user EXEC or privileged EXEC mode.

show	module	[{ <i>switch-num</i> }]
------	--------	-------------------------

Syntax Description	<i>switch-num</i> (Optional) Number of the switch.	
Command Default	None	
Command Modes	User EXEC (>)	
	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.
Usage Guidelines	Entering the <b>show module</b> command without the module all command.	ne switch-num argument is the same as entering the show

### show mgmt-infra trace messages ilpower

To display inline power messages within a trace buffer, use the **show mgmt-infra trace messages ilpower** command in privileged EXEC mode.

show mgmt-infra trace messages ilpower [switch stack-member-number]

 Syntax Description
 switch
 stack-member-number
 (Optional)
 Specifies the stack member number for which to display inline power messages within a trace buffer.

Command Default None

**Command Modes** Privileged EXEC (#)

#### Command History Release

Cisco IOS XE Everest 16.5.1a

Modification
This command was introduced.

This is an output example from the **show mgmt-infra trace messages ilpower** command:

```
Device# show mgmt-infra trace messages ilpower
[10/23/12 14:05:10.984 UTC 1 3] Initialized inline power system configuration fo
r slot 1.
[10/23/12 14:05:10.984 UTC 2 3] Initialized inline power system configuration fo
r slot 2.
[10/23/12 14:05:10.984 UTC 3 3] Initialized inline power system configuration fo

# show mgmt-infra trace messages ilpower-ha

To display inline power high availability messages within a trace buffer, use the **show mgmt-infra trace messages ilpower-ha** command in privileged EXEC mode.

show mgmt-infra trace messages ilpower-ha [switch stack-member-number]

Syntax Description	switch stack-member-numbe	<i>r</i> (Optional) Specifies the stack power messages within a trace	x member number for which to display inline the buffer.
Command Default	None		
Command Modes	Privileged EXEC (#)		
Command History	Release	Modification	
	Cisco IOS XE Everest 16.5.1a	This command was introduced.	
	Device# show mgmt-infra t	n the <b>show mgmt-infra trace m</b>	

[10/23/12 14:04:48.087 UTC 1 3] NG3K\_ILPOWER\_HA: Created NGWC ILP CF client succ essfully.

#### show mgmt-infra trace messages platform-mgr-poe

To display platform manager Power over Ethernet (PoE) messages within a trace buffer, use the show mgmt-infra trace messages platform-mgr-poe privileged EXEC command.

show mgmt-infra trace messages platform-mgr-poe [switch stack-member-number]

**Syntax Description** switch stack-member-number (Optional) Specifies the stack member number for which to display messages within a trace buffer. None **Command Default** Privileged EXEC (#)

**Command Modes** 

**Command History** Release

Cisco IOS XE Everest 16.5.1a

- 11

This command was introduced.

Modification

This is an example of partial output from the show mgmt-infra trace messages platform-mgr-poe command:

## show network-policy profile

To display the network-policy profiles, use the **show network policy profile** command in privileged EXEC mode.

show network-policy profile [profile-number] [detail]

Syntax Description	profile-nun	<i>iber</i> (Optional) Displays the network-point network-policy profiles appear.	licy profile number. If no profile is entered, all
	detail	(Optional) Displays detailed status	and statistics information.
Command Default	None		
Command Modes	Privileged	EXEC (#)	
Command History	Release		Modification
	Cisco IOS	XE Everest 16.5.1a	This command was introduced.

This is an example of output from the show network-policy profile command:

```
Device# show network-policy profile
Network Policy Profile 10
voice vlan 17 cos 4
Interface:
none
Network Policy Profile 30
voice vlan 30 cos 5
Interface:
none
Network Policy Profile 36
voice vlan 4 cos 3
Interface:
Interface_id
```

#### show platform hardware bluetooth

To display information about Bluetooth interface, use the **show platform hardware bluetooth** command in privileged EXEC mode.

show platform hardware bluetooth None **Command Default** Privileged EXEC (#) **Command Modes Command History** Release Modification Cisco IOS XE Amsterdam 17.1.1 This command was introduced. This command was introduced for the Cisco C Performance Switches. Cisco IOS XE Gibraltar 16.12.1 This command was introduced. This command was introduced for the Cisco Switches. The show platform hardware bluetooth command is to be used when an external USB Bluetooth dongle is **Usage Guidelines** connected on the device. **Examples** This example shows how to display the information of the Bluetooth interface using the show platform hardware bluetooth command. Device> enable Device# show platform hardware bluetooth Controller: 0:1a:7d:da:71:13 Type: Primary Bus: USB State: DOWN Name: HCI Version:

# show platform hardware fed switch forward

To display device-specific hardware information, use the **show platform hardware fed switch** *switch\_number* command.

This topic elaborates only the forwarding-specific options, that is, the options available with the **show platform** hardware fed switch {  $switch_num \mid active \mid standby$  } forward summary command.

The output of the **show platform hardware fed switch** *switch\_number* **forward summary** displays all the details about the forwarding decision taken for the packet.

show platform hardware fed switch {switch\_num | active | standby} forward summary

Syntax Description	switch {switch_num  The switch for which you want to display information. You have the following options :active   standby }options :					
	• <i>switch_num</i> —ID of the switch.					
		• acti	ive—Displays information relating to the active switch.			
			<b>adby</b> —Displays information relating to the standby switch, if ilable.			
	forward summary	Displays	packet forwarding information.			
		Note	Support for the keyword <b>summary</b> has been discontinued in the Cisco IOS XE Everest 16.6.1 release and later releases.			
Command Modes	Privileged EXEC (#)					
Command History	Release		Modification			
	Cisco IOS XE Everest 16.	5.1a	This command was introduced.			
	Cisco IOS XE Everest 16.0	5.1 and later	releases Supprort for the keyword <b>summary</b> was discontinued.			
Usage Guidelines			ical support representative asks you to. Use this command only when al support representative while troubleshooting a problem.			
	Fields displayed in the com	mand output	are explained below.			
	• Station Index : The Station Index is the result of the layer 2 lookup and points to a station descriptor which provides the following:					
	<ul> <li>Destination Index : Determines the egress port(s) to which the packets should be sent to. Global Port Number(GPN) can be used as the destination index. A destination index with15 down to 12 bits set indicates the GPN to be used. For example, destination index - 0xF04E corresponds to GP - 78 (0x4e).</li> </ul>					
	<ul> <li>Rewrite Index : D typically a bridging</li> </ul>		hat needs to be done with the packets. For layer 2 switching, this is			

- Flexible Lookup Pipeline Stages(FPS) : Indicates the forwarding decision that was taken for the packet routing or bridging
- Replication Bit Map : Determines if the packets should be sent to CPU or stack
  - Local Data Copy = 1
  - Remote Data copy = 0
  - Local CPU Copy = 0
  - Remote CPU Copy = 0

#### Example

This is an example of output from the **show platform hardware fed switch** {*switch\_num* | **active** | **standby** } **forward summary** command.

## show platform hardware fed switch forward interface

	<b>platform hardware fed switch</b> <i>switch_number</i> <b>forward interface</b> command. This command simulates a user-defined packet and retrieves the forwarding information from the hardware forwarding plane. A packet is generated on the ingress port based on the packet parameters that you have specified in this command. You can also provide a complete packet from the captured packets stored in a PCAP file.				
	1 5	rface forwarding-specific options, that is, the options available with the tch { <i>switch_num</i>   active   standby } forward interface command.			
		itch {switch_num   active   standby} forward interface interface-type address destination-mac-address {protocol-number   arp   cos   ipv4   ipv6			
	—	itch {switch_num   active   standby} forward interface interface-type file-name number packet-number data			
	-	itch {switch_num   active   standby} forward interface interface-type source-mac-address destination-mac-address {protocol-number   arp			
Syntax Description	<pre>switch {switch_num   active   standby }</pre>	The switch on which packet tracing has to be scheduled. The input port should be available on this switch. You have the following options :			
		• <i>switch_num</i> —ID of the switch on which the ingress port is present.			
		• <b>active</b> —indicates the active switch on which the ingress port is present.			
		• <b>standby</b> —indicates the standby switch on which the ingress port is present.			
		<b>Note</b> This keyword is not supported.			
	<b>interface</b> <i>interface-type interface-number</i>	The input interface on which packet trace is simulated.			
	source-mac-address	The source MAC address of the packet you want to simulate.			
	destination-mac-address	The MAC address of the destination interface in hexadecimal format.			
	protocol-number	The number assigned to any L3 protocol.			
	arp	The Address Resolution Protocol (ARP) parameters.			
	ipv4	The IPv4 packet parameters.			
	ipv6	The IPv6 packet parameters.			
	mpls	The Multiprotocol Label Switching (MPLS) label parameters.			

To debug forwarding information and to trace the packet path in the hardware forwarding plane, use the **show** 

I

	cos	The class of service (CoS) number from 0 to 7 to set priority.			
	pcap pcap-file-name	Name of the pcap file in internal flash (flash:).			
		Ensure that the file already exists in flash:.			
	number packet-number	Specifies the packet number in the pcap file.			
	vlan vlan-id	VLAN id of the dot1q header in the simulated packet. The range is 1 t 4096.			
Command Modes	Privileged EXEC				
Command History	Release	Modification			
	Cisco IOS XE Everest 16.5.1a	This command was introduced.			
	Cisco IOS XE Fuji 16.9.1	The command was enhanced to support MPLS/ARP/VxLAN packet parameters and trace packe captured in a PCAP file.			
	Cisco IOS XE Gibraltar 16.10.	1 The command was enhanced to support data capture across a stack			
Usage Guidelines	Do not use this command unless a technical support representative asks you to. Use this command only when you are working directly with a technical support representative while troubleshooting a problem.				
	This command supports the following packet types:				
	• Non-IP packets with any L3 protocol				
	• ARP packets				
	• IPv4 packets with any L4 protocol				
	IPv4 packets with TCP/UDP/IGMP/ICMP/SCTP payload				
	• VxLAN packets				
	• MPLS packets with up to 3 Labels and meta data				
	MPLS packets with IPv4/IPv6 payload				
	• IPv6 packets with TCP/UDP/IGMP/ICMP/SCTP payload				
	and topology. The <b>show platfor</b> <i>interface-number</i> command con	a trace packets across the stack irrespective of the number of stack member <b>m hardware fed switch</b> <i>switch-number</i> <b>forward interface</b> <i>interface-type</i> asolidates packet-forwarding information of all the stack members on the nsure that the switch number specified in the <i>switch_num</i> and <i>interface-numb</i> th and that the number matches.			
	T. (				

To trace any particular packet from the captured packets stored in a PCAP file, use the **show platform hardware fed switch forward interface** *interface-type interface-number* **pcap** *pcap-file-name number packet-number* **data** command.

L

#### Example

This is an example of output from the **show platform hardware fed switch** {*switch\_num* | **active** | **standby** } **forward interface** command.

Device#show platform hardware fed switch active forward interface gigabitEthernet 1/0/35 0000.0022.0055 0000.0055.0066 ipv4 44.44.0.2 55.55.0.2 udp 1222 3333

Show forward is running in the background. After completion, syslog will be generated.

\*Sep 24 05:57:36.614: %SHFWD-6-PACKET\_TRACE\_DONE: Switch 1 R0/0: fed: Packet Trace Complete: Execute (show platform hardware fed switch <> forward last summary|detail) \*Sep 24 05:57:36.614: %SHFWD-6-PACKET\_TRACE\_FLOW\_ID: Switch 1 R0/0: fed: Packet Trace Flow id is 150323855361

#### Related Commands

Command	Description			
monitor capture interface	Configures monitor capture points specifying an attachment point and the packet flow direction.			
monitor capture start	Starts the capture of packet data at a traffic trace point into a buffer.			
monitor capture stop	Stops the capture of packet data at a traffic trace point.			
monitor capture export	Saves the captured packets in the buffer. Use this command to export the monitor capture buffer to a pcap file in flash: that you can use as an input in the <b>show forward</b> with <b>pcap</b> .			

# show platform hardware fed switch forward last summary

To display a summary of packet tracing data from a switch or switches in a stack, use the **show platform** hardware fed switch *switch\_number* forward last summary command.

The output of the **show platform hardware fed switch** *switch\_number* **forward last summary** command displays all the details about the forwarding decision taken for the packet from the last time the **show forward** command was run.

show platform hardware fed switch {switch\_number | active | standby} forward last summary

Syntax Description	<pre>switch {switch_number   active   standby }</pre>	hedule a packet capture for a port. You					
	• <i>switch_num</i> —ID of the switch on which the ingress port is present.						
	<ul> <li>active—indicates the active switch on which the ingress popresent.</li> </ul>						
		• standby- present.	—indicates the standb	y switch on which the ingress port is			
		Note	This keyword is n	ot supported.			
	forward last summary Displays packet forwarding information.						
Command Modes	Privileged EXEC						
Command History	Release			Modification			
	Cisco IOS XE Everest 16.5.1	a		This command was introduced.			
	Cisco IOS XE Everest 16.6.1	and later release	S	Support for the keyword <b>summar</b> , was discontinued.			
	Cisco IOS XE Fuji 16.9.1			Support for keywords <b>last</b> and <b>summary</b> is introduced.			
	Cisco IOS XE Gibraltar 16.10	D.1		The output of the command was enhanced to display the details about all the copies of the packets and the corresponding outgoing ports.			

With Cisco IOS XE Gibraltar 16.10.1, show platform hardware fed switch forward last summary command is enhanced to:

• Inject the debug packets from the CPU to simulate the incoming port and packets

- Use the debug packets to trace the packet in hardware data-path to provide forwarding details such as lookup, adjacency, rewrite information, drop decision, outgoing port and so on
- Drop the original packets at egress so as not to transmit the packet to the outgoing port
- Send a copy of all the packets to the CPU and display the details in the packet tracing output

#### Example

This is an example of output from the **show platform hardware fed switch** {*switch\_number* | **active** | **standby** } **forward last summary** command.

```

## show platform resources

To display platform resource information, use the **show platform reources** command in privileged EXEC mode.

show platform resources

This command has no arguments or keywords.

Command Modes Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

**Usage Guidelines** The output of this command displays the used memory, which is total memory minus the accurate free memory.

#### Example

The following is sample output from the show platform resources command:

Switch# show platform resources

```
**State Acronym: H - Healthy, W - Warning, C - Critical
```

Resource State	Usage	Max	Warning	Critical
Control Processor H	7.20%	100%	90%	95%
DRAM H	2701MB(69%)	3883MB	90%	95%

## show platform software audit

To display the SE Linux Audit logs, use the **show platform software audit** command in privileged EXEC mode.

show platform software audit  $\{all \mid summary \mid [switch \{switch-number \mid active \mid standby\}]$  $\{0 \mid F0 \mid R0 \mid \{FP \mid RP\} \{active\}\}\}$ 

Syntax Description	all	Shows the audit log from all the slots.
	summary	Shows the audit log summary count from all the slots.
	switch	Shows the audit logs for a slot on a specific switch.
	switch-number	Selects the switch with the specified switch number.
	switch active	Selects the active instance of the switch.
	standby	Selects the standby instance of the switch.
	0	Shows the audit log for the SPA-Inter-Processor slot 0.
	F0	Shows the audit log for the Embedded-Service-Processor slot 0.
	R0	Shows the audit log for the Route-Processor slot 0.
	FP active	Shows the audit log for the active Embedded-Service-Processor slot.
	RP active	Shows the audit log for the active Route-Processor slot.
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
Usage Guidelines		IOS XE Gibraltar 16.10.1 as a part of the SELinux Permissive audit command displays the system logs containing the access
	specific components (process or application)	n in a permissive mode is available - with the intent of confining of the IOS-XE platform. In the permissive mode, access violation rated, but the event or operation itself is not blocked. The solution tion mode.
	The following is a sample output of the <b>show</b>	software platform software audit summary command:

Device# show platform software audit summary

AUDIT LOG ON switch 1 AUC Denial count: 58

The following is a sample output of the show software platform software audit all command:

Device# show platform software audit all

```

I

## show platform software fed switch punt cpuq rates

To display the rate at which packets are punted, including the drops in the punted path, use the **show platform software fed switch punt cpuq rates** command in privileged EXEC mode.

show platform software fed switch {switch-number | active | standby} punt cpuq rates

	<pre>switch{switch-number   active   standby}</pre>	Displays information about the switch. You have the following options:
		• switch-number.
		• <b>active</b> — Displays information relating to the active switch.
		<ul> <li>standby—Displays information relating to the standby switch, if available.</li> </ul>
		<b>Note</b> This keyword is not supported.
	punt	Specifies the punt information.
	cpuq	Specifies information about CPU receive queue.
	rates	Specifies the rate at which the packets are punted.
Command Modes	Privileged EXEC (#)	
Command History	Release Modification	
	Cisco IOS XE Gibraltar 16.10.1 This command was i	introduced.
Usage Guidelines	The output of this command displays the rate in pack 5 minutes.	tets per second at intervals of 10 seconds, 1 minute and
Usage Guidelines		tets per second at intervals of 10 seconds, 1 minute and
Usage Guidelines	5 minutes.	
Usage Guidelines	<ul><li>5 minutes.</li><li>Example</li><li>The following is sample output from the show platform</li></ul>	
Usage Guidelines	5 minutes. <b>Example</b> The following is sample output from the <b>show platfo</b> <b>rates</b> command.	orm software fed switch active punt cpuq
Usage Guidelines	<pre>5 minutes. 5 minutes. Example The following is sample output from the show platfor rates command. Device#show platform software fed switch act Punt Rate CPU Q Statistics Packets per second averaged over 10 seconds,</pre>	orm software fed switch active punt cpuq
Usage Guidelines	<pre>5 minutes. 5 minutes. Example The following is sample output from the show platfor rates command. The table below describes the significant fields shown in the display.

Table 5: show platform software fed switch active punt cpuq rates Field Descriptions

Field	Description
Queue Name	Name of the queue.
Rx	The rate at which the packets are received per second in 10s, 1 minute and 5 minutes.
Drop	The rate at which the packets are dropped per second in 10s, 1 minute and 5 minutes.

## show platform software fed switch punt packet-capture display

To display packet capture information during high CPU utilization, use the **show platform software fed switch active punt packet-capture display** command in privileged EXEC mode.

show platform software fed switch active punt packet-capture display { detailed | hexdump}

Syntax Description	<pre>switch {switch-number   active   standby}</pre>	Displays information about a switch. You have the following options:
		• <b>active</b> — Displays information relating to the active switch.
		• <b>standby</b> —Displays information relating to the standby switch, if available.
		Note The standby keyword is not supported.
	punt	Specifies punt information.
	packet-capture display	Specifies information about the captured packet.
	detailed	Specifies detailed information about the captured packet.
	hex-dump	Specifies information about the captured packet, in hex format.
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
Usage Guidelines	The output of this command displays the periodic traffic rates, and running CPU processes when the	and persistent logs of CPU-bound packets, inband CPU e CPU passes a high CPU utilization threshold.
Examples	The following is a sample output from the <b>show p</b> <b>packet-capture display detailed</b> command:	platform software fed switch active punt
	Device# <b>show platform software fed switch</b> Punt packet capturing: disabled. Buffer w Total captured so far: 101 packets. Captu

## show platform software fed switch punt rates interfaces

To display the overall statistics of punt rate for all the interfaces, use the **show platform software fed switch punt rates interfaces** command in privileged EXEC mode.

show platform software fed switch {switch-number | active | standby} punt rates
interfaces[interface-id]

Syntax Description	<pre>switch {switch-number   active   standby}</pre>	Displays information about the switch. You have the following options:			
		• switch-number.			
		• <b>active</b> — Displays information relating to the active switch.			
		<ul> <li>standby—Displays information relating to the standby switch, if available.</li> </ul>			
		<b>Note</b> This keyword is not supported.			
	punt	Specifies the punt information.			
	rates	Specifies the rate at which the packets are punted.			
	interfaces[interface-id]	(Optional) Displays the overall statistics for an interface and also the per-queue configuration for the interface at an interval of 10 seconds.			
Command Modes	Privileged EXEC (#)				
Command History	Release Modification				
	Cisco IOS XE Gibraltar 16.10.1 This command wa	as introduced.			
Usage Guidelines	The output displays the punt rates in packets per se	econd at intervals of 10 seconds, 1 minute and 5 minutes.			
	Example				
	The following is sample output from the <b>show pla</b> <b>interfaces</b> command for all the interfaces.	tform software fed switch active punt rates			
	Device#show plataform software fed switch	active punt rates interfaces			
	Punt Rate on Interfaces Statistics				
	Packets per second averaged over 10 second	ds, 1 min and 5 mins			
	     Interface Name   IF_ID	Rx   Rx   Rx   Drop   Drop   Drop 10s   1min   5min   10s   1min   5min			

Vlan3	0x0000034	1000	1000	520	0	0	0

The table below describes the significant fields shown in the display.

Table 6: show platform software fed switch active punt rates interfaces Field Descriptions

Field	Description
Interface Name	Name of the physical interface.
IF_ID	ID of the physical interface.
Rx	The per second rate at which the packets are received in 10s, 1 minute and 5 minutes.
Drop	The per second rate at which the packets are dropped in 10s, 1 minute and 5 minutes.

The following is sample output from the **show platform software fed switch active punt rates interface***id* command for a specific interface.

Device#show platform software fed switch active punt rates interfaces 0x31 Punt Rate on Single Interfaces Statistics

Interface : Port-channel1 [if\_id: 0x31]

Received			Dro	pp	bed

# show platform software memory

To display memory information for a specified switch, use the **show platform software memory** command in privileged EXEC mode.

show platform software memory [{chunk | database | messaging}] process slot

Syntax Description		
Syntax Description	chunk	(Optional) Displays chunk memory information for the specified process.
	database	(Optional) Displays database memory information for the specified process.
	messaging	(Optional) Displays messaging memory information for the specified process.
		The information displayed is for internal debugging purposes only.

process

Level that is being set. Options include:

- bt-logger—The Binary-Tracing Logger process.
- btrace-manager—The Btrace Manager process.
- chassis-manager—The Chassis Manager process.
- cli-agent—The CLI Agent process.
- cmm—The CMM process.
- dbm—The Database Manager process.
- dmiauthd—The DMI Authentication Daemon process.
- emd—The Environmental Monitoring process.
- fed—The Forwarding Engine Driver process.
- forwarding-manager—The Forwarding Manager process.
- geo—The Geo Manager process.
- gnmi—The GNMI process.
- host-manager—The Host Manager process.
- interface-manager—The Interface Manager process.
- iomd—The Input/Output Module daemon (IOMd) process.
- ios—The IOS process.
- iox-manager—The IOx Manager process.
- license-manager—The License Manager process.
- · logger—The Logging Manager process.
- mdt-pubd—The Model Defined Telemetry Publisher process.
- ndbman—The Netconf DataBase Manager process.
- nesd—The Network Element Synchronizer Daemon process.
- nginx—The Nginx Webserver process.
- nif\_mgr—The NIF Manager process.
- platform-mgr—The Platform Manager process.
- pluggable-services—The Pluggable Services process.
- replication-mgr—The Replication Manager process.
- shell-manager—The Shell Manager process.
- sif—The Stack Interface (SIF) Manager process.
- smd—The Session Manager process.
- stack-mgr—The Stack Manager process.

	syncfd—The SyncmDaemon process.
	• table-manager—The Table Manager Server.
	• thread-test—The Multithread Manager process.
	• virt-manager—The Virtualization Manager process.
slot	Hardware slot where the process for which the level is set, is running. Options include:
	• <i>number</i> —Number of the SIP slot of the hardware module where the level is set. For instance, if you want to specify the SIP in SIP slot 2 of the switch enter 2.
	• <i>SIP-slot / SPA-bay</i> —Number of the SIP switch slot and the number of the shared port adapter (SPA) bay of that SIP. For instance, if you want to specif the SPA in bay 2 of the SIP in switch slot 3, enter 3/2.
	• <b>F0</b> —The Embedded Service Processor slot 0.
	• FP active—The active Embedded Service Processor.
	• <b>R0</b> —The route processor in slot 0.
	• <b>RP active</b> —The active route processor.
	• <b>RP standby</b> —The standby route processor.
	• switch active—The active switch.

The following table describes the significant fields shown in the display.

Table 8: show platform software memory brief Field Descriptions

!

Field	Description
module	Name of submodule.
allocated	Memory, allocated in bytes.
requested	Number of bytes requested by application.
allocs	Number of discrete allocation event attempts.
frees	Number of free events.

## show platform software process list

To display the list of running processes on a platform, use the **show platform software process list** command in privileged EXEC mode.

show platform software process list switch {switch-number | active | standby} {0 | F0 | R0} [{name process-name | process-id process-ID | sort memory | summary}]

Syntax Description	switch switch-number	Displays information about the switch. Valid values for <i>switch-number</i> argument are from 0 to 9.					
	active	Displays information about the active instance of the switch.					
	standby	Displays information about the standby instance of the switch.					
	0	Displays information about the shared port adapters (SPA) Interface Processor slot 0.					
	F0	Displays information about the Embedded Service Processor (ESP) slot 0.					
	R0	Displays information about the Route Processor (RP) slot 0.					
	name process-name	(Optional) Displays information about the specified process. Enter the process name.					
process-id proce		<ul> <li>D (Optional) Displays information about the specified process ID. Enter the process ID.</li> </ul>					
	sort	(Optional) Displays information sorted according to processes. (Optional) Displays information sorted according to memory.					
	memory						
	summary	<b>summary</b> (Optional) Displays a summary of the process memory of the host device.					
Command Modes	Privileged EXE (#)						
Command History	Release	Modification					
	Cisco IOS XE Gibraltar	16.10.1 The Size column in the output was modified to display Resident Set Size (RSS) in KB.					
	Cisco IOS XE Everest	16.5.1a The command was introduced.					
Examples	The following is sample command:	e output from the <b>show platform software process list switch active R0</b>					
	Switch# show platfor	m software process list switch active R0 summary

#### Device# show platform software process list switch active R0

•

The table below describes the significant fields shown in the displays.

#### Table 9: show platform software process list Field Descriptions

Field	Description
Name	Displays the command name associated with the process. Different threads in the same process may have different command values.
Pid	Displays the process ID that is used by the operating system to identify and keep track of the processes.
PPid	Displays process ID of the parent process.
Group Id	Displays the group ID

Field	Description
Status	Displays the process status in human readable form.
Priority	Displays the negated scheduling priority.
Size	Prior to Cisco IOS XE Gibraltar 16.10.1:
	Displays Virtual Memory size.
	From Cisco IOS XE Gibraltar 16.10.1 onwards:
	Displays the Resident Set Size (RSS) that shows how much memory is allocated to that process in the RAM.

### show platform software process memory

To display the amount of memory used by each system process, use the **show platform software process memory** command in privileged EXEC mode.

#### show platform process memory

switch { switch-number | active | standby } { 0 | F0 | FP | R0 } { all [sorted | virtual [sorted] ] | name
process-name { maps | smaps [summary] } | process-id { maps | smaps [summary] } }

Syntax Description switch switch-number Displays information about the switch. Enter the switch number. active Specifies the active instance of the device. Specifies the standby instance of the device. standby 0 Specifies the Shared Port Adapter (SPA) Interface Processor slot 0. F0 Specifies the Embedded Service Processor (ESP) slot 0. FP Specifies the Embedded Service Processor (ESP). R0 Specifies the Route Processor (RP) slot 0. all Lists all processes. sorted (Optional) Sorts the output based on Resident Set Size (RSS). virtual (Optional) Specifies virtual memory. Specifies a process name. name process-name Specifies the memory maps of a process. maps smaps summary Specifies the smaps summary of a process. process-id process-id Specifies a process identifier. **Command History** Modification Release Cisco IOS XE Gibraltar 16.10.1 This command was introduced. **Command Modes** Privileged EXEC(#)

#### Examples:

#### Device# show platform software process memory switch active R0 all

•

The table below describes the significant fields shown in the displays.

Field	Description
PID	Displays the process ID that is used by the operating system to identify and keep track of the processes.
RSS	Displays the Resident Set Size (in kilobytes (KB)) that shows how much memory is allocated to that process in the RAM.
PSS	Displays the Proportional Set Size of a process. This is the count of pages it has in memory, where each page is divided by the number of processes sharing it.
Неар	Displays where all user-allocated memory is located.
Shared	Shared clean + Shared dirty
Private	Private clean + Private dirty
Name	Displays the command name associated with the process. Different threads in the same process may have different command values.

#### Table 10: show platform software process memory Field Descriptions

### show platform software process slot switch

To display platform software process switch information, use the **show platform software process slot switch** command in privileged EXEC mode.

show platform software process slot switch {switch-number | active | standby} {0 | F0 | R0} monitor [{cycles no-of-times [{interval delay [{lines number}]}]}]

Syntax Description	switch-number		Switch number.			
	active		Specifies the active instance.			
	standby		Specifies the standby instance.			
	0		Specifies the shared port adapter (SPA) interface processor slot 0.			
	FO		Specifies the Embedded Service Processor (ESP) slot 0.			
	R0		Specifies the Route Processor (RP) slot 0.			
	monitor		Monitors the running processes.			
	cycles no-of-tmes		(Optional) Sets the number of times to run monitor command. Valid values are from 1 to 4294967295. The default is 5.			
	interval delay		(Optional) Sets a delay after each . Valid values are from 0 to 300. The default is 3.			
	lines number		(Optional) Sets the number of lines of output displayed. Valid values are from 0 to 512. The default is 0.

### show platform software thread list

To display the list of threads on a platform, use the **show platform software thread list** command in privileged EXEC mode.

show platform software thread list switch { switch-number | active | standby } { 0 | F0 | FP active | R0 } pname { cdman | vidman | all } tname { main | pktio | rt | all }

Syntax Description	switch switch-number	Displays information about the switch. Enter the switch number.
	active	Specifies the active instance of the device.
	standby	Specifies standby instance of the device.
	0	Specifies the Shared Port Adapter (SPA) Interface Processor slot 0.
	F0	Specifies the Embedded Service Processor (ESP) slot 0.
	FP active	Specifies the active instance of Embedded Service Processor (ESP).
	R0	Specifies the Route Processor (RP) slot 0.
	pname	Specifies a process name. The possible values are <b>cdman</b> , <b>vidman</b> , and <b>all</b> .
	tname	Specifies a thread name. The possible values are <b>main</b> , <b>pktio</b> , <b>rt</b> , and <b>all</b> .
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
Command Modes	Privileged EXEC(#)	
	Examples:	
	The following is sample output from the <b>show tname all</b> command:	platform software thread list switch active R0 pname cdman
	Device# show platform software thread	list switch active R0 pname cdman tname all
	Name Tid PPid Group Id TIME+ Size	Core Vcswch Nvcswch Status Priority
	 cdman 8407 7295 8407 12309 36976	1 0 0 S 20

The table below describes the significant fields shown in the displays.

Field	Description
Name	Displays the command name associated with the process. Different threads in the same process may have different command values.
Tid	Displays the process ID.
PPid	Displays the process ID of the parent process.
Group Id	Displays the group ID.
Core	Displays processor information.
Vcswch	Displays the number of voluntary context switches.
Nvcswch	Displays the number of non-voluntary context switches.
Status	Displays the process status in human readable form.
Priority	Displays the negated scheduling priority.
TIME+	Displays the time since the start of the process.
Size	Displays the Resident Set Size (in kilobytes (KB)) that shows how much memory is allocated to that process in the RAM.

Table 11: show platform software thread list Field Descriptions

### show processes cpu platform

To display information about the CPU utilization of the IOS-XE processes, use the **show processes cpu platform** command in privileged EXEC mode.

show processes cpu platform [ [ sorted [1min | 5min | 5sec] ] location
switch { switch-number | active | standby } { F0 | FP active | R0 | RP active } ]

Syntax Description	sorted	(Optional) Displays output sorted based on percentage of CPU usage on a platfor         (Optional) Sorts based on 1 minute intervals.         (Optional) Sorts based on 5 minute intervals.         (Optional) Sorts based on 5 second intervals.						
	1min							
	5min							
	5sec							
	location	Specifies the Field Replaceable Unit (FRU) location.						
	<b>switch</b> switch-number	Displays information	on about the switch. Enter the switch number.					
	active	Specifies the active	instance of the device.					
	standby	Specifies the stand	by instance of the device.					
	FO	Specifies the Embedded Service Processor (ESP) slot 0.						
	FP active	Specifies active ins	tances on the Embedded Service Processor (ESP).					
	RO	Specifies the Route	Processor (RP) slot 0.					
	<b>RP</b> active	Specifies active ins	tances on the Route Processor (RP).					
Command History	Release		Modification					
	Cisco IOS XE Gib	praltar 16.10.1	This command was introduced.					
Command Modes	Privileged EXEC (	#)						
	Examples:							

The following is sample output from the show processes cpu platform command:

### show processes cpu platform history

To display information about the CPU usage history of a system, use the **show processes cpu platform history** command.

## $show \ processes \ cpu \ platform \ history \ [\ 1min \ | \ 5min \ | \ 5sec \ | \ 60min \ ] \ location \ switch \ \{\ switch-number \ | \ active \ | \ standby \ \} \ \{\ 0 \ | \ F0 \ | \ FP \ active \ | \ R0 \ \}$

1min	(Optional) Displays CPU utilization history with 1 minute intervals.					
5min	(Optional) Displays CPU utilization history with 5 minute intervals.					
5sec	(Optional) Displays CPU utilization history with 5 second intervals.					
60min	(Optional) Displays CPU utilization history with 60 minute intervals.					
location	Specifies the Field Replaceable Unit (FRU) location					
switch switch-number	Displays information about the switch. Enter the switch number.					
active	Specifies the active instance of the device.					
standby	Specifies the standby instance of the device.					
0	Specifies the Shared Port Adapter (SPA) Interface Processor slot 0.					
FO	Specifies the Embedded Service Processor (ESP) slo 0.					
FP active	Specifies active instances on the Embedded Service Processor (ESP).					
R0	Specifies the Route Processor (RP) slot 0.					
Release	Modification					
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

### show processes cpu platform monitor

To displays information about the CPU utilization of the IOS-XE processes, use the **show processes cpu platform monitor** command in privileged EXEC mode.

show processes cpu platform monitor location switch {switch-number | active | standby}  $\{0 | F0 | R0\}$ 

Syntax Description	<b>location</b> Displays information about the Field Replaceable Unit (FRU) location.								
	switch	switch Specifies the switch.							
	switch-numbe	r Switch number.							
	active	Specifies the active instance.							
	standby	Specifies the standby instance.							
	0	Specifies the shared port adapter (SPA) interface processor slot 0.							
	FO	Specifies the Embedded Service Processor (ESP) slot 0.							
	R0	Specifies the Route Processor (RP) slot 0.							
	- Drivilagad EV								
Command Modes	Privileged EX	EC(#)							
Command History	Release	Modification							
	Cisco IOS XI	E Everest 16.5.1a This command was introduced.							
Usage Guidelines	location com Free memory memory and U	the <b>show platform software process slot switch</b> and <b>show processes cpu platform monitor</b> mands display the output of the Linux <b>top</b> command. The output of these commands display and Used memory as displayed by the Linux <b>top</b> command. The values displayed for the Free Jsed memory by these commands do not match the values displayed by the output of other mory related CLIs.							
Examples	The following command:	is sample output from the show processes cpu monitor location switch active R0							
	Switch# <b>show</b>	v processes cpu platform monitor location switch active R0							
	Tasks: 312 t Cpu(s): 7.4	21 up 1 day, 11:22, 0 users, load average: 0.42, 0.60, 0.78 cotal, 4 running, 308 sleeping, 0 stopped, 0 zombie 1%us, 3.3%sy, 0.0%ni, 89.2%id, 0.0%wa, 0.0%hi, 0.1%si, 0.0%st 344k total, 3956928k used, 19916k free, 419312k buffers 0k total, 0k used, 0k free, 1947036k cached

### show processes memory

To display the amount of memory used by each system process, use the **show processes memory** command in privileged EXEC mode.

Syntax Description	process-id	(Optional) Process ID (PID) of a specific process. When you specify a process ID, only details for the specified process will be shown.					
	sorted	(Optional) Displays memory data sorted by the Allocated, Get Buffers, or Holding column. If the <b>sorted</b> keyword is used by itself, data is sorted by the Holding column by default.					
	allocated	(Optional) Displays memory data sorted by the Allocated column. (Optional) Displays memory data sorted by the Getbufs (Get Buffers) column.					
	getbufs						
	holding	(Optional) Displays memory data sorted by the Holding column. This keyword is the default.					
Command Modes	Privileged E	EXEC (#)					
Command History	Release	Modification					
	Cisco IOS 2	XE Everest 16.5.1a This command was introduced.

78	0	0	0	12992	0	0 DHCPD Timer
79	0	160	0	13088	0	0 DHCPD Database
				8329440 Tot	al	

The table below describes the significant fields shown in the display.

Table 12: show processes memory Field Descriptions

Field	Description
Processor Pool Total	Total amount of memory, in kilobytes (KB), held for the Processor memory pool.
Used	Total amount of used memory, in KB, in the Processor memory pool.
Free	Total amount of free memory, in KB, in the Processor memory pool.
PID	Process ID.
TTY	Terminal that controls the process.
Allocated	Bytes of memory allocated by the process.
Freed	Bytes of memory freed by the process, regardless of who originally allocated it.
Holding	Amount of memory, in KB, currently allocated to the process. This includes memory allocated by the process and assigned to the process.
Getbufs	Number of times the process has requested a packet buffer.
Retbufs	Number of times the process has relinquished a packet buffer.
Process	Process name.
*Init*	System initialization process.
*Sched*	The scheduler process.
*Dead*	Processes as a group that are now dead.
<value> Total</value>	Total amount of memory, in KB, held by all processes (sum of the "Holding" column).

The following is sample output from the **show processes memory** command when the **sorted** keyword is used. In this case, the output is sorted by the Holding column, from largest to smallest.

Device# show processes memory sorted

Proce	essor	Pool Total:	25954228	Used:	8371280 Free:	17582948

Moi	ce					

The following is sample output from the **show processes memory** command when a process ID (*process-id*) is specified:

```
Device# show processes memory 1
```

Process ID: 1 Process Name: Chunk Manager Total Memory Held: 8428 bytes Processor memory holding = 8428 bytes pc = 0x60790654, size = 6044, count = 1 pc = 0x607A5084, size = 1544, count = 1 pc = 0x6076DBC4, size = 652, count = 1 pc = 0x6076FF18, size = 188, count = 1 I/O memory holding = 0 bytes

#### Device# show processes memory 2

```
Process ID: 2

Process Name: Load Meter

Total Memory Held: 3884 bytes

Processor memory holding = 3884 bytes

pc = 0x60790654, size = 3044, count = 1

pc = 0x6076DBC4, size = 652, count = 1

pc = 0x6076FF18, size = 188, count = 1

I/O memory holding = 0 bytes
```

#### **Related Commands**

Command	Description
show memory	Displays statistics about memory, including memory-free pool statistics.
show processes	Displays information about the active processes.

## show processes memory platform

To display memory usage for each Cisco IOS XE process, use the **show processes memory platform** command in privileged EXEC mode.

Syntax Description	acco
--------------------	------

**Command Modes** 

accounting	(Optional) Displays the top memory allocators for each Cisco IOS XE process.				
detailed	(Optional) Displays detailed memory information for a specified Cisco IOS XE process.				
name process-name	(Optional) Displays the Cisco IOS XE process name. Enter the process name.				
process-id process-ID	(Optional) Displayss the Cisco IOS XE process ID. Enter the process ID.				
location	(Optional) Displays information about the Field Replaceable Unit (FRU) location.				
maps	(Optional) Displays memory maps of a process.				
smaps	(Optional) Displays static memory maps of a process.				
sorted	(Optional) Displays the sorted output based on the Resident Set Size (RSS) memory used by Cisco IOS XE process.				
switch switch-number	Displays information about the device.				
active	Displays information about the active instance of the device.				
standby	Displays information about the standby instance of the device.				
0	Displays information about Shared Port Adapter (SPA)-Inter-Processor slot 0.				
F0	Displays information about Embedded Service Processor (ESP) slot 0.				
R0	Displays information about Route Processor (RP) slot 0.				
Privileged EXEC (#)					
Palaaaa	Madifiaatian				

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was modified. The keyword <b>accounting</b> was added.
	The <b>Total</b> column was deleted from the output.

#### **Examples**

The following is a sample output from the show processes memory platform command:

### show processes platform

To display information about the IOS-XE processes running on a platform, use the **show processes platform** command in privileged EXEC mode.

### show processes platform [detailed name process-name] [location switch { switch-number | active | standby } { 0 | F0 | FP active | R0 } ]

detailed	(Optional) Displays detailed information of the specified IOS-XE process.		
name process-name	(Optional) Specifies the process name.		
location (Optional) Specifies the Field Replaceable Unit (FRU) location.			
<b>switch</b> switch-number	(Optional) Displays information about the switch.		
active	(Optional) Specifies the active instance of the device.		
standby	(Optional) Specifies standby instance of the device.		
0	Specifies the Shared Port Adapter (SPA) Interface Processor slot 0.		
FO	Specifies the Embedded Service Processor (ESP) slot 0.		
FP active	Specifies the active instance in the Embedded Service Processor (ESP).		
R0	Specifies the Route Processor (RP) slot 0.		

#### **Command History**

Release

Cisco IOS XE Gibraltar 16.10.1

This command was introduced.

Modification

#### Command Modes Privileged EXEC(#)

#### Examples:

The following is sample output from the **show processes platform** command:

Device# show processes platform

The table below describes the significant fields shown in the displays.

Table 13: show processes platform Field Descriptions

Field	Description
Pid	Displays the process ID.

Field	Description
PPid	Displays the process ID of the parent process.
Status	Displays the process status in human readable form.
Size	Displays the Resident Set Size (in kilobytes (KB)) that shows how much memory is allocated to that process in the RAM.
Name	Displays the command name associated with the process. Different threads in the same process may have different command values.

### show system mtu

To display the global maximum transmission unit (MTU) or maximum packet size set for the switch, use the **show system mtu** command in privileged EXEC mode.

show system mtu This command has no arguments or keywords. **Syntax Description** None **Command Default** Privileged EXEC (#) **Command Modes Command History** Release Modification Cisco IOS XE Everest 16.5.1a This command was introduced. For information about the MTU values and the stack configurations that affect the MTU values, see the system **Usage Guidelines** mtu command. **Examples** This is an example of output from the show system mtu command: Device# show system mtu Global Ethernet MTU is 1500 bytes.

# show tech-support

To automatically run **show** commands that display system information, use the **show tech-support** command in the privilege EXEC mode.

#### show tech-support

Syntax Description	cef	(Optional) Displays CEF related information.
	cft	(Optional) Displays CFT related information.
	eigrp	(Optional) Displays EIGRP related information.
	evc	(Optional) Displays EVC related information.
	fnf	(Optional) Displays flexible netflow related information.
	ipc	(Optional) Displays IPC related information.
	ipmulticast	(Optional) Displays IP multicast related information.
	ipsec	(Optional) Displays IPSEC related information.
	mfib	(Optional) Displays MFIB related information.
	nat	(Optional) Displays NAT related information.
	nbar	(Optional) Displays NBAR related information.
	onep	(Optional) Displays ONEP related information.
	ospf	(Optional) Displays OSPF related information.
	page	(Optional) Displays the command output on a single page at a time. Use the Return key to display the next line of output or use the space bar to display the next page of information. If not used, the output scrolls (that is, it does not stop for page breaks).
		Press the <b>Ctrl-C</b> keys to stop the command output.
	password	(Optional) Leaves passwords and other security information in the output. If not used, passwords and other security-sensitive information in the output are replaced with the label " <removed>".</removed>
	rsvp	(Optional) Displays IP RSVP related information.
	subscriber	(Optional) Displays subscriber related information.
	vrrp	(Optional) Displays VRRP related information.
	wccp	(Optional) Displays WCCP related information.

Command Modes

Privileged EXEC (#)

I

Command History Usage Guidelines	Release	Modification		
	Cisco IOS XE Everest 16.5.1a	This command was implemented.		
	The output from the <b>show tech-support</b> command is very long. To better manage this output, you can redirect the output to a file (for example, <b>show tech-support</b> > <i>filename</i> ) in the local writable storage file system or the remote file system. Redirecting the output to a file also makes sending the output to your Cisco Technical Assistance Center (TAC) representative easier.			
	You can use one of the following redirection methods:			
	• > <i>filename</i> - Redirects the output to a file.			
	• >> filename - Redirects the output to a file in ap	ppend mode.		

### show tech-support bgp

To automatically run show commands that display BGP related system information, use the **show tech-support bgp** command in the privileged EXEC mode.

show tech-support bgp [address-family {all | ipv4 [flowspec | multicast | unicast | [mdt
| mvpn] {all | vrf vrf-instance-name} ] |ipv6 [flowspec | multicast | mvpn {all | vrf
vrf-instance-name} | unicast] | l2vpn [evpn | vpls] | link-state [link-state] | [nsap |
rtfilter] [unicast] | [vpnv4 | vpnv6] [flowspec | multicast | unicast] {all | vrf
vrf-instance-name}}] [detail]

address-family	(Optional) Displays the output for a specified address family.
address-family all	(Optional) Displays the output for all address families.
ipv4	(Optional) Displays the output for IPv4 address family.
ipv6	(Optional) Displays the output for IPv6 address family.
l2vpn	(Optional) Displays the output for L2VPN address family.
link-state	(Optional) Displays the output for Link State address family.
nsap	(Optional) Displays the output for NSAP address family.
rtfilter	(Optional) Displays the output for RT Filter address family.
vpnv4	(Optional) Displays the output for VPNv4 address family.
vpnv6	(Optional) Displays the output for VPNv6 address family.
flowspec	(Optional) Displays the flowspec related information for an address family.
multicast	(Optional) Displays the multicast related information for an address family.
unicast	(Optional) Displays the unicast related information for an address family.
mdt	(Optional) Displays the Multicast Distribution Tree (MDT) related information for an address family.
	address-family all   ipv4   ipv6   l2vpn   link-state   nsap   rtfilter   vpnv4   vpnv6   flowspec   multicast   unicast

I

	mvpn	(Optional) Displays the Multicast VPN (MVPN) related information for an address family.		
	vrf	Displays the information for a VPN Routing/Forwarding instance.		
	evpn	(Optional) Displays the Ethernet VPN (EVPN) related information for an address family.		
	vpls	(Optional) Displays the Virtual Private LAN Services (VPLS) related information for an address family.		
	vrf-instance-name	Specifies the name of the VPN Routing/Forwarding instance.		
	all	Displays the information about all VPN NLRIS.		
	detail	(Optional) Displays the detailed routes information.		
Command Modes	User EXEC (>)			
	Privileged EXEC (#)			
Command History	Release	Modification		
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.		
Usage Guidelines	The <b>show tech-support bgp</b> command is used to display the outputs of various BGP show commands and log them to the show-tech file. The output from the <b>show tech-support bgp</b> command is very long. To better manage this output, you can redirect the output to a file (for example, <b>show tech-support</b> > <b>filename</b> ) in the local writable storage file system or the remote file system. Redirecting the output to a file also makes sending the output to your Cisco Technical Assistance Center (TAC) representative easier.			
	You can use one of the following redirection methods:			
	• > filename - Redirects the output to a file.			
	• >> filename - Redirects the output to a file in append mode.			
	The following <b>show</b> commands run automatically when the <b>show tech-support bgp</b> command is used:			
	• show clock			
	• show version			
	• show running-config			
	• show process cpu sorted			
	• show process cpu history			
	show process memory sorted			
		c address family run automnatically when the show tech-suppor		

- show bgp address-family-name address-family-modifier summary
- show bgp address-family-name address-family-modifier detail
- show bgp address-family-name address-family-modifier internal
- show bgp address-family-name address-family-modifier neighbors
- show bgp address-family-name address-family-modifier update-group
- show bgp address-family-name address-family-modifier replication
- show bgp address-family-name address-family-modifier community
- show bgp address-family-name address-family-modifier dampening dampened-paths
- show bgp address-family-name address-family-modifier dampening flap-statistics
- show bgp address-family-name address-family-modifier dampening parameters

- · show logging onboard switch [switch number] voltage detail

#### show tech-support poe

To display the output of all the PoE-related troubleshooting commands, use the **show tech-support poe** command in privileged EXEC mode. This command displays the output of the following commands:

- show clock
- show version
- show running-config
- show log
- show interface
- show interface status
- show controllers ethernet-controller
- show controllers power inline
- show cdp neighbors detail
- show llpd neighbors detail
- show post
- · show platform software ilpower details
- show platform software ilpower system switch-id
- show power inline
- show power inline interface-id detail
- show power inline police
- show power inline priority
- show platform software trace message platform-mgr switch switch-number R0
- show platform software trace message fed switch switch-number
- show platform hardware fed switch switch-number fwd-asic register read register-name pimdeviceid
- show platform frontend-controller manager 0 switch-number
- show platform frontend-controller subordinate 0 switch-number
- show platform frontend-controller version 0 switch-number
- show stack-power budgeting
- show stack-power detail

**Command Default** This command has no arguments or keywords.

### speed

To specify the speed of a port, use the **speed** command in interface configuration mode. To return to the default value, use the **no** form of this command.

```
Note
```

Available configuration options depend on the switch model and transceiver module installed. Options include 10, 100, 1000, 2500, 5000, 10000, 25000, 40000, 100000

 $\begin{array}{c} speed \quad \{10 \mid 100 \mid 1000 \mid 2500 \mid 5000 \mid 10000 \mid 25000 \mid 40000 \mid 100000 \mid auto \quad [\ \{10 \mid 100 \mid 1000 \mid 2500 \mid 5000 \}] \\ \mid nonegotiate \} \\ no \ speed \end{array}$ 

Syntax Description	10	Specifies that the port runs	at 10 Mbps.
	100	Specifies that the port runs	at 100 Mbps.
	1000	Specifies that the port runs a Mb/s ports.	t 1000 Mbps. This option is valid and visible only on 10/100/1000
	2500	Specifies that the port runs a multi-Gigabit-supported Eth	at 2500 Mbps. This option is valid and visible only on the approximation of the second s
	5000	Specifies that the port runs a multi-Gigabit-supported Eth	at 5000 Mbps. This option is valid and visible only on aernet ports.
	10000	Specifies that the port runs	at 10000 Mbps operation.
	25000	Specifies that the port runs	at 25000 Mbps operation.
	40000	Specifies that the port runs	at 40000 Mbps operation.
	100000	Specifies that the port runs	at 100000 Mbps operation.
	auto		he port should run, automatically, based on the port at the other the <b>10</b> , <b>100</b> , <b>1000</b> , <b>2500</b> , or <b>5000</b> keyword with the <b>auto</b> keyword, at the specified speeds.
	nonegotiate	Disables autonegotiation, an	d the port runs at 1000 Mbps.
Command Default	The default i	s <b>auto</b> .	
Command Modes	Interface con	figuration (config-if)	
Command History	Release		Modification
	Cisco IOS X	KE Everest 16.5.1a	This command was introduced.
	Cisco IOS X	KE Fuji 16.9.2	Support for <b>10000</b> and <b>25000</b> Mbps options with dual-rate transceivers was introduced.

I

	Release	Modification				
	Cisco IOS XE Gibraltar 16.12.1	Support for <b>40000</b> and <b>100000</b> Mbps options with dual-rate transceivers was introduced.				
Usage Guidelines	You cannot configure speed on 10-Gig	gabit Ethernet ports.				
-	Except for the 1000BASE-T small for	m-factor pluggable (SFP) modules, you can configure the speed to not nodule port is connected to a device that does not support autonegotiation.				
	The keywords, <b>2500</b> and <b>5000</b> are visi	ble only on multi-Gigabit (m-Gig) Ethernet supporting devices.				
		negotiates with the device at the other end of the link for the speed ng to the negotiated value. The duplex setting remains configured on ilt in a duplex setting mismatch.				
		gotiation, we highly recommend the default autonegotiation settings. on and the other end does not, use the auto setting on the supported he other side.				
	When you install dual-rate transceiver modules (on supported switch models), entering the the <b>speed</b> command displays the dual configuration options that are available with the transceiver module. For information about such transceiver modules and device compatibility, see: the Transceiver Module Group (TMG) Compatibility Matrix.					
	$\triangle$					
_	<b>Caution</b> Changing the interface speed and during the reconfiguration.	duplex mode configuration might shut down and re-enable the interface				
	For guidelines on setting the switch spee chapter in the software configuration g	ed and duplex parameters, see the "Configuring Interface Characteristics" guide for this release.				
	Verify your settings using the show interfaces privileged EXEC command.					
Examples	The following example shows how to	set speed on a port to 100 Mbps:				
	Device(config)# <b>interface gigabi</b> Device(config-if)# <b>speed 100</b>	tethernet1/0/1				
	The following example shows how to	set a port to autonegotiate at only 10 Mbps:				
	Device(config)# <b>interface gigabi</b> Device(config-if)# <b>speed auto 10</b>					
	The following example shows how to	set a port to autonegotiate at only 10 or 100 Mbps:				

# switchport block

To prevent unknown multicast or unicast packets from being forwarded, use the **switchport block** command in interface configuration mode. To allow forwarding unknown multicast or unicast packets, use the **no** form of this command.

switchport block {multicast | unicast}
no switchport block {multicast | unicast}

Syntax Description	multicast	Specifie	es that unknown multicast traffic s	hould be blocked.		
	<b>Note</b> Only pure Layer 2 multicast traffic is blocked. Multicast packets that or IPv6 information in the header are not blocked.					
	unicast	Specifie	es that unknown unicast traffic sho	ould be blocked.		
Command Default	Unknown	multicas	t and unicast traffic is not blocked	l.		
Command Modes	Interface of	configura	tion (config-if)			
Command History	Release			Modification		
	Cisco IOS	S XE Eve	erest 16.5.1a	This command was introduced.		
Usage Guidelines	unicast tra	iffic on p		is sent to all ports. You can block unknown multicast or unknown multicast or unicast traffic is not blocked on a		
	With multicast traffic, the port blocking feature blocks only pure Layer 2 packets. Multicast packets that contain IPv4 or IPv6 information in the header are not blocked.					
	Blocking unknown multicast or unicast traffic is not automatically enabled on protected ports; you must explicitly configure it.					
	For more information about blocking packets, see the software configuration guide for this release.					
	This example shows how to block unknown unicast traffic on an interface:					
	Device(co	onfig-if	) # switchport block unicast			
	You can v EXEC cor	5 5	r setting by entering the <b>show int</b>	erfaces interface-id switchport privileged		

#### system mtu

To set the global maximum packet size or MTU size for switched packets on Gigabit Ethernet and 10-Gigabit Ethernet ports, use the **system mtu** command in global configuration mode. To restore the global MTU value to its default value, use the **no** form of this command.

system mtu *bytes* no system mtu

Syntax Description	bytes The global MTU size in bytes. The range is 1500 to 9198 bytes; the default is 1500 bytes.				
Command Default	The default MTU size for all ports is 1500 bytes.				
Command Modes	Global configuration (config)				
Command History	Release	Modification			
	Cisco IOS XE Everest 16.5.1a	This command was introduced.			
Usage Guidelines	You can verify your setting by entering the <b>show sy</b>				
	The switch does not support the MTU on a per-interface basis.				
	If you enter a value that is outside the allowed range for the specific type of interface, the value is not accepted.				
Examples	This example shows how to set the global system M	TU size to 6000 bytes:			
	Device(config)# system mtu 6000 Global Ethernet MTU is set to 6000 bytes. Note: this is the Ethernet payload size, no Ethernet frame size, which includes the Eth- header/trailer and possibly other tags, suc 802.1q tags.	ernet			

## voice-signaling vlan (network-policy configuration)

To create a network-policy profile for the voice-signaling application type, use the **voice-signaling vlan** command in network-policy configuration mode. To delete the policy, use the **no** form of this command.

**voice-signaling vlan** {*vlan-id* [{**cos** *cos-value* | **dscp** *dscp-value*}] | **dot1p** [{**cos** *l2-priority* | **dscp** *dscp*}] | **none** | **untagged**}

Syntax Description	vlan-id	(Optional) The VLAN for voice traffic. T	The range is 1 to 4094.		
	cos cos-value	(Optional) Specifies the Layer 2 priority ch The range is 0 to 7; the default is 5.	lass of service (CoS) for the configured VLAN.		
	dscp dscp-value	(Optional) Specifies the differentiated serv VLAN. The range is 0 to 63; the default i	ices code point (DSCP) value for the configured s 46.		
	dot1p(Optional) Configures the phone to use IEEE 802.1p priority tagging and to use V 0 (the native VLAN).				
	none	none(Optional) Does not instruct the Cisco IP phone about the voice VLAN. The pho the configuration from the phone key pad.			
	untagged	(Optional) Configures the phone to send the phone.	untagged voice traffic. This is the default for		
Command Default	No network-policy profiles for the voice-signaling application type are defined.				
	The default CoS value is 5.				
	The default DSCP value is 46.				
	The default tagging mode is untagged.				
Command Modes	Network-policy pr	ofile configuration			
Command History	Release		Modification		
	Cisco IOS XE Ev	erest 16.5.1a	This command was introduced.		
Usage Guidelines	Use the <b>network-policy profile</b> global configuration command to create a profile and to enter network-policy profile configuration mode.				
	The voice-signaling application type is for network topologies that require a different policy for voice signaling than for voice media. This application type should not be advertised if all of the same network policies apply as those advertised in the voice policy TLV.				
	When you are in network-policy profile configuration mode, you can create the profile for voice-signaling by specifying the values for VLAN, class of service (CoS), differentiated services code point (DSCP), and tagging mode.				
	-	outes are contained in the Link Layer Disco work-policy time-length-value (TLV).	overy Protocol for Media Endpoint Devices		

To return to privileged EXEC mode from the network-policy profile configuration mode, enter the **exit** command.

This example shows how to configure voice-signaling for VLAN 200 with a priority 2 CoS:

```
Device(config)# network-policy profile 1
Device(config-network-policy)# voice-signaling vlan 200 cos 2
```

This example shows how to configure voice-signaling for VLAN 400 with a DSCP value of 45:

```
Device(config)# network-policy profile 1
Device(config-network-policy)# voice-signaling vlan 400 dscp 45
```

This example shows how to configure voice-signaling for the native VLAN with priority tagging:

```
Device(config-network-policy)# voice-signaling vlan dot1p cos 4
```

## voice vlan (network-policy configuration)

To create a network-policy profile for the voice application type, use the **voice vlan** command in network-policy configuration mode. To delete the policy, use the **no** form of this command.

voice vlan {*vlan-id* [{cos *cos-value* | dscp *dscp-value*}] | dot1p [{cos *l2-priority* | dscp *dscp*}] | none | untagged}

Syntax Description	vlan-id	(Optional) The VLAN for voice traffic. The range is 1 to 4094.			
	cos cos-value	(Optional) Specifies the Layer 2 priority class of service (CoS) for the configured VLAN. The range is 0 to 7; the default is 5.			
	dscp dscp-value	(Optional) Specifies the differentiated services code point (DSCP) value for the configured VLAN. The range is 0 to 63; the default is 46.			
	dot1p	(Optional) Configures the phone to use IEEE 802.1p priority tagging and to use VLAN 0 (the native VLAN).			
	none	(Optional) Does not instruct the Cisco IP phone about the voice VLAN. The phone uses the configuration from the phone key pad.			
	untagged	(Optional) Configures the phone to send untagged voice traffic. This is the default for the phone.			
Command Default		y profiles for the voice application type are defined.			
	The default CoS value is 5.				
	The default DSCP value is 46.				
	The default tagging mode is untagged.				
Command Modes	Network-policy pr	rofile configuration			
Command History	Release	Modification			
	Cisco IOS XE Ev	This command was introduced.			
Usage Guidelines	Use the <b>network-</b> profile configuration	<b>policy profile</b> global configuration command to create a profile and to enter network-policy ion mode.			
	The voice application type is for dedicated IP telephones and similar devices that support interactive voice services. These devices are typically deployed on a separate VLAN for ease of deployment and enhanced security through isolation from data applications.				
	When you are in network-policy profile configuration mode, you can create the profile for voice by specifying the values for VLAN, class of service (CoS), differentiated services code point (DSCP), and tagging mode.				
	-	butes are contained in the Link Layer Discovery Protocol for Media Endpoint Devices work-policy time-length-value (TLV).			

To return to privileged EXEC mode from the network-policy profile configuration mode, enter the **exit** command.

This example shows how to configure the voice application type for VLAN 100 with a priority 4 CoS:

```
Device(config)# network-policy profile 1
Device(config-network-policy)# voice vlan 100 cos 4
```

This example shows how to configure the voice application type for VLAN 100 with a DSCP value of 34:

```
Device(config)# network-policy profile 1
Device(config-network-policy)# voice vlan 100 dscp 34
```

This example shows how to configure the voice application type for the native VLAN with priority tagging:

```
Device(config-network-policy) # voice vlan dot1p cos 4
```
