# bluetooth pin

To configure a new Bluetooth pin, use the **bluetooth pin** command in interface configuration or global configuration mode.

**bluetooth pin** *pin*

## Syntax Description

*pin*

Pairing pin for the Bluetooth interface.

The pin is a 4-digit number.

## Command Modes

Interface configuration (config-if)

Global configuration (config)

## Command History

### Release

### Modification

Cisco IOS XE Amsterdam 17.1.1

This command was introduced.

This command was introduced for the Cisco Catalyst 9 Series High Performance Switches.

Cisco IOS XE Gibraltar 16.12.1

This command was introduced.

This command was introduced for the Cisco Catalyst 9 Series Switches.

## Usage Guidelines

The **bluetooth pin** command can be configured either in the interface configuration or global configuration mode. Cisco recommends using the global configuration mode to configure the Bluetooth pin.

## Examples

This example shows how to configure a new Bluetooth pin using the **bluetooth pin** command.

```
Device> enable
Device# configure terminal
Device(config)# bluetooth pin 1111
Device(config)#
```

## Related Commands

Command	Description
<b>show platform hardware bluetooth</b>	Displays information about the Bluetooth interface

# debug ilpower

To enable debugging of the power controller and Power over Ethernet (PoE) system, use the **debug ilpower** command in privileged EXEC mode. To disable debugging, use the **no** form of this command.

```
debug ilpower {cdp | event | ha | ipc | police | port | powerman | registries | scp | sense}
no debug ilpower {cdp | event | ha | ipc | police | port | powerman | registries | scp | sense}
```

## Syntax Description

<b>cdp</b>	Displays PoE Cisco Discovery Protocol (CDP) debug messages.
<b>event</b>	Displays PoE event debug messages.
<b>ha</b>	Displays PoE high-availability messages.
<b>ipc</b>	Displays PoE Inter-Process Communication (IPC) debug messages.
<b>police</b>	Displays PoE police debug messages.
<b>port</b>	Displays PoE port manager debug messages.
<b>powerman</b>	Displays PoE power management debug messages.
<b>registries</b>	Displays PoE registries debug messages.
<b>scp</b>	Displays PoE SCP debug messages.
<b>sense</b>	Displays PoE sense debug messages.

## Command Default

Debugging is disabled.

## Command Modes

Privileged EXEC

## Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

## Usage Guidelines

This command is supported only on PoE-capable switches.

When you enable debugging on a switch stack, it is enabled only on the active switch. To enable debugging on a stack member, you can start a session from the active switch by using the **session** *switch-number* EXEC command. Then enter the **debug** command at the command-line prompt of the stack member. You also can use the **remote command** *stack-member-number* *LINE* EXEC command on the active switch to enable debugging on a member switch without first starting a session.

# debug interface

To enable debugging of interface-related activities, use the **debug interface** command in privileged EXEC mode. To disable debugging, use the **no** form of this command.

```
debug interface {interface-id | counters {exceptions | protocol memory} | null interface-number |
port-channel port-channel-number | states | vlan vlan-id}
no debug interface {interface-id | counters {exceptions | protocol memory} | null interface-number |
port-channel port-channel-number | states | vlan vlan-id}
```

## Syntax Description

<i>interface-id</i>	ID of the physical interface. Displays debug messages for the specified physical port, identified by type switch number/module number/port, for example, gigabitethernet 1/0/2.
<b>null</b> <i>interface-number</i>	Displays debug messages for null interfaces. The interface number is always <b>0</b> .
<b>port-channel</b> <i>port-channel-number</i>	Displays debug messages for the specified EtherChannel port-channel interface. The <i>port-channel-number</i> range is 1 to 48.
<b>vlan</b> <i>vlan-id</i>	Displays debug messages for the specified VLAN. The vlan range is 1 to 4094.
<b>counters</b>	Displays counters debugging information.
<b>exceptions</b>	Displays debug messages when a recoverable exceptional condition occurs during the computation of the interface packet and data rate statistics.
<b>protocol memory</b>	Displays debug messages for memory operations of protocol counters.
<b>states</b>	Displays intermediary debug messages when an interface's state transitions.

## Command Default

Debugging is disabled.

## Command Modes

Privileged EXEC (#)

## Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

## Usage Guidelines

If you do not specify a keyword, all debug messages appear.

The **undebug interface** command is the same as the **no debug interface** command.

When you enable debugging on a switch stack, it is enabled only on the active switch. To enable debugging on a stack member, you can start a session from the active switch by using the **session** *switch-number* EXEC command. Then enter the **debug** command at the command-line prompt of the stack member. You also can use the **remote command** *stack-member-number* *LINE* EXEC command on the active switch to enable debugging on a member switch without first starting a session.

# debug lldp packets

To enable debugging of Link Layer Discovery Protocol (LLDP) packets, use the **debug lldp packets** command in privileged EXEC mode. To disable debugging, use the **no** form of this command.

**debug lldp packets**  
**no debug lldp packets**

**Syntax Description** This command has no arguments or keywords.

**Command Default** Debugging is disabled.

**Command Modes** Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

**Usage Guidelines** The **undebug lldp packets** command is the same as the **no debug lldp packets** command. When you enable debugging on a switch stack, it is enabled only on the active switch. To enable debugging on a stack member, you can start a session from the active switch by using the **session *switch-number*** EXEC command.

## debug platform poe

To enable debugging of a Power over Ethernet (PoE) port, use the **debug platform poe** command in privileged EXEC mode. To disable debugging, use the **no** form of this command.

```
debug platform poe [{error | info}] [switch switch-number]  
no debug platform poe [{error | info}] [switch switch-number]
```

<b>Syntax Description</b>	<b>error</b>	(Optional) Displays PoE-related error debug messages.
	<b>info</b>	(Optional) Displays PoE-related information debug messages.
	<b>switch</b> <i>switch-number</i>	(Optional) Specifies the stack member. This keyword is supported only on stacking-capable switches.
<b>Command Default</b>	Debugging is disabled.	
<b>Command Modes</b>	Privileged EXEC (#)	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Cisco IOS XE Everest 16.5.1a	This command was introduced.
<b>Usage Guidelines</b>	The <b>undebg platform poe</b> command is the same as the <b>no debug platform poe</b> command.	

# debug platform software fed switch active punt packet-capture start

To enable debugging of packets during high CPU utilization, for an active switch, use the **debug platform software fed switch active punt packet-capture start** command in privileged EXEC mode. To disable debugging of packets during high CPU utilization, for an active switch, use the **debug platform software fed switch active punt packet-capture stop** command in privileged EXEC mode.

**debug platform software fed switch active punt packet-capture start**

**debug platform software fed switch active punt packet-capture stop**

Syntax Description		
	<b>switch active</b>	Displays information about the active switch.
	<b>punt</b>	Specifies the punt information.
	<b>packet-capture</b>	Specifies information about the captured packet.
	<b>start</b>	Enables debugging of the active switch.
	<b>stop</b>	Disables debugging of the active switch.

**Command Modes** Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

**Usage Guidelines** The **debug platform software fed switch active punt packet-capture start** command starts the debugging of packets during high CPU utilization. The packet capture is stopped when the 4k buffer size is exceeded.

## Examples

The following is a sample output from the **debug platform software fed switch active punt packet-capture start** command:

```
Device# debug platform software fed switch active packet-capture start
Punt packet capturing started.
```

The following is a sample output from the **debug platform software fed switch active punt packet-capture stop** command:

```
Device# debug platform software fed switch active packet-capture stop
Punt packet capturing stopped. Captured 101 packet(s)
```

# duplex

To specify the duplex mode of operation for a port, use the **duplex** command in interface configuration mode. To return to the default value, use the **no** form of this command.

**duplex** {**auto** | **full** | **half**}  
**no duplex** {**auto** | **full** | **half**}

## Syntax Description

**auto** Enables automatic duplex configuration. The port automatically detects whether it should run in full- or half-duplex mode, depending on the attached device mode.

**full** Enables full-duplex mode.

**half** Enables half-duplex mode (only for interfaces operating at 10 or 100 Mb/s). You cannot configure half-duplex mode for interfaces operating at 1000 Mb/s, 10,000 Mb/s, 2.5Gb/s, or 5Gb/s.

## Command Default

The default is **auto** for Gigabit Ethernet ports.

Duplex options are not supported on the 1000BASE-*x* or 10GBASE-*x* (where *x* is -BX, -CWDM, -LX, -SX, or -ZX) small form-factor pluggable (SFP) modules.

## Command Modes

Interface configuration

## Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

## Usage Guidelines

For Gigabit Ethernet ports, setting the port to **auto** has the same effect as specifying **full** if the attached device does not autonegotiate the duplex parameter.

**Note** Half-duplex mode is supported on Gigabit Ethernet interfaces if the duplex mode is **auto** and the connected device is operating at half duplex. However, you cannot configure these interfaces to operate in half-duplex mode.

Certain ports can be configured to be either full duplex or half duplex. How this command is applied depends on the device to which the switch is attached.

Starting Cisco IOS XE Gibraltar 16.12.1 release, C9500-48Y4C and C9500-24Y4C do not support half-duplex mode on 1000BASE-T SFP transceivers for 10Mb/s and 100Mb/s speeds.

If both ends of the line support autonegotiation, we highly recommend using the default autonegotiation settings. If one interface supports autonegotiation and the other end does not, configure duplex and speed on both interfaces, and use the **auto** setting on the supported side.

If the speed is set to **auto**, the switch negotiates with the device at the other end of the link for the speed setting and then forces the speed setting to the negotiated value. The duplex setting remains as configured on each end of the link, which could result in a duplex setting mismatch.

You can configure the duplex setting when the speed is set to **auto**.

---

**Caution** Changing the interface speed and duplex mode configuration might shut down and re-enable the interface during the reconfiguration.

---

You can verify your setting by entering the **show interfaces** privileged EXEC command.

---

## Examples

This example shows how to configure an interface for full-duplex operation:

```
Device(config)# interface gigabitethernet1/0/1  
Devic(config-if)# duplex full
```

## enable (interface configuration)

To enable the 100 GigabitEthernet interface, use the **enable** command in interface configuration mode. Use the **no** form of the command to disable a 100 GigabitEthernet interface.

**enable**

**no enable**

### Command Default

The 100 GigabitEthernet interface is enabled on physical port numbers 25 through 32.

The 100 GigabitEthernet interface is disabled on physical port numbers 1 through 24.

### Command Modes

Interface configuration

### Command History

Release	Modification
Cisco IOS XE Fuji 16.8.1a	The command was introduced on the Cisco Catalyst 9500 Series Switches - High Performance.

### Usage Guidelines

Use the **enable** command in the interface configuration mode, to enable the 100 GigabitEthernet interface.

Use the **no** version of the command to disable the 100 GigabitEthernet interface.

To display the current state of an interface, enter the **show interface** *interface-id* command in privileged EXEC mode.

The following example shows how to enable interface HundredGigabitEthernet 1/0/40.

When you enable the interface HundredGigabitEthernet 1/0/40, the corresponding 40 GigabitEthernet interfaces, FortyGigabitEthernet 1/0/15 and FortyGigabitEthernet 1/0/16 become inactive.

```
Device> enable
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# interface hundredgigabitethernet 1/0/40
Device(config-if)# enable
```

The following example shows how to disable interface HundredGigabitEthernet 1/0/40 to use interface 40 GigabitEthernet 1/0/16.

When you disable a HundredGigabitEthernet interface, both the corresponding 40 GigabitEthernet interfaces, FortyGigabitEthernet1/0/15 and FortyGigabitEthernet1/0/16 become active.

```
Device> enable
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# interface hundredgigabitethernet 1/0/40
Device(config-if)# no enable
Device(config-if)# exit
```

## errdisable detect cause

To enable error-disable detection for a specific cause or for all causes, use the **errdisable detect cause** command in global configuration mode. To disable the error-disable detection feature, use the **no** form of this command.

```
errdisable detect cause {all | arp-inspection | bpduguard shutdown vlan | dhcp-rate-limit | dtp-flap
| gbic-invalid | inline-power | link-flap | loopback | pagp-flap | pppoe-ia-rate-limit | psp shutdown
vlan | security-violation shutdown vlan | sfp-config-mismatch}
no errdisable detect cause {all | arp-inspection | bpduguard shutdown vlan | dhcp-rate-limit | dtp-flap
| gbic-invalid | inline-power | link-flap | loopback | pagp-flap | pppoe-ia-rate-limit | psp shutdown
vlan | security-violation shutdown vlan | sfp-config-mismatch}
```

Syntax Description	
<b>all</b>	Enables error detection for all error-disabled causes.
<b>arp-inspection</b>	Enables error detection for dynamic Address Resolution Protocol (ARP) inspection.
<b>bpduguard shutdown vlan</b>	Enables per-VLAN error-disable for BPDU guard.
<b>dhcp-rate-limit</b>	Enables error detection for DHCP snooping.
<b>dtp-flap</b>	Enables error detection for the Dynamic Trunking Protocol (DTP) flapping.
<b>gbic-invalid</b>	Enables error detection for an invalid Gigabit Interface Converter (GBIC) module.  <b>Note</b> This error refers to an invalid small form-factor pluggable (SFP) module.
<b>inline-power</b>	Enables error detection for the Power over Ethernet (PoE) error-disabled cause.  <b>Note</b> This keyword is supported only on switches with PoE ports.
<b>link-flap</b>	Enables error detection for link-state flapping.
<b>loopback</b>	Enables error detection for detected loopbacks.
<b>pagp-flap</b>	Enables error detection for the Port Aggregation Protocol (PAgP) flap error-disabled cause.
<b>pppoe-ia-rate-limit</b>	Enables error detection for the PPPoE Intermediate Agent rate-limit error-disabled cause.
<b>psp shutdown vlan</b>	Enables error detection for protocol storm protection (PSP).
<b>security-violation shutdown vlan</b>	Enables voice aware 802.1x security.
<b>sfp-config-mismatch</b>	Enables error detection on an SFP configuration mismatch.

**Command Default** Detection is enabled for all causes. All causes, except per-VLAN error disabling, are configured to shut down the entire port.

**Command Modes** Global configuration

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

**Usage Guidelines** A cause (such as a link-flap or dhcp-rate-limit) is the reason for the error-disabled state. When a cause is detected on an interface, the interface is placed in an error-disabled state, an operational state that is similar to a link-down state.

When a port is error-disabled, it is effectively shut down, and no traffic is sent or received on the port. For the bridge protocol data unit (BPDU) guard, voice-aware 802.1x security, and port-security features, you can configure the switch to shut down only the offending VLAN on the port when a violation occurs, instead of shutting down the entire port.

If you set a recovery mechanism for the cause by entering the **errdisable recovery** global configuration command, the interface is brought out of the error-disabled state and allowed to retry the operation when all causes have timed out. If you do not set a recovery mechanism, you must enter the **shutdown** and then the **no shutdown** commands to manually recover an interface from the error-disabled state.

For protocol storm protection, excess packets are dropped for a maximum of two virtual ports. Virtual port error disabling using the **psp** keyword is not supported for EtherChannel and Flexlink interfaces.

To verify your settings, enter the **show errdisable detect** privileged EXEC command.

This example shows how to enable error-disabled detection for the link-flap error-disabled cause:

```
Device(config)# errdisable detect cause link-flap
```

This command shows how to globally configure BPDU guard for a per-VLAN error-disabled state:

```
Device(config)# errdisable detect cause bpduguard shutdown vlan
```

This command shows how to globally configure voice-aware 802.1x security for a per-VLAN error-disabled state:

```
Device(config)# errdisable detect cause security-violation shutdown vlan
```

You can verify your setting by entering the **show errdisable detect** privileged EXEC command.

## errdisable recovery cause

To enable the error-disabled mechanism to recover from a specific cause, use the **errdisable recovery cause** command in global configuration mode. To return to the default setting, use the **no** form of this command.

```
errdisable recovery cause {all | arp-inspection | bpduguard | channel-misconfig | dhcp-rate-limit |
dtp-flap | gbic-invalid | inline-power | link-flap | loopback | mac-limit | pagp-flap | port-mode-failure |
pppoe-ia-rate-limit | psecure-violation | psp | security-violation | sfp-config-mismatch | storm-control |
udld}
```

```
no errdisable recovery cause {all | arp-inspection | bpduguard | channel-misconfig | dhcp-rate-limit |
dtp-flap | gbic-invalid | inline-power | link-flap | loopback | mac-limit | pagp-flap | port-mode-failure |
pppoe-ia-rate-limit | psecure-violation | psp | security-violation | sfp-config-mismatch | storm-control |
udld}
```

Syntax Description	
<b>all</b>	Enables the timer to recover from all error-disabled causes.
<b>arp-inspection</b>	Enables the timer to recover from the Address Resolution Protocol (ARP) inspection error-disabled state.
<b>bpduguard</b>	Enables the timer to recover from the bridge protocol data unit (BPDU) guard error-disabled state.
<b>channel-misconfig</b>	Enables the timer to recover from the EtherChannel misconfiguration error-disabled state.
<b>dhcp-rate-limit</b>	Enables the timer to recover from the DHCP snooping error-disabled state.
<b>dtp-flap</b>	Enables the timer to recover from the Dynamic Trunking Protocol (DTP) flap error-disabled state.
<b>gbic-invalid</b>	Enables the timer to recover from an invalid Gigabit Interface Converter (GBIC) module error-disabled state.  <b>Note</b> This error refers to an invalid small form-factor pluggable (SFP) error-disabled state.
<b>inline-power</b>	Enables the timer to recover from the Power over Ethernet (PoE) error-disabled state.  This keyword is supported only on switches with PoE ports.
<b>link-flap</b>	Enables the timer to recover from the link-flap error-disabled state.
<b>loopback</b>	Enables the timer to recover from a loopback error-disabled state.
<b>mac-limit</b>	Enables the timer to recover from the mac limit error-disabled state.
<b>pagp-flap</b>	Enables the timer to recover from the Port Aggregation Protocol (PAgP)-flap error-disabled state.

<b>port-mode-failure</b>	Enables the timer to recover from the port mode change failure error-disabled state.
<b>pppoe-ia-rate-limit</b>	Enables the timer to recover from the PPPoE IA rate limit error-disabled state.
<b>psecure-violation</b>	Enables the timer to recover from a port security violation disable state.
<b>psp</b>	Enables the timer to recover from the protocol storm protection (PSP) error-disabled state.
<b>security-violation</b>	Enables the timer to recover from an IEEE 802.1x-violation disabled state.
<b>sfp-config-mismatch</b>	Enables error detection on an SFP configuration mismatch.
<b>storm-control</b>	Enables the timer to recover from a storm control error.
<b>udld</b>	Enables the timer to recover from the UniDirectional Link Detection (UDLD) error-disabled state.

**Command Default**

Recovery is disabled for all causes.

**Command Modes**

Global configuration (config)

**Command History**

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

**Usage Guidelines**

A cause (such as all or BPDU guard) is defined as the reason that the error-disabled state occurred. When a cause is detected on an interface, the interface is placed in the error-disabled state, an operational state similar to link-down state.

When a port is error-disabled, it is effectively shut down, and no traffic is sent or received on the port. For the BPDU guard and port-security features, you can configure the switch to shut down only the offending VLAN on the port when a violation occurs, instead of shutting down the entire port.

If you do not enable the recovery for the cause, the interface stays in the error-disabled state until you enter the **shutdown** and the **no shutdown** interface configuration commands. If you enable the recovery for a cause, the interface is brought out of the error-disabled state and allowed to retry the operation again when all the causes have timed out.

Otherwise, you must enter the **shutdown** and then the **no shutdown** commands to manually recover an interface from the error-disabled state.

You can verify your settings by entering the **show errdisable recovery** privileged EXEC command.

**Examples**

This example shows how to enable the recovery timer for the BPDU guard error-disabled cause:

```
Device# Device#configure terminal
Device(config)# errdisable recovery cause bpduguard
```

## errdisable recovery cause

To enable the error-disabled mechanism to recover from a specific cause, use the **errdisable recovery cause** command in global configuration mode. To return to the default setting, use the **no** form of this command.

```
errdisable recovery cause {all | arp-inspection | bpduguard | channel-misconfig | dhcp-rate-limit |
dtp-flap | gbic-invalid | inline-power | link-flap | loopback | mac-limit | pagp-flap | port-mode-failure |
pppoe-ia-rate-limit | psecure-violation | psp | security-violation | sfp-config-mismatch | storm-control |
udld}
```

```
no errdisable recovery cause {all | arp-inspection | bpduguard | channel-misconfig | dhcp-rate-limit |
dtp-flap | gbic-invalid | inline-power | link-flap | loopback | mac-limit | pagp-flap | port-mode-failure |
pppoe-ia-rate-limit | psecure-violation | psp | security-violation | sfp-config-mismatch | storm-control |
udld}
```

Syntax Description	
<b>all</b>	Enables the timer to recover from all error-disabled causes.
<b>arp-inspection</b>	Enables the timer to recover from the Address Resolution Protocol (ARP) inspection error-disabled state.
<b>bpduguard</b>	Enables the timer to recover from the bridge protocol data unit (BPDU) guard error-disabled state.
<b>channel-misconfig</b>	Enables the timer to recover from the EtherChannel misconfiguration error-disabled state.
<b>dhcp-rate-limit</b>	Enables the timer to recover from the DHCP snooping error-disabled state.
<b>dtp-flap</b>	Enables the timer to recover from the Dynamic Trunking Protocol (DTP) flap error-disabled state.
<b>gbic-invalid</b>	Enables the timer to recover from an invalid Gigabit Interface Converter (GBIC) module error-disabled state.  <b>Note</b> This error refers to an invalid small form-factor pluggable (SFP) error-disabled state.
<b>inline-power</b>	Enables the timer to recover from the Power over Ethernet (PoE) error-disabled state.  This keyword is supported only on switches with PoE ports.
<b>link-flap</b>	Enables the timer to recover from the link-flap error-disabled state.
<b>loopback</b>	Enables the timer to recover from a loopback error-disabled state.
<b>mac-limit</b>	Enables the timer to recover from the mac limit error-disabled state.
<b>pagp-flap</b>	Enables the timer to recover from the Port Aggregation Protocol (PAgP)-flap error-disabled state.

<b>port-mode-failure</b>	Enables the timer to recover from the port mode change failure error-disabled state.
<b>pppoe-ia-rate-limit</b>	Enables the timer to recover from the PPPoE IA rate limit error-disabled state.
<b>psecure-violation</b>	Enables the timer to recover from a port security violation disable state.
<b>psp</b>	Enables the timer to recover from the protocol storm protection (PSP) error-disabled state.
<b>security-violation</b>	Enables the timer to recover from an IEEE 802.1x-violation disabled state.
<b>sfp-config-mismatch</b>	Enables error detection on an SFP configuration mismatch.
<b>storm-control</b>	Enables the timer to recover from a storm control error.
<b>udld</b>	Enables the timer to recover from the UniDirectional Link Detection (UDLD) error-disabled state.

**Command Default**

Recovery is disabled for all causes.

**Command Modes**

Global configuration (config)

**Command History**

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

**Usage Guidelines**

A cause (such as all or BPDU guard) is defined as the reason that the error-disabled state occurred. When a cause is detected on an interface, the interface is placed in the error-disabled state, an operational state similar to link-down state.

When a port is error-disabled, it is effectively shut down, and no traffic is sent or received on the port. For the BPDU guard and port-security features, you can configure the switch to shut down only the offending VLAN on the port when a violation occurs, instead of shutting down the entire port.

If you do not enable the recovery for the cause, the interface stays in the error-disabled state until you enter the **shutdown** and the **no shutdown** interface configuration commands. If you enable the recovery for a cause, the interface is brought out of the error-disabled state and allowed to retry the operation again when all the causes have timed out.

Otherwise, you must enter the **shutdown** and then the **no shutdown** commands to manually recover an interface from the error-disabled state.

You can verify your settings by entering the **show errdisable recovery** privileged EXEC command.

**Examples**

This example shows how to enable the recovery timer for the BPDU guard error-disabled cause:

```
Device# Device#configure terminal
Device(config)# errdisable recovery cause bpduguard
```

# hw-module beacon

To control the beacon LED on a device, use the **hw-module beacon** command in the privileged EXEC mode or global configuration mode.

**Note** This command description is *not* applicable to the C9500-32C, C9500-32QC, C9500-48Y4C, and C9500-24Y4C models of the Cisco Catalyst 9500 Series Switches.

## Cisco IOS XE Fuji 16.8.x and Earlier Releases

**hw-module beacon** { **off** | **on** } **switch** *switch-number*

## Cisco IOS XE Fuji 16.9.1 and Later Releases

**hw-module beacon slot** { *switch-number* | **active** | **standby** } { **off** | **on** }

Syntax Description		
<b>off</b>		Turns the beacon off.
<b>on</b>		Turns the beacon on.
<b>switch</b> <i>switch-number</i>		Specifies the switch to be controlled. <ul style="list-style-type: none"> <li>• <i>switch-number</i>: Switch number. The range is from 1 to 8.</li> </ul>
<b>slot</b> { <i>switch-number</i>   <b>active</b>   <b>standby</b> }		Specifies the switch to be controlled. <ul style="list-style-type: none"> <li>• <i>switch-number</i>: Switch number. The range is from 1 to 8.</li> <li>• <b>active</b>: Specifies the active switch.</li> <li>• <b>standby</b>: Specifies the standby switch.</li> </ul>
<b>Command Default</b>	This command has no default settings.	
<b>Command Modes</b>	Global configuration (config) (Cisco IOS XE Fuji 16.8.x and Earlier Releases) Privileged EXEC (#) (Cisco IOS XE Fuji 16.9.1 and Later Releases)	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Cisco IOS XE Everest 16.5.1a	This command was introduced.
	Cisco IOS XE Fuji 16.9.1	This command was modified.

---

**Usage Guidelines**

Use this command to enable or disable the switch LED. Blue indicates the switch LED is on and black indicates that it is off.

The following example shows how to switch on the LED beacon of the active switch:

```
Device> enable
Device# hw-module beacon slot active on
```

# hw-module beacon

To control the beacon LED on a device, use the **hw-module beacon** command in the privileged EXEC mode.

**Note** This command description is applicable to the C9500-32C, C9500-32QC, C9500-48Y4C, and C9500-24Y4C models of the Cisco Catalyst 9500 Series Switches.

**hw-module beacon** { **rp** { **active** | **standby** } | **slot** *slot-number* | **ssd** } { **off** | **on** | **status** }

Syntax Description		
<b>rp</b> { <b>active</b>   <b>standby</b> }		Specifies the active or the standby Supervisor to be controlled.
<b>slot</b> <i>slot-number</i>		Specifies the slot to be controlled.
<b>ssd</b>		Specifies the SSD to be controlled.
<b>off</b>		Turns the beacon off.
<b>on</b>		Turns the beacon on.
<b>status</b>		Displays the status of the beacon.

**Command Default** This command has no default settings.

**Command Modes** Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Fuji 16.8.1a	This command was introduced.

**Usage Guidelines** Use the **hw-module beacon slot** *slot-number* command to enable or disable the module slot LED and also check its status. Blue indicates the slot LED is on and black indicates that it is off.

Use the **hw-module beacon rp active** {**off** | **on**} command to enable or disable the active supervisor LED. Similarly the standby supervisor LED can be turned on or off with the **hw-module beacon rp standby** {**off** | **on**} command. You can check the status of the supervisor LED using the **hw-module beacon rp** {**active** | **standby**} **status** command. Blue indicates the supervisor LED is on and black indicates the supervisor LED is off.

**Note** If the switch is operating in SVL mode, then select either the active or standby switch. For example: **hw-module beacon switch** {**active** | **standby**}.

The following example shows how to switch on the LED beacon of the active supervisor:

```
Device> enable
Device# hw-module beacon rp active on
```

# interface

To configure an interface, use the **interface** command.

**interface** {**Auto-Template** *interface-number* | **FortyGigabitEthernet** *switch-number/slot-number/port-number* | **GigabitEthernet** *switch-number/slot-number/port-number* | **Group VI** *Group VI interface number* | **Internal Interface** *Internal Interface number* | **Loopback** *interface-number* | **Null** *interface-number* | **Port-channel** *interface-number* | **TenGigabitEthernet** *switch-number/slot-number/port-number* | **Tunnel** *interface-number* | **Vlan** *interface-number* }

## Syntax Description

<b>Auto-Template</b> <i>interface-number</i>	Enables you to configure a auto-template interface. The range is from 1 to 999.
<b>FortyGigabitEthernet</b> <i>switch-number/slot-number/port-number</i>	Enables you to configure a 40-Gigabit Ethernet interface. <ul style="list-style-type: none"> <li>• <i>switch-number</i> — Switch ID. The range is from 1 to 8.</li> <li>• <i>slot-number</i> — Slot number. Value is 1.</li> <li>• <i>port-number</i> — Port number. The range is from 1 to 2.</li> </ul>
<b>GigabitEthernet</b> <i>switch-number/slot-number/port-number</i>	Enables you to configure a Gigabit Ethernet IEEE 802.3z interface. <ul style="list-style-type: none"> <li>• <i>switch-number</i> — Switch ID. The range is from 1 to 8.</li> <li>• <i>slot-number</i> — Slot number. The range is from 0 to 1.</li> <li>• <i>port-number</i> — Port number. The range is from 1 to 48.</li> </ul>
<b>Group VI</b> <i>Group VI interface number</i>	Enables you to configure a Group VI interface. The range is from 0 to 9.
<b>Internal Interface</b> <i>Internal Interface</i>	Enables you to configure an internal interface.
<b>Loopback</b> <i>interface-number</i>	Enables you to configure a loopback interface. The range is from 0 to 2147483647.
<b>Null</b> <i>interface-number</i>	Enables you to configure a null interface. The default value is 0.
<b>Port-channel</b> <i>interface-number</i>	Enables you to configure a port-channel interface. The range is from 1 to 128.

<b>TenGigabitEthernet</b> <i>switch-number/slot-number/port-number</i>	Enables you to configure a 10-Gigabit Ethernet interface. <ul style="list-style-type: none"> <li>• <i>switch-number</i> — Switch ID. The range is from 1 to 8.</li> <li>• <i>slot-number</i> — Slot number. The range is from 0 to 1.</li> <li>• <i>port-number</i> — Port number. The range is from 1 to 24 and 37 to 48</li> </ul>
<b>Tunnel</b> <i>interface-number</i>	Enables you to configure a tunnel interface. The range is from 0 to 2147483647.
<b>Vlan</b> <i>interface-number</i>	Enables you to configure a switch VLAN. The range is from 1 to 4094.

**Command Default** None

**Command Modes** Global configuration (config)

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

**Usage Guidelines** You can not use the "no" form of this command.

### Examples

The following example shows how to configure a tunnel interface:

```
Device(config)# interface Tunnel 15
Device(config-if)#
```

The following example shows how to configure a 40-Gigabit Ethernet interface

```
Device(config)# interface FortyGigabitEthernet 1/1/2
Device(config-if)#
```

# interface range

To configure an interface range, use the **interface range** command.

```
interface range {Auto-Template interface-number | FortyGigabitEthernet
switch-number/slot-number/port-number | GigabitEthernet switch-number/slot-number/port-number |
Group VI Group VI interface number | Internal Interface Internal Interface number | Loopback
interface-number Null interface-number Port-channel interface-number TenGigabitEthernet
switch-number/slot-number/port-number Tunnel interface-number Vlan interface-number }
```

Syntax Description		
<b>Auto-Template</b> <i>interface-number</i>		Enables you to configure a auto-template interface. The range is from 1 to 999.
<b>FortyGigabitEthernet</b> <i>switch-number/slot-number/port-number</i>		Enables you to configure a 40-Gigabit Ethernet interface. <ul style="list-style-type: none"> <li>• <i>switch-number</i> — Switch ID. The range is from 1 to 8.</li> <li>• <i>slot-number</i> — Slot number. Value is 1.</li> <li>• <i>port-number</i> — Port number. The range is from 1 to 2.</li> </ul>
<b>GigabitEthernet</b> <i>switch-number/slot-number/port-number</i>		Enables you to configure a Gigabit Ethernet IEEE 802.3z interface. <ul style="list-style-type: none"> <li>• <i>switch-number</i> — Switch ID. The range is from 1 to 8.</li> <li>• <i>slot-number</i> — Slot number. The range is from 0 to 1.</li> <li>• <i>port-number</i> — Port number. The range is from 1 to 48.</li> </ul>
<b>Group VI</b> <i>Group VI interface number</i>		Enables you to configure a Group VI interface. The range is from 0 to 9.
<b>Internal Interface</b> <i>Internal Interface</i>		Enables you to configure an internal interface.
<b>Loopback</b> <i>interface-number</i>		Enables you to configure a loopback interface. The range is from 0 to 2147483647.
<b>Null</b> <i>interface-number</i>		Enables you to configure a null interface. The default value is 0.
<b>Port-channel</b> <i>interface-number</i>		Enables you to configure a port-channel interface. The range is from 1 to 128.

<b>TenGigabitEthernet</b> <i>switch-number/slot-number/port-number</i>	Enables you to configure a 10-Gigabit Ethernet interface. <ul style="list-style-type: none"> <li>• <i>switch-number</i> — Switch ID. The range is from 1 to 8.</li> <li>• <i>slot-number</i> — Slot number. The range is from 0 to 1.</li> <li>• <i>port-number</i> — Port number. The range is from 1 to 24 and 37 to 48</li> </ul>
<b>Tunnel</b> <i>interface-number</i>	Enables you to configure a tunnel interface. The range is from 0 to 2147483647.
<b>Vlan</b> <i>interface-number</i>	Enables you to configure a switch VLAN. The range is from 1 to 4094.

**Command Default** None

**Command Modes** Global configuration (config)

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

### Examples

This example shows how you can configure interface range:

```
Device(config)# interface range vlan 1-100
```

# ip mtu

To set the IP maximum transmission unit (MTU) size of routed packets on all routed ports of the switch or switch stack, use the **ip mtu** command in interface configuration mode. To restore the default IP MTU size, use the **no** form of this command.

```
ip mtu bytes
no ip mtu bytes
```

## Syntax Description

*bytes* MTU size, in bytes. The range is from 68 up to the system MTU value (in bytes).

## Command Default

The default IP MTU size for frames received and sent on all switch interfaces is 1500 bytes.

## Command Modes

Interface configuration (config-if)

## Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

## Usage Guidelines

The upper limit of the IP value is based on the switch or switch stack configuration and refers to the currently applied system MTU value. For more information about setting the MTU sizes, see the **system mtu** global configuration command.

To return to the default IP MTU setting, you can apply the **default ip mtu** command or the **no ip mtu** command on the interface.

You can verify your setting by entering the **show ip interface** *interface-id* or **show interfaces** *interface-id* privileged EXEC command.

The following example sets the maximum IP packet size for VLAN 200 to 1000 bytes:

```
Device(config)# interface vlan 200
Device(config-if)# ip mtu 1000
```

The following example sets the maximum IP packet size for VLAN 200 to the default setting of 1500 bytes:

```
Device(config)# interface vlan 200
Device(config-if)# default ip mtu
```

This is an example of partial output from the **show ip interface** *interface-id* command. It displays the current IP MTU setting for the interface.

```
Device# show ip interface gigabitethernet4/0/1
GigabitEthernet4/0/1 is up, line protocol is up
  Internet address is 18.0.0.1/24
  Broadcast address is 255.255.255.255
  Address determined by setup command
  MTU is 1500 bytes
  Helper address is not set
```

<output truncated>

# ipv6 mtu

To set the IPv6 maximum transmission unit (MTU) size of routed packets on all routed ports of the switch or switch stack, use the **ipv6 mtu** command in interface configuration mode. To restore the default IPv6 MTU size, use the **no** form of this command.

**ipv6 mtu** *bytes*  
**no ipv6 mtu** *bytes*

<b>Syntax Description</b>	<i>bytes</i> MTU size, in bytes. The range is from 1280 up to the system MTU value (in bytes).	
<b>Command Default</b>	The default IPv6 MTU size for frames received and sent on all switch interfaces is 1500 bytes.	
<b>Command Modes</b>	Interface configuration	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

**Usage Guidelines** The upper limit of the IPv6 MTU value is based on the switch or switch stack configuration and refers to the currently applied system MTU value. For more information about setting the MTU sizes, see the **system mtu** global configuration command.

To return to the default IPv6 MTU setting, you can apply the **default ipv6 mtu** command or the **no ipv6 mtu** command on the interface.

You can verify your setting by entering the **show ipv6 interface** *interface-id* or **show interface** *interface-id* privileged EXEC command.

The following example sets the maximum IPv6 packet size for an interface to 2000 bytes:

```
Device(config)# interface gigabitethernet4/0/1
Device(config-if)# ipv6 mtu 2000
```

The following example sets the maximum IPv6 packet size for an interface to the default setting of 1500 bytes:

```
Device(config)# interface gigabitethernet4/0/1
Device(config-if)# default ipv6 mtu
```

This is an example of partial output from the **show ipv6 interface** *interface-id* command. It displays the current IPv6 MTU setting for the interface.

```
Device# show ipv6 interface gigabitethernet4/0/1
GigabitEthernet4/0/1 is up, line protocol is up
  Internet address is 18.0.0.1/24
  Broadcast address is 255.255.255.255
  Address determined by setup command
  MTU is 1500 bytes
  Helper address is not set
```

<output truncated>

## lldp (interface configuration)

To enable Link Layer Discovery Protocol (LLDP) on an interface, use the **lldp** command in interface configuration mode. To disable LLDP on an interface, use the **no** form of this command.

```
lldp {med-tlv-select tlv | receive | tlv-select power-management | transmit}
no lldp {med-tlv-select tlv | receive | tlv-select power-management | transmit}
```

Syntax Description		
<b>med-tlv-select</b>		Selects an LLDP Media Endpoint Discovery (MED) time-length-value (TLV) element to send.
<i>tlv</i>		String that identifies the TLV element. Valid values are the following: <ul style="list-style-type: none"> <li>• <b>inventory-management</b>— LLDP MED Inventory Management TLV.</li> <li>• <b>location</b>— LLDP MED Location TLV.</li> <li>• <b>network-policy</b>— LLDP MED Network Policy TLV.</li> <li>• <b>power-management</b>— LLDP MED Power Management TLV.</li> </ul>
<b>receive</b>		Enables the interface to receive LLDP transmissions.
<b>tlv-select</b>		Selects the LLDP TLVs to send.
<b>power-management</b>		Sends the LLDP Power Management TLV.
<b>transmit</b>		Enables LLDP transmission on the interface.

**Command Default** LLDP is disabled.

**Command Modes** Interface configuration (config-if)

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

**Usage Guidelines** This command is supported on 802.1 media types.

If the interface is configured as a tunnel port, LLDP is automatically disabled.

The following example shows how to disable LLDP transmission on an interface:

```
Device(config)# interface gigabitethernet1/0/1
Device(config-if)# no lldp transmit
```

The following example shows how to enable LLDP transmission on an interface:

```
Device(config)# interface gigabitethernet1/0/1
```

```
Device(config-if)# lldp transmit
```

## mode (power-stack configuration)

To configure power stack mode for the power stack, use the **mode** command in power-stack configuration mode. To return to the default settings, use the **no** form of the command.

**mode** {**power-shared** | **redundant**} [**strict**]  
**no mode**

Syntax Description		
	<b>power-shared</b>	Sets the power stack to operate in power-shared mode. This is the default.
	<b>redundant</b>	Sets the power stack to operate in redundant mode. The largest power supply is removed from the power pool to be used as backup power in case one of the other power supplies fails.
	<b>strict</b>	(Optional) Configures the power stack mode to run a strict power budget. The stack power needs cannot exceed the available power.

**Command Default** The default modes are **power-shared** and nonstrict.

**Command Modes** Power-stack configuration (config-stackpower)

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

**Usage Guidelines** This command is available only on switch stacks running the IP Base or IP Services feature set.

To access power-stack configuration mode, enter the **stack-power stack** *power stack name* global configuration command.

Entering the **no mode** command sets the switch to the defaults of **power-shared** and non-strict mode.

**Note** For stack power, available power is the total power available for PoE from all power supplies in the power stack, available power is the power allocated to all powered devices connected to PoE ports in the stack, and consumed power is the actual power consumed by the powered devices.

In **power-shared** mode, all of the input power can be used for loads, and the total available power appears as one large power supply. The power budget includes all power from all supplies. No power is set aside for power supply failures. If a power supply fails, load shedding (shutting down of powered devices or switches) might occur.

In **redundant** mode, the largest power supply is removed from the power pool to use as backup power in case one of the other power supplies fails. The available power budget is the total power minus the largest power supply. This reduces the available power in the pool for switches and powered devices, but in case of a failure or an extreme power load, there is less chance of having to shut down switches or powered devices.

In **strict** mode, when a power supply fails and the available power drops below the budgeted power, the system balances the budget through load shedding of powered devices, even if the actual power is less than the available power. In nonstrict mode, the power stack can run in an over-allocated state and is stable as long as

the actual power does not exceed the available power. In this mode, a powered device drawing more than normal power could cause the power stack to start shedding loads. This is normally not a problem because most devices do not run at full power. The chances of multiple powered devices in the stack requiring maximum power at the same time is small.

In both strict and nonstrict modes, power is denied when there is no power available in the power budget.

This is an example of setting the power stack mode for the stack named power1 to power-shared with strict power budgeting. All power in the stack is shared, but when the total available power is allotted, no more devices are allowed power.

```
Device(config)# stack-power stack power1  
Device(config-stackpower)# mode power-shared strict  
Device(config-stackpower)# exit
```

This is an example of setting the power stack mode for the stack named power2 to redundant. The largest power supply in the stack is removed from the power pool to provide redundancy in case one of the other supplies fails.

```
Device(config)# stack-power stack power2  
Device(config-stackpower)# mode redundant  
Device(config-stackpower)# exit
```

# monitoring

To enable monitoring of all optical transceivers and to specify the time period for monitoring the transceivers, use the **monitoring** command in transceiver type configuration mode. To disable the monitoring, use the **no** form of this command.

**monitoring** [ **interval** *seconds* ]  
**no monitoring** [ **interval** ]

<b>Syntax Description</b>	<table border="1"> <tr> <td style="vertical-align: top;"><b>interval</b> <i>seconds</i></td> <td>(Optional) Specifies the time interval for monitoring optical transceivers. The range is from 300 to 3600 seconds, and the default interval time is 600 seconds.</td> </tr> </table>	<b>interval</b> <i>seconds</i>	(Optional) Specifies the time interval for monitoring optical transceivers. The range is from 300 to 3600 seconds, and the default interval time is 600 seconds.
<b>interval</b> <i>seconds</i>	(Optional) Specifies the time interval for monitoring optical transceivers. The range is from 300 to 3600 seconds, and the default interval time is 600 seconds.		

**Command Default** The interval time is 600 seconds.

**Command Modes** Transceiver type configuration (config-xcvr-type)

<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Everest 16.5.1a</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Everest 16.5.1a	This command was introduced.
Release	Modification				
Cisco IOS XE Everest 16.5.1a	This command was introduced.				

**Usage Guidelines** You need digital optical monitoring (DOM) feature and transceiver module compatibility information to configure the **monitoring** command. Refer to the [compatibility matrix](#) to get the lists of Cisco platforms and minimum required software versions to support Gigabit Ethernet transceiver modules.

Gigabit Ethernet Transceivers transmit and receive Ethernet frames at a rate of a gigabit per second, as defined by the IEEE 802.3-2008 standard. Cisco's Gigabit Ethernet Transceiver modules support Ethernet applications across all Cisco switching and routing platforms. These pluggable transceivers offer a convenient and cost effective solution for the adoption in data center, campus, metropolitan area access and ring networks, and storage area networks.

The **interval** keyword enables you to change the default polling interval. For example, if you set the interval as 1500 seconds, polling happens at every 1500th second. During the polling period entSensorStatus of optical transceivers is set to *Unavailable*, and once the polling finishes entSensorStatus shows the actual status.

## Examples

This example shows how to enable monitoring of optical transceivers and set the interval time for monitoring to 1500 seconds:

```
Device# configure terminal
Device(config)# transceiver type all
Device(config-xcvr-type)# monitoring interval 1500
```

This example shows how to disable monitoring for all transceiver types:

```
Device(config-xcvr-type)# no monitoring
```

<b>Related Commands</b>	<table border="1"> <thead> <tr> <th>Command</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td><b>transceiver type all</b></td> <td>Enables monitoring on all transceivers.</td> </tr> </tbody> </table>	Command	Description	<b>transceiver type all</b>	Enables monitoring on all transceivers.
Command	Description				
<b>transceiver type all</b>	Enables monitoring on all transceivers.				

# network-policy

To apply a network-policy profile to an interface, use the **network-policy** command in interface configuration mode. To remove the policy, use the **no** form of this command.

**network-policy** *profile-number*  
**no network-policy**

---

## Syntax Description

*profile-number* The network-policy profile number to apply to the interface.

---

## Command Default

No network-policy profiles are applied.

## Command Modes

Interface configuration (config-if)

---

## Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

---

## Usage Guidelines

Use the **network-policy** *profile number* interface configuration command to apply a profile to an interface.

You cannot apply the **switchport voice vlan** command on an interface if you first configure a network-policy profile on it. However, if **switchport voice vlan** *vlan-id* is already configured on the interface, you can apply a network-policy profile on the interface. The interface then has the voice or voice-signaling VLAN network-policy profile applied.

This example shows how to apply network-policy profile 60 to an interface:

```
Device(config)# interface gigabitethernet1/0/1
Device(config-if)# network-policy 60
```

## network-policy profile (global configuration)

To create a network-policy profile and to enter network-policy configuration mode, use the **network-policy profile** command in global configuration mode. To delete the policy and to return to global configuration mode, use the **no** form of this command.

**network-policy profile** *profile-number*  
**no network-policy profile** *profile-number*

### Syntax Description

*profile-number* Network-policy profile number. The range is 1 to 4294967295.

### Command Default

No network-policy profiles are defined.

### Command Modes

Global configuration (config)

### Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

### Usage Guidelines

Use the **network-policy profile** global configuration command to create a profile and to enter network-policy profile configuration mode.

To return to privileged EXEC mode from the network-policy profile configuration mode, enter the **exit** command.

When you are in network-policy profile configuration mode, you can create the profile for voice and voice signaling by specifying the values for VLAN, class of service (CoS), differentiated services code point (DSCP), and tagging mode.

These profile attributes are contained in the Link Layer Discovery Protocol for Media Endpoint Devices (LLDP-MED) network-policy time-length-value (TLV).

This example shows how to create network-policy profile 60:

```
Device(config)# network-policy profile 60
Device(config-network-policy)#
```

# platform usb disable

To disable all the USB ports on a device, use the **platform usb disable** command in global configuration mode. To reenble all the USB ports on the device, use the **no platform usb disable** command.

**platform usb disable**  
**no platform usb disable**

**Command Default** All the USB ports are enabled by default.

**Command Modes** Global configuration (config)

Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.5.1	This command was introduced.

**Usage Guidelines** The **platform usb disable** command disables all the USB ports on both stacked and standalone devices, but not Bluetooth dongles connected to USB ports.

## Examples

The following example shows how to disable USB ports on a device:

```
Device> enable
Device# configure terminal
Device(config)# platform usb disable
This config cli may cause data corruption if there is some ongoing operation on usb device.
Do you want to proceed [confirm]?
y
Device(config)# end
```

## Related Commands

Command	Description
show platform usb status	Displays the status of the USB ports on a device.

# power-priority

To configure Cisco StackPower power-priority values for a switch in a power stack and for its high-priority and low-priority PoE ports, use the **power-priority** command in switch stack-power configuration mode. To return to the default setting, use the **no** form of the command.

```
power-priority {high value | low value | switch value}
no power-priority {high | low | switch}
```

Syntax Description	high value	low value	switch value
	Sets the power priority for the ports configured as high-priority ports. The range is 1 to 27, with 1 as the highest priority. The <b>high</b> value must be lower than the value set for the low-priority ports and higher than the value set for the switch.	Sets the power priority for the ports configured as low-priority ports. The range is 1 to 27. The <b>low</b> value must be higher than the value set for the high-priority ports and the value set for the switch.	Sets the power priority for the switch. The range is 1 to 27. The <b>switch</b> value must be lower than the values set for the low and high-priority ports.

**Command Default** If no values are configured, the power stack randomly determines a default priority. The default ranges are 1 to 9 for switches, 10 to 18 for high-priority ports, 19 to 27 for low-priority ports. On non-PoE switches, the high and low values (for port priority) have no effect.

**Command Modes** Switch stack-power configuration (config-stack)

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

**Usage Guidelines** To access switch stack-power configuration mode, enter the **stack-power switch switch-number** global configuration command.

Cisco StackPower power-priority values determine the order for shutting down switches and ports when power is lost and load shedding must occur. Priority values are from 1 to 27; the highest numbers are shut down first.

We recommend that you configure different priority values for each switch and for its high priority ports and low priority ports to limit the number of devices shut down at one time during a loss of power. If you try to configure the same priority value on different switches in a power stack, the configuration is allowed, but you receive a warning message.

**Note** This command is available only on switch stacks running the IP Base or IP Services feature set.

## Examples

This is an example of setting the power priority for switch 1 in power stack a to 7, for the high-priority ports to 11, and for the low-priority ports to 20.

```
Device(config)# stack-power switch 1  
Device(config-switch-stackpower)# stack-id power_stack_a  
Device(config-switch-stackpower)# power-priority high 11  
Device(config-switch-stackpower)# power-priority low 20  
Device(config-switch-stackpower)# power-priority switch 7  
Device(config-switch-stackpower)# exit
```

# power supply

To configure and manage the internal power supplies on a switch, use the **power supply** command in privileged EXEC mode.

**power supply** *stack-member-number* **slot** {**A** | **B**} {**off** | **on**}

Syntax Description		
<i>stack-member-number</i>		Stack member number for which to configure the internal power supplies. The range is 1 to 9, depending on the number of switches in the stack.  This parameter is available only on stacking-capable switches.
<b>slot</b>		Selects the switch power supply to set.
<b>A</b>		Selects the power supply in slot A.
<b>B</b>		Selects the power supply in slot B.  <b>Note</b> Power supply slot B is the closest slot to the outer edge of the switch.
<b>off</b>		Sets the switch power supply to off.
<b>on</b>		Sets the switch power supply to on.

**Command Default** The switch power supply is on.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

**Usage Guidelines** The **power supply** command applies to a switch or to a switch stack where all switches are the same platform. In a switch stack with the same platform switches, you must specify the stack member before entering the **slot** {**A** | **B**} **off** or **on** keywords.

To return to the default setting, use the **power supply** *stack-member-number* **on** command.

You can verify your settings by entering the **show env power** privileged EXEC command.

## Examples

This example shows how to set the power supply in slot A to off:

```
Device> power supply 2 slot A off
Disabling Power supply A may result in a power loss to PoE devices and/or switches ...
Continue? (yes/[no]): yes
Device
Jun 10 04:52:54.389: %PLATFORM_ENV-6-FRU_PS_OIR: FRU Power Supply 1 powered off
Jun 10 04:52:56.717: %PLATFORM_ENV-1-FAN_NOT_PRESENT: Fan is not present
```

This example shows how to set the power supply in slot A to on:

```
Device> power supply 1 slot B on
Jun 10 04:54:39.600: %PLATFORM_ENV-6-FRU_PS_OIR: FRU Power Supply 1 powered on
```

This example shows the output of the show env power command:

```
Device> show env power
SW  PID                Serial#      Status      Sys Pwr  PoE Pwr  Watts
--  -
1A  PWR-1RUC2-640WAC    DCB1705B05B OK           Good     Good    250/390
1B  Not Present
```

# power supply autoLC shutdown

To enable automatic shutdown control on linecards, use the **power supply autoLC shutdown** command in global configuration mode. This command is enabled by default and cannot be disabled. The `AutoLC shutdown cannot be disabled` message will be displayed if you try to disable it.

**power supply autoLC shutdown**  
**no power supply autoLC shutdown**

---

**Syntax Description** This command has no arguments or keywords.

---

**Command Default** Automatic shutdown control on linecards is enabled.

---

**Command Modes** Global configuration (config)

---

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

---

---

## Examples

This example shows how to enable automatic shutdown on linecards:

```
Device> enable
Device# configure terminal
Device(config)# power supply autoLC shutdown
```

# shell trigger

To create an event trigger, use the **shell trigger** command in global configuration mode. Use the **no** form of this command to delete the trigger.

**shell trigger** *identifier* *description*

**no shell trigger** *identifier* *description*

Syntax Description	Parameter	Description
	<i>identifier</i>	Specifies the event trigger identifier. The identifier should have no spaces or hyphens between words.
	<i>description</i>	Specifies the event trigger description text.

Command Default	Default Value
	System-defined event triggers: <ul style="list-style-type: none"> <li>• CISCO_DMP_EVENT</li> <li>• CISCO_IPVSC_AUTO_EVENT</li> <li>• CISCO_PHONE_EVENT</li> <li>• CISCO_SWITCH_EVENT</li> <li>• CISCO_ROUTER_EVENT</li> <li>• CISCO_WIRELESS_AP_EVENT</li> <li>• CISCO_WIRELESS_LIGHTWEIGHT_AP_EVENT</li> </ul>

Command Modes	Mode
	Global configuration (config)

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

**Usage Guidelines** Use this command to create user-defined event triggers for use with the **macro auto device** and the **macro auto execute** commands.

To support dynamic device discovery when using IEEE 802.1x authentication, you need to configure the RADIUS authentication server to support the Cisco attribute-value pair: **auto-smart-port=event trigger**.

## Example

This example shows how to create a user-defined event trigger called RADIUS\_MAB\_EVENT:

```
Device(config)# shell trigger RADIUS_MAB_EVENT MAC_AuthBypass Event
Device(config)# end
```

# show beacon all

To display the status of beacon LED on the device, use the **show beacon all** command in privileged EXEC mode.

```
show beacon { rp { active | standby } | slot slot-number } | all }
```

Syntax Description		
<b>rp { active   standby }</b>		Specifies the active or the standby Switch whose beacon LED status is to be displayed.
<b>slot slot-num</b>		Specifies the slot whose beacon LED status is to be displayed.
<b>all</b>		Displays the status of all beacon LEDs.

Command History	Release	Modification
	Cisco IOS XE Fuji 16.9.1	This command was introduced.

**Command Default** This command has no default settings.

**Command Modes** Privileged EXEC (#)

**Usage Guidelines** Use the command **show beacon all** to know the status of all beacon LEDs.

## Sample output of *show beacon all* command.

```
Device#show beacon all
Switch# Beacon Status
-----
*1 OFF
```

## Sample output of *show beacon rp* command.

```
Device#show beacon rp active
Switch# Beacon Status
-----
*1 OFF
```

```
Device#show beacon slot 1
Switch# Beacon Status
-----
*1 OFF
```

# show environment

To display information about the sensors, and status of fan and power supply, use the **show environment** command in EXEC mode.

**show environment** { **all** | **counters** | **fan-air-direction** | **history** | **location** | **sensor** | **status** | **summary** | **table** }

## Syntax Description

<b>all</b>	(Optional) Displays the list of sensors.
<b>counters</b>	(Optional) Displays the operational counters of the sensors.
<b>fan-air-direction</b>	(Optional) Displays information of the fan tray and power supply fan air direction.
<b>history</b>	(Optional) Displays history of the sensor state changes.
<b>location</b>	(Optional) Displays the sensors by location.
<b>sensor</b>	(Optional) Displays sensor summary.
<b>status</b>	(Optional) Displays the power supply and fan tray status of the switch.
<b>summary</b>	(Optional) Displays a summary of all the environment monitoring sensors.
<b>table</b>	(Optional) Displays sensor state table.

## Command Default

None

## Command Modes

User EXEC (>)

Privileged EXEC (#)

## Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

## Usage Guidelines

Use the **show environment** EXEC command to display the information for the switch being accessed—a standalone switch or the active switch.

## Examples

This example shows a sample output of the **show environment all** command:

```
Device> show environment all
```

```
Sensor List: Environmental Monitoring
Sensor      Location      State      Reading
Temp: UADP_0_0  R1           Normal    52 Celsius
Temp: UADP_0_1  R1           Normal    50 Celsius
Temp: UADP_0_2  R1           Normal    50 Celsius
Temp: UADP_0_3  R1           Normal    52 Celsius
Temp: UADP_0_4  R1           Normal    51 Celsius
Temp: UADP_0_5  R1           Normal    52 Celsius
```

```
Temp: UADP_0_6 R1 Normal 63 Celsius
Temp: UADP_0_7 R1 Normal 54 Celsius
..
<output truncated>
```

This example shows a sample output of the **show environment status** command:

```
Device> show environment status
```

Power					Fan States	
Supply	Model No	Type	Capacity	Status	1	2
PS1	C9600-PWR-2KWAC	ac	2000 W	active	good	good
PS4	C9600-PWR-2KWAC	ac	2000 W	active	good	good

```
PS Current Configuration Mode : Combined
PS Current Operating State    : none
```

```
Power supplies currently active : 2
Power supplies currently available : 2
```

```
Fantray : good
Power consumed by Fantray : 300 Watts
Fantray airflow direction : side-to-side
Fantray beacon LED: off
Fantray status LED: green
```

# show errdisable detect

To display error-disabled detection status, use the **show errdisable detect** command in EXEC mode.

## show errdisable detect

**Syntax Description** This command has no arguments or keywords.

**Command Default** None

**Command Modes** User EXEC (>)  
Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

## Usage Guidelines

A gbic-invalid error reason refers to an invalid small form-factor pluggable (SFP) module.

The error-disable reasons in the command output are listed in alphabetical order. The mode column shows how error-disable is configured for each feature.

You can configure error-disabled detection in these modes:

- port mode—The entire physical port is error-disabled if a violation occurs.
- vlan mode—The VLAN is error-disabled if a violation occurs.
- port/vlan mode—The entire physical port is error-disabled on some ports and is per-VLAN error-disabled on other ports.

This is an example of output from the **show errdisable detect** command:

```
Device> show errdisable detect
ErrDisable Reason    Detection    Mode
-----
arp-inspection       Enabled     port
bpduguard            Enabled     vlan
channel-misconfig    Enabled     port
community-limit      Enabled     port
dhcp-rate-limit      Enabled     port
dtp-flap             Enabled     port
gbic-invalid         Enabled     port
inline-power         Enabled     port
invalid-policy       Enabled     port
l2ptguard            Enabled     port
link-flap            Enabled     port
loopback             Enabled     port
lsgroup              Enabled     port
pagp-flap            Enabled     port
psecure-violation    Enabled     port/vlan
security-violatio    Enabled     port
sfp-config-mismat    Enabled     port
storm-control        Enabled     port
```

```
udld          Enabled   port
vmps         Enabled   port
```

# show errdisable recovery

To display the error-disabled recovery timer information, use the **show errdisable recovery** command in EXEC mode.

## show errdisable recovery

**Syntax Description** This command has no arguments or keywords.

**Command Default** None

**Command Modes** User EXEC (>)  
Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

**Usage Guidelines** A gbic-invalid error-disable reason refers to an invalid small form-factor pluggable (SFP) module interface.

**Note** Though visible in the output, the unicast-flood field is not valid.

# show ip interface

To display the usability status of interfaces configured for IP, use the **show ip interface** command in privileged EXEC mode.

**show ip interface** [*type number*] [**brief**]

<b>Syntax Description</b>	<i>type</i>	(Optional) Interface type.
	<i>number</i>	(Optional) Interface number.
	<b>brief</b>	(Optional) Displays a summary of the usability status information for each interface.
	<b>Note</b>	The output of the <b>show ip interface brief</b> command displays information of all the available interfaces whether or not the corresponding network module for these interfaces are connected. These interfaces can be configured if the network module is connected. Run the <b>show interface status</b> command to see which network modules are connected.  This is not applicable for Cisco Catalyst 9500 Series High-Performance switches.

**Command Default** The full usability status is displayed for all interfaces configured for IP.

**Command Modes** Privileged EXEC (#)

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

**Usage Guidelines** The Cisco IOS software automatically enters a directly connected route in the routing table if the interface is usable (which means that it can send and receive packets). If an interface is not usable, the directly connected routing entry is removed from the routing table. Removing the entry lets the software use dynamic routing protocols to determine backup routes to the network, if any.

If the interface can provide two-way communication, the line protocol is marked "up." If the interface hardware is usable, the interface is marked "up."

If you specify an optional interface type, information for that specific interface is displayed. If you specify no optional arguments, information on all the interfaces is displayed.

When an asynchronous interface is encapsulated with PPP or Serial Line Internet Protocol (SLIP), IP fast switching is enabled. A **show ip interface** command on an asynchronous interface encapsulated with PPP or SLIP displays a message indicating that IP fast switching is enabled.

You can use the **show ip interface brief** command to display a summary of the device interfaces. This command displays the IP address, the interface status, and other information.

The **show ip interface brief** command does not display any information related to Unicast RPF.

## Examples

The following example shows interface information on Gigabit Ethernet interface 1/0/1:

```

Device# show ip interface gigabitethernet 1/0/1

GigabitEthernet1/0/1 is up, line protocol is up
  Internet address is 10.1.1.1/16
  Broadcast address is 255.255.255.255
  Address determined by setup command
  MTU is 1500 bytes
  Helper address is not set
  Directed broadcast forwarding is disabled
  Outgoing access list is not set
  Inbound access list is not set
  Proxy ARP is enabled
  Local Proxy ARP is disabled
  Security level is default
  Split horizon is enabled
  ICMP redirects are always sent
  ICMP unreachables are always sent
  ICMP mask replies are never sent
  IP fast switching is enabled
  IP fast switching on the same interface is disabled
  IP Flow switching is disabled
  IP CEF switching is enabled
  IP Feature Fast switching turbo vector
  IP VPN Flow CEF switching turbo vector
  IP multicast fast switching is enabled
  IP multicast distributed fast switching is disabled
  IP route-cache flags are Fast, CEF
  Router Discovery is disabled
  IP output packet accounting is disabled
  IP access violation accounting is disabled
  TCP/IP header compression is disabled
  RTP/IP header compression is disabled
  Policy routing is enabled, using route map PBR
  Network address translation is disabled
  BGP Policy Mapping is disabled
  IP Multi-Processor Forwarding is enabled
    IP Input features, "PBR",
      are not supported by MPF and are IGNORED
    IP Output features, "NetFlow",
      are not supported by MPF and are IGNORED

```

The following example shows how to display the usability status for a specific VLAN:

```

Device# show ip interface vlan 1

Vlan1 is up, line protocol is up
  Internet address is 10.0.0.4/24
  Broadcast address is 255.255.255.255
  Address determined by non-volatile memory
  MTU is 1500 bytes
  Helper address is not set
  Directed broadcast forwarding is disabled
  Outgoing access list is not set
  Inbound access list is not set
  Proxy ARP is enabled
  Local Proxy ARP is disabled
  Security level is default
  Split horizon is enabled
  ICMP redirects are always sent
  ICMP unreachables are always sent
  ICMP mask replies are never sent
  IP fast switching is enabled

```

```

IP fast switching on the same interface is disabled
IP Flow switching is disabled
IP CEF switching is enabled
IP Fast switching turbo vector
IP Normal CEF switching turbo vector
IP multicast fast switching is enabled
IP multicast distributed fast switching is disabled
IP route-cache flags are Fast, CEF
Router Discovery is disabled
IP output packet accounting is disabled
IP access violation accounting is disabled
TCP/IP header compression is disabled
RTP/IP header compression is disabled
Probe proxy name replies are disabled
Policy routing is disabled
Network address translation is disabled
WCCP Redirect outbound is disabled
WCCP Redirect inbound is disabled
WCCP Redirect exclude is disabled
BGP Policy Mapping is disabled
Sampled Netflow is disabled
IP multicast multilayer switching is disabled
Netflow Data Export (hardware) is enabled

```

The table below describes the significant fields shown in the display.

**Table 1: show ip interface Field Descriptions**

Field	Description
Broadcast address is	Broadcast address.
Peer address is	Peer address.
MTU is	MTU value set on the interface, in bytes.
Helper address	Helper address, if one is set.
Directed broadcast forwarding	Shows whether directed broadcast forwarding is enabled.
Outgoing access list	Shows whether the interface has an outgoing access list set.
Inbound access list	Shows whether the interface has an incoming access list set.
Proxy ARP	Shows whether Proxy Address Resolution Protocol (ARP) is enabled for the interface.
Security level	IP Security Option (IPSO) security level set for this interface.
Split horizon	Shows whether split horizon is enabled.
ICMP redirects	Shows whether redirect messages will be sent on this interface.
ICMP unreachable	Shows whether unreachable messages will be sent on this interface.
ICMP mask replies	Shows whether mask replies will be sent on this interface.
IP fast switching	Shows whether fast switching is enabled for this interface. It is generally enabled on serial interfaces, such as this one.

Field	Description
IP Flow switching	Shows whether Flow switching is enabled for this interface.
IP CEF switching	Shows whether Cisco Express Forwarding switching is enabled for the interface.
IP multicast fast switching	Shows whether multicast fast switching is enabled for the interface.
IP route-cache flags are Fast	Shows whether NetFlow is enabled on an interface. Displays "Flow init" to specify that NetFlow is enabled on the interface. Displays "Ingress Flow" to specify that NetFlow is enabled on a subinterface using the <b>ip flow ingress</b> command. Shows "Flow" to specify that NetFlow is enabled on a main interface using the <b>ip route-cache flow</b> command.
Router Discovery	Shows whether the discovery process is enabled for this interface. It is generally disabled on serial interfaces.
IP output packet accounting	Shows whether IP accounting is enabled for this interface and what the threshold (maximum number of entries) is.
TCP/IP header compression	Shows whether compression is enabled.
WCCP Redirect outbound is disabled	Shows the status of whether packets received on an interface are redirected to a cache engine. Displays "enabled" or "disabled."
WCCP Redirect exclude is disabled	Shows the status of whether packets targeted for an interface will be excluded from being redirected to a cache engine. Displays "enabled" or "disabled."
Netflow Data Export (hardware) is enabled	NetFlow Data Expert (NDE) hardware flow status on the interface.

The following example shows how to display a summary of the usability status information for each interface:

```
Device# show ip interface brief
```

```
Interface          IP-Address      OK? Method Status          Protocol
Vlan1              unassigned     YES NVRAM   administratively down down
GigabitEthernet0/0 unassigned     YES NVRAM   down            down
GigabitEthernet1/0/1 unassigned     YES NVRAM   down            down
GigabitEthernet1/0/2 unassigned     YES unset   down            down
GigabitEthernet1/0/3 unassigned     YES unset   down            down
GigabitEthernet1/0/4 unassigned     YES unset   down            down
GigabitEthernet1/0/5 unassigned     YES unset   down            down
GigabitEthernet1/0/6 unassigned     YES unset   down            down
GigabitEthernet1/0/7 unassigned     YES unset   down            down
```

```
<output truncated>
```

Table 2: show ip interface brief Field Descriptions

Field	Description
Interface	Type of interface.
IP-Address	IP address assigned to the interface.
OK?	"Yes" means that the IP Address is valid. "No" means that the IP Address is not valid.
Method	The Method field has the following possible values: <ul style="list-style-type: none"> <li>• RARP or SLARP: Reverse Address Resolution Protocol (RARP) or Serial Line Address Resolution Protocol (SLARP) request.</li> <li>• BOOTP: Bootstrap protocol.</li> <li>• TFTP: Configuration file obtained from the TFTP server.</li> <li>• manual: Manually changed by the command-line interface.</li> <li>• NVRAM: Configuration file in NVRAM.</li> <li>• IPCP: <b>ip address negotiated</b> command.</li> <li>• DHCP: <b>ip address dhcp</b> command.</li> <li>• unset: Unset.</li> <li>• other: Unknown.</li> </ul>
Status	Shows the status of the interface. Valid values and their meanings are: <ul style="list-style-type: none"> <li>• up: Interface is up.</li> <li>• down: Interface is down.</li> <li>• administratively down: Interface is administratively down.</li> </ul>
Protocol	Shows the operational status of the routing protocol on this interface.

**Related Commands**

Command	Description
<b>ip interface</b>	Configures a virtual gateway IP interface on a Secure Socket Layer Virtual Private Network (SSL VPN) gateway
<b>show interface status</b>	Displays the status of the interface.

# show interfaces

To display the administrative and operational status of all interfaces or for a specified interface, use the **show interfaces** command in the EXEC mode.

```
show interfaces [ { interface-id | vlan vlan-id } ] [ { accounting | capabilities [ module number ] | description | etherchannel | flowcontrol | link [ module number ] | private-vlan mapping | pruning | stats | status [ { err-disabled | inactive } ] | trunk } ]
```

## Syntax Description

<b>interface-id</b>	(Optional) ID of the interface. Valid interfaces include physical ports (including type, stack member for stacking-capable switches, module, and port number) and port channels.  The port channel range is 1 to 128.
<b>vlan</b> <i>vlan-id</i>	(Optional) VLAN identification. The range is 1 to 4094.
<b>accounting</b>	(Optional) Displays accounting information on the interface, including active protocols and input and output packets and octets.  <b>Note</b> The display shows only packets processed in software; hardware-switched packets do not appear.
<b>capabilities</b>	(Optional) Displays the capabilities of all interfaces or the specified interface, including the features and options that you can configure on the interface. Though visible in the command line help, this option is not available for VLAN IDs.
<b>module</b> <i>number</i>	(Optional) Displays capabilities of all interfaces on the switch or specified stack member.  The range is 1 to 9.  This option is not available if you entered a specific interface ID.
<b>description</b>	(Optional) Displays the administrative status and description set for interfaces.  <b>Note</b> The output of the <b>show interfaces description</b> command displays information of all the available interfaces whether or not the corresponding network module for these interfaces are connected. These interfaces can be configured if the network module is connected. Run the <b>show interface status</b> command to see which network modules are connected.  This is not applicable for Cisco Catalyst 9500 Series High-Performance switches.
<b>etherchannel</b>	(Optional) Displays interface EtherChannel information.
<b>flowcontrol</b>	(Optional) Displays interface flow control information.

<b>link</b> [ <i>modulenumbers</i> ]	(Optional) Displays the up time and down time of the interface.
<b>private-vlan mapping</b>	(Optional) Displays private-VLAN mapping information for the VLAN switch virtual interfaces (SVIs). This keyword is not available if the switch is running the LAN base feature set.
<b>pruning</b>	(Optional) Displays trunk VTP pruning information for the interface.
<b>stats</b>	(Optional) Displays the input and output packets by switching the path for the interface.
<b>status</b>	(Optional) Displays the status of the interface. A status of unsupported in the Type field means that a non-Cisco small form-factor pluggable (SFP) module is inserted in the module slot.
<b>err-disabled</b>	(Optional) Displays interfaces in an error-disabled state.
<b>inactive</b>	(Optional) Displays interfaces in an inactive state.
<b>trunk</b>	(Optional) Displays interface trunk information. If you do not specify an interface, only information for active trunking ports appears.

**Note** Though visible in the command-line help strings, the **crb**, **fair-queue**, **irb**, **mac-accounting**, **precedence**, **random-detect**, **rate-limit**, and **shape** keywords are not supported.

**Command Default** None

**Command Modes** Privileged EXEC (#)

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Cisco IOS XE Everest 16.5.1a	This command was introduced.
	Cisco IOS XE Gibraltar 16.12.1	The <b>link</b> keyword was introduced.

**Usage Guidelines** The **show interfaces capabilities** command with different keywords has these results:

- Use the **show interface capabilities module** *number* command to display the capabilities of all interfaces on that switch in the stack. If there is no switch with that module number in the stack, there is no output.
- Use the **show interfaces** *interface-id* **capabilities** to display the capabilities of the specified interface.
- Use the **show interfaces capabilities** (with no module number or interface ID) to display the capabilities of all interfaces in the stack.

**Note** The field **Last Input** displayed in the command output indicates the number of hours, minutes, and seconds since the last packet was successfully received by an interface and processed by the CPU on the device. This information can be used to know when a dead interface failed.

**Last Input** is not updated by fast-switched traffic.

The field **output** displayed in the command output indicates the number of hours, minutes, and seconds since the last packet was successfully transmitted by the interface. The information provided by this field can be useful for knowing when a dead interface failed.

The **show interfaces link** command with different keywords has these results:

- Use the **show interface link module** *number* command to display the up time and down time of all interfaces on that switch in the stack. If there is no switch with that module number in the stack, there is no output.

**Note** On a standalone switch, the **module number** refers to the slot number.

- Use the **show interfaces interface-id link** to display the up time and down time of the specified interface.
- Use the **show interfaces link** (with no module number or interface ID) to display the up time and down time of all interfaces in the stack.
- If the interface is up, the up time displays the time (hours, minutes, and seconds) and the down time displays 00:00:00.
- If the interface is down, only the down time displays the time (hours, minutes, and seconds).

## Examples

```
Device# show interfaces accounting
```

```
Vlan1
      Protocol  Pkts In  Chars In  Pkts Out  Chars Out
      IP        0        0          6         378

Vlan200

# show interfaces counters

To display various counters for the switch or for a specific interface, use the **show interfaces counters** command in privileged EXEC mode.

```
show interfaces [interface-id] counters [{errors | etherchannel | module member-number | protocol status | trunk}]
```

Syntax Description		
<i>interface-id</i>	(Optional) ID of the physical interface, including type, stack member (stacking-capable switches only) module, and port number.	
<b>errors</b>	(Optional) Displays error counters.	
<b>etherchannel</b>	(Optional) Displays EtherChannel counters, including octets, broadcast packets, multicast packets, and unicast packets received and sent.	
<b>module</b> <i>member-number</i>	(Optional) Displays counters for the specified member.	
<b>protocol status</b>	(Optional) Displays the status of protocols enabled on interfaces.	
<b>trunk</b>	(Optional) Displays trunk counters.	

**Note** Though visible in the command-line help string, the **vlan** *vlan-id* keyword is not supported.

**Command Default** None

**Command Modes** Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

**Usage Guidelines** If you do not enter any keywords, all counters for all interfaces are included.

This is an example of partial output from the **show interfaces counters** command. It displays all counters for the switch.

```
Device# show interfaces counters
Port          InOctets      InUcastPkts    InMcastPkts    InBcastPkts
Gi1/0/1              0                0                0                0
Gi1/0/2              0                0                0                0
Gi1/0/3          95285341         43115           1178430          1950
Gi1/0/4              0                0                0                0

<output truncated>
```

This is an example of partial output from the **show interfaces counters module** command for module 2. It displays all counters for the specified switch in the module.

## show interfaces counters

```
Device# show interfaces counters module 2
Port          InOctets    InUcastPkts  InMcastPkts  InBcastPkts

```

<output truncated>

# show interfaces switchport

To display the administrative and operational status of a switching (nonrouting) port, including port blocking and port protection settings, use the **show interfaces switchport** command in privileged EXEC mode.

**show interfaces** [*interface-id*] **switchport** [{**module** *number*}]

<b>Syntax Description</b>	<p><i>interface-id</i> (Optional) ID of the interface. Valid interfaces include physical ports (including type, stack member for stacking-capable switches, module, and port number) and port channels. The port channel range is 1 to 48.</p> <hr/> <p><b>module</b> <i>number</i> (Optional) Displays switchport configuration of all interfaces on the switch or specified stack member.</p> <p>The range is 1 to 9.</p> <p>This option is not available if you entered a specific interface ID.</p>				
<b>Command Default</b>	None				
<b>Command Modes</b>	Privileged EXEC (#)				
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Everest 16.5.1a</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Everest 16.5.1a	This command was introduced.
Release	Modification				
Cisco IOS XE Everest 16.5.1a	This command was introduced.				
<b>Usage Guidelines</b>	<p>Use the <b>show interface switchport module</b> <i>number</i> command to display the switch port characteristics of all interfaces on that switch in the stack. If there is no switch with that module number in the stack, there is no output.</p> <p>This is an example of output from the <b>show interfaces switchport</b> command for a port. ## show interfaces switchport

```

Pruning VLANs Enabled: 2-1001
Capture Mode Disabled
Capture VLANs Allowed: ALL

Protected: false
Unknown unicast blocked: disabled
Unknown multicast blocked: disabled
Appliance trust: none

```

Field	Description
Name	Displays the port name.
Switchport	Displays the administrative and operational status of the port. In this display, the port is in switchport mode.
Administrative Mode Operational Mode	Displays the administrative and operational modes.
Administrative Trunking Encapsulation Operational Trunking Encapsulation Negotiation of Trunking	Displays the administrative and operational encapsulation method and whether trunking negotiation is enabled.
Access Mode VLAN	Displays the VLAN ID to which the port is configured.
Trunking Native Mode VLAN Trunking VLANs Enabled Trunking VLANs Active	Lists the VLAN ID of the trunk that is in native mode. Lists the allowed VLANs on the trunk. Lists the active VLANs on the trunk.
Pruning VLANs Enabled	Lists the VLANs that are pruning-eligible.
Protected	Displays whether or not protected port is enabled (True) or disabled (False) on the interface.
Unknown unicast blocked Unknown multicast blocked	Displays whether or not unknown multicast and unknown unicast traffic is blocked on the interface.
Voice VLAN	Displays the VLAN ID on which voice VLAN is enabled.
Appliance trust	Displays the class of service (CoS) setting of the data packets of the IP phone.

# show interfaces transceiver

To display the physical properties of a small form-factor pluggable (SFP) module interface, use the **show interfaces transceiver** command in EXEC mode.

**show interfaces** [*interface-id*] **transceiver** [{**detail** | **module** *number* | **properties** | **supported-list** | **threshold-table**}]

Syntax Description	
<i>interface-id</i>	(Optional) ID of the physical interface, including type, stack member (stacking-capable switches only) module, and port number.
<b>detail</b>	(Optional) Displays calibration properties, including high and low numbers and any alarm information for any Digital Optical Monitoring (DoM)-capable transceiver if one is installed in the switch.
<b>module</b> <i>number</i>	(Optional) Limits display to interfaces on module on the switch. This option is not available if you entered a specific interface ID.
<b>properties</b>	(Optional) Displays speed, duplex, and inline power settings on an interface.
<b>supported-list</b>	(Optional) Lists all supported transceivers.
<b>threshold-table</b>	(Optional) Displays alarm and warning threshold table.

Command Modes	
	User EXEC (>)
	Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

## Examples

This is an example of output from the **show interfaces *interface-id* transceiver properties** command:

```
Device# show interfaces transceiver
```

```
If device is externally calibrated, only calibrated values are printed.
++ : high alarm, + : high warning, - : low warning, -- : low alarm.
NA or N/A: not applicable, Tx: transmit, Rx: receive.
mA: milliamperes, dBm: decibels (milliwatts).
```

Port	Temperature (Celsius)	Voltage (Volts)	Current (mA)	Optical Tx Power (dBm)	Optical Rx Power (dBm)
Gi5/1/2	42.9	3.28	22.1	-5.4	-8.1
Te5/1/3	32.0	3.28	19.8	2.4	-4.2

```
Device# show interfaces gigabitethernet1/1/1 transceiver properties
Name : Gi1/1/1
Administrative Speed: auto
```

## show interfaces transceiver

```
Operational Speed: auto
Administrative Duplex: auto
Administrative Power Inline: enable
Operational Duplex: auto
Administrative Auto-MDIX: off
Operational Auto-MDIX: off
```

This is an example of output from the **show interfaces interface-id transceiver detail** command:

```
Device# show interfaces gigabitethernet1/1/1 transceiver detail
```

```
ITU Channel not available (Wavelength not available),
Transceiver is internally calibrated.
mA:milliamperes, dBm:decibels (milliwatts), N/A:not applicable.
++:high alarm, +:high warning, -:low warning, -- :low alarm.
A2D readouts (if they differ), are reported in parentheses.
The threshold values are uncalibrated.
```

Port	Temperature (Celsius)	High Alarm Threshold (Celsius)	High Warn Threshold (Celsius)	Low Warn Threshold (Celsius)	Low Alarm Threshold (Celsius)
Gil/1/1	29.9	74.0	70.0	0.0	-4.0

  

Port	Voltage (Volts)	High Alarm Threshold (Volts)	High Warn Threshold (Volts)	Low Warn Threshold (Volts)	Low Alarm Threshold (Volts)
Gil/1/1	3.28	3.60	3.50	3.10	3.00

  

Port	Optical Transmit Power (dBm)	High Alarm Threshold (dBm)	High Warn Threshold (dBm)	Low Warn Threshold (dBm)	Low Alarm Threshold (dBm)
Gil/1/1	1.8	7.9	3.9	0.0	-4.0

  

Port	Optical Receive Power (dBm)	High Alarm Threshold (dBm)	High Warn Threshold (dBm)	Low Warn Threshold (dBm)	Low Alarm Threshold (dBm)
Gil/1/1	-23.5	-5.0	-9.0	-28.2	-32.2

## Related Commands

Command	Description
<b>transceiver type all</b>	Enters the transceiver type configuration mode.
<b>monitoring</b>	Enables digital optical monitoring.

# show inventory

To display the product inventory listing of all Cisco products installed in the networking device, use the **show inventory** command in user EXEC or privileged EXEC mode.

**show inventory** {fru | oid | raw} [entity]

<b>fru</b>	(Optional) Retrieves information about all Field Replaceable Units (FRUs) installed in the Cisco networking device.
<b>oid</b>	(Optional) Retrieves information about the vendor specific hardware registration identifier referred to as object identifier (OID).  The OID identifies the MIB object's location in the MIB hierarchy, and provides a means of accessing the MIB object in a network of managed devices
<b>raw</b>	(Optional) Retrieves information about all Cisco products referred to as entities installed in the Cisco networking device, even if the entities do not have a product ID (PID) value, a unique device identifier (UDI), or other physical identification.
<i>entity</i>	(Optional) Name of a Cisco entity (for example, chassis, backplane, module, or slot). A quoted string may be used to display very specific UDI information; for example "sfslot 1" will display the UDI information for slot 1 of an entity named sfslot.

Release	Modification
Cisco IOS XE Everest 16.6.1	This command was introduced.
Cisco IOS XE Everest 16.6.3	This command was enhanced to display the serial number for the chassis.

## Usage Guidelines

The **show inventory** command retrieves and displays inventory information about each Cisco product in the form of a UDI. The UDI is a combination of three separate data elements: a product identifier (PID), a version identifier (VID), and the serial number (SN).

The PID is the name by which the product can be ordered; it has been historically called the "Product Name" or "Part Number." This is the identifier that one would use to order an exact replacement part.

The VID is the version of the product. Whenever a product has been revised, the VID will be incremented. The VID is incremented according to a rigorous process derived from Telcordia GR-209-CORE, an industry guideline that governs product change notices.

The SN is the vendor-unique serialization of the product. Each manufactured product will carry a unique serial number assigned at the factory, which cannot be changed in the field. This is the means by which to identify an individual, specific instance of a product.

The UDI refers to each product as an entity. Some entities, such as a chassis, will have subtentities like slots. Each entity will display on a separate line in a logically ordered presentation that is arranged hierarchically by Cisco entities.

Use the **show inventory** command without options to display a list of Cisco entities installed in the networking device that are assigned a PID.

The following is sample output from the **show inventory** command:

```
Device#show inventory
9500-32QC-SVL#show inv
NAME: "Switch 1 Chassis", DESCR: "Cisco Catalyst 9500 Series Chassis"

Table 3: show inventory Field Descriptions

Field	Description
NAME	Physical name (text string) assigned to the Cisco entity. For example, console or a simple component number (port or module number), such as "1," depending on the physical component naming syntax of the device.
DESCR	Physical description of the Cisco entity that characterizes the object. The physical description includes the hardware serial number and the hardware revision.
PID	Entity product identifier. Equivalent to the entPhysicalModelName MIB variable in RFC 2737.
VID	Entity version identifier. Equivalent to the entPhysicalHardwareRev MIB variable in RFC 2737.
SN	Entity serial number. Equivalent to the entPhysicalSerialNum MIB variable in RFC 2737.

For diagnostic purposes, the **show inventory** command can be used with the **raw** keyword to display every RFC 2737 entity including those without a PID, UDI, or other physical identification.

**Note** The **raw** keyword option is primarily intended for troubleshooting problems with the **show inventory** command itself.

Enter the **show inventory** command with an *entity* argument value to display the UDI information for a specific type of Cisco entity installed in the networking device. In this example, a list of Cisco entities that match the sfslot argument string is displayed.

```

```

You can request even more specific UDI information with the *entity* argument value enclosed in quotation marks.

# show memory platform

To display memory statistics of a platform, use the **show memory platform** command in privileged EXEC mode.

**show memory platform** [{**compressed-swap** | **information** | **page-merging**}]

Syntax Description	
<b>compressed-swap</b>	(Optional) Displays platform memory compressed-swap information.
<b>information</b>	(Optional) Displays general information about the platform.
<b>page-merging</b>	(Optional) Displays platform memory page-merging information.

**Command Modes** Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

**Usage Guidelines** Free memory is accurately computed and displayed in the Free Memory field of the command output.

## Examples

The following is sample output from the **show memory platform** command:

```
Switch# show memory platform

<b>Command Default</b>	None	
<b>Command Modes</b>	User EXEC (>) Privileged EXEC (#)	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Cisco IOS XE Everest 16.5.1a	This command was introduced.
<b>Usage Guidelines</b>	Entering the <b>show module</b> command without the <i>switch-num</i> argument is the same as entering the show module all command.	

# show mgmt-infra trace messages ilpower

To display inline power messages within a trace buffer, use the **show mgmt-infra trace messages ilpower** command in privileged EXEC mode.

**show mgmt-infra trace messages ilpower** [**switch** *stack-member-number*]

<b>Syntax Description</b>	<b>switch</b> <i>stack-member-number</i> (Optional) Specifies the stack member number for which to display inline power messages within a trace buffer.				
<b>Command Default</b>	None				
<b>Command Modes</b>	Privileged EXEC (#)				
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Everest 16.5.1a</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Everest 16.5.1a	This command was introduced.
Release	Modification				
Cisco IOS XE Everest 16.5.1a	This command was introduced.				

This is an output example from the **show mgmt-infra trace messages ilpower** command:

```
Device# show mgmt-infra trace messages ilpower
[10/23/12 14:05:10.984 UTC 1 3] Initialized inline power system configuration fo
r slot 1.
[10/23/12 14:05:10.984 UTC 2 3] Initialized inline power system configuration fo
r slot 2.
[10/23/12 14:05:10.984 UTC 3 3] Initialized inline power system configuration fo

## show mgmt-infra trace messages ilpower-ha

To display inline power high availability messages within a trace buffer, use the **show mgmt-infra trace messages ilpower-ha** command in privileged EXEC mode.

```
show mgmt-infra trace messages ilpower-ha [switch stack-member-number]
```

<b>Syntax Description</b>	<b>switch</b> <i>stack-member-number</i> (Optional) Specifies the stack member number for which to display inline power messages within a trace buffer.				
<b>Command Default</b>	None				
<b>Command Modes</b>	Privileged EXEC (#)				
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Everest 16.5.1a</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Everest 16.5.1a	This command was introduced.
Release	Modification				
Cisco IOS XE Everest 16.5.1a	This command was introduced.				

This is an output example from the **show mgmt-infra trace messages ilpower-ha** command:

```
Device# show mgmt-infra trace messages ilpower-ha
[10/23/12 14:04:48.087 UTC 1 3] NG3K_ILPOWER_HA: Created NGWC ILP CF client successfully.
```

# show mgmt-infra trace messages platform-mgr-poe

To display platform manager Power over Ethernet (PoE) messages within a trace buffer, use the **show mgmt-infra trace messages platform-mgr-poe** privileged EXEC command.

**show mgmt-infra trace messages platform-mgr-poe** [**switch** *stack-member-number*]

<b>Syntax Description</b>	<b>switch</b> <i>stack-member-number</i> (Optional) Specifies the stack member number for which to display messages within a trace buffer.				
<b>Command Default</b>	None				
<b>Command Modes</b>	Privileged EXEC (#)				
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Everest 16.5.1a</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Everest 16.5.1a	This command was introduced.
Release	Modification				
Cisco IOS XE Everest 16.5.1a	This command was introduced.				

This is an example of partial output from the **show mgmt-infra trace messages platform-mgr-poe** command:

```
Device# show mgmt-infra trace messages platform-mgr-poe

# show network-policy profile

To display the network-policy profiles, use the **show network policy profile** command in privileged EXEC mode.

**show network-policy profile** [*profile-number*] [**detail**]

## Syntax Description

*profile-number* (Optional) Displays the network-policy profile number. If no profile is entered, all network-policy profiles appear.

**detail** (Optional) Displays detailed status and statistics information.

## Command Default

None

## Command Modes

Privileged EXEC (#)

## Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

This is an example of output from the **show network-policy profile** command:

```
Device# show network-policy profile
Network Policy Profile 10
  voice vlan 17 cos 4
  Interface:
    none
Network Policy Profile 30
  voice vlan 30 cos 5
  Interface:
    none
Network Policy Profile 36
  voice vlan 4 cos 3
  Interface:
    Interface_id
```

# show platform hardware bluetooth

To display information about Bluetooth interface, use the **show platform hardware bluetooth** command in privileged EXEC mode.

## show platform hardware bluetooth

### Command Default

None

### Command Modes

Privileged EXEC (#)

### Command History

Release	Modification
Cisco IOS XE Amsterdam 17.1.1	This command was introduced.  This command was introduced for the Cisco Catalyst Performance Switches.
Cisco IOS XE Gibraltar 16.12.1	This command was introduced.  This command was introduced for the Cisco Catalyst Switches.

### Usage Guidelines

The **show platform hardware bluetooth** command is to be used when an external USB Bluetooth dongle is connected on the device.

### Examples

This example shows how to display the information of the Bluetooth interface using the **show platform hardware bluetooth** command.

```
Device> enable
Device# show platform hardware bluetooth
Controller: 0:1a:7d:da:71:13
Type: Primary
Bus: USB
State: DOWN
Name:
HCI Version:
```

# show platform hardware fed switch forward

To display device-specific hardware information, use the **show platform hardware fed switch** *switch\_number* command.

This topic elaborates only the forwarding-specific options, that is, the options available with the **show platform hardware fed switch** {*switch\_num* | **active** | **standby**} **forward summary** command.

The output of the **show platform hardware fed switch** *switch\_number* **forward summary** displays all the details about the forwarding decision taken for the packet.

**show platform hardware fed switch** {*switch\_num* | **active** | **standby**} **forward summary**

Syntax Description	
<b>switch</b> { <i>switch_num</i>   <b>active</b>   <b>standby</b> }	The switch for which you want to display information. You have the following options : <ul style="list-style-type: none"> <li>• <i>switch_num</i>—ID of the switch.</li> <li>• <b>active</b>—Displays information relating to the active switch.</li> <li>• <b>standby</b>—Displays information relating to the standby switch, if available.</li> </ul>
<b>forward summary</b>	Displays packet forwarding information. <p><b>Note</b> Support for the keyword <b>summary</b> has been discontinued in the Cisco IOS XE Everest 16.6.1 release and later releases.</p>

**Command Modes** Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.
	Cisco IOS XE Everest 16.6.1 and later releases	Support for the keyword <b>summary</b> was discontinued.

**Usage Guidelines** Do not use this command unless a technical support representative asks you to. Use this command only when you are working directly with a technical support representative while troubleshooting a problem.

Fields displayed in the command output are explained below.

- **Station Index** : The Station Index is the result of the layer 2 lookup and points to a station descriptor which provides the following:
  - **Destination Index** : Determines the egress port(s) to which the packets should be sent to. Global Port Number(GPN) can be used as the destination index. A destination index with 15 down to 12 bits set indicates the GPN to be used. For example, destination index - 0xF04E corresponds to GPN - 78 (0x4e).
  - **Rewrite Index** : Determines what needs to be done with the packets. For layer 2 switching, this is typically a bridging action

- Flexible Lookup Pipeline Stages(FPS) : Indicates the forwarding decision that was taken for the packet - routing or bridging
- Replication Bit Map : Determines if the packets should be sent to CPU or stack
  - Local Data Copy = 1
  - Remote Data copy = 0
  - Local CPU Copy = 0
  - Remote CPU Copy = 0

### Example

This is an example of output from the **show platform hardware fed switch** { *switch\_num* | **active** | **standby** } **forward summary** command.

```
Device#show platform hardware fed switch 1 forward summary
Time: Fri Sep 16 08:25:00 PDT 2016
```

Incomming Packet Details:

```

## show platform hardware fed switch forward interface

To debug forwarding information and to trace the packet path in the hardware forwarding plane, use the **show platform hardware fed switch *switch\_number* forward interface** command. This command simulates a user-defined packet and retrieves the forwarding information from the hardware forwarding plane. A packet is generated on the ingress port based on the packet parameters that you have specified in this command. You can also provide a complete packet from the captured packets stored in a PCAP file.

This topic elaborates only the interface forwarding-specific options, that is, the options available with the **show platform hardware fed switch {*switch\_num* | **active** | **standby** } forward interface** command.

**show platform hardware fed switch** {*switch\_num* | **active** | **standby**} **forward interface** *interface-type* *interface-number* **source-mac-address** *destination-mac-address*{*protocol-number* | **arp** | **cos** | **ipv4** | **ipv6** | **mpls**}

**show platform hardware fed switch** {*switch\_num* | **active** | **standby**} **forward interface** *interface-type* *interface-number* **pcap** *pcap-file-name* **number** *packet-number* **data**

**show platform hardware fed switch** {*switch\_num* | **active** | **standby**} **forward interface** *interface-type* *interface-number* **vlan** *vlan-id* *source-mac-address* *destination-mac-address*{*protocol-number* | **arp** | **cos** | **ipv4** | **ipv6** | **mpls**}

### Syntax Description

<b>switch</b> { <i>switch_num</i>   <b>active</b>   <b>standby</b> }	The switch on which packet tracing has to be scheduled. The input port should be available on this switch. You have the following options : <ul style="list-style-type: none"> <li>• <i>switch_num</i>—ID of the switch on which the ingress port is present.</li> <li>• <b>active</b>—indicates the active switch on which the the ingress port is present.</li> <li>• <b>standby</b>—indicates the standby switch on which the ingress port is present.</li> </ul> <p><b>Note</b> This keyword is not supported.</p>
<b>interface</b> <i>interface-type</i> <i>interface-number</i>	The input interface on which packet trace is simulated.
<i>source-mac-address</i>	The source MAC address of the packet you want to simulate.
<i>destination-mac-address</i>	The MAC address of the destination interface in hexadecimal format.
<i>protocol-number</i>	The number assigned to any L3 protocol.
<b>arp</b>	The Address Resolution Protocol (ARP) parameters.
<b>ipv4</b>	The IPv4 packet parameters.
<b>ipv6</b>	The IPv6 packet parameters.
<b>mpls</b>	The Multiprotocol Label Switching (MPLS) label parameters.

<b>cos</b>	The class of service (CoS) number from 0 to 7 to set priority.
<b>pcap</b> <i>pcap-file-name</i>	Name of the pcap file in internal flash (flash:). Ensure that the file already exists in flash:.
<b>number</b> <i>packet-number</i>	Specifies the packet number in the pcap file.
<b>vlan</b> <i>vlan-id</i>	VLAN id of the dot1q header in the simulated packet. The range is 1 to 4096.

**Command Modes** Privileged EXEC

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Cisco IOS XE Everest 16.5.1a	This command was introduced.
	Cisco IOS XE Fuji 16.9.1	The command was enhanced to support MPLS/ARP/VxLAN packet parameters and trace packets captured in a PCAP file.
	Cisco IOS XE Gibraltar 16.10.1	The command was enhanced to support data capture across a stack.

**Usage Guidelines** Do not use this command unless a technical support representative asks you to. Use this command only when you are working directly with a technical support representative while troubleshooting a problem.

This command supports the following packet types:

- Non-IP packets with any L3 protocol
- ARP packets
- IPv4 packets with any L4 protocol
- IPv4 packets with TCP/UDP/IGMP/ICMP/SCTP payload
- VxLAN packets
- MPLS packets with up to 3 Labels and meta data
- MPLS packets with IPv4/IPv6 payload
- IPv6 packets with TCP/UDP/IGMP/ICMP/SCTP payload

In a stack environment, you can trace packets across the stack irrespective of the number of stack members and topology. The **show platform hardware fed switch** *switch-number* **forward interface** *interface-type interface-number* command consolidates packet-forwarding information of all the stack members on the ingress switch. To achieve this, ensure that the switch number specified in the *switch\_num* and *interface-number* arguments are of the input switch and that the number matches.

To trace any particular packet from the captured packets stored in a PCAP file, use the **show platform hardware fed switch forward interface** *interface-type interface-number* **pcap** *pcap-file-name number packet-number* **data** command.

**Example**

This is an example of output from the **show platform hardware fed switch** {*switch\_num* | **active** | **standby** } **forward interface** command.

```
Device#show platform hardware fed switch active forward interface gigabitEthernet 1/0/35
0000.0022.0055 0000.0055.0066 ipv4 44.44.0.2 55.55.0.2 udp 1222 3333
```

Show forward is running in the background. After completion, syslog will be generated.

```
*Sep 24 05:57:36.614: %SHFWD-6-PACKET_TRACE_DONE: Switch 1 R0/0: fed: Packet Trace Complete:
  Execute (show platform hardware fed switch <> forward last summary|detail)
*Sep 24 05:57:36.614: %SHFWD-6-PACKET_TRACE_FLOW_ID: Switch 1 R0/0: fed: Packet Trace Flow
id is 150323855361
```

**Related Commands**

Command	Description
<b>monitor capture interface</b>	Configures monitor capture points specifying an attachment point and the packet flow direction.
<b>monitor capture start</b>	Starts the capture of packet data at a traffic trace point into a buffer.
<b>monitor capture stop</b>	Stops the capture of packet data at a traffic trace point.
<b>monitor capture export</b>	Saves the captured packets in the buffer.  Use this command to export the monitor capture buffer to a pcap file in flash: that you can use as an input in the <b>show forward</b> with <b>pcap</b> .

# show platform hardware fed switch forward last summary

To display a summary of packet tracing data from a switch or switches in a stack, use the **show platform hardware fed switch** *switch\_number* **forward last summary** command.

The output of the **show platform hardware fed switch** *switch\_number* **forward last summary** command displays all the details about the forwarding decision taken for the packet from the last time the **show forward** command was run.

**show platform hardware fed switch** {*switch\_number* | **active** | **standby**} **forward last summary**

<b>Syntax Description</b>	<p><b>switch</b> {<i>switch_number</i>   <b>active</b>   <b>standby</b> }</p> <p>The switch on which you want to schedule a packet capture for a port. You have the following options :</p> <ul style="list-style-type: none"> <li>• <i>switch_num</i>—ID of the switch on which the ingress port is present.</li> <li>• <b>active</b>—indicates the active switch on which the the ingress port is present.</li> <li>• <b>standby</b>—indicates the standby switch on which the ingress port is present.</li> </ul> <p><b>Note</b> This keyword is not supported.</p>
	<p><b>forward last summary</b> Displays packet forwarding information.</p>

**Command Modes** Privileged EXEC

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Cisco IOS XE Everest 16.5.1a	This command was introduced.
	Cisco IOS XE Everest 16.6.1 and later releases	Support for the keyword <b>summary</b> was discontinued.
	Cisco IOS XE Fuji 16.9.1	Support for keywords <b>last</b> and <b>summary</b> is introduced.
	Cisco IOS XE Gibraltar 16.10.1	The output of the command was enhanced to display the details about all the copies of the packets and the corresponding outgoing ports.

**Usage Guidelines** Do not use this command unless a technical support representative asks you to. Use this command only when you are working directly with a technical support representative while troubleshooting a problem.

With Cisco IOS XE Gibraltar 16.10.1, **show platform hardware fed switch forward last summary** command is enhanced to:

- Inject the debug packets from the CPU to simulate the incoming port and packets

- Use the debug packets to trace the packet in hardware data-path to provide forwarding details such as lookup, adjacency, rewrite information, drop decision, outgoing port and so on
- Drop the original packets at egress so as not to transmit the packet to the outgoing port
- Send a copy of all the packets to the CPU and display the details in the packet tracing output

### Example

This is an example of output from the **show platform hardware fed switch** {*switch\_number* | **active** | **standby**} **forward last summary** command.

```
Device#show platform hardware fed switch active forward last summary

## show platform hardware fed switch fwd-asic counters tla

To display the register information of a counter from the forwarding ASIC, use the **show platform hardware fed switch fwd-asic counters tla** command in the Privileged EXEC mode.

```
show platform hardware fed switch {switch_num | active | standby} fwd-asic counters tla
tla_counter{detail | drop | statistics} [asic asic_num] output location:filename
```

---

### Syntax Description

<pre><b>switch</b> {<i>switch_num</i>   <b>active</b>   <b>standby</b> }</pre>	<p>The switch for which you want to display information. You have the following options :</p> <ul style="list-style-type: none"> <li>• <i>switch_num</i>: ID of the switch.</li> <li>• <b>active</b>: Displays information relating to the active switch.</li> <li>• <b>standby</b>: Displays information relating to the standby switch, if available.</li> </ul>
--	--

---

---

<b>tlatla_counter</b>	<p><i>tla_counter</i> can be any of the following Three Letter Acronym (TLA) counters:</p> <ul style="list-style-type: none"> <li>• AQM Active Queue Management</li> <li>• ASE ACL Search Engine</li> <li>• DPP DopplerE Point to Point</li> <li>• EGR Egress Global Resolution</li> <li>• EPF Egress Port FIFO</li> <li>• ESM Egress Scheduler Module</li> <li>• EQC Egress Queue Controller</li> <li>• FPE Flexible Parser</li> <li>• FPS Flexible Pipe Stage</li> <li>• FSE Fib Search Engine</li> <li>• IGR Ingress Global Resolution</li> <li>• IPF Ingress Port FIFO</li> <li>• IQS Ingress Queues and Scheduler</li> <li>• MSC Macsec Engine</li> <li>• NFL Netflow</li> <li>• NIF Network Interface</li> <li>• PBC Packet Buffer Complex</li> <li>• PIM Protocol Independent Multicast</li> <li>• PLC Policer</li> <li>• RMU Recirculation Multiplexer Unit</li> <li>• RRE Reassembly Engine</li> <li>• RWE Rewrite Engine</li> <li>• SEC Security Engine</li> <li>• SIF Stack Interface</li> <li>• SPQ Supervisor Packet Queuing Engine</li> <li>• SQS Stack Queues And Scheduler</li> <li>• SUP Supervisor Interface</li> </ul>
<b>detail</b>	Displays the contents of the registers of all non-zero counters.
<b>drop</b>	Displays the contents of the registers of all non-zero drop counters.
<b>statistics</b>	Displays the contents of the registers of all non-zero statistical counters.

---

```
show platform hardware fed switch fwd-asic counters tla
```

<b>ascii</b> <i>asic_num</i>	(Optional) Specifies the ASIC.
<b>output</b> <i>location:filename</i>	Specifies an output file to which the contents of the counters registers are to be dumped.

**Command Modes**

Privileged EXEC (#)

**Command History**

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.
Cisco IOS XE Amsterdam 17.3.1	The command output was modified to be presented in a readable tabular format. The size of the output file was also reduced by not printing fields that had zero values.  The <b>change</b> keyword was deprecated.

**Usage Guidelines**

Do not use this command unless a technical support representative asks you to. Use this command only when you are working directly with a technical support representative while troubleshooting a problem.

**Note** Some TLAs may not have any registers to display as part of **drop** or **statistics** options because of the lack of these drop or statistics registers for them. In such a case, a message, `No <detail|drop|statistics> counters to display for tla <TLA_NAME>` is displayed and no output file is generated.

**Example**

This is an example output from the **show platform hardware fed active fwd-asic counters tla aqm** command.

```
Device#show platform hardware fed active fwd-asic counters tla aqm detail output flash:aqm
command to get counters for tla AQM succeeded
Device#
Device# more flash:aqm
```

```

# show platform hardware fed active fwd-asic resource tcam utilization

To display hardware information about the Ternary Content Addressable Memory (TCAM) usage, use the **show platform hardware fed active fwd-asic resource tcam utilization** command in privileged EXEC mode.

**show platform hardware fed active fwd-asic resource tcam utilization** [*asic-number* ]

<b>Syntax Description</b>	<i>asic-number</i>	ASIC number. Valid values are from 0 to 7.
<b>Command Modes</b>	Privileged EXEC (#)	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Cisco IOS XE Amsterdam 17.2.1	This command was introduced in a release prior to Cisco IOS XE Amsterdam 17.2.1 .
<b>Usage Guidelines</b>	On stackable switches, this command has the <b>switch</b> keyword, <b>show platform hardware fed switch active fwd-asic resource tcam utilization</b> . On non-stackable switches, the <b>switch</b> keyword is not available.	

## Example

The following is sample output from the **show platform hardware fed active fwd-asic resource tcam utilization** command:

```
Device# show platform hardware fed active fwd-asic resource tcam utilization

Codes: EM - Exact_Match, I - Input, O - Output, IO - Input & Output, NA - Not Applicable

# show platform resources

To display platform resource information, use the **show platform resources** command in privileged EXEC mode.

## show platform resources

This command has no arguments or keywords.

**Command Modes** Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

**Usage Guidelines** The output of this command displays the used memory, which is total memory minus the accurate free memory.

## Example

The following is sample output from the **show platform resources** command:

```
Switch# show platform resources
```

```
**State Acronym: H - Healthy, W - Warning, C - Critical
```

Resource State	Usage	Max	Warning	Critical
Control Processor H	7.20%	100%	90%	95%
DRAM H	2701MB (69%)	3883MB	90%	95%

# show platform software audit

To display the SE Linux Audit logs, use the **show platform software audit** command in privileged EXEC mode.

```
show platform software audit {all | summary | [switch {switch-number | active | standby}]
{0 | F0 | R0 | {FP | RP} {active}}}
```

Syntax Description		
<b>all</b>		Shows the audit log from all the slots.
<b>summary</b>		Shows the audit log summary count from all the slots.
<b>switch</b>		Shows the audit logs for a slot on a specific switch.
<i>switch-number</i>		Selects the switch with the specified switch number.
<b>switch active</b>		Selects the active instance of the switch.
<b>standby</b>		Selects the standby instance of the switch.
<b>0</b>		Shows the audit log for the SPA-Inter-Processor slot 0.
<b>F0</b>		Shows the audit log for the Embedded-Service-Processor slot 0.
<b>R0</b>		Shows the audit log for the Route-Processor slot 0.
<b>FP active</b>		Shows the audit log for the active Embedded-Service-Processor slot.
<b>RP active</b>		Shows the audit log for the active Route-Processor slot.

**Command Modes** Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

**Usage Guidelines** This command was introduced in the Cisco IOS XE Gibraltar 16.10.1 as a part of the SELinux Permissive Mode feature. The **show platform software audit** command displays the system logs containing the access violation events.

In Cisco IOS XE Gibraltar 16.10.1, operation in a permissive mode is available - with the intent of confining specific components (process or application) of the IOS-XE platform. In the permissive mode, access violation events are detected and system logs are generated, but the event or operation itself is not blocked. The solution operates mainly in an access violation detection mode.

The following is a sample output of the **show software platform software audit summary** command:

```
Device# show platform software audit summary
```

```
=====
AUDIT LOG ON switch 1
-----
AVC Denial count: 58
=====
```

The following is a sample output of the **show software platform software audit all** command:

```
Device# show platform software audit all
```

```
=====

# show platform software fed switch punt cpuq rates

To display the rate at which packets are punted, including the drops in the punted path, use the **show platform software fed switch punt cpuq rates** command in privileged EXEC mode.

```
show platform software fed switch {switch-number | active | standby} punt cpuq rates
```

Syntax Description	switch {switch-number   active   standby}	Displays information about the switch. You have the following options:
		<ul style="list-style-type: none"> <li><i>switch-number</i>.</li> <li><b>active</b>—Displays information relating to the active switch.</li> <li><b>standby</b>—Displays information relating to the standby switch, if available.</li> </ul> <p><b>Note</b> This keyword is not supported.</p>
	<b>punt</b>	Specifies the punt information.
	<b>cpuq</b>	Specifies information about CPU receive queue.
	<b>rates</b>	Specifies the rate at which the packets are punted.

**Command Modes** Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

## Example

The following is sample output from the **show platform software fed switch active punt cpuq rates** command.

The output of this command displays the rate in packets per second at intervals of 10 seconds, 1 minute and 5 minutes.

```
Device#show platform software fed switch active punt cpuq rates
```

```
Punt Rate CPU Q Statistics
```

```
Packets per second averaged over 10 seconds, 1 min and 5 mins
```

Q no	Queue Name	Rx 10s	Rx 1min	Rx 5min	Drop 10s	Drop 1min	Drop 5min
0	CPU_Q_DOT1X_AUTH	0	0	0	0	0	0
1	CPU_Q_L2_CONTROL	0	0	0	0	0	0
2	CPU_Q_FORUS_TRAFFIC	336	266	320	0	0	0

```

The table below describes the significant fields shown in the display.

**Table 5: show platform software fed switch active punt cpuq rates Field Descriptions**

Field	Description
Queue Name	Name of the queue.
Rx	The rate at which the packets are received per second in 10s, 1 minute and 5 minutes.
Drop	The rate at which the packets are dropped per second in 10s, 1 minute and 5 minutes.

# show platform software fed switch punt packet-capture display

To display packet capture information during high CPU utilization, use the **show platform software fed switch active punt packet-capture display** command in privileged EXEC mode.

**show platform software fed switch active punt packet-capture display { detailed | hexdump }**

Syntax Description		
<b>switch</b> { <i>switch-number</i>   <b>active</b>   <b>standby</b> }		Displays information about a switch. You have the following options: <ul style="list-style-type: none"> <li>• <b>active</b>—Displays information relating to the active switch.</li> <li>• <b>standby</b>—Displays information relating to the standby switch, if available.</li> </ul> <p><b>Note</b> The <b>standby</b> keyword is not supported.</p>
<b>punt</b>		Specifies punt information.
<b>packet-capture display</b>		Specifies information about the captured packet.
<b>detailed</b>		Specifies detailed information about the captured packet.
<b>hex-dump</b>		Specifies information about the captured packet, in hex format.

**Command Modes** Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

**Usage Guidelines** The output of this command displays the periodic and persistent logs of CPU-bound packets, inband CPU traffic rates, and running CPU processes when the CPU passes a high CPU utilization threshold.

**Examples** The following is a sample output from the **show platform software fed switch active punt packet-capture display detailed** command:

```
Device# show platform software fed switch active punt packet-capture display detailed
Punt packet capturing: disabled. Buffer wrapping: disabled
Total captured so far: 101 packets. Capture capacity : 4096 packets

# show platform software fed switch punt packet-capture cpu-top-talker

To display the occurrences of an attribute of a packet capture, use the **show platform software fed switch punt packet-capture cpu-top-talker** command in privileged EXEC mode.

```
show platform software fed switch { switch-number | active | standby } punt packet-capture
cpu-top-talker { cause-code | dst_ipv4 | dst_ipv6 | dst_l4 | dst_mac | eth_type | incoming-interface
| ipv6_hoplt | protocol | src_dst_port | src_ipv4 | src_ipv6 | src_l4 | src_mac | summary | ttl |
vlan }
```

## Syntax Description

<b>switch</b> { <i>switch-number</i>   <b>active</b>   <b>standby</b> }	Displays information about a switch. You have the following options: <ul style="list-style-type: none"> <li>• <b>active</b>—Displays information relating to the active switch.</li> <li>• <b>standby</b>—Displays information relating to the standby switch, if available.</li> </ul> <p><b>Note</b> The <b>standby</b> keyword is not supported.</p> <p><b>Note</b> The <b>switch</b> keyword is not supported on nonstackable devices and on the devices that do not support StackWise Virtual.</p>
<b>cause-code</b>	Displays the occurrences of cause-code.
<b>dst_ipv4</b>	Displays the occurrences on the destination IPv4 interface.
<b>dst_ipv6</b>	Displays the occurrences on the destination IPv6 interface.
<b>dst_l4</b>	Displays the occurrences of the Layer 4 destination port.
<b>dst_mac</b>	Displays the occurrences of the destination MAC address.
<b>eth_type</b>	Displays the occurrences of the Ethernet frame type.
<b>incoming-interface</b>	Displays the occurrences of incoming-interfaces.
<b>ipv6_hoplt</b>	Displays the occurrences of the hop limit on IPv6.
<b>protocol</b>	Displays the occurrences of the Layer 4 protocol.
<b>src_dst_port</b>	Displays the occurrences of the Layer 4 source destination port.
<b>src_ipv4</b>	Displays the occurrences on the source IPv4 interface.
<b>src_ipv6</b>	Displays the occurrences on the source IPv6 interface.
<b>src_l4</b>	Displays the occurrences on the Layer 4 source.

<b>src_mac</b>	Displays the occurrences of the source MAC address.
<b>summary</b>	Displays the summary of the occurrences of all the attributes.
<b>ttl</b>	Displays the occurrences on IPv4 Time to Live (TTL).
<b>vlan</b>	Displays the occurrences of VLAN.

**Command Modes** Privileged EXEC (#)

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Cisco IOS XE Bengaluru 17.6.1	This command was introduced.

**Usage Guidelines** Ensure to start and stop debugging of the packets from the active switch to obtain the occurrences of the packet capture attributes.

### Examples

The following is a sample out of the **debugplatform software fed switch active punt packet-capture start** command:

```
Device# debug platform software fed active punt packet-capture start
Punt packet capturing started.
Device#
*Jan 28 12:51:14.978: %FED_PUNJECT-6-PKT_CAPTURE_FULL: F0/0: fed: Punject pkt capture buffer
is full. Use show command to display the punted packets
```

The following is a sample out of the **debugplatform software fed switch active punt packet-capture stop** command:

```
Device# debug platform software fed active punt packet-capture stop

Punt packet capturing stopped. Captured 4096 packet(s)
```

These commands provide a maximum of ten unique values in descending order for each of the attributes.

The following is a sample output of the **show platform software fed switch active punt packet-capture cpu-top-talkercause-code** command:

```
Device# show platform software fed switch active punt packet-capture cpu-top-talker cause-code

Punt packet capturing: disabled. Buffer wrapping: disabled
Total captured so far: 4096 packets. Capture capacity : 4096 packets
Sr.no.      Value/Key Occurrence
1      Layer2 control protocols 4096
```

The following is a sample output of the **show platform software fed switch active punt packet-capture cpu-top-talkerdst\_mac** command:

```
Device# show platform software fed switch active punt packet-capture cpu-top-talker dst_mac
Punt packet capturing: disabled. Buffer wrapping: disabled
Total captured so far: 4096 packets. Capture capacity : 4096 packets
Sr.no.      Value/Key Occurrence
1      01:80:c2:00:00:00 4096
```

The following is a sample output of the **show platform software fed switch active punt packet-capture cpu-top-talkerincoming-interface** command:

```
Device# show platform software fed switch active punt packet-capture cpu-top-talker
incoming-interface
Punt packet capturing: disabled. Buffer wrapping: disabled
Total captured so far: 4096 packets. Capture capacity : 4096 packets
Sr.no.    Value/Key Occurrence
1    TwentyFiveGigE1/0/1 1366
2    TwentyFiveGigE1/0/16 1365
3    TwentyFiveGigE1/0/18 1365
```

The following is a sample output of the **show platform software fed switch activepunt packet-capture cpu-top-talkersrc\_mac** command:

```
Device# show platform software fed switch active punt packet-capture cpu-top-talker src_mac
Punt packet capturing: disabled. Buffer wrapping: disabled
Total captured so far: 4096 packets. Capture capacity : 4096 packets
Sr.no.    Value/Key Occurrence
1    70:b3:17:1e:9e:8f 1366
2    70:b3:17:1e:9e:90 1365
3    70:b3:17:1e:9e:91 1365
```

The following is a sample output of the **show platform software fed switch activepunt packet-capture cpu-top-talkersummary** command. This command will provide one highest output for each of the attributes.

```
Device# show platform software fed switch active punt packet-capture cpu-top-talker summary
Punt packet capturing: disabled. Buffer wrapping: disabled
Total captured so far: 4096 packets. Capture capacity : 4096 packets

# show platform software fed switch punt rates interfaces

To display the overall statistics of punt rate for all the interfaces, use the **show platform software fed switch punt rates interfaces** command in privileged EXEC mode.

**show platform software fed switch** {*switch-number* | **active** | **standby**} **punt rates interfaces**[*interface-id*]

## Syntax Description

<b>switch</b> { <i>switch-number</i>   <b>active</b>   <b>standby</b> }	Displays information about the switch. You have the following options: <ul style="list-style-type: none"> <li>• <i>switch-number</i>.</li> <li>• <b>active</b>—Displays information relating to the active switch.</li> <li>• <b>standby</b>—Displays information relating to the standby switch, if available.</li> </ul> <p><b>Note</b> This keyword is not supported.</p>
<b>punt</b>	Specifies the punt informtion.
<b>rates</b>	Specifies the rate at which the packets are punted.
<b>interfaces</b> [ <i>interface-id</i> ]	(Optional) Displays the overall statistics for an interface and also the per-queue configuration for the interface at an interval of 10 seconds.

## Command Modes

Privileged EXEC (#)

## Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

## Usage Guidelines

The output displays the punt rates in packets per second at intervals of 10 seconds, 1 minute and 5 minutes.

## Example

The following is sample output from the **show platform software fed switch active punt rates interfaces** command for all the interfaces.

```
Device#show plataform software fed switch active punt rates interfaces
```

```
Punt Rate on Interfaces Statistics
```

```
Packets per second averaged over 10 seconds, 1 min and 5 mins
```

```
=====
```

Interface Name	IF_ID	Rx 10s	Rx 1min	Rx 5min	Drop 10s	Drop 1min	Drop 5min

```
=====
Vlan3                               0x00000034   1000   1000   520     0     0     0
-----
```

The table below describes the significant fields shown in the display.

**Table 6: show platform software fed switch active punt rates interfaces Field Descriptions**

Field	Description
Interface Name	Name of the physical interface.
IF_ID	ID of the physical interface.
Rx	The per second rate at which the packets are received in 10s, 1 minute and 5 minutes.
Drop	The per second rate at which the packets are dropped in 10s, 1 minute and 5 minutes.

The following is sample output from the **show platform software fed switch active punt rates interfaces interface-id** command for a specific interface.

```
Device#show platform software fed switch active punt rates interfaces 0x31
Punt Rate on Single Interfaces Statistics
```

```
Interface : Port-channell [if_id: 0x31]
```

```

Received                               Dropped
-----                               -
Total           : 29617                Total           : 0

The table below describes the significant fields shown in the display.

**Table 7: show platform software fed switch punt rates interfaces interface-id Field Descriptions**

Field	Description
Queue Name	Name of the queue.
Recv Total	Total number of packets received.
Recv Rate	Per second rate at which the packets are received.
Drop Total	Total number of packets dropped.
Drop Rate	Per second rate at which the packets are dropped.

# show platform software ilpower

To display the inline power details of all the PoE ports on the device, use the **show platform software ilpower** command in privileged EXEC mode.

```
show platform software ilpower {details | port {GigabitEthernet interface-number } | system slot-number }
```

Syntax Description	details	Displays inline power details for all the interfaces.
	<b>port</b>	Displays inline power port configuration.
	<b>GigabitEthernet</b> <i>interface-number</i>	The GigabitEthernet interface number. Values range from 0 to 9.
	<b>system</b> <i>slot-number</i>	Displays inline power system configuration.
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	The command was introduced.

## Examples

The following is sample output from the **show platform software ilpower details** command:

```
Device# show platform software ilpower details
ILP Port Configuration for interface Gi1/0/1
  Initialization Done:    Yes
  ILP Supported:         Yes
  ILP Enabled:           Yes
  POST:                  Yes
  Detect On:             No
  Powered Device Detected                No
  Powered Device Class Done              No
  Cisco Powered Device:                  No
  Power is On:                          No
  Power Denied:                          No
  Powered Device Type:                    Null
  Powerd Device Class:                    Null

# show platform software memory

To display memory information for a specified switch, use the **show platform software memory** command in privileged EXEC mode.

**show platform software memory** [{**chunk** | **database** | **messaging**}] *process slot*

---

**Syntax Description****Syntax Description**

---

<b>chunk</b>	(Optional) Displays chunk memory information for the specified process.
<b>database</b>	(Optional) Displays database memory information for the specified process.
<b>messaging</b>	(Optional) Displays messaging memory information for the specified process. The information displayed is for internal debugging purposes only.

---

show platform software memory

---

*process*

---

Level that is being set. Options include:

- **bt-logger**—The Binary-Tracing Logger process.
- **btrace-manager**—The Btrace Manager process.
- **chassis-manager**—The Chassis Manager process.
- **cli-agent**—The CLI Agent process.
- **cmm**—The CMM process.
- **dbm**—The Database Manager process.
- **dmiauthd**—The DMI Authentication Daemon process.
- **emd**—The Environmental Monitoring process.
- **fed**—The Forwarding Engine Driver process.
- **forwarding-manager**—The Forwarding Manager process.
- **geo**—The Geo Manager process.
- **gnmi**—The GNMI process.
- **host-manager**—The Host Manager process.
- **interface-manager**—The Interface Manager process.
- **iomd**—The Input/Output Module daemon (IOMd) process.
- **ios**—The IOS process.
- **iox-manager**—The IOx Manager process.
- **license-manager**—The License Manager process.
- **logger**—The Logging Manager process.
- **mdt-pubd**—The Model Defined Telemetry Publisher process.
- **ndbman**—The Netconf DataBase Manager process.
- **nesd**—The Network Element Synchronizer Daemon process.
- **nginx**—The Nginx Webserver process.
- **nif\_mgr**—The NIF Manager process.
- **platform-mgr**—The Platform Manager process.
- **pluggable-services**—The Pluggable Services process.
- **replication-mgr**—The Replication Manager process.
- **shell-manager**—The Shell Manager process.
- **sif**—The Stack Interface (SIF) Manager process.
- **smd**—The Session Manager process.
- **stack-mgr**—The Stack Manager process.

- **syncfd**—The SyncmDaemon process.
- **table-manager**—The Table Manager Server.
- **thread-test**—The Multithread Manager process.
- **virt-manager**—The Virtualization Manager process.

---

<i>slot</i>	Hardware slot where the process for which the level is set, is running. Options include: <ul style="list-style-type: none"> <li>• <i>number</i>—Number of the SIP slot of the hardware module where the level is set. For instance, if you want to specify the SIP in SIP slot 2 of the switch, enter 2.</li> <li>• <i>SIP-slot / SPA-bay</i>—Number of the SIP switch slot and the number of the shared port adapter (SPA) bay of that SIP. For instance, if you want to specify the SPA in bay 2 of the SIP in switch slot 3, enter 3/2.</li> <li>• <b>F0</b>—The Embedded Service Processor slot 0.</li> <li>• <b>FP active</b>—The active Embedded Service Processor.</li> <li>• <b>R0</b>—The route processor in slot 0.</li> <li>• <b>RP active</b>—The active route processor.</li> <li>• <b>RP standby</b>—The standby route processor.</li> <li>• <b>switch active</b>—The active switch.</li> </ul>

The following table describes the significant fields shown in the display.

**Table 8: show platform software memory brief Field Descriptions**

Field	Description
module	Name of submodule.
allocated	Memory, allocated in bytes.
requested	Number of bytes requested by application.
allocs	Number of discrete allocation event attempts.
frees	Number of free events.

# show platform software process list

To display the list of running processes on a platform, use the **show platform software process list** command in privileged EXEC mode.

**show platform software process list switch** {*switch-number* | **active** | **standby**} {**0** | **F0** | **R0**} [**{name** *process-name* | **process-id** *process-ID* | **sort** **memory** | **summary**}]

## Syntax Description

<b>switch</b> <i>switch-number</i>	Displays information about the switch. Valid values for <i>switch-number</i> argument are from 0 to 9.
<b>active</b>	Displays information about the active instance of the switch.
<b>standby</b>	Displays information about the standby instance of the switch.
<b>0</b>	Displays information about the shared port adapters (SPA) Interface Processor slot 0.
<b>F0</b>	Displays information about the Embedded Service Processor (ESP) slot 0.
<b>R0</b>	Displays information about the Route Processor (RP) slot 0.
<b>name</b> <i>process-name</i>	(Optional) Displays information about the specified process. Enter the process name.
<b>process-id</b> <i>process-ID</i>	(Optional) Displays information about the specified process ID. Enter the process ID.
<b>sort</b>	(Optional) Displays information sorted according to processes.
<b>memory</b>	(Optional) Displays information sorted according to memory.
<b>summary</b>	(Optional) Displays a summary of the process memory of the host device.

## Command Modes

Privileged EXEC (#)

## Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	The Size column in the output was modified to display Resident Set Size (RSS) in KB.
Cisco IOS XE Everest 16.5.1a	The command was introduced.

The table below describes the significant fields shown in the displays.

**Table 9: show platform software process list Field Descriptions**

Field	Description
Name	Displays the command name associated with the process. Different threads in the same process may have different command values.
Pid	Displays the process ID that is used by the operating system to identify and keep track of the processes.
PPid	Displays process ID of the parent process.
Group Id	Displays the group ID

Field	Description
Status	Displays the process status in human readable form.
Priority	Displays the negated scheduling priority.
Size	Prior to Cisco IOS XE Gibraltar 16.10.1: Displays Virtual Memory size. From Cisco IOS XE Gibraltar 16.10.1 onwards: Displays the Resident Set Size (RSS) that shows how much memory is allocated to that process in the RAM.

# show platform software process memory

To display the amount of memory used by each system process, use the **show platform software process memory** command in privileged EXEC mode.

## show platform process memory

**switch** { *switch-number* | **active** | **standby** } { **0** | **F0** | **FP** | **R0** } { **all** [ **sorted** | **virtual** [ **sorted** ] ] | **name** *process-name* { **maps** | **smaps** [ **summary** ] } | **process-id** *process-id* { **maps** | **smaps** [ **summary** ] } }

Syntax Description		
<b>switch</b> <i>switch-number</i>		Displays information about the switch. Enter the switch number.
<b>active</b>		Specifies the active instance of the device.
<b>standby</b>		Specifies the standby instance of the device.
<b>0</b>		Specifies the Shared Port Adapter (SPA) Interface Processor slot 0.
<b>F0</b>		Specifies the Embedded Service Processor (ESP) slot 0.
<b>FP</b>		Specifies the Embedded Service Processor (ESP).
<b>R0</b>		Specifies the Route Processor (RP) slot 0.
<b>all</b>		Lists all processes.
<b>sorted</b>		(Optional) Sorts the output based on Resident Set Size (RSS).
<b>virtual</b>		(Optional) Specifies virtual memory.
<b>name</b> <i>process-name</i>		Specifies a process name.
<b>maps</b>		Specifies the memory maps of a process.
<b>smaps summary</b>		Specifies the smaps summary of a process.
<b>process-id</b> <i>process-id</i>		Specifies a process identifier.
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

**Command Modes** Privileged EXEC(#)

### Examples:

The following is a sample output from the **show platform software process memory active R0 all** command:

```
Device# show platform software process memory switch active R0 all
```

```
.  
.

```

The table below describes the significant fields shown in the displays.

*Table 10: show platform software process memory Field Descriptions*

Field	Description
PID	Displays the process ID that is used by the operating system to identify and keep track of the processes.
RSS	Displays the Resident Set Size (in kilobytes (KB)) that shows how much memory is allocated to that process in the RAM.
PSS	Displays the Proportional Set Size of a process. This is the count of pages it has in memory, where each page is divided by the number of processes sharing it.
Heap	Displays where all user-allocated memory is located.
Shared	Shared clean + Shared dirty
Private	Private clean + Private dirty
Name	Displays the command name associated with the process. Different threads in the same process may have different command values.

# show platform software process slot switch

To display platform software process switch information, use the **show platform software process slot switch** command in privileged EXEC mode.

```
show platform software process slot switch {switch-number | active | standby} {0 | F0 | R0}
monitor [{cycles no-of-times [{interval delay [{lines number}]}}]
```

Syntax Description		
	<i>switch-number</i>	Switch number.
	<b>active</b>	Specifies the active instance.
	<b>standby</b>	Specifies the standby instance.
	<b>0</b>	Specifies the shared port adapter (SPA) interface processor slot 0.
	<b>F0</b>	Specifies the Embedded Service Processor (ESP) slot 0.
	<b>R0</b>	Specifies the Route Processor (RP) slot 0.
	<b>monitor</b>	Monitors the running processes.
	<b>cycles</b> <i>no-of-times</i>	(Optional) Sets the number of times to run monitor command. Valid values are from 1 to 4294967295. The default is 5.
	<b>interval</b> <i>delay</i>	(Optional) Sets a delay after each . Valid values are from 0 to 300. The default is 3.
	<b>lines</b> <i>number</i>	(Optional) Sets the number of lines of output displayed. Valid values are from 0 to 512. The default is 0.

**Command Modes** Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

**Usage Guidelines** The output of the **show platform software process slot switch** and **show processes cpu platform monitor location** commands display the output of the Linux **top** command. The output of these commands display Free memory and Used memory as displayed by the Linux **top** command. The values displayed for the Free memory and Used memory by these commands do not match the values displayed by the output of other platform-memory related CLIs.

## Examples

The following is sample output from the **show platform software process slot monitor** command:

```
Switch# show platform software process slot switch active R0 monitor
```

## show platform software process slot switch

# show platform software thread list

To display the list of threads on a platform, use the **show platform software thread list** command in privileged EXEC mode.

**show platform software thread list switch** { *switch-number* | **active** | **standby** } { **0** | **F0** | **FP active** | **R0** } **pname** { **cdman** | **vidman** | **all** } **tname** { **main** | **pktio** | **rt** | **all** }

## Syntax Description

<b>switch</b> <i>switch-number</i>	Displays information about the switch. Enter the switch number.
<b>active</b>	Specifies the active instance of the device.
<b>standby</b>	Specifies standby instance of the device.
<b>0</b>	Specifies the Shared Port Adapter (SPA) Interface Processor slot 0.
<b>F0</b>	Specifies the Embedded Service Processor (ESP) slot 0.
<b>FP active</b>	Specifies the active instance of Embedded Service Processor (ESP).
<b>R0</b>	Specifies the Route Processor (RP) slot 0.
<b>pname</b>	Specifies a process name. The possible values are <b>cdman</b> , <b>vidman</b> , and <b>all</b> .
<b>tname</b>	Specifies a thread name. The possible values are <b>main</b> , <b>pktio</b> , <b>rt</b> , and <b>all</b> .

## Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

## Command Modes

Privileged EXEC(#)

### Examples:

The following is sample output from the **show platform software thread list switch active R0 pname cdman tname all** command:

```
Device# show platform software thread list switch active R0 pname cdman tname all
Name          Tid    PPid  Group Id  Core   Vcswch  Nvcswch  Status  Priority
TIME+  Size
-----
cdman         8407   7295   8407     1       0         0    S         20
12309  36976
```

The table below describes the significant fields shown in the displays.

**Table 11: show platform software thread list Field Descriptions**

<b>Field</b>	<b>Description</b>
Name	Displays the command name associated with the process. Different threads in the same process may have different command values.
Tid	Displays the process ID.
PPid	Displays the process ID of the parent process.
Group Id	Displays the group ID.
Core	Displays processor information.
Veswch	Displays the number of voluntary context switches.
Nvcswch	Displays the number of non-voluntary context switches.
Status	Displays the process status in human readable form.
Priority	Displays the negated scheduling priority.
TIME+	Displays the time since the start of the process.
Size	Displays the Resident Set Size (in kilobytes (KB)) that shows how much memory is allocated to that process in the RAM.

# show platform usb status

To display the status of the USB ports on a device, use the **show platform usb status** command in Privileged EXEC mode.

**show platform usb status**

**Command Modes**

Privileged EXEC (#)

---

**Command History**

---

<b>Release</b>	<b>Modification</b>
Cisco IOS XE Bengaluru 17.5.1	This command was introduced.

---

---

**Examples**

The following is a sample output of the **show platform usb status** command:

```
Device> enable
Device# show platform usb status
USB Disabled
```

# show processes cpu platform

To display information about the CPU utilization of the IOS-XE processes, use the **show processes cpu platform** command in privileged EXEC mode.

**show processes cpu platform** [ [ **sorted** [ **1min** | **5min** | **5sec** ] ] **location**  
**switch** { *switch-number* | **active** | **standby** } { **F0** | **FP active** | **R0** | **RP active** }

Syntax Description		
<b>sorted</b>	(Optional) Displays output sorted based on percentage of CPU usage on a platform.	
<b>1min</b>	(Optional) Sorts based on 1 minute intervals.	
<b>5min</b>	(Optional) Sorts based on 5 minute intervals.	
<b>5sec</b>	(Optional) Sorts based on 5 second intervals.	
<b>location</b>	Specifies the Field Replaceable Unit (FRU) location.	
<b>switch</b> <i>switch-number</i>	Displays information about the switch. Enter the switch number.	
<b>active</b>	Specifies the active instance of the device.	
<b>standby</b>	Specifies the standby instance of the device.	
<b>F0</b>	Specifies the Embedded Service Processor (ESP) slot 0.	
<b>FP active</b>	Specifies active instances on the Embedded Service Processor (ESP).	
<b>R0</b>	Specifies the Route Processor (RP) slot 0.	
<b>RP active</b>	Specifies active instances on the Route Processor (RP).

# show processes cpu platform monitor

To displays information about the CPU utilization of the IOS-XE processes, use the **show processes cpu platform monitor** command in privileged EXEC mode.

```
show processes cpu platform monitor location switch {switch-number | active | standby} {0 | F0 | R0}
```

Syntax Description	Parameter	Description
	<b>location</b>	Displays information about the Field Replaceable Unit (FRU) location.
	<b>switch</b>	Specifies the switch.
	<i>switch-number</i>	Switch number.
	<b>active</b>	Specifies the active instance.
	<b>standby</b>	Specifies the standby instance.
	<b>0</b>	Specifies the shared port adapter (SPA) interface processor slot 0.
	<b>F0</b>	Specifies the Embedded Service Processor (ESP) slot 0.
	<b>R0</b>	Specifies the Route Processor (RP) slot 0.

**Command Modes** Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

**Usage Guidelines** The output of the **show platform software process slot switch** and **show processes cpu platform monitor location** commands display the output of the Linux **top** command. The output of these commands display Free memory and Used memory as displayed by the Linux **top** command. The values displayed for the Free memory and Used memory by these commands do not match the values displayed by the output of other platform-memory related CLIs.

## Examples

The following is sample output from the **show processes cpu monitor location switch active R0** command:

```
Switch# show processes cpu platform monitor location switch active R0

## Related Commands

Command	Description
<b>show platform software process slot switch</b>	Displays platform software process switch information.

# show processes memory

To display the amount of memory used by each system process, use the **show processes memory** command in privileged EXEC mode.

```
show processes memory [{ process-id | sorted [{ allocated | getbufs | holding }]}]
```

## Syntax Description

<i>process-id</i>	(Optional) Process ID (PID) of a specific process. When you specify a process ID, only details for the specified process will be shown.
<b>sorted</b>	(Optional) Displays memory data sorted by the Allocated, Get Buffers, or Holding column. If the <b>sorted</b> keyword is used by itself, data is sorted by the Holding column by default.
<b>allocated</b>	(Optional) Displays memory data sorted by the Allocated column.
<b>getbufs</b>	(Optional) Displays memory data sorted by the Getbufs (Get Buffers) column.
<b>holding</b>	(Optional) Displays memory data sorted by the Holding column. This keyword is the default.

## Command Modes

Privileged EXEC (#)

## Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

## Usage Guidelines

The **show processes memory** command and the **show processes memory sorted** command displays a summary of total, used, and free memory, followed by a list of processes and their memory impact.

If the standard **show processes memory process-id** command is used, processes are sorted by their PID. If the **show processes memory sorted** command is used, the default sorting is by the Holding value.

**Note** Holding memory of a particular process can be allocated by other processes also, and so it can be greater than the allocated memory.

The following is sample output from the **show processes memory** command:

```
Device# show processes memory

Processor Pool Total: 25954228 Used: 8368640 Free: 17585588
  PID TTY  Allocated    Freed   Holding   Getbufs   Retbufs Process
  --- ---  ---
  0  0    8629528    689900   6751716         0         0 *Init*
  0  0     24048    12928    24048         0         0 *Sched*
  0  0         260     328      68      350080         0 *Dead*
  1  0         0         0    12928         0         0 Chunk Manager

      8329440 Total

```

The table below describes the significant fields shown in the display.

**Table 12: show processes memory Field Descriptions**

Field	Description
Processor Pool Total	Total amount of memory, in kilobytes (KB), held for the Processor memory pool.
Used	Total amount of used memory, in KB, in the Processor memory pool.
Free	Total amount of free memory, in KB, in the Processor memory pool.
PID	Process ID.
TTY	Terminal that controls the process.
Allocated	Bytes of memory allocated by the process.
Freed	Bytes of memory freed by the process, regardless of who originally allocated it.
Holding	Amount of memory, in KB, currently allocated to the process. This includes memory allocated by the process and assigned to the process.
Getbufs	Number of times the process has requested a packet buffer.
Retbufs	Number of times the process has relinquished a packet buffer.
Process	Process name.
*Init*	System initialization process.
*Sched*	The scheduler process.
*Dead*	Processes as a group that are now dead.
<value> Total	Total amount of memory, in KB, held by all processes (sum of the “Holding” column).

The following is sample output from the **show processes memory** command when the **sorted** keyword is used. In this case, the output is sorted by the Holding column, from largest to smallest.

```

Device# show processes memory sorted

Processor Pool Total: 25954228 Used: 8371280 Free: 17582948
PID TTY Allocated Freed Holding Getbufs Retbufs Process
 0 0 8629528 689900 6751716 0 0 *Init*

```

```

The following is sample output from the **show processes memory** command when a process ID (*process-id*) is specified:

```
Device# show processes memory 1
```

```

Process ID: 1
Process Name: Chunk Manager
Total Memory Held: 8428 bytes
Processor memory holding = 8428 bytes
pc = 0x60790654, size = 6044, count = 1
pc = 0x607A5084, size = 1544, count = 1
pc = 0x6076DBC4, size = 652, count = 1
pc = 0x6076FF18, size = 188, count = 1
I/O memory holding = 0 bytes

```

```
Device# show processes memory 2
```

```

Process ID: 2
Process Name: Load Meter
Total Memory Held: 3884 bytes
Processor memory holding = 3884 bytes
pc = 0x60790654, size = 3044, count = 1
pc = 0x6076DBC4, size = 652, count = 1
pc = 0x6076FF18, size = 188, count = 1
I/O memory holding = 0 bytes

```

#### Related Commands

Command	Description
<b>show memory</b>	Displays statistics about memory, including memory-free pool statistics.
<b>show processes</b>	Displays information about the active processes.

# show processes memory platform

To display memory usage for each Cisco IOS XE process, use the **show processes memory platform** command in privileged EXEC mode.

Syntax	Description
<b>accounting</b>	(Optional) Displays the top memory allocators for each Cisco IOS XE process.
<b>detailed</b>	(Optional) Displays detailed memory information for a specified Cisco IOS XE process.
<b>name</b> <i>process-name</i>	(Optional) Displays the Cisco IOS XE process name. Enter the process name.
<b>process-id</b> <i>process-ID</i>	(Optional) Displays the Cisco IOS XE process ID. Enter the process ID.
<b>location</b>	(Optional) Displays information about the Field Replaceable Unit (FRU) location.
<b>maps</b>	(Optional) Displays memory maps of a process.
<b>smaps</b>	(Optional) Displays static memory maps of a process.
<b>sorted</b>	(Optional) Displays the sorted output based on the Resident Set Size (RSS) memory used by Cisco IOS XE process.
<b>switch</b> <i>switch-number</i>	Displays information about the device.
<b>active</b>	Displays information about the active instance of the device.
<b>standby</b>	Displays information about the standby instance of the device.
<b>0</b>	Displays information about Shared Port Adapter (SPA)-Inter-Processor slot 0.
<b>F0</b>	Displays information about Embedded Service Processor (ESP) slot 0.
<b>R0</b>	Displays information about Route Processor (RP) slot 0.
<b>Command Modes</b>	Privileged EXEC (#)
<b>Command History</b>	
<b>Release</b>	<b>Modification</b>
Cisco IOS XE Everest 16.5.1a	This command was introduced.

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was modified. The keyword <b>accounting</b> was added.  The <b>Total</b> column was deleted from the output.

# show processes platform

To display information about the IOS-XE processes running on a platform, use the **show processes platform** command in privileged EXEC mode.

**show processes platform** [**detailed name** *process-name*] [**location** **switch** {*switch-number* | **active** | **standby**} {**0** | **F0** | **FP active** | **R0**}]

<b>detailed</b>	(Optional) Displays detailed information of the specified IOS-XE process.
<b>name</b> <i>process-name</i>	(Optional) Specifies the process name.
<b>location</b>	(Optional) Specifies the Field Replaceable Unit (FRU) location.
<b>switch</b> <i>switch-number</i>	(Optional) Displays information about the switch.
<b>active</b>	(Optional) Specifies the active instance of the device.
<b>standby</b>	(Optional) Specifies standby instance of the device.
<b>0</b>	Specifies the Shared Port Adapter (SPA) Interface Processor slot 0.
<b>F0</b>	Specifies the Embedded Service Processor (ESP) slot 0.
<b>FP active</b>	Specifies the active instance in the Embedded Service Processor (ESP).
<b>R0</b>	Specifies the Route Processor (RP) slot 0.

## Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

## Command Modes

Privileged EXEC(#)

### Examples:

The following is sample output from the **show processes platform** command:

```
Device# show processes platform
```

```
CPU utilization for five seconds: 1%, one minute: 2%, five minutes: 1%
```

```

  Pid   PPid  Status   Size  Name
-----
    1     0    S        4876  systemd
    2     0    S         0  kthreadd

```

The table below describes the significant fields shown in the displays.

**Table 13: show processes platform Field Descriptions**

Field	Description
Pid	Displays the process ID.

Field	Description
PPid	Displays the process ID of the parent process.
Status	Displays the process status in human readable form.
Size	Displays the Resident Set Size (in kilobytes (KB)) that shows how much memory is allocated to that process in the RAM.
Name	Displays the command name associated with the process. Different threads in the same process may have different command values.

## show system mtu

To display the global maximum transmission unit (MTU) or maximum packet size set for the switch, use the **show system mtu** command in privileged EXEC mode.

```
show system mtu
```

---

**Syntax Description** This command has no arguments or keywords.

---

**Command Default** None

---

**Command Modes** Privileged EXEC (#)

---

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

---

---

**Usage Guidelines** For information about the MTU values and the stack configurations that affect the MTU values, see the **system mtu** command.

---

**Examples** This is an example of output from the **show system mtu** command:

```
Device# show system mtu
Global Ethernet MTU is 1500 bytes.
```

# show tech-support

To automatically run **show** commands that display system information, use the **show tech-support** command in the privilege EXEC mode.

## show tech-support

[**cef** | **cft** | **eigrp** | **evc** | **fnf** | | **ipc** | **ipmulticast** | **ipsec** | **mfib** | **nat** | **nbar** | **onep** | **ospf** | **page** | **password** | **rsvp** | **subscriber** | **vrrp** | **wccp**

### Syntax Description

<b>cef</b>	(Optional) Displays CEF related information.
<b>cft</b>	(Optional) Displays CFT related information.
<b>eigrp</b>	(Optional) Displays EIGRP related information.
<b>evc</b>	(Optional) Displays EVC related information.
<b>fnf</b>	(Optional) Displays flexible netflow related information.
<b>ipc</b>	(Optional) Displays IPC related information.
<b>ipmulticast</b>	(Optional) Displays IP multicast related information.
<b>ipsec</b>	(Optional) Displays IPSEC related information.
<b>mfib</b>	(Optional) Displays MFIB related information.
<b>nat</b>	(Optional) Displays NAT related information.
<b>nbar</b>	(Optional) Displays NBAR related information.
<b>onep</b>	(Optional) Displays ONEP related information.
<b>ospf</b>	(Optional) Displays OSPF related information.
<b>page</b>	(Optional) Displays the command output on a single page at a time. Use the Return key to display the next line of output or use the space bar to display the next page of information. If not used, the output scrolls (that is, it does not stop for page breaks).  Press the <b>Ctrl-C</b> keys to stop the command output.
<b>password</b>	(Optional) Leaves passwords and other security information in the output. If not used, passwords and other security-sensitive information in the output are replaced with the label "<removed>".
<b>rsvp</b>	(Optional) Displays IP RSVP related information.
<b>subscriber</b>	(Optional) Displays subscriber related information.
<b>vrrp</b>	(Optional) Displays VRRP related information.
<b>wccp</b>	(Optional) Displays WCCP related information.

### Command Modes

Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Everest 16.5.1a	This command was implemented.

### Usage Guidelines

The output from the **show tech-support** command is very long. To better manage this output, you can redirect the output to a file (for example, **show tech-support > filename** ) in the local writable storage file system or the remote file system. Redirecting the output to a file also makes sending the output to your Cisco Technical Assistance Center (TAC) representative easier.

You can use one of the following redirection methods:

- **> filename** - Redirects the output to a file.
- **>> filename** - Redirects the output to a file in append mode.

## show tech-support bgp

To automatically run show commands that display BGP related system information, use the **show tech-support bgp** command in the privileged EXEC mode.

```
show tech-support bgp [address-family {all | ipv4 [flowspec | multicast | unicast | [mdt
| mvpn] {all | vrf vrf-instance-name} ] | ipv6 [flowspec | multicast | mvpn {all | vrf
vrf-instance-name} | unicast] | l2vpn [evpn | vpls] | link-state [link-state] | [nsap |
rtfilter] [unicast] | [vpn4 | vpn6] [flowspec | multicast | unicast] {all | vrf
vrf-instance-name} } ] [detail]
```

### Syntax Description

<b>address-family</b>	(Optional) Displays the output for a specified address family.
<b>address-family all</b>	(Optional) Displays the output for all address families.
<b>ipv4</b>	(Optional) Displays the output for IPv4 address family.
<b>ipv6</b>	(Optional) Displays the output for IPv6 address family.
<b>l2vpn</b>	(Optional) Displays the output for L2VPN address family.
<b>link-state</b>	(Optional) Displays the output for Link State address family.
<b>nsap</b>	(Optional) Displays the output for NSAP address family.
<b>rtfilter</b>	(Optional) Displays the output for RT Filter address family.
<b>vpn4</b>	(Optional) Displays the output for VPNv4 address family.
<b>vpn6</b>	(Optional) Displays the output for VPNv6 address family.
<b>flowspec</b>	(Optional) Displays the flowspec related information for an address family.
<b>multicast</b>	(Optional) Displays the multicast related information for an address family.
<b>unicast</b>	(Optional) Displays the unicast related information for an address family.
<b>mdt</b>	(Optional) Displays the Multicast Distribution Tree (MDT) related information for an address family.

<b>mvpn</b>	(Optional) Displays the Multicast VPN (MVPN) related information for an address family.
<b>vrf</b>	Displays the information for a VPN Routing/Forwarding instance.
<b>evpn</b>	(Optional) Displays the Ethernet VPN (EVPN) related information for an address family.
<b>vpls</b>	(Optional) Displays the Virtual Private LAN Services (VPLS) related information for an address family.
<i>vrf-instance-name</i>	Specifies the name of the VPN Routing/Forwarding instance.
<b>all</b>	Displays the information about all VPN NLRIs.
<b>detail</b>	(Optional) Displays the detailed routes information.

**Command Modes**

User EXEC (>)  
Privileged EXEC (#)

**Command History**

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

**Usage Guidelines**

The **show tech-support bgp** command is used to display the outputs of various BGP show commands and log them to the show-tech file. The output from the **show tech-support bgp** command is very long. To better manage this output, you can redirect the output to a file (for example, **show tech-support > filename**) in the local writable storage file system or the remote file system. Redirecting the output to a file also makes sending the output to your Cisco Technical Assistance Center (TAC) representative easier.

You can use one of the following redirection methods:

- > filename - Redirects the output to a file.
- >> filename - Redirects the output to a file in append mode.

The following **show** commands run automatically when the **show tech-support bgp** command is used:

- **show clock**
- **show version**
- **show running-config**
- **show process cpu sorted**
- **show process cpu history**
- **show process memory sorted**

The following **show** commands for a specific address family run automatically when the **show tech-support bgp address-family address-family-name address-family-modifier** command is used:

- **show bgp** *address-family-name* *address-family-modifier* **summary**
- **show bgp** *address-family-name* *address-family-modifier* **detail**
- **show bgp** *address-family-name* *address-family-modifier* **internal**
- **show bgp** *address-family-name* *address-family-modifier* **neighbors**
- **show bgp** *address-family-name* *address-family-modifier* **update-group**
- **show bgp** *address-family-name* *address-family-modifier* **replication**
- **show bgp** *address-family-name* *address-family-modifier* **community**
- **show bgp** *address-family-name* *address-family-modifier* **dampening dampened-paths**
- **show bgp** *address-family-name* *address-family-modifier* **dampening flap-statistics**
- **show bgp** *address-family-name* *address-family-modifier* **dampening parameters**
- **show bgp** *address-family-name* *address-family-modifier* **injected-paths**
- **show bgp** *address-family-name* *address-family-modifier* **cluster-ids**
- **show bgp** *address-family-name* *address-family-modifier* **cluster-ids internal**
- **show bgp** *address-family-name* *address-family-modifier* **peer-group**
- **show bgp** *address-family-name* *address-family-modifier* **pending-prefixes**
- **show bgp** *address-family-name* *address-family-modifier* **rib-failure**

In addition to the above commands, the following segment routing specific **show** commands also run when the **show tech-support bgp** command is used:

- **show bgp all binding-sid**
- **show segment-routing client**
- **show segment-routing mpls state**
- **show segment-routing mpls gb**
- **show segment-routing mpls connected-prefix-sid-map protocol ipv4**
- **show segment-routing mpls connected-prefix-sid-map protocol backup ipv4**
- **show mpls traffic-eng tunnel auto-tunnel client bgp**

# show tech-support diagnostic

To display diagnostic information for technical support, use the **show tech-support diagnostic** command in privileged EXEC mode.

## show tech-support diagnostic

### Syntax Description

This command has no arguments or keywords.

### Command Modes

Privileged EXEC (#)

### Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

### Usage Guidelines

The output of this command is very long. To better manage this output, you can redirect the output to a file (for example, **show tech-support diagnostic > flash:filename** ) in the local writable storage file system or remote file system.

**Note** For devices that support stacking, this command is executed on every switch that is up. For devices that do not support stacking, this command is executed only on the active switch.

The output of this command displays the output of the following commands:

- **show clock**
- **show version**
- **show running-config**
- **show inventory**
- **show diagnostic bootup level**
- **show diagnostic status**
- **show diagnostic content switch all**
- **show diagnostic result switch all detail**
- **show diagnostic schedule switch all**
- **show diagnostic post**
- **show diagnostic description switch [switch number] test all**
- **show logging onboard switch [switch number] clilog detail**
- **show logging onboard switch [switch number] counter detail**
- **show logging onboard switch [switch number] environment detail**
- **show logging onboard switch [switch number] message detail**

- **show logging onboard switch [switch number] poe detail**
- **show logging onboard switch [switch number] status**
- **show logging onboard switch [switch number] temperature detail**
- **show logging onboard switch [switch number] uptime detail**
- **show logging onboard switch [switch number] voltage detail**

## show tech-support poe

To display the output of all the PoE-related troubleshooting commands, use the **show tech-support poe** command in privileged EXEC mode. This command displays the output of the following commands:

- **show clock**
- **show version**
- **show running-config**
- **show log**
- **show interface**
- **show interface status**
- **show controllers ethernet-controller**
- **show controllers power inline**
- **show cdp neighbors detail**
- **show llpd neighbors detail**
- **show post**
- **show platform software ilpower details**
- **show platform software ilpower system** *switch-id*
- **show power inline**
- **show power inline** *interface-id* **detail**
- **show power inline police**
- **show power inline priority**
- **show platform software trace message platform-mgr switch** *switch-number* *R0*
- **show platform software trace message fed switch** *switch-number*
- **show platform hardware fed switch** *switch-number* **fwd-asic register read** *register-name* *pimdeviceid*
- **show platform frontend-controller manager 0** *switch-number*
- **show platform frontend-controller subordinate 0** *switch-number*
- **show platform frontend-controller version 0** *switch-number*
- **show stack-power budgeting**
- **show stack-power detail**

# speed

To specify the speed of a port, use the **speed** command in interface configuration mode. To return to the default value, use the **no** form of this command.

**Note** Available configuration options depend on the switch model and transceiver module installed. Options include 10, 100, 1000, 2500, 5000, 10000, 25000, 40000, 100000

```
speed {10 | 100 | 1000 | 2500 | 5000 | 10000 | 25000 | 40000 | 100000} auto [{10 | 100 | 1000 | 2500 | 5000}]
| nonegotiate}
no speed
```

## Syntax Description

<b>10</b>	Specifies that the port runs at 10 Mbps.
<b>100</b>	Specifies that the port runs at 100 Mbps.
<b>1000</b>	Specifies that the port runs at 1000 Mbps. This option is valid and visible only on 10/100/1000 Mb/s ports.
<b>2500</b>	Specifies that the port runs at 2500 Mbps. This option is valid and visible only on multi-Gigabit-supported Ethernet ports.
<b>5000</b>	Specifies that the port runs at 5000 Mbps. This option is valid and visible only on multi-Gigabit-supported Ethernet ports.
<b>10000</b>	Specifies that the port runs at 10000 Mbps operation.
<b>25000</b>	Specifies that the port runs at 25000 Mbps operation.
<b>40000</b>	Specifies that the port runs at 40000 Mbps operation.
<b>100000</b>	Specifies that the port runs at 100000 Mbps operation.
<b>auto</b>	Detects the speed at which the port should run, automatically, based on the port at the other end of the link. If you use the <b>10</b> , <b>100</b> , <b>1000</b> , <b>2500</b> , or <b>5000</b> keyword with the <b>auto</b> keyword, the port autonegotiates only at the specified speeds.
<b>nonegotiate</b>	Disables autonegotiation, and the port runs at 1000 Mbps.

## Command Default

The default is **auto**.

## Command Modes

Interface configuration (config-if)

## Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.
Cisco IOS XE Fuji 16.9.2	Support for <b>10000</b> and <b>25000</b> Mbps options with dual-rate transceivers was introduced.

Release	Modification
Cisco IOS XE Gibraltar 16.12.1	Support for <b>40000</b> and <b>100000</b> Mbps options with dual-rate transceivers was introduced.

### Usage Guidelines

You cannot configure speed on 10-Gigabit Ethernet ports.

Except for the 1000BASE-T small form-factor pluggable (SFP) modules, you can configure the speed to not negotiate (**nonegotiate**) when an SFP module port is connected to a device that does not support autonegotiation.

The keywords, **2500** and **5000** are visible only on multi-Gigabit (m-Gig) Ethernet supporting devices.

If the speed is set to **auto**, the switch negotiates with the device at the other end of the link for the speed setting, and then forces the speed setting to the negotiated value. The duplex setting remains configured on each end of the link, which might result in a duplex setting mismatch.

If both ends of the line support autonegotiation, we highly recommend the default autonegotiation settings. If one interface supports autonegotiation and the other end does not, use the auto setting on the supported side, but set the duplex and speed on the other side.

When you install dual-rate transceiver modules (on supported switch models), entering the the **speed** command displays the dual configuration options that are available with the transceiver module. For information about such transceiver modules and device compatibility, see: the [Transceiver Module Group \(TMG\) Compatibility Matrix](#).

**Caution** Changing the interface speed and duplex mode configuration might shut down and re-enable the interface during the reconfiguration.

For guidelines on setting the switch speed and duplex parameters, see the “Configuring Interface Characteristics” chapter in the software configuration guide for this release.

Verify your settings using the **show interfaces** privileged EXEC command.

### Examples

The following example shows how to set speed on a port to 100 Mbps:

```
Device(config)# interface gigabitethernet1/0/1
Device(config-if)# speed 100
```

The following example shows how to set a port to autonegotiate at only 10 Mbps:

```
Device(config)# interface gigabitethernet1/0/1
Device(config-if)# speed auto 10
```

The following example shows how to set a port to autonegotiate at only 10 or 100 Mbps:

```
Device(config)# interface gigabitethernet1/0/1
Device(config-if)# speed auto 10 100
```

# switchport block

To prevent unknown multicast or unicast packets from being forwarded, use the **switchport block** command in interface configuration mode. To allow forwarding unknown multicast or unicast packets, use the **no** form of this command.

**switchport block** {multicast | unicast}  
**no switchport block** {multicast | unicast}

<b>Syntax Description</b>	<b>multicast</b> Specifies that unknown multicast traffic should be blocked.				
	<p><b>Note</b> Only pure Layer 2 multicast traffic is blocked. Multicast packets that contain IPv4 or IPv6 information in the header are not blocked.</p>				
	<b>unicast</b> Specifies that unknown unicast traffic should be blocked.				
<b>Command Default</b>	Unknown multicast and unicast traffic is not blocked.				
<b>Command Modes</b>	Interface configuration (config-if)				
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Everest 16.5.1a</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Everest 16.5.1a	This command was introduced.
	Release	Modification			
Cisco IOS XE Everest 16.5.1a	This command was introduced.				
<b>Usage Guidelines</b>	<p>By default, all traffic with unknown MAC addresses is sent to all ports. You can block unknown multicast or unicast traffic on protected or nonprotected ports. If unknown multicast or unicast traffic is not blocked on a protected port, there could be security issues.</p> <p>With multicast traffic, the port blocking feature blocks only pure Layer 2 packets. Multicast packets that contain IPv4 or IPv6 information in the header are not blocked.</p> <p>Blocking unknown multicast or unicast traffic is not automatically enabled on protected ports; you must explicitly configure it.</p> <p>For more information about blocking packets, see the software configuration guide for this release.</p> <p>This example shows how to block unknown unicast traffic on an interface:</p> <pre>Device(config-if)# switchport block unicast</pre> <p>You can verify your setting by entering the <b>show interfaces interface-id switchport</b> privileged EXEC command.</p>				

## system mtu

To set the global maximum packet size or MTU size for switched packets on Gigabit Ethernet and 10-Gigabit Ethernet ports, use the **system mtu** command in global configuration mode. To restore the global MTU value to its default value, use the **no** form of this command.

```
system mtu bytes
no system mtu
```

<b>Syntax Description</b>	<i>bytes</i> The global MTU size in bytes. The range is 1500 to 9198 bytes; the default is 1500 bytes.	
<b>Command Default</b>	The default MTU size for all ports is 1500 bytes.	
<b>Command Modes</b>	Global configuration (config)	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Cisco IOS XE Everest 16.5.1a	This command was introduced.

**Usage Guidelines**

You can verify your setting by entering the **show system mtu** privileged EXEC command.

The switch does not support the MTU on a per-interface basis.

If you enter a value that is outside the allowed range for the specific type of interface, the value is not accepted.

### Examples

This example shows how to set the global system MTU size to 6000 bytes:

```
Device(config)# system mtu 6000
Global Ethernet MTU is set to 6000 bytes.
Note: this is the Ethernet payload size, not the total
Ethernet frame size, which includes the Ethernet
header/trailer and possibly other tags, such as ISL or
802.1q tags.
```

## voice-signaling vlan (network-policy configuration)

To create a network-policy profile for the voice-signaling application type, use the **voice-signaling vlan** command in network-policy configuration mode. To delete the policy, use the **no** form of this command.

```
voice-signaling vlan {vlan-id [{cos cos-value | dscp dscp-value}] | dot1p [{cos l2-priority | dscp dscp}] | none | untagged}
```

### Syntax Description

<b>vlan-id</b>	(Optional) The VLAN for voice traffic. The range is 1 to 4094.
<b>cos</b> <i>cos-value</i>	(Optional) Specifies the Layer 2 priority class of service (CoS) for the configured VLAN. The range is 0 to 7; the default is 5.
<b>dscp</b> <i>dscp-value</i>	(Optional) Specifies the differentiated services code point (DSCP) value for the configured VLAN. The range is 0 to 63; the default is 46.
<b>dot1p</b>	(Optional) Configures the phone to use IEEE 802.1p priority tagging and to use VLAN 0 (the native VLAN).
<b>none</b>	(Optional) Does not instruct the Cisco IP phone about the voice VLAN. The phone uses the configuration from the phone key pad.
<b>untagged</b>	(Optional) Configures the phone to send untagged voice traffic. This is the default for the phone.

### Command Default

No network-policy profiles for the voice-signaling application type are defined.

The default CoS value is 5.

The default DSCP value is 46.

The default tagging mode is untagged.

### Command Modes

Network-policy profile configuration

### Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

### Usage Guidelines

Use the **network-policy profile** global configuration command to create a profile and to enter network-policy profile configuration mode.

The voice-signaling application type is for network topologies that require a different policy for voice signaling than for voice media. This application type should not be advertised if all of the same network policies apply as those advertised in the voice policy TLV.

When you are in network-policy profile configuration mode, you can create the profile for voice-signaling by specifying the values for VLAN, class of service (CoS), differentiated services code point (DSCP), and tagging mode.

These profile attributes are contained in the Link Layer Discovery Protocol for Media Endpoint Devices (LLDP-MED) network-policy time-length-value (TLV).

To return to privileged EXEC mode from the network-policy profile configuration mode, enter the **exit** command.

This example shows how to configure voice-signaling for VLAN 200 with a priority 2 CoS:

```
Device(config)# network-policy profile 1  
Device(config-network-policy)# voice-signaling vlan 200 cos 2
```

This example shows how to configure voice-signaling for VLAN 400 with a DSCP value of 45:

```
Device(config)# network-policy profile 1  
Device(config-network-policy)# voice-signaling vlan 400 dscp 45
```

This example shows how to configure voice-signaling for the native VLAN with priority tagging:

```
Device(config-network-policy)# voice-signaling vlan dot1p cos 4
```

## voice vlan (network-policy configuration)

To create a network-policy profile for the voice application type, use the **voice vlan** command in network-policy configuration mode. To delete the policy, use the **no** form of this command.

```
voice vlan {vlan-id [{cos cos-value | dscp dscp-value}] | dot1p [{cos l2-priority | dscp dscp}] | none | untagged}
```

### Syntax Description

<b>vlan-id</b>	(Optional) The VLAN for voice traffic. The range is 1 to 4094.
<b>cos</b> <i>cos-value</i>	(Optional) Specifies the Layer 2 priority class of service (CoS) for the configured VLAN. The range is 0 to 7; the default is 5.
<b>dscp</b> <i>dscp-value</i>	(Optional) Specifies the differentiated services code point (DSCP) value for the configured VLAN. The range is 0 to 63; the default is 46.
<b>dot1p</b>	(Optional) Configures the phone to use IEEE 802.1p priority tagging and to use VLAN 0 (the native VLAN).
<b>none</b>	(Optional) Does not instruct the Cisco IP phone about the voice VLAN. The phone uses the configuration from the phone key pad.
<b>untagged</b>	(Optional) Configures the phone to send untagged voice traffic. This is the default for the phone.

### Command Default

No network-policy profiles for the voice application type are defined.

The default CoS value is 5.

The default DSCP value is 46.

The default tagging mode is untagged.

### Command Modes

Network-policy profile configuration

### Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

### Usage Guidelines

Use the **network-policy profile** global configuration command to create a profile and to enter network-policy profile configuration mode.

The voice application type is for dedicated IP telephones and similar devices that support interactive voice services. These devices are typically deployed on a separate VLAN for ease of deployment and enhanced security through isolation from data applications.

When you are in network-policy profile configuration mode, you can create the profile for voice by specifying the values for VLAN, class of service (CoS), differentiated services code point (DSCP), and tagging mode.

These profile attributes are contained in the Link Layer Discovery Protocol for Media Endpoint Devices (LLDP-MED) network-policy time-length-value (TLV).

To return to privileged EXEC mode from the network-policy profile configuration mode, enter the **exit** command.

This example shows how to configure the voice application type for VLAN 100 with a priority 4 CoS:

```
Device(config)# network-policy profile 1
Device(config-network-policy)# voice vlan 100 cos 4
```

This example shows how to configure the voice application type for VLAN 100 with a DSCP value of 34:

```
Device(config)# network-policy profile 1
Device(config-network-policy)# voice vlan 100 dscp 34
```

This example shows how to configure the voice application type for the native VLAN with priority tagging:

```
Device(config-network-policy)# voice vlan dot1p cos 4
```
