

# IPv6 Support for SGT and SGACL

The IPv6 Support for SGT and SGACL feature facilitates the mapping between IPv6 addresses and security group tags (SGTs). The mapped SGTs are later used to drive the Security Group Access Control List (SGACL) enforcement.

This module describes how to configure this feature.

- Restrictions for IPv6 SGT and SGACL, on page 1
- Information About IPv6 Support for SGT and SGACL, on page 1
- How to Configure IPv6 Support for SGT and SGACL, on page 2
- Verifying IPv6 Support for SGT and SGACL, on page 6
- Configuration Examples for IPv6 Support for SGT and SGACL, on page 7
- Feature History for IPv6 Support for SGT and SGACL, on page 8

# **Restrictions for IPv6 SGT and SGACL**

• IPv6 for SGT and SGACL feature is not supported on the Cisco Catalyst 9600 Series Supervisor 2 Module (C9600X-SUP-2).

# Information About IPv6 Support for SGT and SGACL

# **Components of IPv6 Dynamic Learning**

Dynamic learning of IPv6 addresses requires three components:

- Switch Integrated Security Features (SISF): An infrastructure built to take care of security, address assignment, address resolution, neighbor discovery, exit point discovery, and so on.
- Cisco Enterprise Policy Manager (EPM): A solution that registers with SISF to receive IPv6 address notifications. The Cisco EPM then uses the IPv6 addresses and SGTs downloaded from the Cisco Identity Services Engine (ISE) to generate IP-SGT bindings.
- Cisco TrustSec: A solution that protects devices from unauthorized access. Cisco TrustSec assigns an SGT to the ingress traffic of a device and enforces the access policy based on the tag anywhere in the network.

Mapping of IPv6 addresses to SGT can be done using the following methods, which are listed from lowest priority (1) to highest priority (6):

- 1. VLAN: IPv6 addresses learnt through SISF on the VLAN that has an SGT-VLAN mapping. Bindings are learned through ICMPv6 Neighbor Discovery.
- **2.** CLI: Address bindings configured using the IP-SGT form of the **cts role-based sgt-map** global configuration command.
- **3.** Layer 3 Interface: Bindings added due to forwarding information base (FIB) forwarding entries that have paths through one or more interfaces with consistent Layer 3 interface-SGT mapping or identity port mapping (IPM) on routed ports.
- 4. SXP: Bindings learned from SGT Exchange Protocol (SXP) peers.
- **5.** Local: Bindings of authenticated hosts that are learned via EPM and device tracking. (Device tracking and SISF are the same.)
- **6.** Internal: Bindings between locally configured IP addresses and the device SGT.

# How to Configure IPv6 Support for SGT and SGACL

This section describes how to configure IPv6 support for SGT and SGACL.

## **Learning IPv6 Addresses for IP-SGT Bindings**

SISF is a feature that learns IPv6 addresses for use in IP-SGT bindings.

### **Procedure**

	Command or Action	Purpose	
Step 1	enable	Enables privileged EXEC mode.	
	Example:	Enter your password if prompted.	
	Device> enable		
Step 2	configure terminal	Enters global configuration mode.	
	Example:		
	Device# configure terminal		
Step 3	cts role-based sgt-map host-address/prefix sgt sgt-value	Manually maps a source IPv6 address to an SC on either a host or a virtual routing and	
	Example:	forwarding (VRF) instance.	
	Device(config)# cts role-based sgt-map 2001::db8::1/64 sgt 120		
Step 4	device-tracking policy policy-name	Enables device tracking and enters device	
	Example:	tracking configuration mode.	
	Device(config)# device-tracking policy policy1		

	Command or Action	Purpose
Step 5	tracking enable	Overrides the default tracking policy on a port.
	Example:	
	Device(config-device-tracking)# tracking enable	1
Step 6	exit	Exits device tracking configuration mode and
	Example:	returns to privileged EXEC mode.
	Device(config-device-tracking)# end	

# **Configuring IPv6 IP-SGT Binding Using Local Binding**

### Before you begin

- In local binding, SGT values are downloaded from Cisco Identity Service Engine (ISE). For more information, see the Configuring Cisco Security Group Access Policies document.
- SISF must be enabled and populated before IPv6 address can be generated.

Note

This task uses Cisco Identity Based Networking Services (IBNS) Version 2.0.

### **Procedure**

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Device> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Device# configure terminal	
Step 3	policy-map type control subscriber	Defines a control policy for subscriber sessions
	control-policy-name	and enters control policy-map configuration
	Example:	mode.
	Device(config) # policy-map type control subscriber policy1	
Step 4	event session-started match-all	Specifies the type of event that triggers actions
	Example:	in a control policy if conditions are met.
	Device(config-event-control-policymap)# event session-started match-all	

	Command or Action	Purpose
Step 5	<pre>priority-number class always do-until-failure  Example: Device(config-class-control-policymap) #   10 class always do-until-failure</pre>	actions in a control policy and enters action control policy-map configuration mode.
Step 6	<pre>action-number authenticate using mab Example: Device(config-action-control-policymap)# 10 authenticate using mab</pre>	Initiates the authentication of a subscriber session using the specified method.
Step 7	<pre>end Example: Device(config-action-control-policymap)# exit</pre>	Exits action control policy-map configuration mode and returns to global configuration mode.
Step 8	<pre>interface gigabitethernet interface-number Example:    Device(config) # interface    gigabitethernet 1/0/1</pre>	Configures an interface and enters interface configuration mode.
Step 9	<pre>description interface-description Example:    Device(config-if) # description downlink    to ipv6 clients</pre>	Describes the configured interface.
Step 10	<pre>switchport access vlan vlan-id Example: Device(config-if)# switchport access vlan 20</pre>	Sets access mode characteristics of the interface and configures VLAN when the interface is in access mode.
Step 11	<pre>switchport mode access  Example:    Device(config-if)# switchport mode access</pre>	Sets the trunking mode to access mode.
Step 12	<pre>device-tracking attach-policy policy-name Example:    Device(config-if) # device-tracking attach-policy snoop</pre>	Applies a policy to the IPv6 Snooping feature.
Step 13	access-session port-control auto  Example:  Device(config-if) # access-session port-control auto	Sets the authorization state of a port.

	Command or Action	Purpose
Step 14	mab eap	Uses Extensible Authentication Protocol (EAP)
	Example:	for MAC authentication bypass.
	Device(config-if)# mab eap	
Step 15	dot1x pae authenticator	Enables dot1x authentication on the port.
	Example:	
	Device(config-if)# dot1x pae authenticator	
Step 16	service-policy type control subscriber	Specifies the policy map that is used for
	policy-name	sessions that come up on this interface. The policy map has rules for authentication and
	Example:	authorization
	Device(config-if)# service-policy type control subscriber policy	uunoi izunoii.
Step 17	end	Exits interface configuration mode and returns
	Example:	to privileged EXEC mode.
	Device(config-if)# end	
Step 18	show cts role-based sgt-map all ipv6	Displays active IPv6 IP-SGT bindings.
	Example:	
	Device# show cts role-based sgt-map all ipv6	

# **Configuring IPv6 IP-SGT Binding Using a VLAN**

In a VLAN, a network administrator assigns SGT values to a particular VLAN.

### **Procedure**

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Device> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Device# configure terminal	
Step 3	cts role-based sgt-map vlan-list vlan-id sgt	Assigns an SGT value to the configured VLAN.
	sgt-value	<b>Note</b> The range of the <i>sgt-value</i>
	Example:	argument must be from 2 to
	Device(config)# cts role-based sgt-map vlan-list 20 sgt 3	65519.

	Command or Action	Purpose
Step 4	end	Exits global configuration mode and returns to
	Example:	privileged EXEC mode.
	Device(config)# end	
Step 5	show cts role-based sgt-map all ipv6	Displays active IPv6 IP-SGT bindings.
	Example:	
	Device# show cts role-based sgt-map all ipv6	

# **Verifying IPv6 Support for SGT and SGACL**

#### **Procedure**

### Step 1 enable

Enables privileged EXEC mode.

• Enter your password if prompted.

## Example:

Device> enable

### Step 2 show cts role-based sgt-map all

Displays active IPv4 and IPv6 IP-SGT bindings.

#### **Example:**

Device# show cts role-based sgt-map all

Active IPv4-SGT Bindings Information

IP Address	SGT	Source
192.0.2.1	8	INTERNAL
192.0.2.2	8	INTERNAL
192.0.2.3	11	LOCAL

IP-SGT Active Bindings Summary

Total number of LOCAL bindings = 1 Total number of INTERNAL bindings = 2 Total number of active bindings = 3

Active IPv6-SGT Bindings Information

IP Address	SGT	Source
2001:DB8:0:ABCD::1	8	INTERNAL
2001:DB8:1::1	11	LOCAL
2001:DB8:1::1	11	LOCAL

```
IP-SGT Active Bindings Summary

Total number of LOCAL bindings = 2

Total number of INTERNAL bindings = 1

Total number of active bindings = 3
```

### Step 3 show cts role-based sgt-map all ipv6

Displays active IPv6 IP-SGT bindings.

### **Example:**

```
Device# show cts role-based sgt-map all ipv6
```

Active IP-SGT Bindings Information

IP Address	SGT	Source
2001:DB8:1::1 2001:DB8:1:FFFF::1 2001:DB8:9798:8294:753F::1 2001:DB8:8E99:DA94:8A6A::2 2001:DB8:104:2001::139 2001:DB8:104:2001:14FE:9798:8294:753F	10 27 5 5 27 27	CLI VLAN LOCAL LOCAL VLAN LOCAL
IP-SGT Active Bindings Summary		
Total number of VLAN bindings = 2 Total number of CLI bindings = 1 Total number of LOCAL bindings = 3 Total number of active bindings = 6		

# Configuration Examples for IPv6 Support for SGT and SGACL

The following sections show how to configure IPv6 Support for SGT and SGACL.

## **Example: Learning IPv6 Addresses for IP-SGT Bindings**

The following example shows how to learn IPv6 addresses for IP-SGT bindings:

```
Device> enable
Device# configure terminal
Device(config)# cts role-based sgt-map 2001::db8::1/64 sgt 120
Device(config)# device-tracking policy policy1
Device(config-device-tracking)# tracking enable
Device(config-device-tracking)# end
```

## **Example: Configuring IPv6 IP-SGT Binding Using Local Binding**

The following example uses IBNS Version 2.0.

```
Device> enable
Device# configure terminal
Device(config) # policy-map type control subscriber policy1
Device (config-event-control-policymap) # event session-started match-all
Device (config-class-control-policymap) # 10 class always do-until-failure
Device(config-action-control-policymap) # 10 authenticate using mab
Device(config-action-control-policymap)# exit
Device (config) # interface gigabitethernet 1/0/1
Device(config-if) # description downlink to ipv6 clients
Device (config-if) # switchport access vlan 20
Device (config-if) # switchport mode access
Device(config-if) # device-tracking attach-policy snoop
Device(config-if)# access-session port-control auto
Device(config-if) # mab eap
Device (config-if) # dot1x pae authenticator
Device(config-if)# service-policy type control subscriber policy
Device(config-if)# end
```

## **Example: Configuring IPv6 IP-SGT Binding Using a VLAN**

The following example shows how to configure IP-SGT binding using a VLAN:

```
Device> enable
Device# configure terminal
Device(config)# cts role-based sgt-map vlan-list 20 sgt 3
Device(config)# end
```

# Feature History for IPv6 Support for SGT and SGACL

This table provides release and related information for the features explained in this module.

These features are available in all the releases subsequent to the one they were introduced in, unless noted otherwise.

Release	Feature	Feature Information
Cisco IOS XE Gibraltar 16.11.1	IPv6 Support for SGT and SGACL	The IPv6 Support for SGT and SGACL feature introduces dynamic learning of mappings between IP addresses and SGTs for IPv6 addresses. The SGTs are later used to derive the SGACL.
Cisco IOS XE Dublin 17.11.1	IPv6 Support for SGT and SGACL	Support for this feature was introduced on the Cisco Catalyst 9600 Series Supervisor 2 Module.

Use the Cisco Feature Navigator to find information about platform and software image support. To access Cisco Feature Navigator, go to <a href="http://www.cisco.com/go/cfn">http://www.cisco.com/go/cfn</a>.
