Tracing Commands

Information About Tracing

Information About Trace Management

The tracing functionality logs internal events. Trace files are automatically created and saved on the persistent storage device of specific platforms.

The contents of trace files are useful to troubleshoot if a device has an issue. The trace file outputs provide information that can be used for locating and solving the issue, and helps to get a detailed view of system actions and operations.

To view the most recent trace information for a specific process, use the **show logging [process | Profile | process-helper]** command. The process uses the name of the process, the profile lists predefined set of process names, and the profile-helper displays the available names.

To change the verbosity in a trace message output, you can adjust the trace level of processes using the **set platform software trace level** command. You can choose the **all** keyword to adjust the trace level for all the processes listed or you can select a specific process. When you select a specific process, there is also the option of adjust the trace level for a specific module or the **all-modules** keyword can be used to adjust all the process's modules.

Tracing Levels

Trace level determines the types of traces outputted. Each trace message is assigned a trace level. If the trace level of a process or its module it set at a greater than or equal to level as the trace message, the trace message is displayed otherwise, it is skipped. For example, the default trace level is **Notice** level, so all traces with the **Notice** level and below the notice level are included while the traces above the **Notice** level are excluded.

The following table shows all of the tracing levels that are available, and provides descriptions of the message that are displayed with each tracing level. The tracing levels listed in the table are from the lowest to the highest order. The default trace level is **Notice**.

Table 1: Tracing Levels and Descriptions

Tracing Level	Description
Fatal	The message stating the process is aborted.
Emergency	The message is regarding an issue that makes the system unusable.
Alert	The message indicating that an action must be taken immediately.
Critical	The message is regarding a critical event causing loss of important functions.
Error	The message is regarding a system error.
Warning	The message is regarding a system warning.
Notice	The message is regarding a significant event.

Tracing Level	Description
Informational	The message is useful for informational purposes only.
Debug	The message provides debug-level output.
Verbose	All possible trace messages are sent.
Noise	All possible trace messages for the module are logged. The noise level is always equal to the highest possible tracing level. Even if a future enhancement to tracing introduces a higher tracing level, the noise level will become equal to the level of that new enhancement.

set platform software trace

To set the trace level for a specific module within a process, use the **set platform software trace** command in privileged EXEC or user EXEC mode.

set platform software trace *process slot module trace-level*

Syntax Description

process	Process whose tracing level is being set. Options include: • **chassis-manager**—The Chassis Manager process. • **cli-agent**—The CLI Agent process. • **dbm**—The Database Manager process. • **emd**—The Environmental Monitoring process. • **fed**—The Forwarding Engine Driver process. • **forwarding-manager**—The Forwarding Manager process. • **host-manager**—The Host Manager process. • **iomd**—The Input/Output Module daemon (IOMd) process. • **ios**—The IOS process. • **license-manager**—The License Manager process. • **logger**—The Logging Manager process. • **platform-mgr**—The Platform Manager process. • **pluggable-services**—The Pluggable Services process. • **replication-mgr**—The Replication Manager process. • **shell-manager**—The Shell Manager process. • **smd**—The Session Manager process. • **table-manager**—The Table Manager Server. • **wireless**—The wireless controller module process. • **wireshark**—The Embedded Packet Capture (EPC) Wireshark process.

slot	Hardware slot where the process for which the trace level is set, is running. Options include: • *number*—Number of the SIP slot of the hardware module where the trace level is set. For instance, if you want to specify the SIP in SIP slot 2 of the switch, enter 2. • *SIP-slot / SPA-bay*—Number of the SIP switch slot and the number of the shared port adapter (SPA) bay of that SIP. For instance, if you want to specify the SPA in bay 2 of the SIP in switch slot 3, enter 3/2. • **F0**—The Embedded-Service-Processor in slot 0. • **FP active**—The active Embedded-Service-Processor. • **R0**—The route processor in slot 0. • **RP active**—The active route processor. • **switch** <*number*> —The switch with its number specified. • **switch active**—The active switch. • **switch standby**—The standby switch.
module	Module within the process for which the tracing level is set.

trace-level	Trace level. Options include: • **debug**—Debug level tracing. A debug-level trace message is a non-urgent message providing a large amount of detail about the module. • **emergency**—Emergency level tracing. An emergency-level trace message is a message indicating that the system is unusable. • **error**—Error level tracing. An error-level tracing message is a message indicating a system error. • **info**—Information level tracing. An information-level tracing message is a non-urgent message providing information about the system. • **noise**—Noise level tracing. The noise level is always equal to the highest tracing level possible and always generates every possible tracing message. The noise level is always equal to the highest-level tracing message possible for a module, even if future enhancements to this command introduce options that allow users to set higher tracing levels. • **notice**—The message is regarding a significant issue, but the switch is still working normally. • **verbose**—Verbose level tracing. All possible tracing messages are sent when the trace level is set to verbose. • **warning**—Warning messages.

Command Default

The default tracing level for all modules is **notice**.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
	This command was introduced.

Usage Guidelines

The *module* options vary by process and by *hardware-module*. Use the ? option when entering this command to see which *module* options are available with each keyword sequence.

Trace files are stored in the tracelogs directory in the harddisk: file system. These files can be deleted without doing any harm to your switch operation.

Trace file output is used for debugging. The trace level is a setting that determines how much information should be stored in trace files about a module.

Examples

This example shows how to set the trace level for all the modules in dbm process:

```
# set platform software trace dbm R0 all-modules debug
```

show platform software trace level

To view the trace levels for all the modules under a specific process, use the **show platform software trace level** command in privileged EXEC or user EXEC mode.

show platform software trace level *process slot*

Syntax Description

process	Process whose tracing level is being set. Options include: • **chassis-manager**—The Chassis Manager process. • **cli-agent**—The CLI Agent process. • **cmm**—The CMM process. • **dbm**—The Database Manager process. • **emd**—The Environmental Monitoring process. • **fed**—The Forwarding Engine Driver process. • **forwarding-manager**—The Forwarding Manager process. • **geo**—The Geo Manager process. • **host-manager**—The Host Manager process. • **interface-manager**—The Interface Manager process. • **iomd**—The Input/Output Module daemon (IOMd) process. • **ios**—The IOS process. • **license-manager**—The License Manager process. • **logger**—The Logging Manager process. • **platform-mgr**—The Platform Manager process. • **pluggable-services**—The Pluggable Services process. • **replication-mgr**—The Replication Manager process. • **shell-manager**—The Shell Manager process. • **sif**—The Stack Interface (SIF) Manager process. • **smd**—The Session Manager process. • **stack-mgr**—The Stack Manager process. • **table-manager**—The Table Manager Server. • **thread-test**—The Multithread Manager process. • **virt-manager**—The Virtualization Manager process. • **wireless**—The wireless controller module process.

slot	Hardware slot where the process for which the trace level is set, is running. Options include:
	• *number*—Number of the SIP slot of the hardware module where the trace level is set. For instance, if you want to specify the SIP in SIP slot 2 of the switch, enter 2.
	• *SIP-slot / SPA-bay*—Number of the SIP switch slot and the number of the shared port adapter (SPA) bay of that SIP. For instance, if you want to specify the SPA in bay 2 of the SIP in switch slot 3, enter 3/2.
	• **F0**—The Embedded Service Processor in slot 0.
	• **F1**—The Embedded Service Processor in slot 1.
	• **FP active**—The active Embedded Service Processor.
	• **R0**—The route processor in slot 0.
	• **RP active**—The active route processor.
	• **switch** <*number*> —The switch, with its number specified.
	• **switch active**—The active switch.
	• **switch standby**—The standby switch.
	  • *number*—Number of the SIP slot of the hardware module where the trace level is set. For instance, if you want to specify the SIP in SIP slot 2 of the switch, enter 2.
	  • *SIP-slot / SPA-bay*—Number of the SIP switch slot and the number of the shared port adapter (SPA) bay of that SIP. For instance, if you want to specify the SPA in bay 2 of the SIP in switch slot 3, enter 3/2.
	  • **F0**—The Embedded Service Processor in slot 0.
	  • **FP active**—The active Embedded Service Processor.
	  • **R0**—The route processor in slot 0.
	  • **RP active**—The active route processor.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
	This command was introduced.

Examples

This example shows how to view the trace level:

```
# show platform software trace level dbm switch active R0
```

```
Module Name                      Trace Level

request platform software trace archive

To archive all the trace logs relevant to all the processes running on a system since the last reload on the switch and to save this in the specified location, use the **request platform software trace archive** command in privileged EXEC or user EXEC mode.

request platform software trace archive [**last** *number-of-days* [**days** [**target** *location*]] | **target** *location*]

Syntax Description

last *number-of-days*	Specifies the number of days for which the trace files have to be archived.
target *location*	Specifies the location and name of the archive file.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
	This command was introduced.

Usage Guidelines

This archive file can be copied from the system, using the tftp or scp commands.

Examples

This example shows how to archive all the trace logs of the processes running on the switch since the last 5 days:

```
# request platform software trace archive last 5 days target flash:test_archive
```

show platform software btrace-manager

To display the most recent UTF/UTM information for a specific module, use the **show platform software btrace-manager** command in privileged EXEC or user EXEC mode.

show platform software trace filter-binary *filter* [**status** *UTF* *UTM*]

Syntax Description

filter	Shows the UTF binary stream filter.
status	Shows the status of the binary trace manager filter.
UTF	Shows the UTF unified trace file.
UTM	Shows the UTM trace encoder.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

Examples

```
Device# show platform software btrace-manager R0 utf
Estimated disk usage for UTF storage (mbytes):.........61
Disk UTF quota set from: default
Stored preserved UTF time window (current boot):
 [2023/03/17 08:40:00.419987197] - [2023/03/17 20:16:59.895805251]
Stored non-preserved UTF time window (current boot): none
Disk usage for UTF storage (mbytes):...................23
Maximum number of files to retain:.....................27
Number of retained UTF files:..........................18
Maximum inflated UTF file size (mbytes):...............20
Maximum number of files to preserve:...................2
Number of preserved UTF files:.........................2
Stale messages from stream:............................0
Compressed file write failures (disk full):............0
```

```
Device# show platform software btrace-manager R0 UTM brief
Current Time ............................ Fri Mar 17 20:55:25 2023
Unified Consolidated Mode ............... FALSE
Process [Main-ID / Demux-ID / FRU ] .... [6382 / 17304 / RP-FRU]
Number of Processes  .................... 79
Number of Active trace files  ........... 61
Message Rate/Sec [Current/Average/Peak]. 20 / 11 / 10356
Total Messages .......................... 311406
```

set logging

To display the time zone for logging operations, use the **set logging** command in privileged EXEC or user EXEC mode.

set logging { **backtrace** *process* | **marker** *string* | **ra** { **collect** } | **timezone** { **UTC** | **local** } | **tracelog-number** *process* | **tracelog-files-to-preserve** *number* | **tracelog-storage-quota** *size* }

Syntax Description

backtrace	Displays the backtrace details of a specific process.
marker	Selects the logs corresponding to the specified marker: • **start last marker**— The **latest** matching marker in the marker list. • **end marker**— The first matching marker **after** the start marker.
timezone	Sets the time zone to be displayed in trace logs. The time zone set by using the **set logging** command is displayed for the trace logs of **show logging** and **monitor logging** commands. If the time zone is not set for a device, then the trace logss appear in Cordinated Universal Time (UTC).
ra	Sets the RA attributes.
tracelog-number	Sets the tracelog number of a specific process.
tracelog-files-to-preserve	Set amount of files to preserve from rotation
tracelog-storage-quota	Set Tracelog files to preserve

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Fuji 16.9.x	This command was introduced.

Usage Guidelines

In scenarios where the time zone has already been set and the trace logs need to be dispalyed in UTC, use the command **set logging timezone UTC** and the trace logs will appear in UTC. Note that using this command, you can only configure how you want to see the timestamp for trace logs. The timestamps within the trace file is not modified.

This example shows the trace logs when the time zone is set to **UTC**.

```
device_2_9222#show clock *06:14:29.031 IST Fri Oct 4 2019

device_2_9222#show logging process ios
Displaying logs from the last 0 days, 0 hours, 5 minutes, 13 seconds
executing cmd on chassis 1 ...
Collecting files on current[1] chassis.
# of files collected = 15
2019/10/04 06:12:38.051848 {IOSRP_R0-0}{1}: [iosrp] [6107]: (info): *Oct 4 00:42:37.992:
%VUDI-6-EVENT:
[serial number: 9SQTGKYU119], [vUDI: ], vUDI is successfully retrieved from license file

device_2_9222#set logging timezone UTC

device_2_9222#show logging process ios
Displaying logs from the last 0 days, 0 hours, 5 minutes, 40 seconds
executing cmd on chassis 1 ...
Collecting files on current[1] chassis.
# of files collected = 15
2019/10/04 00:42:38.051848 {IOSRP_R0-0}{1}: [iosrp] [6107]: (info): *Oct 4 00:42:37.992:
%VUDI-6-EVENT:
[serial number: 9SQTGKYU119], [vUDI: ], vUDI is successfully retrieved from license file
```

This example shows the trace logs when the time zone is set to **local**.

```
device_2_9222#set logging timezone local

device_2_9222#show logging process ios
Displaying logs from the last 0 days, 0 hours, 7 minutes, 32 seconds
executing cmd on chassis 1 ...
Collecting files on current[1] chassis.
# of files collected = 12
2019/10/04 06:12:38.051848 {IOSRP_R0-0}{1}: [iosrp] [6107]: (info): *Oct 4 00:42:37.992:
%VUDI-6-EVENT: [serial number: 9SQTGKYU119], [vUDI: ], vUDI is successfully retrieved from
 license file
```

set logging marker

To add a marker trace to all the processes, use the **set logging marker** command. Use the **show logging markers** command to see the markers that were set using the **set logging marker** along with the timestamp.

set logging marker *marker-name*

Syntax Description

marker-name	Sets the marker trace in the trace logs of a process. The marker string entered is not case sensitive.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Fuji 16.9.x	This command was introduced.

This example show how to set a logging marker.

```
Device# set logging marker global_100

Device# show logging markers
Timestamp UTC                 Marker
-------------------------------------------------------------------------------
2023/03/13 10:31:34.667836    global_100
```

show logging

To display the state of system logging (syslog) and the contents of the standard system logging buffer, use the **show logging** command in privileged EXEC or user EXEC mode.

show logging

Syntax Description

This command has no arguments or keywords.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Fuji 16.9.x	This command was introduced.

Examples

This example shows the output of the **show logging** command:

```
device# show logging
Syslog logging: enabled (0 messages dropped, 2 messages rate-limited, 0 flushes, 0 overruns,
 xml disabled, filtering disabled)
No Active Message Discriminator.

No Inactive Message Discriminator.

    Console logging: level debugging, 67 messages logged, xml disabled,
                     filtering disabled
    Monitor logging: level debugging, 0 messages logged, xml disabled,
                     filtering disabled
    Buffer logging:  level debugging, 160 messages logged, xml disabled,
                    filtering disabled
    Exception Logging: size (4096 bytes)
    Count and timestamp logging messages: disabled
    File logging: disabled
    Persistent logging: disabled

No active filter modules.

    Trap logging: level informational, 157 message lines logged
        Logging Source-Interface:       VRF Name:
    TLS Profiles:

Log Buffer (102400 bytes):

*Mar  9 11:32:47.051: %SMART_LIC-6-AGENT_ENABLED: Smart Agent for Licensing is enabled
*Mar  9 11:32:50.053: pagp init: platform supports EC/LACP xFSURA Tracing tool registry
return: 0
*Mar  9 11:32:50.103: LACP-GR: infra cb, GR_NONE

*Mar  9 11:32:50.104: BFD: brace register success
*Mar  9 11:32:52.617: %CRYPTO-4-AUDITWARN: Encryption audit check could not be performed
*Mar  9 11:32:52.617: %CRYPTO_ENGINE-4-CSDL_COMPLIANCE_DISABLED: Cisco PSB security compliance
 has been disabled
*Mar  9 11:32:52.630: %SPANTREE-5-EXTENDED_SYSID: Extended SysId enabled for type vlan
*Mar  9 11:32:52.964: %LINK-3-UPDOWN: Interface Lsmpi18/3, changed state to up
```

```
*Mar  9 11:32:52.976: %LINK-3-UPDOWN: Interface EOBC18/1, changed state to up
*Mar  9 11:32:52.976: %LINEPROTO-5-UPDOWN: Line protocol on Interface LI-Null0, changed
state to up
*Mar  9 11:32:52.977: %LINK-3-UPDOWN: Interface GigabitEthernet0/0, changed state to down
*Mar  9 11:32:52.977: %LINK-3-UPDOWN: Interface LIIN18/2, changed state to up
*Mar  9 11:32:52.977: %LINK-5-CHANGED: Interface Bluetooth0/4, changed state to
administratively down

show logging process

To view messages logged by binary trace for a process or processes, use the **show logging process** command in privileged EXEC or user EXEC mode.

show logging process *process-name*

Syntax Description

process-name	You can choose a certain process for which the logs need to be displayed. Example: **dbm**, **sman**, **ios**, **btman** and so on. The process name is not case sensitive.

Command Default

The default tracing level for all modules is **notice**.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Fuji 16.9.x	This command was introduced.

This example shows how to display the logs below the **notice** level.

```
device#show logging process ios level notice

show logging process-helper

To display the logs for a specific process, use the **show logging process-helper** command in privileged EXEC or user EXEC mode.

show logging process-helper *process-name*

Syntax Description

process-name	You can choose a certain process for which the logs need to be displayed. Example: **bt-logger**, **btrace-manager**, **ios**, **dbm**, **logger**, and so on.

Command Default

The default tracing level for all modules is **notice**.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Fuji 16.9.x	This command was introduced.

The following example shows how to display logs for a specific process.

```

show logging profile

To display the logs for a specific profile, use the **show logging profile** command in privileged EXEC or user EXEC mode.

show logging profile *profile-name*

Syntax Description

profile-name	• **all**: Displays the logs for all processes. • **file**: Displays the logs for a specific profile file. • **hardware-diagnostics**: Displays the logs for the hardware-diagnostics specific processes • **install**: Displays the logs for Install-specific processes. • **netconf-yang**: Displays the logs for netconf-yang specific processes. • **restconf**: Displays the logs for restconf-specific processes. • **sdwan**: Displays the logs for SDWAN-specific processes. • **wireless**: Displays the logs for Wireless-specific processes.

Command Default

None

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Fuji 16.9.x	This command was introduced.

Examples

This examples shows how to display trace logs for all processes:

show logging profile wireless

To display the logs for a specific profile, use the **show logging profile wireless** command in privileged EXEC or user EXEC mode.

show logging profile wireless

Syntax Description

This command has no keywords or arguments.

Command Default

None.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

Usage Guidelines

Ensure that you enable internal keyword using the **show logging profile wireless internal** command to get the trace output.

Without the **internal** keyword, only customer curated logs are displayed.

The following example shows how to display logs for the wireless profile.

```
Device# show logging profile wireless
Logging display requested on 2023/03/13 09:07:09 (UTC) for Hostname: [FABRIEK], Model:

show logging profile wireless end

To specify log filtering end location timestamp for filtering, use the **show logging profile wireless end timestamp** command.

show logging profile wireless end timestamp *time-stamp*
show logging profile wireless end timestamp time-stamp

Syntax Description

time-stamp	The timestamp to end the filtering. For example, 2023/02/10 14:41:50.849.

Command Default

None.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Fuji 16.9.x	This command was introduced.

Usage Guidelines

Ensure that you enable internal keyword using the **show logging profile wireless internal** command to get the trace output.

Without the **internal** keyword, only customer curated logs are displayed.

Examples

The following example shows how to specify log filtering start/end location timestamp for filtering:

```
Device# show logging profile wireless internal start timestamp "2018/07/16 23:09:52.541"
end timestamp "2018/07/16 23:19:52.671" to-file test

excuting cmd on chassis 1 ...
Files being merged in the background, result will be in /bootflash/test log file.
Collecting files on current[1] chassis.
Decoding files:
btrace decoder:         number of files: [48]   number of messages: [5736]
         2018-07-16 23:23:51.451 - btrace decoder processed 17%
         2018-07-16 23:23:51.585 - btrace decoder processed 34%
         2018-07-16 23:23:51.832 - btrace decoder processed 52%
         2018-07-16 23:23:52.108 - btrace decoder processed 69%
         2018-07-16 23:23:52.138 - btrace decoder processed 87%
         2018-07-16 23:23:52.222 - btrace decoder processed 98%
```

show logging profile wireless filter

To specify filter for logs, use the **show logging profile wireless filter** command.

\

show logging profile wireless filter { **interface** | **ipv4** | **ipv6** | **mac** | **ra** | **string** | **uuid** }

Syntax Description

interface	Selects logs with specific interface app context.
ipv4	Selects logs with specific IPv4 address app context.
ipv6	Selects logs with specific IPv6 address app context.
mac	Selects logs with specific MAC app context.
string	Selects logs with specific string app context.
uuid	Selects logs with specific Universally Unique Identifier (UUID) app context.
ra	Selects the radioactive logs.

Command Default

None

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Everest 16.5.1a	This command was introduced.

Usage Guidelines

Ensure that you enable internal keyword using the **show logging profile wireless internal** command to get the trace output.

Without the **internal** keyword, only customer curated logs are displayed.

The following example shows how to specify filter for logs:

```
Device# show logging profile wireless filter mac ECE1.A9DA.0CE0
excuting cmd on chassis 1 ...
Collecting files on current[1] chassis.
Total # of files collected = 28
Decoding files:

```

show logging profile wireless fru

To specify field-replaceable unit (FRU) specific commands, use the **show logging profile wireless fru** command.

show logging profile wireless fru

Syntax Description

0	SM-Inter-Processor slot 0
1	SM-Inter-Processor slot 1
F0	Embedded-Service-Processor slot 0
FP	Embedded-Service-Processor
R0	Route-Processor slot 0
RP	Route-Processor

Command Default

None.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Fuji 16.9.x	This command was introduced.

Usage Guidelines

Ensure that you enable internal keyword using the **show logging profile wireless internal** command to get the trace output.

Without the **internal** keyword, only customer curated logs are displayed.

Examples

The following example shows how to specify FRU specific commands:

```
Device# show logging profile wireless fru switch standby R0
Logging display requested on 2023/03/13 07:39:11 (UTC) for Hostname: [BRU-C9K-153-05],
Model: [C9300-24T], Version: [17.03.05], SN: [FOC24140R40], MD_SN: [FOC2415U0XX]

Displaying logs from the last 0 days, 0 hours, 10 minutes, 0 seconds
Unicasting cmd: chassis 1 route-processor 0

show logging profile wireless level

To select logs above a specific level, use the **show logging profile wireless level** command.

show logging profile wireless level { **debug** | **error** | **info** | **notice** | **verbose** | **warning** }

Syntax Description

debug	Selects the debug-level trace messages.
error	Selects the error-level trace messages.
info	Selects the informational-level trace messages.
notice	Selects the notice-level trace messages.
verbose	Selects the verbose-level trace messages.
warning	Selects the warning-level trace messages.

Command Default

The default tracing level for all modules is **notice**.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Fuji 16.9.x	This command was introduced.

Usage Guidelines

- Ensure that you enable internal keyword using the **show logging profile wireless internal** command to get the trace output. Without the **internal** keyword, only customer curated logs are displayed.
- Trace level determines the types of traces outputted. Each trace message is assigned a trace level. If the trace level of a process or its module it set at a greater than or equal to level as the trace message, the trace messag is displayed otherwise, it is skipped. For example, the default trace level is **Notice** level, so all traces with the **Notice** level and below the **Notice** level are included while the traces above the **Notice** level are excluded.

Examples

The following example shows how to select logs above a specific level:

```
Device# show logging profile wireless level notice
Logging display requested on 2023/03/13 08:00:47 (UTC) for Hostname: [BRU-C9K-153-05],

show logging profile wireless module

To select logs for specific modules, use the **show logging profile wireless module** command.

show logging profile wireless module *module-name*

Syntax Description

module-name	List the module names separated by commas or space. For example, dbal, tdllib or "dbal tdllib".

Command Default

None.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Fuji 16.9.x	This command was introduced.

Usage Guidelines

Ensure that you enable internal keyword using the **show logging profile wireless internal** command to get the trace output.

Without the **internal** keyword, only customer curated logs are displayed.

The following example shows how to select logs for specific modules:

```
Device# show logging profile wireless module dbal
Logging display requested on 2023/03/13 08:53:08 (UTC) for Hostname: [FABRIEK], Model:

show logging profile wireless start

To specify log filtering start location, use the **show logging profile wireless start** command.

show logging profile wireless start { **last** | **marker** | **timestamp** }

Syntax Description

last	Display the logs since last event.
marker	The marker to start filtering from. It must match with previously set marker
timestamp	The timestamp for filtering. for example, "2023/02/10 14:41:50.849".

Command Default

None.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Fuji 16.9.x	This command was introduced.

Usage Guidelines

Ensure that you enable internal keyword using the **show logging profile wireless internal** command to get the trace output.

Without the **internal** keyword, only customer curated logs are displayed.

Examples

The following example shows how to specify log filtering from a specific marker:

```
Device# show logging profile wireless start marker global
Logging display requested on 2023/03/13 08:57:50 (UTC) for Hostname: [BRU-C9K-153-05],

show logging profile wireless switch

To specify the switch to look for logs, use the **show logging profile wireless switch** command.

show logging profile wireless switch { <*switch-nmber*> | **active** | **standby** }

Syntax Description

Chasis-number	The chasis number.
active	Selects the active instance.
standby	Selects the standby instance.

Command Default

None.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Fuji 16.9.x	This command was introduced.

Usage Guidelines

Ensure that you enable internal keyword using the **show logging profile wireless internal** command to get the trace output.

Without the **internal** keyword, only customer curated logs are displayed.

Examples

The following example shows how to specify the chassis number to look for logs:

```
Device# show logging profile wireless switch 1
Logging display requested on 2023/03/13 08:31:03 (UTC) for Hostname: [BRU-C9K-153-05],
Model: [C9300-24T], Version: [17.03.05], SN: [FOC24140R40], MD_SN: [FOC2415U0XX]

Displaying logs from the last 0 days, 0 hours, 10 minutes, 0 seconds
executing cmd on chassis 1 ...

show logging profile wireless to-file

To decode files stored in disk and write the output to a file, use the **show logging profile wireless to-file** command.

show logging profile wireless to-file *output-file-name*

Syntax Description

output-file-name	Output file name. File with this name will be created in the flash/bootflash/crashinfo/harddisk memory.

Command Default

None.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Fuji 16.9.x	This command was introduced.

Usage Guidelines

Ensure that you enable internal keyword using the **show logging profile wireless internal** command to get the trace output.

Without the **internal** keyword, only customer curated logs are displayed.

Examples

The following example shows how to decode files stored in disk and write the output to a file:

```
Device# show logging profile wireless to-file mylog.txt
excuting cmd on chassis 1 ...
Files being merged in the background, result will be in /bootflash/mylog.txt log file.

Device#
Device#dir bootflash:mylog.txt
Directory of bootflash:/mylog.txt

   39  -rw-          1698598  Oct 31 2017 05:29:11 +00:00  mylog.txt

7897796608 bytes total (3338383360 bytes free)
```

show logging profile sdwan

To view messages logged by binary trace for Cisco-SD-WAN-specific processes and process modules, use the **show logging profile sdwan** command in the privileged EXEC mode. The messages are displayed in chronological order.

show logging profile sdwan
[{ **extract-pcap to-file** *path* | [**end timestamp** *ts*] [**module** *name*] [**internal**] [**start** { **last** { *n* { **days** | **hours** | **minutes** | **seconds** } **clear boot** } | **timestamp** *ts* } [**end** { **last** { *n* { **days** | **hours** | **minutes** | **seconds** } **clear boot** } | **timestamp** *ts* }]] [**level** *level*] [**fru** *slot*] [{ **reverse** | [{ **trace-on-failure** | **metadata** }] [**to-file** *path*] }] }]

Syntax Description

extract-pcap to-file *path*	Extracts pcap data to a file.
end timestamp *ts*	Shows logs up to the specified timestamp.
module *name*	Selects logs for specific modules.
internal	Selects all logs.
start{ **last** { *n* {**days** | **hours** | **minutes** | **seconds**} | **clear** | **boot**} | **timestamp** *ts*}[**end**{ **last** { *n* {**days** | **hours** | **minutes** | **seconds**} | **clear** | **boot**} | **timestamp** *ts*}]	Shows logs collected between the specified start and end times.
level *level*	Shows logs for the specified and higher levels.
fru *slot*	Shows logs from a specific FRU.
reverse	Shows logs in reverse chronological order.
to-file *path*	Decodes files stored in disk and writes output to file.
trace-on-failure	Shows the trace on failure summary.
metadata	Shows metadata for every log message.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Release 17.4.1a	Command support introduced for select Cisco SD-WAN processes.

Usage Guidelines

Table 2: Supported Cisco SD-WAN Daemons

Cisco SD-WAN Daemons	Supported from Release
• fpmd • ftm • ompd • vdaemon • cfgmgr	Cisco IOS XE Release 17.4.1a

Example

The following example shows a truncated output of the **show logging profile sdwan start last boot internal** command. From the timestamps, we can see that the messages are shown in a chronological order.

```
Device# show logging profile sdwan start last boot internal
Logging display requested on 2020/11/18 18:59:16 (UTC) for Hostname: [Device], Model:
[ISR4451-X/K9], Version: [17.04.01], SN: [FOC23125GHG], MD_SN: [FGL231432EQ]

show logging profile sdwan internal

To view messages logged by binary trace for Cisco-SD-WAN-specific processes and process modules, use the **show logging profile sdwan internal** command in the privileged EXEC mode. The messages are displayed in chronological order.

show logging profile sdwan internal

Syntax Description

end timestamp *ts*	Shows logs up to the specified timestamp.
start{ **last** { *n* {**days** | **hours** | **minutes** | **seconds**} | **clear** | **boot**} | **timestamp** *ts*}[**end**{ **last** { *n* {**days** | **hours** | **minutes** | **seconds**} | **clear** | **boot**} | **timestamp** *ts*}]	Shows logs collected between the specified start and end times.
level *level*	Shows logs for the specified and higher levels.
fru *slot*	Shows logs from a specific FRU.
reverse	Shows logs in reverse chronological order.
to-file *path*	Decodes files stored in disk and writes output to file.
trace-on-failure	Shows the trace on failure summary.
metadata	Shows metadata for every log message.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Release 17.4.1a	Command support introduced for select Cisco SD-WAN processes.

Usage Guidelines

Table 3: Supported Cisco SD-WAN Daemons

Cisco SD-WAN Daemons	Supported from Release
• fpmd • ftm • ompd • vdaemon • cfgmgr	Cisco IOS XE Release 17.4.1a

Example

```
Device# show logging profile sdwan internal start last boot
Logging display requested on 2023/03/17 20:24:21 (UTC) for Hostname: [FABRIEK], Model:
[C8300-1N1S-4T2X], Version: [17.12.01], SN: [FDO24190V85], MD_SN: [FDO2451M13G]

Displaying logs from the last 0 days, 11 hours, 43 minutes, 34 seconds
executing cmd on chassis local ...

```

show log file

To display the log files in bootflash:, crashinfo:, flash:, harddisk:, or webui:, use the **show log file** command.

show log file

Syntax Description

This command has no arguments or keywords.

Command Default

None.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Fuji 16.9.x	This command was introduced.

Examples

This example shows how to display binary encoded logs on the /harddisk/tracelogs directory:

```
# show log file flash:tracelogs/wncmgrd_R0-0.31953_1984.20171030025730.bin

excuting cmd on chassis 1 ...
Decoding files:

2017/10/30 02:57:30.189 {wncmgrd_R0-0}{1}: [hl-core] [31953]: UUID: 1000000042b94, ra: 15,
 (debug): AP ece1.a9da.0ce0 is detected as unknown and is ignored for L1
2017/10/30 02:57:30.190 {wncmgrd_R0-0}{1}: [hl-core] [31953]: UUID: 1000000042b95, ra: 15,
 (debug): AP ece1.a9da.0ce0 is detected as unknown and is ignored for L1
2017/10/30 02:57:30.655 {wncmgrd_R0-0}{1}: [capwapac-srvr] [31953]: UUID: 1000000042b9d,
ra: 15, (info): MAC: ece1.a9da.0ce0  IP:90.90.90.244[51099], Discovery Request received
2017/10/30 02:57:30.655 {wncmgrd_R0-0}{1}: [capwapac-srvr] [31953]: UUID: 1000000042b9d,
ra: 15,
```

monitor logging

To monitor log generation in real-time for a process or a profile, use the **monitor logging** command in privileged EXEC or user EXEC mode.

monitor logging

Syntax Description

This command has no arguments or keywords.

Command Default

None.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Fuji 16.9.x	This command was introduced.

Examples

This example shows how to monitor logs for a device:

```
Device# monitor logging
Displaying traces starting from 2023/03/13 13:54:44.000000.  If no traces are present, the
 command will wait until one is.

```

monitor logging filter

To specify filter for monitorin logs, use the **monitor logging** command.

monitor logging filter { **interface** | **ipv4** | **ipv6** | **mac** | **ra** | **string** | **uuid** }

Syntax Description

interface	Selects logs with specific interface app context.
ipv4	Selects logs with specific IPv4 address app context.
ipv6	Selects logs with specific IPv6 address app context.
mac	Selects logs with specific MAC app context.
string	Selects logs with specific string app context.
uuid	Selects logs with specific Universally Unique Identifier (UUID) app context.
ra	Selects the radioactive logs.

Command Default

None.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Fuji 16.9.x	This command was introduced.

Examples

The following example show how to specify filter for monitoring logs.

```
Device# monitor logging filter mac ECE1.A9DA.0CE0
Device# monitor logging filter uuid 0x1f00000000014
```

monitor logging level

To monitor logs above a specific level, use the **monitor logging level** command.

monitor logging level { **debug** | **error** | **info** | **notice** | **verbose** | **warning** }

Syntax Description

debug	Selects the debug-level trace messages.
error	Selects the error-level trace messages.
info	Selects the informational-level trace messages.
notice	Selects the notice-level trace messages.
verbose	Selects the verbose-level trace messages.
warning	Selects the warning-level trace messages.

Command Default

The default tracing level for all modules is **notice**.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Fuji 16.9.x	This command was introduced.

Examples

The following example shows how to monitor logs above a specific level.

```
Device# monitor logging level debug
```

monitor logging metadata

To display metadata for every log message, use the **monitor logging metadata** command.

monitor logging metadata

Syntax Description

This command has no arguments or keywords.

Command Default

None.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Fuji 16.9.x	This command was introduced.

The following example show how to view the metadata of a log message.

```
#monitor logging metadata
Displaying traces starting from 2023/03/13 16:14:38.000000.  If no traces are present, the
 command will wait until one is.
Unified Decoder Library Init .. DONE

monitor logging process-helper

To monitor log generation in real-time for a process or a profile, use the **monitor logging** command in privileged EXEC or user EXEC mode.

monitor logging process-helper process-name

Syntax Description

process-name	You can choose a certain process for which the logs need to be monitored. Example: **bt-logger**, **btrace-manager**, **ios**, **dbm**, **logger**, and so on.

Command Default

None.

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Fuji 16.9.x	This command was introduced.

Examples

The following example shows how to monitor logs for a specific process.

```
Device# monitor logging process-helper ios
Displaying traces starting from 2023/03/13 16:38:08.000000.  If no traces are present, the
 command will wait until one is.
