- [Information about Tenant Routed Multicast](#), on page 2
- [How to Configure Tenant Routed Multicast](#), on page 6
- [Verifying Tenant Routed Multicast](#), on page 12
- [Troubleshooting Tenant Routed Multicast](#), on page 13
- [Configuration Examples for Tenant Routed Multicast](#), on page 13

## Restrictions for Tenant Routed Multicast

- Only Layer 3 Tenant Routed Multicast (TRM) is supported.
- Layer 2 TRM is not supported.
- TRM works only on the Default Multicast Distribution Tree (MDT).
- In the underlay network, TRM is supported only in the PIM-SM mode.
- In the underlay network, the spine switch should be configured as the Rendezvous Point (RP).
- In the overlay network, TRM is supported in the PIM-SM and PIM-SSM mode.
- Only Layer 3 Tenant Routed Multicast (TRM) is supported.
- Layer 2 TRM is not supported.
- Layer 3 TRM is not supported for IPv6 traffic in the underlay networks.  
In the overlay networks, Layer 3 TRM is supported for both IPv4 and IPv6 traffic.
- TRM works only on the Default Multicast Distribution Tree (MDT).
- In the underlay network, TRM is supported only in the PIM-SM mode. In the overlay network, it is supported in the PIM-SM with Distributed Anycast-RP mode, PIM-SM with External-RP mode, and PIM-SSM mode.
- In the underlay network, the spine switch should be configured as the Rendezvous Point (RP).
- In the overlay network, each of the VTEPs must be configured as the RP for TRM in Distributed Anycast-RP mode.
- For External RP with EVPN AnycastGW, separate register-source loopback is needed in FHR

- E-BGP and I-BGP are supported.
- BGP router-reflector is also supported.

## Information about Tenant Routed Multicast

TRM enables multicast forwarding in a VXLAN fabric that uses a BGP-based EVPN control plane. TRM provides multi-tenancy aware multicast forwarding between senders and receivers within the same or different subnets local or across VTEPs.

This feature brings the efficiency of multicast delivery to VXLAN overlay networks. TRM enables the delivery of a customer's IP multicast traffic in a multi-tenant fabric in an efficient and resilient manner. The delivery of TRM improves Layer-3 overlay multicast functionality in the networks.

With TRM enabled, multicast forwarding in the underlay is leveraged to replicate VXLAN-encapsulated routed multicast traffic. A default-MDT is built per-VRF. This is an addition to the existing multicast groups for broadcast and unknown unicast traffic in a Layer 2 Virtual Network Instance (VNI), and for Layer 2 multicast replication group. The individual multicast group addresses in the overlay are mapped to the respective underlay multicast address for replication and transport. The advantage of using a BGP-based approach is that it allows the BGP EVPN VXLAN fabric with TRM to operate as fully distributed Overlay Rendezvous-Point (RP), with the RP presence on every edge-device or VTEP.

A multicast-enabled data center fabric is typically part of an overall multicast network. Multicast sources, receivers, and multicast rendezvous points, might reside inside the data center but might also be inside the campus or externally reachable via the WAN. TRM allows a seamless integration with existing multicast networks.

For IPv4 and IPv6 multicast traffic, TRM uses BGP EVPN and MVPN routes to perform multicast routing.

**Figure 1: Tenant Routed Multicast Topology**

Source detection triggers advertising of EVPN route type 2 in the EVPN fabric. This EVPN route installed in Layer 3 RIB at a receiver VTEP is used as the RPF route towards the source. Thus, if the source is undetected, the RPF for the (S,G) entry is not found. In this case, either RPF remains NULL or a less specific route is installed if present in the RIB.

In EVPN-VXLAN network, TRM is supported in the overlay network in PIM-SM and PIM-SSM modes.

## PIM-SM with Distributed Anycast-RP Mode

In PIM-SM with Distributed Anycast-RP Mode, each of the VTEPs must be the RP in the overlay network for their respective groups. The rendezvous points in the underlay network must be configured on the spine switches. All the VTEPs do not need to be BGP peers. There can be BGP peering between the VTEPs and the spine switches with the spine switches acting as route reflectors.

When a VTEP discovers a source device, it sends Source A-D Routes (MVPN Route Type 5) to all the other VTEPs. Based on these Source A-D routes, the other VTEPs send (S,G) join requests as MVPN route type 7 to the source VTEP.

Figure 2: PIM-SM with Distributed Anycast-RP Mode

1. IGMP Join for (\*,G) from Receiver Device to VTEP 3.
2. Data Traffic from Source Device to VTEP 1.
3. Source A-D Route for (S,G) from VTEP 1 to VTEP 2 and VTEP 3.
4. MVPN route type 7 from VTEP 3 to VTEP 1.
5. Data Traffic from VTEP 1 to VTEP 3.

In PIM-SM with Distributed Anycast-RP Mode, the following sequence of events occurs:

1. Receiver sends (\*,G) IGMP Join to VTEP 3. Since VTEP 3 is an RP, (\*,G) is created at VTEP 3.
2. The source device starts streaming data and (S,G) is created on VTEP 1.

#### Note

When PIM-SM with Distributed Anycast-RP Mode is enabled, the first packet is dropped.

3. VTEP 1 performs self-source-registration since it is also an RP.
4. The source VTEP (VTEP 1) advertises Source A-D Routes (also called MVPN route type 5) for (S,G) to all the other VTEPs which are BGP peers in the MVPN address family.

5. VTEP 2 and VTEP 3 receive and install the Source A-D Routes for (S,G).
6. (S,G) is created at VTEP 3. VTEP 3 now has an overlay route for (S,G) and also has a unicast route to the source device from the EVPN Control plane. It then sends an MVPN route type 7 (S,G) BGP join to VTEP 1 and starts accepting traffic.
7. VTEP 1 receives and installs MVPN route type 7 from VTEP 3. It uses the Layer 3 VNI's SVI as the forwarding interface for (S,G) and starts forwarding traffic.

## PIM-SSM Mode

In PIM-SSM Mode, the Source A-D route (MVPN route type 5) is not needed for the multicast convergence to happen. The receiver VTEP does not wait to receive the Source A-D route to send the MVPN route type 7.

**Figure 3: PIM-SSM Mode**

1. IGMP Join for (S,G) from Receiver Device to VTEP 3.
2. MVPN route type 7.
3. Data Traffic for (S,G) from Source Device to VTEP 1.
4. Data Traffic from VTEP 1 to VTEP 3.

In PIM-SSM Mode, the following sequence of events occurs:

1. When the source device sends a unicast packet, VTEP 1 sends out EVPN routes to all the other VTEPs, letting them know that the packet is from the source device.
2. The receiver sends an (S,G) IGMP join towards VTEP 3 and an (S,G) entry is created.
3. VTEP 3 performs an RPF lookup for the source device. If the SVI of the Layer 3 VNI is found to be the RPF interface, VTEP 3 sends MVPN route type 7 towards VTEP 1.
4. VTEP 1 receives and installs the MVPN route type 7. VTEP 1 creates an (S,G) entry, using the Layer 3 VNI's SVI as the forwarding interface for (S,G).
5. The source device sends (S,G) data to VTEP 1 which starts forwarding the traffic to VTEP 3.

## How to Configure Tenant Routed Multicast

### Prerequisites to Configuring TRM

Before configuring TRM, ensure that EVPN VXLAN Layer 2 and Layer 3 Overlay networks have been configured. See [How to Configure EVPN VXLAN Integrated Routing and Bridging](#) for detailed steps to configure Layer 2 and Layer 3 overlay networks.

Perform the following set of procedures to configure TRM in an EVPN VXLAN network:

## Configuring the TRM Multicast Distribution Tree in the VRF

To configure the TRM MDT, perform the following steps:

### Procedure

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b> <b>Example:</b> Device> <b>enable</b>	Enables privileged EXEC mode. Enter your password, if prompted.
<b>Step 2</b>	<b>configure terminal</b> <b>Example:</b> Device# <b>configure terminal</b>	Enters global configuration mode.
<b>Step 3</b>	<b>vrf definition</b> <i>vrf-name</i> <b>Example:</b> Device(config)# <b>vrf definition green</b>	Names the VRF and enters VRF configuration mode.
<b>Step 4</b>	<b>address-family</b> { <b>ipv4</b>   <b>ipv6</b> } <b>Example:</b> Device(config-vrf)# <b>address-family ipv4</b>	Specifies the VRF and enters VRF address family configuration mode. <ul style="list-style-type: none"> <li>• Use the <b>ipv4</b> keyword to configure IPv4 address family.</li> </ul>

	Command or Action	Purpose
		<ul style="list-style-type: none"> <li>Use the <b>ipv6</b> keyword to configure IPv6 address family.</li> </ul>
<b>Step 5</b>	<b>mdt default vxlan <i>group-address</i></b>  <b>Example:</b> Device(config-vrf-af)# <b>mdt default vxlan 225.2.2.2</b>	Configures the multicast group address range for default MDT groups for a VRF in a VXLAN.
<b>Step 6</b>	<b>mdt auto-discovery vxlan [ <i>inter-as</i> ]</b>  <b>Example:</b> Device(config-vrf-af)# <b>mdt auto-discovery vxlan</b>	Enables VXLAN with BGP auto-discovery.  Use the <b>inter-as</b> keyword for the MVPN address family routes to cross the BGP autonomous system (AS) boundaries.
<b>Step 7</b>	<b>mdt overlay use-bgp [ <i>spt-only</i> ]</b>  <b>Example:</b> Device(config-vrf-af)# <b>mdt overlay use-bgp spt-only</b>	Configures the mechanism that is used by TRM in PIM sparse mode to operate within the BGP EVPN VXLAN fabric.  Specifies BGP as the overlay protocol. <ul style="list-style-type: none"> <li>Use the <b>mdt overlay use-bgp spt-only</b> command to configure PIM sparse mode with anycast RP.</li> <li>Use the <b>mdt overlay use-bgp</b> command to configure PIM sparse mode with a single RP either inside or outside the BGP EVPN VXLAN fabric.</li> </ul>
<b>Step 8</b>	<b>exit-address-family</b>  <b>Example:</b> Device(config-vrf-af)# <b>exit-address-family</b>	Exits VRF address family configuration mode and returns to VRF configuration mode.
<b>Step 9</b>	<b>end</b>  <b>Example:</b> Device(config-vrf)# <b>end</b>	Returns to privileged EXEC mode.

## Configuring Multicast Routing on the Overlay VRF

To enable multicast routing on the overlay VRF, perform the following steps:

### Procedure

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b>  <b>Example:</b> Device> <b>enable</b>	Enables privileged EXEC mode.  Enter your password, if prompted.

	Command or Action	Purpose
<b>Step 2</b>	<b>configure terminal</b>  <b>Example:</b> Device# <b>configure terminal</b>	Enters global configuration mode.
<b>Step 3</b>	<b>ip multicast-routing vrf vrf-name</b>  <b>Example:</b> Device(config)# <b>ip multicast-routing vrf green</b>	Enables IP multicast forwarding on the overlay VRF.
<b>Step 4</b>	<b>ipv6 unicast-routing</b>  <b>Example:</b> Device(config)# <b>ipv6 unicast-routing</b>	Enables IPv6 unicast forwarding.
<b>Step 5</b>	<b>ipv6 multicast-routing vrf vrf-name</b>  <b>Example:</b> Device(config)# <b>ipv6 multicast-routing vrf green</b>	Enables IPv6 multicast forwarding on the overlay VRF.
<b>Step 6</b>	<b>end</b>  <b>Example:</b> Device(config)# <b>end</b>	Returns to privileged EXEC mode.

## Configuring Multicast on Switch Virtual Interfaces for the Core-facing and Access-facing VLANs

To configure multicast on SVIs for the core-facing and access-facing VLANs on the VTEP, perform the following steps:

### Procedure

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b>  <b>Example:</b> Device> <b>enable</b>	Enables privileged EXEC mode. Enter your password, if prompted.
<b>Step 2</b>	<b>configure terminal</b>  <b>Example:</b> Device# <b>configure terminal</b>	Enters global configuration mode.
<b>Step 3</b>	<b>interface vlan core-facing-vlan-id</b>  <b>Example:</b> Device(config)# <b>interface vlan 200</b>	Enters interface configuration mode for the specified VLAN.

	Command or Action	Purpose
<b>Step 4</b>	<b>ip pim sparse-mode</b> <b>Example:</b> Device(config-if) # <b>ip pim sparse-mode</b>	Enables IPv4 multicast on the core-facing SVI.
<b>Step 5</b>	<b>exit</b> <b>Example:</b> Device(config-if) # <b>end</b>	Returns to privileged EXEC mode.
<b>Step 6</b>	<b>interface vlan <i>access-facing-vlan-id</i></b> <b>Example:</b> Device(config) # <b>interface vlan 202</b>	Enters interface configuration mode for the specified VLAN.
<b>Step 7</b>	<b>ip pim sparse-mode</b> <b>Example:</b> Device(config-if) # <b>ip pim sparse-mode</b>	Enables IPv4 multicast on the access-facing SVI where sources or receivers are connected.  Repeat this step for all the access-facing SVIs that are part of the Layer 2 VNI where sources and receivers are connected.
<b>Step 8</b>	<b>end</b> <b>Example:</b> Device(config-if) # <b>end</b>	Returns to privileged EXEC mode.

## Configuring BGP with MVPN Address Family on VTEP

To configure BGP on a VTEP with MVPN address family, perform the following steps:

### Procedure

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b> <b>Example:</b> Device> <b>enable</b>	Enables privileged EXEC mode.  Enter your password, if prompted.
<b>Step 2</b>	<b>configure terminal</b> <b>Example:</b> Device# <b>configure terminal</b>	Enters global configuration mode.
<b>Step 3</b>	<b>router bgp <i>autonomous-system-number</i></b> <b>Example:</b> Device(config) # <b>router bgp 1</b>	Enables a BGP routing process, assigns it an autonomous system number, and enters router configuration mode.
<b>Step 4</b>	<b>address-family {ipv4   ipv6} mvpn</b> <b>Example:</b>	Specifies the MVPN address family and enters address family configuration mode.

	Command or Action	Purpose
	Device(config-router)# <b>address-family</b> <b>ipv4 mvpn</b>	<ul style="list-style-type: none"> <li>• Use the <b>ipv4</b> keyword to configure IPv4 MVPN address family.</li> <li>• Use the <b>ipv6</b> keyword to configure IPv6 MVPN address family.</li> </ul>
<b>Step 5</b>	<b>neighbor ip-address activate</b>  <b>Example:</b> Device(config-router-af)# <b>neighbor</b> <b>10.2.2.20 activate</b>	Enables the exchange of information with a BGP neighbor.  Use the IP address of the spine switch as the neighbor IP address.
<b>Step 6</b>	<b>neighbor ip-address send-community extended</b>  <b>Example:</b> Device(config-router-af)# <b>neighbor</b> <b>10.2.2.20 send-community both</b>	Specifies the communities attribute sent to a BGP neighbor.  Use the IP address of the spine switch as the neighbor IP address.
<b>Step 7</b>	<b>neighbor ip-address advertisement-interval</b> <i>seconds</i>  <b>Example:</b> Device(config-router-af)# <b>neighbor</b> <b>10.2.2.20 advertisement-interval 10</b>	(Optional) Sets the minimum route advertisement interval (MRAI) between the sending of BGP routing updates.
<b>Step 8</b>	<b>exit-address-family</b>  <b>Example:</b> Device(config-router-af)# <b>exit-address-family</b>	Exits address family configuration mode and returns to router configuration mode.
<b>Step 9</b>	<b>end</b>  <b>Example:</b> Device(config-router)# <b>end</b>	Returns to privileged EXEC mode.

## Configuring RP for Underlay Network

To configure RP for the underlay network, perform the following steps:

### Note

It is recommended that you configure the Spine Switch as the RP for the underlay network.

### Procedure

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b>  <b>Example:</b>	Enables privileged EXEC mode.  Enter your password, if prompted.

	Command or Action	Purpose
	Device> <b>enable</b>	
<b>Step 2</b>	<b>configure terminal</b>  <b>Example:</b> Device# <b>configure terminal</b>	Enters global configuration mode.
<b>Step 3</b>	<b>ip pim rp-address</b> <i>ip-address-of-rp</i>  <b>Example:</b> Device(config)# <b>ip pim rp-address</b> <b>&lt;rp-ip-address&gt;</b>	Configures the RP in the underlay network.  For information about RP redundancy, see to <i>IP Multicast Routing Configuration Guide</i> .
<b>Step 4</b>	<b>end</b>  <b>Example:</b> Device(config)# <b>end</b>	Returns to privileged EXEC mode.

## Configuring RP for Overlay Network

To configure RP for the overlay network, perform the following steps:

### Procedure

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b>  <b>Example:</b> Device> <b>enable</b>	Enables privileged EXEC mode.  Enter your password, if prompted.
<b>Step 2</b>	<b>configure terminal</b>  <b>Example:</b> Device# <b>configure terminal</b>	Enters global configuration mode.
<b>Step 3</b>	<b>interface</b> <i>loopback-interface</i>  <b>Example:</b> Device(config)# <b>interface Loopback 13</b>	Enters interface configuration mode for the specified Loopback interface.
<b>Step 4</b>	<b>vrf forwarding</b> <i>vrf-name</i>  <b>Example:</b> Device(config-if)# <b>vrf forwarding green</b>	Configures forwarding table for the Loopback interface.
<b>Step 5</b>	<b>ip-address</b> <i>ip-address subnet-mask</i>  <b>Example:</b> Device(config-if)# <b>ip address 10.1.13.13</b> <b>255.255.255.255</b>	Configures the IP address for the Loopback interface.

	Command or Action	Purpose
<b>Step 6</b>	<b>ip pim sparse-mode</b> <b>Example:</b> Device(config-if)# <b>ip pim sparse-mode</b>	Enables IPv4 multicast on the Loopback interface. <b>Note</b> Enable PIM sparse mode only if EVPN VXLAN Layer 2 overlay network is also configured on the VTEP with underlay multicast as the mechanism for forwarding BUM traffic.
<b>Step 7</b>	<b>exit</b> <b>Example:</b> Device(config-if)# <b>exit</b>	Returns to global configuration mode.
<b>Step 8</b>	<b>{ip   ipv6 } pim vrf vrf-name rp-address rp-address</b> <b>Example:</b> Device(config)# <b>ip pim vrf green rp-address 10.1.13.13</b>	Configures the address of the local VTEP as the PIM RP for the multicast group. <ul style="list-style-type: none"> <li>• In PIM-SM with Anycast RP mode, use the address of the loopback interface of the local VTEP.</li> <li>• In PIM-SM with RP either inside or outside the BGP EVPN VXLAN fabric, use the IP address of the RP.</li> </ul> <b>Note</b> The loopback interface specified must be part of the same VRF.
<b>Step 9</b>	<b>{ip   ipv6 } pim vrf vrf-name register-source loopback-address-of-vtep</b> <b>Example:</b> Device(config)# <b>ip pim vrf green register-source loopback901</b>	Configures a unique IP address for the loopback interface of the VTEP that acts as the first hop router to multicast traffic.
<b>Step 10</b>	<b>end</b> <b>Example:</b> Device(config)# <b>end</b>	Returns to privileged EXEC mode.

## Verifying Tenant Routed Multicast

The following table lists the **show** commands that are used to verify TRM:

Command	Purpose
<b>show nve peers</b>	Displays NVE interface state information for peer leaf switches.

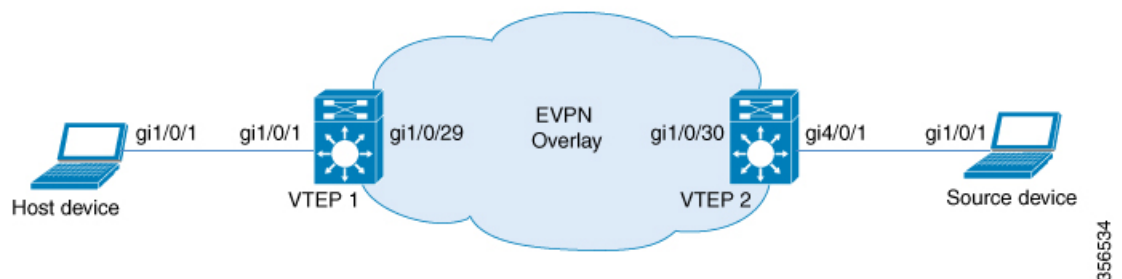

Command	Purpose
<b>show l2vpn evpn peers vxlan</b>	Displays Layer 2 EVPN peer route counts in the VXLAN and up time.
<b>show ip igmp vrf green groups</b>	Displays the multicast groups with receivers that are directly connected to the router pertaining to the specific Multicast Virtual Routing and Forwarding (MVRF) instance and that were learned through IGMP.
<b>show bgp ipv4 mvpn all</b>	Displays the MVPN options for BGP MVPN C-route signaling.
<b>show ip mroute vrf green</b>	Displays the contents of the mroute table that pertain to a specific MVRF instance.
<b>show ip mfib vrf green</b>	Displays forwarding entries and interfaces in the IPv4 Multicast Forwarding Information Base (MFIB) associated with MVRF instances.
<b>show ip mroute</b>	Displays multicast routing table information.
<b>show ip mfib</b>	Displays the forwarding entries and interfaces in the IPv4 MFIB.

## Troubleshooting Tenant Routed Multicast

See [Troubleshoot EVPN VxLAN TRM on Catalyst 9000 Switches](#) document to learn how to troubleshoot issues with TRM in a BGP EVPN VXLAN fabric.

## Configuration Examples for Tenant Routed Multicast

This section provides an example for TRM configuration. The following example shows a sample configuration for a VXLAN network with a receiver device and a source device connected to VTEP 1 and VTEP 2 respectively, with TRM enabled.

*Table 1: Configuration Example for a VXLAN Network with the Source Device and Host Device connected to two VTEPs with TRM Enabled*

VTEP 1	VTEP 2
--------	--------

VTEP 1	VTEP 2
<pre> VTEP1# show running-config ! hostname VTEP1 ! vrf definition green rd 103:2 ! address-family ipv4 mdt auto-discovery vxlan mdt default vxlan 239.1.1.1 mdt overlay use-bgp spt-only route-target export 103:2 route-target import 104:2 route-target export 103:2 stitching route-target import 104:2 stitching exit-address-family ! ! ip routing ip multicast-routing ip multicast-routing vrf green ! ! l2vpn evpn replication-type static router-id Loopback0 default-gateway advertise ! l2vpn evpn instance 1 vlan-based encapsulation vxlan route-target export 103:1 route-target import 104:1 ! l2vpn evpn instance 2 vlan-based encapsulation vxlan ! ! system mtu 9150 ! vlan configuration 200 member vni 5000 vlan configuration 201 member evpn-instance 1 vni 6000 vlan configuration 202 member evpn-instance 2 vni 7000 ! ! interface Loopback0 ip address 10.1.1.10 255.255.255.255 ip pim sparse-mode ! interface Loopback13 vrf forwarding green ip address 10.1.13.13 255.255.255.0 ip pim sparse-mode ipv6 enable ! ! interface GigabitEthernet1/0/1 description access interface switchport mode trunk ! </pre>	<pre> VTEP2# show running-config ! hostname VTEP2 ! vrf definition green rd 104:2 ! address-family ipv4 mdt auto-discovery vxlan mdt default vxlan 239.1.1.1 mdt overlay use-bgp spt-only route-target export 104:2 route-target import 103:2 route-target export 104:2 stitching route-target import 103:2 stitching exit-address-family ! ! ip routing ip multicast-routing ip multicast-routing vrf green ! ! l2vpn evpn replication-type static router-id Loopback0 default-gateway advertise ! l2vpn evpn instance 1 vlan-based encapsulation vxlan route-target export 104:1 route-target import 103:1 ! l2vpn evpn instance 2 vlan-based encapsulation vxlan ! ! system mtu 9150 ! vlan configuration 200 member vni 5000 vlan configuration 201 member evpn-instance 1 vni 6000 vlan configuration 202 member evpn-instance 2 vni 7000 ! ! interface Loopback0 ip address 10.2.2.20 255.255.255.255 ip pim sparse-mode ! interface Loopback14 vrf forwarding green ip address 10.1.14.14 255.255.255.0 ip pim sparse-mode ipv6 address 2001:200::14:14/128 ipv6 enable ! ! interface GigabitEthernet4/0/1 description access interface switchport mode trunk ! </pre>

```

**show l2vpn evpn peers vxlan****VTEP 1**

The following example shows the output for the **show l2vpn evpn peers vxlan** command on VTEP 1:

```
VTEP1# show l2vpn evpn peers vxlan
```

Interface	VNI	Peer-IP	Num routes	eVNI	UP time
nve10	6000	10.2.2.20	5	6000	01:34:50
nve10	7000	10.2.2.20	6	7000	01:34:50

**VTEP 2**

The following example shows the output for the **show l2vpn evpn peers vxlan** command on VTEP 2:

```
VTEP2# show l2vpn evpn peers vxlan
```

Interface	VNI	Peer-IP	Num routes	eVNI	UP time
nve10	6000	10.1.1.10	7	6000	01:35:23
nve10	7000	10.1.1.10	6	7000	01:35:23

**show ip igmp vrf green groups****VTEP 1**

The following example shows the output for the **show ip igmp vrf green groups** command on VTEP 1:

```
VTEP1# show ip igmp vrf green groups
```

IGMP Connected Group Membership		Uptime	Expires	Last Reporter	Group Account
Group Address	Interface				
229.1.1.1	Vlan201	04:08:35	00:02:16	192.168.1.81	
224.0.1.40	Loopback13	06:35:55	00:02:05	10.1.13.13	

**VTEP 2**

The following example shows the output for the **show ip igmp vrf green groups** command on VTEP 2:

```
VTEP2# show ip igmp vrf green groups
```

IGMP Connected Group Membership		Uptime	Expires	Last Reporter	Group Account
Group Address	Interface				
224.0.1.40	Loopback14	05:11:42	00:02:18	10.1.14.14	

**show bgp ipv4 mvpn all****VTEP 1**

The following example shows the output for the **show bgp ipv4 mvpn all** command on VTEP 1:

```
VTEP1# show bgp ipv4 mvpn all
BGP table version is 22, local router ID is 10.1.1.10

```

## VTEP 2

The following example shows the output for the **show ip mfib** command on VTEP 2:

```

VTEP2# show ip mfib
Entry Flags:      C - Directly Connected, S - Signal, IA - Inherit A flag,
                  ET - Data Rate Exceeds Threshold, K - Keepalive

```

```

DDE - Data Driven Event, HW - Hardware Installed
ME - MoFRR ECMP entry, MNE - MoFRR Non-ECMP entry, MP - MFIB
MoFRR Primary, RP - MRIB MoFRR Primary, P - MoFRR Primary
MS - MoFRR Entry in Sync, MC - MoFRR entry in MoFRR Client.
I/O Item Flags: IC - Internal Copy, NP - Not platform switched,
NS - Negate Signalling, SP - Signal Present,
A - Accept, F - Forward, RA - MRIB Accept, RF - MRIB Forward,
MA - MFIB Accept, A2 - Accept backup,
RA2 - MRIB Accept backup, MA2 - MFIB Accept backup
Forwarding Counts: Pkt Count/Pkts per second/Avg Pkt Size/Kbits per second
Other counts:      Total/RPF failed/Other drops
I/O Item Counts:   HW Pkt Count/FS Pkt Count/PS Pkt Count   Egress Rate in pps
Default
