with Cisco devices 49-48	log buffer 27-15
with Cisco IOS software 49-8	statistics 27-15
mrinfo requests, responding to 49-52	configuration guidelines 27-5
neighbors	configuring
advertising the default route to 49-51	ACLs for non-DHCP environments 27-8
discovery with Probe messages 49-48	in DHCP environments 27-7
displaying information 49-52	log buffer 27-12
prevent peering with nonpruning 49-55	rate limit for incoming ARP packets 27-4, 27-10
rejecting nonpruning 49-54	default configuration 27-5
overview 49-8	denial-of-service attacks, preventing 27-10
routes	described 27-1
adding a metric offset 49-59	DHCP snooping binding database 27-2
advertising all 49-59	displaying
advertising the default route to neighbors 49-51	ARP ACLs 27-14
caching DVMRP routes learned in report	configuration and operating state 27-14
messages 49-53	log buffer 27-15
changing the threshold for syslog messages 49-56	statistics 27-15
deleting 49-60	trust state and rate limit 27-14
displaying 49-61	error-disabled state for exceeding rate limit 27-4
favoring one over another 49-59	function of 27-2
limiting the number injected into MBONE 49-56	interface trust states 27-3
limiting unicast route advertisements 49-48	log buffer
routing table 49-9	clearing 27-15
source distribution tree, building 49-9	configuring 27-12
support for 1-13	displaying 27-15
tunnels	logging of dropped packets, described 27-4
configuring 49-50	man-in-the middle attack, described 27-2
displaying neighbor information 49-52	network security issues and interface trust states 27-3
dynamic access ports	priority of ARP ACLs and DHCP snooping
characteristics 16-3	entries 27-4
configuring 16-27	rate limiting of ARP packets
defined 14-3	configuring 27-10
dynamic addresses	described 27-4
See addresses	error-disabled state 27-4
dynamic ARP inspection	statistics
ARP cache poisoning 27-1	clearing 27-15
ARP requests, described 27-1	displaying 27-15
ARP spoofing attack 27-1	validation checks, performing 27-11

dynamic auto trunking mode 16-15	registering and defining a TCL script 37-6
dynamic desirable trunking mode 16-15	understanding 37-1
Dynamic Host Configuration Protocol	enable password 11-4
See DHCP-based autoconfiguration	enable secret password 11-4
dynamic port VLAN membership	enabling SNMP traps 3-13
described 16-25	encryption, CipherSuite 11-52
reconfirming 16-28	encryption for passwords 11-4
troubleshooting 16-30	Enhanced IGRP
types of connections 16-27	See EIGRP
dynamic routing 41-3	enhanced object tracking
ISO CLNS 41-62	backup static routing 47-11
Dynamic Trunking Protocol	commands 47-1
See DTP	defined 47-1
	DHCP primary interface 47-10
	— HSRP 47-7
E	IP routing state 47-2
EBGP 41-41	IP SLAs 47-9
editing features	line-protocol state 47-2
enabling and disabling 2-7	network monitoring with IP SLAs 47-11
keystrokes used 2-8	routing policy, configuring 47-11
wrapped lines 2-9	static route primary interface 47-10
EIGRP	tracked lists 47-3
authentication 41-38	enhanced object tracking static routing 47-10
components 41-34	environmental variables, embedded event manager 37-4
configuring 41-36	environment variables, function of 4-20
default configuration 41-34	equal-cost routing 1-12, 41-88
definition 41-33	error-disabled state, BPDU 23-2
interface parameters, configuring 41-37	error messages during command entry 2-5
monitoring 41-40	EtherChannel
stub routing 41-39	automatic creation of 40-4, 40-6
ELIN location 31-2	channel groups
embedded event manager	binding physical and logical interfaces 40-3
actions 37-4	numbering of 40-3
configuring 37-1, 37-5	configuration guidelines 40-10
displaying information 37-6	configuring
environmental variables 37-4	Layer 2 interfaces 40-11
event detectors 37-2	Layer 3 physical interfaces 40-14
policies 37-4	Layer 3 port-channel logical interfaces 40-13
registering and defining an applet 37-5	default configuration 40-10

described 40-2	defaults and ranges 16-7
displaying status 40-20	modifying 16-8
forwarding methods 40-7, 40-16	EUI 42-3
IEEE 802.3ad, described 40-6	event detectors, embedded event manager 37-2
interaction	events, RMON 34-3
with STP 40-10	examples
with VLANs 40-11	network configuration 1-17
LACP	expedite queue for QoS 39-76
described 40-6	Express Setup 1-2
displaying status 40-20	See also getting started guide
hot-standby ports 40-18	extended crashinfo file 36-19
interaction with other features 40-7	extended-range VLANs
modes 40-6	configuration guidelines 16-11
port priority 40-19	configuring 16-10
system priority 40-19	creating 16-12
Layer 3 interface 41-3	creating with an internal VLAN ID 16-13
load balancing 40-7, 40-16	defined 16-1
logical interfaces, described 40-3	extended system ID
PAgP	MSTP 22-17
aggregate-port learners 40-16	STP 21-4, 21-14
compatibility with Catalyst 1900 40-17	extended universal identifier
described 40-4	See EUI
displaying status 40-20	Extensible Authentication Protocol over LAN 12-1
interaction with other features 40-6	external BGP
interaction with virtual switches 40-5	See EBGP
learn method and priority configuration 40-16	external neighbors, BGP 41-45
modes 40-5	
support for 1-3	
with dual-action detection 40-5	r
port-channel interfaces	fa0 interface 1-5
described 40-3	fallback bridging
port groups 14-6	and protected ports 51-3
support for 1-3	bridge groups
EtherChannel guard	creating 51-3
described 23-7	described 51-1
disabling 23-14	displaying 51-10
enabling 23-14	function of 51-2
Ethernet VLANs	number supported 51-4
adding 16-8	removing 51-4

bridge table	deleting A-5
clearing 51-10	displaying the contents of A-8
displaying 51-10	extended crashinfo
configuration guidelines 51-3	description 36-20
connecting interfaces with 14-7	location 36-20
default configuration 51-3	tar
described 51-1	creating A-6
frame forwarding	displaying the contents of A-6
flooding packets 51-2	extracting A-7
forwarding packets 51-2	image file format A-22
overview 51-1	file system
protocol, unsupported 51-3	displaying available file systems A-2
STP	displaying file information A-3
disabling on an interface 51-9	local file system names A-1
forward-delay interval 51-8	network file system names A-5

limiting messages 35-10	displaying the configuration 11-18
message format 35-2	identifying the server 11-13

in clusters 6-14	TFTP server 1-4
limiting the services to the user 11-16	threshold, traffic level 29-2
operation of 11-12	threshold monitoring, IP SLAs 46-6
overview 11-10	time
support for 1-10	See NTP and system clock
tracking services accessed by user 11-17	Time Domain Reflector
tagged packets	See TDR
IEEE 802.1Q 20-3	time-range command 38-16
Layer 2 protocol 20-7	time ranges in ACLs 38-16
tar files	time stamps in log messages 35-7
creating A-6	time zones 7-5
displaying the contents of A-6	TLVs
extracting A-7	defined 31-1
image file format A-22	LLDP 31-1
TCL script, registering and defining with embedded event	LLDP-MED 31-2
manager 37-6	Token Ring VLANs
TDR 1-14	support for 16-6
Telnet	VTP support 17-4
accessing management interfaces 2-10	ToS 1-11
number of connections 1-5	traceroute, Layer 2
setting a password 11-6	and ARP 36-12
temperature alarms, configuring 3-7, 3-8	and CDP 36-11
temporary self-signed certificate 11-51	broadcast traffic 36-11
Terminal Access Controller Access Control System Plus	described 36-11
See TACACS+	IP addresses and subnets 36-12
terminal lines, setting a password 11-6	MAC addresses and VLANs 36-12
TFTP	multicast traffic 36-12
configuration files	multiple devices on a port 36-12
downloading A-10	unicast traffic 36-11
preparing the server A-10	usage guidelines 36-11
uploading A-11	traceroute command 36-13
configuration files in base directory 4-7	See also IP traceroute
configuring for autoconfiguration 4-7	tracked lists
image files	configuring 47-3
deleting A-25	types 47-3
downloading A-24	tracked objects
preparing the server A-24	by Boolean expression 47-4
uploading A-26	by threshold percentage 47-6
limiting access by servers 36-16	by threshold weight 47-5

tracking interface line-protocol state 47-2	with ping 36-10
tracking IP routing state 47-2	with system message logging 35-1
tracking objects 47-1	with traceroute 36-13
tracking process 47-1	trunk failover
track state, tracking IP SLAs 47-9	See link-state tracking
traffic	trunking encapsulation 1-7
blocking flooded 29-8	trunk ports
fragmented 38-5	configuring 16-17
fragmented IPv6 44-2	defined 14-3, 16-3
unfragmented 38-5	trunks
traffic policing 1-11	allowed-VLAN list 16-18
traffic suppression 29-1	load sharing
transmit hold-count	setting STP path costs 16-23
see STP	using STP port priorities 16-21, 16-22
transparent mode, VTP 17-3	native VLAN for untagged traffic 16-20
trap-door mechanism 4-2	parallel 16-23
traps	pruning-eligible list 16-19
configuring MAC address notification 7-15, 7-17, 7-18	to non-DTP device 16-15
configuring managers 36-11	trusted boundary for QoS 39-38
defined 36-3	trusted port states
enabling 7-15, 7-17, 7-18, 36-11	between QoS domains 39-40
notification types 36-12	classification options 39-5
overview 36-1, 36-4	ensuring port security for IP phones 39-38
triggering alarm options	support for 1-11
configurable relay 3-3	within a QoS domain 39-36
methods 3-3	trustpoints, CA 11-50
SNMP traps 3-4	tunneling
syslog messages 3-4	defined 20-1
troubleshooting	IEEE 802.1Q 20-1
connectivity problems 36-9, 36-11, 36-12	Layer 2 protocol 20-8
CPU utilization 36-20	tunnel ports
detecting unidirectional links 33-1	defined 16-4
displaying crash information 36-19	described 14-3, 20-1
PIMv1 and PIMv2 interoperability problems 49-34	IEEE 802.1Q, configuring 20-6
setting packet forwarding 36-17	incompatibilities with other features 20-5
SFP security and identification 36-9	twisted-pair Ethernet, detecting unidirectional links 33-1
show forward command 36-17	type of service
with CiscoWorks 36-4	See ToS
with debug commands 36-15	

U	racinties supported 33-13
_	message logging configuration 35-12
UDLD	unrecognized Type-Length-Value (TLV) support 17-4
configuration guidelines 33-4	upgrading software images
default configuration 33-4	See downloading
disabling	UplinkFast
globally 33-5	described 23-3
on fiber-optic interfaces 33-5	disabling 23-13
per interface 33-5	enabling 23-13
echoing detection mechanism 33-2	uploading
enabling	configuration files
globally 33-5	preparing A-10, A-12, A-15
per interface 33-5	reasons for A-8
Layer 2 protocol tunneling 20-10	using FTP A-14
link-detection mechanism 33-1	using RCP A-17
neighbor database 33-2	using TFTP A-11
overview 33-1	image files
resetting an interface 33-6	preparing A-24, A-27, A-31
status, displaying 33-6	reasons for A-22
support for 1-6	using FTP A-29
UDP, configuring 41-14	using RCP A-33
UDP jitter, configuring 46-9	using TFTP A-26
UDP jitter operation, IP SLAs 46-9	User Datagram Protocol
unauthorized ports with IEEE 802.1x 12-10	See UDP
unicast MAC address filtering 1-5	user EXEC mode 2-2
and adding static addresses 7-21	username-based authentication 11-7
and broadcast MAC addresses 7-20	
and CPU packets 7-20	·
and multicast addresses 7-20	V
and router MAC addresses 7-20	version-dependent transparent mode 17-4
configuration guidelines 7-20	virtual IP address
described 7-20	cluster standby group 6-11
unicast storm 29-1	command switch 6-11
unicast storm control command 29-4	Virtual Private Network
unicast traffic, blocking 29-8	See VPN
UniDirectional Link Detection protocol	virtual router 45-1, 45-2
See UDLD	virtual switches and PAgP 40-5
UNIX syslog servers	vlan.dat file 16-5
daemon configuration 35-12	VLAN 1, disabling on a trunk port 16-19

VLAN 1 minimization 16-18	removing 38-34
VLAN ACLs	support for 1-8
See VLAN maps	wiring closet configuration example 38-35
vlan-assignment response, VMPS 16-25	VLAN membership
VLAN blocking, REP 24-12	confirming 16-28
VLAN configuration	modes 16-3
at bootup 16-7	VLAN Query Protocol
saving 16-7	See VQP
VLAN configuration mode 2-2	VLANs
VLAN database	adding 16-8
and startup configuration file 16-7	adding to VLAN database 16-8
and VTP 17-1	aging dynamic addresses 21-9
VLAN configuration saved in 16-7	allowed on trunk 16-18
VLANs saved in 16-4	and spanning-tree instances 16-3, 16-6, 16-11
vlan dot1q tag native command 20-4 VLAN filtering and SPAN 30-6	configuration guidelines, extended-range VLANs 16-11
vlan global configuration command 16-7	configuration guidelines, normal-range VLANs 16-6
VLAN ID, discovering 7-23	configuring 16-1
VLAN link state 14-5	configuring IDs 1006 to 4094 16-11
VLAN load balancing	connecting through SVIs 14-7
REP 24-4	creating 16-8
VLAN load balancing, triggering 24-5	customer numbering in service-provider
VLAN load balancing on flex links 25-2	networks 20-3
configuration guidelines 25-8	default configuration 16-7
VLAN management domain 17-2	deleting 16-9
VLAN Management Policy Server	described 14-2, 16-1
See VMPS	displaying 16-14
VLAN map entries, order of 38-30	extended-range 16-1, 16-10
VLAN maps	features 1-7
applying 38-34	illustrated 16-2 internal 16-11
common uses for 38-34	
configuration guidelines 38-30	6
configuring 38-29	limiting source traffic with SPAN 30-14
creating 38-31	modifying 16-8
defined 38-2	multicast 28-17
denying access to a server example 38-35	native, configuring 16-20
denying and permitting packets 38-31	normal-range 16-1, 16-4
displaying 38-41	number supported 1-7
examples of ACLs and VLAN maps 38-32	parameters 16-5

port membership modes 16-3	802.1p priority tagged frames 18-5
static-access ports 16-9	802.1Q frames 18-4
STP and IEEE 802.1Q trunks 21-10	connecting to an IP phone 18-4
supported 16-2	default configuration 18-3
Token Ring 16-6	described 18-1
traffic between 16-2	displaying 18-6
VLAN-bridge STP 21-10, 51-2	IP phone data traffic, described 18-2
VTP modes 17-3	IP phone voice traffic, described 18-2
VLAN Trunking Protocol	VPN
See VTP	configuring routing in 41-81
VLAN trunks 16-14	forwarding 41-74
VMPS	in service provider networks 41-71
administering 16-29	routes 41-72
configuration example 16-30	VPN routing and forwarding table
configuration guidelines 16-26	See VRF
default configuration 16-26	VQP 1-7, 16-24
description 16-24	VRF
dynamic port membership	defining 41-74
described 16-25	tables 41-71
reconfirming 16-28	VRF-aware services
troubleshooting 16-30	ARP 41-78
entering server address 16-27	configuring 41-77
