rmon collection stats

Use the rmon collection stats interface configuration command to collect Ethernet group statistics, which include usage statistics about broadcast and multicast packets, and error statistics about cyclic redundancy check (CRC) alignment errors and collisions. Use the no form of this command to return to the default setting.

```
rmon collection stats index [owner name]
no rmon collection stats index [owner name]
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>index</td>
<td>Remote Network Monitoring (RMON) collection control index. The range is 1 to 65535.</td>
</tr>
<tr>
<td>owner name</td>
<td>(Optional) Owner of the RMON collection.</td>
</tr>
</tbody>
</table>

**Defaults**
The RMON statistics collection is disabled.

**Command Modes**
Interface configuration

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**
The RMON statistics collection command is based on hardware counters.

**Examples**

This example shows how to collect RMON statistics for the owner root:

```
Switch(config)# interface gigabitethernet1/1
Switch(config-if)# rmon collection stats 2 owner root
```

You can verify your setting by entering the show rmon statistics privileged EXEC command.

</tbody>
</table>
sdm prefer

To configure the template used in Switch Database Management (SDM) resource allocation, use the `sdm prefer` global configuration command. Use the `no` form of this command to return to the default template.

```
  sdm prefer {default | lanbase-routing | dual-ipv4-and-ipv6 {default | routing} | qos | routing}
  no sdm prefer
```

### Syntax Description

- **default**
  - Provides balance to all Layer 2 features.

- **lanbase-routing**
  - Provides maximum system usage for configuring IPv4 static routes on SVIs.

- **dual-ipv4-and-ipv6**
  - Selects a template that supports both IPv4 and IPv6 routing.
    - **default**—Provides balance to IPv4 and IPv6 Layer 2 functionality.
    - **routing**—Provides maximum system usage for IPv4 and IPv6 routing, including IPv4 policy-based routing. You must use the IPv4 and IPv6 routing template on switches running the IP Services image for Layer 3 functionality.

To enable IPv6 features, you must configure a dual IPv4 and IPv6 template.

- **qos**
  - Provides maximum system usage for quality of service (QoS) access control entries (ACEs).

- **routing**
  - Provides maximum system usage for IPv4 unicast routing. You must use the routing template on switches running the IP Services image for Layer 3 functionality.

### Defaults

The `default` template provides a balance to all features.

### Command Modes

Global configuration

### Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
<tr>
<td>12.2(52)SE</td>
<td>The <code>routing</code> and <code>dual-ipv4-and-ipv6 routing</code> keywords were added on switches running the IP services image.</td>
</tr>
<tr>
<td>15.0(2)SE</td>
<td>The <code>lanbase-routing</code> keyword was added.</td>
</tr>
</tbody>
</table>

### Usage Guidelines

You must reload the switch for the configuration to take effect.

If you enter the `show sdm prefer` command before you enter the `reload` privileged EXEC command, the `show sdm prefer` command shows the template currently in use and the template that will become active after a reload.

Use the `no sdm prefer` command to set the switch to the default template.
You must use a routing template on switches running the IP Services image for Layer 3 functionality. Do not use the routing template if you are not using Layer 3 functionality on your switch. Entering the `sdm prefer routing` global configuration command prevents other features from using the memory allocated to unicast routing in the routing template.

Do not use the dual IPv4 and IPv6 template if you do not plan to enable IPv6 functionality on the switch. Entering the `sdm prefer ipv4-and-ipv6` global configuration command divides resources between IPv4 and IPv6, limiting those allocated to IPv4 forwarding.

Table 2-16 shows the resources allowed for each feature in the IPv4 templates and Table 2-17 shows the feature allocation in the dual IPv4 and IPv6 templates.

### Table 2-16 Approximate Number of Feature Resources Allowed by IPv4 Templates

<table>
<thead>
<tr>
<th>Resource</th>
<th>Default</th>
<th>LAN Base</th>
<th>QoS</th>
<th>Routing</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unicast MAC addresses</td>
<td>8 K</td>
<td>8 K</td>
<td>8 K</td>
<td>2 K</td>
</tr>
<tr>
<td>IGMP groups and multicast routes</td>
<td>256</td>
<td>256</td>
<td>256</td>
<td>1 K</td>
</tr>
<tr>
<td>Unicast routes</td>
<td>0</td>
<td>750</td>
<td></td>
<td>4 K</td>
</tr>
<tr>
<td>• Directly connected hosts</td>
<td>0</td>
<td>750</td>
<td></td>
<td>2 K</td>
</tr>
<tr>
<td>• Indirect routes</td>
<td>0</td>
<td>16</td>
<td></td>
<td>2 K</td>
</tr>
<tr>
<td>Policy-based routing ACEs</td>
<td>0</td>
<td>0</td>
<td></td>
<td>512</td>
</tr>
<tr>
<td>QoS classification ACEs</td>
<td>375</td>
<td>375</td>
<td>625</td>
<td>625</td>
</tr>
<tr>
<td>Security ACEs</td>
<td>375</td>
<td>375</td>
<td>125</td>
<td>375</td>
</tr>
<tr>
<td>Layer 2 VLANs</td>
<td>1 K</td>
<td>1 K</td>
<td>1 K</td>
<td>1 K</td>
</tr>
</tbody>
</table>

The first eight rows in the tables (unicast MAC addresses through security ACEs) represent approximate hardware boundaries set when a template is selected. If a section of a hardware resource is full, all processing overflow is sent to the CPU, seriously impacting switch performance. The last row is a guideline used to calculate hardware resource consumption related to the number of Layer 2 VLANs on the switch.

### Table 2-17 Approximate Feature Resources Allowed by Dual IPv4-IPv6 Templates

<td>0.125 K</td>
</tr>
</tbody>
</table>
Table 2-17  Approximate Feature Resources Allowed by Dual IPv4-IPv6 Templates (continued)

<table>
<thead>
<tr>
<th>Resource</th>
<th>IPv4-and-IPv6 Default</th>
<th>IPv4-and-IPv6 Routing</th>
</tr>
</thead>
<tbody>
<tr>
<td>IPv4 or MAC QoS ACEs (total)</td>
<td>0.375 K</td>
<td>0.375 K</td>
</tr>
<tr>
<td>IPv4 or MAC security ACEs (total)</td>
<td>0.375 K</td>
<td>0.125 K</td>
</tr>
<tr>
<td>IPv6 policy-based routing ACEs</td>
<td>0</td>
<td>0.125 K</td>
</tr>
<tr>
<td>IPv6 QoS ACEs</td>
<td>0</td>
<td>0.125 K</td>
</tr>
<tr>
<td>IPv6 security ACEs</td>
<td>0.125 K</td>
<td>0.125 K</td>
</tr>
</tbody>
</table>

1. Template estimates are based on a switch with 8 routed interfaces and approximately 1000 VLANs.
2. IPv6 policy-based routing is not supported.

Examples

This example shows how to use the QoS template:

Switch(config)# sdm prefer qos
Switch(config)# exit
Switch# reload

This example shows how to configure the dual IPv4 and IPv6 default template on a switch:

Switch(config)# sdm prefer dual-ipv4-and-ipv6 default
Switch(config)# exit
Switch# reload

This example shows how to configure the IPv4 and IPv6 routing template on a switch:

Switch(config)# sdm prefer dual-ipv4-and-ipv6 routing
Switch(config)# exit
Switch# reload
Proceed with reload? [confirm]

service password-recovery

Use the service password-recovery global configuration command to enable the password-recovery mechanism (the default). This mechanism allows an end user with physical access to the switch to hold down the Express Setup button and interrupt the bootup process while the switch is powering up and to assign a new password. Use the no form of this command to disable part of the password-recovery functionality. When the password-recovery mechanism is disabled, interrupting the bootup process is allowed only if the user agrees to set the system back to the default configuration.

service password-recovery

no service password-recovery

Syntax Description
This command has no arguments or keywords.

Defaults
The password-recovery mechanism is enabled.

Command Modes
Global configuration

Command History
<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

Usage Guidelines
As a system administrator, you can use the no service password-recovery command to disable some of the functionality of the password recovery feature by allowing an end user to reset a password only by agreeing to return to the default configuration.

To use the password-recovery procedure, you must have physical access to the switch.

To delete the switch password and set a new one, follow these steps:

Step 1
Press the Express Setup button until the SETUP LED blinks green and the LED of an available switch downlink port blinks green.

If no switch downlink port is available for your PC or laptop connection, disconnect a device from one of the switch downlink ports. Press the Express Setup button again until the SETUP LED and the port LED blink green.

Step 2
Connect your PC or laptop to the port with the blinking green LED.

The SETUP LED and the switch downlink port LED stop blinking and stay solid green.

Step 3
Press and hold the Express Setup button. Notice that the SETUP LED starts blinking green again. Continue holding the button until the SETUP LED turns solid green (approximately 5 seconds). Release the Express Setup button immediately.

This procedure deletes the password without affecting any other configuration settings. You can now access the switch without a password through the console port or by using the device manager.
Step 4  Enter a new password through the device manager by using the Express Setup window or through the command line interface by using the `enable secret` global configuration command.

**Note**  If you use the `no service password-recovery` command to control end user access to passwords, we recommend that you save a copy of the config file in a location away from the switch in case the end user uses the password recovery procedure and sets the system back to default values. Do not keep a backup copy of the config file on the switch.

If the switch is operating in VTP transparent mode, we recommend that you also save a copy of the `vlan.dat` file in a location away from the switch.

You can verify if password recovery is enabled or disabled by entering the `show version` privileged EXEC command.

**Examples**  This example shows how to disable password recovery on a switch so that a user can only reset a password by agreeing to return to the default configuration.

```
Switch(config)# no service-password recovery
Switch(config)# exit
```

**Related Commands**

</tr>
</tbody>
</table>
service-policy

Use the service-policy interface configuration command to apply a policy map defined by the policy-map command to the input of a physical port or a switch virtual interface (SVI). Use the no form of this command to remove the policy map and port association.

```
service-policy input policy-map-name
no service-policy input policy-map-name
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>input policy-map-name</code></td>
<td>Apply the specified policy map to the input of a physical port or an SVI.</td>
</tr>
</tbody>
</table>

**Note**

Though visible in the command-line help strings, the history keyword is not supported, and you should ignore the statistics that it gathers. The output keyword is also not supported.

**Defaults**

No policy maps are attached to the port.

**Command Modes**

Interface configuration

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
<tr>
<td>12.2(52)SE</td>
<td>A policy map can now be applied to a physical port or an SVI.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Only one policy map per ingress port is supported.

Policy maps can be configured on physical ports or on SVIs. When VLAN-based quality of service (QoS) is disabled by using the no mls qos vlan-based interface configuration command on a physical port, you can configure a port-based policy map on the port. If VLAN-based QoS is enabled by using the mls qos vlan-based interface configuration command on a physical port, the switch removes the previously configured port-based policy map. After a hierarchical policy map is configured and applied on an SVI, the interface-level policy map takes effect on the interface.

You can apply a policy map to incoming traffic on a physical port or on an SVI. You can configure different interface-level policy maps for each class defined in the VLAN-level policy map. For more information about hierarchical policy maps, see the “Configuring QoS” chapter in the software configuration guide for this release.

Classification using a port trust state (for example, mls qos trust [cos | dscp | ip-precedence] and a policy map (for example, service-policy input policy-map-name) are mutually exclusive. The last one configured overwrites the previous configuration.

**Examples**

This example shows how to apply plcmpl1 to an physical ingress port:
Switch(config)# interface gigabitethernet1/1
Switch(config-if)# service-policy input plcmap1

This example shows how to remove *plcmap2* from a physical port:

Switch(config)# interface gigabitethernet1/1
Switch(config-if)# no service-policy input plcmap2

This example shows how to apply *plcmap1* to an ingress SVI when VLAN-based QoS is enabled:

Switch(config)# interface vlan 10
Switch(config-if)# service-policy input plcmap1

This example shows how to create a hierarchical policy map and attach it to an SVI:

Switch(config)# access-list 101 permit ip any any
Switch(config)# class-map cm-1
Switch(config-cmap)# match access 101
Switch(config-cmap)# exit
Switch(config)# exit

Switch(config)# class-map cm-interface-1
Switch(config-cmap)# match input gigabitethernet1/1 - gigabitethernet1/2
Switch(config-cmap)# exit
Switch(config)# policy-map port-plcmap
Switch(config-pmap)# class-map cm-interface-1
Switch(config-pmap-c)# police 900000 9000 exc policed-dscp-transmit
Switch(config-pmap-c)# exit
Switch(config-pmap)#exit
Switch(config)# policy-map vlan-plcmap
Switch(config-pmap)# class-map cm-1
Switch(config-pmap-c)# set dscp 7
Switch(config-pmap-c)# service-policy port-plcmap-1
Switch(config-pmap-c)# exit
Switch(config-pmap)# class-map cm-2
Switch(config-pmap-c)# match ip dscp 2
Switch(config-pmap-c)# service-policy port-plcmap-1
Switch(config-pmap-c)# exit
Switch(config-pmap)# class-map cm-3
Switch(config-pmap-c)# match ip dscp 3
Switch(config-pmap-c)# service-policy port-plcmap-2
Switch(config-pmap-c)# exit
Switch(config-pmap)# class-map cm-4
Switch(config-pmap-c)# trust dscp
Switch(config-pmap-c)# exit
Switch(config)# interface vlan 10
Switch(config-if)#
Switch(config-if)# ser input vlan-plcmap
Switch(config-if)# exit
Switch(config)# exit
<table>
<thead>
<tr>

</tbody>
</table>
set

Use the `set` policy-map class configuration command to classify IP traffic by setting a Differentiated Services Code Point (DSCP) or an IP-precedence value in the packet. Use the `no` form of this command to remove traffic classification.

```
set {dscp new-dscp | [ip] precedence new-precedence}

no set {dscp new-dscp | [ip] precedence new-precedence}
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>dscp new-dscp</code></td>
<td>New DSCP value assigned to the classified traffic. The range is 0 to 63. You also can enter a mnemonic name for a commonly used value.</td>
</tr>
<tr>
<td><code>[ip] precedence new-precedence</code></td>
<td>New IP-precedence value assigned to the classified traffic. The range is 0 to 7. You also can enter a mnemonic name for a commonly used value.</td>
</tr>
</tbody>
</table>

**Defaults**

No traffic classification is defined.

**Command Modes**

Policy-map class configuration

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

If you have used the `set ip dscp` policy-map class configuration command, the switch changes this command to `set dscp` in the switch configuration. If you enter the `set ip dscp` policy-map class configuration command, this setting appears as `set dscp` in the switch configuration.

You can use the `set ip precedence` policy-map class configuration command or the `set precedence` policy-map class configuration command. This setting appears as `set ip precedence` in the switch configuration.

The `set` command is mutually exclusive with the `trust` policy-map class configuration command within the same policy map.

For the `set dscp new-dscp` or the `set ip precedence new-precedence` command, you can enter a mnemonic name for a commonly used value. For example, you can enter the `set dscp af11` command, which is the same as entering the `set dscp 10` command. You can enter the `set ip precedence critical` command, which is the same as entering the `set ip precedence 5` command. For a list of supported mnemonics, enter the `set dscp ?` or the `set ip precedence ?` command to see the command-line help strings.

To return to policy-map configuration mode, use the `exit` command. To return to privileged EXEC mode, use the `end` command.
This example shows how to assign DSCP 10 to all FTP traffic without any policers:

```
Switch(config)# policy-map policy_ftp
Switch(config-pmap)# class ftp_class
Switch(config-pmap-c)# set dscp 10
Switch(config-pmap)# exit
```

You can verify your settings by entering the `show policy-map` privileged EXEC command.

</tbody>
</table>
Use the `setup` privileged EXEC command to configure the switch with its initial configuration.

```
setup
```

**Syntax Description**

This command has no arguments or keywords.

**Command Modes**

Privileged EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

When you use the `setup` command, make sure that you have this information:

- IP address and network mask
- Password strategy for your environment
- Whether the switch will be used as the cluster command switch and the cluster name

When you enter the `setup` command, an interactive dialog, called the System Configuration Dialog, appears. It guides you through the configuration process and prompts you for information. The values shown in brackets next to each prompt are the default values last set by using either the `setup` command facility or the `configure` privileged EXEC command.

Help text is provided for each prompt. To access help text, press the question mark (?) key at a prompt.

To return to the privileged EXEC prompt without making changes and without running through the entire System Configuration Dialog, press Ctrl-C.

When you complete your changes, the setup program shows you the configuration command script that was created during the setup session. You can save the configuration in NVRAM or return to the setup program or the command-line prompt without saving it.

**Examples**

This is an example of output from the `setup` command:

```
Switch# setup
--- System Configuration Dialog ---

Continue with configuration dialog? [yes/no]: yes

At any point you may enter a question mark '?' for help. Use ctrl-c to abort configuration dialog at any prompt. Default settings are in square brackets '{}'.

Basic management setup configures only enough connectivity for management of the system, extended setup will ask you to configure each interface on the system.

Would you like to enter basic management setup? [yes/no]: yes

Configuring global parameters:
```
Enter host name [Switch]: host-name

The enable secret is a password used to protect access to privileged EXEC and configuration modes. This password, after entered, becomes encrypted in the configuration.
Enter enable secret: enable-secret-password

The enable password is used when you do not specify an enable secret password, with some older software versions, and some boot images.
Enter enable password: enable-password

The virtual terminal password is used to protect access to the router over a network interface.
Enter virtual terminal password: terminal-password

Configure SNMP Network Management? [no]: yes
Community string [public]:

Current interface summary
Any interface listed with OK? value "NO" does not have a valid configuration

<table>
<thead>
<tr>
<th>Interface</th>
<th>IP-Address</th>
<th>OK? Method</th>
<th>Status</th>
<th>Protocol</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vlan1</td>

<td>YES unset</td>
<td>up</td>
<td>up</td>
</tr>
<tr>
<td>GigabitEthernet1/2</td>
<td>unassigned</td>
<td>YES unset</td>
<td>up</td>
<td>down</td>
</tr>
</tbody>
</table>

Port-channel1        | unassigned      | YES unset  | up              | down     |

Enter interface name used to connect to the management network from the above interface summary: vlan1

Configuring interface vlan1:
Configure IP on this interface? [yes]: yes
IP address for this interface: ip_address
Subnet mask for this interface [255.0.0.0]: subnet_mask

Would you like to enable as a cluster command switch? [yes/no]: yes

Enter cluster name:

The following configuration command script was created:

```
hostname host-name
enable secret 5 $1$LiBw$0Xc1wyT.PXPkuhFwqyhVi0
enable password enable-password
line vty 0 15
password terminal-password
snmp-server community public

no ip routing

interface GigabitEthernet1/1
no ip address

interface GigabitEthernet1/2
no ip address
```
cluster enable cluster-name
!
end

Use this configuration? [yes/no]: yes
!

[0] Go to the IOS command prompt without saving this config.

[1] Return back to the setup without saving this config.

[2] Save this configuration to nvram and exit.

Enter your selection [2]:

<td>show version</td>
<td>Displays version information for the hardware and firmware.</td>
</tr>
</tbody>
</table>
**setup express**

Use the **setup express** global configuration command to enable Express Setup mode. Use the **no** form of this command to disable Express Setup mode.

```
setup express

no setup express
```

**Syntax Description**

This command has no arguments or keywords.

**Defaults**

Express Setup is enabled.

**Command Modes**

Global configuration

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

When Express Setup is enabled on a new (unconfigured) switch, pressing the Express Setup button for 2 seconds activates Express Setup. You can access the switch through an Ethernet port by using the IP address 10.0.0.1 and then can configure the switch with the web-based Express Setup program or the command-line interface (CLI)-based setup program.

When you press the Express Setup button for 2 seconds on a configured switch, the LEDs below the Express Setup button start blinking. If you press the Express Setup button for a total of 10 seconds, the switch configuration is deleted, and the switch reboots. The switch can then be configured like a new switch, either through the web-based Express Setup program or the CLI-based setup program.

**Note**

As soon as you make any change to the switch configuration (including entering **no** at the end of the CLI-based setup program), configuration by Express Setup is no longer available. You can only run Express Setup again by pressing the Express Setup button for 10 seconds. This deletes the switch configuration and reboots the switch.

If Express Setup is active on the switch, entering the **write memory** or **copy running-configuration startup-configuration** privileged EXEC commands deactivates Express Setup. The IP address 10.0.0.1 is no longer valid on the switch, and your connection using this IP address ends.

The primary purpose of the **no setup express** command is to prevent someone from deleting the switch configuration by pressing the Mode button for 10 seconds.

**Examples**

This example shows how to enable Express Setup mode:

```
Switch(config)# setup express
```
You can verify that Express Setup mode is enabled by pressing the Express Setup button:

- On an unconfigured switch, the LEDs below the Express Setup button turn solid green after 3 seconds.
- On a configured switch, the mode LEDs begin blinking after 2 seconds and turn solid green after 10 seconds.

⚠️ **Caution**

If you hold the Express Setup button down for a total of 10 seconds, the configuration is deleted, and the switch reboots.

This example shows how to disable Express Setup mode:

Switch(config)# no setup express

You can verify that Express Setup mode is disabled by pressing the Express Setup button. The LEDs do not turn solid green or begin blinking green if Express Setup mode is not enabled on the switch.

<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

The switch supports only IP standard and extended access lists. Therefore, the allowed numbers are only 1 to 199 and 1300 to 2699.

This command also displays the MAC ACLs that are configured.

**Note**

Though visible in the command-line help strings, the `rate-limit` keywords are not supported.
This is an example of output from the `show access-lists` command:

```
Switch# show access-lists
Standard IP access list 1
  10 permit 1.1.1.1
  20 permit 2.2.2.2
  30 permit any
  40 permit 0.255.255.255, wildcard bits 12.0.0.0
Standard IP access list videowizard_1-1-1-1
  10 permit 1.1.1.1
Standard IP access list videowizard_10-10-10-10
  10 permit 10.10.10.10
Extended IP access list 121
  10 permit ahp host 10.10.10.10 host 20.20.10.10 precedence routine
Extended IP access list CMP-NAT-ACL
  Dynamic Cluster-HSRP deny ip any any
  10 deny ip any host 19.19.11.11
  20 deny ip any host 10.11.12.13
  Dynamic Cluster-NAT permit ip any any
  10 permit ip host 10.99.100.128 any
  20 permit ip host 10.46.22.128 any
  30 permit ip host 10.45.101.64 any
  40 permit ip host 10.45.20.64 any
  50 permit ip host 10.213.43.128 any
  60 permit ip host 10.91.28.64 any
  70 permit ip host 10.99.75.128 any
  80 permit ip host 10.38.49.0 any
```

This is an example of output from the `show access-lists hardware counters` command:

```
Switch# show access-lists hardware counters

<td>Configures a named or numbered MAC access list on the switch.</td>
</tr>
</tbody>
</table>
show alarm description port

Use the show alarm description port EXEC command to display the alarm numbers with the text description.

```
show alarm description port
```

**Syntax Description**

This command has no arguments or keywords.

**Command Modes**

EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Examples**

This is an example of output from the show alarm description port command. It shows the alarm IDs and their respective alarm descriptions.

```
Switch# show alarm description port
1       Link Fault
2       Port Not Forwarding
3       Port Not Operating
4       FCS Error Rate exceeds threshold
```

**Related Commands**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>alarm profile (global configuration)</td>
<td>Creates an alarm profile containing one or more alarm IDs and alarm options.</td>
</tr>
<tr>
<td>show alarm profile</td>
<td>Displays all alarm profiles or a specified alarm profile and lists the interfaces to which each profile is attached.</td>
</tr>
</tbody>
</table>
show alarm profile

Use the `show alarm profile` EXEC command to display all alarm profiles configured in the system or the specified profile and the interfaces to which each profile is attached.

```
show alarm profile [name]
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>name</code></td>
<td>(Optional) Display only the profile with the specified name.</td>
</tr>
</tbody>
</table>

**Command Modes**

EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>T2.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

If you do not enter a profile name, the display includes the profile information for all existing alarm profiles. This command does not display the default configuration settings.

The `defaultPort` profile is applied by default to all interfaces. This profile enables only the Port Not Operating (3) alarm. You can use the `alarm profile defaultPort` global configuration command and modify this profile to enable other alarms.

**Examples**

These are examples of output from the `show alarm profile` command.

This output displays all ports that are attached to the configured profiles.

```
Switch> show alarm profile GigE-UplinkPorts
Interface     Gi1/2
Alarms        1,2,3,4
Syslog        1,2,3,4
Notifies      1,2,3,4
Relay-major   4
Relay-minor   1,2
```

This output displays all the configured profiles:

```
Switch> show alarm profile
Alarm Profile my_gig_port:
Interface     Gi1/2
Alarms        1,2,3,4
Syslog        1,2,3,4
Notifies      1,2,3,4
Relay-major   4
Relay-minor   1,2

Alarm Profile my_fast_port:
Interface     Fa1/1
Alarms        1,2,3,4
Syslog        1,2,3,4
Notifies      1,2,3,4
Relay-major   4
Relay-minor   1,2
```
### Related Commands

</tbody>
</table>
show alarm settings

Use the `show alarm settings` EXEC command to display all environmental alarm settings on the switch.

```
show alarm settings
```

**Syntax Description**
This command has no arguments or keywords.

**Command Modes**
EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Examples**

This is an example of output from the `show alarm settings` command. It shows all the switch alarm settings that are on the switch:

```
Switch> show alarm settings
Alarm relay mode: Positive

Power Supply
  Alarm                Enabled
  Relay                MAJ
  Notifies             Enabled
  Syslog               Enabled

Temperature-Primary
  Alarm                Enabled
  Thresholds           MAX: 95C               MIN: -20C
  Relay                MAJ
  Notifies             Enabled
  Syslog               Enabled

Temperature-Secondary
  Alarm                Disabled
  Threshold
  Relay                Disabled
  Notifies             Disabled
  Syslog               Disabled
```

</tr>
</tbody>
</table>
show archive status

Use the `show archive status` privileged EXEC command to display the status of a new image being downloaded to a switch with the HTTP or the TFTP protocol.

```
show archive status
```

**Syntax Description**

This command has no arguments or keywords.

**Command Modes**

Privileged EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

If you use the `archive download-sw` privileged EXEC command to download an image to a TFTP server, the output of the `archive download-sw` command shows the status of the download.

If you do not have a TFTP server, you can use Network Assistant or the embedded device manager to download the image by using HTTP. The `show archive status` command shows the progress of the download.

**Examples**

These are examples of output from the `show archive status` command:

```
Switch# show archive status
IDLE: No upgrade in progress

Switch# show archive status
LOADING: Upgrade in progress

Switch# show archive status
EXTRACT: Extracting the image

Switch# show archive status
VERIFY: Verifying software

Switch# show archive status
RELOAD: Upgrade completed. Reload pending
```

**Related Commands**

</tbody>
</table>
show authentication

Use the **show authentication** command EXEC mode to display information about authentication manager events on the switch.

```
show authentication [interface interface-id | registrations | sessions [session-id session-id]
   [handle handle] [interface interface-id] [mac mac] [method method] | statistics [summary]]
```

**Syntax Description**

- **interface interface-id** (Optional) Display all of the authentication manager details for the specified interface.
- **method method** (Optional) Displays all clients authorized by a specified authentication method (dot1x, mab, or webauth)
- **registrations** (Optional) Display authentication manager registrations
- **sessions** (Optional) Display detail of the current authentication manager sessions (for example, client devices). If you do not enter any optional specifiers, all current active sessions are displayed. You can enter the specifiers singly or in combination to display a specific session (or group of sessions).
- **session-id session-id** (Optional) Specify an authentication manager session.
- **handle handle** (Optional) Specify a range from 1 to 4294967295.
- **mac mac** (Optional) Display authentication manager information for a specified MAC address.
- **statistics** (Optional) Display authentication statistics in detail.
- **summary** (Optional) Display authentication statistics summary.

**Command Default**

This command has no default settings.

**Command Modes**

EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(50)SE</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Table 2-18 describes the significant fields shown in the output of the **show authentication** command.

**Note**

The possible values for the status of sessions are shown below. For a session in terminal state, **Authz Success** or **Authz Failed** is displayed along with **No methods** if no method has provided a result.
Table 2-18  show authentication Command Output

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Idle</td>
<td>The session has been initialized and no methods have run yet.</td>
</tr>
<tr>
<td>Running</td>
<td>A method is running for this session.</td>
</tr>
<tr>
<td>No methods</td>
<td>No method has provided a result for this session.</td>
</tr>
<tr>
<td>Authc Success</td>
<td>A method has resulted in authentication success for this session.</td>
</tr>
<tr>
<td>Authc Failed</td>
<td>A method has resulted in authentication fail for this session.</td>
</tr>
<tr>
<td>Authz Success</td>
<td>All features have been successfully applied for this session.</td>
</tr>
<tr>
<td>Authz Failed</td>
<td>A feature has failed to be applied for this session.</td>
</tr>
</tbody>
</table>

Table 2-19 lists the possible values for the state of methods. For a session in a terminal state, Authc Success, Authc Failed, or Failed over are displayed. Failed over means that an authentication method ran and then failed over to the next method, which did not provide a result. Not run appears for sessions that synchronized on standby.

Table 2-19  State Method Values

<table>
<thead>
<tr>
<th>Method State</th>
<th>State Level</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Not run</td>
<td>Terminal</td>
<td>The method has not run for this session.</td>
</tr>
<tr>
<td>Running</td>
<td>Intermediate</td>
<td>The method is running for this session.</td>
</tr>
<tr>
<td>Failed over</td>
<td>Terminal</td>
<td>The method has failed and the next method is expected to provide a result.</td>
</tr>
<tr>
<td>Authc Success</td>
<td>Terminal</td>
<td>The method has provided a successful authentication result for the session.</td>
</tr>
<tr>
<td>Authc Failed</td>
<td>Terminal</td>
<td>The method has provided a failed authentication result for the session.</td>
</tr>
</tbody>
</table>

Examples

This is an example the show authentication registrations command:

Switch# show authentication registrations
Auth Methods registered with the Auth Manager:
Handle Priority Name
3 0 dot1x
2 1 mab
1 2 webauth

The is an example of the show authentication interface interface-id command:

Switch# show authentication interface gigabitethernet1/2
Client list:
MAC Address Domain Status Handle Interface
000e.84af.59bd DATA Authz Success 0xE0000000 GigabitEthernet1//2
Available methods list:
Handle Priority Name
3 0 dot1x
Runnable methods list:
Handle Priority Name
3 0 dot1x
This is an example of the `show authentication sessions` command:

```
Switch# show authentication sessions
Interface  MAC Address     Method   Domain   Status         Session ID
Gi3/45     (unknown)       N/A      DATA     Authz Failed   0908140400000007003651EC
Gi3/46     (unknown)       N/A      DATA     Authz Success  09081404000000080057C274
```

This is an example of the `show authentication sessions` command for a specified interface:

```
Switch# show authentication sessions int gigabitethernet 1/4
```

```
Interface:  GigabitEthernet0/46 GigabitEthernet1/4
MAC Address:  Unknown
IP Address:  Unknown
Status:  Authz Success
Domain:  DATA
Oper host mode:  multi-host
Oper control dir:  both
Authorized By:  Guest Vlan
Vlan Policy:  4094
Session timeout:  N/A
Idle timeout:  N/A
Common Session ID:  09081404000000080057C274
Acct Session ID:  0x0000000A
Handle:  0xCC000008
Runnable methods list:
  Method   State
  dot1x    Failed over
```

This is an example of the `show authentication sessions` command for a specified MAC address:

```
Switch# show authentication sessions mac 000e.84af.59bd
```

```
Interface: GigabitEthernet1/4
MAC Address: 000e.84af.59bd
Status: Authz Success
Domain: DATA
Oper host mode: single-host
Authorized By: Authentication Server
Vlan Policy: 10
Handle: 0xE0000000
Runnable methods list:
  Method   State
  dot1x    Authc Success
```

This is an example of the `show authentication session method` command for a specified method:

```
Switch# show authentication sessions method mab
```

```
No Auth Manager contexts match supplied criteria
```

```
Switch# show authentication sessions method dot1x
```

```
MAC Address Domain Status Handle Interface
000e.84af.59bd DATA Authz Success 0xE0000000 GigabitEthernet1/23
```

</table>
show auto qos

Use the `show auto qos` EXEC command to display the quality of service (QoS) commands entered on the interfaces on which automatic QoS (auto-QoS) is enabled.

```
show auto qos [interface [interface-id]]
```

**Syntax Description**

- `interface [interface-id]`: (Optional) Display auto-QoS information for the specified port or for all ports. Valid interfaces include physical ports.

**Command Modes**

EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

The `show auto qos` command output shows only the auto-QoS command entered on each interface. The `show auto qos interface interface-id` command output shows the auto-QoS command entered on a specific interface.

Use the `show running-config` privileged EXEC command to display the auto-QoS configuration and the user modifications.

The `show auto qos` command output also shows the service policy information for the Cisco IP phone.

To display information about the QoS configuration that might be affected by auto-QoS, use one of these commands:

- `show mls qos`
- `show mls qos maps cos-dscp`
- `show mls qos interface [interface-id] [buffers | queueing]`
- `show mls qos maps [cos-dscp | cos-input-q | cos-output-q | dscp-cos | dscp-input-q | dscp-output-q]`
- `show mls qos input-queue`
- `show running-config`

**Examples**

This is an example of output from the `show auto qos` command after the `auto qos voip cisco-phone` and the `auto qos voip cisco-softphone` interface configuration commands are entered:

```
Switch> show auto qos

GigabitEthernet1/1
auto qos voip cisco-softphone

GigabitEthernet1/3
auto qos voip cisco-phone
```
GigabitEthernet1/2
auto qos voip cisco-phone

This is an example of output from the `show auto qos interface interface-id` command when the `auto qos voip cisco-phone` interface configuration command is entered:

Switch# show auto qos interface gigabitethernet 1/1
GigabitEthernet1/1
auto qos voip cisco-phone

This is an example of output from the `show running-config` privileged EXEC command when the `auto qos voip cisco-phone` and the `auto qos voip cisco-softphone` interface configuration commands are entered:

Switch# show running-config
Building configuration...
...

This is an example of output from the show auto qos interface interface-id command when the auto qos voip cisco-phone interface configuration command is entered:

Switch> show auto qos interface FastEthernet1/2
FastEthernet1/2
auto qos voip cisco-softphone

This is an example of output from the `show auto qos` command when auto-QoS is disabled on the switch:

```
Switch> show auto qos
AutoQoS not enabled on any interface
```

This is an example of output from the `show auto qos interface interface-id` command when auto-QoS is disabled on an interface:

```
Switch> show auto qos interface gigabitethernet1/1
AutoQoS is disabled
```

Auto upgrade : yes
Auto upgrade path : 
Boot optimization : disabled
NVRAM/Config file buffer size: 65536
Timeout for Config Download: 0 seconds
Config Download via DHCP: disabled (next boot: disabled)
Switch#
```
### Table 2-20  show boot Field Descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BOOT path-list</td>
<td>Displays a semicolon separated list of executable files to try to load and execute when automatically booting up. If the BOOT environment variable is not set, the system attempts to load and execute the first executable image it can find by using a recursive, depth-first search through the flash file system. In a depth-first search of a directory, each encountered subdirectory is completely searched before continuing the search in the original directory. If the BOOT variable is set but the specified images cannot be loaded, the system attempts to boot up with the first bootable file that it can find in the flash file system.</td>
</tr>
<tr>
<td>Config file</td>
<td>Displays the filename that Cisco IOS uses to read and write a nonvolatile copy of the system configuration.</td>

Table 2-21 lists the descriptions of the fields in the `show cable-diagnostics tdr` command output.

### Table 2-21: Fields Descriptions for the `show cable-diagnostics tdr` Command Output

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Interface on which TDR was run.</td>
</tr>
<tr>
<td>Speed</td>
<td>Speed of connection.</td>
</tr>
<tr>
<td>Local pair</td>
<td>Name of the pair of wires that TDR is testing on the local interface.</td>
</tr>
<tr>
<td>Pair length</td>
<td>Location on the cable where the problem is, with respect to your switch. TDR can only find the location in one of these cases:</td>
</tr>
<tr>
<td></td>
<td>- The cable is properly connected, the link is up, and the interface speed is 1000 Mb/s.</td>
</tr>
<tr>
<td></td>
<td>- The cable is open.</td>
</tr>
<tr>
<td></td>
<td>- The cable has a short.</td>
</tr>
<tr>
<td>Remote pair</td>
<td>Name of the pair of wires to which the local pair is connected. TDR can learn about the remote pair only when the cable is properly connected and the link is up.</td>
</tr>
<tr>
<td>Pair status</td>
<td>The status of the pair of wires on which TDR is running:</td>
</tr>
<tr>
<td></td>
<td>- Normal—The pair of wires is properly connected.</td>
</tr>
<tr>
<td></td>
<td>- Not completed—The test is running and is not completed.</td>
</tr>
<tr>
<td></td>
<td>- Not supported—The interface does not support TDR.</td>
</tr>
<tr>
<td></td>
<td>- Open—The pair of wires is open.</td>
</tr>
<tr>
<td></td>
<td>- Shorted—The pair of wires is shorted.</td>
</tr>
<tr>
<td></td>
<td>- ImpedanceMis—The impedance is mismatched.</td>
</tr>
<tr>
<td></td>
<td>- Short/Impedance Mismatched—The impedance mismatched or the cable is short.</td>
</tr>
<tr>
<td></td>
<td>-InProgress—The diagnostic test is in progress</td>
</tr>
</tbody>
</table>

This is an example of output from the `show interfaces interface-id` command when TDR is running:

```
Switch# show interfaces gigabitethernet1/2
```

```
gigabitethernet1/2 is up, line protocol is up (connected: TDR in Progress)
```

This is an example of output from the `show cable-diagnostics tdr interface interface-id` command when TDR is not running:

```
Switch# show cable-diagnostics tdr interface gigabitethernet1/2
```

```
% TDR test was never issued on Gigabit Ethernet 1/2
```
If an interface does not support TDR, this message appears:

% TDR test is not supported on switch 1

<table>

**show cip**

Use the **show cip** privileged EXEC command to display information about the Common Industrial Protocol (CIP) subsystem.

```
show cip {connection | faults | file | miscellaneous | object | security | session | status}
```

**Syntax Description**

- **connection**: Display the CIP connection information.
- **faults**: Display information about CIP faults.
- **file**: Display the information about the CIP file instances.
- **miscellaneous**: Display miscellaneous CIP system information.
- **object**: Display information about specific CIP objects. These objects include assembly, Ethernet link, identity, switch parameter, time sync, and TCP/IP objects.
- **security**: Display the CIP security window status and settings.
- **session**: Display the active and inactive CIP sessions.
- **status**: Display the CIP status (enabled or disabled).

**Command Modes**

Privileged EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
<tr>
<td>12.2(50)SE</td>
<td>The <strong>faults</strong> keyword was added.</td>
</tr>
</tbody>
</table>

**Examples**

This is an example of output from the **show cip faults** command:

```
Switch# show cip faults
Major/Minor Recoverable Faults
----------------------------------
MAC address flap : Normal
CDP native vlan mismatch : Normal
Storm control event : Normal
Port security violation : Normal
Port in error-disable state: Normal
----------------------------------
Major Unrecoverable Faults
----------------------------------
POST detected HW failure : Normal
SFP in error-disable state : Normal
```

This is an example of output from the **show cip security** command:

```
Switch# show cip security
State : Enabled
Password: abc123
Window: Open
Owner IP: 172.20.140.147
Window timeout: 600 seconds
Window open tick: 17
```
### show cip

<table>
<thead>
<tr>
<th>Related Commands</th>
<th>Command</th>

</tr>
</tbody>
</table>
show class-map

Use the show class-map EXEC command to display quality of service (QoS) class maps, which define the match criteria to classify traffic.

```
show class-map [class-map-name]
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>class-map-name</td>
<td>(Optional) Display the contents of the specified class map.</td>
</tr>
</tbody>
</table>

**Command Modes**

EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Examples**

This is an example of output from the show class-map command:

```
Switch> show class-map
Class Map match-all videowizard_10-10-10-10 (id 2)
   Match access-group name videowizard_10-10-10-10

Class Map match-any class-default (id 0)
   Match any
Class Map match-all dscp5 (id 3)
   Match ip dscp 5
```

**Related Commands**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>class-map</td>
<td>Creates a class map to be used for matching packets to the class whose name you specify.</td>
</tr>
<tr>
<td>match (class-map configuration)</td>
<td>Defines the match criteria to classify traffic.</td>
</tr>
</tbody>
</table>
show cluster

Use the `show cluster` EXEC command to display the cluster status and a summary of the cluster to which the switch belongs. This command can be entered on the cluster command switch and cluster member switches.

```
show cluster
```

**Syntax Description**

This command has no arguments or keywords.

**Command Modes**

EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

If you enter this command on a switch that is not a cluster member, the error message `Not a management cluster member` appears.

On a cluster member switch, this command displays the identity of the cluster command switch, the switch member number, and the state of its connectivity with the cluster command switch.

On a cluster command switch, this command displays the cluster name and the total number of members. It also shows the cluster status and time since the status changed. If redundancy is enabled, it displays the primary and secondary command-switch information.

**Examples**

This is an example of output when the `show cluster` command is entered on the active cluster command switch:

```
Switch> show cluster
Command switch for cluster "cluster1"
    Total number of members: 7
    Status: 1 members are unreachable
    Time since last status change: 0 days, 0 hours, 2 minutes
    Redundancy: Enabled
        Standby command switch: Member 1
        Standby Group: cluster1_standby
        Standby Group Number: 110
    Heartbeat interval: 8
    Heartbeat hold-time: 80
    Extended discovery hop count: 3
```

This is an example of output when the `show cluster` command is entered on a cluster member switch:

```
Switch1> show cluster
Member switch for cluster "cluster2"
    Member number: 3
    Management IP address: 192.192.192.192
    Command switch mac address: 0000.0c07.ac14
    Heartbeat interval: 8
    Heartbeat hold-time: 80
```
This is an example of output when the `show cluster` command is entered on a cluster member switch that is configured as the standby cluster command switch:

```plaintext
Switch> show cluster
Member switch for cluster "hapuna"
   Member number: 3 (Standby command switch)
   Management IP address: 192.192.192.192
   Command switch mac address: 0000.0c07.ac14
   Heartbeat interval: 8
   Heartbeat hold-time: 80
```

This is an example of output when the `show cluster` command is entered on the cluster command switch that has lost connectivity with member 1:

```plaintext
Switch> show cluster
Command switch for cluster "Ajang"
   Total number of members: 7
   Status: 1 members are unreachable
   Time since last status change: 0 days, 0 hours, 5 minutes
   Redundancy: Disabled
   Heartbeat interval: 8
   Heartbeat hold-time: 80
   Extended discovery hop count: 3
```

This is an example of output when the `show cluster` command is entered on a cluster member switch that has lost connectivity with the cluster command switch:

```plaintext
Switch> show cluster
Member switch for cluster "hapuna"
   Member number: <UNKNOWN>
   Management IP address: 192.192.192.192
   Command switch mac address: 0000.0c07.ac14
   Heartbeat interval: 8
   Heartbeat hold-time: 80
```

### Related Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>cluster enable</strong></td>
<td>Enables a command-capable switch as the cluster command switch, assigns a cluster name, and optionally assigns a member number to it.</td>

</tr>
</tbody>
</table>
show cluster candidates

Use the `show cluster candidates` privileged EXEC command to display a list of candidate switches.

```
show cluster candidates [detail | mac-address H.H.H.]
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>detail</td>
<td>(Optional) Display detailed information for all candidates.</td>
</tr>
<tr>
<td>mac-address</td>
<td>(Optional) MAC address of the cluster candidate.</td>
</tr>
</tbody>
</table>

**Command Modes**

EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

This command is available only on the cluster command switch.

If the switch is not a cluster command switch, the command displays an empty line at the prompt.

The SN in the display means `switch member number`. If E appears in the SN column, it means that the switch is discovered through extended discovery. If E does not appear in the SN column, it means that the `switch member number` is the upstream neighbor of the candidate switch. The hop count is the number of devices the candidate is from the cluster command switch.

**Examples**

This is an example of output from the `show cluster candidates` command:

```
Switch> show cluster candidates
00d0.7961.c4c0 StLouis-2  WS-IE3000-4TC  Gi1/1  2  1  Fa1/1
00d0.bbf5.e900 ldf-dist-128 WS-C3524-XL  Fa1/7  1  0  Fa0/24
00e0.1e7e.be80 1900_Switch  1900             3  1  0   Fa0/11
00e0.1e9f.7a00 Surfers-24   WS-C2924-XL      Fa1/5  1  0  Fa0/3
00e0.1e9f.8c00 Surfers-12-2 WS-C2912-XL      Fa1/4  1  0  Fa0/7
00e0.1e9f.8c40 Surfers-12-1 WS-C2912-XL      Fa1/1  1  0  Fa0/9
```
This is an example of output from the `show cluster candidates` command that uses the MAC address of a cluster member switch directly connected to the cluster command switch:

```
Switch> show cluster candidates mac-address 00d0.7961.c4c0
Device 'Tahiti-12' with mac address number 00d0.7961.c4c0
    Device type:            cisco WS-IE3000-4TC
    Upstream MAC address:   00d0.796d.2f00 (Cluster Member 0)
    Local port:             Gi1/1   FEC number:
    Upstream port:          Gi2/2  FEC Number:
    Hops from cluster edge: 1
    Hops from command device: 1
```

This is an example of output from the `show cluster candidates` command that uses the MAC address of a cluster member switch three hops from the cluster edge:

```
Switch> show cluster candidates mac-address 0010.7bb6.1cc0
Device 'Ventura' with mac address number 0010.7bb6.1cc0
    Device type:            cisco WS-C2912MF-XL
    Upstream MAC address:   0010.7bb6.1cd4
    Local port:             Fa2/1   FEC number:
    Upstream port:          Fa0/24  FEC Number:
    Hops from cluster edge: 3
    Hops from command device: -
```

This is an example of output from the `show cluster candidates detail` command:

```
Switch> show cluster candidates detail

show cluster members

Use the `show cluster members` privileged EXEC command to display information about the cluster members.

    show cluster members [n | detail]

**Syntax Description**

- `n` (Optional) Number that identifies a cluster member. The range is 0 to 15.
- `detail` (Optional) Display detailed information for all cluster members.

**Command Modes**

Privileged EXEC

**Command History**

Release Modification
12.2(44)EX This command was introduced.

**Usage Guidelines**

This command is available only on the cluster command switch.

If the cluster has no members, this command displays an empty line at the prompt.

**Examples**

This is an example of output from the `show cluster members` command. The SN in the display means `switch number`.

```
Switch# show cluster members
|---Upstream---|
SN MAC Address    Name         PortIf FEC Hops   SN PortIf  FEC  State   
0  0002.4b29.2e00 StLouis1     0                    Up   (Cmdr)
1  0030.946c.d740 tal-switch-1 Fa0/13      1     0  Gi0/1       Up
2  0002.b922.7180 nms-2820     10      0   2     1  Fa0/18      Up
3  0002.4b29.4400 SanJuan2     Gi0/1       2     1  Fa0/11      Up
4  0002.4b28.c480 GenieTest    Gi0/2       2     1  Fa0/9       Up
```

This is an example of output from the `show cluster members` for cluster member 3:

```
Switch# show cluster members 3
Device 'SanJuan2' with member number 3
  Device type:    cisco WS-IE3000
  MAC address:    0002.4b29.4400
  Upstream MAC address: 0030.946c.d740 (Cluster member 1)
  Local port:     Gi1/1   FEC number:
  Upstream port:  Gi2/3 FEC Number:
  Hops from command device: 2
```

This is an example of output from the `show cluster members detail` command:

```
Switch# show cluster members detail
Device 'StLouis1' with member number 0 (Command Switch)
  Device type:    cisco WS-ies
  MAC address:    0002.4b29.2e00
  Upstream MAC address:
  Local port:     FEC number:
  Upstream port:  FEC Number:
```
show cluster members

Hops from command device: 0

Device 'tal-switch-14' with member number 1

show controllers ethernet-controller

Use the `show controllers ethernet-controller` privileged EXEC command without keywords to display per-interface send and receive statistics read from the hardware. Use with the `phy` keyword to display the interface internal registers or the `port-asic` keyword to display information about the port ASIC.

```
show controllers ethernet-controller [interface-id] [phy [detail]] [port-asic { configuration | statistics }] [fastetherent 0]
```

### Syntax Description

- **interface-id**
  The physical interface (including type, module, and port number).

- **phy**
  (Optional) Display the status of the internal registers on the switch physical layer device (PHY) for the device or the interface. This display includes the operational state of the automatic medium-dependent interface crossover (auto-MDIX) feature on an interface.

- **detail**
  (Optional) Display details about the PHY internal registers.

- **port-asic**
  (Optional) Display information about the port ASIC internal registers.

- **configuration**
  Display port ASIC internal register configuration.

- **statistics**
  Display port ASIC statistics, including the Rx/Sup Queue and miscellaneous statistics.

### Command Modes

Privileged EXEC (only supported with the `interface-id` keywords in EXEC mode)

### Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

### Usage Guidelines

This display without keywords provides traffic statistics, basically the RMON statistics for all interfaces or for the specified interface.

When you enter the `phy` or `port-asic` keywords, the displayed information is useful primarily for Cisco technical support representatives troubleshooting the switch.
This is an example of output from the `show controllers ethernet-controller` command for an interface. Table 2-22 describes the Transmit fields, and Table 2-23 describes the Receive fields.

<td>15.0(2)EY1</td>
<td>This command is introduced.</td>
</tr>
</tbody>
</table>

Usage Guidelines

The instance range is 0 to 1. For instances other than 0 to 1, the switch provides no output.

Though the instances are visible on all switches, this command is valid only for PoE switches. The command does not provide information for switches that do not support PoE.

The output provides information that might be useful for Cisco technical support representatives troubleshooting the switch.

Examples

This is an example of output from the show controllers power inline command on a switch:

Switch# show controllers power inline
Controller Instance 0, Address 0x52

show dot1q-tunnel

To display information about IEEE 802.1Q tunnel ports, use the `show dot1q-tunnel` command in EXEC mode.

```
show dot1q-tunnel [interface interface-id]
```

**Syntax Description**

- `interface interface-id` (Optional) Specifies the interface for which to display IEEE 802.1Q tunneling information. Valid interfaces include physical ports and port channels.

**Command Modes**

- EXEC (`>`)

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(52)SE</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

This command is available only when the switch is running the IP Services image.

**Examples**

These are examples of output from the `show dot1q-tunnel` command:

```
Switch> show dot1q-tunnel
dot1q-tunnel mode LAN Port(s)
-----------------------------
Gi1/1
Gi1/2
Gi1/3
Gi1/6
Po2
```

```
Switch> show dot1q-tunnel interface gigabitethernet0/1
dot1q-tunnel mode LAN Port(s)
-----------------------------
Gi1/1
```

**Related Commands**

<td>(Optional) Display the IEEE 802.1x status for the specified port (including type, module, and port number).</td>
</tr>
<tr>
<td>details</td>
<td>(Optional) Display the IEEE 802.1x interface details.</td>
</tr>
<tr>
<td>statistics</td>
<td>(Optional) Display IEEE 802.1x statistics for the specified port.</td>
</tr>
</tbody>
</table>

Command Modes

EXEC

Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

Usage Guidelines

If you do not specify a port, global parameters and a summary appear. If you specify a port, details for that port appear.

If the port control is configured as unidirectional or bidirectional control and this setting conflicts with the switch configuration, the show dot1x {all | interface interface-id} privileged EXEC command output has this information:

ControlDirection = In (Inactive)
### Examples

This is an example of output from the `show dot1x` EXEC command:

```
Switch> show dot1x
Sysauthcontrol Enabled
Dot1x Protocol Version 2
Critical Recovery Delay 100
Critical EAPOL Disabled
```

This is an example of output from the `show dot1x all` EXEC command:

```
Switch> show dot1x all
Sysauthcontrol Enabled
Dot1x Protocol Version 2
Critical Recovery Delay 100
Critical EAPOL Disabled

Dot1x Info for GigabitEthernet1/1
-----------------------------------
PAE = AUTHENTICATOR
PortControl = AUTO
ControlDirection = Both
HostMode = SINGLE_HOST
Violation Mode = PROTECT
ReAuthentication = Disabled
QuietPeriod = 60
ServerTimeout = 30
SuppTimeout = 30
ReAuthPeriod = 3600 (Locally configured)
ReAuthMax = 2
MaxReq = 2
TxPeriod = 30
RateLimitPeriod = 0

<output truncated>
```

This is an example of output from the `show dot1x all summary` EXEC command:

```
Interface       PAE     Client          Status
--------------------------------------------------------
Gi1/1           AUTH    none            UNAUTHORIZED
Gi1/2           AUTH    00a0.c9b8.0072  AUTHORIZED
Fa1/1           AUTH    none            UNAUTHORIZED
```

This is an example of output from the `show dot1x interface interface-id` EXEC command:

```
Switch> show dot1x interface gigabitethernet1/2
Dot1x Info for GigabitEthernet1/2
-----------------------------------
PAE = AUTHENTICATOR
PortControl = AUTO
ControlDirection = In
HostMode = SINGLE_HOST
ReAuthentication = Disabled
QuietPeriod = 60
ServerTimeout = 30
SuppTimeout = 30
ReAuthPeriod = 3600 (Locally configured)
ReAuthMax = 2
MaxReq = 2
TxPeriod = 30
RateLimitPeriod = 0
```
This is an example of output from the `show dot1x interface interface-id details` EXEC command:

```plaintext
Switch# show dot1x interface gigabitethernet1/2 details
Dot1x Info for GigabitEthernet1/2
-----------------------------------
PAE                       = AUTHENTICATOR
PortControl               = AUTO
ControlDirection          = Both
HostMode                  = SINGLE_HOST
ReAuthentication          = Disabled
QuietPeriod               = 60
ServerTimeout             = 30
SuppTimeout               = 30
ReAuthPeriod              = 3600 (Locally configured)
ReAuthMax                 = 2
MaxReq                    = 2
TxPeriod                  = 30
RateLimitPeriod           = 0

Dot1x Authenticator Client List Empty
```

This is an example of output from the `show dot1x interface interface-id details` commmand when a port is assigned to a guest VLAN and the host mode changes to multiple-hosts mode:

```plaintext
Switch# show dot1x interface gigabitethernet1/1 details
Dot1x Info for GigabitEthernet1/1
-----------------------------------
PAE                       = AUTHENTICATOR
PortControl               = AUTO
ControlDirection          = Both
HostMode                  = SINGLE_HOST
ReAuthentication          = Enabled
QuietPeriod               = 60
ServerTimeout             = 30
SuppTimeout               = 30
ReAuthPeriod              = 3600 (Locally configured)
ReAuthMax                 = 2
MaxReq                    = 2
TxPeriod                  = 30
RateLimitPeriod           = 0
Guest-Vlan                = 182

Dot1x Authenticator Client List Empty
Port Status               = AUTHORIZED
Authorized By             = Guest-Vlan
Operational HostMode      = MULTI_HOST
Vlan Policy               = 182
```

This is an example of output from the `show dot1x interface interface-id statistics` command. Table 2-25 describes the fields in the display.

```plaintext
Switch> show dot1x interface gigabitethernet1/2 statistics
Dot1x Authenticator Port Statistics for GigabitEthernet1/2
----------------------------------------------------------
RxStart = 0     RxLogoff = 0    RxResp = 1      RxRespID = 1
RxInvalid = 0   RxLenErr = 0    RxTotal = 2
TxReq = 2       TxReqID = 132   TxTotal = 134
RxVersion = 2   LastRxSrcMAC = 00a0.c9b8.0072
```

**Examples**

This is an example of output from the **show dtp** command:

Switch# **show dtp**
Global DTP information
    Sending DTP Hello packets every 30 seconds
    Dynamic Trunk timeout is 300 seconds
    21 interfaces using DTP

This is an example of output from the **show dtp interface** command:

Switch# **show dtp interface gigabitethernet1/1**
DTP information for GigabitEthernet1/1:
    TOS/TAS/TNS: ACCESS/AUTO/ACCESS
    TOT/TAT/TNT: NATIVE/NEGOTIATE/NATIVE
    Neighbor address 1: 000943A7D081
    Neighbor address 2: 000000000000
    Hello timer expiration (sec/state): 1/RUNNING
    Access timer expiration (sec/state): never/STOPPED
    Negotiation timer expiration (sec/state): never/STOPPED
    Multidrop timer expiration (sec/state): never/STOPPED
    FSM state: S2:ACCESS
    # times multi & trunk 0
    Enabled: yes
    In STP: no

Statistics
-------
3160 packets received (3160 good)
0 packets dropped
    0 nonegotiate, 0 bad version, 0 domain mismatches, 0 bad TLVs, 0 other

show eap

Use the `show eap` privileged EXEC command to display Extensible Authentication Protocol (EAP) registration and session information for the switch or for the specified port.

```
```

**Syntax Description**

- **registrations**
  - Display EAP registration information.
- **method name**
  - (Optional) Display EAP method registration information.
- **transport name**
  - (Optional) Display EAP transport registration information.
- **sessions**
  - Display EAP session information.
- **credentials name**
  - (Optional) Display EAP method registration information.
- **interface interface-id**
  - (Optional) Display the EAP information for the specified port (including type, module, and port number).

**Command Modes**

Privileged EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

When you use the `show eap registrations` privileged EXEC command with these keywords, the command output shows this information:

- None—All the lower levels used by EAP and the registered EAP methods.
- **method name** keyword—The specified method registrations.
- **transport name** keyword—The specific lower-level registrations.

When you use the `show eap sessions` privileged EXEC command with these keywords, the command output shows this information:

- None—All active EAP sessions.
- **credentials name** keyword—The specified credentials profile.
- **interface interface-id** keyword—The parameters for the specified interface.
- **method name** keyword—The specified EAP method.
- **transport name** keyword—The specified lower layer.

**Examples**

This is an example of output from the `show eap registrations` privileged EXEC command:

```
Switch> show eap registrations
Registered EAP Methods:
  Method  Type     Name
```
This is an example of output from the `show eap registrations transport` privileged EXEC command:

```
Switch> show eap registrations transport all
Registered EAP Lower Layers:
   Handle  Type            Name
   2     Authenticator   Dot1x-Authenticator
   1     Authenticator   MAB
```

This is an example of output from the `show eap sessions` privileged EXEC command:

```
Switch> show eap sessions
Role:                    Authenticator   Decision:                Fail
Lower layer:             Dot1x-Authenticator
Current method:          None            Method state:            Uninitialised
Retransmission count:    0  (max: 2)     Timer:                   Authenticator
ReqId Retransmit (timeout: 30s, remaining: 2s)
EAP handle:              0x5200000A      Credentials profile:     None
Lower layer context ID:  0x93000004      Eap profile name:        None
Method context ID:       0x00000000      Peer Identity:           None
Start timeout (s):       1               Retransmit timeout (s):  30 (30)
Current ID:              2               Available local methods: None
```

This is an example of output from the `show eap sessions interface interface-id` privileged EXEC command:

```
Switch# show eap sessions gigabitethernet1/1
Role:                    Authenticator   Decision:                Fail
Lower layer:             Dot1x-Authenticator
Current method:          None            Method state:            Uninitialised
Retransmission count:    1  (max: 2)     Timer:                   Authenticator
ReqId Retransmit (timeout: 30s, remaining: 13s)
EAP handle:              0xA800000B      Credentials profile:     None
Lower layer context ID:  0x0D000005      Eap profile name:        None
Method context ID:       0x00000000      Peer Identity:           None
Start timeout (s):       1               Retransmit timeout (s):  30 (30)
Current ID:              2               Available local methods: None
```

show env

Use the `show env` EXEC command to show switch environment information.

```
show env {all | power | temperature [status]}
```

**Syntax Description**

- `all` Display both fan and temperature environmental status.
- `power` Display the switch power status.
- `temperature` Display the switch temperature status.
- `status` (Optional) Display the switch internal temperature.

**Command Modes**

EXEC

**Command History**

Release | Modification
---------|------------------
12.2(44)EX | This command was introduced.

**Usage Guidelines**

The command output shows the green and yellow states as `OK` and the red state as `FAULTY`.

If you enter the `show env all` command on this switch, the command output is the same as the `show env temperature status` command output.

For more information about the threshold levels, see the software configuration guide for this release.

**Examples**

This is an example of output from the `show env all` command:

```
Switch> show env all
TEMPERATURE is OK
Temperature Value: 48 Degree Celsius
POWER SUPPLY A is DC OK
POWER SUPPLY B is DC OK
```

This is an example of output from the `show env power` command.

```
Switch> show env power
Power supply A is DC OK
Power supply B is DC FAULTY
```

This is an example of output from the `show env temperature` command.

```
Switch> show env temperature
Temperature is OK
```

This is an example of output from the `show env temperature status` command.

```
Switch> show env temperature status
Temperature Value: 48 Degree Celsius
```
show errdisable detect

Use the show errdisable detect EXEC command to display error-disabled detection status.

show errdisable detect

Syntax Description
This command has no arguments or keywords.

Command Modes
EXEC

Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

Usage Guidelines
A displayed gbic-invalid error reason refers to an invalid small form-factor pluggable (SFP) module.

Examples
This is an example of output from the show errdisable detect command:

```
Switch> show errdisable detect
ErrDisable Reason    Detection    Mode
-----------------    ---------    ----
arp-inspection      Enabled      port
bpduguard           Enabled      vlan
channel-misconfig   Enabled      port
community-limit     Enabled      port
dhcp-rate-limit     Enabled      port
dtp-flap            Enabled      port
gbic-invalid        Enabled      port
inline-power        Enabled      port
invalid-policy      Enabled      port
l2ptguard           Enabled      port
link-flap            Enabled      port
loopback            Enabled      port
lsgroup             Enabled      port
pgap-flap            Enabled      port
psecure-violation   Enabled      port/vlan
security-violatio   Enabled      port
sfp-config-mismat   Enabled      port
storm-control       Enabled      port
udid                Enabled      port
vmps                Enabled      port
```

show errdisable flap-values

Use the **show errdisable flap-values** EXEC command to display conditions that cause an error to be recognized for a cause.

```
show errdisable flap-values
```

### Syntax Description

This command has no arguments or keywords.

### Command Modes

EXEC

### Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

### Usage Guidelines

The *Flaps* column in the display shows how many changes to the state within the specified time interval will cause an error to be detected and a port to be disabled. For example, the display shows that an error will be assumed and the port shut down if three Dynamic Trunking Protocol (DTP)-state (port mode access/trunk) or Port Aggregation Protocol (PAgP) flap changes occur during a 30-second interval, or if 5 link-state (link up/down) changes occur during a 10-second interval.

show errdisable recovery

Use the show errdisable recovery EXEC command to display the error-disabled recovery timer information.

show errdisable recovery

**Syntax Description**

This command has no arguments or keywords.

**Command Modes**

EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

A gbic-invalid error-disable reason refers to an invalid small form-factor pluggable (SFP) module interface.

**Examples**

This is an example of output from the show errdisable recovery command:

```
Switch> show errdisable recovery
ErrDisable Reason    Timer Status
-----------------    --------------
udld                Disabled
bpduguard           Disabled
security-violation  Disabled
channel-misconfig   Disabled
vmps                Disabled
pagp-flap           Disabled
dcp-flap            Disabled
link-flap           Enabled
l2ptguard           Disabled
pssecure-violation  Disabled
gbic-invalid       Disabled
dhcp-rate-limit     Disabled
unicast-flood       Disabled
storm-control       Disabled
arp-inspection      Disabled
loopback            Disabled

Timer interval:300 seconds

Interfaces that will be enabled at the next timeout:

<table>
<thead>
<tr>
<th>Interface</th>
<th>Errdisable reason</th>
<th>Time left(sec)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gi1/2</td>
<td>link-flap</td>
<td>279</td>
</tr>
</tbody>
</table>
```

**Note**

Though visible in the output, the unicast-flood field is not valid.

</tr>
<tr>
<td></td>
<td>protocol</td>
<td>Display the protocol that is being used in the EtherChannel.</td>
</tr>
<tr>
<td></td>
<td>summary</td>
<td>Display a one-line summary per channel-group.</td>
</tr>
</tbody>
</table>

**Command Modes**

EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

If you do not specify a `channel-group`, all channel groups are displayed.

In the output, the Passive port list field is displayed only for Layer 3 port channels. This field means that the physical port, which is still not up, is configured to be in the channel group (and indirectly is in the only port channel in the channel group).

**Examples**

This is an example of output from the `show etherchannel 1 detail` command:

```
Switch> show etherchannel 1 detail
Group state = L2
Ports: 2  Maxports = 16
Port-channels: 1 Max Port-channels = 16

show fcs-threshold

Use the show fcs-threshold EXEC command to display the frame check sequence (FCS) bit error-rate settings on the switch interfaces.

show fcs-threshold

Syntax Description
This command has no arguments or keywords.

Command Modes
EXEC

Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

Usage Guidelines
The Ethernet standard calls for a maximum bit error rate of $10^{-8}$. In the Cisco IE 3000 switch, the configurable bit error-rate range is from $10^{-6}$ to $10^{-11}$. The bit error-rate input to the switch is a positive exponent. The output displays the positive exponent; an output of 9 means that the bit error-rate is $10^{-9}$.

Examples
This is an example of output from the show fcs-threshold command. It shows the output when all ports are set to the default FCS threshold.

```
Switch# show fcs-threshold
Port    FCS Threshold
Fa1/1    8
Fa1/2    8
Fa1/3    8
Fa1/4    8
Fa2/1    8

Fa2/6    8
Fa2/7    8
Fa2/8    8
Fa3/1    8
Fa3/2    8
Fa3/3    8
Fa3/4    8
Fa3/5    8
Fa3/6    8
Fa3/7    8
Fa3/8    8
Gi1/1    8
Gi1/2    8
```
Related Commands | Command | Description
--- | --- | ---
 | fcs-threshold | Sets the FCS threshold on an interface. |
show flowcontrol

Use the show flowcontrol EXEC command to display the flow control status and statistics.

```
show flowcontrol [interface interface-id | module number]
```

**Syntax Description**

- **interface interface-id** (Optional) Display the flow control status and statistics for a specific interface.
- **module number** (Optional) Display the flow control status and statistics for all interfaces on the switch. Module number is 1. This option is not available if you have entered a specific interface ID.

**Command Modes**

EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Use this command to display the flow control status and statistics on the switch or for a specific interface.

Use the show flowcontrol command to display information about all the switch interfaces. The output from the show flowcontrol command is the same as the output from the show flowcontrol module number command.

Use the show flowcontrol interface interface-id command to display information about a specific interface.

**Examples**

This is an example of output from the show flowcontrol command:

```
Switch> show flowcontrol
Port       Send FlowControl  Receive FlowControl  RxPause TxPause
admin      oper     admin    oper
---------  -------- -------- -------- --------    ------- -------    ------- -------
Gi1/1      Unsupp.  Unsupp.  off      off         0       0
Gi1/2      desired off      off      off         0       0
Gi1/3      desired off      off      off         0       0
<output truncated>
```

This is an example of output from the show flowcontrol interface interface-id command:

```
Switch> show flowcontrol gigabitethernet1/2
Port       Send FlowControl  Receive FlowControl  RxPause TxPause
admin      oper     admin    oper
---------  -------- -------- -------- --------    ------- -------    ------- -------
Gi1/2      desired off      off      off         0       0
```

**Related Commands**

- **flowcontrol** Sets the receive flow-control state for an interface.
show interfaces

Use the show interfaces privileged EXEC command to display the administrative and operational status of all interfaces or a specified interface.

```
show interfaces [interface-id | vlan vlan-id] [accounting | capabilities [module number] | counters | description | etherchannel | flowcontrol | private-vlan mapping | rep | pruning | stats | status [err-disabled] | switchport [backup | module number] | transceiver | properties
| detail [module number] | trunk]
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>interface-id</code></td>
<td>(Optional) Valid interfaces include physical ports (including type, module, and port number) and port channels. The port-channel range is 1 to 6.</td>
</tr>
<tr>
<td><code>vlan vlan-id</code></td>
<td>(Optional) VLAN identification. The range is 1 to 4094.</td>
</tr>
<tr>
<td><code>accounting</code></td>
<td>(Optional) Display accounting information on the interface, including active protocols and input and output packets and octets. Note The display shows only packets processed in software; hardware-switched packets do not appear.</td>
</tr>
<tr>
<td><code>capabilities</code></td>
<td>(Optional) Display the capabilities of all interfaces or the specified interface, including the features and options that you can configure on the interface. Though visible in the command line help, this option is not available for VLAN IDs.</td>
</tr>
<tr>
<td><code>module number</code></td>
<td>(Optional) Display capabilities, switchport configuration, or transceiver characteristics (depending on preceding keyword) of all interfaces on the switch. The only valid module number is 1. This option is not available if you enter a specific interface ID.</td>
</tr>
<tr>
<td><code>counters</code></td>
<td>(Optional) See the show interfaces counters command.</td>
</tr>
<tr>
<td><code>description</code></td>
<td>(Optional) Display the administrative status and description set for an interface.</td>
</tr>
<tr>
<td><code>etherchannel</code></td>
<td>(Optional) Display interface EtherChannel information.</td>
</tr>
<tr>
<td><code>flowcontrol</code></td>
<td>(Optional) Display interface flowcontrol information</td>
</tr>
<tr>
<td><code>private-vlan mapping</code></td>
<td>(Optional) Display private-VLAN mapping information for the VLAN switch virtual interfaces (SVIs). This keyword is available only if your switch is running the IP services image, formerly known as the enhanced multilayer image (EMI).</td>
</tr>
<tr>
<td><code>pruning</code></td>
<td>(Optional) Display interface trunk VTP pruning information.</td>
</tr>
<tr>
<td><code>rep</code></td>
<td>(Optional) See the show interfaces rep command.</td>
</tr>
<tr>
<td><code>stats</code></td>
<td>(Optional) Display the input and output packets by switching path for the interface.</td>
</tr>
<tr>
<td><code>status</code></td>
<td>(Optional) Display the status of the interface. A status of unsupported in the Type field means that a non-Cisco small form-factor pluggable (SFP) module is inserted in the module slot.</td>
</tr>
<tr>
<td><code>err-disabled</code></td>
<td>(Optional) Display interfaces in error-disabled state.</td>
</tr>
<tr>
<td><code>switchport</code></td>
<td>(Optional) Display the administrative and operational status of a switching (nonrouting) port, including port blocking and port protection settings.</td>
</tr>
<tr>
<td><code>backup</code></td>
<td>(Optional) Display Flex Link backup interface configuration and status for the specified interface or all interfaces on the switch.</td>
</tr>
</tbody>
</table>
transceiver [detail | properties] (Optional) Display the physical properties of a CWDM or DWDM small form-factor (SFP) module interface. The keywords have these meanings:
• detail—(Optional) Display calibration properties, including high and low numbers and any alarm information.
• properties—(Optional) Display speed and duplex settings on an interface.

trunk Display interface trunk information. If you do not specify an interface, only information for active trunking ports appears.

Command Modes Privileged EXEC

Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
<tr>
<td>12.2(50)SE</td>
<td>The rep keyword was added.</td>
</tr>
<tr>
<td>12.2(52)SE</td>
<td>The private-vlan mapping keywords were added.</td>
</tr>
</tbody>
</table>

Usage Guidelines

The show interfaces capabilities command with different keywords has these results:
• Use the show interfaces capabilities module 1 to display the capabilities of all interfaces on the switch. Entering any other number is invalid.
• Use the show interfaces interface-id capabilities to display the capabilities of the specified interface.
• Use the show interfaces capabilities (with no module number or interface ID) to display the capabilities of all interfaces on the switch.
• Use the show interfaces switchport module 1 to display the switch port characteristics of all interfaces on the switch. Entering any other number is invalid.

Note Though visible in the command-line help strings, the crb, fair-queue, irb, mac-accounting, precedence, random-detect, rate-limit, and shape keywords are not supported.

Examples

This is an example of output from the show interfaces command for an interface:

```
Switch# show interface GigabitEthernet1/2
GigabitEthernet1/2 is up, line protocol is up (connected)
Hardware is Gigabit Ethernet, address is 001e.1300.4882 (bia 001e.1300.4882)
MTU 1500 bytes, BW 100000 Kbit, DLY 100 usec, reliability 255/255, txload 1/255, rxload 1/255
Encapsulation ARPA, loopback not set
Keepalive not set
Full-duplex, 100Mb/s, link type is auto, media type is 10/100/1000BaseTX
input flow-control is off, output flow-control is unsupported
ARP type: ARPA, ARP Timeout 04:00:00
Last input 00:00:01, output 00:00:00, output hang never
Last clearing of ''show interface'' counters never
Input queue: 0/75/0/0 (size/max/drops/flushes); Total output drops: 0
Queueing strategy: fifo
```
Output queue: 0/40 (size/max)
5 minute input rate 2000 bits/sec, 4 packets/sec
5 minute output rate 17000 bits/sec, 27 packets/sec
553226 packets input, 39772509 bytes, 0 no buffer
Received 530934 broadcasts (529980 multicas)
0 runts, 0 giants, 0 throttles
0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored
0 watchdog, 529980 multicast, 0 pause input
0 input packets with dribble condition detected
4031941 packets output, 317450903 bytes, 0 underruns
0 output errors, 0 collisions, 1 interface resets
0 babbles, 0 late collision, 0 deferred
0 lost carrier, 0 no carrier, 0 PAUSE output
0 output buffer failures, 0 output buffers swapped out

This is an example of output from the **show interfaces accounting** command.

```
Switch# show interfaces accounting
Vlan1

This is an example of output from the `show interfaces interface description` command when the interface has been described as Connects to Marketing by using the `description` interface configuration command.

Switch# `show interfaces gigabitethernet1/2 description`

<table>
<thead>
<tr>
<th>Interface Status</th>
<th>Protocol Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gi1/2</td>
<td>up</td>
</tr>
</tbody>
</table>

This is an example of output from the `show interfaces etherchannel` command when port channels are configured on the switch:

Switch# `show interfaces etherchannel`

Port-channel1:
- Age of the Port-channel = 03d:20h:17m:29s
- Logical slot/port = 10/1
- GC = 0x00000000
- Port state = Port-channel Ag-Not-Inuse

Port-channel2:
- Age of the Port-channel = 03d:20h:17m:29s
- Logical slot/port = 10/2
- GC = 0x00000000
- Port state = Port-channel Ag-Not-Inuse

Port-channel3:
- Age of the Port-channel = 03d:20h:17m:29s
- Logical slot/port = 10/3
- GC = 0x00000000
- Port state = Port-channel Ag-Not-Inuse

This is an example of output from the `show interfaces interface-id pruning` command when pruning is enabled in the VTP domain:

Switch# `show interfaces gigabitethernet1/2 pruning`

<table>
<thead>
<tr>
<th>Port</th>
<th>Vlans pruned for lack of request by neighbor</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gi1/2</td>
<td>3,4</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Port</th>
<th>Vlans traffic requested of neighbor</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gi1/2</td>
<td>1-3</td>
</tr>
</tbody>
</table>

This is an example of output from the `show interfaces stats` command for a specified VLAN interface.

Switch# `show interfaces vlan 1 stats`

<table>
<thead>
<tr>
<th>Processor</th>
<th>Pkts In</th>
<th>Chars In</th>
<th>Pkts Out</th>
<th>Chars Out</th>
</tr>
</thead>

These are examples of output from the `show interfaces status` command for a specific interface when private VLANs are configured. Port 2 is configured as a private-VLAN host port. It is associated with primary VLAN 20 and secondary VLAN 25.

```
Switch# show interfaces fastethernet1/2 status
Port      Name               Status       Vlan       Duplex  Speed Type
Fa01/2    connected 20,25 a-full a-100 10/100BaseTX
```

In this example, port 3 is configured as a private-VLAN promiscuous port. The display shows only the primary VLAN 20.

```
Switch# show interfaces fastethernet1/3 status
Port      Name               Status       Vlan       Duplex  Speed Type
Fa01/3    connected 20 a-full a-100 10/100BaseTX
```

This is an example of output from the `show interfaces status err-disabled` command. It displays the status of interfaces in the error-disabled state.

```
Switch# show interfaces status err-disabled
Port      Name               Status       Reason
Gi1/2     err-disabled dtp-flap
```

This is an example of output from the `show interfaces switchport` command for a port. Table 2-26 describes the fields in the display.

```
Note
Private VLAN trunks are not supported in this release, so those fields are not applicable.
```

```
Switch# show interfaces gigabitethernet1/1 switchport
Name: Gi1/1
Switchport: Enabled
Administrative Mode: dynamic auto

</table>

This is an example of output from the `show interfaces switchport` command for a port configured as a private VLAN promiscuous port. The primary VLAN 20 is mapped to secondary VLANs 25, 30, and 35:

```
Switch# show interfaces gigabitethernet1/2 switchport
Name: Gi1/2
Switchport: Enabled
Administrative Mode: private-vlan promiscuous
Operational Mode: private-vlan promiscuous
Administrative Trunking Encapsulation: negotiate
Operational Trunking Encapsulation: native
Negotiation of Trunking: Off
Access Mode VLAN: 1 (default)
Trunking Native Mode VLAN: 1 (default)
Administrative Native VLAN tagging: enabled
Voice VLAN: none
```
Administrative private-vlan host-association: none
Administrative private-vlan mapping: 20 (VLAN0020) 25 (VLAN0025) 30 (VLAN0030) 35 (VLAN0035)
Administrative private-vlan trunk native VLAN: none
Administrative private-vlan trunk Native VLAN tagging: enabled
Administrative private-vlan trunk encapsulation: dot1q
Administrative private-vlan trunk normal VLANs: none
Administrative private-vlan trunk private VLANs: none
Operational private-vlan:
20 (VLAN0020) 25 (VLAN0025)
30 (VLAN0030)
35 (VLAN0035)

This is an example of output from the `show interfaces switchport backup` command:

```
Switch# show interfaces switchport backup
Switch Backup Interface Pairs:
<table>
<thead>
<tr>
<th>Active Interface</th>
<th>Backup Interface</th>
<th>State</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fa1/1</td>
<td>Fa1/2</td>
<td>Active Up/Backup Standby</td>
</tr>
<tr>
<td>Fa1/3 Fa1/5</td>
<td>Fa1/5</td>
<td>Active Down/Backup Up</td>
</tr>
<tr>
<td>Po1</td>
<td>Po2</td>
<td>Active Standby/Backup Up</td>
</tr>
</tbody>
</table>
```

This is an example of output from the `show interfaces switchport backup` command. In this example, VLANs 1 to 50, 60, and 100 to 120 are configured on the switch:

```
Switch(config)#interface gigabitEthernet 1/1
Switch(config-if)#show switchport backup interface gigabitEthernet 1/2 prefer vlan 60,100-120
```

When both interfaces are up, Gi1/2 forwards traffic for VLANs 60, 100 to 120, and Gi1/1 forwards traffic for VLANs 1 to 50.

```
Switch# show interfaces switchport backup
Switch Backup Interface Pairs:
<table>
<thead>
<tr>
<th>Active Interface</th>
<th>Backup Interface</th>
<th>State</th>
</tr>
</thead>
<tbody>
<tr>
<td>GigabitEthernet1/1</td>
<td>GigabitEthernet1/2</td>
<td>Active Down/Backup Up</td>
</tr>
</tbody>
</table>

Vlans on Interface Gi 1/1: 1-50
Vlans on Interface Gi 1/2: 60, 100-120
```

When a Flex Link interface goes down (LINK_DOWN), VLANs preferred on this interface are moved to the peer interface of the Flex Link pair. In this example, if interface Gi1/1 goes down, Gi1/2 carries all VLANs of the Flex Link pair.

```
Switch# show interfaces switchport backup
Switch Backup Interface Pairs:
<table>
<thead>
<tr>
<th>Active Interface</th>
<th>Backup Interface</th>
<th>State</th>
</tr>
</thead>
<tbody>
<tr>
<td>GigabitEthernet1/1</td>
<td>GigabitEthernet1/2</td>
<td>Active Down/Backup Up</td>
</tr>
</tbody>
</table>

Vlans on Interface Gi 1/1:
Vlans on Interface Gi 1/2: 1-50, 60, 100-120
```

When a Flex Link interface comes up, VLANs preferred on this interface are blocked on the peer interface and moved to the forwarding state on the interface that has just come up. In this example, if interface Gi1/1 comes up, then VLANs preferred on this interface are blocked on the peer interface Gi1/2 and forwarded on Gi1/1.

```
Switch# show interfaces switchport backup
```

<output truncated>
Switch Backup Interface Pairs:

<table>
<thead>
<tr>
<th>Active Interface</th>
<th>Backup Interface</th>
<th>State</th>
</tr>
</thead>
<tbody>
<tr>
<td>GigabitEthernet1/1</td>
<td>GigabitEthernet1/1</td>
<td>Active Down/Backup Up</td>
</tr>
</tbody>
</table>

Vlans on Interface Gi 1/1: 1-50
Vlans on Interface Gi 1/2: 60, 100-120

This is an example of output from the `show interfaces interface-id pruning` command:

Switch# `show interfaces gigabitethernet1/2 pruning`
Port Vlans pruned for lack of request by neighbor

This is an example of output from the `show interfaces interface-id trunk` command. It displays trunking information for the port.

Switch# `show interfaces gigabitethernet1/1 trunk`
Port Mode Encapsulation Status Native vlan
Gi1/1 auto negotiate trunking 1

Port Vlans allowed on trunk
Gi1/1 1-4094

Port Vlans allowed and active in management domain
Gi1/1 1-4

Port Vlans in spanning tree forwarding state and not pruned
Gi1/1 1-4

This is an example of output from the `show interfaces interface-id transceiver properties` command:

Switch# `show interfaces gigabitethernet1/2 transceiver properties`
Name : Gi1/2
Administrative Speed: auto
Operational Speed: auto

show interfaces counters

Use the **show interfaces counters** privileged EXEC command to display various counters for the switch or for a specific interface.

```
show interfaces [interface-id | vlan vlan-id] counters [errors | etherchannel | protocol status | trunk]
```

**Syntax Description**

- **interface-id** (Optional) ID of the physical interface, including type, module, and port number.
- **errors** (Optional) Display error counters.
- **etherchannel** (Optional) Display EtherChannel counters, including octets, broadcast packets, multicast packets, and unicast packets received and sent.
- **protocol status** (Optional) Display status of protocols enabled on interfaces.
- **trunk** (Optional) Display trunk counters.

**Command Modes**

Privileged EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

If you do not enter any keywords, all counters for all interfaces are included.

**Note**

Though visible in the command-line help string, the **vlan vlan-id** keyword is not supported.

**Examples**

This is an example of partial output from the **show interfaces counters** command. It displays all counters for the switch.

```
Switch# show interfaces counters
Port   InOctets InUcastPkts InMcastPkts InBcastPkts
Gi1/1  0        0          0          0
Gi1/2  0        0          0          0
<output truncated>
```

This is an example of partial output from the **show interfaces counters protocol status** command for all interfaces.

```
Switch# show interfaces counters protocol status
Protocols allocated:
   Vlan1: Other, IP
   Vlan20: Other, IP, ARP
   Vlan30: Other, IP, ARP
   Vlan40: Other, IP, ARP
   Vlan50: Other, IP, ARP
   Vlan60: Other, IP, ARP
```
Vlan70: Other, IP, ARP
Vlan80: Other, IP, ARP
Vlan90: Other, IP, ARP
Vlan900: Other, IP, ARP
Vlan3000: Other, IP
Vlan3500: Other, IP
FastEthernet1/1: Other, IP, ARP, CDP
FastEthernet1/2: Other, IP
FastEthernet1/3: Other, IP
FastEthernet1/4: Other, IP

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(50)SE</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

In the output for the `show interface rep [detail]` command, in addition to an Open, Fail, or AP (alternate port) state, the Port Role might show as Fail Logical Open (FailLogOpen) or Fail No Ext Neighbor (FailNoNbr). These states indicate that the port is physically up, but REP is not configured on the neighboring port. In this case, one port goes into a forwarding state for the data path to help maintain connectivity during configuration. The Port Role for this port shows as Fail Logical Open; the port forwards all data traffic on all VLANs. The other failed Port Role shows as Fail No Ext Neighbor; this port blocks traffic for all VLANs.

When the external neighbors for the failed ports are configured, the failed ports go through the alternate port state transitions and eventually go to an Open state or remain as the alternate port, based on the alternate port election mechanism.

In the `show interfaces rep` command output, ports configured as edge no-neighbors are designated with an asterisk (*) in front of Primary Edge or Secondary Edge. In the output of the `show interfaces rep detail` command, No-Neighbor is spelled out.

The output of this command is also included in the `show tech-support` privileged EXEC command output.

**Examples**

This is sample output from the `show interface rep` command:

```
Switch # show interface rep
Interface Seg-id Type LinkOp Role
---------------------- ------ ------------ ----------- ----
GigabitEthernet 1/1 1 Primary Edge TWO_WAY Open
GigabitEthernet 1/2 1 Edge TWO_WAY Open
FastEthernet 1/4 2 INIT_DOWN Fail
```
This is sample output from the `show interface rep` command when the edge port is configured to have no REP neighbor. Note the asterisk (*) next to `Primary Edge`.

```
Switch# show interface rep
Interface            Seg-id Type      LinkOp    Role
--------------------- ------ --------------  ----------- ----
GigabitEthernet1/1   2        TWO_WAY      Open
GigabitEthernet1/2   2      Primary Edge*  TWO_WAY      Open
```

This is sample output from the `show interface rep` command when external neighbors are not configured:

```
Switch # show interface rep
Interface Seg-id Type LinkOp   Role
---------------------- ------ ------------ ----------- -----
GigabitEthernet1/1 1  NO_NEIGHBOR FailNoNbr
GigabitEthernet1/2 2 NO_NEIGHBOR FailLogOpen
```

This is sample output from the `show interface rep detail` command for a specified interface:

```
Switch # show interface gigabitethernet1/2 rep detail
GigabitEthernet1/2     REP enabled
Segment-id: 1 (Segment)
PortID: 00030019E85BDD00
Preferred flag: No

show inventory

Use the **show inventory** EXEC command to display product identification (PID) information for the hardware.

```
show inventory [entity-name | raw]
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>entity-name</code></td>
<td>(Optional) Display the specified entity. For example, enter the interface (such as gigabitethernet1/1) into which a small form-factor pluggable (SFP) module is installed.</td>
</tr>
<tr>
<td><code>raw</code></td>
<td>(Optional) Display every entity in the device.</td>
</tr>
</tbody>
</table>

**Command Modes**

EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

The command is case sensitive. With no arguments, the **show inventory** command produces a compact dump of all identifiable entities that have a product identifier. The compact dump displays the entity location (slot identity), entity description, and the unique device identifier (UDI) (PID, VID, and SN) of that entity.

**Note**

If there is no PID, no output appears when you enter the **show inventory** command.

**Examples**

This is example output from the **show inventory** command:

```
Switch> show inventory
NAME: '1', DESCR: 'IE-3000-4TC'
PID: IE-3000-4TC , VID: , SN: FHK1152UZRW

NAME: 'IEM-3000-8FM - Module in slot 3', DESCR: 'IEM-3000-8FM - Module in slot 3'
PID: 800-28543-01, VID: C1151V462F0C11505, SN: GTFOC11505JMPFOC11505JDX

Switch>
```
show ip arp inspection

Use the `show ip arp inspection` privileged EXEC command to display the configuration and the operating state of dynamic Address Resolution Protocol (ARP) inspection or the status of this feature for all VLANs or for the specified interface or VLAN.

```
show ip arp inspection [interfaces [interface-id] | log | statistics [vlan vlan-range] | vlan vlan-range]
```

**Syntax Description**

- **interfaces [interface-id]** (Optional) Display the trust state and the rate limit of ARP packets for the specified interface or all interfaces. Valid interfaces include physical ports and port channels.

- **log** (Optional) Display the configuration and contents of the dynamic ARP inspection log buffer.

- **statistics [vlan vlan-range]** (Optional) Display statistics for forwarded, dropped, MAC validation failure, IP validation failure, access control list (ACL) permitted and denied, and DHCP permitted and denied packets for the specified VLAN. If no VLANs are specified or if a range is specified, display information only for VLANs with dynamic ARP inspection enabled (active).

  You can specify a single VLAN identified by VLAN ID number, a range of VLANs separated by a hyphen, or a series of VLANs separated by a comma. The range is 1 to 4094.

- **vlan vlan-range** (Optional) Display the configuration and the operating state of dynamic ARP inspection for the specified VLAN. If no VLANs are specified or if a range is specified, display information only for VLANs with dynamic ARP inspection enabled (active).

  You can specify a single VLAN identified by VLAN ID number, a range of VLANs separated by a hyphen, or a series of VLANs separated by a comma. The range is 1 to 4094.

**Command Modes**

Privileged EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(50)SE</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Examples**

This is an example of output from the `show ip arp inspection` command.

```
Switch# show ip arp inspection
Source Mac Validation : Disabled
Destination Mac Validation : Disabled
IP Address Validation : Enabled

Vlan   Configuration Operation ACL Match Static ACL
------- ----------- --------- --------------- -------
```
This is an example of output from the `show ip arp inspection interfaces` command:

```
Switch# show ip arp inspection interfaces
Interface        Trust State     Rate (pps)    Burst Interval
---------------  -----------     ----------    --------------
Gi1/1          Untrusted               15                 1
Gi1/2          Untrusted               15                 1
Gi1/3          Untrusted               15                 1
```

This is an example of output from the `show ip arp inspection interfaces interface-id` command:

```
Switch# show ip arp inspection interfaces gigabitethernet1/1
Interface        Trust State     Rate (pps)    Burst Interval
---------------  -----------     ----------    --------------
Gi1/1          Untrusted               15                 1
```

This is an example of output from the `show ip arp inspection log` command. It shows the contents of the log buffer before the buffers are cleared:

```
Switch# show ip arp inspection log
Total Log Buffer Size : 32
Syslog rate : 10 entries per 300 seconds.

Interface Vlan Sender MAC      Sender IP        Num Pkts   Reason       Time
---------- ---- -------------  ---------------  ---------  -----------  ----
Gi1/1  5     0003.0000.d673  192.2.10.4               5  DHCP Deny    19:39:01 UTC

Mon Mar 1 1993
Gi1/1  5     001.c940.1115  173.1.1.3               12  DHCP Deny    19:39:08 UTC
Mon Mar 1 1993
```

If the log buffer overflows, it means that a log event does not fit into the log buffer, and the display for the `show ip arp inspection log` privileged EXEC command is affected. A -- in the display appears in place of all data except the packet count and the time. No other statistics are provided for the entry. If you see this entry in the display, increase the number of entries in the log buffer, or increase the logging rate in the `ip arp inspection log-buffer` global configuration command.
This is an example of output from the `show ip arp inspection statistics` command. It shows the statistics for packets that have been processed by dynamic ARP inspection for all active VLANs.

```
Switch# show ip arp inspection statistics
Vlan  Forwarded  Dropped  DHCP Drops  ACL Drops
----  ---------  -------  ----------  ---------
 5    3         4618     4605        4
2000  0         0        0          0
Vlan  DHCP Permits  ACL Permits  Source MAC Failures
----  ------------  -----------  -------------------
 5    0           12          0
2000  0           0           0
Vlan  Dest MAC Failures  IP Validation Failures
----  -----------------  ----------------------
 5    0                 9
2000  0                 0
```

For the `show ip arp inspection statistics` command, the switch increments the number of forwarded packets for each ARP request and response packet on a trusted dynamic ARP inspection port. The switch increments the number of ACL or DHCP permitted packets for each packet that is denied by source MAC, destination MAC, or IP validation checks, and the switch increments the appropriate failure count.

This is an example of output from the `show ip arp inspection statistics vlan 5` command. It shows statistics for packets that have been processed by dynamic ARP for VLAN 5.

```
Switch# show ip arp inspection statistics vlan 5
Vlan  Forwarded  Dropped  DHCP Drops  ACL Drops
----  ---------  -------  ----------  ---------
 5    3         4618     4605        4
Vlan  DHCP Permits  ACL Permits  Source MAC Failures
----  ------------  -----------  -------------------
 5    0           12          0
Vlan  Dest MAC Failures  IP Validation Failures  Invalid Protocol Data
----  -----------------  ----------------------  ---------------------
 5    0                 9                        3
```

This is an example of output from the `show ip arp inspection vlan 5` command. It shows the configuration and the operating state of dynamic ARP inspection for VLAN 5.

```
Switch# show ip arp inspection vlan 5
Source Mac Validation :Enabled
Destination Mac Validation :Enabled
IP Address Validation :Enabled
Vlan  Configuration  Operation  ACL Match  Static ACL
----  -------------  ---------  --------  ----------
 5    Enabled       Active    second   No
Vlan  ACL Logging  DHCP Logging
----  -----------  -----------
 5    All         All
```

</table>
**show ip dhcp snooping**

Use the `show ip dhcp snooping` EXEC command to display the DHCP snooping configuration.

```
show ip dhcp snooping
```

### Syntax Description

This command has no arguments or keywords.

### Command Modes

EXEC

### Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

### Usage Guidelines

Expressions are case sensitive. For example, if you enter `exclude output`, the lines that contain `output` do not appear, but the lines that contain `Output` appear.

This command displays only the results of global configuration. Therefore, in this example, the circuit ID suboption appears in its default format of `vlan-mod-port`, even if a string is configured for the circuit ID.

### Examples

This is an example of output from the `show ip dhcp snooping` command:

```
Switch> show ip dhcp snooping
Switch DHCP snooping is enabled
DHCP snooping is configured on following VLANs: 40-42
Insertion of option 82 is enabled
circuit-id format: vlan-mod-port
remote-id format: string
Option 82 on untrusted port is allowed
Verification of hwaddr field is enabled
Interface                    Trusted     Rate limit (pps)
-------------------------------     -------     ----------------
GigabitEthernet1/1            yes         unlimited
GigabitEthernet1/2            yes         unlimited
```

### Related Commands

</table>
show ip dhcp snooping binding

Use the `show ip dhcp snooping binding` EXEC command to display the DHCP snooping binding database and configuration information for all interfaces on a switch.

```
show ip dhcp snooping binding [ip-address] [mac-address] [interface interface-id] [vlan vlan-id]
```

**Syntax Description**

- `ip-address` (Optional) Specify the binding entry IP address.
- `mac-address` (Optional) Specify the binding entry MAC address.
- `interface interface-id` (Optional) Specify the binding input interface.
- `vlan vlan-id` (Optional) Specify the binding entry VLAN.

**Command Modes**

EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

The `show ip dhcp snooping binding` command output shows only the dynamically configured bindings. Use the `show ip source binding` privileged EXEC command to display the dynamically and statically configured bindings in the DHCP snooping binding database.

If DHCP snooping is enabled and an interface changes to the down state, the switch does not delete the statically configured bindings.

**Examples**

This example shows how to display the DHCP snooping binding entries for a switch:

```
Switch> show ip dhcp snooping binding
MacAddress  IpAddress      Lease(sec) Type          VLAN Interface
----------  ----------  ----------  -------------  ----  --------------------
01:02:03:04:05:06   10.1.2.150       9837        dhcp-snooping  20    GigabitEthernet1/1
00:D0:B7:1B:35:DE   10.1.2.151       237         dhcp-snooping  20    GigabitEthernet1/2
Total number of bindings: 2
```
This example shows how to display the DHCP snooping binding entries for a specific IP address:

Switch> show ip dhcp snooping binding 10.1.2.150

```
MacAddress          IpAddress        Lease(sec)  Type           VLAN  Interface
------------------  ---------------  ----------  -------------  ----  --------------------
01:02:03:04:05:06   10.1.2.150       9810        dhcp-snooping  20    GigabitEthernet1/1
```

Total number of bindings: 1

This example shows how to display the DHCP snooping binding entries for a specific MAC address:

Switch> show ip dhcp snooping binding 0102.0304.0506

```
MacAddress          IpAddress        Lease(sec)  Type           VLAN  Interface
------------------  ---------------  ----------  -------------  ----  --------------------
01:02:03:04:05:06   10.1.2.150       9788        dhcp-snooping  20    GigabitEthernet1/2
```

Total number of bindings: 1

This example shows how to display the DHCP snooping binding entries on a port:

Switch> show ip dhcp snooping binding interface gigabitethernet1/2

```
MacAddress          IpAddress        Lease(sec)  Type           VLAN  Interface
------------------  ---------------  ----------  -------------  ----  --------------------
00:30:94:C2:EF:35   10.1.2.151       290         dhcp-snooping  20    GigabitEthernet1/2
```

Total number of bindings: 1

This example shows how to display the DHCP snooping binding entries on VLAN 20:

Switch> show ip dhcp snooping binding vlan 20

```
MacAddress          IpAddress        Lease(sec)  Type           VLAN  Interface
------------------  ---------------  ----------  -------------  ----  --------------------
01:02:03:04:05:06   10.1.2.150       9747        dhcp-snooping  20    GigabitEthernet1/1
00:00:00:00:00:02   10.1.2.151       65          dhcp-snooping  20    GigabitEthernet1/2
```

Total number of bindings: 2

Table 2-27 describes the fields in the `show ip dhcp snooping binding` command output:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MacAddress</td>
<td>Client hardware MAC address</td>
</tr>
<tr>
<td>IpAddress</td>
<td>Client IP address assigned from the DHCP server</td>
</tr>
<tr>
<td>Lease(sec)</td>
<td>Remaining lease time for the IP address</td>
</tr>
<tr>
<td>Type</td>
<td>Binding type</td>
</tr>
<tr>
<td>VLAN</td>
<td>VLAN number of the client interface</td>
</tr>
<tr>
<td>Interface</td>
<td>Interface that connects to the DHCP client host</td>
</tr>
<tr>
<td>Total number of bindings</td>
<td>Total number of bindings configured on the switch</td>
</tr>
</tbody>
</table>

Note: The command output might not show the total number of bindings. For example, if 200 bindings are configured on the switch and you stop the display before all the bindings appear, the total number does not change.

<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

In a switch stack, all statistics are generated on the stack master. If a new stack master is elected, the statistics counters reset.

**Examples**

This is an example of output from the **show ip dhcp snooping statistics** command:

```
Switch> show ip dhcp snooping statistics
Packets Forwarded = 0
Packets Dropped = 0
Packets Dropped From untrusted ports = 0
```

This is an example of output from the **show ip dhcp snooping statistics detail** command:

```
Switch> show ip dhcp snooping statistics detail
Packets Processed by DHCP Snooping = 0
Packets Dropped Because
  IDB not known = 0
  Queue full = 0
  Interface is in errdisabled = 0
  Rate limit exceeded = 0
  Received on untrusted ports = 0
  Nonzero giaddr = 0
  Source mac not equal to chaddr = 0
  Binding mismatch = 0
  Insertion of opt82 fail = 0
  Interface Down = 0
  Unknown output interface = 0
  Reply output port equal to input port = 0
  Packet denied by platform = 0
```
Table 2-28 shows the DHCP snooping statistics and their descriptions:

<table>
<thead>
<tr>
<th>DHCP Snooping Statistic</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Packets Processed by DHCP Snooping</td>
<td>Total number of packets handled by DHCP snooping, including forwarded and dropped packets.</td>
</tr>
<tr>
<td>Packets Dropped Because IDB not known</td>
<td>Number of errors when the input interface of the packet cannot be determined.</td>
</tr>
<tr>
<td>Queue full</td>
<td>Number of errors when an internal queue used to process the packets is full. This might happen if DHCP packets are received at an excessively high rate and rate limiting is not enabled on the ingress ports.</td>
</tr>
<tr>
<td>Interface is in errdisabled</td>
<td>Number of times a packet was received on a port that has been marked as error disabled. This might happen if packets are in the processing queue when a port is put into the error-disabled state and those packets are subsequently processed.</td>
</tr>
<tr>
<td>Rate limit exceeded</td>
<td>Number of times the rate limit configured on the port was exceeded and the interface was put into the error-disabled state.</td>
</tr>
<tr>
<td>Received on untrusted ports</td>
<td>Number of times a DHCP server packet (OFFER, ACK, NAK, or LEASEQUERY) was received on an untrusted port and was dropped.</td>
</tr>
<tr>
<td>Nonzero giaddr</td>
<td>Number of times the relay agent address field (giaddr) in the DHCP packet received on an untrusted port was not zero, or the <strong>no ip dhcp snooping information option allow-untrusted</strong> global configuration command is not configured and a packet received on an untrusted port contained option-82 data.</td>
</tr>
<tr>
<td>Source mac not equal to chaddr</td>
<td>Number of times the client MAC address field of the DHCP packet (chaddr) does not match the packet source MAC address and the <strong>ip dhcp snooping verify mac-address</strong> global configuration command is configured.</td>
</tr>
<tr>
<td>Binding mismatch</td>
<td>Number of times a RELEASE or DECLINE packet was received on a port that is different than the port in the binding for that MAC address-VLAN pair. This indicates someone might be trying to spoof the real client, or it could mean that the client has moved to another port on the switch and issued a RELEASE or DECLINE. The MAC address is taken from the chaddr field of the DHCP packet, not the source MAC address in the Ethernet header.</td>
</tr>
<tr>
<td>Insertion of opt82 fail</td>
<td>Number of times the option-82 insertion into a packet failed. The insertion might fail if the packet with the option-82 data exceeds the size of a single physical packet on the internet.</td>
</tr>
<tr>
<td>Interface Down</td>
<td>Number of times the packet is a reply to the DHCP relay agent, but the SVI interface for the relay agent is down. This is an unlikely error that occurs if the SVI goes down between sending the client request to the DHCP server and receiving the response.</td>
</tr>
<tr>
<td>Unknown output interface</td>
<td>Number of times the output interface for a DHCP reply packet cannot be determined by either option-82 data or a lookup in the MAC address table. The packet is dropped. This can happen if option 82 is not used and the client MAC address has aged out. If IPSG is enabled with the port-security option and option 82 is not enabled, the MAC address of the client is not learned, and the reply packets will be dropped.</td>
</tr>
</tbody>
</table>
Table 2-28  DHCP Snooping Statistics (continued)

<table>
<thead>
<tr>
<th>DHCP Snooping Statistic</th>
<th>Description</th>
</tr>

**show ip igmp profile**

Use the `show ip igmp profile` privileged EXEC command to display all configured Internet Group Management Protocol (IGMP) profiles or a specified IGMP profile.

```
show ip igmp profile [profile number]
```

### Syntax Description

- **Syntax:**
  
  `show ip igmp profile [profile number]`

- **profile number**

  (Optional) The IGMP profile number to be displayed. The range is 1 to 4294967295. If no profile number is entered, all IGMP profiles are displayed.

### Command Modes

- **Privileged EXEC**

### Command History

</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

### Examples

These are examples of output from the `show ip igmp profile` privileged EXEC command, with and without specifying a profile number. If no profile number is entered, the display includes all profiles configured on the switch.

```
Switch# show ip igmp profile 40
IGMP Profile 40
  permit
  range 233.1.1.1 233.255.255.255

Switch# show ip igmp profile
IGMP Profile 3
  range 230.9.9.0 230.9.9.0
IGMP Profile 4
  permit
  range 229.9.9.0 229.255.255.255
```

**show ip igmp snooping**

Use the `show ip igmp snooping` EXEC command to display the Internet Group Management Protocol (IGMP) snooping configuration of the switch or the VLAN.

```
show ip igmp snooping [groups | mrouter | querier] [vlan vlan-id]
```

**Syntax Description**

- `groups` (Optional) See the `show ip igmp snooping groups` command.
- `mrouter` (Optional) See the `show ip igmp snooping mrouter` command.
- `querier` (Optional) See the `show ip igmp snooping querier` command.
- `vlan vlan-id` (Optional) Specify a VLAN; the range is 1 to 1001 and 1006 to 4094 (available only in privileged EXEC mode).

**Command Modes**

EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Use this command to display snooping configuration for the switch or for a specific VLAN.

VLAN IDs 1002 to 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in IGMP snooping.

**Examples**

This is an example of output from the `show ip igmp snooping vlan 1` command. It shows snooping characteristics for a specific VLAN.

```
Switch# show ip igmp snooping vlan 1
Global IGMP Snooping configuration:
-----------------------------------
IGMP snooping             :Enabled
IGMPv3 snooping (minimal) :Enabled
Report suppression        :Enabled
TCN solicit query         :Disabled
TCN flood query count     :2
Last member query interval : 100

Vlan 1:
--------
IGMP snooping             :Enabled
Immediate leave           :Disabled
Multicast router learning mode : pim-dvmrp
Source only learning age timer : 10
CGMP interoperability mode : IGMP_ONLY
Last member query interval : 100
```

This is an example of output from the `show ip igmp snooping` command. It displays snooping characteristics for all VLANs on the switch.

```
Switch> show ip igmp snooping
```
show ip igmp snooping

Global IGMP Snooping configuration:
-----------------------------------
IGMP snooping              : Enabled
IGMPv3 snooping (minimal)  : Enabled
Report suppression         : Enabled
TCN solicit query         : Disabled
TCN flood query count     : 2
Last member query interval : 100

Vlan 1:
--------
IGMP snooping                       :Enabled
Immediate leave                     :Disabled
Multicast router learning mode      :pim-dvmrp
Source only learning age timer      :10
CGMP interoperability mode          :IGMP_ONLY
Last member query interval          : 100

Vlan 2:
--------
IGMP snooping                       :Enabled
Immediate leave                     :Disabled
Multicast router learning mode      :pim-dvmrp
Source only learning age timer      :10
CGMP interoperability mode          :IGMP_ONLY
Last member query interval          : 333

# show ip igmp snooping groups

Use the `show ip igmp snooping groups` privileged EXEC command to display the Internet Group Management Protocol (IGMP) snooping multicast table for the switch or the multicast information. Use with the `vlan` keyword to display the multicast table for a specified multicast VLAN or specific multicast information.

```
show ip igmp snooping groups [vlan vlan-id [ip_address] | dynamic | user] [count]
```

## Syntax Description

<table>
<thead>
<tr>
<th>Keyword</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>vlan</strong> vlan-id</td>
<td>(Optional) Specify a VLAN; the range is 1 to 1001 and 1006 to 4094.</td>

<tr>
<td><strong>ip_address</strong></td>
<td>(Optional) Display characteristics of the multicast group with the specified group IP address.</td>
</tr>
<tr>
<td><strong>dynamic</strong></td>
<td>(Optional) Display entries learned by IGMP snooping.</td>
</tr>
<tr>
<td><strong>user</strong></td>
<td>Optional) Display only the user-configured multicast entries.</td>
</tr>
<tr>
<td><strong>count</strong></td>
<td>(Optional) Display the total number of entries for the specified command options instead of the actual entries.</td>
</tr>
</tbody>
</table>

## Command Modes

Privileged EXEC

## Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

## Usage Guidelines

Use this command to display multicast information or the multicast table.

VLAN IDs 1002 to 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in IGMP snooping.

## Examples

This is an example of output from the `show ip igmp snooping groups` command without any keywords. It displays the multicast table for the switch.

```
Switch# show ip igmp snooping groups
Vlan   Group     Type   Version   Port List
-------- ----------- ------- ---------- ---------------
104 224.1.4.2  igmp     v2    Gi1/1, Gi1/2
104 224.1.4.3  igmp     v2    Gi1/1, Gi1/2
```

This is an example of output from the `show ip igmp snooping groups count` command. It displays the total number of multicast groups on the switch.

```
Switch# show ip igmp snooping groups count
Total number of multicast groups: 2
```

This is an example of output from the `show ip igmp snooping groups dynamic` command. It shows only the entries learned by IGMP snooping.

```
Switch# show ip igmp snooping groups vlan 1 dynamic
Vlan   Group     Type   Version   Port List
-------- ----------- ------- ---------- ---------------
```
This is an example of output from the `show ip igmp snooping groups vlan vlan-id ip-address` command. It shows the entries for the group with the specified IP address.

```
Switch# show ip igmp snooping groups vlan 104 224.1.4.2
Vlan      Group          Type        Version     Port List
-------------------------------------------------------------
104       224.1.4.2      igmp        v2          Gi1/1, Fa1/8
```

### Related Commands

</tbody>
</table>

**Usage Guidelines**

Use this command to display multicast router ports on the switch or for a specific VLAN. VLAN IDs 1002 to 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in IGMP snooping.

When multicast VLAN registration (MVR) is enabled, the show ip igmp snooping mrouter command displays MVR multicast router information and IGMP snooping information.

**Examples**

This is an example of output from the show ip igmp snooping mrouter command. It shows how to display multicast router ports on the switch.

```
Switch# show ip igmp snooping mrouter
Vlan  ports
-----  -----  
1      Gi1/1(dynamic)
```

</tr>
</tbody>
</table>

### Command Modes

EXEC

### Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

### Usage Guidelines

Use the `show ip igmp snooping querier` command to display the IGMP version and the IP address of a detected device, also called a querier, that sends IGMP query messages. A subnet can have multiple multicast routers but has only one IGMP querier. In a subnet running IGMPv2, one of the multicast routers is elected as the querier. The querier can be a Layer 3 switch.

The `show ip igmp snooping querier` command output also shows the VLAN and the interface on which the querier was detected. If the querier is the switch, the output shows the `Port` field as `Router`. If the querier is a router, the output shows the port number on which the querier is learned in the `Port` field.

The `show ip igmp snooping querier detail` EXEC command is similar to the `show ip igmp snooping querier` command. However, the `show ip igmp snooping querier` command displays only the device IP address most recently detected by the switch querier.

The `show ip igmp snooping querier detail` command displays the device IP address most recently detected by the switch querier and this additional information:

- The elected IGMP querier in the VLAN
- The configuration and operational information pertaining to the switch querier (if any) that is configured in the VLAN

### Examples

This is an example of output from the `show ip igmp snooping querier` command:

```
Switch> show ip igmp snooping querier
Vlan IP Address   IGMP Version Port
--------------------------------------
1   172.20.50.11   v3     Gi1/1
2   172.20.40.20   v2     Router
```

This is an example of output from the `show ip igmp snooping querier detail` command:

```
Switch> show ip igmp snooping querier detail
```
show ip igmp snooping querier

<table>
<thead>

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(50)SE</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

The `show ip source binding` command output shows the dynamically and statically configured bindings in the DHCP snooping binding database. Use the `show ip dhcp snooping binding` privileged EXEC command to display only the dynamically configured bindings.

**Examples**

This is an example of output from the `show ip source binding` command:

```
Switch> show ip source binding
MacAddress     IpAddress   Lease(sec)  Type       VLAN  Interface
-------------- ------------- ----------- ---------- ---- ----------------------
00:00:00:0A:00:0B 11.0.0.1     infinite  static     10    GigabitEthernet1/1
00:00:00:0A:00:0A 11.0.0.2     10000    dhcp-snooping 10    GigabitEthernet1/1
```

**Related Commands**

<td>This command was introduced.</td>
</tr>
</tbody>
</table>

### Examples

This is an example of output from the **show ip verify source** command:

```
Switch> show ip verify source

Interface     Filter-type  Filter-mode     IP-address       Mac-address     Vlan
-------------- -------------- ----------------- ----------------- -------------- ----
Gi1/1         ip            active           10.0.0.1         10              
Gi1/1         ip            active           deny-all         11-20           
Gi1/2         ip            inactive-trust-port  
Gi1/3         ip            inactive-no-snooping-vlan  
Gi1/4         ip-mac        active           10.0.0.2         aaaa.bbbb.cccc  10
Gi1/4         ip-mac        active           11.0.0.1         aaaa.bbbb.cccd  11
Gi1/4         ip-mac        active           deny-all         deny-all        12-20
Gi1/5         ip-mac        active           10.0.0.3         permit-all      10
Gi1/5         ip-mac        active           deny-all         permit-all      11-20
```

In the previous example, this is the IP source guard configuration:

- On the Gigabit Ethernet 1 interface, DHCP snooping is enabled on VLANs 10 to 20. For VLAN 10, IP source guard with IP address filtering is configured on the interface, and a binding exists on the interface. For VLANs 11 to 20, the second entry shows that a default port access control lists (ACLs) is applied on the interface for the VLANs on which IP source guard is not configured.
- The Gigabit Ethernet 2 interface is configured as trusted for DHCP snooping.
- On the Gigabit Ethernet 3 interface, DHCP snooping is not enabled on the VLANs to which the interface belongs.
- On the Gigabit Ethernet 4 interface, IP source guard with source IP and MAC address filtering is enabled, and static IP source bindings are configured on VLANs 10 and 11. For VLANs 12 to 20, the default port ACL is applied on the interface for the VLANs on which IP source guard is not configured.
- On the Gigabit Ethernet 5 interface, IP source guard with source IP and MAC address filtering is enabled and configured with a static IP binding, but port security is disabled. The switch cannot filter source MAC addresses.

This is an example of output on an interface on which IP source guard is disabled:

```
Switch> show ip verify source gigabitethernet 1/6
```
IP source guard is not configured on the interface gi1/16.

</tr>
</thead>
<tbody>
<tr>
<td>12.2(52)SE</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

### Usage Guidelines

This command is available only when the switch is running the IP Services image.
**Examples**

This example shows how to display the IPC routing status:

```
Switch> show ipc mcast status
IPC Mcast Status

Tx      Rx
Total Frames                                           0         0
Total control Frames                                   0         0
Total Frames dropped                                   0         0
Total control Frames dropped                           0         0
Total Reliable messages                                0         0
Total Reliable messages acknowledged                   0         0
Total Out of Band Messages                             0         0
Total Out of Band messages acknowledged                0         0
Total No Mcast groups                                  0         0
Total Retries                    0  Total Timeouts                     0
Total OOB Retries                0  Total OOB Timeouts                 0
Total flushes                    0  Total No ports                     0
```

This example shows how to display the participating nodes:

```
Switch> show ipc nodes
There is 1 node in this IPC realm.
ID    Type       Name           Last  Last
      Sent      Heard
10000 Local      IPC Master     0      0
```

This example shows how to display the local IPC ports:

```
Switch> show ipc ports
There are 8 ports defined.
Port ID        Type       Name                    (current/peak/total)
There are 8 ports defined.
10000.1     unicast    IPC Master:Zone 0/1/0 0/0/0
10000.2     unicast    IPC Master:Echo 0/0/0 0/0/0
10000.3     unicast    IPC Master:Control 0/1/0 0/0/0
10000.4     unicast    IPC Master:Init 0/0/0 0/0/0
10000.5     unicast    FIB Master:DFS.process_level.msgs 0/0/0 0/0/0
10000.6     unicast    FIB Master:DFS.interrupt.msgs 0/0/0 0/0/0
10000.7     unicast    MDFS RP:Statistics 0/0/0 0/0/0
  port_index = 0  seat_id = 0x10000    last sent = 0     last heard = 0
  0/0/2/159
10000.8     unicast    Slot 1 :MDFS.control.RIL 0/1/0 0/0/0
  port_index = 0  seat_id = 0x10000    last sent = 0     last heard = 0
  0/0/0/0
RPC packets:current/peak/total
0/1/4
```

This example shows how to display the contents of the IPC retransmission queue:

```
Switch> show ipc queue
There are 0 IPC messages waiting for acknowledgement in the transmit queue.
There are 0 IPC messages waiting for a response.
There are 0 IPC messages waiting for additional fragments.
There are 0 IPC messages currently on the IPC inboundQ.
Messages currently in use : 3
Message cache size : 1000
Maximum message cache usage : 1000
```
show ipc

0 times message cache crossed 5000 [max]

Emergency messages currently in use : 0

There are 2 messages currently reserved for reply msg.

Inbound message queue depth 0
Zone inbound message queue depth 0

This example shows how to display all the IPC session statistics:

Switch# show ipc session all
Tx Sessions:
   Port ID   Type       Name
   10000.7   Unicast    MDFS RP:Statistics
           port_index = 0  type = Unreliable  last sent = 0  last heard = 0
           Msds requested = 180  Msds returned = 180

   10000.8   Unicast    Slot 1 :MDFS.control.RIL
           port_index = 0  type = Reliable    last sent = 0  last heard = 0
           Msds requested = 0    Msds returned = 0

Rx Sessions:
   Port ID   Type       Name
   10000.7   Unicast    MDFS RP:Statistics
           port_index = 0  seat_id = 0x10000 last sent = 0  last heard = 0
           No of msg requested = 180  Msds returned = 180

   10000.8   Unicast    Slot 1 :MDFS.control.RIL
           port_index = 0  seat_id = 0x10000 last sent = 0  last heard = 0
           No of msg requested = 0    Msds returned = 0

This example shows how to display the status of the local IPC server:

Switch> show ipc status cumulative
IPC System Status

Time last IPC stat cleared :never

This processor is the IPC master server.
Do not drop output of IPC frames for test purposes.

1000 IPC Message Headers Cached.

show ipv6 access-list

To display the contents of all current IPv6 access lists, use the show ipv6 access-list command in EXEC mode.

```
show ipv6 access-list [access-list-name]
```

<table>
<thead>
<tr>
<th>Syntax Description</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>access-list-name</td>
<td>(Optional) Specifies the name of access list.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Command Modes</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>EXEC (&gt;)</td>

</tr>
</thead>
<tbody>
<tr>
<td>Release</td>
<td>Modification</td>
</tr>
<tr>
<td>T2.2(52)SE</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

The show ipv6 access-list command provides output similar to the show ip access-list command, except that it is IPv6-specific.

To configure the dual IPv4 and IPv6 template, enter the sdm prefer dual-ipv4-and-ipv6 global configuration command and reload the switch.

**Note**

This command is available only if you have configured a dual IPv4 and IPv6 Switch Database Management (SDM) template on the switch and the switch is running the IP Services image.

**Examples**

The following output from the show ipv6 access-list command shows IPv6 access lists named inbound and outbound:

```
Router# show ipv6 access-list
IPv6 access list inbound
   permit tcp any any eq bgp (8 matches) sequence 10
   permit tcp any any eq telnet (15 matches) sequence 20
   permit udp any any sequence 30
```

Table 2-29 describes the significant fields shown in the display.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IPv6 access list inbound</td>
<td>Name of the IPv6 access list, for example, inbound.</td>
</tr>
<tr>
<td>permit</td>
<td>Permits any packet that matches the specified protocol type.</td>
</tr>
<tr>
<td>tcp</td>
<td>Transmission Control Protocol. The higher-level (Layer 4) protocol type that the packet must match.</td>
</tr>
<tr>
<td>any</td>
<td>Equal to ::/0.</td>
</tr>
</tbody>
</table>
Table 2-29  show ipv6 access-list Field Descriptions (continued)

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>eq</td>
<td>An equal operand that compares the source or destination ports of TCP or UDP packets.</td>
</tr>
<tr>
<td>bgp (matches)</td>
<td>Border Gateway Protocol. The protocol type that the packet is equal to and the number of matches.</td>
</tr>
<tr>
<td>sequence 10</td>
<td>Sequence in which an incoming packet is compared to lines in an access list. Access list lines are ordered from first priority (lowest number, for example, 10) to last priority (highest number, for example, 80).</td>
</tr>
</tbody>
</table>

**show ipv6 dhcp conflict**

To display address conflicts found by a Dynamic Host Configuration Protocol for IPv6 (DHCPv6) server when addresses are offered to the client, use the `show ipv6 dhcp conflict` command in privileged EXEC mode.

```
show ipv6 dhcp conflict
```

**Syntax Description**
This command has no arguments or keywords.

**Command Modes**
Privileged EXEC (#)

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(52)SE</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**
This command is available only if the switch is running the IP Services image and you have configured a dual IPv4 and IPv6 Switch Database Management (SDM) template. To configure the dual IPv4 and IPv6 template, enter the `sdm prefer dual-ipv4-and-ipv6` global configuration command, and reload the switch.

When you configure the DHCPv6 server to detect conflicts, it uses ping. The client uses neighbor discovery to detect clients and reports to the server through a DECLINE message. If an address conflict is detected, the address is removed from the pool, and the address is not assigned until the administrator removes the address from the conflict list.

**Examples**
This is an example of the output from the `show ipv6 dhcp conflict` command:

```
Switch# show ipv6 dhcp conflict
Pool 350, prefix 2001:1005::/48
  2001:1005::10
```

**Related Commands**

<table>

</tbody>
</table>
show ipv6 mld snooping

To display IP version 6 (IPv6) Multicast Listener Discovery (MLD) snooping configuration of the switch or the VLAN, use the `show ipv6 mld snooping` command in EXEC mode.

```
show ipv6 mld snooping [vlan vlan-id]
```

**Syntax Description**

- `vlan vlan-id` (Optional) Specifies a VLAN; the range is 1 to 1001 and 1006 to 4094.

**Command Modes**

- EXEC (>)

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(52)SE</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Use this command to display MLD snooping configuration for the switch or for a specific VLAN.

*Note*

This command is available only if you have configured a dual IPv4 and IPv6 Switch Database Management (SDM) template on the switch. To configure the dual IPv4 and IPv6 template, enter the `sdm prefer dual-ipv4-and-ipv6` global configuration command and reload the switch.

VLAN numbers 1002 through 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in MLD snooping.

**Examples**

This is an example of output from the `show ipv6 mld snooping vlan` command. It shows snooping characteristics for a specific VLAN.

```
Switch> show ipv6 mld snooping vlan 100
Global MLD Snooping configuration:
-----------------------------
MLD snooping : Enabled
MLDv2 snooping (minimal) : Enabled
Listener message suppression : Enabled
TCN solicit query : Disabled
TCN flood query count : 2
Robustness variable : 3
Last listener query count : 2
Last listener query interval : 1000
Vlan 100:
---------
MLD snooping : Disabled
MLDv1 immediate leave : Disabled
Explicit host tracking : Enabled
Multicast router learning mode : pim-dvmrp
Robustness variable : 3
Last listener query count : 2
Last listener query interval : 1000
```
This is an example of output from the `show ipv6 mld snooping` command. It displays snooping characteristics for all VLANs on the switch.

Switch> `show ipv6 mld snooping`
Global MLD Snooping configuration:
-------------------------------------------
MLD snooping                  : Enabled  
MLDv2 snooping (minimal)      : Enabled

</table>
show ipv6 mld snooping address

To display all or specified IP version 6 (IPv6) multicast address information maintained by Multicast Listener Discovery (MLD) snooping, use the `show ipv6 mld snooping address` command in EXEC mode.

```
show ipv6 mld snooping address [[vlan vlan-id] [ipv6-multicast-address]] [vlan vlan-id] [count | dynamic | user]
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>vlan vlan-id</code></td>
<td>(Optional) Specifies a VLAN about which to show MLD snooping multicast address information. The VLAN ID range is 1 to 1001 and 1006 to 4094.</td>
</tr>
<tr>
<td><code>ipv6-multicast-address</code></td>
<td>(Optional) Displays information about the specified IPv6 multicast address. This keyword is only available when a VLAN ID is entered.</td>
</tr>
<tr>
<td><code>count</code></td>
<td>(Optional) Displays the number of multicast groups on the switch or in the specified VLAN.</td>
</tr>
<tr>
<td><code>dynamic</code></td>
<td>(Optional) Displays MLD snooping learned group information.</td>
</tr>
<tr>
<td><code>user</code></td>
<td>(Optional) Displays MLD snooping user-configured group information.</td>
</tr>
</tbody>
</table>

**Command Modes**

EXEC (>)

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(52)SE</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Use this command to display IPv6 multicast address information.

This command is available only if you have configured a dual IPv4 and IPv6 Switch Database Management (SDM) template on the switch. To configure the dual IPv4 and IPv6 template, enter the `sdm prefer dual-ipv4-and-ipv6` global configuration command and reload the switch.

You can enter an IPv6 multicast address only after you enter a VLAN ID.

VLAN numbers 1002 through 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in MLD snooping.

Use the `dynamic` keyword to display information only about groups that are learned. Use the `user` keyword to display information only about groups that have been configured.

**Examples**

This is an example of output from the `show ipv6 mld snooping address` EXEC command:

```
Switch> show ipv6 mld snooping address
Vlan Group Type    Version Port List
-------------------------------------------------------------
2  FF12::3 user    Fa1/2, Gi1/2, Gi1/1,Gi1/3
```
This is an example of output from the `show ipv6 mld snooping address count` EXEC command:

```
Switch> show ipv6 mld snooping address count
Total number of multicast groups: 2
```

This is an example of output from the `show ipv6 mld snooping address` EXEC command:

```
Switch> show ipv6 mld snooping address user
Vlan Group  Type Version Port List
-------------------------------
2    FF12::3 user  v2    Fa1/2, Gi1/2, Gi1/1,Gi1/3
```

</table>
show ipv6 mld snooping mrouter

To display dynamically learned and manually configured IP version 6 (IPv6) Multicast Listener Discovery (MLD) router ports for the switch or a VLAN, use the show ipv6 mld snooping mrouter command in EXEC mode.

```
show ipv6 mld snooping mrouter [vlan vlan-id]
```

**Syntax Description**

- `vlan vlan-id`: (Optional) Specifies a VLAN; the range is 1 to 1001 and 1006 to 4094.

**Command Modes**

- EXEC (`>`)  

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(52)SE</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Use this command to display MLD snooping router ports for the switch or for a specific VLAN.

**Note**

This command is available only if you have configured a dual IPv4 and IPv6 Switch Database Management (SDM) template on the switch. To configure the dual IPv4 and IPv6 template, enter the `sdm prefer dual-ipv4-and-ipv6` global configuration command and reload the switch.

VLAN numbers 1002 through 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in MLD snooping.

**Examples**

This is an example of output from the `show ipv6 mld snooping mrouter` command. It displays snooping characteristics for all VLANs on the switch that are participating in MLD snooping.

```
Switch> show ipv6 mld snooping mrouter
Vlan    ports
----    -----
   2    Gi1/11(dynamic)
  72    Gi1/11(dynamic)
200    Gi1/11(dynamic)
```

This is an example of output from the `show ipv6 mld snooping mrouter vlan` command. It shows multicast router ports for a specific VLAN.

```
Switch> show ipv6 mld snooping mrouter vlan 100
Vlan    ports
----    -----  
   2    Gi1/11(dynamic)
```

</tr>
</tbody>
</table>

**Command Modes**

EXEC (>

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(52)SE</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Use the `show ipv6 mld snooping querier` command to display the MLD version and IPv6 address of a detected device that sends MLD query messages, which is also called a querier. A subnet can have multiple multicast routers but has only one MLD querier. The querier can be a Layer 3 switch.

This command is available only if you have configured a dual IPv4 and IPv6 Switch Database Management (SDM) template on the switch. To configure the dual IPv4 and IPv6 template, enter the `sdm prefer dual-ipv4-and-ipv6` global configuration command and reload the switch.

The `show ipv6 mld snooping querier` command output also shows the VLAN and interface on which the querier was detected. If the querier is the switch, the output shows the Port field as `Router`. If the querier is a router, the output shows the port number on which the querier is learned in the Port field.

The output of the `show ipv6 mld snooping querier vlan` command displays the information received in response to a query message from an external or internal querier. It does not display user-configured VLAN values, such as the snooping robustness variable on the particular VLAN. This querier information is used only on the MASQ message that is sent by the switch. It does not override the user-configured robustness variable that is used for aging out a member that does not respond to query messages.

VLAN numbers 1002 through 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in MLD snooping.

**Examples**

This is an example of output from the `show ipv6 mld snooping querier` command:

```
Switch> show ipv6 mld snooping querier
Vlan IP Address MLD Version Port
-----------------------------------------------
2 FE80::201:C9FF:FE40:6000 v1 Gi1/1
```
This is an example of output from the `show ipv6 mld snooping querier detail` command:

```
Switch> show ipv6 mld snooping querier detail
Vlan      IP Address               MLD Version Port
-------------------------------------------------------------
2         FE80::201:C9FF:FE40:6000 v1 Gi1/1
```

This is an example of output from the `show ipv6 mld snooping querier vlan` command:

```
Switch> show ipv6 mld snooping querier vlan 2
IP address : FE80::201:C9FF:FE40:6000
MLD version : v1
Port : Gi1/1
Max response time : 1000s
```

show l2protocol-tunnel

To display information about Layer 2 protocol tunnel ports, use the `show l2protocol-tunnel` command in EXEC mode.

```
show l2protocol-tunnel [interface interface-id] [summary]
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>interface</td>
<td>(Optional) Specifies the interface for which protocol tunneling information appears. Valid interfaces are physical ports and port channels; the port channel range is 1 to 48.</td>
</tr>
<tr>
<td>summary</td>
<td>(Optional) Displays only summary information about Layer 2 protocol tunnel ports.</td>

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(52)SE</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

You must first enable Layer 2 protocol tunneling on an access or IEEE 802.1Q tunnel port by using the `l2protocol-tunnel` command in interface configuration mode. You then can configure some or all of these parameters:

- Protocol type to be tunneled
- Shutdown threshold
- Drop threshold

If you enter the `show l2protocol-tunnel [interface interface-id]` command, only information about the active ports on which all the parameters are configured appears.

If you enter the `show l2protocol-tunnel summary` command, only information about the active ports on which some or all of the parameters are configured appears.

**Note**

This command is available only when the switch is running the IP Services image.
Examples

This is an example of output from the `show l2protocol-tunnel` command:

```
Switch> show l2protocol-tunnel
COS for Encapsulated Packets: 5
Drop Threshold for Encapsulated Packets: 0

<table>
<thead>
<tr>

show lacp

Use the show lacp EXEC command to display Link Aggregation Control Protocol (LACP) channel-group information.

```
show lacp [channel-group-number] [counters | internal | neighbor | sys-id]
```

### Syntax Description
- **channel-group-number** (Optional) Number of the channel group. The range is 1 to 128.
- **counters** Display traffic information.
- **internal** Display internal information.
- **neighbor** Display neighbor information.
- **sys-id** Display the system identifier that is being used by LACP. The system identifier is made up of the LACP system priority and the switch MAC address.

### Command Modes
EXEC

### Command History
- **Release** T2.2(44)EX
- **Modification** This command was introduced.

### Usage Guidelines
You can enter any show lacp command to display the active channel-group information. To display specific channel information, enter the show lacp command with a channel-group number.

If you do not specify a channel group, information for all channel groups appears.

You can enter the channel-group-number option to specify a channel group for all keywords except sys-id.

### Examples
This is an example of output from the show lacp counters EXEC command. Table 2-30 describes the fields in the display.

```
Switch# show lacp counters

Port LACPDU Sent  Recv Marker Sent  Recv Marker Sent  Recv LACPDU Pkts Err
---------------------------------------------------------------
Channel group:1
Gi1/1 19 10 0 0 0 0 0 0
Gi1/2 14 6 0 0 0 0 0 0
```

<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Use the `show location` command to display location information for an endpoint.

**Examples**

This is an example of output from the `show location civic-location` command that displays location information for an interface:

```
Switch> show location civic interface gigabitethernet1/1
Civic location information
--------------------------
Identifier              : 1
County                  : Santa Clara
Street number           : 3550
Building                : 19
Room                    : C6
Primary road name       : Cisco Way
City                    : San Jose
State                   : CA
Country                 : US
```

This is an example of output from the `show location civic-location static` command that displays all the civic location information:

```
Switch> show location civic-location static
Civic location information
--------------------------
```
This is an example of output from the `show location elin-location` command that displays the emergency location information:

```
Switch> show location elin-location identifier 1
Elin location information
--------------------------
Identifier : 1
Elin       : 14085553881
Ports      : Gi1/2
```

This is an example of output from the `show location elin static` command that displays all emergency location information:

```
Switch> show location elin static
Elin location information
--------------------------
Identifier : 1
Elin       : 14085553881
Ports      : Gi1/2
--------------------------
Identifier : 2
Elin       : 18002228999
--------------------------
```

### Related Commands

</table>
show link state group

Use the `show link state group` privileged EXEC command to display the link-state group information.

```
show link state group [number] [detail]
```

### Syntax Description

<table>
<thead>
<tr>
<th>Syntax Description</th>
<th>description</th>
</tr>
</thead>
<tbody>
<tr>
<td>number</td>
<td>(Optional) Number of the link-state group.</td>
</tr>
<tr>
<td>detail</td>
<td>(Optional) Specify that detailed information appears.</td>
</tr>
</tbody>
</table>

### Defaults

There is no default.

### Command Modes

Privileged EXEC

### Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

### Usage Guidelines

Use the `show link state group` command to display the link-state group information. Enter this command without keywords to display information about all link-state groups. Enter the group number to display information specific to the group.

Enter the `detail` keyword to display detailed information about the group. The output for the `show link state group detail` command displays only those link-state groups that have link-state tracking enabled or that have upstream or downstream interfaces (or both) configured. If there is no link-state group configuration for a group, it is not shown as enabled or disabled.

### Examples

This is an example of output from the `show link state group 1` command:

```
Switch> show link state group 1
Link State Group: 1      Status: Enabled, Down
```

This is an example of output from the `show link state group detail` command:

```
Switch> show link state group detail
(Up):Interface up   (Dwn):Interface Down   (Dis):Interface disabled
Link State Group: 1 Status: Enabled, Down
Upstream Interfaces : Gi1/1(Dwn) Gi1/2(Dwn)
Downstream Interfaces : Fa1/5(Dis) Fa1/6(Dis) Fa1/7(Dis) Fa1/8(Dis)
Link State Group: 2 Status: Enabled, Down
Upstream Interfaces : Gi1/1(Dwn) Gi1/2(Dwn) Gi1/3(Dwn)
Downstream Interfaces : Fa1/5(Dis) Fa1/6(Dis) Fa1/7(Dis) Fa1/8(Dis)
(Up):Interface up (Dwn):Interface Down (Dis):Interface disabled
```
## show link state group

show mac address-table address

Use the `show mac address-table address` EXEC command to display MAC address table information for the specified MAC address.

```
show mac address-table address mac-address [interface interface-id] [vlan vlan-id] [ | begin | exclude | include] expression
```

**Syntax Description**

- **mac-address**: Specify the 48-bit MAC address; the valid format is H.H.H.
- **interface interface-id**: (Optional) Display information for a specific interface. Valid interfaces include physical ports and port channels.
- **vlan vlan-id**: (Optional) Display entries for the specific VLAN only. The range is 1 to 4094.
- **| begin**: (Optional) Display begins with the line that matches the expression.
- **| exclude**: (Optional) Display excludes lines that match the expression.
- **| include**: (Optional) Display includes lines that match the specified expression.
- **expression**: Expression in the output to use as a reference point.

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

### Usage Guidelines

If no VLAN number is specified, the aging time for all VLANs appears.

Expressions are case sensitive. For example, if you enter `| exclude output`, the lines that contain `output` do not appear, but the lines that contain `Output` appear.

### Examples

This is an example of output from the `show mac address-table aging-time` command:

```
Switch> show mac address-table aging-time
Vlan   Aging Time
-----  ----------
    1  300
```

This is an example of output from the `show mac address-table aging-time vlan 10` command:

```
Switch> show mac address-table aging-time vlan 10
Vlan   Aging Time
-----  ----------
  10   300
```

show mac address-table interface

Use the `show mac address-table interface` user command to display the MAC address table information for the specified interface in the specified VLAN.

```
show mac address-table interface interface-id [vlan vlan-id] [ | begin | exclude | include] expression
```

**Syntax Description**

- `interface-id`: Specify an interface type; valid interfaces include physical ports and port channels.
- `vlan vlan-id`: (Optional) Display entries for a specific VLAN; the range is 1 to 4094.
- `| begin`: (Optional) Display begins with the line that matches the `expression`.
- `| exclude`: (Optional) Display excludes lines that match the `expression`.
- `| include`: (Optional) Display includes lines that match the specified `expression`.
- `expression`: Expression in the output to use as a reference point.

show mac address-table learning

Use the show mac address-table learning EXEC command to display the status of MAC address learning for all VLANs or the specified VLAN.

```
show mac address-table learning [vlan vlan-id] [ | begin | exclude | include] expression]
```

**Syntax Description**

- **vlan vlan-id**: (Optional) Display information for a specific VLAN. The range is 1 to 4094.
- **begin**: (Optional) Display begins with the line that matches the expression.
- **exclude**: (Optional) Display excludes lines that match the expression.
- **include**: (Optional) Display includes lines that match the specified expression.
- **expression**: Expression in the output to use as a reference point.

**Command Modes**

EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(46)SE1</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Use the show mac address-table learning command without any keywords to display configured VLANs and whether MAC address learning is enabled or disabled on them. The default is that MAC address learning is enabled on all VLANs. Use the command with a specific VLAN ID to display the learning status on an individual VLAN.

Expressions are case sensitive. For example, if you enter `| exclude output`, the lines that contain `output` do not appear, but the lines that contain `Output` appear.

**Examples**

This is an example of output from the `show mac address-table learning` EXEC command showing that MAC address learning is disabled on VLAN 200:

```
Switch> show mac address-table learning
VLAN  Learning Status
----  ---------------
  1    yes
  100   yes
  200   no
```

**Related Commands**

### show mac address-table notification

Use the `show mac address-table notification` EXEC command to display the MAC address notification settings for all interfaces or the specified interface.

```plaintext
show mac address-table notification { change [interface [interface-id] | mac-move | threshold] [ | begin | exclude | include] expression}
```

<table>
<thead>
<tr>
<th>Syntax Description</th>
<th>Description</th>
</tr>

</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

### Usage Guidelines

Use the `show mac address-table notification change` command without keywords to see if the MAC address change notification feature is enabled or disabled, the MAC notification interval, the maximum number of entries allowed in the history table, and the history table contents.

Use the `interface` keyword to display the notifications for all interfaces. If the `interface-id` is included, only the flags for that interface appear.

Expressions are case sensitive. For example, if you enter `| exclude output`, the lines that contain `output` do not appear, but the lines that contain `Output` appear.
Examples

This is an example of output from the `show mac address-table notification change` command:

Switch> `show mac address-table notification change`
MAC Notification Feature is Enabled on the switch
Interval between Notification Traps : 60 secs
Number of MAC Addresses Added : 4
Number of MAC Addresses Removed : 4
Number of Notifications sent to NMS : 3
Maximum Number of entries configured in History Table : 100
Current History Table Length : 3
MAC Notification Traps are Enabled
History Table contents
----------------------
History Index 0, Entry Timestamp 1032254, Despatch Timestamp 1032254
MAC Changed Message :
Operation: Added Vlan: 2  MAC Addr: 0000.0000.0001 Module: 0  Port: 1

History Index 1, Entry Timestamp 1038254, Despatch Timestamp 1038254

show mac address-table vlan

Use the **show mac address-table vlan** EXEC command to display the MAC address table information for the specified VLAN.

```
show mac address-table vlan vlan-id [ | begin | exclude | include | expression]
```

### Syntax Description

- **vlan-id** *(Optional)* Display addresses for a specific VLAN. The range is 1 to 4094.
- | **begin** *(Optional)* Display begins with the line that matches the *expression*.
- | **exclude** *(Optional)* Display excludes lines that match the *expression*.
- | **include** *(Optional)* Display includes lines that match the specified *expression*.
- **expression** Expression in the output to use as a reference point.

### Command Modes

show mls qos aggregate-policer

Use the `show mls qos aggregate-policer` EXEC command to display the quality of service (QoS) aggregate policer configuration. A policer defines a maximum permissible rate of transmission, a maximum burst size for transmissions, and an action to take if either maximum is exceeded.

```
show mls qos aggregate-policer [aggregate-policer-name] [ | begin | exclude | include] expression
```

### Syntax Description
- `aggregate-policer-name` (Optional) Display the policer configuration for the specified name.
- `| begin` (Optional) Display begins with the line that matches the `expression`.
- `| exclude` (Optional) Display excludes lines that match the `expression`.
- `| include` (Optional) Display includes lines that match the specified `expression`.
- `expression` Expression in the output to use as a reference point.

### Command Modes

show mls qos interface

Use the **show mls qos interface** EXEC command to display quality of service (QoS) information at the port level.

```
show mls qos interface [interface-id] [buffers | queueing | statistics]
   [ | {begin | exclude | include} expression]
```

**Syntax Description**

- **interface-id** (Optional) Display QoS information for the specified port. Valid interfaces include physical ports.
- **buffers** (Optional) Display the buffer allocation among the queues.
- **queueing** (Optional) Display the queueing strategy (shared or shaped) and the weights corresponding to the queues.
- **statistics** (Optional) Display statistics for sent and received Differentiated Services Code Points (DSCPs) and class of service (CoS) values, the number of packets enqueued or dropped per egress queue, and the number of in-profile and out-of-profile packets for each policer.

- **begin** (Optional) Display begins with the line that matches the expression.
- **exclude** (Optional) Display excludes lines that match the expression.
- **include** (Optional) Display includes lines that match the specified expression.

**expression** Expression in the output to use as a reference point.

**Note**

Though visible in the command-line help string, the **policer** keyword is not supported.

**Command Modes**

EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Expressions are case sensitive. For example, if you enter `| exclude output`, the lines that contain output do not appear, but the lines that contain Output appear.

**Examples**

This is an example of output from the **show mls qos interface interface-id** command when VLAN-based QoS is enabled:

```
Switch> show mls qos interface gigabitethernet1/1
GigabitEthernet1/1
trust state: not trusted
trust mode: not trusted
trust enabled flag: ena
COS override: dis
default COS: 0
```
DSCP Mutation Map: Default DSCP Mutation Map
Trust device: none
qos mode: vlan-based

This is an example of output from the `show mls qos interface interface-id` command when VLAN-based QoS is disabled:

```
Switch> show mls qos interface gigabitethernet1/2
GigabitEthernet1/2
trust state: not trusted
trust mode: not trusted
trust enabled flag: ena
COS override: dis
default COS: 0
DSCP Mutation Map: Default DSCP Mutation Map
Trust device: none
qos mode: port-based
```

This is an example of output from the `show mls qos interface interface-id buffers` command:

```
Switch> show mls qos interface gigabitethernet1/2 buffers
GigabitEthernet1/2
The port is mapped to qset : 1
The allocations between the queues are : 25 25 25 25
```

This is an example of output from the `show mls qos interface interface-id queueing` command. The egress expedite queue overrides the configured shaped round robin (SRR) weights.

```
Switch> show mls qos interface gigabitethernet1/2 queueing
GigabitEthernet1/2
Egress Priority Queue : enabled
Shaped queue weights (absolute) : 25 0 0 0
Shared queue weights : 25 25 25 25
The port bandwidth limit : 100 (Operational Bandwidth:100.0)
The port is mapped to qset : 1
```

This is an example of output from the `show mls qos interface interface-id statistics` command. Table 2-32 describes the fields in this display.

```
Switch> show mls qos interface gigabitethernet1/2 statistics
GigabitEthernet1/2

<td>srr-queue bandwidth shape</td>
<td>Assigns the shaped weights and enables bandwidth shaping on the four egress queues mapped to a port.</td>
</tr>
<tr>
<td>srr-queue bandwidth share</td>
<td>Assigns the shared weights and enables bandwidth sharing on the four egress queues mapped to a port.</td>
</tr>
</tbody>
</table>
show mls qos maps

Use the `show mls qos maps` EXEC command to display quality of service (QoS) mapping information. During classification, QoS uses the mapping tables to represent the priority of the traffic and to derive a corresponding class of service (CoS) or Differentiated Services Code Point (DSCP) value from the received CoS, DSCP, or IP precedence value.

```
show mls qos maps [cos-dscp | cos-input-q | cos-output-q | dscp-cos | dscp-input-q |
    dscp-mutation dscp-mutation-name | dscp-output-q | ip-prec-dscp | policed-dscp] [ | | begin
    | exclude | include] expression
```

### Syntax Description

<table>

</tr>
</tbody>
</table>

### Usage Guidelines

Expressions are case sensitive. For example, if you enter `| exclude output`, the lines that contain `output` do not appear, but the lines that contain `Output` appear.

The policed-DSCP, DSCP-to-CoS, and the DSCP-to-DSCP-mutation maps appear as a matrix. The d1 column specifies the most-significant digit in the DSCP. The d2 row specifies the least-significant digit in the DSCP. The intersection of the d1 and d2 values provides the policed-DSCP, the CoS, or the mutated-DSCP value. For example, in the DSCP-to-CoS map, a DSCP value of 43 corresponds to a CoS value of 5.
show mls qos maps

The DSCP input queue threshold and the DSCP output queue threshold maps appear as a matrix. The d1 column specifies the most-significant digit of the DSCP number. The d2 row specifies the least-significant digit in the DSCP number. The intersection of the d1 and the d2 values provides the queue ID and threshold ID. For example, in the DSCP input queue threshold map, a DSCP value of 43 corresponds to queue 2 and threshold 1 (02-01).

The CoS input queue threshold and the CoS output queue threshold maps show the CoS value in the top row and the corresponding queue ID and threshold ID in the second row. For example, in the CoS input queue threshold map, a CoS value of 5 corresponds to queue 2 and threshold 1 (2-1).

Examples

This is an example of output from the show mls qos maps command:

Switch> show mls qos maps
Policed-dscp map:
   d1 : d2  0  1  2  3  4  5  6  7  8  9
   -------------------------------
   0 :  00 01 02 03 04 05 06 07 08 09
   1 :  10 11 12 13 14 15 16 17 18 19
   2 :  20 21 22 23 24 25 26 27 28 29
   3 :  30 31 32 33 34 35 36 37 38 39
   4 :  40 41 42 43 44 45 46 47 48 49
   5 :  50 51 52 53 54 55 56 57 58 59
   6 :  60 61 62 63

Dscp-cos map:
   d1 : d2  0  1  2  3  4  5  6  7  8  9
   -------------------------------
   0 :  00 00 00 00 00 00 00 01 01 01
   1 :  01 01 01 01 01 01 02 02 02 02
   2 :  02 02 02 02 03 03 03 03 03 03

</tr>
</tbody>
</table>

Usage Guidelines

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain output do not appear, but the lines that contain Output appear.

Examples

This is an example of output from the show mls qos queue-set command:

```
Switch> show mls qos queue-set
Queueset: 1
Queue :  1  2  3  4
----------------------------------------------
buffers : 25 25 25 25
threshold1: 100 200 100 100
threshold2: 100 200 100 100
reserved : 50 50 50 50
maximum : 400 400 400 400
Queueset: 2
Queue :  1  2  3  4
----------------------------------------------
buffers : 25 25 25 25
threshold1: 100 200 100 100
threshold2: 100 200 100 100
reserved : 50 50 50 50
maximum : 400 400 400 400
```
### Related Commands

</tbody>
</table>
show mls qos vlan

Use the `show mls qos vlan` EXEC command to display the policy maps attached to a switch virtual interface (SVI).

```
show mls qos vlan vlan-id [ | begin | exclude | include ] expression
```

### Syntax Description

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>vlan-id</code></td>
<td>Specify the VLAN ID of the SVI to display the policy maps. The range is 1 to 4094.</td>
</tr>
<tr>
<td>`</td>
<td>begin`</td>
</tr>
<tr>
<td>`</td>
<td>exclude`</td>
</tr>
<tr>
<td>`</td>
<td>include`</td>
</tr>
<tr>
<td><code>expression</code></td>
<td>Expression in the output to use as a reference point.</td>
</tr>
</tbody>
</table>

### Command Modes

EXEC

### Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

### Usage Guidelines

The output from the `show mls qos vlan` command is meaningful only when VLAN-based quality of service (QoS) is enabled and when hierarchical policy maps are configured.

Expressions are case sensitive. For example, if you enter `| exclude output`, the lines that contain `output` do not appear, but the lines that contain `Output` appear.

### Examples

This is an example of output from the `show mls qos vlan` command:

```
Switch> show mls qos vlan 10
Vlan10
Attached policy-map for Ingress:pm-test-pm-2
```

### Related Commands

<table>
<thead>

<td>(Optional) Display detailed information about the specified sessions.</td>
</tr>
<tr>
<td>begin</td>
<td>Display begins with the line that matches the expression.</td>
</tr>
<tr>
<td>exclude</td>
<td>Display excludes lines that match the expression.</td>
</tr>
<tr>
<td>include</td>
<td>Display includes lines that match the specified expression.</td>
</tr>
<tr>
<td>expression</td>
<td>Expression in the output to use as a reference point.</td>
</tr>
</tbody>
</table>

Command Modes

EXEC

Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

Usage Guidelines

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain output do not appear, but the lines that contain Output appear.

The output is the same for the show monitor command and the show monitor session all command.
Examples

This is an example of output for the `show monitor` EXEC command:

```
Switch# show monitor
Session 1
--------
Type : Local Session
Source Ports :
RX Only : Fa1/1
Both : Fa2/2-3,Fa2/5-6
Destination Ports : Fa1/2
Encapsulation : Replicate
Ingress : Disabled

Session 2
--------
Type : Remote Source Session
Source VLANs :
TX Only : 10
Both : 1-9
Dest RSPAN VLAN : 105
```

This is an example of output for the `show monitor session` EXEC command for local SPAN source session 1:

```
Switch# show monitor session 1
Session 1
--------
Type : Local Session
Source Ports :
RX Only : Fa1/1
Both : Fa2/2-3,Fa2/5-6
Destination Ports : Fa2/8
Encapsulation : Replicate
Ingress : Disabled
```

This is an example of output for the `show monitor session all` EXEC command when ingress traffic forwarding is enabled:

```
Switch# show monitor session all
Session 1
--------
Type : Local Session
Source Ports :
Both : Fa1/2
Destination Ports : Fa1/3
Encapsulation : Native
Ingress : Enabled, default VLAN = 5
Ingress encap : DOT1Q

Session 2
--------
Type : Local Session
Source Ports :
Both : Fa1/5
Destination Ports : Fa1/8
Encapsulation : Replicate
Ingress : Enabled, default VLAN = 4
Ingress encap : Untagged
```

Related Commands

<tr>
<td><code>monitor session</code></td>
<td>Starts or modifies a SPAN or RSPAN session.</td>
</tr>
</tbody>
</table>
show mvr

Use the **show mvr** privileged EXEC command without keywords to display the current Multicast VLAN Registration (MVR) global parameter values, including whether or not MVR is enabled, the MVR multicast VLAN, the maximum query response time, the number of multicast groups, and the MVR mode (dynamic or compatible).

```
show mvr [ | begin | exclude | include ] expression
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>begin</td>
<td>(Optional) Display begins with the line that matches the <strong>expression</strong>.</td>
</tr>
<tr>
<td>exclude</td>
<td>(Optional) Display excludes lines that match the <strong>expression</strong>.</td>
</tr>
<tr>
<td>include</td>
<td>(Optional) Display includes lines that match the specified <strong>expression</strong>.</td>
</tr>
<tr>
<td>expression</td>
<td>Expression in the output to use as a reference point.</td>
</tr>
</tbody>
</table>

**Command Modes**

Privileged EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Expressions are case sensitive. For example, if you enter `| exclude output`, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

**Examples**

This is an example of output from the **show mvr** command:

```
Switch# show mvr
MVR Running: TRUE
MVR multicast VLAN: 1
MVR Max Multicast Groups: 256
MVR Current multicast groups: 0
MVR Global query response time: 5 (tenths of sec)
MVR Mode: compatible
```

In the preceding display, the maximum number of multicast groups is fixed at 256. The MVR mode is either compatible (for interoperability with Catalyst 2900 XL and Catalyst 3500 XL switches) or dynamic (where operation is consistent with IGMP snooping operation and dynamic MVR membership on source ports is supported).
<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>mvr (global configuration)</td>
<td>Enables and configures multicast VLAN registration on the switch.</td>
</tr>
<tr>
<td>mvr (interface configuration)</td>
<td>Configures MVR ports.</td>
</tr>
<tr>
<td>show mvr interface</td>
<td>Displays the configured MVR interfaces, status of the specified interface, or all multicast groups to which the interface belongs when the interface and members keywords are appended to the command.</td>
</tr>
<tr>
<td>show mvr members</td>
<td>Displays all ports that are members of an MVR multicast group or, if there are no members, means the group is inactive.</td>
</tr>
</tbody>
</table>
show mvr interface

Use the `show mvr interface` privileged EXEC command without keywords to display the Multicast VLAN Registration (MVR) receiver and source ports. Use the command with keywords to display MVR parameters for a specific receiver port.

```
show mvr interface [interface-id [members [vlan vlan-id]]] [ | begin | exclude | include] expression
```

**Syntax Description**

- **interface-id** (Optional) Display MVR type, status, and Immediate Leave setting for the interface.
  - Valid interfaces include physical ports (including type, module, and port number).
- **members** (Optional) Display all MVR groups to which the specified interface belongs.
- **vlan vlan-id** (Optional) Display all MVR group members on this VLAN. The range is 1 to 4094.
- **| begin** (Optional) Display begins with the line that matches the `expression`.
- **| exclude** (Optional) Display excludes lines that match the `expression`.
- **| include** (Optional) Display includes lines that match the specified `expression`.
- **expression** Expression in the output to use as a reference point.

**Command Modes**

Privileged EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

If the entered port identification is a non-MVR port or a source port, the command returns an error message. For receiver ports, it displays the port type, per port status, and Immediate-Leave setting.

If you enter the `members` keyword, all MVR group members on the interface appear. If you enter a VLAN ID, all MVR group members in the VLAN appear.

Expressions are case sensitive. For example, if you enter `| exclude output`, the lines that contain `output` do not appear, but the lines that contain `Output` appear.

**Examples**

This is an example of output from the `show mvr interface` command:

```
Switch# show mvr interface
Port   Type       Status       Immediate Leave
----   ------     ---------     --------------
G1/1   SOURCE    ACTIVE/UP    DISABLED
G1/2   RECEIVER  ACTIVE/DOWN  DISABLED
```
In the preceding display, Status is defined as follows:

- **Active** means the port is part of a VLAN.
- **Up/Down** means that the port is forwarding/nonforwarding.
- **Inactive** means that the port is not yet part of any VLAN.

This is an example of output from the `show mvr interface` command for a specified port:

Switch# `show mvr interface gigabitethernet1/2`
Type: RECEIVER Status: ACTIVE Immediate Leave: DISABLED

This is an example of output from the `show mvr interface interface-id members` command:

Switch# `show mvr interface gigabitethernet1/2 members`

</tbody>
</table>
show mvr members

Use the `show mvr members` privileged EXEC command to display all receiver and source ports that are currently members of an IP multicast group.

```
show mvr members [ip-address] [ | begin | exclude | include ] expression
```

### Syntax Description

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ip-address</td>
<td>(Optional) The IP multicast address. If the address is entered, all receiver and source ports that are members of the multicast group appear. If no address is entered, all members of all Multicast VLAN Registration (MVR) groups are listed. If a group has no members, the group is listed as Inactive.</td>

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

### Usage Guidelines

The `show mvr members` command applies to receiver and source ports. For MVR-compatible mode, all source ports are members of all multicast groups.

Expressions are case sensitive. For example, if you enter `| exclude output`, the lines that contain `output` do not appear, but the lines that contain `Output` appear.

### Examples

This is an example of output from the `show mvr members` command:

```
Switch# show mvr members
MVR Group IP     Status     Members
-------------------------------
239.255.0.1      ACTIVE    Gi1/1(d), Gi1/2(s)  
239.255.0.2      INACTIVE  None              
239.255.0.3      INACTIVE  None              
239.255.0.4      INACTIVE  None              
239.255.0.5      INACTIVE  None              
239.255.0.6      INACTIVE  None              
239.255.0.7      INACTIVE  None              
239.255.0.8      INACTIVE  None              
239.255.0.9      INACTIVE  None              
239.255.0.10     INACTIVE  None              
<output truncated>
```
This is an example of output from the `show mvr members ip-address` command. It displays the members of the IP multicast group with that address:

```
Switch# show mvr members 239.255.0.2
239.255.003.--22     ACTIVE          Gi1/1(d), Gi1/2(d), Gi1/3(d),
                      Gi1/4(d), Gi1/5(s)
```

show network-policy profile

Use the `show network-policy profile` privileged EXEC command to display the network-policy profiles.

```
show network-policy profile [profile number] [detail] [ | begin | exclude | include] expression
```

**Note**

To use this command, the switch must be running the LAN Base image.

**Syntax Description**

- **profile number** (Optional) Display the network-policy profile number. If no profile is entered, all network-policy profiles appear.
- **detail** (Optional) Display detailed status and statistics information.
- **begin** (Optional) Display begins with the line that matches the `expression`.
- **exclude** (Optional) Display excludes lines that match the `expression`.
- **include** (Optional) Display includes lines that match the specified `expression`.
- **expression** Expression in the output to use as a reference point.

show nmsp

Use the `show nmsp` privileged EXEC command to display the Network Mobility Services Protocol (NMSP) information for the switch. This command is available only when your switch is running the cryptographic (encrypted) software image.

```
show nmsp {attachment suppress interface | capability | notification interval | statistics
    {connection | summary} | status | subscription {detail | summary}} [ | {begin | exclude | include} expression]
```

### Syntax Description

- **attachment suppress interface**: Display attachment suppress interfaces.
- **capability**: Display switch capabilities including the supported services and subservices.
- **notification interval**: Display the notification intervals of the supported services.
- **statistics {connection | summary}**: Display the NMSP statistics information.
  - **connection**:—display the message counters on each connection.
  - **summary**:—display the global counters.
- **status**: Display information about the NMSP connections.
- **subscription {detail | summary}**: Display the subscription information on each NMSP connection.
  - **detail**:—display all services and subservices subscribed on each connection.
  - **summary**:—display all services subscribed on each connection.
- **begin**: (Optional) Display begins with the line that matches the `expression`.
- **exclude**: (Optional) Display excludes lines that match the `expression`.
- **include**: (Optional) Display includes lines that match the specified `expression`.
- **expression**: Expression in the output to use as a reference point.

### Examples

This is an example of output from the `show nmsp attachment suppress interface` command:

```
Switch# show nmsp attachment suppress interface
NMSP Attachment Suppression Interfaces
-----------------------------
GigabitEthernet1/1
GigabitEthernet1/2
```
This is an example of output from the `show nmsp capability` command:

```
Switch# show nmsp capability
NMSP Switch Capability
-------------------------
Service      Subservice
-----------    --------------
Attachment    Wired Station
Location      Subscription
```

This is an example of output from the `show nmsp notification interval` command:

```
Switch# show nmsp notification interval
NMSP Notification Intervals
---------------------------
Attachment notify interval: 30 sec (default)
Location notify interval: 30 sec (default)
```

This is an example of output from the `show nmsp statistics connection` and `show nmsp statistics summary` commands:

```
Switch# show nmsp statistics connection
NMSP Connection Counters
-------------------------
Connection 1:
    Connection status: UP
    Freed connection: 0

    Tx message count          Rx message count

show pagp

Use the `show pagp` EXEC command to display Port Aggregation Protocol (PAgP) channel-group information.

```
show pagp [channel-group-number] {counters | dual-active | internal | neighbor} [ | begin | exclude | include] expression]
```

**Syntax Description**

- `channel-group-number` (Optional) Number of the channel group. The range is 1 to 6.
- `counters` Display traffic information.
- `dual-active` Display the dual-active status.
- `internal` Display internal information.
- `neighbor` Display neighbor information.
- `| begin` (Optional) Display begins with the line that matches the expression.
- `| exclude` (Optional) Display excludes lines that match the expression.
- `| include` (Optional) Display includes lines that match the specified expression.
- `expression` Expression in the output to use as a reference point.

**Command Modes**

EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
<tr>
<td>12.2(46)SE</td>
<td>The dual-active keyword was added.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

You can enter any `show pagp` command to display the active channel-group information. To display the nonactive information, enter the `show pagp` command with a channel-group number.

Expressions are case sensitive. For example, if you enter `| exclude output`, the lines that contain `output` do not appear, but the lines that contain `Output` are appear.

**Examples**

This is an example of output from the `show pagp 1 counters` command:

```
Switch> show pagp 1 counters
Port Information Flush
          Sent  Recv  Sent  Recv
--------------------------------------
Channel group: 1
Gi1/1      45    42    0    0
Gi1/2      45    41    0    0
```

This is an example of output from the `show pagp 1 internal` command:

```
Switch> show pagp 1 internal
Flags: S - Device is sending Slow hello. C - Device is in Consistent state.
       A - Device is in Auto mode.
Timers: H - Hello timer is running. Q - Quit timer is running.
```
S - Switching timer is running.  I - Interface timer is running.

Channel group 1

<table>
<thead>
<tr>

show policy-map

Use the `show policy-map` EXEC command to display quality of service (QoS) policy maps, which define classification criteria for incoming traffic. Policy maps can include poliers that specify the bandwidth limitations and the action to take if the limits are exceeded.

```
show policy-map [policy-map-name [class class-map-name]] [ | begin | exclude | include] expression
```

**Syntax Description**

- `policy-map-name` (Optional) Display the specified policy-map name.
- `class class-map-name` (Optional) Display QoS policy actions for a individual class.
- `| begin` (Optional) Display begins with the line that matches the `expression`.
- `| exclude` (Optional) Display excludes lines that match the `expression`.
- `| include` (Optional) Display includes lines that match the specified `expression`.
- `expression` Expression in the output to use as a reference point.

**Note**

Though visible in the command-line help string, the `control-plane` and `interface` keywords are not supported, and the statistics shown in the display should be ignored.

**Command Modes**

EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>

show port-security

Use the show port-security privileged EXEC command to display port-security settings for an interface or for the switch.

```
show port-security [interface interface-id] [address | vlan] [ | begin | exclude | include] expression
```

**Syntax Description**

- **interface interface-id**: (Optional) Display port security settings for the specified interface. Valid interfaces include physical ports (including type, module, and port number).
- **address**: (Optional) Display all secure MAC addresses on all ports or a specified port.
- **vlan**: (Optional) Display port security settings for all VLANs on the specified interface. This keyword is visible only on interfaces that have the switchport mode set to trunk.
- **begin**: (Optional) Display begins with the line that matches the expression.
- **exclude**: (Optional) Display excludes lines that match the expression.
- **include**: (Optional) Display includes lines that match the specified expression.
- **expression**: Expression in the output to use as a reference point.

**Command Modes**

Privileged EXEC

**Command History**

- **Release**
  - 12.2(44)EX
  - This command was introduced.

**Usage Guidelines**

If you enter the command without keywords, the output includes the administrative and operational status of all secure ports on the switch.

If you enter an interface-id, the command displays port security settings for the interface.

If you enter the address keyword, the command displays the secure MAC addresses for all interfaces and the aging information for each secure address.

If you enter an interface-id and the address keyword, the command displays all the MAC addresses for the interface with aging information for each secure address. You can also use this command to display all the MAC addresses for an interface even if you have not enabled port security on it.

If you enter the vlan keyword, the command displays the configured maximum and the current number of secure MAC addresses for all VLANs on the interface. This option is visible only on interfaces that have the switchport mode set to trunk.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain output do not appear, but the lines that contain Output appear.

**Examples**

This is an example of the output from the show port-security command:

```
Switch# show port-security
Secure Port MaxSecureAddr CurrentAddr SecurityViolation Security Action
```
This is an example of output from the `show port-security interface interface-id` command:

Switch# `show port-security interface gigabitethernet1/1`
Port Security : Enabled
Port status : SecureUp
Violation mode : Shutdown
Maximum MAC Addresses : 1
Total MAC Addresses : 0
Aging time : 0 mins
Aging type : Absolute
SecureStatic address aging : Disabled
Security Violation count : 0

This is an example of output from the `show port-security address` command:

Switch# `show port-security address`
Secure Mac Address Table

Vlan | Mac Address       | Type                | Ports | Remaining Age (mins)
-----|------------------|---------------------|-------|---------------------
1    | 0006.0700.0800   | SecureConfigured    | Gi1/2 | 1                   

This is an example of output from the `show port-security interface gigabitethernet1/2 address` command:

Switch# `show port-security interface gigabitethernet1/2 address`
Secure Mac Address Table

Vlan | Mac Address       | Type                | Ports | Remaining Age (mins)
-----|------------------|---------------------|-------|---------------------
1    | 0006.0700.0800   | SecureConfigured    | Gi1/2 | 1                   

This is an example of output from the `show port-security interface interface-id vlan` command:

Switch# `show port-security interface gigabitethernet1/2 vlan`
Default maximum:not set, using 5120
VLAN  Maximum  Current
  5  default    1
 10  default    54
 11  default   101
 12  default   101
 13  default   201
 14  default   501
## show port-security

show power inline

Use the `show power inline` command in EXEC mode to display the Power over Ethernet (PoE) status for the specified PoE port or for all PoE ports.

```
show power inline [interface-id | consumption | module switch-number]
```

**Syntax Description**

- `interface-id` (Optional) Displays PoE-related power management information for the specified interface.
- `consumption` (Optional) Displays the power allocated to devices connected to PoE ports.
- `module switch-number` (Optional) Limits the display to ports on the specified stack member. The switch number is 1 to 4.

**Command Modes**

User EXEC
Privileged EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>15.0(2)EY1</td>
<td>This command is introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Use this command to show the interface port number, administration (configuration) status, current (actual) status, power consumption and device type information.

**Output:**

```
Module Available Used Remaining
------ --------- ------ --------
<M#>     <Total> <Used> <Remaining>
Interface Admin Oper Power Device Class Max
--------- ------ ----- ------ ---------- --------
Fa<M#>/<P#> <Admin> <Oper> <Power> <Device> <Class> <Max>
```

Note: M# - Module Number
P# - Port Number
- Total - Total available power budget in watts
- Used - Utilized Power in watts
- Remaining - Remaining power in watts
- Admin - Admin status
- Oper - Operator status
- Power - Allocated power to Power Device (PD) in watts
- Device - Name of the Power Device (PD)
- Class - Class of Power Device (PD)
- Max - Maximum Power, PD can draw

**Examples**

The following is an example of output from the `show power inline` command on the IE 3000 switch.
The IE 3000 switch supports PoE+ with maximum wattage of 30 W.
This is an example of output from the `show power inline dynamic-priority` command on a switch.

show profinet

Use the `show profinet` EXEC command to display information about the PROFINET sessions on the switch.

```
show profinet {alarm | lldp | session | status} [ | begin | exclude | include] expression
```

**Syntax Description**

- **alarm**: Display PROFINET alarms.
- **lldp**: Display PROFINET Link Layer Discovery Protocol (LLDP).
- **session**: Display PROFINET sessions.
- **status**: Display PROFINET status.
- **| begin**: (Optional) Display begins with the line that matches the `expression`.
- **| exclude**: (Optional) Display excludes lines that match the `expression`.
- **| include**: (Optional) Display includes lines that match the specified `expression`.
- **expression**: Expression in the output to use as a reference point.

**Command Modes**

EXEC

**Command History**

**Release**

**Modification**

12.2(52)SE

This command was introduced.

**Usage Guidelines**

When LLDP and PROFINET are enabled, this command shows the physical ports that are sending and receiving PROFINET-formatted LLDP packets.

Expressions are case sensitive. For example, if you enter `| exclude output`, the lines that contain `output` are not displayed, but the lines that contain `Output` are displayed.

**Examples**

This example shows how to display PROFINET alarms:

```
Switch> show profinet alarm
Monitoring of Profinet Switch Alarms
  RPS Alarm: -
  CF Alarm: -
  Primary Temperature Alarm: -
  Secondary Temperature Alarm: -
  Major Relay Alarm: -
  Minor Relay Alarm: -
Monitoring of Profinet Port Alarms
Port  Link Fault  Not Forwarding  Not Operating  FCS Error
Fa1/1 -         -            -             -           -
Fa1/2 -         -            -             -           -
Fa1/3 -         -            -             -           -
Fa1/4 -         -            -             -           -
Fa1/5 -         -            -             -           -
Fa1/6 -         -            -             -           -
Fa1/7 -         -            -             -           -
Fa1/8 -         -            -             -           -
```
Gi1/1  -  -  -  -
Gi1/2  -  -  -  -

This example shows how to display PROFINET LLDP:

Switch> `show profinet lldp`
Fa1/1  port-003      Off
Fa1/2  port-004      Off
Fa1/3  port-005      Off
Fa1/4  port-006      Off
Fa1/5  port-007      Off
Fa1/6  port-008      Off
Fa1/7  port-009      Off
Fa1/8  port-010      Off
Gi1/1  port-001      Off
Gi1/2  port-002      Off
Switch>

This example shows how to display a PROFINET session:

Switch> `show profinet session`
Session #1
------------
Connected: No
Number Of IO CR's: 0
Number Of DiffModules: 0

This example shows how to display the PROFINET status:

Switch> `show profinet status`
State     : Enabled
Vlan      : 1
Id        : IE3000-8TC
Connected : Yes
ReductRatio : 512
GSD version : Match

show psp config

To display the status of protocol storm protection configured for a specific protocol on a VLAN, use the `show psp config` privileged EXEC command.

```
show psp config {arp | dhcp | igmp}
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>arp</td>
<td>Show protocol storm protection status for ARP and ARP snooping.</td>
</tr>
<tr>
<td>dhcp</td>
<td>Show protocol storm protection status for DHCP and DHCP snooping.</td>
</tr>
<tr>
<td>igmp</td>
<td>Show protocol storm protection status for IGMP and IGMP snooping.</td>
</tr>
</tbody>
</table>

Privileged EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(58)SE</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Examples**

This is an example of output from the `show psp config dhcp` command with protocol storm protection configured to drop packets when the incoming rate exceeds 35 packets per second.

```
Switch# show psp config dhcp

---------------------------------------------------------
PSP Protocol Configuration Summary:
---------------------------------------------------------
DHCP Rate Limit    : 35 packets/sec
PSP Action         : Packet Drop
```

</tr>
<tr>
<td><code>clear psp counter</code></td>
<td>Clears the counter of dropped packets.</td>
</tr>
</tbody>
</table>
show psp statistics

To display the number of packets dropped for all protocols when protocol storm protection is configured, use the show psp statistics privileged EXEC command.

```
show psp statistics [arp | dhcp | igmp]
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>arp</td>
<td>(Optional) Show the number of packets dropped for ARP and ARP snooping.</td>
</tr>
<tr>
<td>dhcp</td>

<tr>
<td>igmp</td>
<td>(Optional) Show the number of packets dropped for IGMP and IGMP snooping.</td>
</tr>
</tbody>
</table>

**Command Modes**

Privileged EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(58)SE</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Examples**

This is an example of output from the show psp statistics dhcp command when protocol storm protection is configured for DHCP. The output shows that 13 packets were dropped.

```
Switch# show psp statistics dhcp

----------------------------------
PSP Protocol Drop Counter Summary:
----------------------------------
DHCP Drop Counter: 13
```

**Related Commands**

<table>
<thead>

</tbody>
</table>
show ptp

To view the Precision Time Protocol (PTP) properties that are configured on the port, use the `show ptp` privileged EXEC command.

```
show ptp { clock | foreign-master-record | parent | port [FastEthernet interface] | GigabitEthernet interface] | time-property | passthrough }
```

### Syntax Description

- **clock**: Displays the PTP clock properties.
- **foreign-master-record**: Displays the foreign master data set.
- **parent**: Displays the parent and grandmaster properties.
- **port**: Displays the PTP port properties.
- **FastEthernet interface**: (Optional) Displays the PTP FastEthernet properties on the specified port.
- **GigabitEthernet interface**: (Optional) Displays the PTP Gigabit Ethernet properties on the specified port.
- **time-property**: Displays the PTP time properties.
- **passthrough**: Displays the PTP pass-through status.

### Defaults

There are no defaults.

### Command Modes

Privileged EXEC

### Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(46)SE1</td>
<td>This command was introduced.</td>
</tr>
<tr>
<td>12.2(58)SE</td>
<td>The <code>passthrough</code> keyword was added.</td>
</tr>
</tbody>
</table>

### Usage Guidelines

The `show ptp foreign-master-record` and `show ptp parent` commands apply to boundary clock mode, even though the commands also appear in end-to-end transparent mode.

If you enter the `show ptp clock` or `show ptp port` privileged EXEC command when the switch is in PTP forward mode, an error message states that no information is available.

### Examples

This is an example of output from the `show ptp clock` command:

```
Switch# show ptp clock
PTP CLOCK INFO
   PTP Device Type: Boundary clock
   Clock Identity: 0x0:9:B7:FF:FE:FF:F3:0
   Clock Domain: 0
   Number of PTP ports: 10
   Priority1: 128
   Priority2: 128
   Clock Quality:
      Class: 248
```
Accuracy: Unknown
Offset (log variance): N/A
Offset From Master: 0
Mean Path Delay: 490
Steps Removed: 1
Local clock time: 18:49:38 UTC Mar 7 1993

This is an example of output from the `show ptp port FastEthernet 1/1` command:

```
Switch# show ptp port FastEthernet 1/1
PTP PORT DATASET: FastEthernet1/1
Port identity: clock identity: 0x0:9:B7:FF:FE:F3:0
Port identity: port number: 1
PTP version: 2
Port state: SLAVE
Delay request interval(log mean): 5
Announce receipt time out: 3
Peer mean path delay: 0
Announce interval(log mean): 1
Sync interval(log mean): 0
Delay Mechanism: End to End
Peer delay request interval(log mean): 0
Sync fault limit: 50000
```

This is an example of output from the `show ptp parent` command:

```
Switch# show ptp parent
PTP PARENT PROPERTIES
Parent Clock:
Parent Clock Identity: 0x0:1E:13:FF:FE:0:28:0
Parent Port Number: 1
Observed Parent Offset (log variance): N/A
Observed Parent Clock Phase Change Rate: N/A

Grandmaster Clock:
Grandmaster Clock Identity: 0x0:1E:13:FF:FE:0:28:0
Grandmaster Clock Quality:
Class: 248
Accuracy: Unknown
Offset (log variance): N/A
Priority1: 127
Priority2: 128
```

This is an example of output from the `show ptp time-property` command:

```
Switch# show ptp time-property
PTP CLOCK TIME PROPERTY:
Current UTC Offset valid: 0
Current UTC Offset: 0
Leap59: 0
Leap61: 0
Time Traceable: 16
Frequency Traceable: 32
PTP Timescale: 1
Time Source: Internal Oscillator
```

This is an example of output from the `show ptp foreign-master-record` command:

```
Switch# show ptp foreign-master-record
Interface FastEthernet1/1
Foreign Master Port Number: 4
Number of Announce Messages: 3
Message Received Port: 1
Most Recent Time stamps: 73097688078005270, 73097687836293940
Interface FastEthernet1/2
   Empty
Interface FastEthernet1/3
   Empty
Interface FastEthernet1/4
   Empty
Interface GigabitEthernet1/1
   Empty
Interface GigabitEthernet1/2
   Foreign Master Clock Identity: 00:09:B7:FF:FE:FF:7D:80
   Foreign Master Port Num: 6
   Number of Announce messages: 3
   Message received port: 6
   Most Recent Time stamps: 73097687967991270, 73097687725402960

This is an example of output from the `show ptp passthrough` command:

```
Switch# show ptp passthrough
PTP Passthrough Enabled
Switch#
```

</table>
show rep topology

Use the `show rep topology` EXEC command to display Resilient Ethernet Protocol (REP) topology information for a segment or for all segments, including the primary and secondary edge ports in the segment.

```
show rep topology [segment segment_id] [archive] [detail] [ | begin | exclude | include] expression
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>segment_id</td>
<td>(Optional) Display REP topology information for the specified segment. The ID range is from 1 to 1024.</td>
</tr>
<tr>
<td>archive</td>
<td>(Optional) Display the previous topology of the segment. This keyword can be useful for troubleshooting a link failure.</td>
</tr>
<tr>
<td>detail</td>
<td>(Optional) Display detailed REP topology information.</td>
</tr>
<tr>
<td>begin</td>
<td>(Optional) Display begins with the line that matches the expression.</td>
</tr>
<tr>
<td>exclude</td>
<td>(Optional) Display excludes lines that match the expression.</td>
</tr>
<tr>
<td>include</td>
<td>(Optional) Display includes lines that match the specified expression.</td>
</tr>
<tr>
<td>expression</td>
<td>Expression in the output to use as a reference point.</td>
</tr>
</tbody>
</table>

**Command Modes**

EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(50)SE</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

In the `show rep topology` command output, ports configured as edge no-neighbor are designated with an asterisk (*) in front of Pri or Sec. In the output of the `show rep topology detail` command, No-Neighbor is spelled out.

The output of this command is also included in the `show tech-support` privileged EXEC command output.

Expressions are case sensitive. For example, if you enter `| exclude output`, the lines that contain `output` are not displayed, but the lines that contain `Output` are displayed.

**Examples**

This is a sample output from the `show rep topology segment` privileged EXEC command:

```
Switch # show rep topology segment 1
REP Segment 1
BridgeName   PortName   Edge Role
------------- ---------- ---- ----
sw1_multseg_3750 Gi1/1/1 Pri Alt
sw3_multseg_3400 Gi1/13 Open
sw3_multseg_3400 Gi1/14 Alt
sw4_multseg_3400 Gi0/13 Open
sw4_multseg_3400 Gi0/14 Open
sw5_multseg_3400 Gi1/13 Open
```
This is a sample output from the `show rep topology` command when the edge ports are configured to have no REP neighbor:

```
Switch # show rep topology
REP Segment 2
BridgeName    PortName   Edge  Role
------------- ----------- ---- ----
sw8-ts8-51    Gi1/2      Pri*  Open
sw9-ts11-50   Gi1/0/4      Open
sw9-ts11-50   Gi1/0/2      Open
sw1-ts11-45   Gi0/2        Alt
sw1-ts11-45   Po1          Open
sw8-ts8-51    Gi1/1      Sec*  Open
```

This example shows output from the `show rep topology detail` command:

```
Switch# show rep topology detail
REP Segment 2
repc_2_24ts, Fa0/2 (Primary Edge)

Alternate Port, some vlans blocked
Bridge MAC: 0019.e714.5380
Port Number: 004
Port Priority: 080
Neighbor Number: 1 / [-10]

repc_3_12cs, Gi1/1 (Intermediate)
Open Port, all vlans forwarding
Bridge MAC: 001a.a292.3580
Port Number: 001
Port Priority: 000
Neighbor Number: 2 / [-9]

repc_3_12cs, Po10 (Intermediate)
Open Port, all vlans forwarding
Bridge MAC: 001a.a292.3580
Port Number: 080
Port Priority: 000
Neighbor Number: 3 / [-8]

repc_4_12cs, Po10 (Intermediate)
Open Port, all vlans forwarding
Bridge MAC: 001a.a19d.7c80
Port Number: 080
Port Priority: 000
Neighbor Number: 4 / [-7]

repc_4_12cs, Gi0/2 (Intermediate)
Alternate Port, some vlans blocked
Bridge MAC: 001a.a19d.7c80
Port Number: 002
Port Priority: 040
Neighbor Number: 5 / [-6]
```

<output truncated>
This example shows output from the `show rep topology segment archive` command:

```
Switch# show rep topology segment 1 archive
REP Segment 1
BridgeName   PortName  Edge Role
------------- ---------- ---- ----
sw1_multseg_3750 Gi1/1/1  Pri  Open
sw3_multseg_3400 Gi1/13       Open
sw3_multseg_3400 Gi1/14       Open
sw4_multseg_3400 Gi1/13       Open
sw4_multseg_3400 Gi1/14       Open
sw5_multseg_3400 Gi1/13       Open
sw5_multseg_3400 Gi1/14       Open
sw2_multseg_3750 Gi1/1/2  Alt
sw2_multseg_3750 Gi1/1/1       Open
sw1_multseg_3750 Gi1/1/2  Sec  Open
```

**Related Commands**

show sdm prefer

To display information about the Switch Database Management (SDM) templates, use the `show sdm prefer` command in privileged EXEC mode.

```
show sdm prefer [default | lanbase-routing | dual-ipv4-and-ipv6 \ { default | routing} | qos | routing] \ [ | begin | exclude | include] expression]
```

**Syntax Description**

- **default** (Optional) Displays the template that balances system resources among features.
- **lanbase-routing** (Optional) Displays the template that maximized system resources for static routes on SVIs.
- **dual-ipv4-and-ipv6** (Optional) Displays the dual templates that support both IPv4 and IPv6.
  - **default**—Displays the default dual template configuration.
  - **routing**—Displays the routing dual template configuration.
- **qos** (Optional) Displays the template that maximizes system resources for quality of service (QoS) access control entries (ACEs).
- **routing** (Optional) Displays the template that maximizes system resources for IPv4 routing.
- **begin** (Optional) Begins with the line that matches the `expression`.
- **exclude** (Optional) Excludes lines that match the `expression`.
- **include** (Optional) Includes lines that match the specified `expression`.
- **expression** Expression in the output to use as a reference point.

**Command Modes**

Privileged EXEC (#)

<td>The <code>lanbase-routing</code> keyword was added.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

When you change the SDM template by using the `sdm prefer` global configuration command, you must reload the switch for the configuration to take effect. If you enter the `show sdm prefer` command before you enter the `reload` privileged EXEC command, the `show sdm prefer` command shows the template currently in use and the template that will become active after a reload.

The numbers displayed for each template represent an approximate maximum number for each feature resource. The actual number might vary, depending on the actual number of other features configured.

Expressions are case sensitive. For example, if you enter `| exclude output`, the lines that contain `output` do not appear, but the lines that contain `Output` appear.
Examples

This is an example of output from the `show sdm prefer default` command:

Switch# `show sdm prefer default`
`default` template:
The selected template optimizes the resources in the switch to support this level of features for 8 routed interfaces and 1024 VLANs.
- number of unicast mac addresses: 12K
- number of IPv4 IGMP groups + multicast routes: 1K
- number of IPv4 unicast routes: 0
- number of IPv4 policy based routing aces: 0
- number of IPv4/MAC qos aces: 0.75K
- number of IPv4/MAC security aces: 1K

This is an example of output from the `show sdm prefer qos` command:

Switch# `show sdm prefer qos`
`qos` template:
The selected template optimizes the resources in the switch to support this level of features for 0 routed interfaces and 1024 VLANs.
- number of unicast mac addresses: 8K
- number of IPv4 IGMP groups: 0.25K
- number of IPv4/MAC qos aces: 0.625K
- number of IPv4/MAC security aces: 0.125K

This is an example of output from the `show sdm prefer routing` command:

Switch# `show sdm prefer routing`
`routing` template:
The selected template optimizes the resources in the switch to support this level of features for 8 routed interfaces and 1024 VLANs.
- number of unicast mac addresses: 2K
- number of IPv4 IGMP groups + multicast routes: 1K
- number of IPv4 unicast routes: 4K
- number of directly-connected IPv4 hosts: 2K
- number of indirect IPv4 routes: 2K
- number of IPv4 policy based routing aces: 0.5K
- number of IPv4/MAC qos aces: 0.625K
- number of IPv4/MAC security aces: 0.375K

This is an example of output from the `show sdm prefer dual-ip4-and-ipv6 routing` command:

Switch# `show sdm prefer dual-ip4-and-ipv6 routing`
`dual-ip4-and-ipv6 routing` template:
The selected template optimizes the resources in the switch to support this level of features for 8 routed interfaces and 1024 VLANs.
- number of unicast mac addresses: 1K
- number of IPv4 IGMP groups + multicast routes: 0.5K
- number of IPv4 unicast routes: 2K
- number of directly-connected IPv4 hosts: 1K
- number of indirect IPv4 routes: 1K
- number of IPv6 multicast groups: 0.625K
- number of directly-connected IPv6 addresses: 1K
- number of indirect IPv6 unicast routes: 0.375K
- number of IPv4 policy based routing aces: 0.125K
- number of IPv4/MAC qos aces: 0.375K
- number of IPv4/MAC security aces: 0.125K
- number of IPv6 policy based routing aces: 0.125K
show sdm prefer

number of IPv6 qos aces: 0.125k
number of IPv6 security aces: 0.125k

show spanning-tree interface interface-id [active] [detail] [cost] [detail] [active] [inconsistency] [portfast] [priority] [rootcost] [state] [ ] {begin} {exclude} {include} {expression}
```

```
show spanning-tree mst [configuration] [digest] [ ] {instance-id} [detail] [interface interface-id] [ ] {begin} {exclude} {include} {expression}
```

### Syntax Description

- **bridge-group**: (Optional) Specify the bridge group number. The range is 1 to 255.
- **active [detail]**: (Optional) Display spanning-tree information only on active interfaces (available only in privileged EXEC mode).
- **backbonefast**: (Optional) Display spanning-tree BackboneFast status.
- **blockedports**: (Optional) Display blocked port information (available only in privileged EXEC mode).
- **bridge [address] [detail] [forward-time] [hello-time] [id] [max-age] [priority] [system-id] [protocol]**: (Optional) Display status and configuration of this switch (optional keywords available only in privileged EXEC mode).
- **detail [active]**: (Optional) Display a detailed summary of interface information (active keyword available only in privileged EXEC mode).
- **inconsistentports**: (Optional) Display inconsistent port information (available only in privileged EXEC mode).
- **interface interface-id [active] [detail] [cost] [detail] [active] [inconsistency] [portfast] [priority] [rootcost] [state]**: (Optional) Display spanning-tree information for the specified interface (all options except portfast and state available only in privileged EXEC mode). Enter each interface separated by a space. Ranges are not supported. Valid interfaces include physical ports, VLANs, and port channels. The VLAN range is 1 to 4094. The port-channel range is 1 to 6.
show spanning-tree

mst [configuration
  [digest]] [instance-id
  [detail] | interface
  interface-id [detail]]

(Optional) Display the multiple spanning-tree (MST) region configuration and status (available only in privileged EXEC mode).

The keywords have these meanings:

- digest—(Optional) Display the MD5 digest included in the current MST configuration identifier (MSTCI). Two separate digests, one for standard and one for prestandard switches, appear (available only in privileged EXEC mode).

The terminology was updated for the implementation of the IEEE standard, and the txholdcount field was added.

The new master role appears for boundary ports.

The word pre-standard or Pre-STD appears when an IEEE standard bridge sends prestandard BPDUs on a port.

The word pre-standard (config) or Pre-STD-Cf appears when a port has been configured to transmit prestandard BPDUs and no prestandard BPDU has been received on that port.

The word pre-standard (rcvd) or Pre-STD-Rx appears when a prestandard BPDU has been received on a port that has not been configured to transmit prestandard BPDUs.

A dispute flag appears when a designated port receives inferior designated information until the port returns to the forwarding state or ceases to be designated.

- instance-id—You can specify a single instance ID, a range of IDs separated by a hyphen, or a series of IDs separated by a comma. The range is 1 to 4094. The display shows the number of currently configured instances.

- interface interface-id—(Optional) Valid interfaces include physical ports, VLANs, and port channels. The VLAN range is 1 to 4094. The port-channel range is 1 to 6.

- detail—(Optional) Display detailed information for the instance or interface.

pathcost method

(Optional) Display the default path cost method (available only in privileged EXEC mode).

root [address | cost | detail
  | forward-time | hello-time
  | id | max-age | port | priority [system-id]]

(Optional) Display root switch status and configuration (all keywords available only in privileged EXEC mode).

summary [totals]

(Optional) Display a summary of port states or the total lines of the spanning-tree state section. The words IEEE Standard identify the MST version running on a switch.

uplinkfast

(Optional) Display spanning-tree UplinkFast status.

vlan vlan-id [active
  [detail] | backbonefast | blockedports | bridge
  [address | detail] | forward-time | hello-time
  id | max-age | priority
  [system-id] | protocol]

(Optional) Display spanning-tree information for the specified VLAN (some keywords available only in privileged EXEC mode). You can specify a single VLAN identified by VLAN ID number, a range of VLANs separated by a hyphen, or a series of VLANs separated by a comma. The range is 1 to 4094.
show spanning-tree

Command Modes
EXEC

Command History
Release Modification
12.2(44)EX This command was introduced.

Usage Guidelines
If the vlan-id variable is omitted, the command applies to the spanning-tree instance for all VLANs.
Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain output do not appear, but the lines that contain Output appear.

Examples
This is an example of output from the show spanning-tree active command:

Switch# show spanning-tree active
VLAN0001
  Spanning tree enabled protocol ieee
  Root ID    Priority    32768
  Address    0001.42e2.cdd0
  Cost       3038
  Port       24 (GigabitEthernet1/1)
  Hello Time   2 sec  Max Age 20 sec  Forward Delay 15 sec
  Bridge ID  Priority    49153  (priority 49152 sys-id-ext 1)
  Address    0003.fd63.9580
  Hello Time   2 sec  Max Age 20 sec  Forward Delay 15 sec
  Aging Time 300
  Uplinkfast enabled

  Interface        Role Sts Cost      Prio.Nbr Type
  ---------------- ---- --- --------- -------- --------------------------------
  Gi1/1    Root FWD 3019      128.24   P2p

This is an example of output from the show spanning-tree detail command:

Switch# show spanning-tree detail
VLAN0001 is executing the ieee compatible Spanning Tree protocol
  Bridge Identifier has priority 49152, sysid 1, address 0003.fd63.9580
  Configured hello time 2, max age 20, forward delay 15
  Current root has priority 32768, address 0001.42e2.cdd0
  Root port is 1 (GigabitEthernet1/1), cost of root path is 3038
  Topology change flag not set, detected flag not set
  Number of topology changes 0 last change occurred 1d16h ago
  Times:  hello 2, max age 20, forward delay 15
  Timers:  hello 0, topology change 0, notification 0, aging 300
  Uplinkfast enabled

show storm-control

Use the show storm-control EXEC command to display broadcast, multicast, or unicast storm control settings on the switch or on the specified interface or to display storm-control history.

```
show storm-control [interface-id] [broadcast | multicast | unicast] [ | begin | exclude | include] expression
```

**Syntax Description**

- **interface-id** (Optional) Interface ID for the physical port (including type, module, and port number).
- **broadcast** (Optional) Display broadcast storm threshold setting.
- **multicast** (Optional) Display multicast storm threshold setting.
- **unicast** (Optional) Display unicast storm threshold setting.
- **| begin** (Optional) Display begins with the line that matches the expression.
- **| exclude** (Optional) Display excludes lines that match the expression.
- **| include** (Optional) Display includes lines that match the specified expression.
- **expression** Expression in the output to use as a reference point.

**Usage Guidelines**

When you enter an interface-id, the storm control thresholds appear for the specified interface.

If you do not enter an interface-id, settings appear for one traffic type for all ports on the switch.

If you do not enter a traffic type, settings appear for broadcast storm control.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain output do not appear, but the lines that contain Output appear.

**Examples**

This is an example of a partial output from the show storm-control command when no keywords are entered. Because no traffic-type keyword was entered, the broadcast storm control settings appear.

```
Switch> show storm-control
Interface Filter State Upper Lower Current
-------- ----------------- ------- ------- -------
Gi1/1    Forwarding    20 pps  10 pps  5 pps
Gi1/2    Forwarding    50.00% 40.00% 0.00%
<output truncated>
```
This is an example of output from the `show storm-control` command for a specified interface. Because no traffic-type keyword was entered, the broadcast storm control settings appear.

```
Switch> show storm-control gigabitethernet 1/1
Interface     Filter State  Upper      Lower     Current
------------- -----------  --------  --------  --------
G1/1          Forwarding  20 pps  10 pps  5 pps
```

Table 2-33 describes the fields in the `show storm-control` display.

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

Usage Guidelines

If you have used the system mtu or system mtu jumbo global configuration command to change the MTU setting, the new setting does not take effect until you reset the switch.

The system MTU refers to ports operating at 10/100 Mb/s; the system jumbo MTU refers to Gigabit ports; the system routing MTU refers to routed ports.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain output do not appear, but the lines that contain Output appear.

Examples

This is an example of output from the show system mtu command:

Switch# show system mtu
System MTU size is 1500 bytes
System Jumbo MTU size is 1550 bytes
Routing MTU size is 1500 bytes.

show udld

Use the `show udld` EXEC command to display UniDirectional Link Detection (UDLD) administrative and operational status for all ports or the specified port.

```
show udld [interface-id] [ | { begin | exclude | include } expression]
```

**Syntax Description**

- `interface-id` (Optional) ID of the interface and port number. Valid interfaces include physical ports and VLANs. The VLAN range is 1 to 4094.
- `| begin` (Optional) Display begins with the line that matches the `expression`.
- `| exclude` (Optional) Display excludes lines that match the `expression`.
- `| include` (Optional) Display includes lines that match the specified `expression`.
- `expression` Expression in the output to use as a reference point.

**Command Modes**

EXEC

**Command History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

If you do not enter an `interface-id`, administrative and operational UDLD status for all interfaces appear. Expressions are case sensitive. For example, if you enter `| exclude output`, the lines that contain `output` do not appear, but the lines that contain `Output` appear.

**Examples**

This is an example of output from the `show udld interface-id` command. For this display, UDLD is enabled on both ends of the link, and UDLD detects that the link is bidirectional. Table 2-34 describes the fields in this display.

```
Switch> show udld gigabitethernet1/1
Interface gi1/1
---
Port enable administrative configuration setting: Follows device default
Port enable operational state: Enabled
Current bidirectional state: Bidirectional
Current operational state: Advertisement - Single Neighbor detected
Message interval: 60
Time out interval: 5
Entry 1
Expiration time: 146
Device ID: 1
Current neighbor state: Bidirectional
Device name: Switch-A
Port ID: Gi1/1
Neighbor echo 1 device: Switch-B
Neighbor echo 1 port: Gi1/2
Message interval: 5
CDP Device name: Switch-A
```
<table>
<thead>
<tr>
<th><strong>Field</strong></th>
<th><strong>Description</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>The interface on the local device configured for UDLD.</td>
</tr>
<tr>
<td>Port enable administrative configuration setting</td>
<td>How UDLD is configured on the port. If UDLD is enabled or disabled, the port enable configuration setting is the same as the operational enable state. Otherwise, the enable operational setting depends on the global enable setting.</td>
</tr>
<tr>
<td>Port enable operational state</td>
<td>Operational state that shows whether UDLD is actually running on this port.</td>
</tr>
<tr>
<td>Current bidirectional state</td>
<td>The bidirectional state of the link. An unknown state appears if the link is down or if it is connected to an UDLD-incapable device. A bidirectional state appears if the link is a normal two-way connection to a UDLD-capable device. All other values mean miswiring.</td>
</tr>
<tr>
<td>Current operational state</td>
<td>The current phase of the UDLD state machine. For a normal bidirectional link, the state machine is most often in the Advertisement phase.</td>
</tr>
<tr>
<td>Message interval</td>
<td>How often advertisement messages are sent from the local device. Measured in seconds.</td>
</tr>
<tr>
<td>Time out interval</td>
<td>The time period, in seconds, that UDLD waits for echoes from a neighbor device during the detection window.</td>
</tr>
<tr>
<td>Entry 1</td>
<td>Information from the first cache entry, which contains a copy of echo information received from the neighbor.</td>
</tr>
<tr>
<td>Expiration time</td>
<td>The amount of time in seconds remaining before this cache entry is aged out.</td>
</tr>
<tr>
<td>Device ID</td>
<td>The neighbor device identification.</td>
</tr>
<tr>
<td>Current neighbor state</td>
<td>The neighbor’s current state. If both the local and neighbor devices are running UDLD normally, the neighbor state and local state should be bidirectional. If the link is down or the neighbor is not UDLD-capable, no cache entries appear.</td>
</tr>
<tr>
<td>Device name</td>
<td>The device name or the system serial number of the neighbor. The system serial number appears if the device name is not set or is set to the default (Switch).</td>
</tr>
<tr>
<td>Port ID</td>
<td>The neighbor port ID enabled for UDLD.</td>
</tr>
<tr>
<td>Neighbor echo 1 device</td>
<td>The device name of the neighbors’ neighbor from which the echo originated.</td>
</tr>
<tr>
<td>Neighbor echo 1 port</td>
<td>The port number ID of the neighbor from which the echo originated.</td>
</tr>

show vlan

Use the `show vlan` EXEC command to display the parameters for all configured VLANs or one VLAN (if the VLAN ID or name is specified) on the switch.

```
show vlan [brief | id vlan-id | internal usage | mtu | name vlan-name | private-vlan [type] | remote-span | summary] [ | begin | exclude | include] expression
```

**Syntax Description**

- **brief** (Optional) Display one line for each VLAN with the VLAN name, status, and its ports.
- **id vlan-id** (Optional) Display information about a single VLAN identified by VLAN ID number. For `vlan-id`, the range is 1 to 4094.
- **internal usage** (Optional) Display a list of VLANs being used internally by the switch. These VLANs are always from the extended range (VLAN IDs 1006 to 4094), and you cannot create VLANs with these IDs by using the `vlan` global configuration command until you remove them from internal use.
- **mtu** (Optional) Display a list of VLANs and the minimum and maximum transmission unit (MTU) sizes configured on ports in the VLAN.
- **name vlan-name** (Optional) Display information about a single VLAN identified by VLAN name. The VLAN name is an ASCII string from 1 to 32 characters.
- **private-vlan** (Optional) Display information about configured private VLANs, including primary and secondary VLAN IDs, type (community, isolated, or primary) and ports belonging to the private VLAN. This keyword is only supported if your switch is running the IP services image.
- **type** (Optional) Display only private VLAN ID and type.
- **remote-span** (Optional) Display information about Remote SPAN (RSPAN) VLANs.
- **summary** (Optional) Display VLAN summary information.
- **begin expression** (Optional) Display begins with the line that matches the `expression`.
- **exclude expression** (Optional) Display excludes lines that match the `expression`.
- **include expression** (Optional) Display includes lines that match the specified `expression`.
- **expression** Expression in the output to use as a reference point.

**Note**

Though visible in the command-line help string, the `ifindex` keyword is not supported.

**Command Modes**

- EXEC

**Command History**

<td>This command was introduced.</td>
</tr>
<tr>
<td>12.2(52)SE</td>
<td>The <code>dot1q tag native, internal usage,</code> and <code>private-vlan</code> keywords were added.</td>
</tr>
</tbody>
</table>
Usage Guidelines

In the `show vlan mtu` command output, the MTU_Mismatch column shows whether all the ports in the VLAN have the same MTU. When `yes` appears in this column, it means that the VLAN has ports with different MTUs, and packets that are switched from a port with a larger MTU to a port with a smaller MTU might be dropped. If the VLAN does not have an SVI, the hyphen (-) symbol appears in the SVI_MTU column. If the MTU-Mismatch column displays `yes`, the names of the port with the MinMTU and the port with the MaxMTU appear.

If you try to associate a private VLAN secondary VLAN with a primary VLAN before you define the secondary VLAN, the secondary VLAN is not included in the `show vlan private-vlan` command output.

In the `show vlan private-vlan type` command output, a type displayed as `normal` means a VLAN that has a private VLAN association but is not part of the private VLAN. For example, if you define and associate two VLANs as primary and secondary VLANs and then delete the secondary VLAN configuration without removing the association from the primary VLAN, the VLAN that was the secondary VLAN is shown as `normal` in the display. In the `show vlan private-vlan` output, the primary and secondary VLAN pair is shown as `non-operational`.

Expressions are case sensitive. For example, if you enter `| exclude output`, the lines that contain `output` do not appear, but the lines that contain `Output` appear.

Examples

</tbody>
</table>
show vlan access-map

Use the show vlan access-map privileged EXEC command to display information about a particular VLAN access map or for all VLAN access maps.

```
show vlan access-map [mapname] [ | begin | exclude | include] expression
```

**Note**
This command is available only when the switch is running the IP Services image.

### Syntax Description

- **mapname** *(Optional)* Name of a specific VLAN access map.
- **| begin** *(Optional)* Display begins with the line that matches the `expression`.
- **| exclude** *(Optional)* Display excludes lines that match the `expression`.
- **| include** *(Optional)* Display includes lines that match the specified `expression`.
- **expression** Expression in the output to use as a reference point.

### Command Modes
Privileged EXEC

### Command History

**Release** | **Modification**
--- | ---
12.2(52)SE | This command was introduced.

### Usage Guidelines
Expressions are case sensitive. For example, if you enter `| exclude output`, the lines that contain `output` do not appear, but the lines that contain `Output` appear.

### Examples
This is an example of output from the `show vlan access-map` command:

```
Switch# show vlan access-map
Vlan access-map "SecWiz" 10
  Match clauses:
    ip address: SecWiz_G10_3_in_ip
    ip address: SecWiz_Fa10_3_in_ip
  Action:
    forward
```

</tbody>
</table>
show vmps

Use the show vmps EXEC command without keywords to display the VLAN Query Protocol (VQP) version, reconfirmation interval, retry count, VLAN Membership Policy Server (VMPS) IP addresses, and the current and primary servers, or use the statistics keyword to display client-side statistics.

    show vmps [statistics] [ | begin | exclude | include] expression

Syntax Description

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>statistics</td>
<td>(Optional) Display VQP client-side statistics and counters.</td>
</tr>
<tr>
<td>begin</td>
<td>(Optional) Display begins with the line that matches the expression.</td>
</tr>
<tr>
<td>exclude</td>
<td>(Optional) Display excludes lines that match the expression.</td>
</tr>
<tr>
<td>include</td>
<td>(Optional) Display includes lines that match the specified expression.</td>
</tr>
<tr>
<td>expression</td>
<td>Expression in the output to use as a reference point.</td>
</tr>
</tbody>
</table>

Command Modes

EXEC

Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
</tbody>
</table>

Usage Guidelines

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain output do not appear, but the lines that contain Output appear.

Examples

This is an example of output from the show vmps command:

Switch> show vmps
VQP Client Status:
-------------------
VMPS VQP Version: 1
Reconfirm Interval: 60 min
Server Retry Count: 3
VMPS domain server:

Reconfirmation status
---------------------
VMPS Action: other

This is an example of output from the show vmps statistics command. Table 2-36 describes each field in the display.

Switch> show vmps statistics
VMPS Client Statistics
-----------------------
VQP Queries: 0
VQP Responses: 0
VMPS Changes: 0
VQP Shutdowns: 0
VQP Denied: 0
VQP Wrong Domain: 0
show vmps

VQP Wrong Version: 0
VQP Insufficient Resource: 0

Table 2-36 show vmps statistics Field Descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>VQP Queries</td>
<td>Number of queries sent by the client to the VMPS.</td>
</tr>
<tr>
<td>VQP Responses</td>
<td>Number of responses sent to the client from the VMPS.</td>
</tr>
<tr>
<td>VMPS Changes</td>
<td>Number of times that the VMPS changed from one server to another.</td>
</tr>
<tr>
<td>VQP Shutdowns</td>
<td>Number of times the VMPS sent a response to shut down the port. The client disables the port and removes all dynamic addresses on this port from the address table. You must administratively re-enable the port to restore connectivity.</td>
</tr>
<tr>
<td>VQP Denied</td>
<td>Number of times the VMPS denied the client request for security reasons. When the VMPS response denies an address, no frame is forwarded to or from the workstation with that address (broadcast or multicast frames are delivered to the workstation if the port has been assigned to a VLAN). The client keeps the denied address in the address table as a blocked address to prevent more queries from being sent to the VMPS for each new packet received from this workstation. The client ages the address if no new packets are received from this workstation on this port within the aging time period.</td>
</tr>
<tr>
<td>VQP Wrong Domain</td>
<td>Number of times the management domain in the request does not match the one for the VMPS. Any previous VLAN assignments of the port are not changed. This response means that the server and the client have not been configured with the same VTP management domain.</td>
</tr>
<tr>
<td>VQP Wrong Version</td>
<td>Number of times the version field in the query packet contains a value that is higher than the version supported by the VMPS. The VLAN assignment of the port is not changed. The switches send only VMPS Version 1 requests.</td>
</tr>
<tr>
<td>VQP Insufficient Resource</td>
<td>Number of times the VMPS is unable to answer the request because of a resource availability problem. If the retry limit has not yet been reached, the client repeats the request with the same server or with the next alternate server, depending on whether the per-server retry count has been reached.</td>
</tr>
</tbody>
</table>

Related Commands

<td>Sends VQP queries to reconfirm all dynamic VLAN assignments with the VMPS.</td>
</tr>
<tr>
<td>vmps retry</td>
<td>Configures the per-server retry count for the VQP client.</td>
</tr>
<tr>
<td>vmps server</td>
<td>Configures the primary VMPS and up to three secondary servers.</td>
</tr>
</tbody>
</table>
**show vtp**

Use the `show vtp` EXEC command to display general information about the VLAN Trunking Protocol (VTP) management domain, status, and counters.

```
show vtp [counters | devices [conflicts] | interface [interface-id] | password | status] [ | {begin | exclude | include} expression]
```

### Syntax Description

<table>
<thead>
<tr>
<th>Syntax Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>counters</td>
<td>Display the VTP statistics for the switch.</td>
</tr>
<tr>
<td>password</td>
<td>Display the configured VTP password.</td>
</tr>
<tr>
<td>devices</td>
<td>Display information about all VTP version 3 devices in the domain. This keyword applies only if the switch is not running VTP version 3.</td>
</tr>
<tr>
<td>conflicts</td>
<td>(Optional) Display information about VTP version 3 devices that have conflicting primary servers. This command is ignored when the switch is in VTP transparent or VPT off mode.</td>
</tr>
<tr>
<td>interface [interface-id]</td>
<td>Display VTP status and configuration for all interfaces or the specified interface. The <code>interface-id</code> can be a physical interface or a port channel.</td>
</tr>
<tr>
<td>status</td>
<td>Display general information about the VTP management domain status.</td>
</tr>
<tr>
<td>begin</td>
<td>(Optional) Display begins with the line that matches the <code>expression</code>.</td>
</tr>
<tr>
<td>exclude</td>
<td>(Optional) Display excludes lines that match the <code>expression</code>.</td>
</tr>
<tr>
<td>include</td>
<td>(Optional) Display includes lines that match the specified <code>expression</code>.</td>
</tr>
<tr>
<td>expression</td>
<td>Expression in the output to use as a reference point.</td>
</tr>
</tbody>
</table>

### Command Modes

**EXEC**

### Command History

<table>
<thead>
<tr>
<th>Release</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.2(44)EX</td>
<td>This command was introduced.</td>
</tr>
<tr>
<td>12.2(52)SE</td>
<td>The <code>devices</code> and <code>interface</code> keywords were added for VTP version 3.</td>
</tr>
</tbody>
</table>

### Usage Guidelines

When you enter the `show vtp password` command when the switch is running VTP version 3, the display follows these rules:

- If the `password password` global configuration command did not specify the `hidden` keyword and encryption is not enabled on the switch, the password appears in clear text.
- If the `password password` command did not specify the `hidden` keyword and encryption is enabled on the switch, the encrypted password appears.
- If the `password password` command included the `hidden` keyword, the hexadecimal secret key is displayed.

Expressions are case sensitive. For example, if you enter `| exclude output`, the lines that contain `output` do not appear, but the lines that contain `Output` appear.
Examples

This is an example of output from the `show vtp devices` command. A Yes in the Conflict column means that the responding server is in conflict with the local server for the feature; that is, when two switches in the same domain do not have the same primary server for a database.

```
Switch# show vtp devices
Retrieving information from the VTP domain. Waiting for 5 seconds.
VTP Database Config switch ID Primary Server Revision System Name
-------------- ---- -------------- ------------- ---------- ----------------------
VLAN         Yes 00b0.8e50.d000 000c.0412.6300 12354 main.cisco.com
MST          No  00b0.8e50.d000 0004.AB45.6000 24    main.cisco.com
VLAN         Yes 000c.0412.6300=000c.0412.6300 67    qwerty.cisco.com
```

This is an example of output from the `show vtp counters` command. Table 2-37 describes the fields in the display.

```
Switch> show vtp counters
VTP statistics:
Summary advertisements received      : 0
Subset advertisements received        : 0
Request advertisements received       : 0
Summary advertisements transmitted    : 6970
Subset advertisements transmitted     : 0
Request advertisements transmitted   : 0
Number of config revision errors      : 0
Number of config digest errors        : 0
Number of V1 summary errors           : 0

VTP pruning statistics:
Trunk                  Join Transmitted Join Received Summary advts received from
---------------------- ---------------- ---------------- -------------------------------
Fa1/7                  0                0                0
Fa1/8                  0                0                0
Gi1/1                  0                0                0
Gi1/2                  0                0                0
```

Table 2-37  `show vtp counters` Field Descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Summary advertisements received</td>
<td>Number of summary advertisements received by this switch on its trunk ports. Summary advertisements contain the management domain name, the configuration revision number, the update timestamp and identity, the authentication checksum, and the number of subset advertisements to follow.</td>
</tr>
<tr>
<td>Subset advertisements received</td>
<td>Number of subset advertisements received by this switch on its trunk ports. Subset advertisements contain all the information for one or more VLANs.</td>
</tr>
<tr>
<td>Request advertisements received</td>
<td>Number of advertisement requests received by this switch on its trunk ports. Advertisement requests normally request information on all VLANs. They can also request information on a subset of VLANs.</td>
</tr>
</tbody>
</table>
This is an example of output from the `show vtp status` command for a switch running VTP version 2. Table 2-38 describes the fields in the display.

```
Switch> show vtp status
VTP Version : 2
Configuration Revision : 0
Maximum VLANs supported locally : 1005
Number of existing VLANs : 45
```

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Summary advertisements transmitted</td>
<td>Number of summary advertisements sent by this switch on its trunk ports. Summary advertisements contain the management domain name, the configuration revision number, the update timestamp and identity, the authentication checksum, and the number of subset advertisements to follow.</td>
</tr>
<tr>
<td>Subset advertisements transmitted</td>
<td>Number of subset advertisements sent by this switch on its trunk ports. Subset advertisements contain all the information for one or more VLANs.</td>
</tr>
<tr>
<td>Request advertisements transmitted</td>
<td>Number of advertisement requests sent by this switch on its trunk ports. Advertisement requests normally request information on all VLANs. They can also request information on a subset of VLANs.</td>
</tr>
<tr>
<td>Number of configuration revision errors</td>
<td>Number of revision errors. Whenever you define a new VLAN, delete an existing one, suspend or resume an existing VLAN, or modify the parameters on an existing VLAN, the configuration revision number of the switch increments. Revision errors increment whenever the switch receives an advertisement whose revision number matches the revision number of the switch, but the MD5 digest values do not match. This error means that the VTP password in the two switches is different or that the switches have different configurations. These errors mean that the switch is filtering incoming advertisements, which causes the VTP database to become unsynchronized across the network.</td>
</tr>
<tr>
<td>Number of configuration digest errors</td>
<td>Number of MD5 digest errors. Digest errors increment whenever the MD5 digest in the summary packet and the MD5 digest of the received advertisement calculated by the switch do not match. This error usually means that the VTP password in the two switches is different. To solve this problem, make sure the VTP password on all switches is the same. These errors mean that the switch is filtering incoming advertisements, which causes the VTP database to become unsynchronized across the network.</td>
</tr>
<tr>
<td>Number of V1 summary errors</td>
<td>Number of Version 1 errors. Version 1 summary errors increment whenever a switch in VTP V2 mode receives a VTP Version 1 frame. These errors mean that at least one neighboring switch is either running VTP Version 1 or VTP Version 2 with V2-mode disabled. To solve this problem, change the configuration of the switches in VTP V2-mode to disabled.</td>
</tr>
<tr>
<td>Join Transmitted</td>
<td>Number of VTP pruning messages sent on the trunk.</td>
</tr>
<tr>
<td>Join Received</td>
<td>Number of VTP pruning messages received on the trunk.</td>
</tr>
<tr>
<td>Summary Advts Received from non-pruning-capable device</td>
<td>Number of VTP summary messages received on the trunk from devices that do not support pruning.</td>
</tr>
</tbody>
</table>
VTP Operating Mode : Transparent
VTP Domain Name    : shared_testbed1
VTP Pruning Mode   : Disabled
VTP V2 Mode        : Disabled
VTP Traps Generation : Enabled
MD5 digest         : 0x3A 0x29 0x86 0x39 0xB4 0x5D 0x58 0xD7
Table 2-38  show vtp status Field Descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>VTP Version</td>
<td>Displays the VTP version operating on the switch. By default, the switch implements Version 1 but can be set to Version 2.</td>
</tr>
<tr>
<td>Configuration Revision</td>
<td>Current configuration revision number on this switch.</td>
</tr>
<tr>
<td>Maximum VLANs Supported Locally</td>
<td>Maximum number of VLANs supported locally.</td>
</tr>
<tr>
<td>Number of Existing VLANs</td>
<td>Number of existing VLANs.</td>
</tr>
<tr>
<td>VTP Operating Mode</td>
<td>Displays the VTP operating mode, which can be server, client, or transparent. Server: a switch in VTP server mode is enabled for VTP and sends advertisements. You can configure VLANs on it. The switch guarantees that it can recover all the VLAN information in the current VTP database from NVRAM after reboot. By default, every switch is a VTP server. Note: The switch automatically changes from VTP server mode to VTP client mode if it detects a failure while writing the configuration to NVRAM and cannot return to server mode until the NVRAM is functioning. Client: a switch in VTP client mode is enabled for VTP, can send advertisements, but does not have enough nonvolatile storage to store VLAN configurations. You cannot configure VLANs on it. When a VTP client starts up, it does not send VTP advertisements until it receives advertisements to initialize its VLAN database. Transparent: a switch in VTP transparent mode is disabled for VTP, does not send or learn from advertisements sent by other devices, and cannot affect VLAN configurations on other devices in the network. The switch receives VTP advertisements and forwards them on all trunk ports except the one on which the advertisement was received.</td>
</tr>
<tr>
<td>VTP Domain Name</td>
<td>Name that identifies the administrative domain for the switch.</td>
</tr>
<tr>
<td>VTP Pruning Mode</td>
<td>Displays whether pruning is enabled or disabled. Enabling pruning on a VTP server enables pruning for the entire management domain. Pruning restricts flooded traffic to those trunk links that the traffic must use to access the appropriate network devices.</td>
</tr>
<tr>
<td>VTP V2 Mode</td>
<td>Displays if VTP Version 2 mode is enabled. All VTP Version 2 switches operate in Version 1 mode by default. Each VTP switch automatically detects the capabilities of all the other VTP devices. A network of VTP devices should be configured to Version 2 only if all VTP switches in the network can operate in Version 2 mode.</td>
</tr>
<tr>
<td>VTP Traps Generation</td>
<td>Displays whether VTP traps are sent to a network management station.</td>
</tr>
<tr>
<td>MD5 Digest</td>
<td>A 16-byte checksum of the VTP configuration.</td>
</tr>
<tr>
<td>Configuration Last Modified</td>
<td>Displays the date and time of the last configuration modification. Displays the IP address of the switch that caused the configuration change to the database.</td>
</tr>
</tbody>
</table>
This is an example of output from the **show vtp status** command for a switch running VTP version 3.

```plaintext
Switch> show vtp status
