Prerequisites for First Hop Security in IPv6

You have configured the necessary IPv6 enabled SDM template.

Restrictions for First Hop Security in IPv6

- The following restrictions apply when applying FHS policies to EtherChannel interfaces (Port Channels):
 - A physical port with an FHS policy attached cannot join an EtherChannel group.
 - An FHS policy cannot be attached to a physical port when it is a member of an EtherChannel group.
- By default, a snooping policy has a security-level of guard. When such a snooping policy is configured on an access switch, external IPv6 Router Advertisement (RA) or Dynamic Host Configuration Protocol for IPv6 (DHCPv6) server packets are blocked, even though the uplink port facing the router or DHCP server/relay is configured as a trusted port. To allow IPv6 RA or DHCPv6 server messages, do the following:

- Apply an IPv6 RA-guard policy (for RA) or IPv6 DHCP-guard policy (for DHCP server messages) on the uplink port.
- Configure a snooping policy with a lower security-level, for example glean or inspect. However; configuring a lower security level is not recommended with such a snooping policy, because benefits of First Hop security features are not effective.
- Host and Guard configuration on the same node is not supported.
- For DHCPv6 guard to work, an SVI must be configured on the corresponding vlan on the same switch.

Information about First Hop Security in IPv6

First Hop Security in IPv6 (FHS IPv6) is a set of IPv6 security features, the policies of which can be attached to a physical interface, or a VLAN. An IPv6 software policy database service stores and accesses these policies. When a policy is configured or modified, the attributes of the policy are stored or updated in the software policy database, then applied as was specified. The following IPv6 policies are currently supported:

- IPv6 Snooping Policy—IPv6 Snooping Policy acts as a container policy that enables most of the features available with FHS in IPv6.

Note IPv6 Snooping Policy feature is deprecated and the Switch Integrated Security Feature (SISF)-based device tracking feature replaces it. While the IPv6 Snooping Policy commands are still available on the CLI and the existing configuration continues to be supported, the commands will be removed from the CLI in a later release. For more information about the replacement feature, see the *Configuring SISF-Based Device Tracking* chapter in this guide.

- IPv6 FHS Binding Table Content—A database table of IPv6 neighbors connected to the switch is created from information sources such as Neighbor Discovery (ND) protocol snooping. This database, or binding, table is used by various IPv6 guard features (such as IPv6 ND Inspection) to validate the link-layer address (LLA), the IPv4 or IPv6 address, and prefix binding of the neighbors to prevent spoofing and redirect attacks.

Note IPv6 FHS Binding Table Content feature is supported through SISF-based device tracking. For more information, see the *Configuring SISF-Based Device Tracking* chapter in this guide.

- IPv6 Neighbor Discovery Inspection—IPv6 ND inspection learns and secures bindings for stateless autoconfiguration addresses in Layer 2 neighbor tables. IPv6 ND inspection analyzes neighbor discovery messages in order to build a trusted binding table database and IPv6 neighbor discovery messages that do not conform are dropped. An ND message is considered trustworthy if its IPv6-to-Media Access Control (MAC) mapping is verifiable.

This feature mitigates some of the inherent vulnerabilities of the ND mechanism, such as attacks on DAD, address resolution, router discovery, and the neighbor cache.

Note Starting with Cisco IOS XE Amsterdam 17.1.1 the IPv6 ND Inspection feature is deprecated and the SISF- based device tracking feature replaces it. While the IPv6 ND Inspection commands are still available on the CLI and the existing configuration continues to be supported, the commands will be removed from the CLI in a later release. For more information about the replacement feature, see the *Configuring SISF-Based Device Tracking* chapter in this guide.

- IPv6 Router Advertisement Guard—The IPv6 Router Advertisement (RA) guard feature enables the network administrator to block or reject unwanted or rogue RA guard messages that arrive at the network switch platform. RAs are used by routers to announce themselves on the link. The RA Guard feature analyzes the RAs and filters out bogus RAs sent by unauthorized routers. In host mode, all router advertisement and router redirect messages are disallowed on the port. The RA guard feature compares configuration information on the Layer 2 device with the information found in the received RA frame. Once the Layer 2 device has validated the content of the RA frame and router redirect frame against the configuration, it forwards the RA to its unicast or multicast destination. If the RA frame content is not validated, the RA is dropped.
- IPv6 DHCP Guard—The IPv6 DHCP Guard feature blocks reply and advertisement messages that come from unauthorized DHCPv6 servers and relay agents. IPv6 DHCP guard can prevent forged messages from being entered in the binding table and block DHCPv6 server messages when they are received on ports that are not explicitly configured as facing a DHCPv6 server or DHCP relay. To use this feature, configure a policy and attach it to an interface or a VLAN. To debug DHCP guard packets, use the **debug ipv6 snooping dhcp-guard** privileged EXEC command.

How to Configure an IPv6 Snooping Policy

The IPv6 Snooping Policy feature has been deprecated. Although the commands are visible on the CLI and you can configure them, we recommend that you use the Switch Integrated Security Feature (SISF)-based Device Tracking feature instead.

Beginning in privileged EXEC mode, follow these steps to configure IPv6 Snooping Policy :

SUMMARY STEPS

1. **configure terminal**
2. **ipv6 snooping policy *policy-name***
3. **{[default] | [device-role {node | switch}] | [limit address-count *value*] | [no] | [protocol {dhcp | ndp}] | [security-level {glean | guard | inspect}] | [tracking {disable [*stale-lifetime* [*seconds* | infinite]] | enable [*reachable-lifetime* [*seconds* | infinite}] }] | [trusted-port] }**
4. **end**
5. **show ipv6 snooping policy *policy-name***

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure terminal Example: <pre># configure terminal</pre>	Enters the global configuration mode.
Step 2	ipv6 snooping policy <i>policy-name</i> Example: <pre>(config)# ipv6 snooping policy example_policy</pre>	Creates a snooping policy and enters IPv6 Snooping Policy Configuration mode.
Step 3	<pre>{[default] [device-role {node switch}] [limit address-count <i>value</i>] [no] [protocol {dhcp ndp}] [security-level {glean guard inspect}] [tracking {disable [stale-lifetime [<i>seconds</i> infinite] enable [reachable-lifetime [<i>seconds</i> infinite] }] [trusted-port] }</pre> Example: <pre>(config-ipv6-snooping) # security-level inspect</pre> Example: <pre>(config-ipv6-snooping) # trusted-port</pre>	<p>Enables data address gleaning, validates messages against various criteria, specifies the security level for messages.</p> <ul style="list-style-type: none"> • (Optional) default—Sets all to default options. • (Optional) device-role {node} switch—Specifies the role of the device attached to the port. Default is node. • (Optional) limit address-count <i>value</i>—Limits the number of addresses allowed per target. • (Optional) no—Negates a command or sets it to defaults. • (Optional) protocol {dhcp ndp}—Specifies which protocol should be redirected to the snooping feature for analysis. The default, is dhcp and ndp. To change the default, use the no protocol command. • (Optional) security-level {glean guard inspect}—Specifies the level of security enforced by the feature. Default is guard. <ul style="list-style-type: none"> glean—Gleans addresses from messages and populates the binding table without any verification. guard—Gleans addresses and inspects messages. In addition, it rejects RA and DHCP server messages. This is the default option. inspect—Gleans addresses, validates messages for consistency and conformance, and enforces address ownership. • (Optional) tracking {disable enable}—Overrides the default tracking behavior and specifies a tracking option. • (Optional) trusted-port—Sets up a trusted port. It disables the guard on applicable targets. Bindings learned through a trusted port have preference over

	Command or Action	Purpose
		bindings learned through any other port. A trusted port is given preference in case of a collision while making an entry in the table.
Step 4	end Example: <code>(config-ipv6-snooping) # exit</code>	Exits configuration modes to Privileged EXEC mode.
Step 5	show ipv6 snooping policy <i>policy-name</i> Example: <code>#show ipv6 snooping policy example_policy</code>	Displays the snooping policy configuration.

What to do next

Attach an IPv6 Snooping policy to interfaces or VLANs.

How to Attach an IPv6 Snooping Policy to an Interface

Beginning in privileged EXEC mode, follow these steps to attach an IPv6 Snooping policy on an interface or VLAN:

SUMMARY STEPS

1. **configure terminal**
2. **interface** Interface_type *stack/module/port*
3. **switchport**
4. **ipv6 snooping** [**attach-policy** *policy_name* [**vlan** {*vlan_id* | **add** *vlan_ids* | **except***vlan_ids* | **none** | **remove** *vlan_ids*}] | **vlan** {*vlan_id* | **add** *vlan_ids* | **except***vlan_ids* | **none** | **remove** *vlan_ids* | **all**}]
5. **do show running-config**

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure terminal Example: <code># configure terminal</code>	Enters the global configuration mode.
Step 2	interface Interface_type <i>stack/module/port</i> Example: <code>(config)# interface gigabitethernet 1/1/4</code>	Specifies an interface type and identifier; enters the interface configuration mode.
Step 3	switchport Example:	Enters the Switchport mode.

	Command or Action	Purpose
	<code>(config-if)# switchport</code>	Note To configure Layer 2 parameters, if the interface is in Layer 3 mode, you must enter the <code>switchport</code> interface configuration command without any parameters to put the interface into Layer 2 mode. This shuts down the interface and then re-enables it, which might generate messages on the device to which the interface is connected. When you put an interface that is in Layer 3 mode into Layer 2 mode, the previous configuration information related to the affected interface might be lost, and the interface is returned to its default configuration. The command prompt displays as <code>(config-if)#</code> in Switchport configuration mode.
Step 4	<p>ipv6 snooping [attach-policy <i>policy_name</i> [vlan {<i>vlan_id</i> add <i>vlan_ids</i> except<i>vlan_ids</i> none remove <i>vlan_ids</i>}] vlan {<i>vlan_id</i> add <i>vlan_ids</i> except<i>vlan_ids</i> none remove <i>vlan_ids</i> all}]</p> <p>Example:</p> <pre>(config-if)# ipv6 snooping or (config-if)# ipv6 snooping attach-policy example_policy or (config-if)# ipv6 snooping vlan 111,112 or (config-if)# ipv6 snooping attach-policy example_policy vlan 111,112</pre>	Attaches a custom ipv6 snooping policy to the interface or the specified VLANs on the interface. To attach the default policy to the interface, use the ipv6 snooping command without the attach-policy keyword. To attach the default policy to VLANs on the interface, use the ipv6 snooping vlan command. The default policy is, security-level guard , device-role node , protocol ndp and dhcp .
Step 5	<p>do show running-config</p> <p>Example:</p> <pre>#(config-if)# do show running-config</pre>	Verifies that the policy is attached to the specified interface without exiting the interface configuration mode.

How to Attach an IPv6 Snooping Policy to a Layer 2 EtherChannel Interface

Beginning in privileged EXEC mode, follow these steps to attach an IPv6 Snooping policy on an EtherChannel interface or VLAN:

Procedure

	Command or Action	Purpose
Step 1	configure terminal Example: <pre># configure terminal</pre>	Enters the global configuration mode.
Step 2	interface range <i>Interface_name</i> Example: <pre>(config)# interface range Po11</pre>	Specify the port-channel interface name assigned when the EtherChannel was created. Enters the interface range configuration mode. Tip Enter the do show interfaces summary command for quick reference to interface names and types.
Step 3	ipv6 snooping [attach-policy <i>policy_name</i> [vlan { <i>vlan_ids</i> add <i>vlan_ids</i> except <i>vlan_ids</i> none remove <i>vlan_ids</i> all }] vlan [{ <i>vlan_ids</i> add <i>vlan_ids</i> except <i>vlan_ids</i> none remove <i>vlan_ids</i> all }]] Example: <pre>(config-if-range)# ipv6 snooping attach-policy example_policy</pre> or <pre>(config-if-range)# ipv6 snooping attach-policy example_policy vlan 222,223,224</pre> or <pre>(config-if-range)#ipv6 snooping vlan 222, 223,224</pre>	Attaches the IPv6 Snooping policy to the interface or the specified VLANs on that interface. The default policy is attached if the attach-policy option is not used.
Step 4	do show running-config interface <i>portchannel_interface_name</i> Example: <pre>#(config-if-range)# do show running-config int po11</pre>	Confirms that the policy is attached to the specified interface without exiting the configuration mode.

How to Attach an IPv6 Snooping Policy to VLANs Globally

Beginning in privileged EXEC mode, follow these steps to attach an IPv6 Snooping Policy to VLANs across multiple interfaces:

SUMMARY STEPS

1. **configure terminal**
2. **vlan configuration** *vlan_list*
3. **ipv6 snooping** [**attach-policy** *policy_name*]

4. do show running-config

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure terminal Example: <pre># configure terminal</pre>	Enters the global configuration mode.
Step 2	vlan configuration <i>vlan_list</i> Example: <pre>(config)# vlan configuration 333</pre>	Specifies the VLANs to which the IPv6 Snooping policy will be attached ; enters the VLAN interface configuration mode.
Step 3	ipv6 snooping [attach-policy <i>policy_name</i>] Example: <pre>(config-vlan-config)#ipv6 snooping attach-policy example_policy</pre>	Attaches the IPv6 Snooping policy to the specified VLANs across all switch and stack interfaces. The default policy is attached if the attach-policy option is not used. The default policy is, security-level guard , device-role node , protocol ndp and dhcp .
Step 4	do show running-config Example: <pre> #(config-if)# do show running-config</pre>	Verifies that the policy is attached to the specified VLANs without exiting the interface configuration mode.

How to Configure the IPv6 Binding Table Content

Beginning in privileged EXEC mode, follow these steps to configure IPv6 Binding Table Content :

SUMMARY STEPS

- configure terminal**
- [no] ipv6 neighbor binding** [**vlan** *vlan-id* {*ipv6-address* **interface** *interface_type* *stack/module/port* *hw_address* [**reachable-lifetimevalue** [*seconds* | **default** | **infinite**] | [**tracking**{ [**default** | **disable**] [**reachable-lifetimevalue** [*seconds* | **default** | **infinite**] | [**enable** [**reachable-lifetimevalue** [*seconds* | **default** | **infinite**] | [**retry-interval** {*seconds*| **default** [**reachable-lifetimevalue** [*seconds* | **default** | **infinite**] }]
- [no] ipv6 neighbor binding max-entries** *number* [**mac-limit** *number* | **port-limit** *number* [**mac-limit** *number*] | **vlan-limit** *number* [[**mac-limit** *number*] | [**port-limit** *number* [**mac-limit***number*]]]]
- ipv6 neighbor binding logging**
- exit**
- show ipv6 neighbor binding**

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure terminal Example: <pre># configure terminal</pre>	Enters the global configuration mode.
Step 2	<pre>[no] ipv6 neighbor binding [vlan vlan-id {ipv6-address interface interface_type stack/module/port hw_address [reachable-lifetimevalue [seconds default infinite] [tracking { [default disable] [reachable-lifetimevalue [seconds default infinite] [enable [reachable-lifetimevalue [seconds default infinite] [retry-interval {seconds default [reachable-lifetimevalue [seconds default infinite] }]</pre> Example: <pre>(config)# ipv6 neighbor binding</pre>	Adds a static entry to the binding table database.
Step 3	<pre>[no] ipv6 neighbor binding max-entries number [mac-limit number port-limit number [mac-limit number] vlan-limit number [[mac-limit number] [port-limit number [mac-limitnumber]]]]</pre> Example: <pre>(config)# ipv6 neighbor binding max-entries 30000</pre>	Specifies the maximum number of entries that are allowed to be inserted in the binding table cache.
Step 4	ipv6 neighbor binding logging Example: <pre>(config)# ipv6 neighbor binding logging</pre>	Enables the logging of binding table main events.
Step 5	exit Example: <pre>(config)# exit</pre>	Exits global configuration mode, and places the router in privileged EXEC mode.
Step 6	show ipv6 neighbor binding Example: <pre># show ipv6 neighbor binding</pre>	Displays contents of a binding table.

How to Configure an IPv6 Neighbor Discovery Inspection Policy

Starting with 17.1.1, the IPv6 ND Inspection feature is deprecated and the SISF- based device tracking feature replaces it. For the corresponding replacement task, see *Creating a Custom Device Tracking Policy with Custom Settings* under the *Configuring SISF-Based Device Tracking* chapter in this document.

Beginning in privileged EXEC mode, follow these steps to configure an IPv6 ND Inspection Policy:

SUMMARY STEPS

1. **configure terminal**
2. **[no]ipv6 nd inspection policy *policy-name***
3. **device-role {host | switch}**
4. **limit address-count *value***
5. **tracking {enable [reachable-lifetime {*value* | infinite}] | disable [stale-lifetime {*value* | infinite}]}**
6. **trusted-port**
7. **validate source-mac**
8. **no {device-role | limit address-count | tracking | trusted-port | validate source-mac}**
9. **default {device-role | limit address-count | tracking | trusted-port | validate source-mac}**
10. **do show ipv6 nd inspection policy *policy_name***

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure terminal Example: <code># configure terminal</code>	Enters the global configuration mode.
Step 2	[no]ipv6 nd inspection policy <i>policy-name</i> Example: <code>(config)# ipv6 nd inspection policy example_policy</code>	Specifies the ND inspection policy name and enters ND Inspection Policy configuration mode.
Step 3	device-role {host switch} Example: <code>(config-nd-inspection)# device-role switch</code>	Specifies the role of the device attached to the port. The default is host .
Step 4	limit address-count <i>value</i> Example: <code>(config-nd-inspection)# limit address-count 1000</code>	Enter 1–10,000.
Step 5	tracking {enable [reachable-lifetime {<i>value</i> infinite}] disable [stale-lifetime {<i>value</i> infinite}]} Example: <code>(config-nd-inspection)# tracking disable stale-lifetime infinite</code>	Overrides the default tracking policy on a port.
Step 6	trusted-port Example: <code>(config-nd-inspection)# trusted-port</code>	Configures a port to become a trusted port.
Step 7	validate source-mac Example: <code>(config-nd-inspection)# validate source-mac</code>	Checks the source media access control (MAC) address against the link-layer address.

	Command or Action	Purpose
Step 8	no {device-role limit address-count tracking trusted-port validate source-mac} Example: <pre>(config-nd-inspection)# no validate source-mac</pre>	Remove the current configuration of a parameter with the no form of the command.
Step 9	default {device-role limit address-count tracking trusted-port validate source-mac} Example: <pre>(config-nd-inspection)# default limit address-count</pre>	Restores configuration to the default values.
Step 10	do show ipv6 nd inspection policy <i>policy_name</i> Example: <pre>(config-nd-inspection)# do show ipv6 nd inspection policy example_policy</pre>	Verifies the ND Inspection Configuration without exiting ND inspection configuration mode.

How to Attach an IPv6 Neighbor Discovery Inspection Policy to an Interface

Starting with 17.1.1, the IPv6 ND Inspection feature is deprecated and the SISF- based device tracking feature replaces it. For the corresponding replacement task, see *Attaching a Device Tracking Policy to an Interface* under the *Configuring SISF-Based Device Tracking* chapter in this document.

Beginning in privileged EXEC mode, follow these steps to attach an IPv6 ND Inspection policy to an interface or VLANs on an interface :

SUMMARY STEPS

1. **configure terminal**
2. **interface** *Interface_type stack/module/port*
3. **ipv6 nd inspection** [**attach-policy** *policy_name* [**vlan** {*vlan_ids* | **add** *vlan_ids* | **except** *vlan_ids* | **none** | **remove** *vlan_ids* | **all**}] | **vlan** [{*vlan_ids* | **add** *vlan_ids* | **except** *vlan_ids* | **none** | **remove** *vlan_ids* | **all**}]]
4. **do show running-config**

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure terminal Example: <pre># configure terminal</pre>	Enters the global configuration mode.
Step 2	interface <i>Interface_type stack/module/port</i> Example: <pre>(config)# interface gigabitethernet 1/1/4</pre>	Specifies an interface type and identifier; enters the interface configuration mode.

	Command or Action	Purpose
Step 3	<p>ipv6 nd inspection [attach-policy <i>policy_name</i> [vlan {<i>vlan_ids</i> add <i>vlan_ids</i> except <i>vlan_ids</i> none remove <i>vlan_ids</i> all}] vlan [{<i>vlan_ids</i> add <i>vlan_ids</i> except <i>vlan_ids</i> none remove <i>vlan_ids</i> all}]]</p> <p>Example:</p> <pre>(config-if)# ipv6 nd inspection attach-policy example_policy or (config-if)# ipv6 nd inspection attach-policy example_policy vlan 222,223,224 or (config-if)# ipv6 nd inspection vlan 222, 223,224</pre>	Attaches the Neighbor Discovery Inspection policy to the interface or the specified VLANs on that interface. The default policy is attached if the attach-policy option is not used.
Step 4	<p>do show running-config</p> <p>Example:</p> <pre> #(config-if)# do show running-config</pre>	Verifies that the policy is attached to the specified interface without exiting the interface configuration mode.

How to Attach an IPv6 Neighbor Discovery Inspection Policy to a Layer 2 EtherChannel Interface

Starting with 17.1.1 the IPv6 ND Inspection feature is deprecated and the SISF-based device tracking feature replaces it. For the corresponding replacement task, see *Attaching a Device Tracking Policy to an Interface* under the *Configuring SISF-Based Device Tracking* chapter in this document.

Beginning in privileged EXEC mode, follow these steps to attach an IPv6 Neighbor Discovery Inspection policy on an EtherChannel interface or VLAN:

SUMMARY STEPS

1. **configure terminal**
2. **interface range** *Interface_name*
3. **ipv6 nd inspection** [**attach-policy** *policy_name* [**vlan** {*vlan_ids* | **add** *vlan_ids* | **except** *vlan_ids* | **none** | **remove** *vlan_ids* | **all**}] | **vlan** [{*vlan_ids* | **add** *vlan_ids* | **except** *vlan_ids* | **none** | **remove** *vlan_ids* | **all**}]]
4. **do show running-config interface** *portchannel_interface_name*

DETAILED STEPS

	Command or Action	Purpose
Step 1	<p>configure terminal</p> <p>Example:</p> <pre># configure terminal</pre>	Enters the global configuration mode.

	Command or Action	Purpose
Step 2	<p>interface range <i>Interface_name</i></p> <p>Example:</p> <pre>(config)# interface Po11</pre>	<p>Specify the port-channel interface name assigned when the EtherChannel was created. Enters the interface range configuration mode.</p> <p>Tip Enter the do show interfaces summary command for quick reference to interface names and types.</p>
Step 3	<p>ipv6 nd inspection [attach-policy <i>policy_name</i> [vlan {<i>vlan_ids</i> add <i>vlan_ids</i> except <i>vlan_ids</i> none remove <i>vlan_ids</i> all}] vlan [{<i>vlan_ids</i> add <i>vlan_ids</i> except <i>vlan_ids</i> none remove <i>vlan_ids</i> all}]]</p> <p>Example:</p> <pre>(config-if-range)# ipv6 nd inspection attach-policy example_policy or (config-if-range)# ipv6 nd inspection attach-policy example_policy vlan 222,223,224 or (config-if-range)#ipv6 nd inspection vlan 222, 223,224</pre>	<p>Attaches the ND Inspection policy to the interface or the specified VLANs on that interface. The default policy is attached if the attach-policy option is not used.</p>
Step 4	<p>do show running-config interface<i>portchannel_interface_name</i></p> <p>Example:</p> <pre>#(config-if-range)# do show running-config int po11</pre>	<p>Confirms that the policy is attached to the specified interface without exiting the configuration mode.</p>

How to Attach an IPv6 Neighbor Discovery Inspection Policy to VLANs Globally

Starting with 17.1.1, the IPv6 ND Inspection feature is deprecated and the SISF- based device tracking feature replaces it. For the corresponding replacement task, see *Attaching a Device Tracking Policy to a VLAN* under the *Configuring SISF-Based Device Tracking* chapter in this document.

Beginning in privileged EXEC mode, follow these steps to attach an IPv6 ND Inspection policy to VLANs across multiple interfaces:

SUMMARY STEPS

1. **configure terminal**
2. **vlan configuration** *vlan_list*
3. **ipv6 nd inspection** [**attach-policy** *policy_name*]
4. **do show running-config**

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure terminal Example: <code># configure terminal</code>	Enters the global configuration mode.
Step 2	vlan configuration <i>vlan_list</i> Example: <code>(config)# vlan configuration 334</code>	Specifies the VLANs to which the IPv6 Snooping policy will be attached ; enters the VLAN interface configuration mode.
Step 3	ipv6 nd inspection [attach-policy <i>policy_name</i>] Example: <code>(config-vlan-config)#ipv6 nd inspection attach-policy example_policy</code>	Attaches the IPv6 Neighbor Discovery policy to the specified VLANs across all switch and stack interfaces. The default policy is attached if the attach-policy option is not used. The default policy is, device-role host , no drop-unsecure, limit address-count disabled, sec-level minimum is disabled, tracking is disabled, no trusted-port, no validate source-mac.
Step 4	do show running-config Example: <code> #(config-if)# do show running-config</code>	Confirms that the policy is attached to the specified VLANs without exiting the configuration mode.

How to Configure an IPv6 Router Advertisement Guard Policy

Beginning in privileged EXEC mode, follow these steps to configure an IPv6 Router Advertisement policy :

SUMMARY STEPS

1. **configure terminal**
2. **[no]ipv6 nd rguard policy** *policy-name*
3. **[no]device-role** {**host** | **monitor** | **router** | **switch**}
4. **[no]hop-limit** {**maximum** | **minimum**} *value*
5. **[no]managed-config-flag** {**off** | **on**}
6. **[no]match** {**ipv6 access-list** *list* | **ra prefix-list** *list*}
7. **[no]other-config-flag** {**on** | **off**}
8. **[no]router-preference maximum** {**high** | **medium** | **low**}
9. **[no]trusted-port**
10. **default** {**device-role** | **hop-limit** {**maximum** | **minimum**} | **managed-config-flag** | **match** {**ipv6 access-list** | **ra prefix-list** } | **other-config-flag** | **router-preference maximum**| **trusted-port**}
11. **do show ipv6 nd rguard policy** *policy_name*

DETAILED STEPS

	Command or Action	Purpose
Step 1	<p>configure terminal</p> <p>Example:</p> <pre># configure terminal</pre>	Enters the global configuration mode.
Step 2	<p>[no]ipv6 nd rguard policy <i>policy-name</i></p> <p>Example:</p> <pre>(config)# ipv6 nd rguard policy example_policy</pre>	Specifies the RA Guard policy name and enters RA Guard Policy configuration mode.
Step 3	<p>[no]device-role {host monitor router switch}</p> <p>Example:</p> <pre>(config-nd-raguard)# device-role switch</pre>	<p>Specifies the role of the device attached to the port. The default is host.</p> <p>Note For a network with both host-facing ports and router-facing ports, along with a RA guard policy configured with device-role host on host-facing ports or vlan, it is mandatory to configure a RA guard policy with device-role router on router-facing ports to allow the RA Guard feature to work properly.</p>
Step 4	<p>[no]hop-limit {maximum minimum} <i>value</i></p> <p>Example:</p> <pre>(config-nd-raguard)# hop-limit maximum 33</pre>	<p>(1–255) Range for Maximum and Minimum Hop Limit values.</p> <p>Enables filtering of Router Advertisement messages by the Hop Limit value. A rogue RA message may have a low Hop Limit value (equivalent to the IPv4 Time to Live) that when accepted by the host, prevents the host from generating traffic to destinations beyond the rogue RA message generator. An RA message with an unspecified Hop Limit value is blocked.</p> <p>If not configured, this filter is disabled. Configure minimum to block RA messages with Hop Limit values lower than the value you specify. Configure maximum to block RA messages with Hop Limit values greater than the value you specify.</p>
Step 5	<p>[no]managed-config-flag {off on}</p> <p>Example:</p> <pre>(config-nd-raguard)# managed-config-flag on</pre>	<p>Enables filtering of Router Advertisement messages by the Managed Address Configuration, or "M" flag field. A rogue RA message with an M field of 1 can cause a host to use a rogue DHCPv6 server. If not configured, this filter is disabled.</p> <p>On—Accepts and forwards RA messages with an M value of 1, blocks those with 0.</p> <p>Off—Accepts and forwards RA messages with an M value of 0, blocks those with 1.</p>

	Command or Action	Purpose
Step 6	<p>[no]match {ipv6 access-list list ra prefix-list list}</p> <p>Example:</p> <pre>(config-nd-raguard)# match ipv6 access-list example_list</pre>	Matches a specified prefix list or access list.
Step 7	<p>[no]other-config-flag {on off}</p> <p>Example:</p> <pre>(config-nd-raguard)# other-config-flag on</pre>	<p>Enables filtering of Router Advertisement messages by the Other Configuration, or "O" flag field. A rogue RA message with an O field of 1 can cause a host to use a rogue DHCPv6 server. If not configured, this filter is disabled.</p> <p>On—Accepts and forwards RA messages with an O value of 1, blocks those with 0.</p> <p>Off—Accepts and forwards RA messages with an O value of 0, blocks those with 1.</p>
Step 8	<p>[no]router-preference maximum {high medium low}</p> <p>Example:</p> <pre>(config-nd-raguard)# router-preference maximum high</pre>	<p>Enables filtering of Router Advertisement messages by the Router Preference flag. If not configured, this filter is disabled.</p> <ul style="list-style-type: none"> • high—Accepts RA messages with the Router Preference set to high, medium, or low. • medium—Blocks RA messages with the Router Preference set to high. • low—Blocks RA messages with the Router Preference set to medium and high.
Step 9	<p>[no]trusted-port</p> <p>Example:</p> <pre>(config-nd-raguard)# trusted-port</pre>	When configured as a trusted port, all attached devices are trusted, and no further message verification is performed.
Step 10	<p>default {device-role hop-limit {maximum minimum} managed-config-flag match {ipv6 access-list ra prefix-list } other-config-flag router-preference maximum trusted-port}</p> <p>Example:</p> <pre>(config-nd-raguard)# default hop-limit</pre>	Restores a command to its default value.
Step 11	<p>do show ipv6 nd raguard policy policy_name</p> <p>Example:</p> <pre>(config-nd-raguard)# do show ipv6 nd raguard policy example_policy</pre>	(Optional)—Displays the ND Guard Policy configuration without exiting the RA Guard policy configuration mode.

How to Attach an IPv6 Router Advertisement Guard Policy to an Interface

Beginning in privileged EXEC mode, follow these steps to attach an IPv6 Router Advertisement policy to an interface or to VLANs on the interface :

SUMMARY STEPS

1. **configure terminal**
2. **interface** Interface_type stack/module/port
3. **ipv6 nd rguard** [attach-policy policy_name [vlan {vlan_ids | add vlan_ids | except vlan_ids | none | remove vlan_ids | all}] | vlan [{vlan_ids | add vlan_ids | exceptvlan_ids | none | remove vlan_ids | all}]]
4. **do show running-config**

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure terminal Example: <code># configure terminal</code>	Enters the global configuration mode.
Step 2	interface Interface_type stack/module/port Example: <code>(config)# interface gigabitethernet 1/1/4</code>	Specifies an interface type and identifier; enters the interface configuration mode.
Step 3	ipv6 nd rguard [attach-policy policy_name [vlan {vlan_ids add vlan_ids except vlan_ids none remove vlan_ids all}] vlan [{vlan_ids add vlan_ids exceptvlan_ids none remove vlan_ids all}]] Example: <code>(config-if)# ipv6 nd rguard attach-policy example_policy</code> or <code>(config-if)# ipv6 nd rguard attach-policy example_policy vlan 222,223,224</code> or <code>(config-if)# ipv6 nd rguard vlan 222, 223,224</code>	Attaches the Neighbor Discovery Inspection policy to the interface or the specified VLANs on that interface. The default policy is attached if the attach-policy option is not used.
Step 4	do show running-config Example: <code>#(config-if)# do show running-config</code>	Confirms that the policy is attached to the specified interface without exiting the configuration mode.

How to Attach an IPv6 Router Advertisement Guard Policy to a Layer 2 EtherChannel Interface

Beginning in privileged EXEC mode, follow these steps to attach an IPv6 Router Advertisement Guard Policy on an EtherChannel interface or VLAN:

SUMMARY STEPS

1. **configure terminal**
2. **interface range** *Interface_name*
3. **ipv6 nd rguard** [**attach-policy** *policy_name* [**vlan** {*vlan_ids* | **add** *vlan_ids* | **except** *vlan_ids* | **none** | **remove** *vlan_ids* | **all**}] | **vlan** [{*vlan_ids* | **add** *vlan_ids* | **except** *vlan_ids* | **none** | **remove** *vlan_ids* | **all**}]]
4. **do show running-config interface** *portchannel_interface_name*

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure terminal Example: <pre># configure terminal</pre>	Enters the global configuration mode.
Step 2	interface range <i>Interface_name</i> Example: <pre>(config)# interface Po11</pre>	Specify the port-channel interface name assigned when the EtherChannel was created. Enters the interface range configuration mode. Tip Enter the do show interfaces summary command for quick reference to interface names and types.
Step 3	ipv6 nd rguard [attach-policy <i>policy_name</i> [vlan { <i>vlan_ids</i> add <i>vlan_ids</i> except <i>vlan_ids</i> none remove <i>vlan_ids</i> all }] vlan [{ <i>vlan_ids</i> add <i>vlan_ids</i> except <i>vlan_ids</i> none remove <i>vlan_ids</i> all }]] Example: <pre>(config-if-range)# ipv6 nd rguard attach-policy example_policy</pre> or <pre>(config-if-range)# ipv6 nd rguard attach-policy example_policy vlan 222,223,224</pre> or <pre>(config-if-range)#ipv6 nd rguard vlan 222, 223,224</pre>	Attaches the RA Guard policy to the interface or the specified VLANs on that interface. The default policy is attached if the attach-policy option is not used.

	Command or Action	Purpose
Step 4	do show running-config interface <i>portchannel_interface_name</i> Example: <pre>#(config-if-range)# do show running-config int poll</pre>	Confirms that the policy is attached to the specified interface without exiting the configuration mode.

How to Attach an IPv6 Router Advertisement Guard Policy to VLANs Globally

Beginning in privileged EXEC mode, follow these steps to attach an IPv6 Router Advertisement policy to VLANs regardless of interface:

SUMMARY STEPS

1. **configure terminal**
2. **vlan configuration** *vlan_list*
3. **ipv6 dhcp guard** [**attach-policy** *policy_name*]
4. **do show running-config**

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure terminal Example: <pre># configure terminal</pre>	Enters global configuration mode.
Step 2	vlan configuration <i>vlan_list</i> Example: <pre>(config)# vlan configuration 335</pre>	Specifies the VLANs to which the IPv6 RA Guard policy will be attached ; enters the VLAN interface configuration mode.
Step 3	ipv6 dhcp guard [attach-policy <i>policy_name</i>] Example: <pre>(config-vlan-config)#ipv6 nd rguard attach-policy example_policy</pre>	Attaches the IPv6 RA Guard policy to the specified VLANs across all switch and stack interfaces. The default policy is attached if the attach-policy option is not used.
Step 4	do show running-config Example: <pre>#(config-if)# do show running-config</pre>	Confirms that the policy is attached to the specified VLANs without exiting the configuration mode.

How to Configure an IPv6 DHCP Guard Policy

Beginning in privileged EXEC mode, follow these steps to configure an IPv6 DHCP (DHCPv6) Guard policy:

SUMMARY STEPS

1. **configure terminal**
2. **[no]ipv6 dhcp guard policy *policy-name***
3. **[no]device-role {client | server}**
4. **[no] match server access-list *ipv6-access-list-name***
5. **[no] match reply prefix-list *ipv6-prefix-list-name***
6. **[no]preference { max *limit* | min *limit* }**
7. **[no] trusted-port**
8. **default {device-role | trusted-port}**
9. **do show ipv6 dhcp guard policy *policy_name***

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure terminal Example: <code># configure terminal</code>	Enters the global configuration mode.
Step 2	[no]ipv6 dhcp guard policy <i>policy-name</i> Example: <code>(config)# ipv6 dhcp guard policy example_policy</code>	Specifies the DHCPv6 Guard policy name and enters DHCPv6 Guard Policy configuration mode.
Step 3	[no]device-role {client server} Example: <code>(config-dhcp-guard)# device-role server</code>	(Optional) Filters out DHCPv6 replies and DHCPv6 advertisements on the port that are not from a device of the specified role. Default is client . <ul style="list-style-type: none"> • client—Default value, specifies that the attached device is a client. Server messages are dropped on this port. • server—Specifies that the attached device is a DHCPv6 server. Server messages are allowed on this port.
Step 4	[no] match server access-list <i>ipv6-access-list-name</i> Example: <code>;;Assume a preconfigured IPv6 Access List as follows: (config)# ipv6 access-list my_acls (config-ipv6-acl)# permit host FE80::A8BB:CCFF:FE01:F700 any ;;configure DHCPv6 Guard to match approved access list. (config-dhcp-guard)# match server access-list my_acls</code>	(Optional). Enables verification that the advertised DHCPv6 server or relay address is from an authorized server access list (The destination address in the access list is 'any'). If not configured, this check will be bypassed. An empty access list is treated as a permit all.
Step 5	[no] match reply prefix-list <i>ipv6-prefix-list-name</i> Example:	(Optional) Enables verification of the advertised prefixes in DHCPv6 reply messages from the configured authorized

	Command or Action	Purpose
	<pre>;;Assume a preconfigured IPv6 prefix list as follows: (config)# ipv6 prefix-list my_prefix permit 2001:0DB8::/64 le 128 ;; Configure DHCPv6 Guard to match prefix (config-dhcp-guard)# match reply prefix-list my_prefix</pre>	<p>prefix list. If not configured, this check will be bypassed. An empty prefix list is treated as a permit.</p>
Step 6	<p>[no]preference { max limit min limit }</p> <p>Example:</p> <pre>(config-dhcp-guard)# preference max 250 (config-dhcp-guard)#preference min 150</pre>	<p>Configure max and min when device-role is server to filter DHCPv6 server advertisements by the server preference value. The defaults permit all advertisements.</p> <p>max limit—(0 to 255) (Optional) Enables verification that the advertised preference (in preference option) is less than the specified limit. Default is 255. If not specified, this check will be bypassed.</p> <p>min limit—(0 to 255) (Optional) Enables verification that the advertised preference (in preference option) is greater than the specified limit. Default is 0. If not specified, this check will be bypassed.</p>
Step 7	<p>[no] trusted-port</p> <p>Example:</p> <pre>(config-dhcp-guard)# trusted-port</pre>	<p>(Optional) trusted-port—Sets the port to a trusted mode. No further policing takes place on the port.</p> <p>Note If you configure a trusted port then the device-role option is not available.</p>
Step 8	<p>default {device-role trusted-port}</p> <p>Example:</p> <pre>(config-dhcp-guard)# default device-role</pre>	<p>(Optional) default—Sets a command to its defaults.</p>
Step 9	<p>do show ipv6 dhcp guard policy policy_name</p> <p>Example:</p> <pre>(config-dhcp-guard)# do show ipv6 dhcp guard policy example_policy</pre>	<p>(Optional) Displays the configuration of the IPv6 DHCP guard policy without leaving the configuration submode. Omitting the <i>policy_name</i> variable displays all DHCPv6 policies.</p>

Example of DHCPv6 Guard Configuration

```
enable
configure terminal
ipv6 access-list acl1
 permit host FE80::A8BB:CCFF:FE01:F700 any
ipv6 prefix-list abc permit 2001:0DB8::/64 le 128
ipv6 dhcp guard policy poll
 device-role server
 match server access-list acl1
 match reply prefix-list abc
 preference min 0
 preference max 255
 trusted-port
interface GigabitEthernet 0/2/0
```

```

switchport
ipv6 dhcp guard attach-policy poll vlan add 1
vlan 1
  ipv6 dhcp guard attach-policy poll
show ipv6 dhcp guard policy poll

```

How to Attach an IPv6 DHCP Guard Policy to VLANs Globally

Beginning in privileged EXEC mode, follow these steps to attach an IPv6 DHCP Guard policy to VLANs across multiple interfaces:

SUMMARY STEPS

1. **configure terminal**
2. **vlan configuration** *vlan_list*
3. **ipv6 dhcp guard** [**attach-policy** *policy_name*]
4. **do show running-config**

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure terminal Example: # configure terminal	Enters the global configuration mode.
Step 2	vlan configuration <i>vlan_list</i> Example: (config)# vlan configuration 334	Specifies the VLANs to which the IPv6 Snooping policy will be attached ; enters the VLAN interface configuration mode.
Step 3	ipv6 dhcp guard [attach-policy <i>policy_name</i>] Example: (config-vlan-config)# ipv6 dhcp guard attach-policy example_policy	Attaches the IPv6 Neighbor Discovery policy to the specified VLANs across all switch and stack interfaces. The default policy is attached if the attach-policy option is not used. The default policy is, device-role client , no trusted-port.
Step 4	do show running-config Example: #(config-if)# do show running-config	Confirms that the policy is attached to the specified VLANs without exiting the configuration mode.

How to Attach an IPv6 DHCP Guard Policy to a Layer 2 EtherChannel Interface

Beginning in privileged EXEC mode, follow these steps to attach an IPv6 DHCP Guard policy on an EtherChannel interface or VLAN:

SUMMARY STEPS

1. **configure terminal**
2. **interface range** *Interface_name*

3. **ipv6 dhcp guard** [**attach-policy** *policy_name* [**vlan** {*vlan_ids* | **add** *vlan_ids* | **except** *vlan_ids* | **none** | **remove** *vlan_ids* | **all**}] | **vlan** [{*vlan_ids* | **add** *vlan_ids* | **except** *vlan_ids* | **none** | **remove** *vlan_ids* | **all**}]]
4. **do show running-config interface***portchannel_interface_name*

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure terminal Example: <pre># configure terminal</pre>	Enters the global configuration mode.
Step 2	interface range <i>Interface_name</i> Example: <pre>(config)# interface Po11</pre>	Specify the port-channel interface name assigned when the EtherChannel was created. Enters the interface range configuration mode. Tip Enter the do show interfaces summary command for quick reference to interface names and types.
Step 3	ipv6 dhcp guard [attach-policy <i>policy_name</i> [vlan { <i>vlan_ids</i> add <i>vlan_ids</i> except <i>vlan_ids</i> none remove <i>vlan_ids</i> all }] vlan [{ <i>vlan_ids</i> add <i>vlan_ids</i> except <i>vlan_ids</i> none remove <i>vlan_ids</i> all }]] Example: <pre>(config-if-range)# ipv6 dhcp guard attach-policy example_policy</pre> <p>or</p> <pre>(config-if-range)# ipv6 dhcp guard attach-policy example_policy vlan 222,223,224</pre> <p>or</p> <pre>(config-if-range)#ipv6 dhcp guard vlan 222, 223,224</pre>	Attaches the DHCP Guard policy to the interface or the specified VLANs on that interface. The default policy is attached if the attach-policy option is not used.
Step 4	do show running-config interface <i>portchannel_interface_name</i> Example: <pre>#(config-if-range)# do show running-config int po11</pre>	Confirms that the policy is attached to the specified interface without exiting the configuration mode.

How to Attach an IPv6 DHCP Guard Policy to VLANs Globally

Beginning in privileged EXEC mode, follow these steps to attach an IPv6 DHCP Guard policy to VLANs across multiple interfaces:

SUMMARY STEPS

1. **configure terminal**
2. **vlan configuration** *vlan_list*
3. **ipv6 dhcp guard** [**attach-policy** *policy_name*]
4. **do show running-config**

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure terminal Example: <code># configure terminal</code>	Enters the global configuration mode.
Step 2	vlan configuration <i>vlan_list</i> Example: <code>(config)# vlan configuration 334</code>	Specifies the VLANs to which the IPv6 Snooping policy will be attached ; enters the VLAN interface configuration mode.
Step 3	ipv6 dhcp guard [attach-policy <i>policy_name</i>] Example: <code>(config-vlan-config)#ipv6 dhcp guard attach-policy example_policy</code>	Attaches the IPv6 Neighbor Discovery policy to the specified VLANs across all switch and stack interfaces. The default policy is attached if the attach-policy option is not used. The default policy is, device-role client , no trusted-port.
Step 4	do show running-config Example: <code>#(config-if)# do show running-config</code>	Confirms that the policy is attached to the specified VLANs without exiting the configuration mode.

How to Configure IPv6 Source Guard

SUMMARY STEPS

1. **configure terminal**
2. **[no] ipv6 source-guard policy** *policy_name*
3. **[deny global-autoconf]** [**permit link-local**] [**default**{. . .}] [**exit**] [**no**{. . .}]
4. **end**
5. **show ipv6 source-guard policy** *policy_name*

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure terminal Example: <code># configure terminal</code>	Enters the global configuration mode.

	Command or Action	Purpose
Step 2	<code>[no] ipv6 source-guard policy <i>policy_name</i></code> Example: <code>(config)# ipv6 source-guard policy example_policy</code>	Specifies the IPv6 Source Guard policy name and enters IPv6 Source Guard policy configuration mode.
Step 3	<code>[deny global-autoconf] [permit link-local] [default{...}] [exit] [no{...}]</code> Example: <code>(config-sisf-sourceguard)# deny global-autoconf</code>	(Optional) Defines the IPv6 Source Guard policy. <ul style="list-style-type: none"> • deny global-autoconf—Denies data traffic from auto-configured global addresses. This is useful when all global addresses on a link are DHCP-assigned and the administrator wants to block hosts with self-configured addresses to send traffic. • permit link-local—Allows all data traffic that is sourced by a link-local address. <p>Note Trusted option under source guard policy is not supported.</p>
Step 4	<code>end</code> Example: <code>(config-sisf-sourceguard)# end</code>	Exits out of IPv6 Source Guard policy configuration mode.
Step 5	<code>show ipv6 source-guard policy <i>policy_name</i></code> Example: <code># show ipv6 source-guard policy example_policy</code>	Shows the policy configuration and all the interfaces where the policy is applied.

What to do next

Apply the IPv6 Source Guard policy to an interface.

How to Attach an IPv6 Source Guard Policy to an Interface

SUMMARY STEPS

1. **configure terminal**
2. **interface** *Interface_type stack/module/port*
3. **ipv6 source-guard** [**attach-policy** *<policy_name>*]
4. **show ipv6 source-guard policy** *policy_name*

DETAILED STEPS

	Command or Action	Purpose
Step 1	<code>configure terminal</code> Example: <code># configure terminal</code>	Enters the global configuration mode.

	Command or Action	Purpose
Step 2	interface <i>Interface_type stack/module/port</i> Example: <code>(config)# interface gigabitethernet 1/1/4</code>	Specifies an interface type and identifier; enters the interface configuration mode.
Step 3	ipv6 source-guard [attach-policy <i><policy_name></i>] Example: <code>(config-if)# ipv6 source-guard attach-policy example_policy</code>	Attaches the IPv6 Source Guard policy to the interface. The default policy is attached if the attach-policy option is not used.
Step 4	show ipv6 source-guard policy <i>policy_name</i> Example: <code>#(config-if)# show ipv6 source-guard policy example_policy</code>	Shows the policy configuration and all the interfaces where the policy is applied.

How to attach an IPv6 Source Guard Policy to a Layer 2 EtherChannel Interface

SUMMARY STEPS

1. **configure terminal**
2. **interface port-channel** *port-channel-number*
3. **ipv6 source-guard** [**attach-policy** *<policy_name>*]
4. **show ipv6 source-guard policy** *policy_name*

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure terminal Example: <code># configure terminal</code>	Enters the global configuration mode.
Step 2	interface port-channel <i>port-channel-number</i> Example: <code>(config)# interface Po4</code>	Specifies an interface type and port number and places the switch in the port channel configuration mode.
Step 3	ipv6 source-guard [attach-policy <i><policy_name></i>] Example: <code>(config-if) # ipv6 source-guard attach-policy example_policy</code>	Attaches the IPv6 Source Guard policy to the interface. The default policy is attached if the attach-policy option is not used.
Step 4	show ipv6 source-guard policy <i>policy_name</i> Example: <code>(config-if) #show ipv6 source-guard policy example_policy</code>	Shows the policy configuration and all the interfaces where the policy is applied.

How to Configure IPv6 Prefix Guard

Note To allow routing protocol control packets sourced by a link-local address when prefix guard is applied, enable the permit link-local command in the source-guard policy configuration mode.

SUMMARY STEPS

1. `[no] ipv6 source-guard policy source-guard-policy`
2. `[no] validate address`
3. `validate prefix`
4. `exit`
5. `show ipv6 source-guard policy [source-guard-policy]`

DETAILED STEPS

	Command or Action	Purpose
Step 1	<code>[no] ipv6 source-guard policy source-guard-policy</code> Example: <pre>(config)# ipv6 source-guard policy my_snooping_policy</pre>	Defines an IPv6 source-guard policy name and enters switch integrated security features source-guard policy configuration mode.
Step 2	<code>[no] validate address</code> Example: <pre>(config-sisf-sourceguard)# no validate address</pre>	Disables the validate address feature and enables the IPv6 prefix guard feature to be configured.
Step 3	<code>validate prefix</code> Example: <pre>(config-sisf-sourceguard)# validate prefix</pre>	Enables IPv6 source guard to perform the IPv6 prefix-guard operation.
Step 4	<code>exit</code> Example: <pre>(config-sisf-sourceguard)# exit</pre>	Exits switch integrated security features source-guard policy configuration mode and returns to privileged EXEC mode.
Step 5	<code>show ipv6 source-guard policy [source-guard-policy]</code> Example: <pre># show ipv6 source-guard policy policy1</pre>	Displays the IPv6 source-guard policy configuration.

How to Attach an IPv6 Prefix Guard Policy to an Interface

SUMMARY STEPS

1. `configure terminal`

2. `interface` *Interface_type stack/module/port*
3. `ipv6 source-guard attach-policy` *policy_name*
4. `show ipv6 source-guard policy` *policy_name*

DETAILED STEPS

	Command or Action	Purpose
Step 1	<code>configure terminal</code> Example: <code># configure terminal</code>	Enters the global configuration mode.
Step 2	<code>interface</code> <i>Interface_type stack/module/port</i> Example: <code>(config)# interface gigabitethernet 1/1/4</code>	Specifies an interface type and identifier; enters the interface configuration mode.
Step 3	<code>ipv6 source-guard attach-policy</code> <i>policy_name</i> Example: <code>(config-if)# ipv6 source-guard attach-policy example_policy</code>	Attaches the IPv6 Source Guard policy to the interface. The default policy is attached if the attach-policy option is not used.
Step 4	<code>show ipv6 source-guard policy</code> <i>policy_name</i> Example: <code>(config-if)# show ipv6 source-guard policy example_policy</code>	Shows the policy configuration and all the interfaces where the policy is applied.

How to attach an IPv6 Prefix Guard Policy to a Layer 2 EtherChannel Interface

SUMMARY STEPS

1. `configure terminal`
2. `interface port-channel` *port-channel-number*
3. `ipv6 source-guard` [`attach-policy` *<policy_name>*]
4. `show ipv6 source-guard policy` *policy_name*

DETAILED STEPS

	Command or Action	Purpose
Step 1	<code>configure terminal</code> Example: <code># configure terminal</code>	Enters the global configuration mode.
Step 2	<code>interface port-channel</code> <i>port-channel-number</i> Example: <code>(config)# interface Po4</code>	Specifies an interface type and port number and places the switch in the port channel configuration mode.

	Command or Action	Purpose
Step 3	ipv6 source-guard [attach-policy <policy_name>] Example: <pre>(config-if)# ipv6 source-guard attach-policy example_policy</pre>	Attaches the IPv6 Source Guard policy to the interface. The default policy is attached if the attach-policy option is not used.
Step 4	show ipv6 source-guard policy policy_name Example: <pre>(config-if)# show ipv6 source-guard policy example_policy</pre>	Shows the policy configuration and all the interfaces where the policy is applied.

Configuration Examples for IPv6 First Hop Security

Examples: How to attach an IPv6 Source Guard Policy to a Layer 2 EtherChannel Interface

The following example shows how to attach an IPv6 Source Guard Policy to a Layer 2 EtherChannel Interface:

```
Switch# configure terminal
Switch(config)# ipv6 source-guard policy POL
Switch(config-sisf-sourceguard) # validate address
switch(config-sisf-sourceguard)# exit
Switch(config)# interface Po4
Switch(config)# ipv6 snooping
Switch(config-if)# ipv6 source-guard attach-policy POL
Switch(config-if)# exit
switch(config)#
```

Examples: How to attach an IPv6 Prefix Guard Policy to a Layer 2 EtherChannel Interface

The following example shows how to attach an IPv6 Prefix Guard Policy to a Layer 2 EtherChannel Interface:

```
Switch# configure terminal
Switch(config)# ipv6 source-guard policy POL
Switch (config-sisf-sourceguard)# no validate address
Switch((config-sisf-sourceguard)# validate prefix
Switch(config)# interface Po4
Switch(config-if)# ipv6 snooping
Switch(config-if)# ipv6 source-guard attach-policy POL
```
