

Getting Started with Cisco Intersight Managed Mode Transition Tool

- [Prerequisites, on page 1](#)
- [Installing Cisco Intersight Managed Mode Transition Tool, on page 2](#)
- [Accessing Cisco Intersight Managed Mode Transition Tool using the Graphical User Interface, on page 9](#)

Prerequisites

This section covers the minimum requirements for installing Cisco Intersight Managed Mode Transition Tool:

- Supported version of Cisco UCS Manager: 3.2(1d) or above.
- Supported version of Cisco UCS Central: 2.0(1a) or above.
- Supported ESX version - ESXi 6.0 and above.
- Minimum VM requirement - 2 vCPUs, 8 GB RAM, 100 GB storage.
- Virtual Hardware Version used by the OVA - 11
- Network Connectivity Requirements:
 - TCP Port 443(HTTPS) (from IMM Transition Tool, Release 1.0.2 onwards)
 - TCP Port 22 (SSH) for troubleshooting or advanced configuration.
 - Access to the following is required:
 - DNS (using TCP/UDP Port 53)
 - NTP (using UDP Port 123)
 - UCS Manager/UCS Central devices (using TCP Port 443 [HTTPS] only)
 - Intersight devices (using TCP Port 443 [HTTPS] only)
 - Connection to the proxy server settings (if any)
 - Pushing Config to Intersight requires HTTPS connectivity to the Intersight instance.
 - For SaaS, the URL is <https://www.intersight.com>

- For Appliance, the URL is provided by the user.

Installing Cisco Intersight Managed Mode Transition Tool

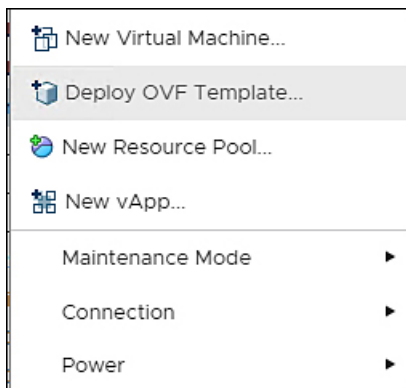

An Open Virtual Appliance (OVA) is a prebuilt software solution that comprises one or more virtual machines (VMs) that are packaged, maintained, updated, and managed as a single unit. The Cisco Intersight Managed Mode Transition Tool OVA has a preinstalled operating system and includes application functionality that is necessary for the IMM Transition Tool functionality. The IMM Transition Tool as an OVA can be deployed on a VMWare Vsphere infrastructure.

Before you begin

- From the [UCS Tools](#) page, download the IMM Transition Tool .ova file to your computer in a place that is easy to find when you start to deploy the OVF template.

Step 1 Log into the HTML5 vSphere Web Client and go to the **VMs** tab.

Step 2 Add the **Deploy OVF Template** action button via the *Actions* dropdown list.

Step 3 Click the added **Deploy OVF Template** button.

A new window appears, asking to select a template.

Deploy OVF Template

- Select an OVF template**
- Select a name and folder
- Select a compute resource
- Review details
- Select storage
- Ready to complete

Select an OVF template
Select an OVF template from remote URL or local file system

Enter a URL to download and install the OVF package from the Internet, or browse to a location accessible from your computer, such as a local hard drive, a network share, or a CD/DVD drive.

URL

http | https://remote-server-address/file-to-deploy.ovf | .ova

Local file

IMM-Migration.ova

- Step 4** Click the **Choose Files** button and select the downloaded OVA file.
- Step 5** Click **Next**.
- Step 6** Select the location where you want to deploy the virtual appliance, then click **Next**.
- Step 7** Select the resource you want to use to run the virtual appliance, click **Next**.

Deploy OVF Template

- ✓ 1 Select an OVF template
- ✓ 2 Select a name and folder
- 3 Select a compute resource**
- 4 Review details
- 5 Select storage
- 6 Ready to complete

Step 11

Customize the template by entering the **Network** settings values and setting up **System Password**, a **Default Password For Converted Policy**, and a **Password For Mutual CHAP Authentication**.

The **Default Password For Converted Policy** is used as a replacement for any existing password in UCS Manager/UCS Central policies such as Virtual Media, iSCSI Boot that are converted. It should be between 12 to 16 characters, including special characters except for spaces, tabs, line breaks. The **Password For Mutual CHAP Authentication** is used for Mutual CHAP Authentication in iSCSI Boot Policy. It should be different from the **Default Password For Converted Policy**. It should be between 12 to 16 characters, including special characters except for spaces, tabs, line breaks.

Deploy OVF Template

- ✓ 1 Select an OVF template
- ✓ 2 Select a name and folder

Step 12 Click **Next**.

Review the configuration data.

Step 13 Click the **Refresh** button to update the system.
The VM will be visible in the center windowpane.

Step 14 Select the VM and click **Power On**.

Step 15 Once the VM is powered on, click the **Open Console** icon to open the VM console in a new window.

You have successfully deployed the OVA template and powered on the VM.

Accessing Cisco Intersight Managed Mode Transition Tool using the Graphical User Interface

You can access the user interface of the Cisco IMM Transition Tool through browser window, to generate transition readiness report, and convert UCS domain into IMM configuration.

Step 1 Launch a Web browser window.

Step 2 Enter `http://<VM IP address>` or `https://<VM IP address>`. VM IP address is the IP address of the VM where you have deployed Cisco IMM Transition Tool OVA.

IMM Transition Tool, Release 1.0.2 and above, provides HTTPS support. All the `http` URLs get redirected to `https`.

Step 3 In the Login dialog box, enter the user name and password.

User name: admin

Password: Enter the password set on the **Customize template** page during installation.

Step 4 Click **Sign In**.

To end the user session, click **Log Out** from the user settings in the top-right corner.

Note **Session Timeout**—In IMM Transition Tool, Release 1.0.2 onwards, if you remain inactive for 30 min, you are automatically logged out of the session. You have to relogin to use the application again.
