

Viewing Logs

This chapter includes the following sections:

- [CIMC Log, page 1](#)
- [System Event Log, page 4](#)

CIMC Log

Viewing the CIMC Log

Procedure

	Command or Action	Purpose
Step 1	Server# scope cimc	Enters the CIMC command mode.
Step 2	Server /cimc # scope log	Enters the CIMC log command mode.
Step 3	Server /cimc/log # show entries [detail]	Displays CIMC events, including timestamp, the software module that logged the event, and a description of the event.

This example displays the log of CIMC events:

```
Server# scope cimc
Server /cimc # scope log
Server /cimc/log # show entries
Time           Source           Description
-----
1970 Jan 4 18:55:36 BMC:kernel:-
<7>/build/trunk/bmc/drivers/pilot2_i2c/pilot2_i2c.c:306:I2c Controller-4 DAT is stuck-low,
issuing One Clock Pulse.
1970 Jan 4 18:55:36 BMC:kernel:-
<7>/build/trunk/bmc/drivers/pilot2_i2c/pilot2_i2c.c:301:I2c Controller-4 Loop:[0].
1970 Jan 4 18:55:36 BMC:kernel:-
<7>/build/trunk/bmc/drivers/pilot2_i2c/pilot2_i2c.c:422: Controller-4 has a stuck bus,
attempting to clear it now... "
```

```

1970 Jan 4 18:55:36 BMC:kernel:-      "
<7>/build/trunk/bmc/drivers/pilot2_i2c/pilot2_i2c.c:402: Controller-4 Initiating I2c recovery
sequence. "
1970 Jan 4 18:55:36 BMC:IPMI:480      last message repeated 22 times
1970 Jan 4 18:55:28 BMC:IPMI:480      " mcddI2CDrv.c:850:PI2CWriteRead: ioctl to driver
failed to read Bus[f4].Dev[5e]! ErrorStatus[77] "
1970 Jan 4 18:55:33 BMC:IPMI:486      last message repeated 17 times
1970 Jan 4 18:55:28 BMC:IPMI:486      " mcddI2CDrv.c:850:PI2CWriteRead: ioctl to driver
failed to read Bus[f4].Dev[b0]! ErrorStatus[77] "
1970 Jan 4 18:55:31 BMC:IPMI:486      last message repeated 17 times
1970 Jan 4 18:55:26 BMC:IPMI:486      " mcddI2CDrv.c:850:PI2CWriteRead: ioctl to driver
failed to read Bus[f4].Dev[b2]! ErrorStatus[77] "
1970 Jan 4 18:55:26 BMC:kernel:-
<7>/build/trunk/bmc/drivers/pilot2_i2c/pilot2_i2c.c:306:I2c Controller-4 DAT is stuck-low,
issuing One Clock Pulse.
1970 Jan 4 18:55:26 BMC:kernel:-
<7>/build/trunk/bmc/drivers/pilot2_i2c/pilot2_i2c.c:301:I2c Controller-4 Loop:[8].

```

Clearing the CIMC Log

Procedure

	Command or Action	Purpose
Step 1	Server# scope cimc	Enters CIMC command mode.
Step 2	Server /cimc # scope log	Enters CIMC log command mode.
Step 3	Server /cimc/log # clear	Clears the CIMC log.

This example clears the log of CIMC events:

```

Server# scope cimc
Server /cimc # scope log
Server /cimc/log # clear

```

Configuring the CIMC Log Threshold

You can specify the lowest level of messages that will be included in the CIMC log.

Procedure

	Command or Action	Purpose
Step 1	Server# scope cimc	Enters CIMC command mode.
Step 2	Server /cimc # scope log	Enters CIMC log command mode.
Step 3	Server /cimc/log # set local-syslog-severity level	The severity <i>level</i> can be one of the following, in decreasing order of severity: <ul style="list-style-type: none"> • emergency

	Command or Action	Purpose
		<ul style="list-style-type: none"> • alert • critical • error • warning • notice • informational • debug <p>Note The CIMC does not log any messages with a severity below the selected severity. For example, if you select error, then the CIMC log will contain all messages with the severity Emergency, Alert, Critical, or Error. It will not show Warning, Notice, Informational, or Debug messages.</p>
Step 4	Server /cimc/log # commit	Commits the transaction to the system configuration.
Step 5	Server /cimc/log # show local-syslog-severity	(Optional) Displays the configured severity level.

This example shows how to configure the logging of messages with a minimum severity of Warning:

```

Server# scope cimc
Server /cimc # scope log
Server /cimc/log # set local-syslog-severity warning
Server /cimc/log *# commit
Server /cimc/log # show local-syslog-severity
Local Syslog Severity: warning

Server /cimc/log #

```

Sending the CIMC Log to a Remote Server

You can configure profiles for one or two remote syslog servers to receive CIMC log entries.

Procedure

	Command or Action	Purpose
Step 1	Server# scope cimc	Enters CIMC command mode.
Step 2	Server /cimc # scope log	Enters CIMC log command mode.
Step 3	Server /cimc/log # scope server {1 2}	Selects one of two remote syslog server profiles and enters the command mode for configuring the profile.

	Command or Action	Purpose
Step 4	Server /cimc/log/server # set server-ip <i>ip-address</i>	Specifies the remote syslog server IP address.
Step 5	Server /cimc/log/server # set enabled {yes no}	Enables the sending of CIMC log entries to this syslog server.
Step 6	Server /cimc/log/server # commit	Commits the transaction to the system configuration.

This example shows how to configure a remote syslog server profile and enable the sending of CIMC log entries:

```
Server# scope cimc
Server /cimc # scope log
Server /cimc/log # scope server 2
Server /cimc/log/server # set server-ip 192.0.2.34
Server /cimc/log/server *# set enabled yes
Server /cimc/log/server *# commit
Server /cimc/log/server #
```

System Event Log

Viewing the System Event Log

Procedure

	Command or Action	Purpose
Step 1	Server# scope sel	Enters the system event log (SEL) command mode.
Step 2	Server /sel # show entries [detail]	For system events, displays timestamp, the severity of the event, and a description of the event. The detail keyword displays the information in a list format instead of a table format.

This example displays the system event log:

```
Server# scope sel
Server /sel # show entries
Time                Severity      Description
-----
[System Boot]       Informational " LED_PSU_STATUS: Platform sensor, OFF event was asserted"

[System Boot]       Informational " LED_HLTH_STATUS: Platform sensor, GREEN was asserted"
[System Boot]       Normal      " PSU_REDUNDANCY: PS Redundancy sensor, Fully Redundant
was asserted"
[System Boot]       Normal      " PSU2 PSU2_STATUS: Power Supply sensor for PSU2, Power
Supply input lost (AC/DC) was deasserted"
[System Boot]       Informational " LED_PSU_STATUS: Platform sensor, ON event was asserted"
```

```

[System Boot]      Informational " LED_HLTH_STATUS: Platform sensor, AMBER was asserted"
[System Boot]      Critical      " PSU_REDUNDANCY: PS Redundancy sensor, Redundancy Lost
was asserted"
[System Boot]      Critical      " PSU2 PSU2_STATUS: Power Supply sensor for PSU2, Power
Supply input lost (AC/DC) was asserted"
[System Boot]      Normal       " HDD_01_STATUS: Drive Slot sensor, Drive Presence was
asserted"
[System Boot]      Critical      " HDD_01_STATUS: Drive Slot sensor, Drive Presence was
deasserted"
[System Boot]      Informational " DDR3_P2_D1_INFO: Memory sensor, OFF event was asserted"

2001-01-01 08:30:16 Warning      " PSU2 PSU2_VOUT: Voltage sensor for PSU2, failure event
was deasserted"
2001-01-01 08:30:16 Critical     " PSU2 PSU2_VOUT: Voltage sensor for PSU2, non-recoverable
event was deasserted"
2001-01-01 08:30:15 Informational " LED_PSU_STATUS: Platform sensor, ON event was asserted"

2001-01-01 08:30:15 Informational " LED_HLTH_STATUS: Platform sensor, AMBER was asserted"
2001-01-01 08:30:15 Informational " LED_HLTH_STATUS: Platform sensor, FAST BLINK event was
asserted"
2001-01-01 08:30:14 Non-Recoverable " PSU2 PSU2_VOUT: Voltage sensor for PSU2, non-recoverable
event was asserted"
2001-01-01 08:30:14 Critical     " PSU2 PSU2_VOUT: Voltage sensor for PSU2, failure event
was asserted"
--More--

```

Clearing the System Event Log

Procedure

	Command or Action	Purpose
Step 1	Server# scope sel	Enters the system event log command mode.
Step 2	Server /sel # clear	You are prompted to confirm the action. If you enter y at the prompt, the system event log is cleared.

This example clears the system event log:

```

Server# scope sel
Server /sel # clear
This operation will clear the whole sel.
Continue?[y|N]y

```
