

Configuring Ports and Port Channels

This chapter includes the following sections:

- [Server and Uplink Ports on the 6100 Series Fabric Interconnect, page 1](#)
- [Unified Ports on the 6200 Series Fabric Interconnect, page 2](#)
- [Server Ports, page 9](#)
- [Uplink Ethernet Ports, page 9](#)
- [Reconfiguring a Port on a Fabric Interconnect, page 11](#)
- [Enabling a Port on a Fabric Interconnect, page 11](#)
- [Disabling a Port on a Fabric Interconnect, page 12](#)
- [Unconfiguring a Port on a Fabric Interconnect, page 13](#)
- [Appliance Ports, page 13](#)
- [FCoE and Fibre Channel Storage Ports, page 18](#)
- [Uplink Ethernet Port Channels, page 21](#)
- [Appliance Port Channels, page 24](#)
- [Fibre Channel Port Channels, page 28](#)
- [Adapter Port Channels, page 32](#)
- [Fabric Port Channels, page 32](#)
- [Configuring Server Ports with the Internal Fabric Manager, page 35](#)

Server and Uplink Ports on the 6100 Series Fabric Interconnect

Each 6100 series fabric interconnect has a set of ports in a fixed port module that you can configure as either server ports or uplink Ethernet ports. These ports are not reserved. They cannot be used by a Cisco UCS domain until you configure them. You can add expansion modules to increase the number of uplink ports on the fabric interconnect or to add uplink Fibre Channel ports to the fabric interconnect.

You need to create LAN pin groups and SAN pin groups to pin traffic from servers to an uplink port.

**Note**

Ports on the 6100 series fabric interconnect are not unified. For more information on Unified Ports, see [Unified Ports on the 6200 Series Fabric Interconnect](#).

Each fabric interconnect can include the following port types:

Server Ports

Server ports handle data traffic between the fabric interconnect and the adapter cards on the servers.

You can only configure server ports on the fixed port module. Expansion modules do not include server ports.

Uplink Ethernet Ports

Uplink Ethernet ports handle Ethernet traffic between the fabric interconnect and the next layer of the network. All network-bound Ethernet traffic is pinned to one of these ports.

By default, Ethernet ports are unconfigured. However, you can configure them to function in the following ways:

- Uplink
- FCoE
- Appliance

You can configure uplink Ethernet ports on either the fixed module or an expansion module.

Uplink Fibre Channel Ports

Uplink Fibre Channel ports handle FCoE traffic between the fabric interconnect and the next layer of the storage area network. All network-bound FCoE traffic is pinned to one of these ports.

By default, Fibre Channel ports are uplink. However, you can configure them to function as Fibre Channel storage ports. This is useful in cases where Cisco UCS requires a connection to a Direct-Attached Storage (DAS) device.

You can only configure uplink Fibre Channel ports on an expansion module. The fixed module does not include uplink Fibre Channel ports.

Unified Ports on the 6200 Series Fabric Interconnect

Unified ports are ports on the 6200 series fabric interconnect that can be configured to carry either Ethernet or Fibre Channel traffic. These ports are not reserved. They cannot be used by a Cisco UCS domain until you configure them.

Configurable beacon LEDs indicate which unified ports are configured for the selected port mode.

Port Modes

The port mode determines whether a unified port on the fabric interconnect is configured to carry Ethernet or Fibre Channel traffic. The port mode is not automatically discovered by the fabric interconnect; it is configured in Cisco UCS Manager.

Changing the port mode results in the existing port configuration being deleted and replaced by a new logical port. Any objects associated with that port configuration, such as VLANs and VSANS, are removed. There is no restriction on the number of times the port mode can be changed for a unified port.

Port Types

The port type defines the type of traffic carried over a unified port connection.

All of the port types listed are configurable on both the fixed and expansion module, including server ports, which are not configurable on the 6100 series fabric interconnect expansion module, but are configurable on the 6200 series fabric interconnect expansion module.

By default, unified ports changed to Ethernet port mode are set to uplink Ethernet port type. unified ports changed to Fibre Channel port mode are set to the Fibre Channel uplink port type. Fibre Channel ports cannot be unconfigured.

Changing the port type does not require a reboot.

When the port mode is set to Ethernet, you can configure the following port types:

- Server ports
- Ethernet uplink ports
- Ethernet port channel members
- FCoE ports
- Appliance ports
- Appliance port channel members
- SPAN destination ports
- SPAN source ports

Note For SPAN source ports, configure one of the port types and then configure the port as SPAN source.

When the port mode is set to Fibre Channel, you can configure the following port types:

- Fibre Channel uplink ports
- Fibre Channel port channel members
- Fibre Channel storage ports
- SPAN destination ports
- SPAN source ports

Note For SPAN source ports, configure one of the port types and then configure the port as SPAN source.

Beacon LEDs for Unified Ports

Each port on the 6200 series fabric interconnect has a corresponding beacon LED. When the Beacon LED property is configured, the beacon LEDs illuminate, showing you which ports are configured in a given port mode.

The Beacon LED property can be configured to show you which ports are grouped in one port mode: either Ethernet or Fibre Channel. By default, the Beacon LED property is set to Off.

**Note**

For unified ports on the expansion module, the Beacon LED property may be reset to the default value of Off during expansion module reboot.

Guidelines for Configuring Unified Ports

Consider the following guidelines and restrictions when configuring unified ports:

Hardware and Software Requirements

Unified ports are supported on the 6200 series fabric interconnect with Cisco UCS Manager, version 2.0.

Unified ports are not supported on 6100 series fabric interconnects, even if they are running Cisco UCS Manager, version 2.0.

Port Mode Placement

Because the Cisco UCS Manager GUI interface uses a slider to configure the port mode for unified ports on a fixed or expansion module, it automatically enforces the following restrictions which limits how port modes can be assigned to unified ports. When using the Cisco UCS Manager CLI interface, these restrictions are enforced when you commit the transaction to the system configuration. If the port mode configuration violates any of the following restrictions, the Cisco UCS Manager CLI displays an error:

- Ethernet ports must be grouped together in a block. For each module (fixed or expansion), the Ethernet port block must start with the first port and end with an even numbered port.
- Fibre Channel ports must be grouped together in a block. For each module (fixed or expansion), the first port in the Fibre Channel port block must follow the last Ethernet port and extend to include the rest of the ports in the module. For configurations that include only Fibre Channel ports, the Fibre Channel block must start with the first port on the fixed or expansion module.
- Alternating Ethernet and Fibre Channel ports is not supported on a single module.

Example of a valid configuration— Might include unified ports 1–16 on the fixed module configured in Ethernet port mode and ports 17–32 in Fibre Channel port mode. On the expansion module you could configure ports 1–4 in Ethernet port mode and then configure ports 5–16 in Fibre Channel mode. The rule about alternating Ethernet and Fibre Channel port types is not violated because this port arrangement complies with the rules on each individual module.

Example of an invalid configuration— Might include a block of Fibre Channel ports starting with port 16. Because each block of ports has to start with an odd-numbered port, you would have to start the block with port 17.

**Note**

The total number of uplink Ethernet ports and uplink Ethernet port channel members that can be configured on each fabric interconnect is limited to 31. This limitation includes uplink Ethernet ports and uplink Ethernet port channel members configured on the expansion module.

Effect of Port Mode Changes on Data Traffic

Port mode changes can cause an interruption to the data traffic for the Cisco UCS domain. The length of the interruption and the traffic that is affected depend upon the configuration of the Cisco UCS domain and the module on which you made the port mode changes.

**Tip**

To minimize the traffic disruption during system changes, form a Fibre Channel uplink port-channel across the fixed and expansion modules.

Impact of Port Mode Changes on an Expansion Module

After you make port mode changes on an expansion module, the module reboots. All traffic through ports on the expansion module is interrupted for approximately one minute while the module reboots.

Impact of Port Mode Changes on the Fixed Module in a Cluster Configuration

A cluster configuration has two fabric interconnects. After you make port changes to the fixed module, the fabric interconnect reboots. The impact on the data traffic depends upon whether or not you have configured the server vNICs to failover to the other fabric interconnect when one fails.

If you change the port modes on the expansion module of one fabric interconnect and then wait for that to reboot before changing the port modes on the second fabric interconnect, the following occurs:

- With server vNIC failover, traffic fails over to the other fabric interconnect and no interruption occurs.
- Without server vNIC failover, all data traffic through the fabric interconnect on which you changed the port modes is interrupted for approximately eight minutes while the fabric interconnect reboots.

However, if you change the port modes on the fixed modules of both fabric interconnects simultaneously, all data traffic through the fabric interconnects are interrupted for approximately eight minutes while the fabric interconnects reboot.

Impact of Port Mode Changes on the Fixed Module in a Standalone Configuration

A standalone configuration has only one fabric interconnect. After you make port changes to the fixed module, the fabric interconnect reboots. All data traffic through the fabric interconnect is interrupted for approximately eight minutes while the fabric interconnect reboots.

Configuring Port Modes for a 6248 Fabric Interconnect

**Caution**

Changing the port mode on either module can cause an interruption in data traffic because changes to the fixed module require a reboot of the fabric interconnect and changes on an expansion module require a reboot of that module.

If the Cisco UCS domain has a cluster configuration that is set up for high availability and servers with service profiles that are configured for failover, traffic fails over to the other fabric interconnect and data traffic is not interrupted when the port mode is changed on the fixed module.

Procedure

-
- Step 1** In the **Navigation** pane, click the **Equipment** tab.
- Step 2** On the **Equipment** tab, expand **Equipment** > **Fabric Interconnects** > *Fabric_Interconnect_Name*.
- Step 3** In the **Work** pane, click the **General** tab.
- Step 4** In the **Actions** area of the **General** tab, click **Configure Unified Ports**.
- Step 5** Review the confirmation message and click one of the following:
- **Yes**—To continue with configuring the port mode.
 - **No**—To exit without configuring the port mode and wait for an appropriate maintenance window.
- Step 6** Click one of the following buttons to choose the module for which you want to configure the port modes:
- **Configure Fixed Module**
 - **Configure Expansion Module**
- Step 7** Use your mouse to drag the slider along the bar until the displays shows the port mode configuration that you want for the module.
If you change the port mode for a previously configured port, the port returns to an unconfigured state.
- Step 8** If you need to configure port modes for the other module, repeat Steps 6 and 7.
- Step 9** Click **Finish** to save your port mode configuration.
Depending upon the module for which you configured the port modes, data traffic for the Cisco UCS domain is interrupted as follows:
- **Fixed module**—The fabric interconnect reboots. All data traffic through that fabric interconnect is interrupted. In a cluster configuration that provides high availability and includes servers with vNICs that are configured for failover, traffic fails over to the other fabric interconnect and no interruption occurs.
It takes about 8 minutes for the fixed module to reboot.
 - **Expansion module**—The module reboots. All data traffic through ports in that module is interrupted.
It takes about 1 minute for the expansion module to reboot.
-

What to Do Next

Configure the port types for the ports. You can right-click on any port in the module display above the slider and configure that port for an available port type.

Configuring Port Modes for a 6296 Fabric Interconnect

Caution

Changing the port mode on either module can cause an interruption in data traffic because changes to the fixed module require a reboot of the fabric interconnect and changes on an expansion module require a reboot of that module.

If the Cisco UCS domain has a cluster configuration that is set up for high availability and servers with service profiles that are configured for failover, traffic fails over to the other fabric interconnect and data traffic is not interrupted when the port mode is changed on the fixed module.

Procedure

- Step 1** In the **Navigation** pane, click the **Equipment** tab.
 - Step 2** On the **Equipment** tab, expand **Equipment** > **Fabric Interconnects** > *Fabric_Interconnect_Name*.
 - Step 3** In the **Work** pane, click the **General** tab.
 - Step 4** In the **Actions** area of the **General** tab, click **Configure Unified Ports**.
 - Step 5** Review the confirmation message and click one of the following:
 - **Yes**—To open the **Configure Unified Ports** wizard and continue with configuring the port mode.
 - **No**—To exit without configuring the port mode and wait for an appropriate maintenance window.
 - Step 6** On the **Configure Fixed Module Ports** page, do the following:
 - a) Use your mouse to drag the slider along the bar until the displays shows the port mode configuration that you want for the fixed module.
 - b) If you want to configure the port type for a port, right-click on any port in the module display above the slider and configure that port for an available port type.
 - c) Do one of the following:
 - Click **Next** to configure the port mode for ports in expansion module 1.
 - If you do not wish to configure the port mode for ports on the expansion modules, continue with Step 9.
- If you change the port mode for a previously configured port, the port returns to an unconfigured state.
- Step 7** On the **Configure Expansion Module 1 Ports** page, do the following:
 - a) Use your mouse to drag the slider along the bar until the displays shows the port mode configuration that you want for the expansion module.
 - b) If you want to configure the port type for a port, right-click on any port in the module display above the slider and configure that port for an available port type.
 - c) Do one of the following:

- Click **Next** to configure the port mode for ports in expansion module 2.
- If you do not wish to configure the port mode for ports on the remaining expansion modules, continue with Step 9.

If you change the port mode for a previously configured port, the port returns to an unconfigured state.

Step 8 If you need to configure port modes for expansion module 3, repeat Step 7.

Step 9 Click **Finish** to save your port mode configuration.

Depending upon the module for which you configured the port modes, data traffic for the Cisco UCS domain is interrupted as follows:

- **Fixed module**—The fabric interconnect reboots. All data traffic through that fabric interconnect is interrupted. In a cluster configuration that provides high availability and includes servers with vNICs that are configured for failover, traffic fails over to the other fabric interconnect and no interruption occurs.

It takes about 8 minutes for the fixed module to reboot.

- **Expansion module**—The module reboots. All data traffic through ports in that module is interrupted.

It takes about 1 minute for the expansion module to reboot.

Configuring the Beacon LEDs for Unified Ports

Complete the following task for each module for which you want to configure beacon LEDs.

Procedure

Step 1 In the **Navigation** pane, click the **Equipment** tab.

Step 2 On the **Equipment** tab, expand **Equipment** > **Fabric Interconnects** > *Fabric_Interconnect_Name*.

Step 3 Depending upon the location of the unified ports for which you want to configure the beacon LEDs, click on one of the following:

- **Fixed Module**
- **Expansion Module**

Step 4 In the **Work** pane, click the **General** tab.

Step 5 In the **Properties** area, click one of the following radio buttons in the **Beacon LED** field:

- **Off**—All physical LEDs are off.
- **Eth**—The physical LEDs next to all Ethernet ports are on.
- **Fc**—The physical LEDs next to all Fibre Channel ports are on.

Step 6 Click **Save Changes**.

Server Ports

Configuring Server Ports

You can only configure server ports on the fixed port module. Expansion modules do not include server ports.

This task describes only one method of configuring ports. You can also configure ports from a right-click menu, from the **General** tab for the port, or in the LAN Uplinks Manager.

Procedure

- Step 1** In the **Navigation** pane, click the **Equipment** tab.
 - Step 2** In the **Equipment** tab, expand **Fabric Interconnects** > *Fabric_Interconnect_Name* > **Fixed Module** > **Unconfigured Ports**.
 - Step 3** Click one or more ports under the **Unconfigured Ports** node.
 - Step 4** Drag the selected port or ports and drop them in the **Server Ports** node.
The port or ports are configured as server ports, removed from the list of unconfigured ports, and added to the **Server Ports** node.
-

Uplink Ethernet Ports

Configuring Uplink Ethernet Ports

You can configure uplink Ethernet ports on either the fixed module or an expansion module.

This task describes only one method of configuring uplink Ethernet ports. You can also configure uplink Ethernet ports from a right-click menu or from the **General** tab for the port.

Procedure

- Step 1** In the **Navigation** pane, click the **Equipment** tab.
- Step 2** On the **Equipment** tab, expand **Equipment** > **Fabric Interconnects** > *Fabric_Interconnect_Name*.
- Step 3** Depending upon the location of the ports you want to configure, expand one of the following:
 - **Fixed Module**
 - **Expansion Module**
- Step 4** Click one or more of the ports under the **Unconfigured Ethernet Ports** node.
If you want to reconfigure a server port, appliance port, or FCoE storage port, expand the appropriate node.

- Step 5** Drag the selected port or ports and drop them in the **Uplink Ethernet Ports** node. The port or ports are configured as uplink Ethernet ports, removed from the list of unconfigured ports, and added to the **Uplink Ethernet Ports** node.
-

What to Do Next

If desired, change the properties for the default flow control policy and admin speed of the uplink Ethernet port.

Changing the Properties of an Uplink Ethernet Port

Procedure

- Step 1** In the **Navigation** pane, click the **Equipment** tab.
- Step 2** On the **Equipment** tab, expand **Equipment** > **Fabric Interconnects** > *Fabric_Interconnect_Name*.
- Step 3** Depending upon the location of the ports you want to configure, expand one of the following:
- **Fixed Module**
 - **Expansion Module**
- Step 4** In the **Uplink Ethernet Ports** node, click the uplink Ethernet port that you want to change.
- Step 5** In the **Work** pane, click the **General** tab.
- Step 6** In the **Actions** area, click **Show Interface**.
- Step 7** In the **Properties** dialog box, complete the following fields:
- a) (Optional) In the **User Label** field, enter a label to identify the port.
 - b) From the **Flow Control Policy** drop-down list, select a flow control policy to determine how the port sends and receives IEEE 802.3x pause frames when the receive buffer fills.
 - c) In the **Admin Speed** field, click one of the following radio buttons:
 - 1Gbps
 - 10Gbps
- Step 8** Click **OK**.
-

Reconfiguring a Port on a Fabric Interconnect

Procedure

- Step 1** In the **Navigation** pane, click the **Equipment** tab.
- Step 2** On the **Equipment** tab, expand **Equipment** > **Fabric Interconnects** > *Fabric_Interconnect_Name*.
- Step 3** Depending upon the location of the ports you want to reconfigure, expand one of the following:
- **Fixed Module**
 - **Expansion Module**
- Step 4** Click the port or ports you want to reconfigure.
- Step 5** Drag the selected port or ports and drop them in the appropriate node.
The port or ports are reconfigured as the appropriate type of port, removed from the original node, and added to the new node.
-

Example: Reconfiguring an Uplink Ethernet Port as a Server Port

- 1 Expand the **Uplink Ethernet Ports** node and select the port you want to reconfigure.
- 2 Drag the port and drop it into the **Server Ports** node.

Enabling a Port on a Fabric Interconnect

After you enable or disable a port on a fabric interconnect, wait for at least 1 minute before you reacknowledge the chassis. If you reacknowledge the chassis too soon, the pinning of server traffic from the chassis may not be updated with the changes to the port that you enabled or disabled.

Procedure

- Step 1** In the **Navigation** pane, click the **Equipment** tab.
- Step 2** On the **Equipment** tab, expand **Equipment** > **Fabric Interconnects** > *Fabric_Interconnect_Name*.
- Step 3** Depending upon the location of the ports you want to enable, expand one of the following:
- **Fixed Module**
 - **Expansion Module**
- Step 4** Depending upon the type of port you want to enable, expand one of the following:
- **Appliance Ports**
 - **FCoE Storage Ports**

- **Server Ports**
- **Storage FC Ports**
- **Uplink Ethernet Ports**
- **Uplink FC Ports**

Step 5 Click the port or ports you want to enable.
You can use the Shift key or Ctrl key to select multiple entries.

Step 6 Right-click the selected port or ports and choose **Enable**.
The port or ports are enabled. Data traffic can begin to travel through them.

Disabling a Port on a Fabric Interconnect

After you enable or disable a port on a fabric interconnect, wait for at least 1 minute before you reacknowledge the chassis. If you reacknowledge the chassis too soon, the pinning of server traffic from the chassis may not be updated with the changes to the port that you enabled or disabled.

Procedure

Step 1 In the **Navigation** pane, click the **Equipment** tab.

Step 2 On the **Equipment** tab, expand **Equipment** > **Fabric Interconnects** > *Fabric_Interconnect_Name*.

Step 3 Depending upon the location of the ports you want to disable, expand one of the following:

- **Fixed Module**
- **Expansion Module**

Step 4 Depending upon the type of port you want to disable, expand one of the following:

- **Appliance Ports**
- **FCoE Storage Ports**
- **Server Ports**
- **Storage FC Ports**
- **Uplink Ethernet Ports**
- **Uplink FC Ports**

Step 5 Click the port or ports you want to disable.
You can use the Shift key or Ctrl key to select multiple entries.

Step 6 Right-click the selected port or ports and choose **Disable**.
The port or ports are disabled. No data traffic can travel through them.

Unconfiguring a Port on a Fabric Interconnect

Procedure

- Step 1** In the **Navigation** pane, click the **Equipment** tab.
- Step 2** On the **Equipment** tab, expand **Equipment > Fabric Interconnects > Fabric_Interconnect_Name**.
- Step 3** Depending upon the location of the ports you want to unconfigure, expand one of the following:
- **Fixed Module**
 - **Expansion Module**
- Step 4** Depending upon the type of port you want to unconfigure, expand one of the following:
- **Appliance Ports**
 - **FCoE Storage Ports**
 - **Server Ports**
 - **Storage FC Ports**
 - **Uplink Ethernet Ports**
 - **Uplink FC Ports**
- Step 5** Click the port or ports you want to unconfigure.
You can use the Shift key or Ctrl key to select multiple entries.
- Step 6** Right-click the selected port or ports and choose **Unconfigure** node.
The port or ports are unconfigured, removed from the original node, and added to the **Unconfigured Ports** node.
-

Appliance Ports

Appliance ports are only used to connect fabric interconnects to directly attached NFS storage.

Configuring an Appliance Port

You can configure Appliance ports on either the fixed module or an expansion module.

This task describes only one method of configuring appl ports. You can also configure appliance ports from the **General** tab for the port.

Procedure

- Step 1** In the **Navigation** pane, click the **Equipment** tab.
- Step 2** On the **Equipment** tab, expand **Equipment** > **Fabric Interconnects** > *Fabric_Interconnect_Name*.
- Step 3** Depending upon the location of the ports you want to configure, expand one of the following:
- **Fixed Module**
 - **Expansion Module**
- Step 4** Click one or more of the ports under the **Unconfigured Ethernet Ports** node.
If you want to reconfigure a server port, uplink Ethernet port, or FCoE storage port, expand the appropriate node.
- Step 5** Right-click the selected port or ports and choose **Configure as Appliance Port**.
- Step 6** If the Cisco UCS Manager GUI displays a confirmation dialog box, click **Yes**.
- Step 7** In the **Configure as Appliance Port** dialog box, complete the following fields:

Name	Description
Priority drop-down list	The quality of service setting associated with this interface. This can be one of the following: <ul style="list-style-type: none"> • Fc—Use this priority for vHBA traffic only. • Platinum—Use this priority for vNIC traffic only. • Gold—Use this priority for vNIC traffic only. • Silver—Use this priority for vNIC traffic only. • Bronze—Use this priority for vNIC traffic only. • Best Effort—Do not use this priority. It is reserved for the Basic Ethernet traffic lane.
Pin Group drop-down list	The LAN pin group that you want to use as the appliance pin target to the specified fabric and port, or fabric and port channel.
Create LAN Pin Group link	Click this link if you want to create a LAN pin group.
Network Control Policy drop-down list	The network control policy associated with this port.
Create Network Control Policy link	Click this link if you want to create a LAN pin group.

Name	Description
Admin Speed field	<p>The data transfer rate for the port, which should match the destination to which the port is linked. This can be one of the following:</p> <ul style="list-style-type: none"> • 1 Gbps • 10 Gbps • 20 Gbps • 40 Gbps <p>Note The admin speed can be changed only for certain ports, and not all speeds are available on all systems. For more information, see the <i>Hardware Installation Guide</i> for your fabric interconnect.</p>

Step 8 In the **VLANs** area, do the following:

- a) In the **Port Mode** field, click one of the following radio buttons to select the mode you want to use for the port channel:
 - **Trunk**—Cisco UCS Manager GUI displays the VLANs Table that lets you choose the VLANs you want to use.
 - **Access**—Cisco UCS Manager GUI displays the **Select VLAN** drop-down list that allows you to choose a VLAN to associate with this port channel.

With either mode, you can click the **Create VLAN** link to create a new VLAN.

- b) If you clicked the **Trunk** radio button, complete the following fields in the VLANs table:

Name	Description
Select column	Check the check box in this column for each VLAN you want to use.
Name column	The name of the VLAN.
Native VLAN column	To designate one of the VLANs as the native VLAN, click the radio button in this column.

- c) If you clicked the **access** radio button, choose a VLAN from the **Select VLAN** drop-down list.

Step 9 (Optional) If you want to add an endpoint, check the **Ethernet Target Endpoint** check box and complete the following fields:

Name	Description
Name field	<p>The name of the endpoint.</p> <p>This name can be between 1 and 16 alphanumeric characters. You cannot use spaces or any special characters other than - (hyphen), _ (underscore), : (colon), and . (period), and you cannot change this name after the object has been saved.</p>

Name	Description
MAC Address field	The MAC address for the endpoint.

Step 10 Click **OK**.

The port or ports are configured as Appliance ports, removed from the list of unconfigured ports, and added to the **Appliance Ports** node.

Modifying the Properties of an Appliance Port

Procedure

Step 1 In the **Navigation** pane, click the **Equipment** tab.

Step 2 On the **Equipment** tab, expand **Equipment** > **Fabric Interconnects** > *Fabric_Interconnect_Name*.

Step 3 Depending upon the location of the appliance port you want to modify, expand one of the following:

- **Fixed Module**
- **Expansion Module**

Step 4 Expand **Appliance Ports**.

Step 5 Click the appliance port for which you want to modify the properties.

Step 6 In the **Work** pane, click the **General** tab.

Step 7 In the **Actions** area, click **Show Interface**.

You may need to expand or use the scroll bars in the **Properties** dialog box to see all the fields.

Step 8 In the **Properties** dialog box, modify the values in one or more of the following fields:

Name	Description
User Label field	<p>A user-defined name that can be used for internal tracking or customized identification.</p> <p>Enter up to 32 characters. You can use any characters or spaces except ^ (carat), \ (backslash), > (greater than), < (less than), ' (single quote), " (double quote), ` (accent mark), or = (equal sign).</p>

Name	Description
Admin Speed field	<p>The data transfer rate for the port, which should match the destination to which the port is linked. This can be one of the following:</p> <ul style="list-style-type: none"> • 1 Gbps • 10 Gbps • 20 Gbps • 40 Gbps <p>Note The admin speed can be changed only for certain ports, and not all speeds are available on all systems. For more information, see the <i>Hardware Installation Guide</i> for your fabric interconnect.</p>
Priority drop-down list	<p>The quality of service setting associated with this interface. This can be one of the following:</p> <ul style="list-style-type: none"> • Fc—Use this priority for vHBA traffic only. • Platinum—Use this priority for vNIC traffic only. • Gold—Use this priority for vNIC traffic only. • Silver—Use this priority for vNIC traffic only. • Bronze—Use this priority for vNIC traffic only. • Best Effort—Do not use this priority. It is reserved for the Basic Ethernet traffic lane.
Pin Group drop-down list	<p>The LAN pin group that you want to use as the appliance pin target to the specified fabric and port, or fabric and port channel.</p>
Network Control Policy drop-down list	<p>The network control policy associated with this port.</p>
MAC Address field	<p>The MAC address for the endpoint.</p> <p>If you do not see this field, the port does not have an Ethernet target endpoint set. Click Add Ethernet Target Endpoint in the Actions area to add an endpoint.</p>
Port Mode field	<p>The fields displayed in this area depend on the setting of the Port Mode field. If you choose:</p> <ul style="list-style-type: none"> • Trunk—Cisco UCS Manager GUI displays the VLANs Table that lets you choose the VLANs you want to use. • Access—Cisco UCS Manager GUI displays the Select VLAN drop-down list that allows you to choose a VLAN to associate with this port channel.

Step 9 Click **OK**.

FCoE and Fibre Channel Storage Ports

Configuring an FCoE Storage Port

You can configure FCoE storage ports on either the fixed module or an expansion module.

This task describes only one method of configuring FCoE storage ports. You can also configure FCoE storage ports from the **General** tab for the port.

Before You Begin

The Fibre Channel switching mode must be set to Switching for these ports to be valid. The storage ports cannot function in end-host mode.

Procedure

- Step 1** In the **Navigation** pane, click the **Equipment** tab.
- Step 2** On the **Equipment** tab, expand **Equipment** > **Fabric Interconnects** > *Fabric_Interconnect_Name*.
- Step 3** Depending upon the location of the ports you want to configure, expand one of the following:
- **Fixed Module**
 - **Expansion Module**
- Step 4** Click one or more of the ports under the **Unconfigured Ethernet Ports** node. If you want to reconfigure an uplink Ethernet port, server port, or appliance port, expand the appropriate node.
- Step 5** Right-click the selected port or ports and choose **Configure as FCoE Storage Port**.
- Step 6** If the Cisco UCS Manager GUI displays a confirmation dialog box, click **Yes**.
- Step 7** Click **OK**.
The port or ports are configured as FCoE storage ports, removed from the list of unconfigured ports, and added to the **FCoE Storage Ports** node.
-

Configuring a Fibre Channel Storage Port

This task describes only one method of configuring FC storage ports. You can also configure FC storage ports from the **General** tab for the port.

Before You Begin

The Fibre Channel switching mode must be set to Switching for these ports to be valid. The storage ports cannot function in end-host mode.

Procedure

- Step 1** In the **Navigation** pane, click the **Equipment** tab.
 - Step 2** On the **Equipment** tab, expand **Equipment** > **Fabric Interconnects** > *Fabric_Interconnect_Name*.
 - Step 3** Expand the **Expansion Module** node.
 - Step 4** Click one or more of the ports under the **Uplink FC Ports** node.
 - Step 5** Right-click the selected port or ports and choose **Configure as FC Storage Port**.
 - Step 6** If the Cisco UCS Manager GUI displays a confirmation dialog box, click **Yes**.
 - Step 7** Click **OK**.
The port or ports are configured as FC storage ports, removed from the list of uplink FC ports, and added to the **Storage FC Ports** node.
-

Restoring an Uplink Fibre Channel Port

This task describes only one method of restoring an FC storage port to function as an uplink FC port. You can also reconfigure FC storage ports from the **General** tab for the port.

Procedure

- Step 1** In the **Navigation** pane, click the **Equipment** tab.
 - Step 2** On the **Equipment** tab, expand **Equipment** > **Fabric Interconnects** > *Fabric_Interconnect_Name*.
 - Step 3** Expand the **Expansion Module** node.
 - Step 4** Click one or more of the ports under the **Storage FC Ports** node.
 - Step 5** Right-click the selected port or ports and choose **Configure as FC Uplink Port**.
 - Step 6** If the Cisco UCS Manager GUI displays a confirmation dialog box, click **Yes**.
 - Step 7** Click **OK**.
The port or ports are configured as uplink FC ports, removed from the list of FC storage ports, and added to the **Uplink FC Ports** node.
-

Default Zoning

Zoning allows you to set up access control between hosts and storage devices. When a zone is configured or the configuration is updated, this information is propagated to all the other switches in the fabric.

In Cisco UCS, the zoning configuration is inherited from an upstream switch. You cannot configure zoning or view information about your zoning configuration through Cisco UCS Manager. The only configurable zoning option in Cisco UCS Manager is whether the default zone in a VSAN (nodes not assigned to any zone) permits or denies access among its members.

When default zoning is **enabled**, all traffic is permitted among members of the default zone.

When default zoning is **disabled**, all traffic is denied among members of the default zone.

Default zoning is applied on a per-VSAN basis. You cannot enable default zoning at the fabric level.

**Note**

Default zoned configurations are not recommended for production deployments, which must always use direct connect Fibre Channel topologies with upstream MDS or Nexus 5000 switches.

Enabling Default Zoning

Procedure

-
- Step 1** In the **Navigation** pane, click the **SAN** tab.
- Step 2** In the **SAN** tab, click the **SAN** node.
- Step 3** In the **Work** pane, click the **VSANs** tab.
- Step 4** Click one of the following subtabs, depending upon the type of VSAN for which you want to enable default zoning:

Subtab	Description
All	Displays all VSANs in the Cisco UCS domain.
Dual Mode	Displays the VSANs that are accessible to both fabric interconnects.
Switch A	Displays the VSANs that are accessible to only fabric interconnect A.
Switch B	Displays the VSANs that are accessible to only fabric interconnect B.

- Step 5** In the table, double-click the VSAN.
Cisco UCS Manager GUI displays the **General** tab for the VSAN.
- Step 6** In the **Actions** area, click **Enable Default Zoning**.
- Step 7** If the Cisco UCS Manager GUI displays a confirmation dialog box, click **Yes**.
-

Disabling Default Zoning

Procedure

- Step 1** In the **Navigation** pane, click the **SAN** tab.
- Step 2** In the **SAN** tab, click the **SAN** node.
- Step 3** In the **Work** pane, click the **VSANs** tab.
- Step 4** Click one of the following subtabs, depending upon the type of VSAN for which you want to disable default zoning:

Subtab	Description
All	Displays all VSANs in the Cisco UCS domain.
Dual Mode	Displays the VSANs that are accessible to both fabric interconnects.
Switch A	Displays the VSANs that are accessible to only fabric interconnect A.
Switch B	Displays the VSANs that are accessible to only fabric interconnect B.

- Step 5** In the table, double-click the VSAN.
Cisco UCS Manager GUI displays the **General** tab for the VSAN.
- Step 6** In the **Actions** area, click **Disable Default Zoning**.
- Step 7** If the Cisco UCS Manager GUI displays a confirmation dialog box, click **Yes**.

Uplink Ethernet Port Channels

An uplink Ethernet port channel allows you to group several physical uplink Ethernet ports (link aggregation) to create one logical Ethernet link to provide fault-tolerance and high-speed connectivity. In Cisco UCS Manager, you create a port channel first and then add uplink Ethernet ports to the port channel. You can add up to eight uplink Ethernet ports to a port channel.

Note Cisco UCS uses Link Aggregation Control Protocol (LACP), not Port Aggregation Protocol (PAgP), to group the uplink Ethernet ports into a port channel. If the ports on the upstream switch are not configured for LACP, the fabric interconnects treat all ports in an uplink Ethernet port channel as individual ports and therefore forward packets.

Creating an Uplink Ethernet Port Channel

Procedure

- Step 1** In the **Navigation** pane, click the **LAN** tab.
- Step 2** On the **LAN** tab, expand **LAN > LAN Cloud**.
- Step 3** Expand the node for the fabric interconnect where you want to add the port channel.
- Step 4** Right-click the **Port Channels** node and choose **Create Port Channel**.
- Step 5** In the **Set Port Channel Name** page of the **Create Port Channel** wizard, do the following:
- a) Complete the following fields:

Name	Description
ID field	The identifier for the port channel. Enter an integer between 1 and 256. This ID cannot be changed after the port channel has been saved.
Name field	A user-defined name for the port channel. This name can be between 1 and 16 alphanumeric characters. You cannot use spaces or any special characters other than - (hyphen), _ (underscore), : (colon), and . (period), and you cannot change this name after the object has been saved.

- b) Click **Next**.

- Step 6** In the **Add Ports** page of the **Create Port Channel** wizard, do the following:
- a) In the **Ports** table, choose one or more ports to include in the port channel.
 - b) Click the >> button to add the ports to the **Ports in the port channel** table. You can use the << button to remove ports from the port channel.
- Note** Cisco UCS Manager warns you if you select a port that has been configured as a server port. You can click **Yes** in the dialog box to reconfigure that port as an uplink Ethernet port and include it in the port channel.

- Step 7** Click **Finish**.

Enabling an Uplink Ethernet Port Channel

Procedure

- Step 1** In the **Navigation** pane, click the **LAN** tab.
 - Step 2** On the **LAN** tab, expand **LAN > LAN Cloud**.
 - Step 3** Expand the node for the fabric interconnect that includes the port channel you want to enable.
 - Step 4** Expand the **Port Channels** node.
 - Step 5** Right-click the port channel you want to enable and choose **Enable Port Channel**.
 - Step 6** If the Cisco UCS Manager GUI displays a confirmation dialog box, click **Yes**.
-

Disabling an Uplink Ethernet Port Channel

Procedure

- Step 1** In the **Navigation** pane, click the **LAN** tab.
 - Step 2** On the **LAN** tab, expand **LAN > LAN Cloud**.
 - Step 3** Expand the node for the fabric interconnect that includes the port channel you want to disable.
 - Step 4** Expand the **Port Channels** node.
 - Step 5** Right-click the port channel you want to disable and choose **Enable Port Channel**.
-

Adding Ports to and Removing Ports from an Uplink Ethernet Port Channel

Procedure

- Step 1** In the **Navigation** pane, click the **LAN** tab.
- Step 2** On the **LAN** tab, expand **LAN > LAN Cloud > Fabric > Port Channels**.
- Step 3** Click the port channel to which you want to add or remove ports.
- Step 4** In the **Work** pane, click the **General** tab.
- Step 5** In the **Actions** area, click **Add Ports**.
- Step 6** In the **Add Ports** dialog box, do one of the following:
 - To add ports, choose one or more ports in the **Ports** table, and then click the >> button to add the ports to the **Ports in the port channel** table.

- To remove ports, choose one or more ports in the **Ports in the port channel** table, and then click the << button to remove the ports from the port channel and add them to the **Ports** table.

Step 7 Click **OK**.

Deleting an Uplink Ethernet Port Channel

Procedure

- Step 1** In the **Navigation** pane, click the **LAN** tab.
- Step 2** On the **LAN** tab, expand **LAN > LAN Cloud**.
- Step 3** Expand the node for the fabric interconnect where you want to delete the port channel.
- Step 4** Click the **Port Channels** node.
- Step 5** In the **General** tab for the **Port Channels** node, choose the port channel you want to delete.
- Step 6** Right-click the port channel and choose **Delete**.
-

Appliance Port Channels

An appliance port channel allows you to group several physical appliance ports to create one logical Ethernet storage link for the purpose of providing fault-tolerance and high-speed connectivity. In Cisco UCS Manager, you create a port channel first and then add appliance ports to the port channel. You can add up to eight appliance ports to a port channel.

Creating an Appliance Port Channel

Procedure

- Step 1** In the **Navigation** pane, click the **LAN** tab.
- Step 2** On the **LAN** tab, expand **LAN > Appliances**.
- Step 3** Expand the node for the fabric interconnect where you want to add the port channel.
- Step 4** Right-click the **Port Channels** node and choose **Create Port Channel**.
- Step 5** In the **Set Port Channel Name** page of the **Create Port Channel** wizard, complete the following fields to specify the identity and other properties of the port channel:

Name	Description
ID field	The unique identifier of the port channel. Enter an integer between 1 and 256. This ID cannot be changed after the port channel has been saved.
Name field	A user-defined name for the port channel. This name can be between 1 and 16 alphanumeric characters. You cannot use spaces or any special characters other than - (hyphen), _ (underscore), : (colon), and . (period), and you cannot change this name after the object has been saved.
Priority drop-down list	The quality of service setting associated with this interface. This can be one of the following: <ul style="list-style-type: none"> • Fc—Use this priority for vHBA traffic only. • Platinum—Use this priority for vNIC traffic only. • Gold—Use this priority for vNIC traffic only. • Silver—Use this priority for vNIC traffic only. • Bronze—Use this priority for vNIC traffic only. • Best Effort—Do not use this priority. It is reserved for the Basic Ethernet traffic lane.
Protocol field	The protocol for the port channel. This can be one of the following: <ul style="list-style-type: none"> • Static • Lacp
Create LAN Pin Group link	Click this link to create a LAN pin group.
Network Control Policy drop-down list	The network control policy that vNICs created from this vNIC template should use.
Create Network Control Policy link	Click this link to create a global network control policy that will be available to all port channels.

Step 6 In the **VLANs** area, do the following:

- a) In the **Port Mode** field, click one of the following radio buttons to select the mode you want to use for the port channel:
 - **Trunk**—Cisco UCS Manager GUI displays the VLANs Table that lets you choose the VLANs you want to use.
 - **Access**—Cisco UCS Manager GUI displays the **Select VLAN** drop-down list that allows you to choose a VLAN to associate with this port channel.

With either mode, you can click the **Create VLAN** link to create a new VLAN.

- b) If you clicked the **Trunk** radio button, complete the following fields in the VLANs table:

Name	Description
Select column	Check the check box in this column for each VLAN you want to use.
Name column	The name of the VLAN.
Native VLAN column	To designate one of the VLANs as the native VLAN, click the radio button in this column.

- c) If you clicked the **access** radio button, choose a VLAN from the **Select VLAN** drop-down list.

- Step 7** (Optional) If you want to add an endpoint, check the **Ethernet Target Endpoint** check box and complete the following fields:

Name	Description
Name field	The name of the endpoint. This name can be between 1 and 16 alphanumeric characters. You cannot use spaces or any special characters other than - (hyphen), _ (underscore), : (colon), and . (period), and you cannot change this name after the object has been saved.
MAC Address field	The MAC address for the endpoint.

- Step 8** Click **Next**.

- Step 9** In the **Add Ports** page of the **Create Port Channel** wizard, do the following:

- In the **Ports** table, choose one or more ports to include in the port channel.
- Click the >> button to add the ports to the **Ports in the port channel** table. You can use the << button to remove ports from the port channel.

Note Cisco UCS Manager warns you if your configuration could cause issues with service profiles or port configurations. You can click **Yes** in the dialog box if you want to create the port channel despite those potential issues.

- Step 10** Click **Finish**.
-

Enabling an Appliance Port Channel

Procedure

- Step 1** In the **Navigation** pane, click the **LAN** tab.
 - Step 2** On the **LAN** tab, expand **LAN > Appliances**.
 - Step 3** Expand the node for the fabric interconnect that includes the port channel you want to enable.
 - Step 4** Expand the **Port Channels** node.
 - Step 5** Right-click the port channel you want to enable and choose **Enable Port Channel**.
 - Step 6** If the Cisco UCS Manager GUI displays a confirmation dialog box, click **Yes**.
-

Disabling an Appliance Port Channel

Procedure

- Step 1** In the **Navigation** pane, click the **LAN** tab.
 - Step 2** On the **LAN** tab, expand **LAN > Appliances**.
 - Step 3** Expand the node for the fabric interconnect that includes the port channel you want to disable.
 - Step 4** Expand the **Port Channels** node.
 - Step 5** Right-click the port channel you want to disable and choose **Disable Port Channel**.
 - Step 6** If the Cisco UCS Manager GUI displays a confirmation dialog box, click **Yes**.
-

Adding Ports to and Removing Ports from an Appliance Port Channel

Procedure

- Step 1** In the **Navigation** pane, click the **LAN** tab.
- Step 2** On the **LAN** tab, expand **LAN > Appliances > Fabric > Port Channels**.
- Step 3** Click the port channel to which you want to add or remove ports.
- Step 4** In the **Work** pane, click the **General** tab.
- Step 5** In the **Actions** area, click **Add Ports**.
- Step 6** In the **Add Ports** dialog box, do one of the following:
 - To add ports, choose one or more ports in the **Ports** table, and then click the >> button to add the ports to the **Ports in the port channel** table.

- To remove ports, choose one or more ports in the **Ports in the port channel** table, and then click the << button to remove the ports from the port channel and add them to the **Ports** table.

Step 7 Click **OK**.

Deleting an Appliance Port Channel

Procedure

- Step 1** In the **Navigation** pane, click the **LAN** tab.
- Step 2** On the **LAN** tab, expand **LAN > Appliances**.
- Step 3** Expand the node for the fabric interconnect that includes the port channel you want to enable.
- Step 4** Expand the **Port Channels** node.
- Step 5** Right-click the port channel you want to enable and choose **Disable Port Channel**.
- Step 6** If the Cisco UCS Manager GUI displays a confirmation dialog box, click **Yes**.
-

Fibre Channel Port Channels

A Fibre Channel port channel allows you to group several physical Fibre Channel ports (link aggregation) to create one logical Fibre Channel link to provide fault-tolerance and high-speed connectivity. In Cisco UCS Manager, you create a port channel first and then add Fibre Channel ports to the port channel.

You can create up to four Fibre Channel port channels in each Cisco UCS domain. Each Fibre Channel port channel can include a maximum of 16 uplink Fibre Channel ports.

Creating a Fibre Channel Port Channel

Procedure

- Step 1** In the **Navigation** pane, click the **SAN** tab.
- Step 2** On the **SAN** tab, expand **SAN > SAN Cloud**.
- Step 3** Expand the node for the fabric where you want to create the port channel.
- Step 4** Right-click the **FC Port Channels** node and choose **Create Port Channel**.
- Step 5** In the **Set Port Channel Name** page of the **Create Port Channel** wizard, do the following:
- a) Complete the following fields:

Name	Description
ID field	The identifier for the port channel. Enter an integer between 1 and 256. This ID cannot be changed after the port channel has been saved.
Name field	A user-defined name for the port channel. This name can be between 1 and 16 alphanumeric characters. You cannot use spaces or any special characters other than - (hyphen), _ (underscore), : (colon), and . (period), and you cannot change this name after the object has been saved.

b) Click **Next**.

Step 6 In the **Add Ports** page of the **Create Port Channel** wizard, do the following:

a) From the **Port Channel Admin Speed** drop-down list, select one of the following data transfer rates for traffic on the port channel:

- **1 Gbps**
- **2 Gbps**
- **4 Gbps**
- **8 Gbps**
- **Auto**—Cisco UCS determines the data transfer rate.

b) In the **Ports** table, choose one or more ports to include in the port channel.

c) Click the >> button to add the ports to the **Ports in the port channel** table.
You can use the << button to remove ports from the port channel.

Step 7 Click **Finish**.

Enabling a Fibre Channel Port Channel

Procedure

Step 1 In the **Navigation** pane, click the **SAN** tab.

Step 2 On the **SAN** tab, expand **SAN > SAN Cloud > Fabric > FC Port Channels**.

Step 3 Click the port channel you want to enable.

Step 4 In the **Work** pane, click the **General** tab.

Step 5 In the **Actions** area, click **Enable Port Channel**.

Step 6 If the Cisco UCS Manager GUI displays a confirmation dialog box, click **Yes**.

Disabling a Fibre Channel Port Channel

Procedure

- Step 1** In the **Navigation** pane, click the **SAN** tab.
- Step 2** On the **SAN** tab, expand **SAN > SAN Cloud > Fabric > FC Port Channels**.
- Step 3** Click the port channel you want to disable.
- Step 4** In the **Work** pane, click the **General** tab.
- Step 5** In the **Actions** area, click **Disable Port Channel**.
- Step 6** If the Cisco UCS Manager GUI displays a confirmation dialog box, click **Yes**.
-

Adding Ports to and Removing Ports from a Fibre Channel Port Channel

Procedure

- Step 1** In the **Navigation** pane, click the **SAN** tab.
- Step 2** On the **SAN** tab, expand **SAN > SAN Cloud > Fabric > FC Port Channels**.
- Step 3** Click the port channel to which you want to add or remove ports.
- Step 4** In the **Work** pane, click the **General** tab.
- Step 5** In the **Actions** area, click **Add Ports**.
- Step 6** In the **Add Ports** dialog box, do one of the following:
- To add ports, choose one or more ports in the **Ports** table, and then click the **>>** button to add the ports to the **Ports in the port channel** table.
 - To remove ports, choose one or more ports in the **Ports in the port channel** table, and then click the **<<** button to remove the ports from the port channel and add them to the **Ports** table.
- Step 7** Click **OK**.
-

Modifying the Properties of a Fibre Channel Port Channel

Note If you are connecting two Fibre Channel port channels, the admin speed for both port channels must match for the link to operate. If the admin speed for one or both of the Fibre Channel port channels is set to auto, Cisco UCS adjusts the admin speed automatically.

Procedure

- Step 1** In the **Navigation** pane, click the **SAN** tab.
- Step 2** On the **SAN** tab, expand **SAN > SAN Cloud > Fabric > FC Port Channels**.
- Step 3** Click the port channel that you want to modify.
- Step 4** In the **Work** pane, click the **General** tab.
- Step 5** In the **Actions** area, change the values in one or more of the following fields:

Name	Description
Name field	The user-defined name given to the port channel. This name can be between 1 and 16 alphanumeric characters.
VSAN drop-down list	The VSAN associated with the port channel.
Port Channel Admin Speed drop-down list	The admin speed of the port channel. This can be: <ul style="list-style-type: none"> • 1 Gbps • 2 Gbps • 4 Gbps • 8 Gbps • auto

- Step 6** Click **Save Changes**.

Deleting a Fibre Channel Port Channel

Procedure

- Step 1** In the **Navigation** pane, click the **LAN** tab.
- Step 2** On the **SAN** tab, expand **SAN > SAN Cloud > Fabric > FC Port Channels**.
- Step 3** Right-click the port channel you want to delete and choose **Delete**.
- Step 4** If the Cisco UCS Manager GUI displays a confirmation dialog box, click **Yes**.
-

Adapter Port Channels

An adapter port channel groups all the physical links from a Cisco UCS Virtual Interface Card (VIC) to an IOM into one logical link.

Adapter port channels are created and managed internally by Cisco UCS Manager when it detects that the correct hardware is present. Adapter port channels cannot be configured manually. Adapter port channels are viewable using the Cisco UCS Manager GUI or Cisco UCS Manager CLI

Viewing Adapter Port Channels

Procedure

- Step 1** In the **Navigation** pane, click the **Equipment** tab.
- Step 2** On the **Equipment** tab, expand **Equipment > Chassis > Chassis_Number > Servers > Server_Number > Interface Cards**
- Step 3** Click the adapter for which you want to view the adapter port channels.
- Step 4** In the **Work** pane, click the **DCE Interfaces** tab.
- Step 5** To view details of the adapter port channel, click the link in the **Port Channel** column.
-

Fabric Port Channels

Fabric port channels allow you to group several of the physical links from an IOM to a fabric interconnect into one logical link for redundancy and bandwidth sharing. As long as one link in the fabric port channel remains active, the fabric port channel continues to operate.

If the correct hardware is connected, fabric port channels are created by Cisco UCS Manager in the following ways:

- During chassis discovery according to the settings configured in the chassis discovery policy.

- After chassis discovery according to the settings configured in the chassis connectivity policy for a specific chassis.

For each IOM there is a single fabric port channel. Each uplink connecting an IOM to a fabric interconnect can be configured as a discrete link or included in the port channel, but an uplink cannot belong to more than one fabric port channel. For example, if a chassis with two IOMs is discovered and the chassis discovery policy is configured to create fabric port channels, Cisco UCS Manager creates two separate fabric port channels: one for the uplinks connecting IOM-1 and another for the uplinks connecting IOM-2. No other chassis can join these fabric port channels. Similarly, uplinks belonging to the fabric port channel for IOM-1 cannot join the fabric port channel for IOM-2.

Cabling Considerations for Fabric Port Channels

When you configure the links between the Cisco UCS 2200 Series IOM and a Cisco UCS 6200 series fabric interconnect in fabric port channel mode, the available VIF namespace on the adapter varies depending on where the IOM uplinks are connected to the fabric interconnect ports.

Inside the 6248 fabric interconnect there are six sets of eight contiguous ports, with each set of ports managed by a single chip. When uplinks are connected such that all of the uplinks from an IOM are connected to a set of ports managed by a single chip, Cisco UCS Manager maximizes the number of VIFs used in service profiles deployed on the blades in the chassis. If uplink connections from an IOM are distributed across ports managed by separate chips, the VIF count is decreased.

Figure 1: Port Groups for Fabric Port Channels

Caution

Adding or removing links from a fabric port channel is disruptive and may affect the available amount of VIF namespace.

For high availability cluster mode applications, symmetric cabling configurations are strongly recommended. If the cabling is asymmetric, the maximum number of VIFs available is the smaller of the two cabling configurations.

For more information on the maximum number of VIFs for your Cisco UCS environment, see the configuration limits document for your hardware and software configuration.

Configuring a Fabric Port Channel

Procedure

- Step 1** To include all links from the IOM to the fabric interconnect in a fabric port channel during chassis discovery, set the link grouping preference in the chassis discovery policy to port channel.
[Configuring the Chassis Discovery Policy](#)
- Step 2** To include links from individual chassis in a fabric port channel during chassis discovery, set the link grouping preference in the chassis connectivity policy to port channel.
[Configuring a Chassis Connectivity Policy](#)
- Step 3** After chassis discovery, enable or disable additional fabric port channel member ports.
[Enabling or Disabling a Fabric Port Channel Member Port, on page 35](#)
-

What to Do Next

To add or remove chassis links from a fabric port channel after making a change to the chassis discovery policy or the chassis connectivity policy, reacknowledge the chassis. Chassis reacknowledgement is not required to enable or disable chassis member ports from a fabric port channel

Viewing Fabric Port Channels

Procedure

- Step 1** In the **Navigation** pane, click the **Equipment** tab.
- Step 2** On the **Equipment** tab, expand **Equipment** > **Chassis** > *Chassis Number* > **IO Modules**.
- Step 3** Click the IOM for which you want to view the fabric port channels.
- Step 4** In the **Work** pane, click the **Fabric Ports** tab.
- Step 5** To view details of the fabric port channel, click the link in the **Port Channel** column.
-

Enabling or Disabling a Fabric Port Channel Member Port

Procedure

- Step 1** In the **Navigation** pane, click the **LAN** tab.
- Step 2** On the **LAN** tab, expand **LAN > Internal LAN > Fabric > Port Channels**.
- Step 3** Expand the port channel for which you want to enable or disable a member port.
- Step 4** Click the ethernet interface for the member port you want to enable or disable.
- Step 5** In the **Work** pane, click the **General** tab.
- Step 6** In the **Actions** area, click one of the following:
- **Enable Interface**
 - **Disable Interface**
- Step 7** If the Cisco UCS Manager GUI displays a confirmation dialog box, click **Yes**.
-

Configuring Server Ports with the Internal Fabric Manager

Internal Fabric Manager

The Internal Fabric Manager provides a single interface where you can configure server ports for a fabric interconnect in a Cisco UCS domain. The Internal Fabric Manager is accessible from the **General** tab for that fabric interconnect.

Some of the configuration that you can do in the Internal Fabric Manager can also be done in nodes on the **Equipment** tab, on the **LAN** tab, or in the LAN Uplinks Manager.

Launching the Internal Fabric Manager

Procedure

- Step 1** In the **Navigation** pane, click the **Equipment** tab.
- Step 2** On the **Equipment** tab, expand **Equipment > Fabric Interconnects > Fabric_Interconnect_Name**.
- Step 3** Click **Fixed Module**.
- Step 4** In the **Work** pane, click **Internal Fabric Manager** in the **Actions** area. The Internal Fabric Manager opens in a separate window.
-

Configuring a Server Port with the Internal Fabric Manager

Procedure

- Step 1** In the Internal Fabric Manager, click the down arrows to expand the **Unconfigured Ports** area.
 - Step 2** Right-click the port that you want to configure and choose **Configure as Server Port**.
 - Step 3** If the Cisco UCS Manager GUI displays a confirmation dialog box, click **Yes**.
 - Step 4** If you have completed all tasks in the Internal Fabric Manager, click **OK**.
-

Unconfiguring a Server Port with the Internal Fabric Manager

Procedure

- Step 1** In the Internal Fabric Manager, click the server port in the **Server Ports** table.
 - Step 2** Click **Unconfigure Port**.
 - Step 3** If the Cisco UCS Manager GUI displays a confirmation dialog box, click **Yes**.
 - Step 4** If you have completed all tasks in the Internal Fabric Manager, click **OK**.
-

Enabling a Server Port with the Internal Fabric Manager

Procedure

- Step 1** In the Internal Fabric Manager, click the server port in the **Server Ports** table.
 - Step 2** Click **Enable Port**.
 - Step 3** If the Cisco UCS Manager GUI displays a confirmation dialog box, click **Yes**.
 - Step 4** If you have completed all tasks in the Internal Fabric Manager, click **OK**.
-

Disabling a Server Port with the Internal Fabric Manager

Procedure

- Step 1** In the Internal Fabric Manager, click the server port in the **Server Ports** table.
 - Step 2** Click **Disable Port**.
 - Step 3** If the Cisco UCS Manager GUI displays a confirmation dialog box, click **Yes**.
 - Step 4** If you have completed all tasks in the Internal Fabric Manager, click **OK**.
-
